## PREFACE TO FIRST EDITION

FOR many years a need has been felt by chemists for a book which shall collect into convenient form for ready reference the various data concerning the solubility of chemical substances that have been published from time to time in chemical periodicals and elsewhere.

The first mention that can be found of such a plan was made in 1731, when Peter Shaw delivered Chemical Lectures in London, as may be seen from the following:—

EXTRACTS from PETER SHAW'S Chemical Lectures, publicly read at London in 1731 and 1732. London. Second Edition, London 1755. 8vo.

Page 97 Experiment I.—That Water as a Menstruum dissolves more of one body and less of another.

[He shows that two ounces of water dissolve two ounces of Epsom salt, five drachms of common salt, and eight grains of cream of tartar. Only in the latter case much remained undissolved until boiled.]

"It might be proper for the further Improvement of Chemistry and Natural Philosophy to form a Table of the Time and Quantity wherein all the known Salts are dissolvable in Water. . . . Such a Table regularly formed might ease the Trouble of refining Salts, by shewing at once without future Trial or Loss of Time how much Water each Salt required to dissolve it for Clarification, Filtration, or Crystallization. It would likewise supply us with a ready and commodious Way of separating any Mixture of Salts, by shewing which would first shoot out of the Mixture upon Crystallization. . . . The same Table might also direct us to a ready and commodious Method of separating two Salts without waiting for Crystallization. . . ."

It was many years, however, before the scheme suggested by Peter Shaw was put into execution. Professor F. H. Storer published the first work that undertook to carry out the idea in its entirety, in 1864, in a book, which he entitled "First Outlines of a Dictionary of Solubilities of Chemical Substances," and which contained a compilation of nearly all the data on the subject published before 1860. It was at once recognized as a most valuable contribution to chemical literature; but for many years it has been difficult to obtain this work, as the limited edition which was published was soon wholly exhausted. Since then nothing has appeared on the subject except the brief tabulations found in various reference books, and no attempt has been made to cover the whole subject.

It is needless to state that the growth of chemical science since the publication of Professor Storer's book has been so enormous that that work has lost, at least to a great extent, the practical value it possessed thirty years ago. This growth has been indeed so great, and the data which have accumulated since 1860 so far surpass the earlier in volume, that a simple revision of Professor Storer's book was impracticable, and it therefore seemed best to start afresh.

With the facilities offered by the various scientific libraries at Harvard University, the Massachusetts Institute of Technology, and other libraries in Boston, it has been possible to collect nearly all the data relating to the subject. For the work before 1860 Professor Storer's work has been found invaluable.

The method pursued has been to form a preliminary list of compounds with more or less data by consulting the two most complete works on inorganic chemistry—Gmelin-Kraut's "*Handbuch der anorganischen Chemie*" and Graham-Otto-Michaelis's "*Lehrbuch*." These statements have been verified and elaborated by consulting the original memoirs in all the periodicals devoted to chemical literature which were obtainable. The "*Jahresbericht der Chemie*" also has been used extensively in tracing references, but the original memoirs have always been consulted and references given to them when possible.

It has been found impracticable to draw any distinction as to reliability between the various data given by different observers. It was manifestly impossible to attempt to verify experimentally the statements of those who have carried on the researches, for the most assiduous labor of many could only cover a small portion of the attested facts. Therefore, even when two statements are directly contradictory, both have been given with the authority for each. The only exception to this has been made when more recent discoveries have shown beyond any reasonable doubt the falsity of previous work. In this way some of the older manifestly inaccurate work has been omitted. In a majority of cases the more recent work may be considered to be the more accurate, but this is not the invariable rule. A Synchronistic Table of the more common periodicals is given in the Appendix, whereby it is easy to determine the date of the publication of a research to which reference is made.

It may be objected by the practical chemist that most of the work previous to 1850 might well have been omitted, but a great deal of this work possesses at least a historical value, and often furnishes facts which have not since been verified. Much of the earlier work, when obviously of less importance, has been printed in smaller type.

The aim has been to include in this volume all analyzed inorganic substances, that is, all substances which do not contain carbon, but exception has been made in the case of  $\text{CO}_2$ ,  $\text{CO}$ ,  $\text{CS}_2$ , the carbonates, cyanides, ferro-cyanides, etc., which are here included.

The work has been brought up to March, 1894, when this volume went to press, and the results of researches published since that time are not included in the present edition.

It is hoped that this book will fill to some extent the want that has been felt by chemists for a compilation of this nature. While it has been attempted to make the book as free from errors as possible, nevertheless it is naturally impossible to avoid many mistakes, and the compiler will be very grateful to those who may call his attention to any errors or omissions.

## PREFACE TO SECOND EDITION

DURING the twenty-five years which have elapsed since the publication of the first edition of this dictionary, a very large amount of work has been published in chemical periodicals, containing data concerning the solubility of inorganic chemical compounds. As it was impossible for the compiler of the first edition to devote the time necessary for the collecting of the published data, it was necessary to employ assistance, and Dr. Dorothy A. Hahn, Professor of Chemistry, Mt. Holyoke College, was engaged for this work. Dr. Hahn has collected the larger part of the material in this book, which work in spite of its arduous and tedious nature, she has performed in a most painstaking manner.

The compilation and arrangement of the data collected by Dr. Hahn, which devolved upon the original author, took much time. This, together with difficulties in printing, caused by the general conditions after the war, has delayed the publication until the present year, although the work was begun in 1916, and it has only been brought up to January 1st of that year.

Since the publication of the first edition of this work, Dr. Atherton Seidell has brought out two editions of his book, entitled "Solubilities of Inorganic and Organic Substances," which covers quite a different field, as he considers only quantitative data and those only for the commoner substances. Dr. Seidell has followed the plan in most cases where there are several available solubility determinations of a substance, of selecting and averaging the more reliable results, and embodying them in tables. Although this undoubtedly facilitates ready reference, it has seemed better to adhere to the original plan of the first edition, and to publish all the data in the form of the original authorities with references and dates, so that the user may be at liberty to use his own judgment in selection. Some few of the tables arranged by Dr. Seidell, however, have seemed to possess decided advantages over any other published data and they have been incorporated in the present volume. It is desired also to acknowledge indebtedness to Dr. Seidell's work for certain other tables where the original sources were not available to the present compilers.

The same plan and arrangement used in the first edition has been followed with certain elaboration, however, of the arrangement of data on the solubility of two or more salts in a solvent, which is explained in the Explanatory Preface.

Data published since the first edition on the cobalt and chromium ammonia compounds and those of the platinum group have been omitted, as it seemed that solubility data on those compounds possessed very little general interest.

As stated in the preface of the first edition, while every possible attempt has been made to avoid errors, it is manifestly impossible to avoid many mistakes in a work of this nature, and the compiler will be glad to have his attention called to any errors or omissions.

WILMINGTON, Del., Jan., 1921.

A. M. C.

## EXPLANATORY PREFACE

IN order to reduce this volume to a convenient size the subject-matter has been abbreviated and condensed as far as seemed compatible with clearness; but it has been the aim not to use any abbreviations which are not at once intelligible without consulting the explanatory table. The more common chemical formulæ have been universally used, thereby saving a large amount of space without detracting from ready intelligibility to chemists.

The solubility of the substance in water is first given, the data being arranged chronologically in the longer articles. Then follow the specific gravities of the aqueous solutions, and also any data obtainable regarding their boiling-points; other physical data concerning solutions are not included. Following this is the solubility of the substance in other solvents—first the inorganic acids, then alkali and salt solutions, and finally organic substances.

Owing to the great increase of data, published during the last twenty years, on the simultaneous solubility of two or more salts in a given solvent, it has been found necessary to plan some arrangement, whereby such data can easily be found, and the plan adopted is as follows: The data for the solubility of two salts in a solvent is placed under the salt which comes first according to the alphabetical arrangement in this dictionary, and the order of the data on various salts under the same heading follows the alphabetical order of the salts considered. Thus the data on the solubility of  $\text{NH}_4\text{Cl} + \text{BaCl}_2$ ,  $\text{NH}_4\text{Cl} + \text{CuCl}_2$ , and  $\text{NH}_4\text{Cl} + \text{PbCl}_2$ , and  $\text{NH}_4\text{Cl} + (\text{NH}_4)_2\text{SO}_4$  are placed under Ammonium Chloride and arranged in the given order. Certain exceptions have been made to this rule, where the data directly concerns the solubility of a salt in a solution of another salt, in which case, it is placed under the former. Numerous cross references, however, are given, which it is hoped will avoid confusion.

In many cases no definite distinction can be drawn between the phenomena of solution and decomposition. At present the theory of solution is in a confused state, and until what really takes place when a substance dissolves is thoroughly understood no distinct line can be drawn. The whole subject is unsettled at the present time; for while many chemists believe in the so-called "dissociation" theory, yet the "hydrate" theory is not without its supporters. It is not my intention to discuss the theoretical side of the question, which has been so well treated in many recent works. It is, however, obvious that the phenomena are essentially different, when, for example, sodium carbonate is dissolved in water, in which case the original salt is deposited on evaporation, and when iron is dissolved in sulphuric acid, and the solution deposits a sulphate of iron. Yet it is still the custom to speak of iron as soluble in sulphuric acid, although it would be much more accurate to say that the sulphuric acid was decomposed by the iron. It has thus been found impracticable to draw a sharp line between solu-

tion and decomposition, and the term "soluble" has in general been used where a solution of some sort is formed by the action of the solvent.

The matter of alphabetical arrangement of chemical compounds, in the present somewhat confused state of chemical nomenclature, has been a difficult question to decide. The plan followed has been practically that of the standard Dictionaries of Chemistry, whereby the compounds of metals with one of the non-metallic elements have been classified under the metals, while the salts of the other acids (the oxygen acids so called and some few others) have been arranged alphabetically under the acids. Thus barium chloride is found under barium, while barium chlorate is found under chloric acid. No exception has been made in the case of the rare metals, as is usually the custom in Dictionaries of Chemistry. Double salts are to be found under the word which comes first alphabetically; thus, "common alum," potassium aluminum sulphate, is found under aluminum sulphate as aluminum potassium sulphate (under sulphuric acid), but ammonia chrome alum is found under ammonium sulphate as ammonium chromium sulphate. In the same way the double sulphate and chromate of potassium is found under potassium chromate (chromic acid), and not under potassium sulphate (sulphuric acid). The double chloride of ammonium and magnesium is found under ammonium chloride (ammonium), while the double chloride of potassium and magnesium is found under magnesium chloride (magnesium). An exception is made, however, in the case of double compounds of salts of oxygen acids with salts containing a single non-metallic element, in which case they are always found under the oxygen acid. Thus the double sulphate and chloride of lead,  $\text{PbSO}_4$ ,  $\text{PbCl}_2$ , is found under lead sulphate (sulphuric acid), and not under lead chloride (lead).

The above method in some cases widely separates analogous compounds, but it was found to be the only practical way to a strictly alphabetical arrangement, which is no necessary in a book containing so many very short articles.

The ammonia addition-products furnished another difficulty. While their nature is more or less definitely understood in the cobalt, platinum, etc., compounds, and a definite nomenclature is in general use, there is an absolute lack of anything of the kind in the less definite compounds. It is good usage to speak of cuprammonium compounds, but how shall we designate the analogous cadmium compounds? "Cadmammonium" has not yet received the sanction of chemists, and  $\text{AlCl}_3$ ,  $\text{NH}_3$  is a still worse case for naming. I have, therefore, not attempted to name these compounds, but classified them all under the salts to which the ammonia is added, affixing the word ammonia, thus: aluminum chloride ammonia, cadmium chloride ammonia, and also cupric chloride ammonia for the salt now almost universally known as cuprammonium chloride.

The ammonia compounds of cobalt, chromium, mercury, and the platinum metals are arranged alphabetically according to their universally accepted names, a list of which is given under each of those elements.

It has further been necessary to settle arbitrarily the question whether a substance should be considered as a double salt or a salt of a compound acid con-

taining one of the metals. For example, "fluosilicates" (or silicofluorides, as some may prefer) is the general name for the double fluorides of  $\text{SiF}_4$  and a metal, but this unanimity in usage gradually disappears as the basic elements become more nearly alike, so that it is impossible to draw a line between such compounds and a compound such as the double chloride of magnesium and potassium, for which indeed the name "potassium chloromagnesate" has been proposed. The aim has been in all these cases to follow the best usage rather than make an absolutely homogeneous system of nomenclature out of the existing confusion.

In the matter of formulæ no attempt at uniformity has been made. Thus in the case above some chemists write the formula of the double chloride of magnesium and potassium as  $\text{KMgCl}_2$ , others as  $\text{KCl, MgCl}_2$ . The form here used has been in most cases that of the author from whom the data are taken.

The prefixes mono, di, tri, ortho, pyro, etc., have in general been disregarded in the alphabetical arrangement, and have been printed in italics. Exceptions to this have been made, however, in the cobalt, chromium, etc., ammonium compounds, and in a few others, as dithionic, perchloric, etc., acids. Cross references have been used, so as to prevent any confusion arising from lack of uniformity in this respect.

In the Appendix will be found formulæ and tables for the conversion of the degrees of various hydrometer scales into specific gravity, and a Synchronistic Table of the Periodicals to which references are most frequently made.

A DICTIONARY OF CHEMICAL SOLUBILITIES  
INORGANIC

# DICTIONARY

OF

## CHEMICAL SOLUBILITIES

### INORGANIC

#### Actinium emanation.

Solubility coefficient of actinium emanation in  $H_2O$  at room temp. is 2.

If the solubility of actinium emanation in  $H_2O$  is made = 1, the relative solubility of the emanation in sat.  $KCl$ - $Aq$  = 0.9; in conc.  $H_2SO_4$  = 0.95; in ethyl alcohol = 1.1, in amyl alcohol = 1.6; in benzaldehyde = 1.7; in benzene = 1.8; in toluene = 1.8, in petroleum = 1.9; in  $CS_2$  = 2.1 at 18°.

(Hevesy, Phys. Zeit. 1911, 12, 1221.)

#### Air, Atmospheric.

See also Nitrogen and Oxygen.

100 vols  $H_2O$  at 15° and 760 mm. absorb about 5 vols atmospheric air (Saussure)

1 vol.  $H_2O$  at t° and 760 mm. pressure absorbs V vols atmospheric air reduced to 760 mm. and 0°

t°	V	t°	V	t°	V
0	0.02471	7	0.02080	14	0.01822
1	0.02408	8	0.02084	15	0.01795
2	0.02345	9	0.01992	16	0.01771
3	0.02287	10	0.01958	17	0.01750

50	1297	1140			

(Winkler, B. 1901, 34. 1409.)

Sea-water absorbs less O and N from air than pure H<sub>2</sub>O, but the ratio between O and N remains constant. In sea-water sat. with air at 6.22° the oxygen was 33.50% of the total gas absorbed. (Pettersson and Söndén.)

1 l. sea-water absorbs cc N and O from air at t° and 760 mm. pressure.

t°	cc N	cc O	N+O	% O
0	14.41	7.77	22.18	35.03
5	13.22	6.93	20.15	34.39
10	12.08	6.29	18.37	34.24
15	11.01	5.70	16.71	34.11

(Törnø, Norwegian North Atlantic Exped. Chem. 18.)

1 l. sea water absorbs cc N from air at  $t^{\circ}$  and 760 mm

$t^{\circ}$	cc N	$t^{\circ}$	cc N	$t^{\circ}$	cc N
0	15.60	10	12.47	20	10.41
5	13.86	15	11.34	25	9.62

(Dittmar)

1 l sea-water absorbs cc N ( $0^{\circ}$  and 760 mm) from atmospheric air at  $t^{\circ}$  and 760 mm. pressure (dry)

$t^{\circ}$	cc N	$t^{\circ}$	cc N	$t^{\circ}$	cc N
0	14.85	10	12.06	20	10.25
2	14.20	12	11.62	22	9.98
4	13.60	14	11.23	24	9.73
6	13.04	16	10.87	25	9.62
8	12.53	18	10.54		

(Hamburg.)

Absorption of air which is free from carbonic acid by  $H_2SO_4$  at  $18^{\circ}$  and 760 mm.  $\alpha$  = coefficient of solubility

$H_2SO_4$	$\alpha$	$H_2SO_4$	$\alpha$
98%	0.0173	70%	0.0055
90%	0.0107	60%	0.0059
80%	0.0069	50%	0.0076

(Tower, Z. anorg. 1906, 50, 388.)

Absolute alcohol absorbs 0.11 vol. gas from air,  $\frac{1}{2}$  of which is O and  $\frac{1}{2}$  N. On mixing with an equal vol.  $H_2O$ ,  $\frac{1}{2}$  of the dissolved gas is given off. (Doberiner)  
100 vols. alcohol (95.1 %) absorb 14.1 vols. air. (Robinet, C. R. 88, 608)  
100 vols. petroleum absorb 6.8 vols. air  
" " oil of lavender " 8.89 " "  
" " benzene " 14.0 " "  
" " oil of turpentine " 24.18 " "  
(Robinet, Lc.)

1 vol. ether at 760 mm. pressure absorbs 0.290 vols. air at  $0^{\circ}$ ; 0.287 vols. at  $10^{\circ}$ ; 0.286 vols. at  $15^{\circ}$ . (Christoff, Z. phys. Ch. 1912, 79, 459.)

**Alcohol.**  $C_2H_5OH$ .

Sp. gr. of pure ethyl alcohol + Aq. at  $25^{\circ}$ .

% alcohol	Sp. gr.	% alcohol	Sp. gr.

45	0.920850	100	0.785058
50	0.909852	—	—

(Osborne, McKelvy and Pearce, Bureau of Standards, Sci. Paper No. 197.)

**Alum, Ammonia.**

See Sulphate, aluminum ammonium.

**Alum, Chrome.**

See Sulphate, aluminum chromium.

**Alum, Iron.**

See Sulphate, aluminum ferric.

**Alum, Potash.**

See Sulphate, aluminum potassium.

**Alumina.**

See Aluminum oxide.

**Alumic acid,**  $H_2Al_2O_4 = Al_2O_3, H_2O$ .

Aluminum hydroxide possesses acid properties, and salts corresponding to an acid of the above formula exist.

See Aluminum hydroxide.

**Aluminates.**

All aluminates are insol. in  $H_2O$  except those of K and Na (Fremy) and Ba (Beckmann, J. pr. (2) 26, 385)

**Barium aluminate,**  $BaAl_2O_4 + 4H_2O$ .

Sol. in 10 pts  $H_2O$ , can be recryst. from alcohol. (Deville, J. pr. 87, 299.)

+  $5H_2O$ . Sl. sol. in  $H_2O$  with decomp. (Allen, Am. Ch. J. 1900, 24, 313)

+  $7H_2O$ . Sl. sol. in cold, not completely sol. in hot  $H_2O$ . Sol. in cold dil. HCl + Aq (Beckmann, J. pr. (2) 26, 385.)

$Ba_2Al_2O_5 + 7H_2O$ . Sol. in 20 pts.  $H_2O$  by boiling. (Beckmann, B. 14, 2151.)

Insol. in alcohol

Sl. sol. in  $H_2O$  with decomp.; insol. in alcohol. (Allen, Am. Ch. J. 1900, 24, 311)

$Ba_2Al_2O_5 + 7 - 11H_2O$ . Sol. in 15 pts.  $H_2O$  with decomp. into  $Ba_2Al_2O_5 + 5H_2O$ , insol. in alcohol. (Beckmann)

**Barium aluminate bromide,**  $BaAl_2O_4, BaBr_2 + 11H_2O$ .

Sol. in  $H_2O$  (Beckmann, J. pr. (2) 26, 385, 474)

**Barium aluminate chloride,**  $BaAl_2O_4, 3BaCl_2 + 6H_2O$ .

Sol. in  $H_2O$ . (Beckmann, l.c.)

$Ba_2Al_2O_5, BaCl_2 + 11H_2O$ . Sol. in  $H_2O$ . (Beckmann, l.c.)

**Barium aluminate iodide,**  $BaAl_2O_4, BaI_2$ .

Sol. in  $H_2O$ . (Beckmann, l.c.)

**Calcium aluminate,**  $CaO, Al_2O_3$ .

Decomp. by  $H_2O$  but does not "set." Sol. in HCl; insol. in  $HNO_3$ ,  $H_2SO_4$ , and HF. (Dufau, C. R. 1900, 131, 543.)

$Ca_2Al_2O_5 + 7H_2O$ . Slowly decomp. by  $H_2O$ ; sl. sol. in  $H_2O$ . (Allen, Am. Ch. J. 1900, 24, 316.)

$Ca_2Al_2O_5$ . Insol. in  $H_2O$ ; not decomp. by KOH + Aq; sol. in acids. (Tissier, C. R. 48, 627.)

+6H<sub>2</sub>O. Ppt. sl. sol. in H<sub>2</sub>O; insol. in alcohol (Allen, Am. Ch. J. 1900, 24, 316.)

3Al<sub>2</sub>O<sub>3</sub>·4CaO+3H<sub>2</sub>O. Ppt. (Friedel, Bull. Soc. Min. 1903, 26, 121; C. C. 1904, I, 430.)

**Cobalt aluminate.**

"*Thenard's* or "*Leuthner's* blue." Insol. in H<sub>2</sub>O.

CoAl<sub>2</sub>O<sub>4</sub>. Insol. in H<sub>2</sub>O and acids. (Ebelmen.)

**Cobalt magnesium aluminate, [MgCo]Al<sub>2</sub>O<sub>4</sub>.**

"*Spinel Blue*" Insol. in H<sub>2</sub>O or HCl+Aq. (Ebelmen.)

**Glucinum aluminate, GlAl<sub>2</sub>O<sub>4</sub>.**

Min. *Chrysoberyll*. Not attacked by acids, but decomp. by KOH+Aq.

**Iron (ferrous) aluminate, FeAl<sub>2</sub>O<sub>4</sub>.**

Min. *Hercynite*. Not attacked by acids.

**Lithium aluminate, LiAlO<sub>2</sub>.**

Sol. in H<sub>2</sub>O (Weyberg, C. C. 1906, II, 1659.)

**Lithium hydrogen aluminate, LiHAl<sub>2</sub>O<sub>4</sub>+5H<sub>2</sub>O**

Sl. sol. in H<sub>2</sub>O; decomp. on boiling (Allen, Am. Ch. J. 1900, 24, 310.)

**Magnesium aluminate, MgAl<sub>2</sub>O<sub>4</sub>.**

Min. *Spinel*. Insol. in H<sub>2</sub>O.

Insol. in HNO<sub>3</sub>+Aq; very sl. sol. in HCl+Aq; partly sol. in H<sub>2</sub>SO<sub>4</sub> at boiling temp. (Abich, Pogg. 23, 316.)

Sol. by standing 2 hours at 210° with a mixture of 3 pts H<sub>2</sub>SO<sub>4</sub> and 1 pt. H<sub>2</sub>O, or by boiling with this mixture together with HF. (Mitscherlich, J. pr. 81, 108.)

Sl. sol. in HCl, HF, and H<sub>2</sub>SO<sub>4</sub>; insol. in HNO<sub>3</sub>. (Dufau, Bull. Soc. 1901, (3) 25, 669.)

**Manganous aluminate.**

Insol. in H<sub>2</sub>O and acids. (Ebelmen, A. ch. (3) 22, 225.)

MnAl<sub>2</sub>O<sub>4</sub>. Insol. in HCl+Aq; readily attacked by HF, HNO<sub>3</sub> and H<sub>2</sub>SO<sub>4</sub>.

Decomp. by fusion with alkali chlorate, nitrate, oxide or carbonate. (Dufau, C. R. 1902, 135, 963.)

**Nickel aluminate.**

Insol. in H<sub>2</sub>O.

**Potassium aluminate, K<sub>2</sub>Al<sub>2</sub>O<sub>4</sub>+3H<sub>2</sub>O.**

Decomp. by dissolving in pure H<sub>2</sub>O with separation of Al<sub>2</sub>O<sub>3</sub>. (Freymy, A. ch. (3), 12, 362.) Can be recrystallised from water containing a little alkali, without decomposition. (Freymy.)

Insol. in alcohol.

**Sodium aluminate, Na<sub>2</sub>Al<sub>2</sub>O<sub>4</sub>.**

Easily and completely sol. in cold H<sub>2</sub>O. (Schaffgotsch, Pogg. 43, 117.)

+4H<sub>2</sub>O. Insol. in alcohol. (Allen, Am. Ch. J. 1900, 24, 308.)

Na<sub>2</sub>Al<sub>2</sub>O<sub>4</sub>. Miscible with hot H<sub>2</sub>O, and as sol. as NaOH in cold H<sub>2</sub>O. Insol. in alcohol but decomp. thereby. (Tissier, C. R. 43, 102.)

**Strontium aluminate, Sr<sub>2</sub>Al<sub>2</sub>O<sub>4</sub>+6H<sub>2</sub>O.**

Sl. sol. in H<sub>2</sub>O (with slow decomp. in Aq. solution) (Allen, Am. Ch. J. 1900, 24, 314.)

**Thallium aluminate, Tl<sub>4</sub>Al<sub>2</sub>O<sub>4</sub>+7H<sub>2</sub>O.**

Not completely sol. in, but slowly hydrolysed by H<sub>2</sub>O.

Readily sol. in dil. acids and in the fixed alkalies.

Insol. in abs. alcohol. (Hawley, J. Am. Chem. Soc. 1907, 29, 303.)

**Zinc aluminate, ZnAl<sub>2</sub>O<sub>4</sub>.**

Insol. in acids or alkalies.

Min. *Gahnite* (*Automolite*).

+xH<sub>2</sub>O. Sol. in KOH, and NH<sub>4</sub>OH+Aq. (Berzelius.)

**Aluminicoantimoniotungstic acid.**

**Ammonium aluminicoantimoniotungstate,**  
6(NH<sub>4</sub>)<sub>2</sub>O, 2Al<sub>2</sub>O<sub>3</sub>, 3Sb<sub>2</sub>O<sub>3</sub>, 18WO<sub>3</sub>+17H<sub>2</sub>O

A shellac-like gum. (Daniels, J. Am. Chem. Soc. 1908, 30, 1856.)

**Barium aluminicoantimoniotungstate, 5BaO,**  
2Al<sub>2</sub>O<sub>3</sub>, 3Sb<sub>2</sub>O<sub>3</sub>, 18WO<sub>3</sub>+6H<sub>2</sub>O.

Somewhat insol. in dil. HCl. (Daniels, J. Am. Chem. Soc. 1908, 30, 1857.)

**Silver aluminicoantimoniotungstate, 6Ag<sub>2</sub>O,**  
2Al<sub>2</sub>O<sub>3</sub>, 3Sb<sub>2</sub>O<sub>3</sub>, 18WO<sub>3</sub>+12H<sub>2</sub>O

Ppt.

Sol. in NH<sub>4</sub>OH+Aq but requires HNO<sub>3</sub> (1:10) to dissolve it (Daniels, J. Am. Chem. Soc. 1908, 30, 1857.)

**Aluminicoarseniotungstic acid.**

**Ammonium aluminicoarseniotungstate,**  
6(NH<sub>4</sub>)<sub>2</sub>O, 2Al<sub>2</sub>O<sub>3</sub>, 3As<sub>2</sub>O<sub>3</sub>, 18WO<sub>3</sub>+14H<sub>2</sub>O.

Sparsely sol. in H<sub>2</sub>O. (Daniels, J. Am. Chem. Soc. 1908, 30, 1854.)

**Barium aluminicoarseniotungstate, 4BaO,**  
2Al<sub>2</sub>O<sub>3</sub>, 3As<sub>2</sub>O<sub>3</sub>, 18WO<sub>3</sub>+12H<sub>2</sub>O.

Very sl. sol. in H<sub>2</sub>O.

Sol. in very dil. HCl or HNO<sub>3</sub>. (Daniels, J. Am. Chem. Soc. 1908, 30, 1855.)

**Cadmium aluminicoarseniotungstate, 4CdO,**  
2Al<sub>2</sub>O<sub>3</sub>, 3As<sub>2</sub>O<sub>3</sub>, 18WO<sub>3</sub>+17H<sub>2</sub>O.

Sol. in dil. mineral acids and in strong NH<sub>4</sub>OH+Aq. (Daniels, J. Am. Chem. Soc. 1908, 30, 1855.)

**Aluminicomolybdic acid.**

**Ammonium aluminicomolybdate, 3(NH<sub>4</sub>)<sub>2</sub>O,**  
Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+19H<sub>2</sub>O.

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29, 696.)

+20H<sub>2</sub>O. More sol. in H<sub>2</sub>O than potassium

aluminicomolybdate (Struve, Bull. Acad. St. Petersb. 12. 147.)

+2H<sub>2</sub>O (Marekwal, Dissert. 1895.)

Barium aluminicomolybdate, 4BaO, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+14H<sub>2</sub>O

Ppt (Hall, J. Am. Chem. Soc. 1907, 29. 712.)

Lead aluminicomolybdate, 4PbO, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+21H<sub>2</sub>O.

Ppt (Hall, J. Am. Chem. Soc. 1907, 29. 712.)

Potassium aluminicomolybdate, 3K<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+20H<sub>2</sub>O.

1 pt. of the salt is sol in 40.67 pts. H<sub>2</sub>O at 17°. Very difficultly sol. in acids (Struve) H<sub>2</sub>Al(MoO<sub>4</sub>)<sub>3</sub>, 2KHMnO<sub>4</sub>. Sol in H<sub>2</sub>O. (Parmentier, C. R. 94. 1713.)

Silver aluminicomolybdate, 4Ag<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+16H<sub>2</sub>O.

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29. 712.)

Sodium aluminicomolybdate, 3Na<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 12MoO<sub>3</sub>+22H<sub>2</sub>O.

Efflorescent. Easily sol. in H<sub>2</sub>O (Gentile J. pr 81. 413)

### Aluminicophosphotungstic acid.

Ammonium aluminicophosphotungstate, 9(NH<sub>4</sub>)<sub>2</sub>O, 2Al<sub>2</sub>O<sub>3</sub>, 4P<sub>2</sub>O<sub>5</sub>, 9WO<sub>3</sub>+13H<sub>2</sub>O.

Sl. sol. in cold and in hot H<sub>2</sub>O. (Daniels, J. Am. Chem. Soc. 1908, 30. 1851)

Barium aluminicophosphotungstate, 4BaO, 2Al<sub>2</sub>O<sub>3</sub>, 4P<sub>2</sub>O<sub>5</sub>, 9WO<sub>3</sub>+13H<sub>2</sub>O.

Sl. sol. in H<sub>2</sub>O. Sol. in very dil. HCl or HNO<sub>3</sub>. (Daniels, J. Am. Chem. Soc. 1908, 30. 1853)

Silver aluminicophosphotungstate, 4Ag<sub>2</sub>O, 2Al<sub>2</sub>O<sub>3</sub>, 4P<sub>2</sub>O<sub>5</sub>, 9WO<sub>3</sub>+6H<sub>2</sub>O.

Nearly insol. in H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH and in dil. HNO<sub>3</sub>. Insol. in acetic acid (Daniels, J. Am. Chem. Soc. 1908, 30. 1852.)

Zinc aluminicophosphotungstate, 5ZnO, 2Al<sub>2</sub>O<sub>3</sub>, 4P<sub>2</sub>O<sub>5</sub>, 9WO<sub>3</sub>+11H<sub>2</sub>O.

Sol in dil. acids and in a large quantity of conc. ammonia when NH<sub>4</sub>Cl is present (Daniels, J. Am. Chem. Soc. 1908, 30. 1853.)

### Aluminicotungstic acid.

Ammonium aluminicotungstate, 3(NH<sub>4</sub>)<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>+4H<sub>2</sub>O.

Sol in conc. HNO<sub>3</sub> and in conc. HCl. When the solution in conc. HCl was boiled, a yellow colored ppt separated. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1230)

Ammonium silver aluminicotungstate, 11Ag<sub>2</sub>O, 21(NH<sub>4</sub>)<sub>2</sub>O, 4Al<sub>2</sub>O<sub>3</sub>, 36WO<sub>3</sub>.

The dry salt is insol in pure H<sub>2</sub>O, but

readily sol. in H<sub>2</sub>O containing NH<sub>3</sub> or HNO<sub>3</sub> (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1231.)

Barium aluminicotungstate, 8BaO, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>+7H<sub>2</sub>O

Not sol in acids when dry. Somewhat decomposed by boiling with conc. HCl, HNO<sub>3</sub>, or aqua regia (Daniels, J. Am. Chem. Soc. 1908, 30. 1848.)

Copper aluminicotungstate, 2CuO, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>+16½H<sub>2</sub>O.

Sol in large quantities of H<sub>2</sub>O. (Daniels, J. Am. Chem. Soc. 1908, 30. 1847.)

Mercurous aluminicotungstate, 5Hg<sub>2</sub>O, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>.

Sl. sol. in H<sub>2</sub>O. Sol in HNO<sub>3</sub> (1.5) (Daniels, J. Am. Chem. Soc. 1908, 30. 1849)

Zinc aluminicotungstate, 1½ZnO, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>+8H<sub>2</sub>O.

Insol. in H<sub>2</sub>O. (Daniels, J. Am. Chem. Soc. 1908, 30. 1850.)

ZnO, Al<sub>2</sub>O<sub>3</sub>, 9WO<sub>3</sub>+20H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Daniels.)

### Aluminum, Al

Less easily attacked than ordinary metals (iron, copper, lead, zinc, tin) by air, H<sub>2</sub>O, wine, beer, coffee, milk, oil, butter, fats, etc. Vinegar dissolves 0.349 g. from a sq. decimetre in 4 months, and 5 % NaCl+Ag, only 0.045 g. in the same time. (Ballaud, C. R. 114. 1536)

The action of various substances contained in foods and drinks on compact Al as it occurs in utensils is very slight. Hard or soft water, whether cold or hot, showed no action in 8 days; 1 % solutions of tartaric, tannic, and acetic acids had no action in same time, also 5 % boric, carbolic, and salicylic acids. 4 % and 10 % acetic acid dissolved only 0.4 mg. of Al, while 10 % acetic acid dissolved 2.1 mg. from a roughened piece of Al foil in 8 days. 1 % soda solution dissolved 15 mg. in 8 days. (Rupp, Dingl. 283. 119)

Similar results were obtained by Arche. (Dingl. 284. 255)

Liquids which are ordinarily contained in foods and drinks do not attack sheet Al except in a very small degree. The following losses in weight in mg. by the action of the given liquids on 100 sq. centimetres sheet aluminum for 6 days were obtained:

Liquids	Loss in mg
Claret	2.84
Hock	3.27
Brandy	1.08
5 % alcohol	0.61
5 % tartaric acid + Ag	1.69
1 % " " "	2.58
5 % acetic acid + Ag	3.58
1 % " " "	4.38

Liquids	Loss in mg.
5 % citric acid + Aq	2.15
1 % " " " " " "	1.90
5 % lactic acid + Aq	4.77
5 % butyric acid + Aq	1.31
Coffee	0.50
Tea	0
Beer	0
4 % boric acid + Aq	1.77
5 % carboic acid + Aq	0.23
1 % " " " " " "	0.49
1/2 % salicylic acid + Aq	6.35

(Lunge, C N. 65. 110.)

The apparent solubility of this metal in  $H_2O$  is due to the presence of minute quantities of Na. Absolutely pure Al does not lose any weight to  $H_2O$  and the  $H_2O$  remains perfectly clear. Also dil acids remain perfectly clear. (Moissan, C R. 1895, 121. 794-98; C C 1896, I 193.)

Sl. attacked by  $H_2O$  at  $80^\circ$  (W. Smith, J. Soc Chem Ind 1904, 23. 475.)

Easily sol. in dil or conc.  $HCl$  + Aq, whether hot or cold; also in  $HBr$ ,  $HI$ , or  $HF$  + Aq. Insol in dil.  $H_2SO_4$  + Aq (de la Rive); sl. attacked by cold, easily by hot conc.  $H_2SO_4$ . Not attacked by  $HNO_3$  + Aq even when conc. and boiling (Wöhler); easily sol. in dil.  $H_2SO_4$  or  $HNO_3$  + Aq in vacuo (Weeren, B. 24. 1798); slowly sol in 37 %  $HNO_3$  + Aq, 100 conc.  $HNO_3$  + Aq requiring 2 months to dissolve 2 g. Al (Montemartini, Gazz. ch. it. 22. 397); very sl. sol in most organic acids, but solubility is increased by presence of NaCl.

Not attacked by dil. or conc.  $HNO_3$  at ord. temp. but attacked by hot  $HNO_3$ . Attacked by  $H_3PO_4$  (Smith, J. Soc. Chem. Ind 1904, 23. 475.)

Completely sol. at  $100^\circ$  in two hours in  $HNO_3$ , sp. gr. 1.15-1.46. (Stulman, J Am. Chem Soc. 1897, 19. 714.)

Very easily sol. in  $HNO_3$  (contrary to the usual statement in text-books). (Woy, C C. 190, J. I. 94.)

Slowly attacked by  $HNO_3$  + Aq (20-25 %) at  $25-30^\circ$ . (Deventer, Chem Weekbl 1907, 4. 69.)

Dil  $HNO_3$  or  $H_2SO_4$  does not attack Al on account of formation of layer of gas. Action is increased by vacuum. Solutions of metallic chlorides, the metal of which is insol and attacks itself to the Al (Pt, Au, Cu, Hg) increase the solubility, but when metal is soluble in the acid (Fe, Zn, etc.), there is no increase of solubility (Ditte, C R. 1890, 110. 573.)

Violently attacked by dil. or conc.  $H_3PO_4$  + Aq. (Winteler.)

Not attacked by solution of  $HCl$  in liquid  $HCN$  (Kahlenberg, J. phys. Chem 1902, 6. 662.)

Very easily sol. in conc or dil  $KOH$ , or  $f NaOH$  + Aq. Slowly attacked by  $NH_4OH$  +

Aq (Wöhler); sol in  $BaO \cdot H_2O$  + Aq (Beckmann, J. pr. (2) 28. 385), slowly sol in  $CaO \cdot H_2O$  + Aq.

Sol in excess of 10 %  $KOH$  + Aq and in  $NaOH$  and  $LiOH$  + Aq; sol. in hot conc  $Ba(OH)_2$ ,  $Sr(OH)_2$  and  $Ca(OH)_2$  + Aq. (Allen, Am. Ch. J 1900, 24. 304-331.)

Attacked by hot conc  $NH_4OH$  + Aq (Smith, J. Soc Chem. Ind 1904, 23. 475.)

Sl attacked by sulphates, or nitrates + Aq, but all chlorides, bromides, and iodides, except those of the alkalis and alkaline earths, even  $AlCl_3$  + Aq, dissolve the metal. Insol. in alum., or in  $NaCl$  + Aq, but sol in alum +  $NaCl$  + Aq (Tissier, C. R. 41. 362), sol in  $NaCl$  + Aq (Deville, A ch (3) 43. 14), sol. in neutral  $FeCl_3$  + Aq in vacuo (Weeren, B. 24. 1798.) Violently attacked by  $CuCl_2$  + Aq (Tommasi, Bull Soc (2) 37. 443.)

Rapidly sol in  $K_2S_2O_8$  + Aq, more slowly sol. in  $(NH_4)_2S_2O_8$  + Aq (Levi, Gazz. ch. it. 1908, 38. (1) 583.)

Attacked by  $(NH_4)_3PO_4$  + Aq. Sl attacked by  $NaNO_3$  + Aq or  $KNO_3$  + Aq at  $100^\circ$ . (Smith, J. Soc Chem Ind. 1904, 23. 475.)

Not affected by  $NH_4NO_3$  + Aq (Hodgkinson, C N. 1904, 90. 142.)

Attacked by  $POCl_3$  at  $100^\circ$ . (Remtzer, B. 13. 845.)

Insol in liquid  $NH_3$  (Gore, Am. Ch. J. 1898, 20. 826.)

Insol in liquid  $CO_2$  (Büchner, Z. phys. Ch 1906, 54. 674.)

Attacked by  $NOCl$ . (Sudborough, Chem. Soc. 1891, 59. 659.)

92 % alcohol attacks Al less than  $H_2O$ . Pure Al is attacked less than commercial (Hugouenq, J Pharm. 1895, (6) 1. 537.)

Sol. in organic acids containing chlorides (Smith, J. Soc Chem. Ind 1904, 23. 475.)

Acetic, tartaric and citric acids attack Al only at first. Metal is covered by layer of hydroxide but on addition of haloid salts, gradual solution ensues. (Ditte, C R. 1898, 127. 919.)

Not attacked by sugar + Aq. (Klein, C R. 102. 1170.)

#### Aluminum arsenide.

Decomp by  $H_2O$  with evolution of  $AsH_3$ . (Wöhler, Pogg. 11. 160.)

Decomp. by  $H_2O$  (Fonzes-Diacon, C. R. 1900, 130. 1315.)

#### Aluminum boride, $Al_2B_3$ .

Very slowly sol. in hot conc  $HCl$  + Aq, and hot  $NaOH$  + Aq, but easily in moderately strong warm  $HNO_3$  + Aq (Hampe, A. 183. 75.)

$Al_2B_3$ . Not attacked by  $HCl$ , or  $KOH$  + Aq. Scarcely attacked by boiling  $H_2SO_4$ . Hot conc  $HNO_3$  + Aq dissolves gradually but completely (Hampe, I. c.)

#### Aluminum borocarbide, $Al_3C_2B_{14}$ .

Insol in  $H_2O$ ,  $HCl$  + Aq,  $H_2SO_4$  + Aq, or

KOH + Aq; slowly sol in hot conc  $\text{HNO}_3$  + Aq. (Hampe, l. c.)

### Aluminum bromide, $\text{AlBr}_3$

*Anhydrous* Dissolved by  $\text{H}_2\text{O}$  with great violence and evolution of much heat Very sol. in alcohol More sol. in  $\text{CS}_2$  than  $\text{AlI}_3$ . (Weber, Pogg. 103. 264)

Sol. in  $\text{SOCl}_2$  (Besson, C. R. 1896, 123. 884.)

Sol in  $\text{C}_2\text{H}_5\text{Br}$ . (Plotnikoff, C. C. 1902, II. 617)

Sol in acetone. (Naumann, B. 1904, 37. 4328); (Fidmann, C. C. 1899, II. 1014)

### Solubility of $\text{AlBr}_3$ in organic liquids

Solvent	t°	Mole per 100	t°	Mole per 100	t°	Mole per 100
Benzophenone	48°	0	130°	43.2	50°	66.0
	45	8.5	140	48.4	38	67.2
	42	13.8	142	50	50	70.7
	38	18.3	140	52.1	60	74.2
	50	21	130	54.5	70	78.3
	60	23.4	120	56.7	80	83.3
	70	25.7	110	58.6	85	86.7
	80	28.1	100	60.3	90	90.7
	90	30.6	90	61.7	93	94.8
	100	33.4	80	62.9	96	100
	110	36.3	70	64.1		
	120	39.6	60	65.1		
Ethylene bromide	10°	0	20°	33.9	70°	72.7
	6	8.4	30	40.1	80	82.3
	2	16.0	40	47.2	90	92.2
	-2	22.9	50	55.1	96	100
Benzoyl chloride	0	5°	0	85°	47	40°
	-2	5	6.5	90	50.8	60
	-5	13.0	80	52.8	70	83.9
	10	17.4	60	56	80	89.2
	30	24.6	40	59.5	90	95.8
	50	31.8	20	63.1	96	100
	70	40	7	65.5		
	80	44.3	20	67.9		

(Menschutkin, Ann. Inst. Pol. P.-le-Gr, 13. 1)

+6 $\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$ .

+15 $\text{H}_2\text{O}$  (Panfiloff, J. B. 1895. 785)

**Aluminum antimony bromide,  $2\text{AlBr}_3, 5\text{SbBr}_3$**   
+24 $\text{H}_2\text{O}$ .

Hygroscopic. Decomp by  $\text{H}_2\text{O}$  (Weinland, B. 1903, 36. 258)

**Aluminum potassium bromide,  $\text{AlBr}_3, \text{KBr}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Weber, Pogg. 103. 267.)

**Aluminum bromide ammonia,  $\text{AlBr}_3, x\text{NH}_3$**

Decomp by  $\text{H}_2\text{O}$ . (Weber, Pogg. 103. 267)

**Aluminum perbromide carbon disulphide,  $\text{AlBr}_3, \text{Br}_4, \text{CS}_2$**

Sol in ether, ethyl bromide, ethylene bromide and benzene, decomp. by  $\text{H}_2\text{O}$  (Plotnikoff, J. Russ. phys. Chem. Soc. 1901, 33. 91, C. C. 1901, I. 1293)

2 $\text{AlBr}_3, \text{Br}_4, \text{CS}_2$ . Sol. in ether and benzene; insol in petroleum ether. (Plotnikoff, l. c.)

**Aluminum bromochloride,  $\text{AlCl}_2\text{Br}$ .**

Deliquescent. Somewhat less violently dissolved by  $\text{H}_2\text{O}$  than is  $\text{AlBr}_3$  (v. Bartsch, Z. anorg. 1907, 55. 154.)

+6 $\text{H}_2\text{O}$  Deliquescent. Sol. in  $\text{H}_2\text{O}$  without evolution of heat (v. Bartsch, Z. anorg. 1907, 55. 155)

**Aluminum carbide,  $\text{Al}_4\text{C}_3$ .**

Decomp. by fused KOH at 100°; insol. in fuming  $\text{HNO}_3$  in the cold, decomp. by  $\text{H}_2\text{O}$ , and dil. acids (Moissan, Bull. Soc. 1894, (3) 11. 1012; C. R. 1894, 119. 16-20.)

Insol in acetone (Naumann, B. 1904, 37. 4328.)

**Aluminum chloride, basic,  $\text{Al}_2\text{O}_3, \text{H}_2\text{O}, \text{HCl}$ .**

Easily sol in  $\text{H}_2\text{O}$ . (Schlumberger, Bull. Soc. 1895, (3) 13. 56)

**Aluminum chloride,  $\text{AlCl}_3$**

*Anhydrous.* Very deliquescent. Sol. in  $\text{H}_2\text{O}$  with a hissing noise and evolution of heat. Solution of  $\text{AlCl}_3$  in  $\text{H}_2\text{O}$  loses HCl on evaporation, and  $\text{AlCl}_3$  is finally wholly converted into  $\text{Al}_2\text{O}_3$ .

Sol in 1432 pts  $\text{H}_2\text{O}$  at 15°. (Gerlach.)

$\text{AlCl}_3$  + Aq containing 19.15 %  $\text{AlCl}_3$  boils at 103.4°,  $\text{AlCl}_3$  + Aq containing 38.3 %  $\text{AlCl}_3$  boils at 112.8° (Gerlach)

### Sp. gr. of $\text{AlCl}_3$ + Aq at 15°.

(Jones & Pearce, Am. Ch. J. 1907, 38, 726.)

Sol. in 1 pt. strong alcohol at 12.5° (Wenzel); easily sol. in ether; sl. sol. in  $\text{CS}_2$ , insol. in ligroine or benzene.

Difficulty sol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29, 374.)

Sol. in  $\text{AlBr}_3$ . (Isbekow, Z. anorg. 1913, 84, 26.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 826.)

Insol. in  $\text{CS}_2$  at ord. temp (Arcetowski, Z. anorg. 1894, 6, 257.)

Sol. in benzonitrile. (Naumann, B. 1914, 47, 1369.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37, 4328.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

Insol. in methylal. (Eidmann, C. C. 1899, II, 1014.)

#### Solubility of $\text{AlCl}_3$ in organic liquids.

Solvent	t°	Mols. per 100	t°	Mols. per 100	t°	Mols. per 100

(Mensehutkin, Ann. Inst. Pol. P.-le-Gr., 13, 1.)

+6H<sub>2</sub>O. Very deliquescent; very sol. in H<sub>2</sub>O. Sol. in 0.25 pt. H<sub>2</sub>O. (Thomson.)

Sol. in 2 pts abs alcohol at ordinary temp., and 1.5 pts at b-pt. (Thomson.)

Completely insol. in a solution of ether in H<sub>2</sub>O sat. with HCl (Havens, Am. J. Sci. 1898, (4) 6, 46)

Aluminum ammonium chloride,  $\text{AlCl}_3 \cdot \text{NH}_4\text{Cl}$  (Baud, A. ch. 1904, (8) 1, 46)

Aluminum antimony chloride.

See Chlorantimonate, aluminum.

Aluminum barium chloride,  $2\text{AlCl}_3 \cdot \text{BaCl}_2$  (Baud, C. R. 1901, 133, 869)

Aluminum calcium chloride, basic.

$3\text{CaO} \cdot \text{CaCl}_2 \cdot \text{Al}_2\text{O}_3 + 10\text{H}_2\text{O}$ . (Stenmetz, Z. phys. Ch. 1905, 52, 466.)

$10\text{CaO} \cdot \text{CaCl}_2 \cdot 6\text{Al}_2\text{O}_3$ . Slowly decomp. by boiling H<sub>2</sub>O. (Gorgeu, Bull. Soc. 1887, (2) 48, 51.)

Aluminum calcium chloride,  $4\text{AlCl}_3 \cdot 3\text{CaCl}_2$  (Baud, A. ch. 1904, (8) 1, 51.)

Aluminum nitrosyl chloride,  $\text{AlCl}_3 \cdot \text{NOCl}$ .

Deliquescent, and decomp. by H<sub>2</sub>O. (Weber Pogg. 118, 471.)

Aluminum palladium chloride,  $\text{AlCl}_3 \cdot \text{PdCl}_2 + 10\text{H}_2\text{O}$ .

See Chloropalladate, aluminum.

Aluminum phosphorus pentachloride,  $\text{AlCl}_3 \cdot \text{PCl}_5$ .

Decomp. violently by H<sub>2</sub>O. (Baudrinont.)

Aluminum phosphoryl chloride,  $\text{AlCl}_3 \cdot \text{POCl}_3$ .

Deliquescent. Sol. in H<sub>2</sub>O with decomp. Sol. in warm  $\text{POCl}_3$ , from which it separates on cooling. (Casselmann, A. 98, 220.)

Aluminum platinum chloride,  $\text{AlCl}_3 \cdot \text{PtCl}_2 + 15\text{H}_2\text{O}$

See Chloroplatinite, aluminum.

Aluminum potassium chloride,  $\text{AlCl}_3 \cdot \text{KCl}$ .

Slowly deliquescent. Sol. in H<sub>2</sub>O with evolution of heat and decomp. (Degen, A. 18, 332.)

Aluminum selenium chloride,  $2\text{AlCl}_3 \cdot \text{SeCl}_4$ .

Sol. in H<sub>2</sub>O with evolution of heat and separation of traces of selenium. (Weber, Pogg. 104, 427.)

Aluminum sodium chloride,  $\text{AlCl}_3 \cdot \text{NaCl}$ .

Much less deliquescent than  $\text{AlCl}_3$ . Sol. in H<sub>2</sub>O with evolution of heat. Upon evaporating, NaCl crystallises out (Wöhler.)

Aluminum strontium chloride,  $4\text{AlCl}_3 \cdot 3\text{SrCl}_2$ . (Baud, A. ch. 1909, (8) 1, 52.)

Aluminum sulphur chloride,  $2\text{AlCl}_3 \cdot \text{SCl}_4$ .

Decomp. by H<sub>2</sub>O with evolution of much

heat and separation of some sulphur. (Weber, Pogg, 104. 421.)

$\text{AlCl}_3, \text{SCl}_2$  Decomp. by  $\text{H}_2\text{O}$  (Ruff, B. 1901, 34. 1757.)

**Aluminum tellurium chloride**,  $2\text{AlCl}_3, \text{TeCl}_4$ .  
Very sol in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Weber, J pr. 76. 313.)

**Aluminum chloride ammonia**,  $\text{AlCl}_3, \text{NH}_3$ .  
Sol. in  $\text{H}_2\text{O}$  (Rose, Pogg, 24. 248.)

Completely sol in  $\text{H}_2\text{O}$  (Baud, C R 1901, 132. 135.)

$\text{AlCl}_3, 2\text{NH}_3$  Very hygroscopic. (Stillman, Am Ch J. 1895, 17. 750.)

$\text{AlCl}_3, 3\text{NH}_3$  Decomp. by  $\text{H}_2\text{O}$ .

$\text{AlCl}_3, 5\text{NH}_3$  M pt  $380^\circ$ . (Baud, C. R. 1901, 132. 135.)

$\text{AlCl}_3, 6\text{NH}_3$  Decomp. by  $\text{H}_2\text{O}$  (Stillman, Am Ch J. 1895, 17. 752.) Somewhat hygroscopic (Baud, C. R. 1901, 132. 135.)

**Aluminum chloride nitric oxide**,  $2\text{AlCl}_3, \text{NO}$

Very hygroscopic Decomp. rapidly in the air Sol in  $\text{KOH} + \text{Aq}$ . (Thomas, C. R. 1895, 121. 130.)

**Aluminum chloride phosphine**,  $3\text{AlCl}_3, \text{PH}_3$

Decomp. by  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq}$  (Rose Pogg, 24. 295.)

**Aluminum chloride hydrogen sulphide**.

Deliquescent. Decomp. by  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq}$  (Wöhler.)

**Aluminum chloride sulphur dioxide**,  $\text{AlCl}_3, \text{SO}_2$

Decomp. by  $\text{H}_2\text{O}$ , alcohol, or benzene (Adrianowski, B. 12. 688.)

$2\text{AlCl}_3, \text{SO}_2$ . (Baud, A. ch 1904, (S) 1. 32.)

**Aluminum cobalt**,  $\text{Co}_2\text{Al}_3$ .

Sol in strong acids (Brunck, B. 1901, 34. 2734.)

**Aluminum copper**,  $\text{Cu}_4\text{Al}_3$ .

Sol. in aqua regia; decomp. by  $\text{HCl}$  (Brunck, B. 1901, 34. 2733.)

**Aluminum fluoride**,  $\text{AlF}_3$ .

*Anhydrous* Not attacked by  $\text{H}_2\text{O}$  or acids, and only very slightly by boiling conc  $\text{H}_2\text{SO}_4$ . Insol. in boiling  $\text{KOH} + \text{Aq}$ . (Deville, C R 42. 49.)

Insol. in ethyl acetate. (Naumann, B 1910, 43. 314.)

Insol in acetone. (Naumann, B 1904, 37. 4328.)

$+ \frac{1}{2}\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$  Sl. sol. in  $\text{HF}$ . (Baud, C. R. 1902, 135. 1104.)

$+ \text{H}_2\text{O}$ . Completely but only sparingly sol in  $\text{H}_2\text{O}$ . (Mazzuchelli, Real. Ac. Linc. 1907, (5) 16, I. 775; Chem Soc 1907, 92, (2). 549.)

$+ 3\frac{1}{2}\text{H}_2\text{O}$ . Two modifications: (1) Easily sol. in  $\text{H}_2\text{O}$ . Sol in  $\text{HF}$ . (2) Insol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{HF}$ . (Baud, C R. 1902, 135. 1104.)

$+ 7\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ . (Deville, A. ch (3) 61. 329.)

*Min Fluelsite*.

$+ 8\frac{1}{2}\text{H}_2\text{O}$ . Very efflorescent Sat. solution contains 3.85 g.  $\text{AlF}_3$  per 100 g. at  $11^\circ$  and 1.2 g. at  $-0.2^\circ$  (Mazzuchelli, Real. Ac. Linc. 1907, (5) 16, I. 775, Chem Soc. 1907, (2), 92. 549.)

**Aluminum hydrogen fluoride**,  $3\text{AlF}_3, 2\text{HF} + 5\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ ; precipitated by alcohol. (Deville)

$2\text{AlF}_3, \text{HF} + 5\text{H}_2\text{O}$ . (Deville, A. ch. (6) 61. 329.)

**Aluminum ammonium fluoride**,  $\text{AlF}_3, \text{NH}_4\text{F}$ .

Somewhat sol. in  $\text{H}_2\text{O}$ ; insol. in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$  or  $\text{NH}_4\text{F}$  (Berzelius, Pogg 1. 45.)

$\text{AlF}_3, 2\text{NH}_4\text{F} + 1\frac{1}{2}\text{H}_2\text{O}$ . Sol. in 100 pts.  $\text{H}_2\text{O}$  at  $16^\circ$  (Baud, C. R. 1902, 135. 1338.)

$\text{AlF}_3, 3\text{NH}_4\text{F}$ . Nearly insol in  $\text{H}_2\text{O}$ ; easily sol. in dil acids. (Petersen, J pr. (2) 40. 35.)

Quite easily sol in  $\text{H}_2\text{O}$ , but insol in  $\text{NH}_4\text{F} + \text{Aq}$ . (Helmholtz, Z. anorg 3. 129.)

**Aluminum barium fluoride**.

Apparently not obtained in pure state. (Röder)

**Aluminum calcium fluoride**,  $\text{AlF}_3, \text{CaF}_2 + \text{H}_2\text{O}$ .

*Min Evigtokite*.

**Aluminum calcium sodium fluoride**,  $\text{AlF}_3, \text{CaF}_2, \text{NaF} + \text{H}_2\text{O}$ .

*Min. Pachnolite*

**Aluminum cobaltous fluoride**,  $\text{AlF}_3, \text{CoF}_2 + 7\text{H}_2\text{O}$ .

Sol in dil  $\text{HF} + \text{Aq}$  (Weinland, Z. anorg. 1899, 22. 272.)

**Aluminum cupric fluoride**,  $2\text{AlF}_3, \text{CuF}_2$ .

Very slowly but completely sol in  $\text{H}_2\text{O}$ . (Berzelius)

$\text{AlF}_3, 2\text{CuF}_2 + 11\text{H}_2\text{O}$ . Sol in dil  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg 1899, 22. 272-76.)

$2\text{AlF}_3, 3\text{CuF}_2 + 18\text{H}_2\text{O}$ . Sol in dil  $\text{HF} + \text{Aq}$  (Weinland)

**Aluminum cupric hydrogen fluoride**,  $\text{AlF}_3, \text{CuF}_2, \text{HF} + 8\text{H}_2\text{O}$ .

Efflorescent in the air. Sol. in dil  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg 1899, 22. 272.)

**Aluminum iron (ferrous) fluoride**,  $\text{AlF}_3, \text{FeF}_2 + 7\text{H}_2\text{O}$ .

Sl. sol. in dil  $\text{HF} + \text{Aq}$  (Weinland, Z. anorg. 1899, 22. 270.)

**Aluminum lithium fluoride**.

Insol. in  $\text{H}_2\text{O}$  (Berzelius)

**Aluminum magnesium fluoride**.

$2\text{AlF}_3, \text{MgF}_2$  (?) (Röder.)

**Aluminum nickel fluoride,  $\text{AlF}_3, \text{NiF}_2 + 7\text{H}_2\text{O}$ .**

Sl. sol. in dl.  $\text{HF} + \text{Aq}$ . (Wernland, Z. anorg. 1899, 22, 271.)

**Aluminum potassium fluoride,  $\text{AlF}_3, 3\text{KF}$ .**

Very sl. sol. in acid solutions, and still less in  $\text{H}_2\text{O}$  (Gay-Lussac and Thénard)

$\text{AlF}_3, 2\text{KF}$ . As above

**Aluminum silicon fluoride.**

See Fluosilicate, aluminum.

**Aluminum sodium fluoride.**

$2\text{AlF}_3, 3\text{NaF}$  Min *Chiolite*

$\text{AlF}_3, 2\text{NaF}$  Min. *Chiodineffite*.

$\text{AlF}_3, 3\text{NaF}$  Min. *Cryolite*

Sl. sol. in  $\text{H}_2\text{O}$  Insol in  $\text{HCl} + \text{Aq}$ . Decomp by  $\text{H}_2\text{SO}_4$ , or by boiling with  $\text{NaOH} + \text{Aq}$

**Aluminum strontium fluoride.**

As the Ba salt. (Röder)

**Aluminum thallos fluoride,  $2\text{AlF}_3, 3\text{TlF}$ .**

Ppt. Sl. sol. in  $\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1909, 61, 243)

**Aluminum zinc fluoride,  $\text{AlF}_3, \text{ZnF}_2 + 7\text{H}_2\text{O}$**

Sol in dl.  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg. 1899, 22, 272)

$2\text{AlF}_3, \text{ZnF}_2$ . Slowly but completely sol in  $\text{H}_2\text{O}$  (Berzelius)

**Aluminum hydroxide,  $\text{Al}_2\text{O}_3, \text{H}_2\text{O}$   
= $\text{Al}_2\text{O}_3(\text{OH})_3$ .**

Dehydrated by conc. acids, without dissolving. (Becquerel, C. R., 67, 108)

Min. *Diaspore*. Insol in  $\text{HCl} + \text{Aq}$ , and not attacked by boiling conc.  $\text{H}_2\text{SO}_4$ , unless it has been ignited

$\text{Al}_2\text{O}_3, 2\text{H}_2\text{O} = \text{Al}_2\text{O}_3(\text{OH})_4$ . Pptd. Al hydroxide, when boiled twenty hours with  $\text{H}_2\text{O}$  is insol in acids and alkalis, and has the above composition. (St. Gilles, A. ch. (3) 48, 57)

Min *Bauxite*.

**Soluble modifications**—(a) *Meta-aluminum hydroxide* From basic Al acetate Sol. in  $\text{H}_2\text{O}$  and more readily in  $\text{HC}_2\text{H}_3\text{O}_2$ . The aqueous solution is coagulated by traces of alkalis, many acids, and salts, while other acids and salts have no effect. Thus, 1 pt.  $\text{H}_2\text{SO}_4$  in 1000 pts.  $\text{H}_2\text{O}$ , added to 7000 pts. of above solution containing 20 pts.  $\text{Al}_2\text{O}_3$ , converts the liquid into a nearly solid mass. Citric, tartaric, oxalic, chromic, molybdic, racemic, suberic, salicylic, benzoic, gallic, lactic, cinnamic, butyric, valeric, camphoric, picric, uric, meconic, cemenic, and hemipinic acids act in the same way.  $\text{HCl}$  and  $\text{HNO}_3$  have far less action, 600 mols being necessary to produce the same effect as 1 mol  $\text{H}_2\text{SO}_4$ , while acetic, formic, boric, arsenous, pyro-

meconic, and opianic acids do not coagulate the solution, except when moderately conc. 1 pt.  $\text{KOH}$  in 1000 pts.  $\text{H}_2\text{O}$  coagulates 6000 pts. of the solution.  $\text{NaOH}$ ,  $\text{NH}_4\text{OH}$ , and  $\text{Ca}(\text{OH})_2$  have the same effect.

The solution is not coagulated by acetates, unless added in large quantity, and even then the ppt. is redissolved when treated with  $\text{H}_2\text{O}$ . Nitrates and chlorides coagulate with difficulty;  $\text{Na}_2\text{SO}_4$ ,  $\text{MgSO}_4$ , and  $\text{CaSO}_4 + \text{Aq}$ , however, have as strong an action as a liquid containing the same amount of  $\text{H}_2\text{SO}_4$ . A teaspoonful of the solution introduced into the mouth solidifies at once from the action of the saliva. The ppt. formed by acids is not sol in an excess of the acid, but by the long continued action of conc.  $\text{H}_2\text{SO}_4$ , especially if hot, the ppt. is dissolved; boiling conc.  $\text{HCl} + \text{Aq}$  also dissolves it, but less readily than  $\text{H}_2\text{SO}_4$ . The ppt. is sol. in boiling conc.  $\text{KOH} + \text{Aq}$ . The residue, when the solution is evaporated at  $100^\circ$ , has composition  $\text{Al}_2\text{O}_3, 2\text{H}_2\text{O}$ , and is insol in acids. (Crum, Chem. Soc. 6, 225)

(b) *By Dialysis*. Sol. in  $\text{H}_2\text{O}$ , from which it is separated by extremely small amounts of various substances, as acids, ammonia, salts (especially  $\text{K}_2\text{SO}_4$ ), caramel, etc. An excess of acid dissolves the coagulum. If the solution contains 0.5%  $\text{Al}_2\text{O}_3$  or less, it may be boiled without change, but the hydroxide separates out suddenly when it is reduced to  $\frac{1}{2}$  its vol., and even very dil. solutions gelatinize spontaneously in a few days. The solution is not coagulated by alcohol or sugar (Graham, A. 121, 41.)

$\text{Al}_2\text{O}_3, 3\text{H}_2\text{O} = \text{Al}(\text{OH})_3$ . *Crystallized* Difficultly sol. in acids and alkalis. (Cossa, N. Cim. (2) 3, 228) Insol in boiling  $\text{HCl} + \text{Aq}$ . (Wöhler, A. 113, 249) Sl. sol in  $\text{KOH} + \text{Aq}$ ; nearly insol in cold  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ ,  $\text{HNO}_3 + \text{Aq}$ ; very slowly sol in hot  $\text{HCl} + \text{Aq}$ , more readily in hot  $\text{H}_2\text{SO}_4$ . (v. Bonsdorff, Pogg. 27, 275.)

$\alpha$ -modification. Unstable. Changes into  $\beta$ -modification. Sol. in  $\text{N-H}_2\text{SO}_4$  at ord. temp. Sol in  $\text{N-NaOH}$  and in hot  $\text{NaOH}$  of concentration  $5\text{Na}_2\text{O}, 100\text{H}_2\text{O}$ . (Russ, Z. anorg. 1904, 41, 226)

$\beta$ -modification. Insol in  $\text{N-H}_2\text{SO}_4$  at ord. temp. Difficultly sol in warm  $\text{N-NaOH}$ , but easily sol. in hot  $\text{NaOH}$  of concentration  $5\text{Na}_2\text{O}, 100\text{H}_2\text{O}$ . Its solubility in  $\text{NaOH}$  increases with increase in concentration of the hydroxyl ions (Russ)

$\delta$ -modification. Easily sol. in conc.  $\text{H}_2\text{SO}_4$ , only sl. sol in  $\text{HCl}$ ,  $\text{HNO}_3$ , or acetic acids, or in alkali +  $\text{Aq}$  (Tommasi, C. C. 1905, II, 605.)

Min *Gibbsite*. Sol. in  $\text{HCl} + \text{Aq}$ , and dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Readily sol in conc.  $\text{KOH}$ , and  $\text{NaOH} + \text{Aq}$ .

*Precipitated*. Completely insol. in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{CO}_3 + \text{Aq}$ . Easily sol. in acids when freshly pptd., but solubility diminishes on standing.

Easily sol. in  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$ . (Sonnenschein)

Herz (Z. anorg. 25, 155) found that aluminum hydroxide which has been dried in a vacuum desiccator requires for solution in  $\text{NaOH} + \text{Aq.}$  3 atoms  $\text{Na}$  to 1 atom  $\text{Al}$ . Slade (Z. Elektrochem. 1911, 17, 261) was unable to obtain this result. Herz says Slade's error is due to insufficient shaking of the solution. (Herz, Z. Elektrochem. 1911, 17, 403.)

New solubility determinations verify the statement of Herz (Z. anorg. 25, 155) that the solubility of  $\text{Al}(\text{OH})_3$  in  $\text{NaOH} + \text{Aq.}$  is proportional to the concentration of  $\text{NaOH}$ . They do not, however, verify his statement that the ratio  $\text{Na} : \text{Al}$  in the solutions is always 3 : 1, for the author finds that the ratio  $\text{Na} : \text{Al}$  varies from 2 : 1 to 10 : 1 depending on the conditions of precipitation and the method and duration of drying of the  $\text{Al}(\text{OH})_3$ . (Slade, Z. Elektrochem. 1912, 18, 1.)

$\text{Al}$  sol in  $\text{NH}_4\text{OH} + \text{Aq.}$  when freshly pptd., but presence of  $\text{NH}_4$  salts diminish its solubility, and it separates out completely after long standing. (Fresenius.)

Somewhat sol in  $\text{NH}_4\text{OH} + \text{Aq.}$  the more readily the larger the vol. of  $\text{H}_2\text{O}$ . Somewhat sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  but less than in  $\text{NH}_4\text{OH} + \text{Aq.}$   $\text{Al}$  sol. in dil.  $\text{NH}_4\text{Cl} + \text{Aq.}$  unless that salt be in large excess. It is finally wholly pptd. if allowed to stand several days.

1875 pts.  $\text{NH}_4\text{OH} + \text{Aq.}$  (4 %  $\text{NH}_4\text{OH}$ ) dissolve an amt. of  $\text{Al}(\text{OH})_3$  corresponding to one pt.  $\text{Al}_2\text{O}_3$ ;  $\text{NH}_4\text{Cl}$  prevents this solubility almost completely. (Hanamann, Pharm. Viertelj. 12, 527.)

$\text{Al}(\text{OH})_3$  prepared by ppt. of a solution of  $\text{Al}(\text{NO}_3)_3$  with  $\text{NH}_4\text{OH}$ , filtered and washed, is insol. in  $\text{NH}_4\text{OH} + \text{Aq.}$

$\text{Al}(\text{OH})_3$  prepared by pptn. of a solution of potassium aluminate with  $\text{NH}_4\text{Cl}$ , is sol. in a large excess of  $\text{NH}_4\text{OH}$  if this is added to the ppt. at once. This modification which is sol. in  $\text{NH}_4\text{OH}$  is unstable and easily goes over into the modification which is insol. in  $\text{NH}_4\text{OH}$ . (Renz, B. 1903, 36, 2751.)

Conc.  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  does not dissolve  $\text{Al}(\text{OH})_3$ , and not a trace is dissolved by boiling conc.  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Weeren, Pogg. 92, 97.)

With  $\text{NH}_4\text{F} + \text{Aq.}$  it forms a double salt,  $\text{AlF}_3 \cdot 3\text{NH}_4\text{F}$ , which is sol. in  $\text{H}_2\text{O}$ , but not in  $\text{NH}_4\text{F} + \text{Aq.}$  (Helmholtz, Z. anorg. 3, 127.)

Insol. in  $(\text{NH}_4)_2\text{S} + \text{Aq.}$  (Malaguti and Durocher, A. ch. (3) 17, 421.) Fuchs found, on the contrary, that it is not wholly insol. in  $(\text{NH}_4)_2\text{S} + \text{Aq.}$  (Fresenius, Quant.)

Insol. in  $\text{FeCl}_3 + \text{Aq.}$  (Béchamp.)

Determinations of the solubility of aluminum hydroxide in  $\text{AlCl}_3 + \text{Aq.}$  show that part goes into solution to form a compound, while the greater part is in the colloidal form. (Fischer, Z. anorg. 1904, 40, 46.)

Only sl. sol. in conc.  $\text{Al}_2(\text{SO}_4)_3 + \text{Aq.}$  but solubility increases with decrease in concentration of  $\text{Al}_2(\text{SO}_4)_3$ , until it reaches a maximum at a concentration of 32 %  $\text{Al}_2(\text{SO}_4)_3$  at 20°, 28 % at 40°, and 38 % at 60°. With further decrease in concentration of  $\text{Al}_2(\text{SO}_4)_3$ ,

the solubility of  $\text{Al}(\text{OH})_3$  in  $\text{Al}_2(\text{SO}_4)_3$  diminishes. (Kreman, C. A. 1909, 2422.)

Sol in  $\text{Ba}(\text{OH})_2 + \text{Aq.}$  (Rose.)

Sol in boiling  $\text{Fe}(\text{NO}_3)_3$ ,  $\text{Cr}(\text{NO}_3)_3$ ,  $\text{Bi}(\text{NO}_3)_3$ ,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{HgNO}_3$ ,  $\text{SnCl}_2$ , and  $\text{SbCl}_3 + \text{Aq.}$  (Persoz.)

Insol. in  $\text{HCN}$  or cold  $\text{KCN} + \text{Aq.}$  but sl. sol. in hot  $\text{KCN} + \text{Aq.}$  (Rose.)

Insol. in  $\text{K}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq.}$  (Osann, 1821.)

When moist, sol. in  $\text{H}_2\text{SO}_4 + \text{Aq.}$  from which it is reprecipitated on boiling. (Berthier, A. ch. (3) 7, 76.)

Somewhat sol. in  $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq.}$  (Mercier.)

Not pptd. by  $\text{NH}_4\text{OH} + \text{Aq.}$  in presence of  $\text{Na}$  citrate. (Spiller.)

Sol. in ethyl amine, amyl amine, alkaline, ethyl picoline hydroxide, stubethylum hydroxide, triethyltoluene ammonium hydroxide +  $\text{Aq.}$  (Friedlander.)

Sol. in alkyl amines. (Renz, B. 1903, 36, 2751.)

Insol. in acetone. (Naumann, B. 1904, 37, 4328.)

Sol to a considerable extent in  $\text{K}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq.}$

Very sl. sol. in cane sugar +  $\text{Aq.}$  (Ramsey.)

Solubility in glycerine +  $\text{Aq.}$  containing about 60 % by vol. of glycerine 100 cc. of the solution contain 0.25 g.  $\text{Al}_2\text{O}_3$ . (Müller, Z. anorg. 1905, 43, 322.)

$\text{Al}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq.}$  and alcohol. Sol. in  $\text{HCl}$  and  $\text{HNO}_3 + \text{Aq.}$  (Zunino, Gazz. ch. it 1900, 30 (1), 194.)

$\text{Al}_2\text{O}_3 \cdot \text{H}_2\text{O}$ , "Trialuminum hydroxide."

Not sol. in conc. acids in the cold; not sol. in  $\text{KOH}$  (cold) and only sl. sol. in hot  $\text{KOH}$ . Characterized by its solubility in exactly one mol. dil.  $\text{HCl}$ . Dil. solutions do not gelatinize even on long standing. Conc. solution of  $\text{NH}_4\text{Cl}$  and other salts cause ppt. which redissolves on addition of  $\text{H}_2\text{O}$ .

Alkalies and alkali carbonates decompose the salt with  $\text{HCl}$  and ppt. trialuminum hydroxide.  $\text{H}_2\text{SO}_4$  and sol. sulphates give insol. compds. with the hydrate.  $\text{HNO}_3$ , like  $\text{HCl}$  gives soluble compds. with the hydrate. (Structural formula given.) (Sehlumberger, Bull. Soc. 1895, (5) 13, 41-65; C. C. 1895, I, 421.)

Aluminum iodide,  $\text{AlI}_3$ .

Anhydrous. Fumes on air and deliquesces. Sol. in  $\text{H}_2\text{O}$  with evolution of much heat. Sol. in  $\text{CS}_2$  and crystallizes from the hot sat. solution on cooling. (Weber.) Sol. in alcohol (Weber), ether and tetraachloromethane. (Gustavson.)

Sol. in  $\text{AlBr}_3$ . (Isbekow, Z. anorg. 1913, 84, 26.)

+  $6\text{H}_2\text{O}$  Very sol. in  $\text{H}_2\text{O}$ .

Aluminum mercuric iodide,  $\text{AlI}_3 \cdot \text{HgI}_2 + 8\text{H}_2\text{O}$ .

Very deliquescent; sol. in  $\text{H}_2\text{O}$  without decomposition. (Dubois, C. R. 1908, 146, 1028.)

- Aluminum potassium iodide,  $\text{AlI}_3$ , KI**  
Sol in  $\text{H}_2\text{O}$  with evolution of much heat. (Weber, Pogg. 101. 469)
- Aluminum iodide ammonia,  $\text{AlI}_3$ ,  $3\text{NH}_3$**   
Decomp by  $\text{H}_2\text{O}$  (Weber, Pogg. 103. 263.)
- Aluminum iodide mercuric oxydide,  $2\text{AlI}_3$ ,  $\text{HgO}$ ,  $3\text{HgI}_2 + 15\text{H}_2\text{O}$**   
(Duboin, C. R. 1907, 146. 714.)
- Aluminum iron,  $\text{FeAl}_3$**   
Readily sol. in strong  $\text{HNO}_3$ . (Brunck, B. 1901, 34. 2734)
- Aluminum manganese,  $\text{Mn}_2\text{Al}_7$**   
Sol in strong  $\text{HCl}$ . (Brunck, B. 1901, 34. 2735)
- Aluminum molybdenum,  $\text{Al}_3\text{Mo}$**   
Easily sol. in hot  $\text{HNO}_3$  or  $\text{HCl}$  (Wohler, A. 1860, 115. 103)  
 $\text{Al}_3\text{Mo}$ . (Guillet, C. R. 1901, 133. 293)  
 $\text{AlMo}$ . (Guillet.)  
 $\text{AlMo}_2$ . Not attacked by  $\text{dil. HCl} + \text{Aq.}$  (Guillet.)  
 $\text{AlMo}_3$ . Not attacked by  $\text{HCl} + \text{Aq}$  (Guillet)
- Aluminum nickel,  $\text{Al}_3\text{Ni}$**   
Sol. in strong acids (Brunck, B. 1901, 34. 2734.)
- Aluminum nitride,  $\text{Al}_3\text{N}_3$**   
Slowly attacked by hot or cold  $\text{H}_2\text{O}$ . Decomp by acids and aqueous solutions of the alkalis, especially when they are concentrated. (Mallet, A. 186. 155)  
Easily decomp.  $\text{H}_2\text{O}$  when finely powdered. (Rossi, C. R. 1895, 121. 942)  
Decomp by moist air and by boiling  $\text{H}_2\text{O}$  and by alkalis +  $\text{Aq.}$  (Franck, Ch. Z. 1897, 21. 263.)
- Aluminum oxide,  $\text{Al}_2\text{O}_3$**   
*Crystalline.* Min. *Corundum, sapphire, ruby, emery.* Insol in acids.  
*Amorphous.* Ignited  $\text{Al}_2\text{O}_3$  is insol. in acids except that it dissolves slowly when heated with a mixture of 1 pt  $\text{H}_2\text{SO}_4$  and 1 pt  $\text{H}_2\text{O}$ . (Berzelius.) Slowly sol. in boiling  $\text{HCl} + \text{Aq.}$  (Rose, Pogg. 52. 595)  
Sol. in 22 pts. of a mixture of 8 pts.  $\text{H}_2\text{SO}_4$  and 1 pt.  $\text{H}_2\text{O}$ . (Mitscherlich.) The lower the temperature at which  $\text{Al}_2\text{O}_3$  has been heated, the more sol. it is in acids and alkalis.  
Solubility in (calcium succate + sugar) +  $\text{Aq.}$   
1 l. solution containing 418.6 g sugar and 34.3 g.  $\text{CaO}$  dissolves 1.35 g.  $\text{Al}_2\text{O}_3$ ; 1 l. solution containing 296.5 g. sugar and 24.2 g.  $\text{CaO}$  dissolves 0.32 g.  $\text{Al}_2\text{O}_3$ ; 1 l. solution containing 174.4 g sugar and 14.1 g  $\text{CaO}$  dis-
- solves 0.19 g  $\text{Al}_2\text{O}_3$ . (Bodenbender, J. B. 1865. 600.)  
Insol. in acetone (Naumann, B. 1904, 37. 4328)  
See also Aluminum hydroxide.
- Aluminum peroxide,  $\text{Al}_2\text{O}_3$ ,  $\text{Al}_2\text{O}_3 + 10\text{H}_2\text{O}$**   
Ppt; sol in acids with decomp. (Terni, C. A. 1912. 3038)
- Aluminum oxybromide.**  
Basic aluminum bromides containing three equivalents or less of  $\text{Al}_2\text{O}_3$  to one of  $\text{AlBr}_3$  are sol in  $\text{H}_2\text{O}$ . Those containing more than three equivalents are insol (Ordway, Am. J. Sci. (2) 28. 203.)
- Aluminum oxychloride.**  
Sol. in  $\text{dil. acids}$  or  $\text{alkalis}$ . Decomp. by  $\text{H}_2\text{O}$  (Hautefeuille and Perrey, C. R. 100. 1220.)  
Basic aluminum chlorides containing two equivalents or less of  $\text{Al}_2\text{O}_3$  to one of  $\text{AlCl}_3$  are sol in  $\text{H}_2\text{O}$ . Those containing more than two equivalents are insol. (Ordway)  
 $\text{Al}_2\text{O}_3$ ,  $3\text{AlCl}_3 + 3\text{H}_2\text{O}$  (Tommasi, Bull. Soc. (2) 37. 443.)  
 $\text{Al}_2\text{O}_3$ ,  $8\text{AlCl}_3 + 3\text{H}_2\text{O}$  (Tommasi)  
 $3\text{Al}_2\text{O}_3$ ,  $\text{AlCl}_3 + 15\text{H}_2\text{O}$ . (Tommasi)
- Aluminum phosphide,  $\text{Al}_3\text{P}$**   
Unstable (Franck, Ch. Z. 1898, 22. 240.)  
 $\text{Al}_3\text{P}$ . Decomp. by  $\text{H}_2\text{O}$ . (Fonzes-Diacon, C. R. 1900, 130. 1315.)  
Unstable. (Franck, Ch. Z. 1898, 22. 240.)  
 $\text{Al}_3\text{P}$ . Decomp by  $\text{H}_2\text{O}$  and acids. (Franck.)  
 $\text{Al}_3\text{P}$ . Decomp. by  $\text{H}_2\text{O}$  and acids (Franck, Ch. Z. 1898, 22. 238)  
 $\text{Al}_3\text{P}$ . Unstable (Franck, Ch. Z. 1898, 22. 240)
- Aluminum platinum,  $\text{Pt}_3\text{Al}_{16}$**   
The Al is dissolved out by  $\text{HCl}$ . (Brunck, B. 1901, 34. 2735.)
- Aluminum selenide,  $\text{Al}_2\text{Se}_3$**   
Decomp. by  $\text{H}_2\text{O}$ . (Fonzes-Diacon, C. R. 1900, 130. 1315)
- Aluminum silicide,  $\text{Al}_3\text{Si}_4$**   
More easily sol. in acids than Al. (Winkler, J. pt. 91. 193)
- Aluminum chromium silicide,  $\text{Al}_2\text{Cr}_2\text{Si}_5$**   
Insol in hot conc.  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$  and aqua regia. Sol. in cold  $\text{HF}$  or in  $\text{HF} + \text{HNO}_3$ . Sol in molten alkali. Insol. in  $\text{NaOH} + \text{Aq.}$ ,  $\text{KOH} + \text{Aq}$  or fused  $\text{KClO}_3$  or  $\text{KHSO}_4$ . (Manchot and Kieser, A. 1904, 337. 356.)  
 $\text{Al}_2\text{Cr}_2\text{Si}_5$ . Insol. in hot conc.  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$  and aqua regia. Sol. in  $\text{HF}$  and in molten alkali. (Manchot and Kieser, A. 1904, 337. 358)

**Aluminum tungsten silicide.**

Insol in most acids and aqua regia. Easily sol in HF, HNO<sub>3</sub> and in molten alkali. Not attacked by dil NaOH + Aq. (Manchot and Kieser, A. 1904, 337. 360.)

**Aluminum vanadium silicide, Al<sub>2</sub>V<sub>2</sub>Si<sub>11</sub>.**

Sol. in HF. Not attacked by hot conc HCl, HNO<sub>3</sub>, H<sub>2</sub>SO<sub>4</sub> or aqua regia. Decomp. by fusing with NaOH. Stable toward fused KClO<sub>3</sub>. (Manchot, A. 1907, 357. 134.)

**Aluminum sulphide, Al<sub>2</sub>S<sub>3</sub>.**

Decomp. by H<sub>2</sub>O. Sol in acids and alkalis. (Regelsberger, Z. Elektrochem, 1898, 4. 548.) Al<sub>2</sub>S<sub>3</sub>. Decomp in moist air and by H<sub>2</sub>O. (Wohler.) Insol in acetone. (Naumann, B. 1904, 37. 4328.)

**Aluminum chromium sulphide, Al<sub>2</sub>S<sub>3</sub>.CrS.**

Sl. attacked by HCl + Aq. Gradually decomp by HNO<sub>3</sub>. (Houdard, C. R. 1907, 144. 1115.)

**Aluminum magnesium sulphide, Al<sub>2</sub>S<sub>3</sub>, MgS.**

Decomp. by H<sub>2</sub>O, alcohol and acids. (Houdard, C. R. 1907, 144. 1116.)

**Aluminum potassium sulphide.**

Violently decomposed by H<sub>2</sub>O. (St. Claire Deville, J. pr. 71. 293.) Does not exist. (Giatama, R. t. c. 3. 4.)

**Aluminum silver sulphide, 5Al<sub>2</sub>S<sub>3</sub>, 4Ag<sub>2</sub>S.**

(Cambé, Real. Ac. Line (5) 21, II. 838.)

**Aluminum telluride.**

Decomp by H<sub>2</sub>O. (Wohler, Pogg 11. 160.)

**Aluminum titanide, Al<sub>2</sub>Ti.**

Not attacked by H<sub>2</sub>O or by cold HNO<sub>3</sub>. Sl. sol. in warm HNO<sub>3</sub>. Sol. in cold conc. H<sub>2</sub>SO<sub>4</sub> or HCl. Sol. in warm KOH + Aq. (Levy, A. ch. 1902, (6) 25. 449.)

Sol. in HCl and in aqua regia. (Guillet.) Al<sub>2</sub>Ti. Sol. in hot dil. H<sub>2</sub>SO<sub>4</sub> and in hot KOH + aq. Sol. in hot conc acids (Manchot, A. 1907, 357. 142.)

Al<sub>2</sub>Ti<sub>3</sub>. Aluminothermic product is sol. in HCl and aqua regia. (Guillet.)

**Aluminosulphuric acid, Al<sub>2</sub>(SO<sub>4</sub>H)<sub>3</sub> + 7 H<sub>2</sub>O**

Sol. in H<sub>2</sub>O with decomp. into Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub> and H<sub>2</sub>SO<sub>4</sub>. (Silberberger, M. 1904, 25. 222.)

**Diamidé, N<sub>2</sub>H<sub>4</sub>.**

See Hydrazine.

**Amidochromic acid.****Amidochromates.**

Do not exist. Those described by Darm-

städter and Löwenthal are impure bichromates. (Wyrouboff, Bull. Soc. 1894, (3) 11. 845-53; C. C. 1894, II. 610.)

**Ammonium amidochromate, (NH<sub>4</sub>)NH<sub>2</sub>CrO<sub>3</sub>.**

Very sol in H<sub>2</sub>O. (Löwenthal, Z. anorg. 1894, 6. 363.)

Is ammonium dichromate. (Wyrouboff, Bull. Soc. (3) 11. 845.)

**Lithium amidochromate, LiNH<sub>2</sub>CrO<sub>3</sub>.**

Very sol in H<sub>2</sub>O and acids. (Löwenthal, Z. anorg. 1894, 6. 364.)

**Potassium amidochromate, KCrO<sub>3</sub>NH<sub>2</sub>.**

Sol only in H<sub>2</sub>O. Sat. solution in H<sub>2</sub>O contains 13 % of the salt. (Heintze, J. pr. (2) 4. 214.)

**Amidophosphoric acid, HPO<sub>3</sub>(NH<sub>2</sub>) = PO(NH<sub>2</sub>)(OH)<sub>2</sub>.**

Sol in H<sub>2</sub>O, but decomp. on standing or by heat. (Stokes, Am. Ch. J. 15. 198.)

**Aluminum amidophosphate.**

Ppt. Sol in NH<sub>4</sub>OH + Aq. (Stokes.)

**Ammonium amidophosphate, NH<sub>4</sub>HPO<sub>3</sub>(NH<sub>2</sub>)**

Very sol. in H<sub>2</sub>O. (Stokes.)

**Barium amidophosphate, BaPO<sub>3</sub>(NH<sub>2</sub>) + H<sub>2</sub>O.**

Very sl. sol in H<sub>2</sub>O. (Stokes.) BaH<sub>2</sub>(PO<sub>3</sub>NH<sub>2</sub>)<sub>2</sub> + 2½ H<sub>2</sub>O. Quite difficultly sol. in H<sub>2</sub>O. (Stokes.)

**Calcium amidophosphate, CaPO<sub>3</sub>(NH<sub>2</sub>).**

Much less sol in H<sub>2</sub>O than Ba salt. (Stokes.) CaH<sub>2</sub>(PO<sub>3</sub>NH<sub>2</sub>)<sub>2</sub>. Much less sol. in H<sub>2</sub>O than the Ba salt. (Stokes.)

**Chromic amidophosphate.**

Ppt. Sol. in warm NH<sub>4</sub>OH + Aq. (Stokes.)

**Cobalt amidophosphate.**

Neutral. Ppt.

Acid. Sl. sol. in H<sub>2</sub>O; sol. in NH<sub>4</sub>OH + Aq.

**Cupric amidophosphate.**

Neutral. Sl. sol. in H<sub>2</sub>O.

Acid. Nearly insol. in H<sub>2</sub>O.

**Ferrous amidophosphate.**

Neutral. Sol. in much H<sub>2</sub>O, and in HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> or NH<sub>4</sub>OH + Aq.

Acid. Nearly insol. in H<sub>2</sub>O or NH<sub>4</sub>Cl + Aq. Sol. in NH<sub>4</sub>OH + Aq.

**Ferric amidophosphate.**

Neutral. Ppt. Sol. in excess of alkali.

amidophosphate and in  $\text{NH}_4\text{OH} + \text{Aq}$  Insol.  
in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$   
Acid. As the neutral salt.

Hydroxylamine amidophosphate,  
 $(\text{NH}_2\text{O})\text{HPO}_2(\text{NH}_2)$   
Sl. sol. in  $\text{H}_2\text{O}$ . (Stokes)

Lithium amidophosphate,  $\text{LiHPO}_2(\text{NH}_2)$ .  
Sl. sol. in  $\text{H}_2\text{O}$  (Stokes.)

Magnesium amidophosphate,  $\text{MgPO}_2(\text{NH}_2)$   
 $+ 7\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ ; quite easily sol. in dil.  
 $\text{NH}_4\text{Cl} + \text{Aq}$ . Sol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Stokes)  
 $\text{MgH}_2(\text{PO}_2\text{NH}_2)_2 + 3\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  
 $\text{NH}_4\text{Cl} + \text{Aq}$  (Stokes)

Manganese amidophosphate.  
Neutral Ppt.  
Acid Sl. sol. in  $\text{H}_2\text{O}$ .

Nickel amidophosphate.  
Neutral Ppt. Sol. in  $\text{HC}_2\text{H}_3\text{O}_2$  or  
 $\text{NH}_4\text{OH} + \text{Aq}$   
Acid Sl. sol. in  $\text{H}_2\text{O}$

Potassium amidophosphate,  $\text{K}_2\text{PO}_2(\text{NH}_2)$ .  
Very sol. in  $\text{H}_2\text{O}$  and not decomp. by boiling.  
(Stokes)  
 $\text{KHPO}_2(\text{NH}_2)$ . Easily sol. in cold  $\text{H}_2\text{O}$ ,  
insol. in alcohol. (Stokes)

Silver amidophosphate,  $\text{Ag}_2\text{PO}_2(\text{NH}_2)$ .  
Almost insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  or  
 $\text{NH}_4\text{OH} + \text{Aq}$   
 $\text{AgHPO}_2(\text{NH}_2)$ . Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol.  
in dil.  $\text{HNO}_3$  or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ , also in  
 $\text{NH}_4\text{OH} + \text{Aq}$ .

Sodium amidophosphate,  $\text{Na}_2\text{PO}_2(\text{NH}_2)$   
Not deliquescent, very sol. in  $\text{H}_2\text{O}$ , pptd.  
from aqueous solution by alcohol. (Stokes.)  
 $\text{NaHPO}_2(\text{NH}_2) + \frac{1}{2}(\text{?})\text{H}_2\text{O}$  Nearly insol.  
in cold, and decomp. by hot  $\text{H}_2\text{O}$  Insol. in  
alcohol.

Zinc amidophosphate.  
Neutral. Perceptibly sol. in  $\text{H}_2\text{O}$ .  
Acid. Sl. sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH}$  or  
 $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ .

Diamidophosphoric acid,  $\text{PO}(\text{NH}_2)_2\text{OH}$   
Sol. in cold  $\text{H}_2\text{O}$ ; almost insol. in alcohol,  
stable in the air but decomp. when heated and  
by boiling in aq. solution. (Stokes, Am. Ch.  
J. 1894, 16. 130.)

Barium diamidophosphate,  $[\text{PO}(\text{NH}_2)_2\text{O}]_2\text{Ba}$   
Very sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol; aq.  
solution decomp. slowly. (Stokes, Am. Ch.  
J. 1894, 16. 134)

Magnesium diamidophosphate,  $[\text{PO}(\text{NH}_2)_2\text{O}]_2\text{Mg}$ .  
Sol. in  $\text{H}_2\text{O}$ , insol. in alcohol. (Stokes.)

Potassium diamidophosphate,  $\text{PO}(\text{NH}_2)_2\text{OK}$ .  
Sol. in  $\text{H}_2\text{O}$ ; not deliquescent; insol. in  
alcohol. (Stokes.)

Silver diamidophosphate,  $\text{PO}(\text{NH}_2)_2\text{OAg}$ .  
Very stable, insol. in  $\text{H}_2\text{O}$ . Very sol. in  
 $\text{NH}_4\text{OH} + \text{Aq}$ . (Stokes.)

Sodium diamidophosphate,  $\text{PO}(\text{NH}_2)_2\text{ONa}$ .  
Sol. in  $\text{H}_2\text{O}$ ; not deliquescent; insol. in  
alcohol (Stokes)

Diamidotrihydroxylphosphoric acid.

Silver diamidotrihydroxylphosphate,  
 $(\text{AgO})_2\text{P}(\text{NHAg})_2$   
(Stokes, Am. Ch. J. 1894, 16. 147)  
 $(\text{AgO})_2\text{P}(\text{NH}_2)(\text{NHAg})$ . Insol. in cold  
 $\text{H}_2\text{O}$  (Stokes)  
 $(\text{AgO})_2\text{P}(\text{NH}_2)_2$  Decomp. by cold  $\text{H}_2\text{O}$   
(Stokes.)  
 $+ 2\text{H}_2\text{O}$  Decomp. by boiling  $\text{H}_2\text{O}$ .  
(Stokes.)

Amidoimidophosphoric acid.

Amidohezimidoheptaphosphoric acid,  $\text{OH}$ .  
 $\text{PO}(\text{NH}_2)[\text{NH PO}(\text{OH})]_6\text{NH PO}(\text{OH})_2$   
 $= \text{P}_7\text{N}_7\text{O}_{15}\text{H}_{18}$   
Known only in solution in  $\text{H}_2\text{O}$ . (Stokes,  
Am. Ch. J. 1898, 20. 758)

Silver diamidopyrimidophosphate,  
 $\text{NH}(\text{PO.NH}_2\text{OAg})_2$ .  
Almost insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
(Stokes, Am. Ch. J. 1894, 16. 136.)

Silver amidotetrimido pentaphosphate,  
 $\text{P}_5\text{N}_4\text{O}_{14}\text{H}_5\text{Ag}_5$   
Ppt. (Stokes, Am. Ch. J. 1898, 20. 752.)

Silver amidohezimidoheptaphosphate,  
 $\text{P}_7\text{N}_7\text{O}_{15}\text{H}_5\text{Ag}_7$   
Ppt., decomp. by acetic acid. (Stokes,  
Am. Ch. J. 1898, 20. 759.)

Sodium amidodiamidotriphosphate,  
 $\text{NH PO}(\text{ONa})_2$   
 $\text{PO ONa} < \text{NHPO}(\text{ONa})\text{NH}_2$ .  
 $= \text{P}_3\text{N}_3\text{O}_4\text{H}_4\text{Na}_4 + \text{H}_2\text{O}$   
Unstable; sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol.  
(Stokes, Am. Ch. J. 1896, 18. 643.)

Sodium amidohezimidoheptaphosphate,  
 $\text{P}_7\text{N}_7\text{O}_{15}\text{H}_5\text{Na}_7$ .  
Sol. in  $\text{H}_2\text{O}$ ; pptd. by alcohol. (Stokes,  
Am. Ch. J. 1898, 20. 758.)

**Amidophosphimic acid.**Silver amidophosphumate,  $P(NH)NH_4(OAg)_3$ .Decomp. by heat; decomp. in contact with  $H_2O$ . (Stokes, Am. Ch. J. 1894, 16. 139.) $(AgO)_3P(NAg)(NHAg)$ . (?) Sl. sol. in  $NH_4OH + Aq$ . (Stokes, Am. Ch. J. 1894, 16. 149.)**Amidosulphonic acid,  $HOSO_2NH_2$ .**Easily sol. in  $H_2O$ , less easily in alcohol. (Berglund, B. 9. 252 and 1896.)Very stable, less easily sol. in  $H_2O$  than its K salt. (Raschig, A. 241. 177.)Stable in air. Non-deliquescent when cold. Sol. in 5 pts  $H_2O$  at  $0^\circ$  and in  $2\frac{1}{2}$  pts.  $H_2O$  at  $70^\circ$ . Solution in  $H_2O$  can be boiled several minutes without decomp. Solubility is decreased by addition of  $H_2SO_4$ , so that if  $1\frac{1}{5}$ – $1\frac{1}{4}$  pt  $H_2SO_4$  is added to  $H_2O$ , 100 pts. of the liquid dissolve only 3 pts  $HOSO_2NH_2$  in the cold. Pptd. from solution by  $HNO_3$  or glacial acetic acid, but not by  $HCl$ . Solubility is decreased by presence of  $NaHSO_4$ . (Divers and Haga, Chem. Soc. 1896, 69. 1641.)**Amidosulphonates.**Easily sol. in  $H_2O$ ; sl. sol. in alcohol**Aluminum amidosulphonate.**Very sol. in  $H_2O$  (Berglund, Bull. Soc. (2) 29. 422.)**Ammonium amidosulphonate,  $(NH_4)NH_2SO_3$ .**Deliquescent. Sol. in  $H_2O$ ; insol. in alcohol.**Ammonium silver amidosulphonate,** $NH_4SO_3(NH_2)$ ,  $AgSO_3(NH_2)$ .

(Ephraim &amp; Gurewitsch, B. 1910, 43. 148.)

**Barium amidosulphonate,  $Ba(NH_2SO_3)_2$ .**Sol. in 3 pts.  $H_2O$ . (Berglund, l.c.)**Cadmium amidosulphonate,  $Cd(NH_2SO_3)_2 + 5H_2O$ .**Very sol. in  $H_2O$  (B.)**Calcium amidosulphonate,  $Ca(NH_2SO_3)_2 + 4H_2O$ .**Very sol. in  $H_2O$  (B.)**Cobalt amidosulphonate,  $Co(NH_2SO_3)_2 + 3H_2O$ .**Sol. in  $H_2O$ . (B.)**Copper amidosulphonate,  $Cu(NH_2SO_3)_2 + 2H_2O$ .**Sol. in  $H_2O$ . (B.)**Gold (auric) potassium amidosulphonate,  $K_3Au_2(NSO_3)_2$ .**

Very sl. sol. in aq., more easily sol. in hot

 $H_2O$  Sol. in dl.  $HCl + Aq$  (Hofmann, B. 1912, 45. 1735.)**Lead amidosulphonate,  $Pb(NH_2SO_3)_2 + H_2O$ .**

The most sol. of all amidosulphonates. (B.)

**Lithium amidosulphonate,  $LiNH_2SO_3$ .**

Deliquescent. (B.)

**Magnesium amidosulphonate.**Very sol. in  $H_2O$ **Manganese amidosulphonate,  $Mn(NH_2SO_3)_2 + 3H_2O$ .**Very sol. in  $H_2O$ . (B.)**Mercuric amidosulphonate, basic,** $Hg(HgOSO_2NH_2)_2$ .Insol. in 3.5 %  $HNO_3 + Aq$ . Very sol. in 3 %  $HCl + Aq$ . (Hofmann, B. 1912, 45. 1733.) $+ 2H_2O$ . Insol. in hot  $H_2O$ . Sol. in  $KOH + Aq$ . (Divers and Haga, Chem. Soc. 1896, 69. 1649.)**Mercuric potassium amidosulphonate,** $KHgNSO_3$ .Very sl. sol. in cold  $H_2O$  and cold dil.  $KOH + Aq$ . Sol. in 3 %  $HCl + Aq$ . (Hofmann, B. 1912, 45. 1732.)**Mercuric sodium amidosulphonate,** $NaHgNSO_3$ .Nearly completely sol. in hot  $H_2O$  (Hofmann, B. 1912, 45. 1734.)**Nickel amidosulphonate,  $Ni(NH_2SO_3)_2 + 3H_2O$ .**Sol. in  $H_2O$ . (B.)**Potassium amidosulphonate,  $KNH_2SO_3$ .**Sol. in  $H_2O$ . (Berglund.)**Potassium silver amidosulphonate,** $NHAgSO_3K + H_2O$ Decomp. by  $H_2O$ , sol. in  $NH_4OH + Aq$ . (Hofmann, B. 1912, 45. 1734.)**Silver amidosulphonate,  $AgNH_2SO_3$ .**Sol. in 15 pts  $H_2O$  at  $19^\circ$  (B.)**Sodium amidosulphonate,  $NaNH_2SO_3$ .**Sol. in  $H_2O$ .**Strontium amidosulphonate,  $Sr(NH_2SO_3)_2 + 4H_2O$ .**Sol. in  $H_2O$ .**Thallium amidosulphonate,  $TlNH_2SO_3$ .**Sol. in  $H_2O$ .**Uranyl amidosulphonate.**Sol. in  $H_2O$ .**Zinc amidosulphonate,  $Zn(NH_2SO_3)_2 + 4H_2O$ .**Sol. in  $H_2O$ .

Solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  at various pressures and temperatures: P=partial pressure, i. e. total pressure minus the tension of aqueous vapour at the given temperature; G=grams  $\text{NH}_3$  dissolved in 1 g.  $\text{H}_2\text{O}$  at the given pressure; G at 760=grams  $\text{NH}_3$  that would be contained in 1 g.  $\text{H}_2\text{O}$  if the solubility was proportional to the pressure.

(Sims, A. 118. 346.)

Solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  at temps. below  
 1°. One gram  $\text{H}_2\text{O}$  dissolves

grams $\text{NH}_3$	Temp.
0.947	-3.9°
1.115	-10°
1.768	-20°
2.781	-30°
2.946	-40°

(Mallet, Ann. Ch. J. 1897, 19. 807)

The solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  does not follow Dalton's law at ord. temp., but does at temp. near 100°. (Konowaloff, J. Russ. Phys. Chem. Soc. 1894, 26. 48; Chem. Soc. 1896, 70 (2). 351.)

16	59 75	46 00	28.50
24	49.50	37.25	21.75

(Result A ch. (5) 1 989)

100 pts. sat. KOH + Aq dissolve only 1 pt.  $\text{NH}_3$ .

Solubility in NaOH + Aq is the same as in KOH + Aq of the same strength.

$\text{NH}_4\text{Cl}$  + Aq absorbs slightly less  $\text{NH}_3$  than the same vol.  $\text{H}_2\text{O}$ .  $\text{NaNO}_3$  and  $\text{NH}_4\text{NO}_3$  + Aq absorb almost the same amount  $\text{NH}_3$  as the same vol.  $\text{H}_2\text{O}$ . (Raoult, *l.c.*)

Solubility of  $\text{NH}_3$  in 100 pts.  $\text{Ca}(\text{NO}_3)_2$  + Aq

t°	$\text{H}_2\text{O}$	$\text{Ca}(\text{NO}_3)_2$ + Aq 28.33% $\text{Ca}(\text{NO}_3)_2$	$\text{Ca}(\text{NO}_3)_2$ + Aq 59.03% $\text{Ca}(\text{NO}_3)_2$

(Riesenfeld, Z. phys. Ch. 1903, 45. 462)

The solubility of  $\text{NH}_3$  in  $\text{NaNO}_3$ ,  $\text{NH}_4\text{NO}_3$  and in  $\text{AgNO}_3 \cdot 2\text{NH}_3$  + Aq is nearly the same as in pure  $\text{H}_2\text{O}$  (Konowaloff, C. C. 1898, II. 659)

Distribution-coefficient of  $\text{NH}_3$  between water and  $\text{CHCl}_3$  = 26.3 at 20°; 24.9 at 25°; 23.2 at 30°.

The distribution-coefficient of  $\text{NH}_3$  between  $\text{CHCl}_3$  and a number of salt solutions has been determined for the purpose of studying the nature of metal-ammonia compounds in aqueous solution. (Dawson, Chem. Soc. 1900, 77. 1242.)

Distribution of  $\text{NH}_3$  between  $\text{H}_2\text{O}$  and  $\text{CHCl}_3$  at 18°.

(Dawson, *l.c.*)

## Sol. in alcohol and ether.

Sol. in 3 pts. alcohol of  $38^\circ$  (Boulay)1 vol. alcohol of 0.829 sp. gr. absorbs about 50 vols.  $\text{NH}_3$ . (Davy)Much less sol. in ethyl, propyl, or amyl alcohol than in  $\text{H}_2\text{O}$ . (Pagliano and Emo, Gazz. ch. it 13. 278)Solubility of  $\text{NH}_3$  in alcohol at  $t^\circ$ : weight  $\text{NH}_3$  = weight  $\text{NH}_3$  contained in a litre of solution sat. at 760 mm. and  $t^\circ$ , sp. gr. = sp. gr. of solution; C = coefficient of solubility.

Temp	Degree of Alcohol	$100^\circ$	$90^\circ$	$80^\circ$	$70^\circ$	$60^\circ$	$50^\circ$
$0^\circ$	Weight $\text{NH}_3$	130.5	146.0	206.5		246.0	304.5
	Sp. gr.	0.782	0.783	0.808		0.830	0.835
	C	209.5	245.0	390.0		504.5	697.7
$10^\circ$	Weight $\text{NH}_3$	108.5	120.0	167.0		198.25	227.0
	Sp. gr.	0.787	0.803	0.800	....	0.831	0.850
	C	164.3	186.0	288.0		373.0	438.6
$20^\circ$	Weight $\text{NH}_3$	75.0	97.5	119.75	137.5	152.5	182.7
	Sp. gr.	0.791	0.788	0.821	0.829	0.842	0.869

	Sp. gr.	0.798	0.791	0.826		0.846	0.883
	C	97.0	186.7	121.6		211.6	252.0

(Delépine, J. Pharm. (5) 25. 496.)

Solubility of  $\text{NH}_3$  in methyl alcohol (absolute) at  $t^\circ$ .

$t^\circ$	% $\text{NH}_3$	Pts. $\text{NH}_3$ per 100 pts. alcohol
0	29.3	41.5
6	26.0	35.2
11.7	23.5	30.7
14.7	21.8	27.9
17	20.8	26.3
22	18.3	22.4
28.4	14.8	17.4

(de Bruyn, *l.c.*)

Readily sol. in ether.

Sol. in 0.4 vol. petroleum from Amiano. (Sausure)

1 vol. oil of turpentine absorbs 7.5 vols.  $\text{NH}_3$  at  $16^\circ$ 1 vol. oil of lemon absorbs 8.5 vols.  $\text{NH}_3$  at  $16^\circ$ .Solubility of  $\text{NH}_3$  in ethyl alcohol (absolute) at  $t^\circ$ .

$t^\circ$	% $\text{NH}_3$	Pts. $\text{NH}_3$ per 100 pts. alcohol
0	19.7	24.5
6	17.1	20.6
11.7	14.1	16.4
14.7	13.2	15.2
17	12.6	14.7
23	10.9	12.2
28.4	9.2	10.1

(de Bruyn, R. t. c. 11. 112)

1 vol. abs. alcohol at  $20^\circ$  and 760 mm. pressure absorbs 340 vols.  $\text{NH}_3$  gas. (Müller, W. Ann. 1891, 43. 567.)1 l methyl alcohol sat. with  $\text{NH}_3$  contains 218 g.  $\text{NH}_3$  at  $0^\circ$ ; sp. gr. of solution = 0.770; coefficient of solubility = 425.0 (Delépine)1 vol. oil of rosemary absorbs 9.75 vols.  $\text{NH}_3$  at  $29^\circ$ .1 vol. oil of lavender absorbs 47 vols.  $\text{NH}_3$  at  $20^\circ$ . (Sausure.)1 vol. caoutchouc absorbs 3 vols.  $\text{NH}_3$ . (Himly.)Valerol absorbs much  $\text{NH}_3$ . (Gerhardt, A. ch (3) 7. 278.)1 vol. ether at 760 mm. pressure absorbs 17.13 vols.  $\text{NH}_3$  at  $0^\circ$ ; 12.35 vols. at  $10^\circ$  and 10.27 vols. at  $15^\circ$ . (Christoff, Z. phys. Ch. 1912, 79. 459.)+  $\text{H}_2\text{O}$ . Colorless crystals.+  $\frac{1}{2}\text{H}_2\text{O}$ . Large transparent crystals. (Rupert, J. Am. Chem. Soc. 1909, 31. 868.)

Ammonia, with metal salts.

For the ammonia addition-products of metal salts, see under the respective metal salts, except in the case of Co, Cr, Hg, and the Pt metals, for which see cobalt ammonium, chromium ammonium, etc.

further reference. New data on Co and Cr ammonium compounds and those of the Pt metals, published since the first edition, has not been included in the present edition

Ammonium amalgam,  $\text{NH}_4 \cdot \text{xHg}$ .

Decomp. by  $\text{H}_2\text{O}$ , but more easily in presence of naphtha, alcohol, or ether.

Ammonium azoimide,  $\text{N}_4\text{H}_4 = \text{NH}_4\text{N}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ , sl. sol. in absolute alcohol, easily in 80% alcohol. Insol. in ether or benzene. (Curtius, B. 24. 3344)

Ammonium cobalt azoimide,  $\text{NH}_4\text{N}_3 \cdot \text{CoN}_3$ .

Rather sol. in  $\text{H}_2\text{O}$ . (Curtius and Rissom, J. pr. 1898, (2) 68. 302.)

Ammonium bromide,  $\text{NH}_4\text{Br}$ .

Easily sol. in  $\text{H}_2\text{O}$  with absorption of much heat.

1 pt.  $\text{NH}_4\text{Br}$  dissolves in pts.  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Pts. $\text{H}_2\text{O}$	$t^\circ$	Pts. $\text{H}_2\text{O}$	$t^\circ$	Pts. $\text{H}_2\text{O}$
10	1 51	30	1 23	100	0 78
16	1 39	50	1 06		

(Eder, W. A. B. 82. (2) 1284.)

$\text{NH}_4\text{Br} + \text{Aq}$  containing 41.09%  $\text{NH}_4\text{Br}$  is sat. at  $15^\circ$ . (Gerlach.)

Sp. gr. of  $\text{NH}_4\text{Br} + \text{Aq}$  at  $15^\circ$ .

% $\text{NH}_4\text{Br}$	Sp. gr.	% $\text{NH}_4\text{Br}$	Sp. gr.

(Hager, Comm. 1883.)

25 g.  $\text{NH}_4\text{Br} + 50$  g.  $\text{H}_2\text{O}$  lower the temp. from  $15.1^\circ$  to  $-1.1^\circ$ . (Rüdorff.)

Sol. in liquid  $\text{NH}_3$  at  $-50^\circ$ . (Moissan C R. 1901, 133. 713.)

Very sol. in liquid  $\text{NH}_3$ . (Frankhn, Am. Ch. J. 1898, 20. 828.)

Sl. sol. in alcohol.

1 pt.  $\text{NH}_4\text{Br}$  dissolves in 32.3 pts. alcohol (0.806 sp. gr.) at  $15^\circ$ ; 9.5 pts. at  $78^\circ$ . (Eder, l.c.)

100 pts. absolute methyl alcohol dissolve 12.5 pts. at  $19^\circ$ ; 100 pts. absolute ethyl alcohol dissolve 3.22 pts. at  $19^\circ$ . (de Bruyn, Z. phys. Ch. 10. 783.)

Solubility in mixtures of methyl and ethyl alcohol at  $25^\circ$ .

P = % methyl alcohol in the solvent.

G = g.  $\text{NH}_4\text{Br}$  in 10 cc. of the solution.

S = sp. gr. of the sat. solution at  $25^\circ/4^\circ$ .

(Herz, l.c.)

Sol. in 809 pts. ether (0.729 sp. gr.). (Eder, l.c.)

Sol. in acetone. (Eidmann, C. C. 1899. II, 1014); (Naumann, B. 1904, 37. 4328.)

Insol. in benzonitrile (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethylacetate. (Naumann, B. 1910, 43. 314.)

#### Ammonium tribromide, $\text{NH}_4\text{Br}_3$ .

Gives off Br in air. Sol. in  $\text{H}_2\text{O}$ . (Roozeboom, B. 14. 2398.)

Decomp. in the air. Very sol. in  $\text{H}_2\text{O}$ . (Chattaway, Chem. Soc. 1915, 107. 106.)

#### Ammonium antimony bromide, $3\text{NH}_4\text{Br}$ , $2\text{SbBr}_3$

Easily sol. in abs. alcohol. (Caven, C. C. 1905. II, 293.)

$7\text{NH}_4\text{Br}$ ,  $3\text{SbBr}_3$ . Easily sol. in abs. alcohol. (Caven, C. C. 1905. II, 293.)

See also Bromantimonate, ammonium.

#### Ammonium bismuth bromide, $\text{NH}_4\text{Br}$ , $\text{BiBr}_3$ , $+\text{H}_2\text{O}$ .

Deliquescent. Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol. (Nicklès, C. R. 51. 1097.)

#### Ammonium cadmium bromide, $\text{NH}_4\text{Br}$ , $\text{CdBr}_2$ , $+\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in 0.73 pt.  $\text{H}_2\text{O}$ , 5.3 pts. abs. alcohol, 280 pts. ether (sp. gr. 0.729), and 24 pts. alcohol ether (1:1). (Eder, Dingl. 221. 89.)

Sol. in  $\text{H}_2\text{O}$  without decomp. between  $1^\circ$  and  $110.1^\circ$ .

100 pts. of the solution contain at:

$1^\circ$  14.8° 52.2° 110.1°  
53.82 58.01 65.32 75.83 pts. of the salt.  
(Rimbach, B. 1905, 38. 1555.)

$4\text{NH}_4\text{Br}$ ,  $\text{CdBr}_2$ . Sol. in 0.96 pt.  $\text{H}_2\text{O}$ , from which it is pptd. by alcohol or ether. (Eder.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

Below  $180^\circ$  the salt is decomp. by  $\text{H}_2\text{O}$ ; at  $180^\circ$  it is sol. in  $\text{H}_2\text{O}$  without decomp

$t^\circ$	100 pts. of the solution contain			Solid phase
	Pts. Cd	Pts. Br	Pts. $\text{NH}_4$	
0.8	14.72	50.46	6.67	Double salt $+\text{NH}_4\text{Br}$

160.0	14.70	62.67	9.43	
				Double salt

(Rimbach, B. 1905, 38. 1558.)

Not sol. in  $\text{HBr}+\text{Aq}$  without decomp. (Rimbach.)

Not sol without decomp. in  $\text{LiBr}+\text{Aq}$ ,  $\text{CaBr}_2+\text{Aq}$ ,  $\text{MgBr}_2+\text{Aq}$ ,  $\text{NiBr}_2+\text{Aq}$ , or

$\text{CoBr}_2+\text{Aq}$ , even though very conc. solutions are used. Sol. without decomp. in  $\text{ZnBr}_2+\text{Aq}$ . (Rimbach, B. 1905, 38. 1571.)

#### Ammonium chloromolybdenum bromide, $2\text{NH}_4\text{Br}$ , $\text{Cl}_2\text{Mo}_2\text{Br}_2$

Decomp. by pure  $\text{H}_2\text{O}$ . Can be crystallized from  $\text{HBr}+\text{Aq}$ . Apparently sol. without decomp. in alcohol. (Blomstrand.)

#### Ammonium cuprous bromide.

$4\text{NH}_4\text{Br}$ ,  $\text{Cu}_2\text{Br}_2$ . Fairly stable in air.  $2\text{NH}_4\text{Br}$ ,  $\text{Cu}_2\text{Br}_2+\text{H}_2\text{O}$ . Fairly stable in air. (Wells, Z. anorg. 1895, 10. 159.)

#### Ammonium cuprous bromide ammonia, $\text{NH}_4\text{Br}$ , $\text{Cu}_2\text{Br}_2$ , $3\text{NH}_3$

(Pleurent, C. R. 1891, 113. 1047.)

#### Ammonium cupric bromide, $2\text{NH}_4\text{Br}$ , $\text{CuBr}_2$ , $+\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (de Koninck, B. 21. 777 R.)

#### Ammonium iridium bromide.

See Bromiridate, ammonium.

#### Ammonium iron (ferrie) bromide,

$(\text{NH}_4)_3\text{FeBr}_6+\text{H}_2\text{O}$ .

Very deliquescent, sol. in  $\text{H}_2\text{O}$ . (Walden, Z. anorg. 1894, 7. 332.)

#### Ammonium lead bromide, $12\text{NH}_4\text{Br}$ , $7\text{PbBr}_2$ , $+\text{H}_2\text{O}$ .

Decomp. on air, or with cold  $\text{H}_2\text{O}$  (André, C. R. 96. 1502.)

$6\text{NH}_4\text{Br}$ ,  $\text{PbBr}_2+\text{H}_2\text{O}$ . Decomp. by cold  $\text{H}_2\text{O}$ . (A.)

$7\text{NH}_4\text{Br}$ ,  $\text{PbBr}_2+1\frac{1}{2}\text{H}_2\text{O}$ . Stable on air; decomp. by cold  $\text{H}_2\text{O}$ . (A.)

None of the above compounds exist. (Wells, Sil. Am. J. 146. 25.)

$2\text{NH}_4\text{Br}$ ,  $\text{PbBr}_2$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{KOH}+\text{Aq}$  and in strong acids.

(Fonze-Diacon, Bull. Soc. 1897, (3) 17.351.)  $\text{NH}_4\text{Br}$ ,  $3\text{PbBr}_2$ . (Wells)

#### Ammonium magnesium bromide, $\text{NH}_4\text{Br}$ , $\text{MgBr}_2$ , $+\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Lerch, J. pr. (2) 28. 338.)

#### Ammonium mercuric bromide,

$2\text{HgBr}_2$ ,  $\text{NH}_4\text{Br}$ .

Decomp. by  $\text{H}_2\text{O}$  into its constituent salts. (Ray, Chem. Soc. 1902, 81. 648.)

#### Ammonium molybdenum bromide, $2\text{NH}_4\text{Br}$ , $\text{MoBr}_3$ , $+\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  (Rosenham, Z. anorg. 1905, 48. 322.)

#### Ammonium molybdenum bromide chloride.

See Ammonium chloromolybdenum bromide.

Ammonium osmium bromide.

See Bromosmate, ammonium.

Ammonium osmyl bromide,  $(\text{NH}_4)_2\text{OsO}_2\text{Br}_4$ .

Sol. in  $\text{H}_2\text{O}$ . (Wintrebert, A. ch. 1903, (7) 28. 95.)

Ammonium osmyl oxybromide,  
 $(\text{NH}_4)_2\text{OsO}_2\text{Br}_2$ .

(Wintrebert, A. ch. 1903 (7) 28. 117.)

Ammonium palladium bromide.

See Bromopalladate, ammonium, and  
Bromopalladite, ammonium.

Ammonium platinum bromide.

See Bromoplatinate, ammonium.

Ammonium rhodium bromide.

See Bromorhodite, ammonium.

Ammonium selenium bromide.

See Bromoselenate, ammonium.

Ammonium tellurium bromide.

See Bromotellurate, ammonium.

Ammonium thallic bromide,  $\text{NH}_4\text{Br}$ ,  $\text{TiBr}_3$  +  $2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Willm.)

+  $4\text{H}_2\text{O}$ . Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Nicklès.)

+  $5\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Nicklès.)

Ammonium stannous bromide (ammonium bromostannite),  $\text{NH}_4\text{Br}$ ,  $\text{SnBr}_2$  +  $\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Benas, C. C. 1884. 958.)

$2\text{NH}_4\text{Br}$ ,  $\text{SnBr}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Raymann and Preis, A. 223. 323.)

+  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Benas, l.c.)

+  $2\text{H}_2\text{O}$ . (Richardson, Am. Ch. J. 14. 96.)

$\text{NH}_4\text{Br}$ ,  $2\text{SnBr}_2$  (?). (Benas.)

Ammonium stannic bromide,  $2\text{NH}_4\text{Br}$ ,  $\text{SnBr}_4$ .

See Bromostannate, ammonium.

Ammonium uranyl bromide,  $2\text{NH}_4\text{Br}$ ,  $\text{UO}_2\text{Br}_2$  +  $2\text{H}_2\text{O}$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Sendtner.)

Ammonium zinc bromide,  $2\text{NH}_4\text{Br}$ ,  $\text{ZnBr}_2$ .

Deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Bödeker, J. B. 1860. 17.)

+  $\text{H}_2\text{O}$ . Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (André, A. ch. (6) 3. 104.)

+  $x\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1908, 59. 66.)

$3\text{NH}_4\text{Br}$ ,  $\text{ZnBr}_2$ . Sol. in  $\text{H}_2\text{O}$ . Decomp. only by great dilution (Jones & Knight, Am. Ch. J. 1899, 22. 136.)

+  $\text{H}_2\text{O}$ . Not hygroscopic. (Ephraim, Z. anorg. 1908, 59. 66.)

Ammonium bromide arsenic trioxide.

See Arsenite bromide, ammonium.

Ammonium bromide mercuric chloride,

$\text{NH}_4\text{Br}$ ,  $2\text{HgCl}_2$ .

Ppt. (Ray, Chem. Soc. 1902, 81. 649.)

Ammonium bromide mercuric iodide,

$2\text{NH}_4\text{Br}$ ,  $\text{HgI}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol without decomp. (Grossmann, B. 1903, 36. 1602.)

$3\text{NH}_4\text{Br}$ ,  $2\text{HgI}_2$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol without decomp. (Grossmann, B. 1903, 36. 1602.)

Ammonium lead bromochloride,

$\text{NH}_4\text{Pb}_2\text{Br}_4\text{Cl}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Fonze-Diacon, Bull. Soc. 1897, (3) 17. 350.)

$\text{NH}_4\text{Pb}_2\text{Br}_4\text{Cl}$ . Decomp. by  $\text{H}_2\text{O}$ . (Fonze-Diacon, Bull. Soc. 1897, (3) 17. 349.)

Ammonium bromochloroiodide,  $\text{NH}_4\text{ClBrI}$

Very stable; sol. in  $\text{H}_2\text{O}$ . (Chattaway, Chem. Soc. 1915, 107. 108.)

Ammonium lead bromiodide,  $\text{NH}_4\text{PbBrI}_2$  +  $2\text{H}_2\text{O}$  and  $\text{NH}_4\text{Pb}_2\text{BrI}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{KOH}$  +  $\text{Ag}$  and in strong acids. (Fonze-Diacon, Bull. Soc. 1897, (3) 17. 352.)

Ammonium bromiodobromide,  $\text{NH}_4\text{BrIBr}$ .

Decomp. in the air. Sol. in ether. (Jackson, Am. Ch. J. 1900, 24. 28.)

Ammonium chloride,  $\text{NH}_4\text{Cl}$

(Sal-ammoniac.) Not deliquescent. Sol. in  $\text{H}_2\text{O}$  with reduction of temp

Sol. in 2.4 pts.  $\text{H}_2\text{O}$ . (Wenzel)

$\text{NH}_4\text{Cl}$  +  $\text{Aq}$  sat. at  $10^\circ$  has sp. gr. = 1.072. (T.)

Sol. in 2.72 pts. cold, and 1 pt. boiling  $\text{H}_2\text{O}$ . (M. R. and P.)

Sol. in 3 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$ . (Abl.)

Sol. in 6 pts. cold, and 1 pt. boiling  $\text{H}_2\text{O}$ . (Fourcroy)

100 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$  dissolve 36.76 pts.  $\text{NH}_4\text{Cl}$

$\text{NH}_4\text{Cl}$  +  $\text{Aq}$  sat. at 15° b.-pt. (114.2°) contains 83.9

pts.  $\text{NH}_4\text{Cl}$  in 100 pts. of the solution. (Benzolus.)

100 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  dissolve 33-36 pts.; and at  $100^\circ$ ,

100 pts.  $\text{NH}_4\text{Cl}$ . (Ure's Dict.)

$\text{NH}_4\text{Cl}$  +  $\text{Aq}$  sat. at  $15^\circ$  has sp. gr. = 1.076209, and

contains at least 31.88 pts.  $\text{NH}_4\text{Cl}$  dissolved in every

100 pts.  $\text{H}_2\text{O}$ . (Michel and Kraft, A. ch. (3) 41. 478.)

$\text{NH}_4\text{Cl}$  +  $\text{Aq}$  sat. at  $10^\circ$  contains 23.8%  $\text{NH}_4\text{Cl}$ .

(Eller.)

$\text{NH}_4\text{Cl}$  +  $\text{Aq}$  sat. in the cold contains 14.3%  $\text{NH}_4\text{Cl}$ .

(Fourcroy)

Sol. in 1 pt.  $\text{H}_2\text{O}$  at  $113.6^\circ$ , b.-pt. of sat. solution.

(Griffiths.)

Sol. in 2.7 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$ , forming a liquid of 1.08

sp. gr. (Karsten, 1840.)

Sol. in 2.727 pts.  $\text{H}_2\text{O}$  at  $10^\circ$ . (Gren's Handbuch.)

100 pts.  $\text{H}_2\text{O}$  at 718 mm. pressure and  $1^\circ$  dissolve pts

$\text{NH}_4\text{Cl}$ .

$t^\circ$	Pts. $\text{NH}_4\text{Cl}$	$t^\circ$	Pts. $\text{NH}_4\text{Cl}$	$t^\circ$	Pts. $\text{NH}_4\text{Cl}$	$t^\circ$	Pts. $\text{NH}_4\text{Cl}$

(Dyken, Z. phys. Ch. 1897, 24, 107.)

B-pt. of  $\text{NH}_4\text{Cl}$  + Aq, containing pts.  $\text{NH}_4\text{Cl}$  to 100 pts.  $\text{H}_2\text{O}$ . G = according to Gerlach (Z. anal. 26, 439); L = according to Legrand (A. ch. (2) 69, 436)

B-pt.	G	L	B-pt.	G	L
101°	6.5	7.8	109°	50.6	53.5
102	12.8	13.9	110	56.2	59.9
103	19.0	19.7	111	61.9	66.4
104	24.7	25.2	112	67.8	73.3
105	29.7	30.5	113	74.2	80.5
106	34.6	35.7	114	81.3	88.1
107	39.6	41.3	114.2		88.9
108	45.0	47.3	114.8	87.1	

Sat  $\text{NH}_4\text{Cl}$  + Aq boils at 115.8° at 718 mm. pressure (Alluard, C. R. 59, 500.)

$\text{NH}_4\text{Cl}$  + Aq containing 74.2 pts.  $\text{NH}_4\text{Cl}$  to 100 pts.  $\text{H}_2\text{O}$  forms a crust at 113°; highest temperature observed, 114.8° (Gerlach, Z. anal. 26, 426.)

$\text{NH}_4\text{Cl}$  + Aq containing 10%  $\text{NH}_4\text{Cl}$  boils at 101.7°; 20%  $\text{NH}_4\text{Cl}$ , at 104.4°. (Gerlach.)

$\text{NH}_4\text{Cl}$  + Aq containing 10.6%  $\text{NH}_4\text{Cl}$  gives off  $\text{NH}_3$  at 37° (Leeds, Am. J. Sci. (3) 7, 197.)

When  $\text{NH}_4\text{Cl}$  + Aq is boiled, or even evap. on water bath, a little  $\text{NH}_3$  is expelled. (Fresenius.)

30 pts.  $\text{NH}_4\text{Cl}$  mixed with 100 pts.  $\text{H}_2\text{O}$  lower the temp from 13.3° to -5.1°, that is 18.4°. (Rudorff, B. 2, 68.)

Freezing-point of sat. solution is -15.4°, the same temp which is caused by mixing 25 pts.  $\text{NH}_4\text{Cl}$  with 100 pts. snow. (Rudorff, Pogg. 122, 337.)

Conc.  $\text{HCl}$  + Aq precipitates part of  $\text{NH}_4\text{Cl}$  from sat.  $\text{NH}_4\text{Cl}$  + Aq. (Vogel, J. pr. 2, 199.)

Solubility of  $\text{NH}_4\text{Cl}$  in  $\text{HCl}$  + Aq at 0°  $\text{NH}_4\text{Cl}$  = mols.  $\text{NH}_4\text{Cl}$  (in milligrammes) dissolved in 10 cc of the liquid;  $\text{HCl}$  = mols.  $\text{HCl}$  (in milligrammes) dissolved in 10 cc. of the liquid.

(Rumbach, B. 1897, 30, 3076.)

+ $\frac{1}{2}$ H<sub>2</sub>O. Sl sol. in H<sub>2</sub>O, alcohol, and wood spirit. (v. Hauer, W. A. B. 13. 449)

4NH<sub>4</sub>Cl, CdCl<sub>2</sub> Sol. in H<sub>2</sub>O. (v. Hauer)  
Decomp by H<sub>2</sub>O to NH<sub>4</sub>Cl, CdCl<sub>2</sub>. Decomp. increases with decrease of temp. At 3° approximately wholly decomp to NH<sub>4</sub>Cl, CdCl<sub>2</sub>. At 113.9° very nearly all is 4NH<sub>4</sub>Cl, CdCl<sub>2</sub> (Rimbach, B. 1897, 30. 3077)

Solubility of 4NH<sub>4</sub>Cl, CdCl<sub>2</sub> in H<sub>2</sub>O at t°.

t°	Pts dissolved in 100 pts by weight of solution.		
	Cd	Cl	NH <sub>4</sub>
3 0	5 75	18 17	7 37
16 1	6 93	20 26	7 97
40 2	9 91	23 84	8 92
58 5	12 50	26 53	9 35
112 9	16 66	31 79	10 78
113 9	16 51	32 71	11 30

(Rimbach, B. 1897, 30. 3071)

Sol. without decomp in 37.3% HCl(d=1.19) and 24.8% HCl(d=1.125) (Rimbach, B. 1905, 38. 1569)

Solubility of 4NH<sub>4</sub>Cl, CdCl<sub>2</sub>+NH<sub>4</sub>Cl in H<sub>2</sub>O at t°.

t°	In 100 pts. by wt of the solution			Composition of the solid phase	
	Pts by wt. Cd	Pts by wt. Cl	Pts. by wt. NH <sub>4</sub>	Mol. % NH <sub>4</sub> Cl	Mol. % Tetra-salt
1 0	2 82	17 11	7 82	59 0	41 0

58 2	3 51	25 21	11 72	69 0	31 0

(Rimbach, B. 1902, 35. 1300)

Solubility of 4NH<sub>4</sub>Cl, CdCl<sub>2</sub>+NH<sub>4</sub>Cl, CdCl<sub>2</sub> in H<sub>2</sub>O at t°.

t°	In 100 pts. by wt of the solution			Composition of the solid phase	
	Pts. by wt. Cd	Pts. by wt. Cl	Pts. by wt. NH <sub>4</sub>	Mol. % Mono-salt	Mol. % Tetra-salt
1 1	5 34	17 62	7 27	49 6	50 4
14.0	7 12	19 86	7 84	47 0	53 0
40.7	10 24	23 82	8.85	77.0	23 0
58 5	12 50	26.53	9 35		

(Rimbach, B. 1902, 35. 1300.)

Sol. without decomp. in 50% LiCl+Aq. 33.3% CaCl<sub>2</sub>+Aq and 50% MgCl<sub>2</sub>+Aq. (Rimbach, B. 1905, 38. 1569.)

Ammonium chloromolybdenum chloride, 2NH<sub>4</sub>Cl, Cl<sub>2</sub>Mo<sub>2</sub>Cl<sub>2</sub>+2H<sub>2</sub>O

Decomp by pure H<sub>2</sub>O; can be crystallised from HCl+Aq. (Blomstrand.)

Ammonium chromium chloride, 2NH<sub>4</sub>Cl, CrCl<sub>3</sub>+H<sub>2</sub>O.

Sol. in H<sub>2</sub>O with decomp. (Neumann, A. 244. 229.)

+6H<sub>2</sub>O=2NH<sub>4</sub>Cl, [CrCl<sub>2</sub> 4H<sub>2</sub>O]Cl+2H<sub>2</sub>O.

Hygroscopic. Decomp by H<sub>2</sub>O and by alcohol. (Weinland, B. 1907, 40. 3770)

Ammonium cobaltous chloride, NH<sub>4</sub>Cl, CoCl<sub>2</sub>+6H<sub>2</sub>O

Deliquescent in moist air. Very easily sol. in H<sub>2</sub>O (Hantz, A. 66. 284)

Ammonium cobaltous chloride ammonia, NH<sub>4</sub>Cl, CoCl<sub>2</sub>, NH<sub>3</sub>. (F. Rose)

Ammonium cuprous chloride, 4NH<sub>4</sub>Cl Cu<sub>2</sub>Cl<sub>2</sub>.

Decomp. in the air.

4NH<sub>4</sub>Cl, 3Cu<sub>2</sub>Cl<sub>2</sub> Decomp by H<sub>2</sub>O, not by alcohol. (Ritthausen, J. pr. 59. 369.)

Fairly stable in air (Wells, Z. anorg. 1895, 10. 158.)

Ammonium cupric chloride,

NH<sub>4</sub>Cl, CuCl<sub>2</sub>

Solubility of NH<sub>4</sub>Cl, CuCl<sub>2</sub> in absolute alcohol at 25°.

CuCl <sub>2</sub> %	Solid phase	CuCl <sub>2</sub> %	Solid phase
4 65	NH <sub>4</sub> Cl+NH <sub>4</sub> Cl, CuCl <sub>2</sub>	12 90	NH <sub>4</sub> Cl, CuCl <sub>2</sub>
4.74	NH <sub>4</sub> Cl+NH <sub>4</sub> Cl, CuCl <sub>2</sub>	34 92	NH <sub>4</sub> Cl, CuCl <sub>2</sub> +CuCl <sub>2</sub> , C <sub>2</sub> H <sub>5</sub> OH
6.45	NH <sub>4</sub> Cl, CuCl <sub>2</sub>	34 50	

(Foote and Walden, J. Am. Ch. Soc. 1911, 33. 1032)

+2H<sub>2</sub>O Sol in 2 pts. H<sub>2</sub>O (Hantz, A. 66. 280.)

Does not exist t. (Meerburg, C. C. 1904. II. 1362.)

2NH<sub>4</sub>Cl, CdCl<sub>2</sub>+2H<sub>2</sub>O Easily sol. in H<sub>2</sub>O, also in alcohol, even when absolute. (Cap and Henry, J. pr. 13. 184.)

Solubility of 2NH<sub>4</sub>Cl, CuCl<sub>2</sub> in H<sub>2</sub>O at t°.

g. 2NH <sub>4</sub> Cl, CuCl <sub>2</sub> in 100 g. of the solution	t°	Solid phase

36 13	60	"
39 25	70	"
43.36	80	"

(Meerburg, Z. anorg. 1905, 45. 8.)

Somewhat sol. in liquid  $\text{NH}_3$  (Franklin and Kraus, *Am. Ch. J.* 1898, 20, 827.)  
Is the only hydrate of  $2\text{NH}_4\text{Cl}$ ,  $\text{CuCl}_2$  existing between  $-11^\circ$  and  $+80^\circ$ . (Meeburg, *C. C.* 1904, II, 1362.)  
+  $3\text{H}_2\text{O}$ . (Bourgeois, *Bull. Soc.* 1898, (3) 19, 786.)

**Ammonium cupric chloride ammonia,**  
 $2\text{NH}_4\text{Cl}$ ,  $\text{CuCl}_2$ ,  $2\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ , less easily by alcohol.  
Decomp. by acids (Litthausen)

**Ammonium indium chloride,**  $2\text{NH}_4\text{Cl}$ ,  $\text{InCl}_3$ ,  
+  $\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$ . (Meyer)

**Ammonium iodine chloride,**  $\text{NH}_4\text{Cl}$ ,  $\text{ICl}_3$ .

More sol. in  $\text{H}_2\text{O}$  than  $\text{KCl}$ ,  $\text{ICl}_3$ . (Fihol, *J. Pharm.* 26, 441; Berz J. B. 20, (2) 110)

**Ammonium iridium trichloride.**

*See Chloriridite, ammonium.*

**Ammonium iridium tetrachloride.**

*See Chloriridate, ammonium.*

**Ammonium iron (ferrous) chloride,**  $\text{NH}_4\text{Cl}$ ,  
 $\text{FeCl}_2$ .

Easily sol in  $\text{H}_2\text{O}$ ; insol in alcohol (Winkler.)

**Ammonium iron (ferric) chloride,**  $2\text{NH}_4\text{Cl}$ ,  
 $\text{FeCl}_3 + \text{H}_2\text{O}$

Deliquescent. Sol. in  $\text{H}_2\text{O}$  without decomp. (Fritzsche); sol. in 3 pts  $\text{H}_2\text{O}$  at  $18.75^\circ$  (Abl.)  
Sol. in  $\text{H}_2\text{O}$  (Walden, *Z. anorg.* 1894, 1, 332.)

**Ammonium iron (ferric) potassium chloride,**  
 $\text{NH}_4\text{Cl}$ ,  $\text{FeCl}_3$ ,  $\text{KCl} + 1\frac{1}{2}\text{H}_2\text{O}$ .

Min. *Kremersite*. Deliquescent.

**Ammonium lead chloride,**  $\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2 + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  without decomp. (?) (André, *C. R.* 96, 1502.)

$6\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2 + \text{H}_2\text{O}$ .  
 $9\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2 + 1\frac{1}{2}\text{H}_2\text{O}$   
 $9\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2 + 2\frac{1}{2}\text{H}_2\text{O}$   
 $10\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2 + \text{H}_2\text{O}$ .  
 $11\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2 + 3\frac{1}{2}\text{H}_2\text{O}$ .  
 $18\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2 + 4\text{H}_2\text{O}$

All these salts are decomp. by  $\text{H}_2\text{O}$ . (André *A. ch.* (6) 3, 104.)

Of the salts prepared by André, only one  $\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2$  exists. (Wells, *Sill Am. J.* 146, 25.)

Solubility determinations show that  $\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2$  is the only double salt formed at  $25^\circ$ . (Foote, *Am. Ch. J.* 1907, 37, 121.)

$\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2 + \frac{1}{2}\text{H}_2\text{O}$ . (Wells, *l.c.*)

**Ammonium lead tetrachloride.**

*See Chloroplumbate, ammonium.*

**Ammonium magnesium chloride,**  $\text{NH}_4\text{MgCl}_2$ ,  
+  $6\text{H}_2\text{O} = \text{NH}_4\text{Cl}$ ,  $\text{MgCl}_2 + 6\text{H}_2\text{O}$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ .  
Sol. in 6 pts. cold  $\text{H}_2\text{O}$ . (Fourcroy.)

Solubility in  $\text{NH}_4\text{Cl} + \text{Aq}$  at  $1^\circ$ .

$t^\circ$	Per 1000 Mol. $\text{H}_2\text{O}$	
	Mol. $\text{NH}_4\text{Cl}$	Mol. $\text{MgCl}_2$
3 3°	27 5	55 7
25 0	42 1	56.4
50 0	62 9	59 1

(Biltz, *Z. anorg.* 1911, 71, 170.)

$4\text{NH}_4\text{Cl}$ ,  $5\text{MgCl}_2 + 33\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Berthelot and André, *A. ch.* (6) 11, 294.)

**Ammonium manganous chloride,**  $\text{NH}_4\text{Cl}$ ,  
 $\text{MnCl}_2 + \frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $1\frac{1}{2}$  pts.  $\text{H}_2\text{O}$  at ordinary temp. (Hantz, *A. ch.* 66, 280), does not exist. (Saunders, *Am. Ch. J.* 14, 134)

$2\text{NH}_4\text{Cl}$ ,  $\text{MnCl}_2 + \text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  (Ram-melsberg), does not exist. (Saunders)

+  $2\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ , but with decomp. into  $\text{NH}_4\text{Cl}$  and  $\text{MnCl}_2$ . (Saunders.)

**Ammonium manganic chloride,**  $2\text{NH}_4\text{Cl}$ ,  
 $\text{MnCl}_3$ .

Sol. in  $\text{H}_2\text{O}$ ; less sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  Un-stable (Neuman, *M* 1894, 15, 490.)

+  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  Sol. in  $\text{HCl}$  apparently without decomp. (Rice, *Chem. Soc.* 1898, 73, 260)

**Ammonium mercuric chloride,**  $2\text{NH}_4\text{Cl}$ ,  
 $\text{HgCl}_2 + \text{H}_2\text{O}$  (sal alembroth).

Sol. in 0.66 pt.  $\text{H}_2\text{O}$  at  $10^\circ$ , and in nearly every proportion of hot  $\text{H}_2\text{O}$ .

$\text{NH}_4\text{Cl}$ ,  $\text{HgCl}_2$ . Easily sol. in  $\text{H}_2\text{O}$ .  
+  $\frac{1}{2}\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Kane.)

$2\text{NH}_4\text{Cl}$ ,  $3\text{HgCl}_2 + 4\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Holmes, *C. N.* 5, 351.)

$\text{NH}_4\text{Cl}$ ,  $2\text{HgCl}_2$  Very sol. in  $\text{H}_2\text{O}$ . (Ray, *Chem. Soc.* 1902, 81, 648.)

$\text{NH}_4\text{Cl}$ ,  $5\text{HgCl}_2$ . (Strömholm, *J. pr.* 1902, (2) 66, 441.)

**Ammonium mercuric sodium chloride,**  $\text{NH}_4\text{Cl}$ ,  
 $\text{HgCl}_2$ ,  $4\text{NaCl}$  (?)

Sol. in  $\text{H}_2\text{O}$ . (Kossmann, *A. ch.* (3) 27, 243.)

**Ammonium molybdenum chloride,**  $2\text{NH}_4\text{Cl}$ ,  
 $\text{MoCl}_5 + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Nearly insol. in alcohol and ether. (Chilesotti, *C. C.* 1903, II, 652.)

*See also Ammonium chloromolybdenum chloride.*

**Ammonium molybdenum chloride iodide.**

*See Ammonium chloromolybdenum iodide.*

**Ammonium molybdenyl chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{MoO}_2\text{Cl}_2 + 2\text{H}_2\text{O}$ .

(Weinland, Z. anorg. 1905, 44. 98.)

$2\text{NH}_4\text{Cl}$ ,  $\text{MoOCl}_3$  Sol. in  $\text{H}_2\text{O}$ , insol. in  $\text{H}_2\text{O}$  sat with  $\text{HCl}$ . (Klasen, B 1901, 34. 149.)

**Ammonium nickel chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{NiCl}_2 + 6\text{H}_2\text{O}$ .

Deliquescent in moist air. Easily sol in  $\text{H}_2\text{O}$ . (Hautz.)

$4\text{NH}_4\text{Cl}$ ,  $\text{NiCl}_2 + 7\text{H}_2\text{O}$  (?).

**Ammonium osmium tetrachloride.**

See Chlorosmate, ammonium.

**Ammonium osmium sesquichloride.**

See Chlorosmite, ammonium.

**Ammonium osmyl chloride**,  $(\text{NH}_4)_2\text{OsO}_2\text{Cl}_4$ .

Sol. in  $\text{H}_2\text{O}$  Decomp. by  $\text{HCl}$  (Wintrebert, A. ch. 1903, (7) 28. 92)

**Ammonium osmyl oxychloride**,

$(\text{NH}_4)_2\text{OsO}_2\text{Cl}_2$ .

Very sl sol. in  $\text{H}_2\text{O}$  Sol in  $\text{KOH} + \text{Ag}$  with decomp. (Wintrebert, A. ch. 1903, (7) 28. 116.)

**Ammonium palladium chlorides.**

See Chloropalladate, ammonium and chloropalladate, ammonium.

**Ammonium rhodium dichloride**,  $4\text{NH}_4\text{Cl}$ ,  $\text{RhCl}_3 + 3\frac{1}{2}\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ , but decomp slowly (Willm B. 16. 3033.)

Does not exist. (Ladité, A. ch. (6) 17. 277.)

**Ammonium rhodium trichloride.**

See Chlororhodite, ammonium.

**Ammonium rhodium chloride ammonium nitrate**,  $\text{Rh}_2\text{Cl}_6$ ,  $6\text{NH}_4\text{Cl}$ ,  $2\text{NH}_4\text{NO}_3$ .

See Chlororhodite nitrate, ammonium.

**Ammonium ruthenium trichloride.**

See Chlororuthenite, ammonium.

**Ammonium ruthenium tetrachloride.**

See Chlororuthenate, ammonium.

**Ammonium tellurium chloride.**

See Chlorotellurate, ammonium.

**Ammonium thallic chloride**,  $3\text{NH}_4\text{Cl}$ ,  $\text{TlCl}_3$

Easily sol. in  $\text{H}_2\text{O}$ . (Willm)  $+ 2\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$  and alcohol. (Nickles, J. Pharm. (4) 1. 28.)

**Ammonium thorium chloride**,  $8\text{NH}_4\text{Cl}$ ,  $\text{ThCl}_4 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Chydenius.)

**Ammonium tin (stannous) chloride** (ammonium chlorostannite),  $\text{NH}_4\text{Cl}$ ,  $\text{SnCl}_2 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Resembles K salt. (Richardson, Am. Ch. J. 14. 93.)

$2\text{NH}_4\text{Cl}$ ,  $\text{SnCl}_2 + \text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ , but decomp by boiling. (Rammelsberg)

Contains  $2\text{H}_2\text{O}$ . (Richardson)

$4\text{NH}_4\text{Cl}$ ,  $\text{SnCl}_2 + 3\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$ . (Poggiale, C R 20. 1182)

Does not exist (Richardson)

**Ammonium tin (stannic) chloride.**

See Chlorostannate, ammonium.

**Ammonium titanium chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{TiCl}_3 + 2\text{H}_2\text{O}$

Ppt, decomp in moist air, sol in fuming  $\text{HCl}$ , insol in ether (Rosenheim, Z. anorg. 1901, 26. 242.)

**Ammonium titanium chloride**,  $3\text{NH}_4\text{Cl}$ ,  $\text{TiCl}_3$

Sol in  $\text{H}_2\text{O}$ .

$6\text{NH}_4\text{Cl}$ ,  $\text{TiCl}_3$  Sol in  $\text{H}_2\text{O}$ . (Rose)

**Ammonium tungsten chloride**,  $(\text{NH}_4)_3\text{W}_2\text{Cl}_9 = 3\text{NH}_4\text{Cl}$ ,  $2\text{WCl}_6$ .

Easily sol in  $\text{H}_2\text{O}$ . Nearly insol in most organic solvents. (Olsson, B 1913, 46. 577)

**Ammonium uranyl chloride.**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$  (Pelletot)

$2\text{NH}_4\text{Cl}$ ,  $(\text{UO}_2)_2\text{Cl}_2 + 2\text{H}_2\text{O}$  Solution at  $15^\circ$  contains in 100 g. 3.51 g.  $\text{NH}_4$ , 40.67 g  $\text{UO}_2$  and 19.15 g.  $\text{Cl}$ , hence there is considerable decomp. (Rumbach, B 1904, 37. 466)

**Ammonium vanadium chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{VCl}_3 + \text{H}_2\text{O}$

Difficulty sol. in  $\text{H}_2\text{O}$  and alcohol (Stahler, B 1904, 37. 432)

**Ammonium zinc chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2 + 2\text{H}_2\text{O}$

Deliquescent. Very sol. in  $\text{H}_2\text{O}$  (Hautz, A 66. 287)

$2\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2$  Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg 504. 507)

$+ \text{H}_2\text{O}$  Deliquescent in moist air Sol. in  $\frac{1}{2}$  pt cold  $\text{H}_2\text{O}$  with absorption of heat. Sol. in 0.28 pt hot  $\text{H}_2\text{O}$  (Golfier-Bassayre, A. ch 70. 344), sol. in  $\frac{1}{2}$  pt. cold  $\text{H}_2\text{O}$ . (Hautz, A. 66. 287)

$3\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2$  Sol in  $\text{H}_2\text{O}$ . (Marignac.)  $+ \text{H}_2\text{O}$ . (Berthelot, A. ch. (6) 11. 294.)

$4\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2$  (Dehérain.)

$6\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2 + \frac{1}{2}\text{H}_2\text{O}$ . (Berthelot, l.c.)

**Ammonium chloride zinc oxychloride**,  $2\text{ZnCl}_2$ ,  $8\text{NH}_4\text{Cl}$ ,  $\text{ZnO}$

Sol. in a little  $\text{H}_2\text{O}$ , but decomp. by excess. (André)

$3\text{ZnCl}_2$ ,  $10\text{NH}_4\text{Cl}$ ,  $\text{ZnO}$ . As above (André, A. ch. (6) 3. 58)

**Ammonium chloride antimony fluoride**,  $\text{NH}_4\text{Cl}$ ,  $\text{SbF}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ . (de Haen, B 21. 901 R.)

**Ammonium chloride arsenic trioxide.**

See Arsenite chloride, ammonium.

**Ammonium chloride bismuth bromide,**  
 $3\text{NH}_4\text{Cl}, \text{BiBr}_3 + \text{H}_2\text{O}$ Deliquescent, decomp by  $\text{H}_2\text{O}$  (Muir, Chem Soc. 31. 148.) $2\text{NH}_4\text{Cl}, \text{BiBr}_3 + 3\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$  (Muir.) $5\text{NH}_4\text{Cl}, 2\text{BiBr}_3 + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Muir.)**Ammonium chloride chromic oxychloride,**  
 $2\text{NH}_4\text{Cl}, \text{CrOCl}_2$ Decomp in the air Sol<sup>h</sup> in conc HCl without decomp (Weinland, B. 1906, 39. 4045.)**Ammonium chloride cuprocupric thiosulphate,**  
 $2\text{NH}_4\text{Cl}, \text{Cu}_2\text{S}, \text{CuO}, 3\text{S}_2\text{O}_2$ 

See Thiosulphate ammonium chloride, cuprocupric.

**Ammonium chloride lead iodide,**  $3\text{NH}_4\text{Cl}, \text{PbI}_2$ Decomp with  $\text{H}_2\text{O}$  (Behrens, Pogg. 62. 252) $4\text{NH}_4\text{Cl}, \text{PbI}_2 + 2\text{H}_2\text{O}$ . Decomp. with  $\text{H}_2\text{O}$ . (Poggiale, C R 20. 1180)**Ammonium chloride mercuric bromide,**  
 $\text{NH}_4\text{Cl}, \text{HgBr}_2$ 

(Edhem-Bey, Dissert 1885.)

**Ammonium chloride platinum sulphite.**

See Chloroplatosulphite, ammonium.

**Ammonium chloride tin (stannous) bromide,**  
 $2\text{NH}_4\text{Cl}, \text{SnBr}_2 + 11\text{H}_2\text{O}$ Sol in  $\text{H}_2\text{O}$ . (Raymann and Preis, A. 223. 323)**Ammonium dichloroiodide,**  $\text{NH}_4\text{Cl}_2\text{I}$ Slowly decomp when exposed to dry air at ord temp Very sol in  $\text{H}_2\text{O}$ . (Chattaway, Chem Soc. 1915, 107. 107)**Ammonium tetrachloroiodide,**  $\text{NH}_4\text{Cl}_4\text{I}$ 

Decomp. in the air. (Chattaway, Chem. Soc. 1915, 107. 107)

**Ammonium lead chloroiodide,**  $\text{NH}_4\text{PbClI}_2 + 2\text{H}_2\text{O}$  and  $(\text{NH}_4)_2\text{PbCl}_2\text{I}_2 + 2\text{H}_2\text{O}$ .Sol. in  $\text{KOH} + \text{Ag}$  and in strong acids; decomp. by  $\text{H}_2\text{O}$ . (Fonzes-Diacon, Bull. Soc. 1897, (3) 17. 348.)**Ammonium fluoride,**  $\text{NH}_4\text{F}$ .Abundantly sol. in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol. (Maignac, Ann. Min (5) 15. 221)Insol in liquid  $\text{NH}_3$  (Ruff and Geisel, B. 1903, 36. 820)Almost insol in liquid  $\text{NH}_3$  at  $50^\circ$ . (Moissan, C R. 1901, 133. 713)

Sol. in methyl alcohol. (Carrara, Gazz. ch. it 1896, 26. 119)

**Ammonium hydrogen fluoride,**  $\text{NH}_4\text{F}, \text{HF}$ .Deliquescent in moist air. Sol in  $\text{H}_2\text{O}$ .**Ammonium antimony fluoride,**  $2\text{NH}_4\text{F}, \text{SbF}_3$   
Deliquescent, sol. in 0.9 pt cold  $\text{H}_2\text{O}$   
Insol in alcohol or ether (Fluckinger, A. 84. 248.) $\text{NH}_4\text{F}, 4\text{SbF}_3$  3 pts sol in 2 pts  $\text{H}_2\text{O}$   
(Raad and Hauser, B. 1800, 23. R 125)  
 $\text{NH}_4\text{F}, \text{SbF}_3$  Easily sol. in  $\text{H}_2\text{O}$  (Marignac, A 145. 239)**Ammonium bismuth fluoride,**  $2\text{NH}_4\text{F}, \text{BiF}_3$ .Insol. in  $\text{H}_2\text{O}$ . Rather difficultly sol in acids. (Helmholt, Z anorg 3. 115)**Ammonium cadmium fluoride,**  $\text{NH}_4\text{F}, \text{CdF}_2$ Insol in  $\text{H}_2\text{O}$  Sol in acids on boiling (Helmholt, Z anorg. 3. 115)**Ammonium chromium fluoride,**  $3\text{NH}_4\text{F}, \text{CrF}_3$ Easily sol in  $\text{H}_2\text{O}$  Sl sol in  $\text{NH}_4\text{F} + \text{Ag}$ . (Petersen, J pi (2) 40. 52) $2\text{NH}_4\text{F}, \text{CrF}_3 + \text{H}_2\text{O}$ . (Wagner, B. 19. 896)**Ammonium cobaltous fluoride,**  $2\text{NH}_4\text{F}, \text{CoF}_2 + 2\text{H}_2\text{O}$ Sl sol in  $\text{H}_2\text{O}$  (Wagner, B. 19. 896)Easily sol. in  $\text{H}_2\text{O}$  (Helmholt, Z. anorg. 3. 132)**Ammonium columbyl fluoride.**

See Fluoxycolumbate, ammonium.

**Ammonium columbium fluoride oxyfluoride,**  
 $3\text{NH}_4\text{F}, \text{CbF}_3, \text{CbOF}_3$ 

See Fluoxycolumbate columbium fluoride, ammonium.

**Ammonium copper fluoride,**  $2\text{NH}_4\text{F}, \text{CuF}_2 + 2\text{H}_2\text{O}$ .Insol. in  $\text{H}_2\text{O}$  (Helmholt, Z. anorg 3. 115.)Nearly insol. in  $\text{H}_2\text{O}$  but decomp. thereby (Haas, Ch Z. 1906, 32. 8.)**Ammonium glucinum fluoride,**  $2\text{NH}_4\text{F}, \text{GlF}_3$ .Sol. in  $\text{H}_2\text{O}$ . (Maignac, A. ch. (4) 30. 51)Very sol in  $\text{H}_2\text{O}$  (Helmholt, Z. anorg. 3. 130)**Ammonium iron (ferrous) fluoride,**  $2\text{NH}_4\text{F}, \text{FeF}_2$ . (Wagner, B. 19. 896) $\text{NH}_4\text{F}, \text{FeF}_2 + 2\text{H}_2\text{O}$ . (W.)**Ammonium iron (ferric) fluoride,**  $2\text{NH}_4\text{F}, \text{FeF}_3$ More sol. in  $\text{H}_2\text{O}$  than the corresponding K compound Decomp. by boiling. (Nickles, J. Pharm. (4) 7. 15) $3\text{NH}_4\text{F}, \text{FeF}_3$ . Sl. sol in  $\text{H}_2\text{O}$  (Maignac, A. ch. (3) 60. 306.)

Easily sol. in acids. (Helmholt, Z anorg. 3. 124.)

**Ammonium manganic fluoride,**  $2\text{NH}_4\text{F}, \text{MnF}_4$ 

More sol. than the K salt. (Nickles, C. R 65. 107)

True composition is  $4\text{NH}_4\text{F}$ ,  $\text{Mn}_2\text{F}_6$ . (Christensen, J. pr. (2) 34. 41)

See also Fluomanganate, ammonium.

**Ammonium manganyl fluoride.**

See Fluoxymanganate, ammonium.

**Ammonium molybdenum fluoride.**

Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HCl} + \text{Aq.}$  (Berzelius.)

See also Fluomolybdate, ammonium.

**Ammonium molybdenyl fluoride.**

See Fluoxymolybdate, ammonium.

**Ammonium nickel fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{NiF}_2 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wagner, B. 19. 896)

Easily sol. in  $\text{H}_2\text{O}$  (Helmholtz, Z anorg. 3. 143)

**Ammonium scandium fluoride**,  $(\text{NH}_4)_3\text{ScF}_6$ .

Easily sol in  $\text{H}_2\text{O}$ . Aqueous solution is not decomp. by boiling. Decomp. by acids. (R. I. Meyer, Z anorg. 1914, 86. 275)

**Ammonium silicon fluoride.**

See Fluosilicate, ammonium.

**Ammonium silver fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{AgF} + \text{H}_2\text{O}$

Not hygroscopic. Sol in  $\text{H}_2\text{O}$ ; sol in conc.  $\text{NH}_4\text{F} + \text{Aq.}$  Sol. in alcohol. (Grützner, Arch. Pharm 1900, 238. 3)

$15\text{NH}_4\text{F}$ ,  $\text{AgF} + 4\text{H}_2\text{O}$ . More deliquescent than  $\text{NH}_4\text{F}$ . (Bohm, Dissert 1906.)

**Ammonium tantalum fluoride.**

See Fluotantalate, ammonium.

**Ammonium tantaly fluoride.**

See Fluoxytantalate, ammonium.

**Ammonium tellurium fluoride**,  $\text{NH}_4\text{F}$ ,  $\text{TeF}_6$ .

Decomp. by  $\text{H}_2\text{O}$ . (Höghom, Bull. Soc. (2) 85. 60.)

**Ammonium tin (stannous) fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{SnF}_2 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Wagner, B. 19. 896.)

**Ammonium tin (stannic) fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{SnF}_4$ .

See Fluostannate, ammonium.

**Ammonium titanium sesquifluoride.**

See Fluotitanate, ammonium.

**Ammonium titanyl fluoride.**

See Fluoxypertitanate, ammonium.

**Ammonium tungstyl fluoride.**

See Fluoxytungstate, ammonium.

**Ammonium uranyl fluoride.**

See Fluoxuryanate, ammonium.

**Ammonium vanadium sesquifluoride.**

See Fluovanadate, ammonium.

**Ammonium vanadyl fluoride.**

See Fluoxyvanadate, ammonium.

**Ammonium zinc fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{ZnF}_2$

Sol in  $\text{H}_2\text{O}$  (R Wagner.)  
+  $2\text{H}_2\text{O}$ . Very sol in  $\text{H}_2\text{O}$  Easily sol in dil. acids (Helmholtz)

**Ammonium zirconium fluoride.**

See Fluozirconate, ammonium.

**Ammonium fluoride manganic oxyfluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{MnOF}_2$ .

Precipitate. (Nicklès.)

See also Fluoxymanganate, ammonium.

**Ammonium fluoride molybdenum trioxide**,  $2\text{NH}_4\text{F}$ ,  $\text{MoO}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Mauro, Gazz. ch. it. 18. 120.)

**Ammonium fluoride tungsten oxyfluoride.**

See Fluoxytungstate, ammonium.

**Ammonium fluoride tungsten oxyfluoride ammonium tungstate**,  $4\text{NH}_4\text{F}$ ,  $\text{WO}_2\text{F}_2$ ,  $(\text{NH}_4)_2\text{WO}_4$

See Fluoxytungstate tungstate, ammonium.

**Ammonium fluoride vanadium oxyfluoride.**

See Fluoxyvanadate, and fluoxyhypovanadate, ammonium.

**Ammonium hydroselenide**,  $\text{NH}_4\text{HSe}$

Sol in  $\text{H}_2\text{O}$  with decomp. (Bineau, A. ch. (2) 67. 229.)

**Ammonium hydrosulphide**,  $\text{NH}_4\text{SH}$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol. Solutions decomp on air

**Ammonium hydroxide**,  $\text{NH}_4\text{OH}$ .

See Ammonia,

**Ammonium imidosulphamide**,  $(\text{S}_2\text{O}_2\text{N}_2\text{H}_4)\text{NH}_4$ .

(Hantzsch, B. 1905, 38. 1033.)

**Ammonium iodide**,  $\text{NH}_4\text{I}$ .

Very deliquescent. Sol. in 0.60 pt  $\text{H}_2\text{O}$ . (Eder, Dingl. 221. 89)

Sp. gr. of aqueous solution of  $\text{NH}_4\text{I}$  at  $18^\circ$  containing—

	10	20	30	40	50% $\text{NH}_4\text{I}$
1	0.653	1.1397	1.2260	1.3260	1.4415

(Kohrausch, W. Ann 1879. 1.)

$\text{NH}_4\text{I} + \text{Aq}$  containing 12.51%  $\text{NH}_4\text{I}$  has sp. gr.  $20^\circ/20^\circ = 1.0846$ .

$\text{NH}_4\text{I} + \text{Aq}$  containing 19.19%  $\text{NH}_4\text{I}$  has sp. gr.  $20^\circ/20^\circ = 1.1359$ .

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 279.)

Very easily sol in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20. 826.)

Very sol. in liquid  $\text{NH}_3$  at  $-50^\circ$ . (Moissan, C. R 1901, 133. 713.)

Sol. in  $\text{SOCl}_2$ . (Walden, Z anorg 1900, 25. 216)

Sol. in liquid  $\text{SO}_2$ . (Walden, Z. anorg 1902, 30. 160)

Sol. in 40 pts. abs alcohol (Eder, l.c.)

" 210 " ether (Eder, l.c.)

" 20 " alcohol-ether (1 : 1). (Eder, l.c.)

Sol. in acetone. (Eidmann, C.C. 1899, II. 1014.); (Naumann, B. 1904, 37. 4328)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314)

Sl sol in benzonitrile (Naumann, B. 1914, 47. 1369)

#### Ammonium diiodide, $\text{NH}_4\text{I}_2$

Sol. in alcohol, ether,  $\text{CS}_2$ , and  $\text{KI} + \text{Aq}$ , less sol. in chloroform. (Guthrie, Chem. Soc (2) 1. 239)

#### Ammonium triiodide, $\text{NH}_4\text{I}_3$

Sl. deliquescent. Sol in little  $\text{H}_2\text{O}$ , but decomp. by much  $\text{H}_2\text{O}$ . (Johnson, Chem Soc. 33. 397)

#### Ammonium antimony iodide, $\text{NH}_4\text{I}$ , $\text{SbI}_3 + 2\text{H}_2\text{O}$

Decomp. by  $\text{H}_2\text{O}$  (Nicklès, C. R. 51. 1097)

$3\text{NH}_4\text{I}$ ,  $4\text{SbI}_3 + 9\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$ , with separation of  $\text{SbOI}$ . Sol. in  $\text{HC}_2\text{H}_3\text{O}_2$ ,  $\text{HCl}$ , and  $\text{H}_2\text{C}_2\text{H}_4\text{O}_6 + \text{Aq}$  Decomp. by  $\text{CS}_2$ . (Schäffer, Pogg 109. 611.)

$3\text{NH}_4\text{I}$ ,  $\text{SbI}_3 + 3\text{H}_2\text{O}$  As above

$4\text{NH}_4\text{I}$ ,  $\text{SbI}_3 + 3\text{H}_2\text{O}$  As above

#### Ammonium bismuth iodide, $\text{NH}_4\text{I}$ , $\text{BiI}_3 + \text{H}_2\text{O}$

Deliquescent; decomp. by  $\text{H}_2\text{O}$ . (Nicklès, C. R. 51. 1097.)

$4\text{NH}_4\text{I}$ ,  $\text{BiI}_3 + 3\text{H}_2\text{O}$  As above. (Linna, Pogg. 111. 240.)

$2\text{NH}_4\text{I}$ ,  $\text{BiI}_3 + 2\frac{1}{2}\text{H}_2\text{O}$ . Decomp by  $\text{H}_2\text{O}$ , or  $\text{MCl}$ ,  $\text{MBr}$ , or  $\text{MI} + \text{Aq}$  (Nicklès, J. pr. (2) 39. 116.)

#### Ammonium cadmium iodide, $2\text{NH}_4\text{I}$ , $\text{CdI}_2 + 2\text{H}_2\text{O}$

Deliquescent. (Croft.)

Sol. at  $15^\circ$  in 0.58 pt.  $\text{H}_2\text{O}$ , 0.70 pt. abs. alcohol., 8.9 pts ether (sp. gr 0.729), and 1.8 pts alcohol-ether (1 : 1). (Eder, Dingl. 221. 89.)

100 pts. of the solution in  $\text{H}_2\text{O}$  contain 85.97 pts. of the salt at  $14.5^\circ$ . (Rimbach, B. 1905, 38. 1563.)

$\text{NH}_4\text{I}$ ,  $\text{CdI}_2 + \frac{1}{2}\text{H}_2\text{O}$  Sol. at  $15^\circ$  in 0.90 pt  $\text{H}_2\text{O}$ , 0.88 pt. abs alcohol, and 2.4 pts. ether (sp. gr 0.729). (Eder, l.c.)

$+ \text{H}_2\text{O}$  (Grossmann, Z anorg 1902, 33. 154.)

#### Ammonium chloromolybdenum iodide, $2\text{NH}_4\text{I}$ , $\text{Cl}_2\text{MoO}_4 + 2\text{H}_2\text{O}$

Decomp. by  $\text{H}_2\text{O}$ . Cryst. from  $\text{HI} + \text{Aq}$ . (Blomstrand)

#### Ammonium cuprous iodide, $2\text{NH}_4\text{I}$ , $\text{Cu}_2\text{I}_2 + \text{H}_2\text{O}$

Decomp on the air, or by  $\text{H}_2\text{O}$ , or alcohol. (Saglier, C. R. 104. 1440)

$+ \frac{1}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  with separation of  $\text{Cu}_2\text{I}_2$  (Gossnei, Zeit. Kryst 1903, 33. 501)

#### Ammonium cupric iodide ammonia, $2\text{NH}_4\text{I}$ , $\text{CuI}_2$ , $2\text{NH}_3 + 2\text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$  or alcohol, sl. sol in  $\text{NH}_4\text{OH} + \text{Aq}$

$+ 8\text{H}_2\text{O}$ . Unstable. (Saglier, C. R. 104. 1440)

$\text{NH}_4\text{I}$ ,  $2\text{CuI}_2$ ,  $3\text{NH}_3$ . (Fleurent, C. R. 1891, 113. 1047)

#### Ammonium iridium diiodide, $2\text{NH}_4\text{I}$ , $\text{IrI}_2$

Insol in cold or hot  $\text{H}_2\text{O}$ , and in alcohol. Sol in warm dil. acids (Oppler)

#### Ammonium iridium sesquiodide.

See Iodiridite, ammonium.

#### Ammonium iridium tetraiodide.

See Iodiridate, ammonium.

#### Ammonium lead iodide, $\text{NH}_4\text{I}$ , $\text{PbI}_2 + 2\text{H}_2\text{O}$

Decomp by much  $\text{H}_2\text{O}$ . (Wells, Sil. Am. J. 146. 25)

$4\text{NH}_4\text{I}$ ,  $3\text{PbI}_2 + 6\text{H}_2\text{O}$ . Sl sol. in  $\text{H}_2\text{O}$ . (Mosmer, C. R. 1895, 120. 444.)

Sol in  $\text{H}_2\text{O}$  with decomp Sol. in strong  $\text{KOH} + \text{Aq}$  and in strong acids. (Fonze-Diacon, Bull. Soc 1897, (3) 17. 347.)

#### Ammonium magnesium iodide, $\text{NH}_4\text{I}$ , $\text{MgI}_2 + 6\text{H}_2\text{O}$

Very deliquescent. (Lereh, J. pr. (2) 28. 338.)

#### Ammonium mercuric iodide, $\text{NH}_4\text{I}$ , $\text{HgI}_2 + \text{H}_2\text{O}$

Decomp. into its constituents by  $\text{H}_2\text{O}$ . (Boullay, A. ch. (2) 34. 345.)

Sol without decomp. in alcohol and ether.  $\text{NH}_4\text{I}$ ,  $2\text{HgI}_2$  Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{KI} + \text{Aq}$ . Very sol. in alcohol, ether and nitrobenzol (Löw, Zeit Kryst, 51. 138)

#### Ammonium silver iodide, $2\text{NH}_4\text{I}$ , $\text{AgI}$

Deliquescent Decomp. by  $\text{H}_2\text{O}$ . (Poggale.)

#### Ammonium thallic iodide, $\text{NH}_4\text{I}$ , $\text{TlI}_3$

Sol in  $\text{H}_2\text{O}$  (Nicklès, J. Pharm. (4) 1. 32.)

#### Ammonium tin (stannous) iodide, $\text{NH}_4\text{I}$ , $\text{SnI}_2$

Decomp. by small amt  $\text{H}_2\text{O}$  but completely sol. in a large amt (Boullay, A. ch (2) 34. 376.)

$+ \frac{1}{2}\text{H}_2\text{O}$ . (Personne.)

#### Ammonium zinc iodide, $2\text{NH}_4\text{I}$ , $\text{ZnI}_2$

Extremely deliquescent, and sol in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg 43. 665.)

$\text{NH}_4\text{I}$ ,  $\text{ZnI}_2 + 1\frac{1}{2}\text{H}_2\text{O}$  Hygroscopic  
(Ephraim, Z anorg 1910, 67. 384)

**Ammonium iodide arsenic trioxide.**

See Arsenite iodide, ammonium.

**Ammonium cobalt nitride.**

See Ammonium cobalt azoimide.

**Ammonium ruthenium dihydronitrosobromide**,  $\text{NO Ru}_2\text{H}_3(\text{NH}_4)_2\text{Br}_2 \cdot 2\text{HBr}$

Ppt. (Brizard, A ch 1900, (7) 21. 363)

**Ammonium ruthenium nitroschloride**,  
 $3\text{NH}_4\text{Cl} \cdot 2\text{HCl} \cdot \text{NO Ru}_2\text{H}_3\text{Cl}_2$

Ppt (Brizard, A ch 1900, (7) 21. 354)

**Ammonium ruthenium dihydronitroschloride**,  $\text{NO Ru}_2\text{H}_3(\text{NH}_4)_2\text{Cl}_2 \cdot 2\text{HCl}$

Ppt (Brizard, A ch. 1900, (7) 21. 358)

**Ammonium peroxide**,  $(\text{NH}_4)_2\text{O}_2$

M-ppt  $-2^\circ$  Sl. sol in ether without decomp (D'Ans, B 1913, 46. 3076)

Sol. in alcohol; insol in ether, decomp slowly in aq solution. (Melikoff, B 1897, 80. 3145.)

**Ammonium hydrogen peroxide**,  $(\text{NH}_4)_2\text{O}_2 \cdot \text{H}_2\text{O}_2$

Decomp at ordinary temp. (Mehkoff, B 1898, 31. 447)

+  $\text{H}_2\text{O}$ . Unstable, deliquesces at ordinary temp; sol in alcohol; insol in light petroleum. (Mehkoff, B 1898, 31. 152)

**Ammonium selenide**,  $(\text{NH}_4)_2\text{Se}$

Sol. in  $\text{H}_2\text{O}$  with decomp (Bineau, A. ch (2) 67. 229.)

Stable in the air. Sol. in  $\text{H}_2\text{O}$ ; aq solution decomp. slowly (Lenher and Smith, J. Am. Chem. Soc 1898, 20. 277.)

**Ammonium hydrogen selenide**,  $\text{NH}_4\text{HSe}$

Sol. in  $\text{H}_2\text{O}$  (Fabre, C. R. 103. 269)

**Ammonium monosulphide**,  $(\text{NH}_4)_2\text{S}$

Decomp. on air. Sol. in  $\text{H}_2\text{O}$ , but solution decomposes rapidly.

Very sol in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20. 826.)

**Ammonium disulphide**,  $(\text{NH}_4)_2\text{S}_2$

Sol. in  $\text{H}_2\text{O}$  with decomp.

Does not exist (Bloxam, Chem. Soc 1895, 67. 293)

**Ammonium tetrasulphide**,  $(\text{NH}_4)_2\text{S}_4$

Easily sol in  $\text{H}_2\text{O}$ . Conc solution is stable, dil solution decomp. on air. Easily sol in alcohol without decomp., but solution decomp. on the air more rapidly than the aqueous solution (Fritzsche, J. pr 32. 313.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . When dissolved in  $\text{H}_2\text{O}$ , it is at once dissociated with deposition of S. (Bloxam, Chem. Soc. 1895, 67. 303)

**Ammonium pentasulphide**,  $(\text{NH}_4)_2\text{S}_5$

Decomp on air Sol in  $\text{H}_2\text{O}$  with separation of S Sol. in alcohol without decomp., but solution decomposes quickly on standing. (Fritzsche, J pr 32. 313.)

Rapidly decomp. by  $\text{H}_2\text{O}$  with separation of S (Bloxam, Chem. Soc. 1895, 67. 298.)

+  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  with separation of S (Bloxam, Chem. Soc 1895, 67. 298)

**Ammonium heptasulphide**,  $(\text{NH}_4)_2\text{S}_7$

More stable on air, and less easily decomposed by  $\text{H}_2\text{O}$  than  $(\text{NH}_4)_2\text{S}_5$

+  $1\frac{1}{2}\text{H}_2\text{O}$ . Decomp by  $\text{H}_2\text{O}$  with separation of S Slowly attacked by dil.  $\text{HCl}$  + Aq. (Bloxam, Chem. Soc. 1895, 67. 307)

**Tetrammonium heptasulphide**,  $(\text{NH}_4)_4\text{S}_7 + 4\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . Solution can be kept for a long time without depositing S (Bloxam, Chem Soc 1895, 67. 298.)

**Diammonium enneasulphide**,  $(\text{NH}_4)_2\text{S}_9 + \frac{1}{2}\text{H}_2\text{O}$

Decomposed by  $\text{H}_2\text{O}$  with separation of S. Not attacked by boiling dil  $\text{HCl}$  + Aq on account of formation of a hard crust of S on the crystals (Bloxam, Chem. Soc 1895, 67. 306)

**Tetrammonium enneasulphide**,  $(\text{NH}_4)_4\text{S}_9$

Solution in  $\text{H}_2\text{O}$  deposits crystals of  $(\text{NH}_4)_2\text{S}_9$  on standing. (Bloxam, Chem. Soc 1895, 67. 302.)

+  $3\frac{1}{2}\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$  with separation of S (Bloxam, Chem. Soc. 1895, 67. 299.)

**Ammonium polysulphides.**

Conc  $\text{NH}_3$  + Aq dissolves  $\text{H}_2\text{S}$  to form  $(\text{NH}_4)_2\text{S}_2 \cdot 2\text{NH}_4\text{SH}$  On dilution more  $\text{H}_2\text{S}$  is absorbed to form  $(\text{NH}_4)_2\text{S}_4 \cdot 4\text{NH}_4\text{SH}$ , then  $(\text{NH}_4)_2\text{S}_8 \cdot 8\text{NH}_4\text{SH}$ , then  $(\text{NH}_4)_2\text{S}_{16} \cdot 16\text{NH}_4\text{SH}$  and finally  $\text{NH}_4\text{SH}$ . (Bloxam, Chem. Soc. 1895, 67. 284)

**Ammonium copper sulphide**,  $(\text{NH}_4)_2\text{S}_2 \cdot 2\text{CuS}_2$  (?)

Sol. in warm  $\text{H}_2\text{O}$ , but decomp. on standing. Warm  $\text{KOH}$  + Aq acts similarly; sl. sol. in  $\text{NH}_4\text{OH}$  + Aq,  $\text{Na}_2\text{CO}_3$  + Aq, or absolute alcohol. Insol in ether. Decomp. by dil. acids. (Priwoznik, B. 6. 1291.)

Correct formula is  $\text{NH}_4\text{CuS}_4$  Sl. sol. in  $\text{H}_2\text{O}$  Decomp by conc. and dil. acids. Easily sol in  $\text{NaOH}$  Sl sol. in alcohol. (Biltz, B 1907, 40. 976)

**Ammonium gold polysulphide**,  $\text{AuS}_2 \cdot \text{NH}_4$

Ppt (Hofmann, B 1903, 36. 3092; B. 1904, 37. 245)

**Ammonium iridium pentadecasulphide**,  
 $\cdot \text{IrS}_{15}(\text{NH}_4)_2$

Ppt. (Hofmann, B. 1904, 37. 247.)

**Ammonium palladium undecaculphide,**  
 $\text{PdS}_{11}(\text{NH}_4)_2 + \frac{1}{2}\text{H}_2\text{O}$

Ppt. (Hofmann, B. 1904, 37, 248)

**Ammonium platinum pentadecaculphide,**  
 $\text{PtS}_{15}(\text{NH}_4)_2 + 2\text{H}_2\text{O}$

Can be washed with  $\text{CS}_2$  without decomp.  
 Sol in alcohol Insol in ether (Hofmann,  
 B. 1903, 36, 3091)

**Ammonium stannic sulphide.**

See Sulphostannate, ammonium.

**Ammonium telluride,  $\text{NH}_4\text{HTe}$**

Easily sol in  $\text{H}_2\text{O}$ . (Bineau, A. ch. (2) 67,  
 229.)

**Ammonium sulphide ammonia,  $(\text{NH}_4)_2\text{S}$ ,  
 $2\text{NH}_3$**

Very unstable (Bloxam, Chem Soc 1895,  
 67, 294)

**Ammonium acisulphomelid,  $(\text{NSO ONH}_4)_2$   
 (?)**

(Hantzsch and Stuer, B. 1905, 38, 1039)

**Ammonplatindiamine comps.**

See Platindiamine comps.

**Ammondisulphonic acid,  $\text{NH}_2(\text{SO}_3\text{H})_2$ .**

Known only in its salts (Claus, A. 158,  
 52 and 194)

Contains 2 at. H less, and is identical with  
 imidosulphonic acid  $\text{NH}(\text{SO}_3\text{H})_2$ , which see  
 (Raschig, A. 241, 161.)

**Ammontrisulphonic acid,  $\text{NH}_2(\text{SO}_3\text{H})_3$**

Known only in its salts (Claus, A. 158,  
 52 and 194)

Contains 2 at. H less, and is nitrosulphonic  
 acid  $\text{N}(\text{SO}_3\text{H})_2$ , which see (Raschig, A. 241,  
 161.)

**Ammontetrasulphonic acid,  $\text{NH}(\text{SO}_3\text{H})_4$**

Known only in its salts (Claus, A. 158,  
 52 and 194.)

Does not exist, but was impure nitrosulpho-  
 nic acid, which see. (Raschig, A. 241,  
 161)

**Anhydroarseniotungstic acid,  $\text{H}_2\text{As}_2\text{W}_3\text{O}_{28}$ .**

See under Arseniotungstic acid.

**Anhydrooxycobaltamine chloride,**

Easily sol. in  $\text{H}_2\text{O}$ , but decomposes after a  
 few minutes; can be recrystallized from dil  
 $\text{HCl} + \text{Aq}$  Precipitated from sat.  $\text{H}_2\text{O}$  solu-  
 tion by conc.  $\text{HCl} + \text{Aq}$ , or alcohol. (Vort-  
 mann, M. Ch. 6, 404)

$\text{Co}_2(\text{NH}_3)_{10} \left( \frac{\text{Cl}}{\text{OH}} \right) \text{Cl}_4$  Sol. in  $\text{H}_2\text{O}$ . (Vort-  
 mann.)

**Anhydrooxycobaltamine chloride · mercuric  
 chloride,  $\text{Co}_2(\text{NH}_3)_{10}(\text{ClO}_2\text{H})\text{Cl}_4 \cdot 3\text{HgCl}_2$ .**

Can be recryst. from very dil hot  $\text{HCl} + \text{Aq}$ .

— chloroplatinate,  $\text{Co}_2(\text{NH}_3)_{10}(\text{ClO}_2\text{H})\text{Cl}_4$ ,  
 $2\text{PtCl}_4$ .

Can be recrystallized from  $\text{H}_2\text{O}$  containing  
 $\text{HCl}$

— chloronitrate,  
 $\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O OH})(\text{NO}_2)_4 + \text{H}_2\text{O}$ .

Can be recrystallized from dil.  $\text{HCl} + \text{Aq}$ .

$\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O OH})\text{Cl}_2(\text{NO}_2)_2 + \text{H}_2\text{O}$ .

More easily sol. in  $\text{H}_2\text{O}$  than the preceding  
 comp.

— chlorosulphate,  
 $\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O} \cdot \text{OH})(\text{SO}_4)_2$ .

— dichromate,  $[\text{Co}_2(\text{NH}_3)_{10}\text{O OH}]_2(\text{Cr}_2\text{O}_7)_2$   
 $+ 8\text{H}_2\text{O}$ .

Sl sol. in  $\text{H}_2\text{O}$ .

— nitrate,  $\text{Co}_2(\text{NH}_3)_{10}(\text{NO}_3)(\text{O} \cdot \text{OH})(\text{NO}_2)_4$   
 $+ \text{H}_2\text{O}$

Sl sol in pure  $\text{H}_2\text{O}$  with immediate decomp.  
 Can be recrystallized from  $\text{H}_2\text{O}$  containing  
 $\text{HNO}_3$

— sulphate,  $[\text{Co}_2(\text{NH}_3)_{10} \text{O} \cdot \text{OH}]_2(\text{SO}_4)_2$ ,  
 $2\text{H}_2\text{SO}_4 + 2\text{H}_2\text{O}$

Sl sol. in cold  $\text{H}_2\text{O}$ . When crystallized  
 from dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , is converted into—

$[\text{Co}_2(\text{NH}_3)_{10}\text{O} \cdot \text{OH}]_2(\text{SO}_4)_2 \cdot \text{H}_2\text{SO}_4 + 3\text{H}_2\text{O}$ ,  
 which by further recrystallization from very  
 dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  becomes—

$[\text{Co}_2(\text{NH}_3)_{10}\text{O} \cdot \text{OH}]_2(\text{SO}_4)_2 + 8\text{H}_2\text{O}$ . Sl sol.  
 in cold  $\text{H}_2\text{O}$ . (Vortmann.)

**Anhydrophospholutedungstic acid,**  
 $\text{H}_2\text{PW}_3\text{O}_{28}$

See under Phosphotungstic acid.

**Antimonic Acid.**

**Metantimonic acid,  $\text{HSbO}_3$**

Very sl. sol. in  $\text{H}_2\text{O}$ ; sol in conc  $\text{HCl} + \text{Aq}$ ;  
 sl. sol. in dil  $\text{HNO}_3 + \text{Aq}$ ; easily sol. in tar-  
 tartic acid +  $\text{Aq}$ ; easily sol in hot  $\text{KOH}$ , or  
 $\text{NaOH} + \text{Aq}$ ; completely insol in  $\text{NH}_4\text{OH} +$   
 $\text{Aq}$  (Fremy, A. ch. (3) 23, 407.)

Sl sol in  $\text{H}_2\text{O}$ . Very sl. sol in  $\text{KOH}$  and  
 $\text{K}_2\text{CO}_3 + \text{Aq}$  Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol.  
 in  $\text{HNO}_3 + \text{H}_2\text{SO}_4$ . Slowly sol. in cold, quickly  
 in hot  $\text{HCl} + \text{Aq}$ . Sl sol in tartaric and  
 oxalic acid and in  $\text{KHC}_2\text{O}_4 + \text{Aq}$  (Senderens,  
 Bull. Soc. 1899, (3) 21, 48.)

Insol. in acetone. (Naumann, B. 1904, 37,  
 4329.)

**Pyroantimonic acid,  $\text{H}_2\text{Sb}_2\text{O}_7$**

More sol. in  $\text{H}_2\text{O}$  and acids than  $\text{H}_2\text{SbO}_3$ .  
 Sol. in cold  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . (Fremy.)

Slowly sol in cold  $\text{H}_2\text{O}$ .

5.88 g  $\text{Sb}_2\text{O}_5$  in 1 l.  $\text{H}_2\text{O}$  at 15°

8.55 " " " " " " 25°

21.30 " " " " " " 60°

(Delacroix, J. Pharm. 1897, 6, 337-41.)

Sl. sol. in  $H_2O$ . Very sl. sol. in KOH and  $K_2CO_3 + Aq$ . Insol. in  $NH_4OH + Aq$ , and in  $HNO_3 + H_2SO_4$ . Slowly sol. in cold, quickly in hot  $HCl + Aq$ . Sl. sol. in tartaric acid, oxalic acid and  $KHC_2O_4 + Aq$ . (Senderens, Bull. Soc. 1899, (3) 21. 48.)

#### Orthoantimonic acid, $H_3SbO_4$

Sl. sol. in  $H_2O$ . Insol. in  $NH_4OH + Aq$ . Easily sol. in KOH +  $Aq$  (Fremy)

Does not exist. (Raschig, B 18. 2745.)

Has, however, been prepared by Daubrawa (A. 186. 110), Conrad (C. N. 40. 198), and Beilstein and Blaeue (Bull. Ac St Petersb. 33. 97).

Very sol. in  $H_2O$  (Delacroix, Bull. Soc. 1899 (3) 21. 1049)

Very sl. sol. in  $H_2O$ , in KOH and  $K_2CO_3 + Aq$ . Slowly sol. in cold, quickly in hot  $HCl + Aq$ . Insol. in  $NH_4OH + Aq$ , and in  $HNO_3 + H_2SO_4$ . Sl. sol. in tartaric acid, oxalic acid and  $KHC_2O_4 + Aq$  (Senderens, Bull. Soc. 1899, (3) 21. 52)

+  $\frac{1}{2}H_2O$  (Beilstein and Blaeue.)

According to Beilstein and Blaeue only one antimonic acid,  $H_3SbO_4$ , exists

#### Tetraantimonic acid, $Sb_2O_3 + 4H_2O = H_8Sb_2O_5$

Slowly sol. in cold  $H_2O$ .

Solution sat at  $t^\circ$  contains g  $Sb_2O_3$  per litre—

$t^\circ$	15°	25°	60°	70°
g. $Sb_2O_3$	5.88	8	3-8	75
	21	30	53	89

Decomp. in solution by heating to 100° or long standing in the cold to  $Sb_2O_3$ ,  $3H_2O$  (Delacroix, Bull. Soc. 1899, (3) 21. 1049.)

Insol. in  $H_2O$ . Very sl. sol. in KOH and  $K_2CO_3 + Aq$ . Slowly sol. in cold, quickly in hot  $HCl + Aq$ . Insol. in  $NH_4OH + Aq$ . Insol. in  $HNO_3 + H_2SO_4$ . Sl. sol. in tartaric acid, oxalic acid and in  $KHC_2O_4 + Aq$  (Senderens, Bull. Soc. 1899, (3) 21. 51)

#### Hexantimonic acid, $Sb_2O_3 + 6H_2O =$

Sol. in  $H_2O$  to the extent of 22 g.  $Sb_2O_3$  per l. but on standing becomes turbid and a white powder is pptd. until finally only 3 g  $Sb_2O_3$  are dissolved per l (Senderens, Bull. Soc. 1899, (3) 21. 48-49.)

#### Antimonates.

$\alpha$  *Antimonates*. From  $HSbO_3$ . Some of the K and  $NH_4$  salts are sol. in  $H_2O$ , the others are slightly sol. or insol.

$\beta$ . *Pyroantimonates*. From  $H_2Sb_2O_7$ . As a class, insol. in  $H_2O$ , but decomp. thereby except in presence of large excess of alkali (Fremy, A. ch. (3) 12. 499.)

Probably do not exist (Beilstein and Blaeue.)

#### Aluminum antimonate, $Al_2O_3, 3Sb_2O_3$ (?)

Ppt. Somewhat sol. in excess of Al salts +  $Aq$ . Insol. in  $K_2Sb_2O_7 + Aq$

Ppt (Beilstein and Blaeue, Bull. Ac St. Petersb. 33. 101)

Ppt. (B and B.)

$Al_2O_3, Sb_2O_3 + 9H_2O$ . Ppt. (Ebel, B. 22. 3043.)

#### Ammonium antimonate, $NH_4SbO_3 + 2H_2O$ ,

Insol. in  $H_2O$

+  $2\frac{1}{2}H_2C$ . Insol. in  $H_2O$  (Senderens,

Bull. Soc. 1899, (3) 21. 56.)

+  $6H_2O$  Ser ( $NH_4$ ) $_2H_3Sb_2O_7 + 5H_2O$

#### Ammonium pyroantimonate, $(NH_4)_2Sb_2O_7$

Known only in solution.

Sol. in  $H_2O$ , but decomp. by standing or boiling into insol salt. Insol. in alcohol. (Fremy, J. pr. 45. 215). Composition is  $NH_4SbO_3 + 6H_2O$ , according to Raschig (B. 18. 2743)

#### Barium antimonate, $Ba(SbO_3)_2$ .

Ppt. Scarcely sol. in  $H_2O$ . Slowly sol. in  $BaCl_2 + Aq$

+  $2H_2O$ . Somewhat sol. in  $H_2O$ . Easily

sol. in  $HCl + Aq$ . (Delacroix, Bull. Soc. 1899, (3) 21. 1051.)

+  $5$ , or  $6H_2O$  Ppt

$BaSb_2O_7 + 5H_2O$ . Sol. in conc.  $HCl$ . (Delacroix, Bull. Soc. 1899, (3) 21. 1051.)

$BaO, 3Sb_2O_3 + 5H_2O$ . Insol. in  $H_2O$ . In-

completely sol. in  $HCl$  (Delacroix, *l.c.*)

$BaO, 4Sb_2O_3 + 15H_2O$ . (Delacroix, *l.c.*)

$9BaO, 10Sb_2O_3 + 18H_2O$ . Insol. in  $HCl +$

$Aq$ . (Delacroix, *l.c.*)

#### Bismuth antimonate, $BiSbO_4 + H_2O$ .

Ppt. Insol. in  $H_2O$ , sol. in  $HCl + Aq$ . (Cavazzi, Gazz. ch. it. 15. 37.)

$3Bi_2O_3, Sb_2O_3 + H_2O$ . Insol. in  $H_2O$ ; sol

in  $HCl + Aq$ . (Cavazzi)

$2Bi_2O_3, Sb_2O_3$  As above (Cavazzi.)

#### Cadmium antimonate, $Cd(SbO_3)_2 + 2H_2O$

Insol. in  $H_2O$  (Senderens, Bull. Soc. 1899, (3) 21. 56.)

+  $3\frac{1}{2}H_2O$ . Very sol. in  $H_2O$ . Sol. in  $HCl$

+  $Aq$  (Ebel, Dissert. 1890.)

+  $5H_2O$ . Insol. in  $H_2O$  (Senderens, *l.c.*)

+  $6H_2O$  Ppt. Insol. in  $H_2O$  (Ebel, B.

22. 3043.)

#### Calcium antimonate, $Ca(SbO_3)_2$ .

Ppt

+  $5H_2O$  Ppt. (Heffter, Pogg. 86. 418.)

+  $6H_2O$  Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 56.)

$3CaO, 2Sb_2O_3 + 6H_2O$ . Min. *Ullmanite*.

#### Chromic antimonate, $Cr(SbO_3)_3 + 14H_2O$

Ppt. (Beilstein and Blaeue.)

#### Cobaltous antimonate, $Co(SbO_3)_2 + 5H_2O$ .

Insol. in  $H_2O$ . Loses  $3H_2O$  in the presence of  $H_2SO_4$  and passes into  $Co(SbO_4)_2 + 2H_2O$ ,

also insol in  $H_2O$  (Senderens, Bull. Soc. 1899, (3) 21. 55)

+  $6H_2O$  Ppt. (Ebel, B. 22. 3043)

+  $7H_2O$  Sl sol in  $H_2O$ . Sl sol in boiling

\* solutions of cobalt salts

+  $12H_2O$  Ppt (Heffter, Pogg 86. 448)

**Cobaltous hydrogen antimonate**,  $CoH_4(SbO_4)_2 + H_2O$

(Gorgeul, Ann Phys. Beihl 1897, 21. 198.)

**Cupric antimonate**,  $3CuO, 2Sb_2O_3$ .

Ppt (Beilstein and Blaesé)

$Cu(SbO_3)_2$ . Insol in  $H_2O$ , acids, or alkalis. (Berzelius)

+  $2H_2O$  Insol in  $H_2O$  (Senderens, Bull. Soc. 1899, (3) 21. 55)

+  $5H_2O$  Ppt (Ebel, B. 22. 3043)

Insol in  $H_2O$  (Senderens, *l.c.*)

$CuO, 2Sb_2O_3 + 9H_2O$  Insol in  $H_2O$ . Sol in  $8Sb_2O_3, 4H_2O + Aq$ . (Delacroix, Bull. Soc. 1899, (3) 21. 1054.)

$2CuO, 3Sb_2O_3 + 10H_2O$  Insol. in  $H_2O$ . Sol. in  $NH_4OH$  and in triantimonie acid + Aq. (Delacroix, *l.c.*)

$CuO, 6Sb_2O_3 + 16H_2O$  (Delacroix, *l.c.*)

**Cupric antimonate ammonia**,  $Cu(SbO_3)_2, 4NH_3 + 4H_2O$

Insol. in  $H_2O$  and  $NH_4OH + Aq$  (Schiff, A. 123. 39)

$CuSb_2N_3H_{12}O_{12} = Cu(ONH_2)_2OH, 2(NH_4SbO_3 + 2H_2O)$  (Raschig, B. 18. 2743.)

$Cu(SbO_3)_2, 3NH_3 + 9H_2O$  (Delacroix, Bull. Soc. 1901, (3) 25. 289)

**Glucinum antimonate**,  $Gl(SbO_3)_2 + 6H_2O$ .

Somewhat sol. in hot  $H_2O$  Easily sol. in warm  $HCl$ . (Ebel, Dissert. 1890.)

**Iron (ferrous) antimonate.**

Sl sol in  $H_2O$  (Berzelius.)

**Iron (ferric) antimonate.**

Insol. in  $H_2O$ . (B.)

$Fe_2O_3, Sb_2O_3 + 7H_2O$  Ppt. (Ebel, B. 22. 3043)

$Fe_2O_3, 2Sb_2O_3 + 11H_2O$  Ppt (Beilstein and Blaesé)

$Fe(SbO_3)_3 + 6\frac{1}{2}H_2O$  Ppt. (B. and B.)

**Lead antimonate, basic**,  $Pb_2(SbO_3)_2(OH)_4 + 2H_2O = Pb_2(SbO_3)_2 + 4H_2O$ .

Min. *Bleinerite, Bindschwarte*.

$2Pb(SbO_3)_2, PbO + 11H_2O$  Ppt. (B. and B.)

**Lead antimonate**,  $Pb(SbO_3)_2$ .

Insol. in  $H_2O$  Incompletely decomp. by acids. (Berzelius.)

*Naples Yellow* Insol in  $H_2O$ .

+  $2H_2O$  Insol in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 57)

+  $5H_2O$  Ppt. (Ebel, B. 22. 3043)

+  $6H_2O$  Ppt. (Beilstein and Blaesé)

+  $9H_2O$  Insol. in  $H_2O$ . (Senderens, *l.c.*)

**Lead antimonate chloride**,  $Pb(SbO_3)_2, PbCl_2$ .

Min. *Nadorite*. Sol. in  $HCl, HNO_3$ , and tartaric acid + Aq.

**Lithium antimonate**,  $LiSbO_3$ .

Sl sol in cold, sol. in hot  $H_2O$ , and crystallizes on cooling. Much more sol. than  $NaSbO_3$ .

+  $3H_2O$  Ppt Sl sol in  $H_2O$ . (Beilstein and Blaesé)

**Magnesium antimonate**,  $Mg(SbO_3)_2 + 12H_2O$ .

Sol in hot, less sol in cold  $H_2O$  (Heffter.)

Sol in  $MgSO_4 + Aq$ , insol. in  $KSbO_3 + Aq$  (Berzelius)

**Manganous antimonate**,  $Mn(SbO_3)_2$ .

Difficultly sol. in  $H_2O$ .

When heated, is sol. only in strong acids.

+  $2H_2O$  Insol. in  $H_2O$  (Senderens, Bull. Soc. 1899, (3) 21. 56.)

+  $5H_2O$  Ppt (Ebel, B. 22. 3043)

+  $6H_2O$  Insol. in  $H_2O$ . (Senderens, *l.c.*)

+  $7H_2O$  Ppt (Beilstein and Blaesé)

**Mercurous antimonate.**

Insol. in  $H_2O$  (Berzelius.)

**Mercuric antimonate**,  $Hg(SbO_3)_2$

Insol in  $H_2O$ , alkalis, and most acids.

Sl. attacked by boiling  $H_2SO_4$ , and  $HCl + Aq$

+  $2H_2O$  Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 55.)

+  $5H_2O$  Insol. in  $H_2O$  (Senderens)

+  $6H_2O$  Ppt. (Beilstein and Blaesé)

**Nickel antimonate**,  $Ni(SbO_3)_2 + 2H_2O$ .

Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 54.)

+  $5H_2O$  Insol. in  $H_2O$ . (Senderens.)

+  $6H_2O$  Ppt. Insol in  $H_2O$ . (Heffter, Pogg 86. 446.)

+  $12H_2O$  Sl sol. in  $H_2O$ . (Heffter)

**Potassium antimonate**,  $KSbO_3$ .

Insol in  $H_2O$ . Sol. in warm  $KOH + Aq$ , but separates nearly completely on cooling. By boiling with  $H_2O$ , or by standing for a long time with cold  $H_2O$ , it gradually dissolves as  $2KSbO_3 + 5H_2O$ , or  $K_2H_3Sb_2O_7 + 4H_2O$ , or  $2KH_2SbO_4 + 3H_2O$

Insol. in  $CS_2$  (Aretowski, Z. anorg. 1894, 6. 257.)

+  $H_2O$  Insol. in  $H_2O$  (Senderens, Bull. Soc. 1899, (3) 21. 57.)

+  $1\frac{1}{2}H_2O$  (=  $2KSbO_3 + 5H_2O$  of Fremy). Easily sol. in  $H_2O$ , especially if warm. Solution is pptd by  $NH_4Cl + Aq$  (Fremy, A. ch. (3) 12. 499.)

+  $2\frac{1}{2}H_2O$  100 pts.  $H_2O$  at  $20^\circ$  dissolve 2.81 pts. anhydrous salt, sp. gr. of solution sat at  $18^\circ = 1.0263$  Composition is given as  $K_2H_3Sb_2O_7 + 4H_2O$  (Knorre and Olschewsky, B. 20. 3043.)

+  $3\frac{1}{2}H_2O$  Insol. in  $H_2O$ . (Senderens, *l.c.*)

+ $4\frac{1}{2}$ H<sub>2</sub>O. Sol. in H<sub>2</sub>O (Delacroix, J Pharm 1897, (6) 6. 533.)  
 2K<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>+10H<sub>2</sub>O Sl. sol in H<sub>2</sub>O (Delacroix, J Pharm. 1897, 6. 337)  
 +10H<sub>2</sub>O (Delacroix, l.c.)

**Potassium pyroantimonate**, K<sub>3</sub>Sb<sub>2</sub>O<sub>7</sub>.

Deliquescent; decomp. by boiling with H<sub>2</sub>O into K<sub>2</sub>SbO<sub>3</sub>+5H<sub>2</sub>O, by cold H<sub>2</sub>O into K<sub>2</sub>H<sub>2</sub>SbO<sub>7</sub>+6H<sub>2</sub>O. (Freymy)

Does not exist (Knorre and Olschewsky)  
 Insol in liquid NH<sub>3</sub> (Franklin, Am. Ch J 1898, 20. 829)

Insol. in acetone (Naumann, B 1904, 37. 4320.)

Insol. in methyl acetate (Naumann, B 1909, 42. 3790)

Insol in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

**Potassium hydrogen pyroantimonate**, K<sub>2</sub>H<sub>2</sub>Sb<sub>2</sub>O<sub>7</sub>.

Insol in acetone (Eidmann, C C 1899, II. 1014.)

+2 $\frac{1}{2}$ H<sub>2</sub>O. (Senderens, Bull. Soc. 1899, (3) 21. 57)

+3 $\frac{1}{2}$ H<sub>2</sub>O Very difficultly sol. in hot or cold H<sub>2</sub>O. (Knorre and Olschewsky, B. 18. 2358)

+6H<sub>2</sub>O Quite difficultly sol. in cold H<sub>2</sub>O Not precipitated by NH<sub>4</sub>Cl+aq. Aqueous solution gradually decomposes (Freymy.)

+4H<sub>2</sub>O. See 2K<sub>2</sub>SbO<sub>3</sub>+5H<sub>2</sub>O

**Potassium antimonate sulphantimonate**, K<sub>2</sub>SbO<sub>3</sub>, K<sub>2</sub>SbS<sub>4</sub>+5H<sub>2</sub>O.

Decomp. on an, and with cold H<sub>2</sub>O Sol in hot H<sub>2</sub>O. (Rammelsberg)

**Silver antimonate**.

Insol in H<sub>2</sub>O. (Berzelius)

AgSbO<sub>3</sub>+3H<sub>2</sub>O=AgH<sub>2</sub>SbO<sub>4</sub>+2H<sub>2</sub>O Easily sol. in NH<sub>4</sub>OH+aq, when freshly pptd (Beilstein and Blaesé)

+1 $\frac{1}{2}$ H<sub>2</sub>O. Ppt (Ebel, B. 22. 3043)

**Silver antimonate ammonia**, AgH<sub>2</sub>SbO<sub>4</sub>, 2NH<sub>3</sub>+H<sub>2</sub>O

(Beilstein and Blaesé.)

**Sodium antimonate**, NaSbO<sub>3</sub>

Sol. in much H<sub>2</sub>O, but soon becomes decomposed into Na<sub>2</sub>H<sub>2</sub>SbO<sub>7</sub>

+3 $\frac{1}{2}$ H<sub>2</sub>O, composition of Na<sub>2</sub>H<sub>2</sub>SbO<sub>7</sub>+6H<sub>2</sub>O, according to Beilstein and Blaesé 1000 pts. H<sub>2</sub>O dissolve 0.31 pt. NaSbO<sub>3</sub>+3 $\frac{1}{2}$ H<sub>2</sub>O at 12.3°.

1000 pts. alcohol of 15.8% dissolve 0.13 pt NaSbO<sub>3</sub>+3 $\frac{1}{2}$ H<sub>2</sub>O at 12.3°.

1000 pts. alcohol of 25.6% dissolve 0.07 pt. NaSbO<sub>3</sub>+3 $\frac{1}{2}$ H<sub>2</sub>O at 12.3°.

Somewhat more sol. when freshly precipitated.

Absolutely insol. in glacial HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>

Presence of NaOH or Na salts diminish solubility, while NH<sub>4</sub>OH or K salts increase it

slightly. (Beilstein and Blaesé, Bull. Ac. St Petersb. 33. 201)

+1 $\frac{1}{2}$ H<sub>2</sub>O. Sol in H<sub>2</sub>O. (Delacroix, Bull Soc 1899, (3) 21. 1051)

2Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>+10H<sub>2</sub>O (Delacroix, l.c.)  
 Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>+11H<sub>2</sub>O. (Delacroix, l.c.)

**Sodium pyroantimonate**, Na<sub>2</sub>H<sub>2</sub>Sb<sub>2</sub>O<sub>7</sub>+6H<sub>2</sub>O

Boiling H<sub>2</sub>O dissolves  $\frac{1}{15}$  pt. of this salt. (Freymy) 1000 pts H<sub>2</sub>O dissolve 2.5 pts. salt (Ebel, B 22. 3044) See also NaSbO<sub>3</sub>+3 $\frac{1}{2}$ H<sub>2</sub>O  
 +5H<sub>2</sub>O (Knorre and Olschewsky.)

**Strontium antimonate**, Sr(SbO<sub>3</sub>)<sub>2</sub>+6H<sub>2</sub>O.

Ppt. Less sol in H<sub>2</sub>O than SrSO<sub>4</sub> (Heffter, Pogg. 86. 418.)

**Thallous antimonate**, TlSbO<sub>3</sub>+2H<sub>2</sub>O = TlH<sub>2</sub>SbO<sub>4</sub>+H<sub>2</sub>O.

Somewhat sol. in H<sub>2</sub>O, when freshly precipitated; insol when dried (Beilstein and Blaesé)

**Tin (stannous) antimonate**, 2SnO, Sb<sub>2</sub>O<sub>3</sub>.

Ppt. (Lewissen, A 114. 113.)

Sn(SbO<sub>3</sub>)<sub>2</sub>+2H<sub>2</sub>O Attacked with difficulty by acids or alkalis, most easily by hot conc. H<sub>2</sub>SO<sub>4</sub> (Schiff, A 120. 55.)

2SnO, 3Sb<sub>2</sub>O<sub>3</sub>+4H<sub>2</sub>O.

SnO, 2Sb<sub>2</sub>O<sub>3</sub>.

**Tin (stannic) antimonate**.

Insol in H<sub>2</sub>O. (Levol, A ch. (3) 1. 504.)

**Uranium antimonate**, 5UO<sub>2</sub>, 3Sb<sub>2</sub>O<sub>3</sub>+15H<sub>2</sub>O.

Ppt. Sol. in hot conc. HCl+aq, and in UCl<sub>4</sub>+aq. (Rammelsberg)

**Zinc antimonate**, Zn(SbO<sub>3</sub>)<sub>2</sub>.

Very slightly sol. in H<sub>2</sub>O (Berzelius); sol. in solutions of Zn salts.

+2H<sub>2</sub>O (Ebel, Dissert. 1890.)

Insol in H<sub>2</sub>O (Senderens, Bull. Soc 1899, (3) 21. 57)

+5H<sub>2</sub>O. Not wholly insol. in cold, moderately sol. in hot H<sub>2</sub>O (Ebel, Dissert. 1890.)

+6H<sub>2</sub>O Insol. in H<sub>2</sub>O. (Senderens)

**Antimoniomolybdic acid**.

**Ammonium antimoniomolybdate**, 5(NH<sub>4</sub>)<sub>2</sub>O, 4Sb<sub>2</sub>O<sub>3</sub>, 7MoO<sub>3</sub>+12H<sub>2</sub>O

Readily sol. in hot H<sub>2</sub>O. (Gibbs, Am. Ch. J. 7. 392.)

**Antimoniotungstic acid**, 3Sb<sub>2</sub>O<sub>3</sub>, 4WO<sub>3</sub>+11H<sub>2</sub>O.

Sol in H<sub>2</sub>O. (Hallopeau, C. R. 1896, 123. 1068)

**Potassium antimoniotungstate**, 3K<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>, 4WO<sub>3</sub>+4H<sub>2</sub>O.

Much more sol. in hot than in cold H<sub>2</sub>O. Decomp by HCl, H<sub>2</sub>SO<sub>4</sub> and HNO<sub>3</sub>. (Hallopeau, C R 1896, 123. 1066.)

+16H<sub>2</sub>O. Much more easily sol in hot than cold H<sub>2</sub>O. Decomp by HCl, H<sub>2</sub>SO<sub>4</sub>, and HNO<sub>3</sub> (Hallopeau, l.c.)  
 6K<sub>2</sub>O, 4Sb<sub>2</sub>O<sub>5</sub>, 12WO<sub>3</sub>+25H<sub>2</sub>O.  
 Sl sol. in H<sub>2</sub>O (Gibbs, Am Ch J 7. 392.)

### Antimoniuretted hydrogen.

See Antimony hydride.

### Antimonosomolybdic acid.

Ammonium antimonosomolybdate, 6(NH<sub>4</sub>)<sub>2</sub>O,  
 3Sb<sub>2</sub>O<sub>3</sub>, 17MO<sub>3</sub>+21H<sub>2</sub>O

Insol. in cold H<sub>2</sub>O (Gibbs, Am Ch J 7. 313)

### Antimonosophosphotungstic acid.

Potassium antimonosophosphotungstate,  
 12K<sub>2</sub>O, 5Sb<sub>2</sub>O<sub>3</sub>, 6P<sub>2</sub>O<sub>5</sub>, 22WO<sub>3</sub>+48H<sub>2</sub>O,  
 Nearly insol in cold or warm H<sub>2</sub>O. (Gibbs, Am. Ch. J. 7. 392.)

### Antimonosotungstic acid.

Ammonium antimonosotungstate.

Sol. in H<sub>2</sub>O

Barium antimonosotungstate, 4BaO, 6Sb<sub>2</sub>O<sub>3</sub>,  
 22WO<sub>3</sub>+36H<sub>2</sub>O

Precipitate; very sl. sol. in hot H<sub>2</sub>O (Gibbs, Am Ch. J. 7. 313)

### Antimonous acid, HSbO<sub>2</sub>

(Long, J. Am. Chem. Soc 1895, 17. 87)  
 +1½H<sub>2</sub>O Ppt. (Schaffner, A. 51. 182)  
 H<sub>2</sub>SbO<sub>3</sub>, Ppt (Clarke and Stallo, B 13. 1793.)

Does not exist (Guntz, C R. 102. 1472.)  
 H<sub>2</sub>SbO<sub>3</sub>. When freshly pptd, is sol. in dil KOH, and NaOH+Aq. Scarcely sol in NH<sub>4</sub>OH+Aq, or in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>, or KHCO<sub>3</sub>+Aq

Completely sol. in K<sub>2</sub>CO<sub>3</sub>, and Na<sub>2</sub>CO<sub>3</sub>+Aq, especially if warm. When recently pptd is sl. sol. in succinic acid+Aq.

Calcium antimonite, CaSb<sub>2</sub>O<sub>4</sub> (?)

Min. *Romeite* Insol. in acids.

Cobaltous antimonite (?).

Sl. sol. in H<sub>2</sub>O. (Berzelius.)

Cuprous antimonite, Cu<sub>2</sub>(SbO<sub>2</sub>)<sub>2</sub>.

Insol in H<sub>2</sub>O Sol. in acids, most easily in conc. HCl+Aq (Hausmann and Stromeyer, Schw J 19. 241)

Cupric antimonite (?)

Insol. in H<sub>2</sub>O. (Berzelius)

CuSb<sub>2</sub>O<sub>4</sub> Min. *Annimolite*.

CuSb<sub>2</sub>O<sub>4</sub> Sol in HCl+Aq, tartaric and citric acids (Harding, Z. anorg. 1899, 20. 238)

Iron (ferrous) antimonite (?).

More sol in H<sub>2</sub>O than the antimonate. (Dumas)

Potassium antimonite, K<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>

Easily decomp. by cold H<sub>2</sub>O Not decomp. by KOH+Aq containing over 20.9% K<sub>2</sub>O (Corrumbœuf, C R 115. 1305.)  
 +3H<sub>2</sub>O As above (C)

Potassium antimonite iodide, K<sub>2</sub>O, 8Sb<sub>2</sub>O<sub>3</sub>,  
 2KI

Insol and not decomp. by cold or hot H<sub>2</sub>O. Not decomp by acids or alkalis Aqua regia decomp slowly. Tartaric acid dissolves gradually. (Gruhl, Dissert. 1897.)

Sodium antimonite, NaSbO<sub>3</sub>+3H<sub>2</sub>O.

Difficultly sol. in H<sub>2</sub>O (Terreil, A. ch (4) 7. 380.)

2Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>+H<sub>2</sub>O Decomp. by H<sub>2</sub>O, but not by NaOH+Aq containing 94.3 g. NaOH per l. (Corrumbœuf)

Na<sub>2</sub>O, 2Sb<sub>2</sub>O<sub>3</sub> Decomp by H<sub>2</sub>O but not by NaOH+Aq containing 188.6 g. NaOH per l. (C.)

Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub> Decomp. by H<sub>2</sub>O, but not by NaOH+Aq containing 113.2 g. NaOH per l. (C)

+2H<sub>2</sub>O=NaH<sub>2</sub>(SbO<sub>2</sub>)<sub>2</sub> (Terreil)

### Antimony, Sb.

Does not decomp H<sub>2</sub>O Not attacked by HCl+Aq (Berzelius); slowly sol in conc HCl+Aq (Debray), slowly sol in conc warm HCl+Aq (Troost). Attacked by very conc HCl+Aq only when finely divided (Schutzenberger, Willm); very sl attacked by dil or conc. acid (Guntz) Not attacked by boiling HCl+Aq (Gmelin) By careful experiments, pure Sb is absolutely insol in dil. or conc., hot or cold HCl+Aq, except when in contact with oxygen. (Ditte and Metzner, A. ch (6) 29. 889)

Insol in dil. or cold conc., but sol in hot conc H<sub>2</sub>SO<sub>4</sub> Oxidized but not dissolved by HNO<sub>3</sub>+Aq Easily and completely sol in aqua regia.

Very slowly attacked by pure HNO<sub>3</sub>+Aq of 1.51-1.42 sp gr, weaker acid has no marked action whether it contains NO<sub>2</sub> or not HCl+HNO<sub>3</sub> has no action if dil. or at low temp., but when even very dil. and KNO<sub>3</sub> is added, the action will begin (Millon, A. ch. (3) 6. 101.)

Not attacked in 10 months by 2% HNO<sub>3</sub>+Aq. Sb is not dissolved by HNO<sub>3</sub>+Aq of any concentration, a white powder being always left, which is insol in HNO<sub>3</sub>+Aq or H<sub>2</sub>O (Montemartini, Gazz. ch. 17-22-384)

Insol in alkalis+Aq

Somewhat sol. in distilled H<sub>2</sub>O. More or less sol in solutions of acids, alkalis and salts and in alcohol and ether Only sl sol in a mixture of alcohol and ether. (Ruff and Albest, B. 1905, 38. 54)

Alkaline H<sub>2</sub>O<sub>2</sub> converts Sb into antimonic acid, but neutral H<sub>2</sub>O<sub>2</sub> is without action (Clark, Chem. Soc 1893, 63. 886)

Insol in liquid NH<sub>3</sub> (Gore, Am Ch. J 1898, 20. 826)

Easily attacked by pyrosulphuryl chloride (Heumann and Kochlin, B. 16. 479)

Sb is sol. in a mixture of  $\text{HNO}_3$  and tartaric acid or other polybasic acids (Czerwek, Z anal 1900, 45. 507)

Not attacked by a mixture of alcohol and ether (Cohen, Z. phys. Ch 1904, 47. 12)

$\frac{1}{2}$  cc. oleic acid dissolves 0.0007 g Sb in 6 days. (Gates, J. phys. Ch. 1911, 15. 143)

There are three modifications

1. Ordinary gray metallic

2. Black amorphous. Unstable at ord. temp. By boiling with  $\text{H}_2\text{O}$  is changed to metallic Sb

3. Yellow. Very unstable. At  $-50^\circ$  goes over rapidly into the ordinary black modification Sol. in  $\text{CS}_2$  at a little above  $-90^\circ$ . (Stock, B. 1903, 37. 898)

Unstable above  $-90^\circ$  (Stock, B. 1905, 38. 3837.)

#### Antimony arsenide, $\text{Sb}_2\text{As}$

(Descamps, C. R. 88. 1065)

#### Antimony tribromide, $\text{SbBr}_3$

Deliquescent; decomp. by  $\text{H}_2\text{O}$

Very sol. in liquid  $\text{NH}_3$ . (Goie, Am Ch J. 1898, 20. 826.)

Very sol. in warm liquid  $\text{AsBr}_3$ , forming a solution with sp gr = 3.685 at  $47^\circ$ . (Retzeis, Z. phys. Ch 1893, 11. 339.)

Sol in  $\text{S}_2\text{Cl}_2$  (Walden, Z. anorg. 1900, 25. 217)

Sol in  $\text{AlBr}_3$ . (Isbekow, Z. anorg. 1913, 84. 27)

Easily sol in  $\text{PCl}_5$  and  $\text{PB}_5$ . (Walden, Z. anorg. 1900, 25. 211)

Sol. in alcohol and  $\text{CS}_2$

Sol. in ether forming two layers. (Hayes, J. Chem Soc 1902, 24. 360)

Sol in acetone (Naumann, B. 1904, 37. 4328)

Solubility of  $\text{SbBr}_3$  in organic liquids  
Data in parentheses indicate labile equilibrium.

Solvent	$t^\circ$	Mols per 100	$t^\circ$	Mols per 100	$t^\circ$	Mols per 100

(Menschutkin, Ann. Inst. Pol. P. le Gr. 13. 1.)

#### Antimony bromide with MBr.

See Bromantimonate, M.

Also below

#### Antimony hydrogen bromide, $\text{SbBr}_3$ , $\text{HBr} + 3\text{H}_2\text{O}$

Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . (Weinland and Feige, B. 1903, 36. 256)

See Metabromantimonate acid.

**Antimony caesium bromide**,  $2\text{SbBr}_3 \cdot 3\text{CsBr} + 2\text{H}_2\text{O}$   
Loses  $\text{Br}_2$  in the air (Weinland, B. 1903, 36. 257)

**Antimony calcium bromide**,  $\text{SbBr}_3 \cdot \text{CaBr}_2 + 8\text{H}_2\text{O}$ .  
Easily decomp. (Benedict, Proc. Am. Acad. 1895, 30. 9)

**Antimony glucinum bromide**,  $3\text{SbBr}_3 \cdot 2\text{GIBr}_2 + 18\text{H}_2\text{O}$ .  
Hygroscopic. Easily decomp. (Weinland, B. 1903, 36. 258)

**Antimony magnesium bromide**,  $\text{SbBr}_3 \cdot \text{MgBr}_2 + 8\text{H}_2\text{O}$   
As Ca salt (Benedict, Proc. Am. Acad. 1895, 30. 9)

**Antimony potassium bromide**,  $10\text{SbBr}_3 \cdot 23\text{KBr} + 27\text{H}_2\text{O}$   
(Herty, Am. Ch. J. 1894, 16. 496)

**Antimony rubidium bromide**,  $2\text{SbBr}_3 \cdot 3\text{RbBr}$ .  
Decomp. by  $\text{H}_2\text{O}$ ; can be recryst. from dil  $\text{HBr} + \text{Aq}$  (Wheeler, Z. anorg. 5. 258)  
 $\text{SbRb}_2\text{Br}_4$  Slowly loses  $\text{Br}_2$  in the air  
Decomp. by  $\text{H}_2\text{O}$ . (Weinland, B. 1903, 36. 259.)

$10\text{SbBr}_3 \cdot 23\text{RbBr}$  (?) Cryst. from conc  $\text{HBr} + \text{Aq}$ . (Wheeler.)  
The composition assigned to this salt by Wheeler (Z. anorg. 5. 253) is incorrect. (Ephraim, B. 1903, 36. 1817.)

**Antimony vanadium bromide**,  $\text{SbBr}_3 \cdot \text{VBr}_4 + 7\text{H}_2\text{O}$ .

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$  Sol. in dil  $\text{HCl}$  and in tartaric acid. (Weinland, B. 1903, 36. 260.)

**Antimony bromide potassium chloride**,  $\text{SbBr}_3 \cdot 3\text{KCl} + 1\frac{1}{2}\text{H}_2\text{O}$ .  
Slowly deliquescent. Very sol. in  $\text{H}_2\text{O}$ .  
Sat. solution contains 120.5 g. to 100 cc.  $\text{H}_2\text{O}$ , and has sp. gr. = 1.9.  
Decomp. by much  $\text{H}_2\text{O}$ . (Atkinson, Chem. Soc. 43. 290.)

Does not exist (Herty, Am. Ch. J. 1894, 16. 497.)  
See also Antimony chloride potassium bromide.

**Antimony bromofluoride**,  $\text{SbF}_3\text{Br}$ .  
Decomp. by  $\text{H}_2\text{O}$ . (Ruff, B. 1906, 39. 4319.)

**Antimony trichloride**,  $\text{SbCl}_3$ .  
Deliquescent. Decomp. by  $\text{H}_2\text{O}$  with precipitation of  $\text{SbOCl}$  This precipitation is prevented by tartaric, citric, or hydrochloric acid, or by conc solutions of chlorides of alkalies and alkaline earths.

Solubility in  $\text{H}_2\text{O}$ .  
100 pts.  $\text{SbCl}_3$  sol in pts.  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Pts $\text{H}_2\text{O}$
$0^\circ$	16.6
$15^\circ$	12.3
$20^\circ$	10.9
$25^\circ$	10.1
$30^\circ$	9.4
$35^\circ$	8.7
$40^\circ$	7.3
$50^\circ$	5.2
$60^\circ$	2.2

(Meerburg, Z. anorg. 1903, 33. 299.)

Solubility in  $\text{HCl} + \text{Aq}$   
100 mol.  $\text{H}_2\text{O}$  dissolve mol.  $\text{SbCl}_3$  in presence of mol.  $\text{HCl}$  at  $20^\circ$ .

Mol. $\text{HCl}$	Mol. $\text{SbCl}_3$
0	72.1-72.8
2.4	73.0
6.5	67.5
8.4	67.6
8.6	66.5
9.8	65.0
12.2	65.3
20.6	54.5

(Meerburg, Z. anorg. 1903, 33. 304)

Solubility in  $\text{HCl} + \text{Aq}$

Solid phase	100 mol $\text{H}_2\text{O}$ dissolve at $20^\circ$			
	1	2	3	4

1 & 2 (Meerburg, Z. anorg. 1903, 33. 302.)  
3 & 4. (Noodt, Z. anorg. 1903, 33. 302)

Somewhat sol. in liquid  $(\text{CN})_2$ . (Centnerszwer, Bull. Soc. 1901, (3) 28. 405)  
Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 826.)  
Easily sol. in  $\text{PCl}_5$  and  $\text{PBr}_5$ . (Walden, Z. anorg. 1900, 25. 211.)  
Sol. in  $\text{S}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 25. 217.)

Easily sol in  $\text{AsBr}_3$  (Walden, Z. anorg. 1902, 29, 374)

Sol in alcohol without decomp. Very sol. in hot  $\text{CS}_2$ , but solubility diminishes rapidly on cooling (Cooke, Proc Am Acad 13, 72)

1 g  $\text{SbCl}_3$  is sol in 0.186 g acetone at  $18^\circ$  Sp gr of sat. solution  $18^\circ/4^\circ = 2.216$  (Naumann, B. 1904, 37, 4332)

Sol. in ethyl acetate (Naumann, B. 1904, 37, 3601)

1 pt sol in 16.97 pts of ethyl acetate at  $18^\circ$ . Sp gr of sat. solution  $18^\circ/4^\circ = 1.7968$  (Naumann, B. 1910, 43, 320)

Sol in benzonitrile (Naumann, B. 1914, 47, 1369)

Sol. in methylal (Eidmann, C C 1899, II, 1014.)

Solubility of  $\text{SbCl}_3$  in organic liquids.

(Menschutkin, Ann Inst. Pol. P.-le Gr, 13, 1)

Antimony hydrogen trichloride,  $2\text{SbCl}_3, \text{HCl} + 2\text{H}_2\text{O}$ .

Deliquescent. Decomp by  $\text{H}_2\text{O}$   
Melts in crystal  $\text{H}_2\text{O}$  at  $16^\circ$ . (Engel, C. R. 106, 1797)

Antimony pentachloride,  $\text{SbCl}_5$ .

Deliquesces to  $\text{SbCl}_3 + 4\text{H}_2\text{O}$ , which can be crystallized out of a little  $\text{H}_2\text{O}$ . Decomp by more  $\text{H}_2\text{O}$  into  $\text{SbO}_2\text{Cl}$ . Sol in a large amt. of  $\text{H}_2\text{O}$ , if it is added all at one time. Precipitation by  $\text{H}_2\text{O}$  is also hindered by presence of tartaric, or hydrochloric acid.

$+ \text{H}_2\text{O}$  Deliquescent. Sol in chloroform. (Anschutz and Evans, A. 239, 285.)

$+ 4\text{H}_2\text{O}$ . Insol in chloroform. (Anschutz and Evans.)

Antimony pentachloride with  $\text{MCl}$ .

See Chlorantimonate, M.

See also below.

**Antimony hydrogen pentachloride**,  $\text{SbCl}_5$ ,  $\text{HCl} + 4\frac{1}{2}\text{H}_2\text{O}$

"*Metachlorantimonie acid*" according to Weinland and Schmid. (Z. anorg. 1905, 44, 43.)

Very easily sol in  $\text{H}_2\text{O}$ , alcohol, acetone and glacial acetic acid. Aqueous solution decomp. on standing with separation of  $\text{Sb}_2\text{O}_5$  but remains clear in presence of 10%  $\text{HCl}$  (Weinland and Schmid, Z. anorg. 1905, 44, 43.)

$\text{SbCl}_5$ ,  $5\text{HCl} + 10\text{H}_2\text{O}$  Not deliquescent. Decomp. by  $\text{H}_2\text{O}$ . Melts in crystal  $\text{H}_2\text{O}$  at about  $55^\circ$  (Engel, C. R. 106, 1797.)

**Antimony antimonyl chloride**,  $\text{SbCl}_3$ ,  $\text{SbOCl}$

More easily attacked by  $\text{H}_2\text{O}$  than  $\text{SbOCl}$  (Bemmelen, Z. anorg. 1903, 33, 293.)

**Antimony antimonyl potassium chloride**,  $\text{SbCl}_3$ ,  $\text{SbOCl}$ ,  $2\text{KCl}$

Not deliquescent. Immediately decomp. by hot or cold  $\text{H}_2\text{O}$ , sol. in hot glacial  $\text{HC}_2\text{H}_3\text{O}_2$ , or in  $\text{HCl}$ , or tartaric acid +  $\text{Aq}$

Insol. in  $\text{KCl} + \text{Aq}$ , hot or cold alcohol,  $\text{CS}_2$ , or ligroine. (Benedikt, Proc. Am. Acad. 29, 217.)

**Antimony antimonyl rubidium chloride**,  $\text{SbCl}_3$ ,  $\text{SbOCl}$ ,  $2\text{RbCl}$

Sol. in very dil.  $\text{HCl} + \text{Aq}$ . (Wells, Am. J. Sci. 1897, (4) 3, 463.)

**Antimony barium chloride**,  $\text{SbCl}_3$ ,  $\text{BaCl}_2 + \frac{3}{2}\text{H}_2\text{O}$

Decomp. by  $\text{H}_2\text{O}$

**Antimony caesium chloride**,  $\text{SbCl}_3$ ,  $6\text{CsCl}$

Decomp. by  $\text{H}_2\text{O}$ . Cryst. from dil.  $\text{HCl} + \text{Aq}$ . (Godefroy, Arch. Pharm. (3) 12, 47.)

$2\text{SbCl}_3$ ,  $3\text{CsCl}$  Decomp. by  $\text{H}_2\text{O}$ , sl. sol. in cold, easily in hot dil.  $\text{HCl} + \text{Aq}$ . This is identical with the above salt. (Saunders, Am. Ch. J. 14, 152.)

$\text{SbCl}_3$ ,  $2\text{CsCl}$  Sol. in boiling conc.  $\text{HCl} + \text{Aq}$  without decomp. (Setterberg, Oef. Vet. Akad. 1882, 6, 23.)

$\text{SbCl}_3$ ,  $\text{CsCl}$  Cryst. from  $\text{HCl} + \text{Aq}$  without decomp. Decomp. by  $\text{H}_2\text{O}$  (Setterberg, Oef. Vet. Akad. 1882, 6, 27.)

**Antimony calcium chloride**,  $\text{SbCl}_3$ ,  $\text{CaCl}_2 + 8\text{H}_2\text{O}$

Easily decomp. (Benedikt, Proc. Am. Acad. 1895, 30, 9.)

$\text{SbCl}_3$ ,  $\text{CaSbCl}_3$ ,  $\text{OH} + 9\text{H}_2\text{O}$ . Deliquescent; sl. sol. in  $\text{H}_2\text{O}$ . (Weinland, B. 1901, 34, 2635.)

**Antimony chromium chloride**,

$\text{CrCl}_3$ ,  $3\text{SbCl}_3 + 13\text{H}_2\text{O}$ . (Weinland)

should be

$[\text{SbCl}_4][\text{Cr}(\text{OH})_3] + 7\text{H}_2\text{O}$ ,

and  $\text{CrCl}_3$ ,  $\text{SbCl}_3 + 10\text{H}_2\text{O}$  should be

$[\text{SbCl}_4][\text{Cr}(\text{OH})_2\text{Cl}] + 6\text{H}_2\text{O}$ .

(Pfeiffer, Z. anorg. 1903, 36, 349.)

**Antimony glucinum chloride**,  $\text{SbCl}_3$ ,  $\text{GlCl}_3 + 3\text{H}_2\text{O}$

Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$ .

Very easily sol. in  $\text{HCl}$ . (Ephraim, B. 1903, 36, 1822.)

$+4\text{H}_2\text{O}$  Ppt. Decomp. by  $\text{H}_2\text{O}$ . Sol.

in  $\text{HCl}$ . (Ephraim, B. 1903, 36, 1822.)

**Antimony hydrazine chloride**,  $\text{SbCl}_3$ ,

$3\text{N}_2\text{H}_4\text{Cl}$

Sol. in conc.  $\text{HCl} + \text{Aq}$ , decomp. by  $\text{H}_2\text{O}$ .

(Ferratin, C. A. 1912, 1613.)

**Antimony lithium chloride**,  $\text{SbCl}_3$ ,  $2\text{LiCl} + 5\text{H}_2\text{O}$

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Very

easily sol. in  $\text{HCl}$ . (Ephraim, B. 1903, 36, 1821.)

$+6\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ , easily sol. in

$\text{HCl}$ . (Ephraim, B. 1903, 36, 1822.)

**Antimony magnesium chloride**,  $\text{SbCl}_3$ ,  $\text{MgCl}_2 + 5\text{H}_2\text{O}$

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Can be

cryst. from  $\text{HCl}$  without decomp. (Ephraim,

B. 1903, 36, 1823.)

$2\text{SbCl}_3$ ,  $\text{MgCl}_2$  Hygroscopic. Decomp.

by  $\text{H}_2\text{O}$ . Very sol. in  $\text{HCl}$ . (Ephraim.)

$\text{SbCl}_3$ ,  $\text{MgSbCl}_3$ ,  $\text{MgOH} + 17\text{H}_2\text{O}$  Hydro-

scopic. Sol. in  $\text{H}_2\text{O}$  with decomp. (Weinland,

B. 1901, 34, 2635.)

**Antimony nitrosyl chloride**,  $\text{SbCl}_3$ ,  $\text{NOCl}$

Very deliquescent; decomp. by pure  $\text{H}_2\text{O}$ ;

sol. in  $\text{H}_2\text{O}$  containing tartaric acid. (Weber,

Pogg. 123, 347.)

$2\text{SbCl}_3$ ,  $5\text{NOCl}$  Decomp. by  $\text{H}_2\text{O}$ . (Sud-

borough, Chem. Soc. 59, 661.)

**Antimony phosphorus chloride**,  $\text{SbCl}_3$ ,  $\text{PCl}_3$

Deliquescent. (Weber, Pogg. 125, 78.)

**Antimony phosphoryl chloride**,  $\text{SbCl}_3$ ,  $\text{POCl}_3$

Deliquescent (Weber.)

**Antimony platinum potassium chloride**,

$(\text{Sb}, \text{Pt})_2\text{Cl}_6\text{K}_2$

Ppt. (Weinland, B. 1905, 38, 1086.)

**Antimony potassium chloride**,  $\text{SbCl}_3$ ,  $2\text{KCl}$

Sol. in  $\text{H}_2\text{O}$  without decomp. (Jacquelin,

A. ch. (2) 66, 128.)

Not deliquescent. Immediately decomp.

by hot or cold  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ ; or tartaric

acid +  $\text{Aq}$ . (Benedikt, Proc. Am. Acad. 29,

219.)

$+2\text{H}_2\text{O}$  Very efflorescent

$\text{SbCl}_3$ ,  $3\text{KCl}$  Deliquescent. Decomp. by

hot  $\text{H}_2\text{O}$  (Poggiale.)

$+2\text{H}_2\text{O}$  (Romanus, C. N. 49, 273.)

Not obtained by Benedikt (l.c.)

$10\text{SbCl}_3$ ,  $23\text{KCl}$ . True composition of above

salts. Sol. in  $\text{H}_2\text{O}$  (Herty, Am. Ch. J. 1894,

16, 495.)

$\text{SbCl}_3$ ,  $2\text{KCl}$  is the only true compound, all

others being isomorphous mixtures. (Jords, B. 1903, 36 2539)

$2SbCl_5, 3KCl$  Deliquescent Decomp. by  $H_2O$ . (Bosek, Chem Soc 1895, 67. 516)

$SbCl_5K_2SbCl_6KOH$  Hydrosropic Sol in  $H_2O$  with decomp. (Wenland, B. 1901, 34. 2635)

See also Antimony antimonyl potassium chloride.

**Antimony rubidium chloride,  $SbCl_5, RbCl$ .**

Decomp on air or with  $H_2O$ . (Saunders, Am. Ch. J. 14. 162)

$2SbCl_5, RbCl + H_2O$  Decomp. on air (Wheeler, Z. anorg. 5. 253)

$SbCl_5, 6RbCl$  Decomp. by  $H_2O$  (Godefroy, Arch. Pharm (3) 9. 343)

Formula is  $10SbCl_5, 23RbCl$  (?). (Saunders Am. Ch. J. 14. 159)

$10SbCl_5, 23RbCl$  (?). Decomp. by  $H_2O$ ; sol in  $HCl + Aq$  (Saunders)

Formula is  $3SbCl_5, 7RbCl$ . (Wells and Foote, Am J Sci 1897, (4) 3. 461.)

Composition assigned to this salt by Saunders (Am. Ch. J. 14. 155) is incorrect. (Ephraim, B. 1903, 36. 1817)

$3SbCl_5, 5RbCl$  As above. (Saunders)

Formula is  $2SbCl_5, 3RbCl$ . (Wheeler.)

$Rb_2SbCl_6$  Ppt. Decomp by  $H_2O$ . (Wenland, B. 1905, 38. 1083)

$Rb_2SbCl_6, 2Rb_2SbCl_6$  Ppt. Decomp by  $H_2O$  (Wenland, B. 1901, 34. 2635.)

**Antimony selenium chloride,  $SbCl_5, SeCl_4$ .**

Deliquescent. (Weber.)

**Antimony selenyl chloride,  $SbCl_5, SeOCl_2$**

Very deliquescent. (Weber, Pogg. 125. 325.)

**Antimony sodium chloride,  $SbCl_5, 3NaCl$  (?).**

Decomp. by much  $H_2O$ . (Poggiale)

**Antimony sulphur chloride,  $2SbCl_5, 3SbCl_3$ .**

Decomp. by  $H_2O$ .

$SbCl_5, SbCl_3$  Sol in dil.  $HNO_3 + Aq$ .

Mpt.  $125-126^\circ$  in an atmos. of chlorine. Violently decomp. by  $H_2O$ . (Ruff, B. 1904, 37. 4515.)

**Antimony thallium chloride,  $SbCl_5, 3TlCl$ .**

Ppt. (Ephraim, Z. anorg. 1909, 61. 249)

$SbCl_5, TlCl$ . (Ephraim and Barteczko, Z. anorg. 1909, 61. 251)

$2SbCl_5, 2TlCl, TlCl_3$  Slowly decomp. by cold  $H_2O$ . (Ephraim and Barteczko, Z. anorg. 1909, 61. 253)

**Antimony trichloride ammonia,  $SbCl_3, NH_3$ .**

Not very deliquescent Decomp. by  $H_2O$ .

**Antimony pentachloride ammonia,  $SbCl_5, 6NH_3$**

Decomp. by  $H_2O$  (Persoz.)

**Antimony pentachloride cyanhydric acid,  $SbCl_5, 3HCN$**

Deliquescent, decomp. by  $H_2O$ . (Klein, A. 74. 85)

**Antimony pentachloride nitric oxide,  $2SbCl_5, NO$**

Decomp by  $H_2O$ . (Beeson, C. R. 108. 1012)

**Antimony pentachloride nitrogen peroxide,  $3SbCl_5, 2N_2O_2$**

Decomp. by  $H_2O$ . (Beeson.)

**Antimony pentachloride nitrogen sulphide,  $SbCl_5, N_2S_4$**

Easily decomp (Davis, Chem. Soc. 1906, 89. 1577.)

Decomp by cold  $H_2O$ ,  $HCl$ ,  $H_2SO_4$  and warm alcohol, also by boiling with  $KOH + Aq$ . Almost insol. in organic solvents. (Walbling, Z. anorg. 1908, 57 283)

**Antimony chloride potassium bromide,  $SbCl_5, 3KBr + 1\frac{1}{2}H_2O$ .**

Very deliquescent. Decomp. by much  $H_2O$ . (Atkinson, Chem. Soc. 43. 286.)

$2SbCl_5, 3KBr + 2H_2O$ . (Atkinson.)

$SbCl_5, KBr + H_2O$  (Atkinson.)

Above are mixtures. (Herty, Am. Ch. J. 1894, 16. 497)

See Antimony bromide potassium chloride.

**Antimony chlorofluoride,  $SbCl_2F_3$**

(Swarts, Z. anorg. 1896, 12. 71.)

**Antimony fluoride,  $SbF_3$ .**

Slowly decomp by  $H_2O$ . (Ruff, B. 1906, 39. 4321.)

$(SbF_3)_2$ . Sol in  $H_2O$  with pptn of  $I_2$ . (Ruff, B. 1906, 39. 4321.)

**Antimony trifluoride,  $SbF_3$ .**

Deliquescent. Sol. in  $H_2O$ .

Solubility in  $H_2O$  at  $t^\circ$ .

$t^\circ$	100 g of the solution contain g. $SbF_3$	100 g $H_2O$ contain g. $SbF_3$
0°	79.37	384.7
20	81.64	444.7
22.5	81.01	452.8
25	83.12	492.4
30	84.93	563.6

(Rosenheim, Z. anorg. 1909, 61. 189)

Solubility in  $HF + Aq$  at  $0^\circ$ .

Normality of $HF + Aq$	100 g $H_2O$ of the $HF$ solution dissolve g. $SbF_3$
2	474.9
1	432.5
0.5	404.0

(Rosenheim, Z. anorg. 1909, 61. 192.)

Solubility of  $\text{SbF}_3$  in salts + Aq at  $0^\circ$ .

Salt	Normality of salt solution	100 g. $\text{H}_2\text{O}$ of the salt solution dissolve g. $\text{SbF}_3$

(Rosenheim, Z. anorg. 1909, 61. 192.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 826.)

Antimony pentafluoride,  $\text{SbF}_5$ 

Sol. in  $\text{H}_2\text{O}$ . (Magnac, A. 145. 239.)  
Very hygroscopic; bpt.  $155^\circ$ . Sol. in  $\text{H}_2\text{O}$  with hissing. (Ruff, B. 1904, 37. 678.)  
+  $2\text{H}_2\text{O}$ . (Ruff, B. 1904, 37. 679.)

Antimony pentafluoride diantimony trifluoride,  $\text{Sb}_2\text{F}_{11} = 2\text{SbF}_5 \cdot \text{SbF}_3$ 

Hygroscopic; bpt.  $390^\circ$ . Easily sol. in  $\text{H}_2\text{O}$  (Ruff, B. 1904, 37. 680.)

Antimony pentafluoride pentantimony trifluoride,  $\text{SbF}_5 \cdot 5\text{SbF}_3$ 

B pt.  $384^\circ$  (corr.). (Ruff, B. 1904, 37. 681.)

## Antimony caesium fluoride,

$\text{CsF} \cdot 2\text{SbF}_5$   
 $\text{CsF} \cdot 3\text{SbF}_5$   
 $4\text{CsF} \cdot 7\text{SbF}_5$   
 $\text{CaF} \cdot \text{SbF}_3$   
 $2\text{CsF} \cdot \text{SbF}_3$   
(Wells, Am. J. Sci. 1901, (4) 11. 451.)

Antimony lithium fluoride,  $\text{SbF}_3 \cdot 2\text{LiF}$ .

Sol. in more than 20 pts.  $\text{H}_2\text{O}$  (Flückinger, Pogg. 87. 245.)

$\text{SbF}_3 \cdot \text{LiF}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Stein, Chem. Z. 13. 357.)

Antimony potassium fluoride,  $\text{SbF}_3 \cdot 2\text{KF}$ .

Sol. in less than 2 pts. boiling, and in 9 pts. cold  $\text{H}_2\text{O}$ . Insol. in alcohol or ether.

$\text{SbF}_3 \cdot \text{KF}$ . More sol. than  $\text{SbF}_3 \cdot 2\text{KF}$ . Sol. in 2.8 pts.  $\text{H}_2\text{O}$  (Flückinger, Pogg. 87. 245.)

$\text{SbF}_3 \cdot \text{KF}$ . Easily sol. in  $\text{H}_2\text{O}$ .

$\text{SbF}_3 \cdot 2\text{KF} + 2\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Magnac, A. 145. 239.)

Antimony sodium fluoride,  $\text{SbF}_3 \cdot 3\text{NaF}$ .

Sol. in 14 pts. cold, and 4 pts. boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{HF}$  (Flückinger, Pogg. 87. 245.)

$\text{SbF}_3 \cdot \text{NaF}$ . 100 pts. cold  $\text{H}_2\text{O}$  dissolve 93 pts. 100 pts. hot  $\text{H}_2\text{O}$  dissolve 166 pts. (Stein, Wagners' J. B. 1887. 1160.)

$4\text{SbF}_3 \cdot \text{NaF}$  As  $\text{NH}_4$  salt. (Raad and Hauser, B. 1890, 23. R. 125.)

$\text{SbF}_3 \cdot 2\text{NaF}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Magnac, A. 145. 329.)

Antimony thallium fluoride,  $\text{TlF} \cdot \text{SbF}_3$ .

Sol. in  $\text{H}_2\text{O}$  without decomp. (Ephraim, B. 1909, 42. 4458.)

$\text{TlF} \cdot 2\text{SbF}_3$ . Sol. in  $\text{H}_2\text{O}$  without decomp. (Ephraim.)

$\text{TlF} \cdot 3\text{SbF}_3$ . Sol. in  $\text{H}_2\text{O}$  without decomp. Decomp. by cold conc.  $\text{H}_2\text{SO}_4$ . (Ephraim.)

Antimony trifluoride ammonia,  $\text{SbF}_3 \cdot 2\text{NH}_3$ .

Sl. sol. in liquid  $\text{NH}_3$ . (Ruff, B. 1906, 39. 4326.)

## Antimony trifluoride ammonium chloride.

$\text{SbF}_3 \cdot \text{NH}_4\text{Cl}$

Easily sol. in  $\text{H}_2\text{O}$  (de Haen, B. 21. 901 R.)

## Antimony trifluoride ammonium sulphate,

$\text{SbF}_3 \cdot (\text{NH}_4)_2\text{SO}_4$

More sol. than K or Na salt. 1 pt.  $\text{H}_2\text{O}$  dissolves 1.4 pts. at  $24^\circ$  and 15 pts. at  $100^\circ$ . (de Haen, B. 21. 902 R.)

Antimony fluoride lithium chloride,  $\text{SbF}_3 \cdot \text{LiCl}$ .

Sol. in  $\text{H}_2\text{O}$ . (Stein, Chem. Z. 13. 357.)

Antimony pentafluoride nitrosyl fluoride,  $\text{SbF}_5 \cdot \text{NOF}$ .

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in liquid  $\text{NH}_3$  with decomp. Sl. sol. in  $\text{NOCl}$ ,  $\text{SiCl}_4$ ,  $\text{PCl}_5$ ,  $\text{AsCl}_3$ ,  $\text{SO}_2\text{Cl}_2$  and  $\text{SOCl}_2$ . (Ruff, Z. anorg. 1908, 58. 334.)

Antimony trifluoride potassium chloride,  $\text{SbF}_3 \cdot \text{KCl}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 51 pts. at  $24^\circ$  and 300 pts. at  $100^\circ$ . (de Haen, B. 21. 901 R.)

- Antimony trifluoride potassium sulphate**,  $\text{SbF}_3, \text{K}_2\text{SO}_4$ .  
Sol. in  $\text{H}_2\text{O}$ . (de Haen)  
 $2\text{SbF}_3, \text{K}_2\text{SO}_4$ . Very sol in  $\text{H}_2\text{O}$  (Mayer, B. 1894, 27, R. 922.)
- Antimony trifluoride sodium chloride**,  $\text{SbF}_3, \text{NaCl}$ .  
Easily sol in  $\text{H}_2\text{O}$ . (de Haen, B. 21. 901 R.)
- Antimony trifluoride sodium sulphate**,  $\text{SbF}_3, \text{Na}_2\text{SO}_4$ .  
Sol in  $\text{H}_2\text{O}$ . (de Haen)
- Antimony fluoiodide**,  $\text{SbFI}$ .  
Mpt.  $80^\circ$ , slowly decomp. by  $\text{H}_2\text{O}$  (Ruff, B. 1906, 39, 4321.)  
 $(\text{SbF}_2)_2\text{I}$ . Mpt  $110-115^\circ$ , decomp by  $\text{H}_2\text{O}$ . (Ruff.)
- Antimony fluosulphide**,  $\text{SbFS}$ .  
Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$  Sol. with decomp in alcohol. Sol. in  $\text{CCl}_4$ . (Ruff, B. 1906, 39, 4332.)
- Antimony gold**,  $\text{Au}_2\text{Sb}$ .  
Insol in equal pts of  $\text{HNO}_3$  and tartaric acids (Roessler, Z. anorg. 1895, 9, 72)
- Antimony hydride**,  $\text{SbH}_3$ .  
Scarcely sol in  $\text{H}_2\text{O}$ . 1000 ccm.  $\text{H}_2\text{O}$  absorb 4.12 cc.  $\text{SbH}_3$  at  $10.5^\circ$ . Decomp. by long contact with  $\text{H}_2\text{O}$ ; also by conc  $\text{H}_2\text{SO}_4$  or  $\text{KOH} + \text{Aq}$ . (Jones, Chem. Soc. 29. 641)
- Antimony trihydroxide**,  $\text{Sb}_2\text{O}_3, 2\text{H}_2\text{O} = \text{Sb}_2\text{O}_3(\text{OH})_3$ .  
(Schaffner, A. 51. 182.)  
 $\text{Sb}(\text{OH})_3$ . Ppt. (Clarke and Stolla, B. 13. 1787.)  
Does not exist. (Guntz, C. R. 102. 1473)  
See Antimonous acid and antimony trioxide.
- Antimony triiodide**,  $\text{SbI}_3$ .  
Decomp. by  $\text{H}_2\text{O}$  or 80% alcohol Sol. in  $\text{HI} + \text{Aq}$ ; sol. in boiling  $\text{CS}_2$ , and in boiling benzene, but separates out on cooling. Almost insol. in  $\text{CHCl}_3$  (Cooke, Proc. Am. Acad. (2) 5. 72.)  
Easily sol in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29. 974)  
Sol. in warm  $\text{AsBr}_3$ . Sp. gr. of a solution sat. at  $40^\circ$ , which solidifies at  $37^\circ$ , = 3.720. This dissolves further  $\text{AsI}_3$ , whereby the mpt. sinks to  $31^\circ$  and sp. gr. rises to 3.801. By mixing the latter solution with a solution of  $\text{AsI}_3$  in  $\text{CH}_2\text{I}_2$ , a liquid can be obtained with a sp. gr. of 3.702 at  $20^\circ$  (Retgers, Z. phys. Ch. 1893, 11. 340)  
Sol. in  $\text{PCl}_5$ . (Beckmann, Z. anorg. 1906, 51. 110.)  
Sol. in  $\text{SO}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 25. 215)
- Sol. in  $\text{SOCl}_2$  and  $\text{S}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 25. 216.)  
Sol. in  $\text{AsCl}_3$ . (Walden, Z. anorg. 1900, 25. 214.)  
Sol. in  $\text{SnCl}_4$ . (Walden, Z. anorg. 1900, 25. 218)  
Sol. in  $\text{POCl}_3$ . (Walden, Z. anorg. 1900, 25. 212.)  
Easily sol in  $\text{PCl}_3$  and  $\text{PBr}_3$ . (Walden, Z. anorg. 1900, 25. 211.)  
Partly sol. up, and partly decomp. by alcohol or ether. (M'Ilvri, Chem. Soc. (2) 14. 328)  
Insol. in oil of turpentine and  $\text{CCl}_4$ , 100 pts. methylene iodide dissolve 11.3 pts.  $\text{SbI}_3$  at  $12^\circ$ ; sp. gr. of solution = 3.453. (Retgers, Z. anorg. 3. 343)  
Sol. in  $\text{C}_6\text{H}_6$ . (Retgers, Z. phys. Ch. 1893, 11. 334.)  
Sol. in acetone (Naumann, B. 1904, 37. 4328)
- Antimony penta iodide**,  $\text{SbI}_5$ .  
Very unstable (Pendleton, C. N. 48. 97.)
- Antimony barium iodide**,  $\text{SbI}_3, \text{BaI}_2 + 9\text{H}_2\text{O}$ .  
Decomp by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{H}_2\text{C}_4\text{H}_7\text{O}_6 + \text{Aq}$ .  $\text{CS}_2$  dissolves out  $\text{SbI}_3$ . (Schaffer, Pogg. 109. 611.)
- Antimony cesium iodide**,  $2\text{SbI}_3, 3\text{CsI}$ .  
Sl sol. in  $\text{HI} + \text{Aq}$  Exists in two distinct forms (Wells, Am. J. Sci. 1901, (4) 11. 455.)
- Antimony potassium iodide**,  $2\text{SbI}_3, 3\text{KI} + 3\text{H}_2\text{O}$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{H}_2\text{C}_4\text{H}_7\text{O}_6 + \text{Aq}$ .  $\text{CS}_2$  dissolves out  $\text{SbI}_3$ . (Schaffer, Pogg. 109. 611.)  
 $\text{SbI}_3, 2\text{KI} + 2\frac{1}{2}\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . (Nickles, J. Pharm. (3) 39. 116)
- Antimony rubidium iodide**,  $2\text{SbI}_3, 3\text{RbI}$ .  
Decomp by  $\text{H}_2\text{O}$ . (Wheeler, Z. anorg. 5. 259.)
- Antimony sodium iodide**,  $2\text{SbI}_3, 3\text{NaI} + 12\text{H}_2\text{O}$   
As  $2\text{SbI}_3, 3\text{KI}$  (Schaffer, Pogg. 109. 611.)
- Antimony thalious iodide**,  $2\text{SbI}_3, 3\text{TlI}$ .  
Decomp. by  $\text{H}_2\text{O}$  and by  $\text{HCl} + \text{Aq}$ , also by alcohol. (Ephraim, Z. anorg. 1908, 58. 354.)
- Antimony nitride**,  $\text{Sb}_2\text{N}_3$ .  
Decomp. by heat. (Franz Fischer, B. 1910, 43. 1471.)
- Antimony trioxide**,  $\text{Sb}_2\text{O}_3$ .  
Very sl sol. in  $\text{H}_2\text{O}$  Sol. in 8900-10,000 pts.  $\text{H}_2\text{O}$  at  $100^\circ$ , 55,000-61,100 pts. at  $15^\circ$ . (Schulze, J. pr. (2) 27. 320)  
Sol. in  $\text{HCl} + \text{Aq}$ . Insol. in  $\text{HNO}_3 + \text{Aq}$ , but not as insol as metastannic acid. Sol. in cold fuming  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Insol. in dil., but sol. in conc. alkalis, or alkali carbonates +

Aq. Sol. in cold  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  Sol. in 15 pts boiling  $\text{SbCl}_3$ . (Schneider, Pogg 108. 407.)

Sol. in  $\text{H}_2\text{C}_2\text{H}_3\text{O}_2$ , or  $\text{H}_2\text{C}_2\text{H}_4\text{O}_6 + \text{Aq.}$  and hot pptd. from these solutions by  $\text{H}_2\text{O}$ . Easily sol. in benzoic acid. Insol. in pyrotartaric acid. Very sol. in  $\text{KHC}_2\text{H}_3\text{O}_6 + \text{Aq.}$  Sol. in glycerine.

Somewhat sol. in  $\text{H}_3\text{PO}_4 + \text{Aq.}$  (Kohler, Dingl. 1885, 258. 520.)

Insol. in liquid  $\text{NH}_3$  (Gore, Am. Ch. J. 1898, 20. 826.)

Sol. in lactic acid (Kietzschmar, Ch. Z. 1888, 12. 943.)

Sol. in grape sugar solution to which  $\text{Ca(OH)}_2$  has been added. (Vogel, B. 1885, 18. R. 38.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eichmann, C. C. 1899, II. 1014.)

Sol. in glycerine in presence of alkalis. (Kohler, Dingl. 1885, 258. 520.)

Exists in a sol. colloidal modification. (Spring, B. 16. 1142.)

Min. *Valentinite*, *Senarmontite*

+  $\text{H}_2\text{O}$ . See Antimonous acid.

#### Antimony tetroxide, $\text{Sb}_2\text{O}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Slightly attacked by acids; hot conc.  $\text{HCl} + \text{Aq}$  acts only slightly (Fresenius.)

Min. *Cervantite*. Sl. sol. in  $\text{HCl} + \text{Aq}$

#### Antimony pentoxide, $\text{Sb}_2\text{O}_5$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq.}$  Sl. sol. in conc.  $\text{KOH} + \text{Aq.}$

"Antimonoyd" is sol. in glycerine in presence of alkalis.

100 g. glycerine, to which have been added 10 g.  $\text{NaOH} + \text{Aq}$  (1.1), dissolve 20.6 g. at b.-pt., 20 g.  $\text{NaOH} + \text{Aq}$  (1.1), dissolve 36.0 g. at b.-pt.; 40 g.  $\text{NaOH} + \text{Aq}$  (1.1), dissolve 68.5 g. at b.-pt.; 80 g.  $\text{NaOH} + \text{Aq}$  (1.1), dissolve 93.0 g. at b.-pt., 120 g.  $\text{NaOH} + \text{Aq}$  (1.1), dissolve 119.2 g. at b.-pt. (Kohler, Dingl. 258. 520.)

See also Antimonie acid.

#### Antimony nitrogen pentoxide, $2\text{Sb}_2\text{O}_5, \text{N}_2\text{O}_5$ .

Not decomp. by  $\text{H}_2\text{O}$ . (Thomas, C. R. 1895, 120. 1116.)

#### Antimony oxybromide.

See Antimonyl bromide.

#### Antimony oxychloride.

See Antimonyl chloride.

#### Antimony oxyfluoride.

See Antimonyl fluoride.

#### Antimony oxysulphide, $\text{Sb}_2\text{OS}_2$ .

Min. *Antimony blende (kermesite)*.

Insol. in  $\text{H}_2\text{O}$  or dil. acids, except  $\text{HCl} + \text{Aq.}$  (Schneider, Pogg 110. 147.)

#### Antimony palladium, $\text{Sb}_2\text{Pd}$

Sl. sol. in equal pts. of  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9. 69.)

#### Antimony platinum, $\text{Sb}_2\text{Pt}$ .

Insol. in equal pts. of  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9. 67.)

#### Antimony phosphide, $\text{SbP}$ .

Insol. in benzene, ether, or  $\text{CS}_2$ . (M'Ivor, B. 6. 1362.)

#### Antimony selenide, $\text{SbSe}$

(Chrétien, C. R. 1906, 142. 1341.)

$\text{Sb}_2\text{Se}_4$ . (Chrétien, l.c.)

$\text{Sb}_2\text{Se}_3$ . (Chrétien, l.c.)

$\text{Sb}_2\text{Se}_3$ . Sol. in  $\text{KOH} + \text{Aq.}$  (Hofacker, A. 107. 6.)

$\text{Sb}_2\text{Se}_4$ . (Hofacker.)

#### Antimony selenide, with M selenide.

See Selenoantimonates, M.

#### Antimony trisulphide, $\text{Sb}_2\text{S}_3$ (Kermes).

Insol. in  $\text{H}_2\text{O}$  and dil. acids.

1 l.  $\text{H}_2\text{O}$  dissolves  $5.2 \times 10^{-6}$  mole pptd.  $\text{Sb}_2\text{S}_3$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Decomp. by conc.  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Sol. in conc.  $\text{HCl} + \text{Aq}$ . Easily sol. in dil.  $\text{KOH}$ ,  $\text{NaOH}$ ,  $(\text{NH}_4)_2\text{S}$ , and  $\text{K}_2\text{S} + \text{Aq}$ . Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , very sl. sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , insol. in  $\text{KSH} + \text{Aq}$  (Fresenius.)

Sol. in a mixture of 50 pts  $\text{H}_2\text{O}$  and 18 pts.  $\text{HCl}$  (sp. gr. 1.16) even when completely sat. with  $\text{H}_2\text{S}$  (Lang and Carson, J. Soc. Chem. Ind. 1902, 21. 1018.)

Sl. sol. in  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Gueudet, C. R. 1872, 75. 1276.)

Cryst.  $\text{Sb}_2\text{S}_3$  is only sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (1 pt. in about 2000 pts  $\text{NH}_3$ ).

Pptd. amorphous  $\text{Sb}_2\text{S}_3$  is appreciably more sol. (1 pt. in 600 pts.  $\text{NH}_3$ ). (Garot, J. pr. 1843, 29. 83.)

Sl. sol. in hot 2%  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq.}$ , still less sol. in cold. (Materne, C. C. 1906, II. 557.)

Insol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$

Sol. in 14-15 pts pure  $\text{SbCl}_3$ . (Schneider, Pogg 108. 407.)

Slowly sol. in  $\text{H}_2\text{C}_2\text{H}_3\text{O}_6 + \text{Aq.}$

Sol. in boiling  $\text{Na}_2\text{SbS}_4 + \text{Aq.}$

Sol. in hot citric, tartaric and oxalic acids. Sl. sol. in malic, benzoic, picric and pyrogallic acids. Insol. in formic and acetic acids. Especially easily sol. in citric and oxalic acids with addition of  $\text{KNO}_3$ ,  $\text{KNO}_2$  or  $\text{KClO}_3$ . (Bolton, C. N. 1878, 37. 88 and 99.)

Sol. in ethylamine sulphhydrate +  $\text{Aq.}$

Min. *Stibnite*. Sol. in cold citric acid +  $\text{Aq}$  (Bolton, C. N. 37. 14.)

*Soluble modification*  $\text{Sb}_2\text{S}_3$  may be obtained in a colloidal state in aqueous solution containing 1 pt  $\text{Sb}_2\text{S}_3$  to 200 pts  $\text{H}_2\text{O}$ . This can be boiled without decomp., but  $\text{Sb}_2\text{S}_3$  is pptd. by acids and salts.

Table of 'maximum' dilution of solutions of acids and salts which cause pptn. of  $\text{Sb}_2\text{S}_3$ .

HCl	1 : 270
$\text{H}_2\text{SO}_4$	1 : 140
$\text{H}_2\text{C}_2\text{O}_4$	1 : 45
$\text{K}_2\text{SO}_4$	1 : 65
$(\text{NH}_4)_2\text{SO}_4$	1 : 130
$\text{MgSO}_4$	1 : 1720
$\text{MnSO}_4$	1 : 2060
NaCl	1 : 135
$\text{BaCl}_2$	1 : 2050
$\text{MgCl}_2$	1 : 5800
$\text{CoCl}_2$	1 : 2500
$\text{KNO}_3$	1 : 75
$\text{Fe}_2\text{Cl}_6$	1 : 2500
$\text{Ba}(\text{NO}_3)_2$	1 : 1250
$\text{K}_2\text{Al}_2(\text{SO}_4)_4$	1 : 35,000
$(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_4$	1 : 800
$\text{K}_2\text{Cr}_2(\text{SO}_4)_4$	1 : 40,000
$\text{KSbOCl}_4\cdot\text{H}_2\text{O}$	1 : 18

(Schulze, J. pr. (2) 27. 320)

### Antimony trisulphide with $\text{M}_2\text{S}$ .

See Sulphantimonites, M.

### Antimony pentasulphide, $\text{Sb}_2\text{S}_5$

Insol in  $\text{H}_2\text{O}$ , or  $\text{H}_2\text{O}$  containing  $\text{H}_2\text{S}$ . Sol in conc.  $\text{HCl} + \text{Aq}$ . Completely sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , traces dissolve in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Easily sol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ , or in alkali sulphides +  $\text{Aq}$ . Sol. in 50 pts cold dil.  $\text{NH}_4\text{OH} + \text{Aq}$  (Geiger).

Insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ .

Insol. in cold, but sol. in hot alkali carbonates +  $\text{Aq}$  (Berzelius).

Insol. in  $\text{Na}_2\text{SbS}_4 + \text{Aq}$ .

When boiled with alcohol, ether,  $\text{CS}_2$ , oil of turpentine, etc., portion of the S is dissolved out. (Berzelius).

$\text{CS}_2$  dissolves about 5% of the sulphur (Rammelsberg).

### Antimony pentasulphide with $\text{M}_2\text{S}$ .

See Sulphantimonates, M.

### Antimony sulphochloride, $\text{SbSCl}_2$

Decomp. by moist air or  $\text{H}_2\text{O}$  (Cloeys, A. ch. (3) 30. 374).

$\text{SbS}_2\text{Cl}$ . Easily attacked by acids; insol. in  $\text{CS}_2$  (Ouvrard, C. R. 116. 1516.)

$\text{Sb}_2\text{S}_2\text{Cl}$  (Ouvrard.)

$2\text{SbSCl}$ ,  $3\text{Sb}_2\text{S}_3$ . Decomp. by dil.  $\text{HCl} + \text{Aq}$ . (Schneider)

$\text{SbSCl}$ ,  $2\text{SbCl}_2$ . Deliquescent; decomp. by  $\text{H}_2\text{O}$ . (Schneider, Pogg. 108. 407)

### Antimony sulphofluoride, $\text{SbF}_2\text{S}$

See Antimony fluosulphide.

### Antimony sulphoiodide, $\text{SbSI}$ .

Not attacked by  $\text{H}_2\text{O}$ , and decomp. only by conc. acids. Insol. in  $\text{CS}_2$ . (Schneider, Pogg. 110. 147)

$\text{Sb}_2\text{S}_2\text{I}_2$ . (Henry and Garot.)

$\text{Sb}_2\text{S}_2\text{I}_2$ . Sol. in dry  $\text{CS}_2$ . Very easily decomp. (Ouvrard, C. R. 117. 108.)

### Antimony sulphur dioxide, $\text{SbSO}_2$ .

Ppt. (Faktor, C. C. 1900, I 1211)

### Antimony telluride, $\text{SbTe}$

Insol. in  $\text{H}_2\text{O}$

$\text{Sb}_2\text{Te}_3$  Insol. in  $\text{H}_2\text{O}$  (Oppenheim, J. pr. 71. 277)

### Antimonyl bromide, $\text{SbOBr}$ .

Insol in  $\text{CS}_2$ . (Cooke, Proc. Am. Acad. 13. 104)

Sl sol in liquid  $\text{NH}_3$  (Gore, Am. Ch. J. 1898, 20. 826)

$\text{Sb}_2\text{O}_3\text{Br}_2$  (M'Ivor, C. N. 29. 179.)

$10\text{Sb}_2\text{O}_3\text{Br}_3$ ,  $\text{SbBr}_3$

### Antimonyl chloride.

From  $\text{SbCl}_3$ ,  $\text{SbOCl}$  Insol in  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . Insol. in alcohol or ether; sol. in  $\text{CS}_2$ ,  $\text{CHCl}_3$ , or  $\text{C}_6\text{H}_6$ . (Sabannajew, Zeit. Ch. 1871. 204)

Insol in liquid  $\text{NH}_3$  (Gore, Am. Ch. J. 1898, 20. 826.)

Insol in acetone (Naumann, B. 1904, 37. 4329.)

$\text{Sb}_2\text{O}_3\text{Cl}_2$  Algaroth powder. Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$  (Cooke, Proc. Am. Acad. 13. 1), tartaric acid +  $\text{Aq}$  (Schaffer, A. 152. 135)

$\text{Sb}_2\text{O}_3\text{Cl}_2$ . (Cooke.)

$\text{Sb}_2\text{OCl}_2$

$\text{Sb}_2\text{O}_3\text{Cl}_2$

From  $\text{SbCl}_3$ ,  $\text{SbOCl}_3$ . Deliquescent. Decomposed by  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Daubrawa, A. 184. 118.)

Does not exist. (Anschütz and Evans, A. 239. 285)

$\text{Sb}_2\text{OCl}_3$ . Deliquescent. Insol. in  $\text{CS}_2$ ; easily sol. in tartaric acid +  $\text{Aq}$ . (Williams, C. N. 24. 224.)

$\text{Sb}_2\text{O}_3\text{Cl}$ . (Williams.)

$\text{Sb}_2\text{O}_3\text{Cl}$ . Decomp. by hot  $\text{H}_2\text{O}$  into  $\text{HSbO}_3$ .

### Antimonyl fluoride.

From  $\text{SbF}_3$ ,  $\text{Sb}_2\text{O}_3\text{F}_3$ . Not deliquescent. (Flückiger, Pogg. 87. 249.)

### Antimonyl caesium fluoride, $\text{SbF}_4\text{OH}$ , $\text{CsF}$ .

(Wells, Am. J. Sci. 1901, (4) 11. 456.)

### Antimonyl sodium fluoride, $\text{SbOF}_2$ , $\text{NaF} + \text{H}_2\text{O}$ .

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . (Marignac, A. 145. 239)

### Antimonyl iodide, $\text{Sb}_2\text{O}_3\text{I}_2$

Difficultly sol. in solution of tartaric acid or tartrates. Decomp. by  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Easily sol. in alkalies, or  $(\text{NH}_4)_2\text{S} + \text{Aq}$

$\text{SbOI}$  Insol. in  $\text{CS}_2$ . (Cooke, Proc. Am. Acad. (2) 5. 72.)

### Antimonyl sulphide.

See Antimony oxysulphide.

**Argon, A.**

100 cc  $H_2O$  dissolve + 05 cc. argon at 13.9°  
Critical t—121.6° under 50.6 atmos. Bpt.—  
186.9°. Sp. gr. 19.9. (Rayleigh, C. N. 1895,  
71. 51-62, 299-302, C. C. 1895. 467.)

Coefficient of absorption in  $H_2O$  at 12° =  
0.0394; at 13.9° = 0.0405 (Ramsay, Phil.  
Trans. 1895, 186. A. 225.)

**Absorption by  $H_2O$  at t°.**

t°	Coefficient of absorption
0°	0.0561
10	0.0438
20	0.0379
30	0.0348
40	0.0338
50	0.0343

(Antropoff, Roy Soc. Proc. 1910, 83. A. 480.)

**Absorption of argon by  $H_2O$  at t° and 760 mm. pressure.**

t°	Coefficient of absorption
0°	0.05780
1	0.05612
5	0.05080
10	0.04525
15	0.04099
20	0.03790
25	0.03470
30	0.03256
35	0.03053
40	0.02865
45	0.02731
50	0.02567

(Estricher, Z. phys. Ch. 1899, 31. 184.)

1 l.  $H_2O$  at 38° absorbs 25.7 cc. A.

1 l. blood absorbs 25.3 cc. A. (Regnard  
and Schloesing, C. R. 1897, 124. 303.)

Not absorbed by members of the fatty  
series of organic compounds; with members  
of the aromatic series absorption was ob-  
served varying from 8% of the volume em-  
ployed for benzene to 1% for aniline. (Berth-  
elot, C. R. 1899, 129. 71.)

**Arsenamide,  $As(NH_2)_3$ .**

Insol. in liquid  $NH_3$ . Decomp. by  $H_2O$ .  
(Hugot, C. R. 1904, 139. 55.)

**Arsenic, As.**

Unaltered by pure  $H_2O$ . Insol. in  $HCl$ +  
 $Aq$  if air is excluded, but sl. sol. in presence of  
air. Not attacked by dil.  $H_2SO_4$ + $Aq$ . Oxid-  
ized by conc.  $H_2SO_4$ ,  $HNO_3$ , or aqua regia.  
Not attacked at 20° by  $HNO_3$ , conc. or dil.,  
or containing  $NO_2$ ; nor by  $HNO_3$ + $HCl$ , as  
long as they do not act on each other, but if  
treated with the above mixture in extremely  
dilute state, and a few drops of  $KNO_3$ + $Aq$

are added, the As is attacked at once. (Mil-  
lon, A. ch. (3) 6. 101.)

Sol. in sea water; 0.009 mg. per liter off  
Brittany, 0.01 to 0.09 mg. per liter near  
Azores. (Gautier, C. R. 1903, 137. 232.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch.  
J. 1898, 20. 827.)

Insol. in liquid  $NH_3$ . (Hugot, A. ch. 1900,  
7) 21. 31.)

Insol. in  $NaOH$ ,  $KOH$ , or  $NH_4OH$ + $Aq$ .  
Sol. in  $S_2Br_2$ . (Hannay, Chem. Soc. (2) 11.  
823.)

Insol. in alcohol and ether

Sol. in certain fatty oils

Insol. in methylene iodide. (Retgers, Z.  
anorg. 3. 343.)

$\frac{1}{2}$  cm. oleic acid dissolves 0.0032 g. As in  
6 days. (Gates, J. phys. Ch. 1911, 15. 143.)

Yellow modification. Very unstable (Mc-  
Leod, C. N. 1894, 70. 139.)

Fairly stable in liquid air. (Thomson,  
Chem. Soc. 1906, 90. (2) 745.)

100 cc.  $CS_2$  dissolve at.

46° 20° 12° 0° —15° —60°  
11 8 6 4 2 0-2.5 1.0 g. As.

Less sol. in benzene and ethyl acetate.  
(Erdmann, Z. anorg. 1902, 32. 448.)

**Arsenic acid.** See page 59.

**Arsenic bromide,  $AsBr_3$ .**

Decomp. by  $H_2O$ . Completely sol. in  
about 3 pts. boiling  $H_2O$ , and much less, in  
presence of  $HBr$ . (Wallace, Phil. Mag. (4)  
17. 261.)

Sol. in  $CS_2$

Sol. in  $AlBr_3$ . (Isabekow, Z. anorg. 1913,  
84. 26.)

Easily sol. in  $PCl_3$  and  $PBr_3$ . (Walden,  
Z. anorg. 1900, 25. 211.)

Sol. in  $S_2Cl_2$ . (Walden, Z. anorg. 1900,  
25. 217.)

**Arsenic caesium bromide,  $2AsBr_3, 3CsBr$ .**

Decomp. by  $H_2O$ , can be recryst. from  
conc.  $HBr$ + $Aq$ . (Wheeler, Z. anorg. 4. 451.)

**Arsenic rubidium bromide,  $2AsBr_3, 8RbCl$** 

As the corresponding Cs comp.

**Arsenic bromide ammonia,  $AsBr_3, 3NH_3$ .**

Decomp. by  $H_2O$ . (Besson, C. R. 110.  
1258.)

**Arsenic bromide copper,  $2AsBr_3, 7Cu$ .**

Stable toward hot  $H_2O$ . Decomp. by  $KOH$ .  
(Hilpert and Herrman, B. 1913, 46. 2224.)

**Arsenic bromide silver,  $AsBr_3, 3Ag$ .**

Scarcely decomp. by cold  $H_2O$ . (Hilpert  
and Herrmann.)

**Arsenic chloride,  $AsCl_3$ .**

Miscible with little  $H_2O$ , and with alcohol,  
ether, and volatile oils. Decomp. by much  
 $H_2O$ , or by boiling. (Gmelin.)

Miscible with oil of turpentine, and with olive oil. Somewhat sol in  $\text{HCl} + \text{Aq}$ .

Easily sol in  $\text{PCl}_5$  and  $\text{PBr}_3$  (Walden, Z. anorg. 1900, 25, 211.)

Sol in liquid  $\text{CN}$ . (Centnerszwer, J. russ. phys. Ges. 1901, 33, 545.)

Sol in  $\text{S}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 25, 217.)

**Arsenic pentachloride,  $\text{AsCl}_5$ .**

Fumes in the air with evolution of hydrogen chloride. Readily sol in  $\text{CS}_2$ , and absolute ether cooled to  $-30^\circ$ . (Baskerville, J. Am. Chem. Soc. 1902, 24, 1070.)

**Arsenic caesium chloride,  $2\text{AsCl}_3, 3\text{CsCl}$ .**

Decomp. by  $\text{H}_2\text{O}$ . 100 pts  $\text{HCl} + \text{Aq}$  (1.2 sp. gr.) dissolve 0.429 pt salt (Wheeler, Z. anorg. 4, 451.)

**Arsenic iridium phosphorus chloride.**

See Iridium phosphorus chloride arsenic chloride.

**Arsenic rubidium chloride,  $2\text{AsCl}_3, 3\text{RbCl}$ .**

Decomp. by  $\text{H}_2\text{O}$ . 100 pts  $\text{HCl} + \text{Aq}$  (sp. gr. 1.2) dissolve 2.935 pts salt (Wheeler, Z. anorg. 4, 451.)

**Arsenic sulphur chloride,  $2\text{AsCl}_3, 3\text{SCl}_2$ .**

Decomp. by  $\text{H}_2\text{O}$  (Rose.)

Above compound is a mixture. (Nilson, C. N. 81, 81.)

**Arsenic chloride ammonia,  $2\text{AsCl}_3, 7\text{NH}_3$ .**

Decomp. by cold  $\text{H}_2\text{O}$ , with evolution of  $\text{NH}_3$ . From the solution crystallizes  $\text{As}_2\text{Cl}_3, \text{N}_2\text{H}_{12}\text{O}_3$ .

Sol in alcohol without decomp (Rose, Pogg. 52, 62.)

Composition is  $\text{AsCl}_3, 4\text{NH}_3$ . (Besson, C. R. 110, 1258.)

**Arsenic chloride copper,  $2\text{AsCl}_3, 7\text{Cu}$ .**

Somewhat decomp. by  $\text{H}_2\text{O}$ . Decomp. by  $\text{KOH}$ , or hot  $\text{HCl}$ . (Hilpert and Herrman, B. 1913, 46, 2224.)

**Arsenic chloride silver,  $2\text{AsCl}_3, 7\text{Ag}$ .**

$\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$  and  $\text{KOH}$  split off  $\text{Ag}$ . (Hilpert and Herrmann.)

**Arsenic trifluoride,  $\text{AsF}_3$ .**

Sol. in  $\text{H}_2\text{O}$  with evolution of heat and decomposition. (Berzelius.)

Easily sol. in benzene (Moissan, C. R. 99, 874.)

Miscible with alcohol and ether. (M'Ivor, C. N. 30, 169.)

**Arsenic pentafluoride,  $\text{AsF}_5$ .**

Sol. in  $\text{H}_2\text{O}$ , alkalis +  $\text{Aq}$  and liquid  $\text{AsF}_3$  with evolution of heat. Absorbed by ether, alcohol and benzene with evolution of heat. (Ruff, B. 1906, 39, 67.)

**Arsenic potassium fluoride,  $\text{AsF}_6, \text{KF} + \frac{1}{2}\text{H}_2\text{O}$ .**

$\text{AsF}_3, 2\text{KF} + \text{H}_2\text{O}$

$\text{AsF}_3, \text{AsOF}_3, 4\text{KF} + 3\text{H}_2\text{O}$ . (Marignac, A. 145, 237.)

**Arsenic fluoride ammonia,  $2\text{AsF}_3, 5\text{NH}_3$ .**

Easily decomp. by  $\text{H}_2\text{O}$ . (Besson, C. R. 110, 1258.)

**Arsenic pentafluoride nitrosyl fluoride,  $\text{AsF}_5, \text{NOF}$ .**

Decomp. by  $\text{H}_2\text{O}$ , fuming  $\text{HCl}$ ,  $\text{NaOH} + \text{Aq}$ , dry ether and dry alcohol with evolution of  $\text{NO}$ . Sol. in conc.  $\text{HNO}_3$ , hot conc.  $\text{H}_2\text{SO}_4$ , boiling  $\text{NOCl}$  and  $\text{AsF}_3$ . Insol. in  $\text{CCl}_4$  and  $\text{CS}_2$  (Ruff, Z. anorg. 1908, 58, 327.)

**Arsenic bisfluoride sulphur tetrachloride,  $2\text{AsF}_5, \text{SCl}_4$ .**

Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$  and  $\text{NaOH}$ . Decomp. by thionyl chloride,  $\text{CCl}_4$ ,  $\text{CS}_2$ , abs. alcohol and ether. Decomp. by ligroin, benzene and toluene. (Ruff, B. 1904, 37, 4520.)

**Arsenic hydride,  $\text{AsH}_3$ .**

Sl. sol in  $\text{H}_2\text{O}$  and alkali hydrates +  $\text{Aq}$ , with subsequent decomposition.  $\text{H}_2\text{O}$  absorbs  $\frac{1}{2}$  vol.  $\text{AsH}_3$ . Decomp. by conc. acids. Absorbed rapidly by oil of turpentine, slightly by fixed oils, and not at all by alcohol, ether, or  $\text{KOH} + \text{Aq}$ . (Gmelin.)

Insol. in  $\text{KOH} + \text{Alcohol}$ . (Meissner.)

Not more sol. in alkaline solutions than in pure  $\text{H}_2\text{O}$ . (Berzelius.)

$\text{AsH}$ . Solid. Insol. in  $\text{H}_2\text{O}$ , alcohol, ether, and  $\text{CS}_2$ . (Wiederhold, Pogg. 118, 615.)

Insol. in  $\text{H}_2\text{O}$ , sol. in methylene iodide, xylene, or in conc.  $\text{KOH} + \text{Aq}$ . (Retgers, Z. anorg. 4, 403.)

**Arsenic hydride boron bromide,  $\text{AsH}_3, \text{BBr}_3$ .**

Easily decomp. Decomp. by  $\text{H}_2\text{O}$ . Appreciably sol. in  $\text{AsH}_3$  or  $\text{BBr}_3$ . Insol. in  $\text{CS}_2$ . (Stock, B. 1901, 34, 949.)

**Arsenic diiodide,  $\text{As}_2\text{I}_4$ .**

Decomp. by  $\text{H}_2\text{O}$  or alkalis; easily sol in alcohol, ether, chloroform, or carbon disulphide. (Bamberger and Philip, B. 14, 2643.)

Not attacked by cold conc.  $\text{H}_2\text{SO}_4$  or by cold fuming  $\text{HNO}_3$ . The latter oxidizes on warming. Decomp. by pyridine. Sol. in boiling acetic anhydride. (Hewitt and Winmill, Chem. Soc. 1907, 91, 962.)

**Arsenic triiodide,  $\text{AsI}_3$ .**

Sol. in 332 pts. boiling  $\text{H}_2\text{O}$ , and solution if boiled down deposits pure  $\text{AsI}_3$ , but if left to cool slowly, deposits crystals of  $\text{As}_2\text{O}_3$  and  $\text{AsOI}$ .

Sl. sol. in  $\text{HCl} + \text{Aq}$ .

Sol. in  $\text{POCl}_3$ ,  $\text{PCl}_5$  and  $\text{PBr}_3$ . (Walden, Z. anorg. 1900, 25, 212.)

Sol in  $\text{PCl}_5$  (Beckmann, Z anorg 1906, 51. 110)  
 Sol. in  $\text{SOCl}_2$ ,  $\text{S}_2\text{Cl}_2$  and  $\text{SO}_2\text{Cl}_2$ . (Walden, Z anorg 1900, 25. 216)  
 Sol. in  $\text{SnCl}_4$ . (Walden, l.c.)  
 Easily sol. in  $\text{AsBr}_3$ . (Walden, Z anorg 1902, 29. 374)  
 Sol. in  $\text{AsCl}_3$  (Walden, Z. anorg. 1900, 25. 214)  
 Sol. in alcohol without decomp  
 Sol. in ether, benzene, chloroform, and  $\text{CS}_2$ .  
 100 pts. methylene iodide dissolve 17.4 pts.  $\text{AsI}_3$  at  $12^\circ$ . (Retgers, Z anorg 3. 343.)

#### Arsenic pentoxide, $\text{As}_2\text{O}_5$ .

More or less sol. in  $\text{H}_2\text{O}$ , alcohol,  $\text{CHCl}_3$ , ether and  $\text{CS}_2$ . (Sloan, C. N. 1882, 46. 194.)

#### Arsenic caesium iodide, $2\text{AsI}_3$ , $3\text{CsI}$

Decomp. by  $\text{H}_2\text{O}$ , sol. in conc.  $\text{HI} + \text{Ag}$  (Wheeler, Z anorg 4. 451)

#### Arsenic rubidium iodide, $2\text{AsI}_3$ , $3\text{RbI}$

As the corresponding Cs comp

#### Arsenic sulphur iodide.

See Arsenic sulphoxide.

#### Arsenic triiodide ammonia, $2\text{AsI}_3$ , $9\text{NH}_3$ .

Insol. in benzene. (Bamberger and Philip, B. 14. 2643)

$\text{AsI}_3$ ,  $4\text{NH}_3$  (Besson, C. R. 110. 1258.)

#### Arsenic nitride, $\text{AsN}$ .

Easily decomp. into As and N. (Hugot, C. R. 1904, 139. 56)

Decomp. by heat (Frau Fischer, B. 1910, 43. 1471.)

#### Arsenic suboxide, $\text{As}_2\text{O}$ (?)

Insol. in  $\text{H}_2\text{O}$ ; decomp. by dil. acids or  $\text{NH}_4\text{OH} + \text{Ag}$

Does not exist. (Geuther, A. 240. 208.)

#### Arsenic trioxide, $\text{As}_2\text{O}_3$ .

"White arsenic" exists in two modifications  $\alpha\text{As}_2\text{O}_3$ —crystalline, octahedral, opaque, porcelainous, etc.,  $\beta\text{As}_2\text{O}_3$ —amorphous, vitreous, "arsenic glass"

The data concerning the solubility of  $\text{As}_2\text{O}_3$  are very contradictory, the reasons being that (1) the solubility of the two modifications is different, (2) that the length of time necessary to effect solution differs in the two modifications; and (3) that there is a tendency of the amorphous  $\text{As}_2\text{O}_3$  to go over into the crystalline state during the process of solution.  $\alpha\text{As}_2\text{O}_3$  is also not easily moistened, especially when in a pulverulent condition, which is not the case with the  $\beta$  modification. (Winkler, J. pr (2) 31. 247.)

The older data are very unreliable, but possess a certain historical interest.

1 pt.  $\text{As}_2\text{O}_3$  is sol. in 1055 pts. (Wenzel), 11.34 pts. (Fischer); 11.88 pts. in  $\frac{1}{2}$  hour (Klaproth); 12.2 pts. (Bucholz); 15.0 pts. (Brandt, Bergmann); 10.0 pts. (Vogel); 24 pts. (Lamethière), 40 pts. (Pörner); 64 pts.

(Baumé), 80 pts. (Navier), 200 pts. (Aschof and Nasse, 1812), 640 pts. (Hagen, 1796) boiling  $\text{H}_2\text{O}$

1 pt.  $\alpha\text{As}_2\text{O}_3$  is sol. in 772 pts.  $\text{H}_2\text{O}$  if  $\alpha$ , or 9.33 pts. if  $\beta$  (Gubior), in 24 pts.  $\text{H}_2\text{O}$  if  $\alpha$ , or 21 pts. if  $\beta$  (Taylor).

Sol. in 53.3 pts.  $\text{H}_2\text{O}$  at  $15.75^\circ$ . (Abt)

Sol. in 30 pts.  $\text{H}_2\text{O}$ . (Nussebrook)

After the solution in  $\text{H}_2\text{O}$  at  $100^\circ$  has been left stand-

ing at ordinary temperatures—

1 pt.  $\alpha\text{As}_2\text{O}_3$  remains dissolved in 16 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ , and 20 pts.  $\text{H}_2\text{O}$  at  $7^\circ$  (Bucholz), in 83 pts.  $\text{H}_2\text{O}$  at  $7^\circ$  (Klaproth), in 38.45 pts.  $\text{H}_2\text{O}$  after 3 days, 55 pts.  $\text{H}_2\text{O}$  after 8 days, 64.50 pts.  $\text{H}_2\text{O}$  after 23 weeks at  $10^\circ$  (Fischer), in 33.52 pts. if  $\alpha\text{As}_2\text{O}_3$  was used, 55.03 pts. if  $\beta\text{As}_2\text{O}_3$  was used (Gubior); in 38 pts. if  $\alpha\text{As}_2\text{O}_3$  after 6 months, 53.71 pts. if  $\beta\text{As}_2\text{O}_3$  after 48 hours (Taylor).

When an excess of pulverized  $\text{As}_2\text{O}_3$  is left to digest for several days with cold  $\text{H}_2\text{O}$ —

1 pt. dissolves in 50 pts. (Bucholz), in 63 pts. (Fischer), in 80 pts. at  $15^\circ$  (Bergmann), in 80 pts. if  $\alpha$ , and 104 pts. if  $\beta$  (Gubior), 96 pts. at  $10^\circ$  (Spelman); 90 pts. at  $35.5^\circ$  (Hahnemann), 320 pts.  $\text{H}_2\text{O}$  at  $20^\circ$  (Aschof and Nasse, 1812)

$\text{H}_2\text{O}$  at  $15.6^\circ$  or below dissolves less than  $\frac{1}{2}\%$   $\alpha\text{As}_2\text{O}_3$ . (Dalton)

To dissolve 1 pt.  $\text{As}_2\text{O}_3$  in 12 pts.  $\text{H}_2\text{O}$ , it is necessary to boil an excess of  $\text{As}_2\text{O}_3$  with  $\text{H}_2\text{O}$ , if 1 pt.  $\text{As}_2\text{O}_3$  is boiled with 12 pts.  $\text{H}_2\text{O}$ , considerable remains undissolved, and even with 1 pt.  $\text{As}_2\text{O}_3$  to 50–80 pts.  $\text{H}_2\text{O}$  long continued boiling is necessary to effect solution.

If a clear solution saturated by long boiling with an excess of  $\text{As}_2\text{O}_3$  is poured off and evaporated continuously to  $\frac{1}{2}$  its original bulk, no  $\text{As}_2\text{O}_3$  separates out, and the solution contains 1 pt.  $\text{As}_2\text{O}_3$  to 6 pts.  $\text{H}_2\text{O}$ . (Fischer)

100 pts. aqueous solution of  $\beta\text{As}_2\text{O}_3$  sat. at  $15^\circ$  contain 0.96 pt.  $\alpha\text{As}_2\text{O}_3$ , and 9.68 pts. when sat. at  $100^\circ$ . (Gubior)

If 1 pt. pulverized  $\text{As}_2\text{O}_3$  be digested 10 days at  $10\text{--}25^\circ$  in 5–10 pts.  $\text{H}_2\text{O}$ , the solution contains 1 pt.  $\text{As}_2\text{O}_3$  to 50 pts.  $\text{H}_2\text{O}$ . A solution of same strength is obtained in 25 days by digesting 1 pt.  $\text{As}_2\text{O}_3$  in 40 pts.  $\text{H}_2\text{O}$ . If 1 pt.  $\text{As}_2\text{O}_3$  be immersed in 80 pts.  $\text{H}_2\text{O}$ , the resulting solution contains 1 pt.  $\text{As}_2\text{O}_3$  to 80 pts.  $\text{H}_2\text{O}$ ; if in 130 pts.  $\text{H}_2\text{O}$ , 1 pt.  $\text{As}_2\text{O}_3$  to 180 pts.  $\text{H}_2\text{O}$ ; if in 240 pts.  $\text{H}_2\text{O}$ , 1 pt.  $\text{As}_2\text{O}_3$  to 280 pts.  $\text{H}_2\text{O}$ ; if in 1000 pts.  $\text{H}_2\text{O}$ , 1 pt.  $\text{As}_2\text{O}_3$  to 1200 pts.  $\text{H}_2\text{O}$ ; and even when 1 pt.  $\text{As}_2\text{O}_3$  is digested at ordinary temperatures for several days with 10,000–100,000 pts.  $\text{H}_2\text{O}$ , a portion remains undissolved. Pulverized  $\alpha\text{As}_2\text{O}_3$  was set aside with  $\text{H}_2\text{O}$  in closed bottles for 18 years, when 1 pt.  $\text{As}_2\text{O}_3$  was present in 1000 pts.  $\text{H}_2\text{O}$ , a perfect solution was obtained, when 1 pt.  $\text{As}_2\text{O}_3$  in 100 pts.  $\text{H}_2\text{O}$ , 0.017%  $\text{As}_2\text{O}_3$  was undissolved; when 1 pt.  $\text{As}_2\text{O}_3$  in 35 pts.  $\text{H}_2\text{O}$ , 0.35%  $\alpha\text{As}_2\text{O}_3$  was undissolved, so that the solution contained 1 pt.  $\text{As}_2\text{O}_3$  to 54 pts.  $\text{H}_2\text{O}$ . (Gmelin)

Porcelainous modification ( $\alpha\text{As}_2\text{O}_3$ ) is much more sol. in  $\text{H}_2\text{O}$  than the vitreous ( $\beta\text{As}_2\text{O}_3$ ) 100 pts.  $\text{H}_2\text{O}$  at ordinary temperature dissolves 0.96 pt.  $\beta\text{As}_2\text{O}_3$  and 1.25 pts.  $\alpha\text{As}_2\text{O}_3$ , 100 pts. boiling  $\text{H}_2\text{O}$  dissolve 9.68 pts.  $\beta\text{As}_2\text{O}_3$  and 11.47 pts.  $\alpha\text{As}_2\text{O}_3$ ; and when the temperature of this solution has fallen to  $15^\circ$ , the solution from  $\beta\text{As}_2\text{O}_3$  retains 1.78 pts. and that from  $\alpha\text{As}_2\text{O}_3$  retains 2.9 pts. (Berzelius [not Gmelin])

$\beta\text{As}_2\text{O}_3$  dissolves more quickly and abundantly than  $\alpha\text{As}_2\text{O}_3$ . The same amount  $\text{H}_2\text{O}$  which will take up 36–38 pts.  $\beta\text{As}_2\text{O}_3$  at  $12\text{--}13^\circ$  will dissolve only 12–14 pts.  $\alpha\text{As}_2\text{O}_3$ , or 100 pts.  $\text{H}_2\text{O}$  dissolve 4 pts.  $\beta\text{As}_2\text{O}_3$  and 1.2–1.3 pts.  $\alpha\text{As}_2\text{O}_3$ . By long boiling with  $\text{H}_2\text{O}$ ,  $\alpha\text{As}_2\text{O}_3$  is converted into  $\beta\text{As}_2\text{O}_3$ , and thus acquires the solubility of the latter, so that 100 pts. boiling  $\text{H}_2\text{O}$  can take up 11 pts.  $\text{As}_2\text{O}_3$ . But at low temperature  $\beta\text{As}_2\text{O}_3$  is converted into  $\alpha\text{As}_2\text{O}_3$  when in contact with  $\text{H}_2\text{O}$ , so that the solution becomes weaker after a while, and retains only the proportion of  $\text{As}_2\text{O}_3$  corresponding to the solubility of  $\alpha\text{As}_2\text{O}_3$ . Communion, which hastens the rate of solubility of  $\alpha\text{As}_2\text{O}_3$  without increasing the amount dissolved, diminishes the solubility of  $\beta\text{As}_2\text{O}_3$ , as this is converted into  $\alpha\text{As}_2\text{O}_3$ .

by the friction or contact with  $H_2O$ .  $As_2O_3$ , which has been rendered opaque by  $NH_4OH$ , and that which has been crystallized from an aqueous solution, are equally sol. in  $H_2O$ . (Bussy, C. R. 24, 774, A. 64, 286.)

100 pts.  $H_2O$  dissolve 1.707 pts.  $\beta As_2O_3$  in  $2\frac{1}{2}$  years; 100 pts. boiling  $H_2O$  dissolve 11.46 pts.  $\beta As_2O_3$  in 3 hours, and 11.86 pts. in 12 hours, 10.14 pts.  $\alpha As_2O_3$  in 3 hours, and 10.18 pts. in 12 hours. (Rose, Ann. Phys. (1) 36, 494.)

A cold sat. solution which stood over excess of  $As_2O_3$  for 10 months at  $10-20^\circ$  contains 1.2%  $As_2O_3$ ; hot sat. solution a few days after saturation contains 2.25-2.50%  $As_2O_3$ . If trace of  $HCl$  is present, the solution contains 3.8%  $As_2O_3$ . Hot sat. solution of porcelain mod. of  $As_2O_3$  contains 4 days after saturation 2.4%  $As_2O_3$  at  $24^\circ$ ; after 82 days at  $14^\circ$ , 1.5%; after 4 months at  $12^\circ$ , 1.3%  $As_2O_3$ . (Bacalaglio, J. pr. 83, 111.)

According to later experiments, 1 pt.  $\alpha As_2O_3$  dissolves in 355 pts.  $H_2O$  in 1 day at  $15^\circ$ , while 1 pt.  $\beta As_2O_3$  dissolves in 108 pts.  $H_2O$  under the same conditions. 1 pt.  $\alpha As_2O_3$  dissolves in 46 pts.  $H_2O$ , if solution is prepared at  $100^\circ$ , and allowed to stand 24 hours at  $15^\circ$ , while 1 pt.  $\beta As_2O_3$  dissolves in 30 pts.  $H_2O$  under the same conditions. (Buchner, N. Rep. Pharm. 22, 265.)

100 pts.  $H_2O$  dissolve pts.  $\alpha As_2O_3$  and  $\beta As_2O_3$  at ordinary temperature:

Time	$\alpha As_2O_3$	$\beta As_2O_3$
1 hour	0.023	1.589
3 hours	0.088	2.356
6 hours	0.353	3.666
12 hours	0.364	3.361
24 hours	0.956	3.306
2 days	1.627	2.629
4 days	1.814	2.429
1 week	1.673	1.763
3 weeks	1.776	1.713
$2\frac{1}{4}$ years	1.712	1.707

In the solution of  $\beta As_2O_3$ , octahedral crystals were deposited on the sides of the vessel after 12 hours, which continued to increase. There was no such deposit in the case of  $\alpha As_2O_3$ .

From the maxima in the above table, 100 pts.  $H_2O$  can dissolve 3.7 pts.  $\beta As_2O_3$  and 1.7 pts.  $\alpha As_2O_3$  at ordinary temperature.

100 pts. boiling  $H_2O$  dissolve 11.46 pts.  $\beta As_2O_3$  and 10.140 pts.  $\alpha As_2O_3$  in 3 hours; 11.86 pts.  $\beta As_2O_3$  and 10.176 pts.  $\alpha As_2O_3$  in 12 hours. (Cl. Winkler, J. pr. (2) 31, 247.)

100 pts.  $H_2O$  dissolve 1.75 pts. of a third modification (hexagonal crystalline) at ordinary temperature, and 2.75 pts. at  $100^\circ$ . (Claudet, Chem. Soc. (2) 6, 179.)

$\beta As_2O_3$  dissolves more rapidly in  $HCl + Aq$  than  $\alpha As_2O_3$ . (Schultz-Sellac, B. 4, 109.)

While 100 cem.  $H_2O$  dissolve 0.8507 g.  $\beta As_2O_3$  at  $18.5^\circ$ , 100 cem.  $H_2O$  containing 4.3195 g.  $HCl$  dissolve 1.1513 g.  $\beta As_2O_3$ ; containing 6.09 g.  $HCl$ , 1.2724 g.  $\beta As_2O_3$ . (Chodounsky, Lusty Chemické, 13, 114.)

100 cem.  $H_2O$  dissolve 1.495 g.  $As_2O_3$  at  $15^\circ$ . (Wood, Chem. Soc. 1908, 93, 412.)

Solubility of crystalline  $As_2O_3$  in  $H_2O$ .

1 l. of the sat. solution contains at:

$2^\circ$      $15^\circ$      $25^\circ$      $39.8^\circ$     bpt.  
12.006 16.566 20.384 29.302 60.4 g.  $As_2O_3$   
(Bruner, Z. anorg. 1903, 37, 456.)

Much more easily sol. in many acids than in  $H_2O$ . Easily sol. in fuming  $H_2SO_4$ . (Schultz-Sellac.)

100 pts. dilute  $H_2SO_4 + Aq$  of various strengths dissolve at  $1^\circ$ .

$t^\circ$	Pts. $\beta As_2O_3$	$t^\circ$	Pts. $\beta As_2O_3$	Ratios of amts. dissolved at $80^\circ$ 18.5°
80°	1.0195	18.5°	0.5422	1.88 : 1
	1.3664		0.7203	1.89 : 1
	1.1933		0.6522	1.84 : 1

(Chodounsky, l.c.)

Decomp. by  $HNO_3$  or aqua regia into  $As_2O_5$ . Sol. in  $H_3PO_4 + Aq$ . (Bergman.)

More sol. in  $HCl + Aq$  than in  $H_2SO_4$ , or  $HNO_3 + Aq$ , and still less in  $HCl + H_2O_2 + Aq$ . Solubility in  $HCl + Aq$ .

Conc. of $HCl + Aq$	Grams of $As_2O_3$ per 100 cc. of solution
0.46N	1.52
0.98N	1.41
2.03N	1.17
3.13N	1.11
3.81N	1.13
5.32N	2.20
6.50N	5.11
7.85N	12.28
9.17N	18.16

As the concentration of the acid increases, the solubility of the oxide decreases, a minimum being reached when the concentration of the solvent is about 3.2N. Beyond this point, an increase in the concentration of the solvent leads to a corresponding increase in the solubility. (Wood, Chem. Soc. 1908, 93, 413.)

Insol. in liquid  $CO_2$ . (Büchner, Z. phys. Ch. 1906, 54, 674.)

Easily sol. in cold  $H_2C_2O_4 + Aq$ . (Bergman.)

When pulverized, it dissolves in hot  $H_2C_2O_4 + Aq$ , but separates out on cooling.

Easily sol. in hot benzoic acid +  $Aq$ .

Sol. in tartaric acid +  $Aq$ .

Easily sol. in alkali hydrates, or carbonates +  $Aq$ .

Easily sol. in  $\text{NH}_4$  arsenite + Aq at  $70-80^\circ$ , crystallizing out on cooling. (Berzelius.)

Sol. in hot  $\text{K}_2\text{C}_2\text{O}_4$  + Aq.

Sol. in  $\text{AsCl}_3$ . (Penney and Wallace.)

More sol. in  $\text{Na}_2\text{B}_4\text{O}_7$  + Aq than in  $\text{H}_2\text{O}$

Very sl. sol. in absolute alcohol (Vogel)

Sol. in 80 pts. highly rectified spirit (Wenzel.)

When 1 pt. powdered  $\text{As}_2\text{O}_3$  is digested 30 days in 10-40 pts. alcohol, a solution is formed containing 1 pt.  $\text{As}_2\text{O}_3$  to 80 pts. alcohol, when 1 pt.  $\text{As}_2\text{O}_3$  is digested with 80-150 pts. alcohol, a solution is formed containing 1 pt.  $\text{As}_2\text{O}_3$  to 124-140 pts. alcohol. (Fischer)

Sol. in 70-80 pts. alcohol (Thompson.)

Alcohol dissolves 0.446 pt.  $\beta\text{As}_2\text{O}_3$ . (Rose, A. Phys. (1) 52. 455.)

100 pts. alcohol dissolve pts.  $\text{As}_2\text{O}_3$ :

Vol % of alcohol	$\alpha\text{As}_2\text{O}_3$ at $15^\circ$	$\alpha\text{As}_2\text{O}_3$ at $15^\circ$ of alcohol	$\beta\text{As}_2\text{O}_3$ at $15^\circ$
56	1 680	4 895	0 504
79	1 430	4 551	0 540
84			0 565
86	0 715	3 197	
88			0.717
100	0 025	3 402	1 060

(Girardin, J. Pharm. (3) 46. 269.)

100 pts. absolute alcohol dissolve 0.446 pt.  $\beta\text{As}_2\text{O}_3$  in  $2\frac{1}{2}$  years (Winkler, J. pr (2) 31. 347.)

Nearly insol. in ether

100 pts. ether dissolve 0.454 pt.  $\beta\text{As}_2\text{O}_3$ . (Winkler.)

Ether extracts 1 mg.  $\text{As}_2\text{O}_3$  from sat.  $\text{As}_2\text{O}_3$  + Aq for every 15 cc. ether used, less is extracted when the solution is acidified with  $\text{HCl}$ , and almost none if acidified with  $\text{H}_2\text{SO}_4$  or  $\text{H}_2\text{C}_2\text{O}_4$ . (Selm, B. 13. 206.)

$\alpha\text{As}_2\text{O}_3$  is sol. in 50 pts. boiling nitrobenzol  $\beta\text{As}_2\text{O}_3$  is insol. in boiling nitrobenzol (Auerbach, Z. anorg. 1903, 37. 353)

$\beta\text{As}_2\text{O}_3$  dissolves in oil of turpentine, but  $\alpha\text{As}_2\text{O}_3$  is insol. therein.  $\alpha\text{As}_2\text{O}_3$  is very sl. sol. in benzene or petroleum ether, but more sol. in methyl alcohol, ethyl alcohol, ether, or chloroform. (Selm.)

100 pts.  $\text{CS}_2$  dissolve 0.001 pt.  $\beta\text{As}_2\text{O}_3$  in  $2\frac{1}{2}$  years. (Winkler.)

Sl. sol. in the fatty oils.

1000 pts. castor-oil dissolve 1.33 pts.  $\text{As}_2\text{O}_3$  at ordinary temperature, and 9 pts. at boiling temperature. 1000 pts. other oils dissolve 0.6-0.8 pt.  $\text{As}_2\text{O}_3$  in the cold, and about 1.7 pts. on boiling. (Berzelius.)

Insol. in chinoline or amline. (Hoffmann, A. ch. (3) 9. 143, 169.)

Moderately sol. in chinolin. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329), (Edmann, C. C. 1899, II. 1014.)

Sol. in amyl alcohol and is divided between it and  $\text{H}_2\text{O}$  in the constant ratio of 1 : 5.47 at  $25^\circ$ . (Auerbach, Z. anorg. 1903, 37. 376.)

Min. *Arsenolite*.

**Arsenic trioxide pentoxide**,  $3\text{As}_2\text{O}_5$ ,  $2\text{As}_2\text{O}_3$  +  $3\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Joly, C. R. 100. 1221.)

$2\text{As}_2\text{O}_5$ ,  $\text{As}_2\text{O}_3$  +  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Joly.)

$\text{As}_2\text{O}_3$ ,  $\text{As}_2\text{O}_5$  +  $\text{H}_2\text{O}$ . (Joly.)

**Arsenic tetroxide**,  $\text{As}_2\text{O}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$  from which it is partially pptd. by alcohol. More easily sol. in alkali carbonates or  $\text{HCl}$  + Aq. Most easily sol. in  $\text{NaOH}$  or  $\text{KOH}$  + Aq. (Heibst, Dissert. 1894.)

**Arsenic pentoxide**,  $\text{As}_2\text{O}_5$

Deliquescent in moist air; slowly sol. in  $\text{H}_2\text{O}$ , forming  $\text{H}_3\text{AsO}_4$ , which see. Easily sol. in alcohol, much more sol. in alcohol than  $\text{As}_2\text{O}_3$ . Very sl. sol. in the fatty oils, 100 pts. of oil dissolving 0.2 pt.  $\text{As}_2\text{O}_5$  in the cold, and 1 pt. with partial decomp. on boiling. (Berzelius.)

1000 pts. boiling poppy-oil dissolve 27 pts.  $\text{As}_2\text{O}_5$ ; 1000 pts. boiling castor-oil dissolve 34 pts.  $\text{As}_2\text{O}_5$ . (Hempel and Grundner.)

+  $4\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts $\text{H}_3\text{AsO}_4$ in 100 pts. solution	$t^\circ$	Pts $\text{H}_3\text{AsO}_4$ in 100 pts. solution
$-55^\circ$	69.9	$-5^\circ$	80.0
$-50$	70.9	0	81.0
$-45$	71.9	+5	82.1
$-40$	72.9	10	83.3
$-35$	73.9	15	84.7
$-30$	74.9	20	86.3
$-25$	75.9	25	88.0
$-20$	76.9	30	90.1
$-15$	77.9	35	92.8
$-10$	78.9		

(Menzies and Potter, J. Am. Chem. Soc. 1912, 34. 1464.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts $\text{H}_3\text{AsO}_4$ in 100 pts. of solution
+ $10^\circ$	88.4
20	89.1
30	89.8
40	90.5
50	91.2
60	91.9
70	92.6
80	93.2
90	93.8
100	94.4
110	95.0
120	95.6
130	96.2
140	96.8

(Menzies and Potter, J. Am. Chem. Soc. 1912, 34. 1464.)

$As_2O_3 + 4H_2O$  and  $3As_2O_3 + 5H_2O$  are the only hydrates that can be isolated (Menzies and Potter.)

See also Arsenic Acid.

**Arsenic trioxide, with alkali haloid.**

See Arsenite, alkali haloid.

**Arsenic sulphur trioxide,  $As_2O_3, SO_2$**

Deliquescent, decomp. by  $H_2O$ . (Adie, Chem. Soc. 55, 157.)

$As_2O_3, 2SO_2$ . As above (Adie)

$As_2O_3, 3SO_2$ . (Weber, B. 19, 3186.)

$As_2O_3, 4SO_2$ . As above (Adie.)

$As_2O_3, 6SO_2$ . (Weber)

$As_2O_3, 8SO_2$ . As above. (Adie.)

**Arsenic oxychloride, etc.**

See Arsenyl chloride, etc

**Arsenic phosphide,  $AsP$ .**

Decomp. by  $H_2O$ . Not attacked by cold  $H_2SO_4$  or  $HCl$ , and only sl. sol. therein on warming. Easily decomp. by  $HNO_3$ ,  $KOH$ ,  $NaOH$ ,  $BaO_2H_2 + Aq$ . Insol. in alcohol, ether, chloroform, sl. sol. in  $CS_2$ .

$P_2As_2O_2$ . Product of action of  $H_2O$  on above compound, which it resembles (Janowsky, B. 6, 216.)

**Arsenic monoselenide,  $As_2Se$**

Insol. in most organic and inorganic solvents. Sol. very slowly in conc.  $HCl$  and  $H_2SO_4$ . Sol. in boiling alkali hydroxides +  $Aq$  (Szarvasy, B. 1897, 30, 1245)

**Arsenic triselenide,  $As_2S_3$**

Partially sol. in  $KOH + Aq$  if boiled with it for a long time. (Uelsmann, A. 116, 123)

**Arsenic pentaselenide,  $As_2Se_5$**

Insol. in most solvents, as conc.  $HCl$ . Sol. in alkali hydrates and sulpho-hydrates +  $Aq$  (Szarvasy, B. 1895, 28, 2855-2856)

Insol. in  $H_2O$ , in dil. acids and in conc.  $HCl$ . Sl. sol. in warm  $HNO_3 + Aq$ . Oxidized by cold fuming  $HNO_3$ . Sol. in alkalis and in hot alkali carbonates +  $Aq$ . Insol. in alcohol, ether,  $CS_2$ , etc (Clever, Z. anorg. 1895, 10, 129.)

**Arsenic selenosulphide.**

See Arsenic sulphoselenide.

**Arsenic sulphide,  $As_2S$**

Ppt. Insol. in  $NH_4OH$  or in colorless  $(NH_4)_2S + Aq$ . Sol. in yellow  $NH_4SH + Aq$ . (Scott, Chem. Soc. 1900, 77, 652.)

**Arsenic disulphide,  $As_2S_2$**

Min. Realgar. Difficultly sol. in alkali sulphides +  $Aq$ . Partly dissolved by  $KOH + Aq$  with decomposition. Sol. at  $150^\circ$  in a sealed tube in  $NaHCO_3 + Aq$ , and crystallizes out on cooling. (Senarmont, A. ch. (3) 32, 158)

**Arsenic trisulphide,  $As_2S_3$**

Insol. in  $H_2O$  when prepared in the dry way, but when prepared moist is very liable to go into the colloidal modification mentioned below. Insol. in  $H_2O$  containing  $H_2SO_4$ ,  $HNO_3$ ,  $HCl$ ,  $H_2C_2O_4$ ,  $HC_2H_3O_2$ ,  $H_2C_4H_4O_6$ ,  $CO_2$ ,  $NH_4Cl$ ,  $KNO_3$ ,  $(NH_4)_2SO_4$ ,  $MgSO_4$ . (Bontigny)

Insol. in  $H_2O$ . Traces are dissolved by  $H_2S + Aq$ . Sl. decomp. by boiling with  $H_2O$ , or long contact with cold  $H_2O$ . (Fresenius)

1 l  $H_2O$  dissolves  $2.1 \times 10^{-6}$  mols pptd.  $As_2S_3$  at  $18^\circ$  (Weigel, Z. phys. Ch. 1907, 58, 294)

Insol. in dil. acids. Insol. in cold, and scarcely attacked by hot conc.  $HCl + Aq$ .

Easily decomp. by  $HNO_3$  or aqua regia

Easily sol. in cold  $KOH$ ,  $NaOH$ , or  $NH_4OH + Aq$ , also in alkali carbonates, or sulphates +  $Aq$ .

Sol. in hot  $KHSO_3 + Aq$ .

Sol. in citric acid, and alkali citrates +  $Aq$ . (Spiller)

Slowly sol. in cold 2%  $Na_2B_4O_7 + Aq$ . Easily sol. on heating (Materne, C. C. 1906, II 557.)

Insol. in  $CS_2$

Min. Orpiment

$As_2S_3$  may also be obtained in a colloidal form, sol. in  $H_2O$ . Sat. solution contains 34.46%  $As_2S_3$ , it is decomp. by standing, but may be boiled without undergoing decomposition, most acids and many salts ppt.  $As_2S_3$  (Schulze, J. pr. (2) 25, 431)

The following solutions cause pptn. of  $As_2S_3$  in a solution of the colloidal modification, when added in the given state of dilution—

$HCl + Aq$	1 : 555
$HNO_3 + Aq$	1 : 276
$H_2SO_4 + Aq$	1 : 255
$H_2S_2O_7 + Aq$	1 : 138
$H_2C_2O_4 + Aq$	1 : 65
$H_3PO_4 + Aq$	1 : 26
$HC_2H_3O_2 + Aq$	1 : 0 18
$K_2SO_4 + Aq$	1 : 76
$Na_2SO_4 + Aq$	1 : 129
$(NH_4)_2SO_4 + Aq$	1 : 188

$\text{K}_3\text{Fe(CN)}_6 + \text{Aq}$	1 · 81

Cold conc. solutions of boric, arsenous, tartaric, benzoic, and salicylic acids, also cane sugar, or chloral hydrate cause no pptn. Absolute alcohol and glycerine may also be mixed with the solutions without causing pptn. (Schulze, J. pr. (2) 25. 442.)

+6H<sub>2</sub>O, decomp. completely into As<sub>2</sub>S<sub>3</sub> under a pressure of 6000 to 7000 atmos (Spring, Z. anorg. 1895, 10. 186.)

#### Arsenic pentasulphide, As<sub>2</sub>S<sub>5</sub>

Insol. in H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH, KOH, NaOH + Aq., and solutions of alkali sulphides and carbonates. Sol. in BaO<sub>2</sub>H<sub>2</sub>, and CaO<sub>2</sub>H<sub>2</sub> + Aq.

Sol. in citric acid, and alkali citrates + Aq. (Spiller)

Alcohol dissolves out S on boiling. (Berzelius.)

Sol. in alkali arsenates + Aq (Nilson, J. pr. (2) 14. 155)

+H<sub>2</sub>O (Nilson, l.c.)

#### Arsenic trisulphide, with M<sub>2</sub>S.

See Sulpharsenites, M.

#### Arsenic pentasulphide, with M<sub>2</sub>S.

See Sulpharsenates, M.

#### Arsenic sulphobromide, AsS<sub>2</sub>Br<sub>2</sub> = AsSBr + SBr<sub>2</sub>

Decomp. by H<sub>2</sub>O. (Haunay, Chem Soc. 33. 284.)

#### Arsenic sulphochloride, As<sub>2</sub>S<sub>2</sub>Cl.

Slowly decomp. by boiling H<sub>2</sub>O. Sol. in hot AsCl<sub>3</sub> without decomp. (Ouvraud, C. R. 116. 1516.)

AsS<sub>2</sub>Cl. Decomp. by H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH, and alkali carbonates + Aq. (Ouvraud.)

AsS<sub>2</sub>Cl. Slowly decomp. by boiling H<sub>2</sub>O. Sol. in alkali carbonates and in NH<sub>4</sub>OH + Aq (Ouvraud, C. R. 1893, 116. 1517)

#### Arsenic sulphoiodide, AsSI

Insol. in alcohol, chloroform or carbon disulphide. (Schneider, J. pr. (2) 23. 486.)

Formula is probably As<sub>2</sub>S<sub>2</sub>, AsI<sub>2</sub>.

Slowly attacked by HCl + Aq., somewhat more easily by HNO<sub>3</sub> + Aq. Easily sol. in KOH, or NH<sub>4</sub>OH + Aq. (Schneider, J. pr. (2) 34. 505)

2AsI<sub>2</sub>, SI<sub>4</sub>. Decomp. on air (Schneider, J. pr. (2) 36. 509)

As<sub>2</sub>SI<sub>2</sub>. Less sol. in CS<sub>2</sub> than AsI<sub>3</sub>. (Ouvraud, C. R. 117. 107.)

As<sub>2</sub>SI<sub>4</sub> (Ouvraud)

See also Arsenyl sulphoiodide.

#### Arsenic sulphoselenide, As<sub>2</sub>SeS<sub>2</sub>

Easily sol. in cold NH<sub>4</sub>SH + Aq. Nearly completely sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq (v. Gerichten, B. 7. 29)

As<sub>2</sub>SeS<sub>2</sub>. More difficultly sol. than the preceding comp. in NH<sub>4</sub>SH + Aq. (v. Gerichten)

As<sub>2</sub>SeS<sub>2</sub>. Sp. gr. = 6.402 at ca. 75°.

Insol. in most solvents. Easily sol. in alkali hydroxides and sulphides + Aq. (Szarvasy, B. 1895, 28. 2661)

As<sub>2</sub>SeS<sub>2</sub>. Sp. gr. = 11.35 at 550-600°

Insol. in most solvents. Easily sol. in alkali hydroxides and sulphides + Aq. (Szarvasy, B. 1895, 28. 2659)

#### Arsenic telluride, As<sub>2</sub>Te.

Sol. in HNO<sub>3</sub> and HNO<sub>3</sub> + HCl + Aq. (Oppenheim, J. pr. 71. 266)

As<sub>2</sub>Te<sub>3</sub>. As above (Oppenheim.)

#### Arsenic acid, anhydrous, As<sub>2</sub>O<sub>3</sub>.

See Arsenic pentoxide.

#### Metaarsenic acid, HAsO<sub>3</sub>.

Slowly sol. in cold, quite easily sol. in hot H<sub>2</sub>O, with considerable evolution of heat, and conversion into H<sub>2</sub>AsO<sub>4</sub>. (Kopp, A. ch. (3) 48. 196)

#### Orthoarsenic acid, H<sub>2</sub>AsO<sub>4</sub>

Sol. in H<sub>2</sub>O, with absorption of heat  
1 pt. As<sub>2</sub>O<sub>3</sub> dissolves in 0.405 pt. H<sub>2</sub>O at 12.5°, or 100 pts. H<sub>2</sub>O dissolve 244.81 pts. As<sub>2</sub>O<sub>3</sub> at 12.5° (Vogel)

Sol. in 0.5 pt. H<sub>2</sub>O (Thénard.)

Sol. in 6 pts. cold H<sub>2</sub>O, and more quickly in 2 pts. hot H<sub>2</sub>O. (Bucholz)

100 pts. H<sub>2</sub>O at 15.56° dissolve 150 pts. As<sub>2</sub>O<sub>3</sub>. (Ure's Dict.)

H<sub>2</sub>AsO<sub>4</sub> + Aq sat. at 15° contains 15% As<sub>2</sub>O<sub>3</sub>

Sp. gr. of H<sub>2</sub>AsO<sub>4</sub> + Aq at 15°  $a = \text{sp. gr. if } \% \text{ is As}_2\text{O}_3, b = \text{sp. gr. if } \% \text{ is H}_2\text{AsO}_4$

(Kopp, calculated by Gerlach, Z. anal. 27. 316)

See also Arsenic pentoxide.

### Pyroarsenic acid, $H_4As_2O_7$ .

Very deliquescent; easily sol in  $H_2O$  with evolution of much heat, and conversion into  $H_2AsO_4$ .

### Arsenates.

Arsenates of the alkali metals, and acid arsenates of the alkaline-earth metals are sol in  $H_2O$ . Neutral and basic arsenates are easily sol. in mineral acids, including  $H_2AsO_4$ ;

less sol in  $HCl + Aq$ . The neutral alkaline-earth arsenates are less sol in  $NH_4OH + Aq$  than in  $H_2O$ , but more sol. in  $NH_4Cl + Aq$  (Field). The alkali arsenates are sol. in hot glycerine (Lefèvre, C R 108. 1058.)

### Aluminum arsenate, $Al_2(AsO_4)_3$ .

Ppt Insol. in  $H_2O$ , difficultly sol. in acids. (Colman, C R 103. 273)

Insol in acetone (Naumann, B. 1904, 37. 4328.)

$2Al_2O_3, 3As_2O_5$ . Nearly unattacked by boiling  $H_2O$ ; sol in dil. acids. (Lefèvre, A. ch. (6) 27. 5.)

### Aluminum potassium arsenate, $2Al_2O_3, 3K_2O, 3As_2O_5$ .

(Lefèvre.)

### Aluminum sodium arsenate, $2Al_2O_3, 3Na_2O, 3As_2O_5$ .

(Lefèvre.)

### Ammonium arsenate, $(NH_4)_2AsO_4 + 3H_2O$ .

Difficultly sol. in  $H_2O$ . Less sol. in  $H_2O$  than  $(NH_4)_2HAsO_4$  (Mitscherlich.)

Insol in liquid  $NH_3$ . (Franklin, Am. Ch J. 1898, 20. 826.)

### Ammonium hydrogen arsenate, $(NH_4)_2HAsO_4$ .

Effloresces, giving off  $NH_3$ ; more sol. in  $H_2O$  than  $(NH_4)_2AsO_4$ . (Salkowsky, J. pr. 104. 129)

Insol in acetone (Eidmann, C. C. 1899, II. 1014)

### Ammonium dihydrogen arsenate, $NH_4H_2AsO_4$ .

Not efflorescent. Very sol. in  $H_2O$

### Ammonium barium arsenate, $NH_4BaAsO_4 + \frac{1}{2}H_2O$ .

Sol. by 10 days' contact in 1391 pts  $H_2O$ ; in 18,832 pts of a mixture of 1 pt.  $NH_4OH + Aq$  and 3 pts  $H_2O$ ; in 227 pts of a solution of 1 pt  $NH_4Cl$  in 10 pts.  $H_2O$ , and in 2169 pts of a solution of 1 pt.  $NH_4Cl$  in 10 pts.  $NH_4OH + Aq$  and 60 pts  $H_2O$ . (Lefèvre, A. ch. 1892, (6) 27. 13)

$(NH_4)_2BaH_2(AsO_4)_2$ . Efflorescent. Insol. in  $H_2O$ , easily sol. in dil.  $HNO_3 + Aq$  (Baumann, Arch. Pharm. 36. 36.)

### Ammonium calcium arsenate, $NH_4CaAsO_4 + \frac{1}{2}H_2O$ .

1000 pts. pure  $H_2O$  dissolve 0.20 pt. thus salt; 1000 pts.  $NH_4Cl + Aq$  (containing 50 pts.  $NH_4Cl$ ) dissolve 4.15 pts this salt; 900 pts.  $H_2O + 100$  pts  $NH_4OH$  (sp. gr = 0.880) dissolve 0.01 pt this salt. (Field, Chem. Soc. 11. 6)

Soluble by 10 days' contact in 2167 pts.  $H_2O$  at  $15^\circ$ ; in 381 pts.  $NH_4Cl + Aq$  (1:7); in

43478 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (1 : 3); in 10570 pts.  $\text{NH}_4\text{Cl} + \text{NH}_4\text{OH} + \text{Aq}$  (1 : 10 : 60) (Lefèvre, A. ch. 1892, (6) 27. 13.)

+6 $\text{H}_2\text{O}$ . Sol. in hot, very al sol. in cold  $\text{H}_2\text{O}$ , sl. sol. in  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4\text{OH} + \text{Aq}$  (Wach, Schw. J. 12. 285)

+7 $\text{H}_2\text{O}$  (Bloxam, C. N. 54. 163)

$(\text{NH}_4)_2\text{CaH}_2(\text{AsO}_4)_2$ . Efflorescent. Insol. in  $\text{H}_2\text{O}$ , easily sol. in dil.  $\text{HNO}_3 + \text{Aq}$  (Bau-  
mann, Arch. Pharm. 36. 36)

$(\text{NH}_4)_2\text{CaH}_2(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$

$(\text{NH}_4)_2\text{CaH}_2(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$ . (Bloxam, C. N. 54. 163)

Ammonium glucinum arsenate,  $\text{NH}_4\text{GlaAsO}_4$   
+4 $\frac{1}{2}\text{H}_2\text{O}$ .

More stable than the corresponding potassium salt. (Bleyer, Z. anorg. 1912, 75. 291)

Ammonium iron (ferrie) dihydrogen arsenate,  
 $\text{NH}_4\text{H}_2\text{AsO}_4$ ,  $\text{FeAsO}_4$

Hydrolyzed by  $\text{H}_2\text{O}$ .

Sol. in cold conc.  $\text{HCl}$ , hot  $\text{HNO}_3$ , hot dil.  $\text{H}_2\text{SO}_4$ , and in hot arsenic acid +  $\text{Aq}$  containing 75% arsenic pentoxide.

Sol. in hot conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . Completely hydrolyzed by caustic alkalis.

Insol. in conc.  $\text{NH}_4\text{Cl} + \text{Aq}$  and in 50% acetic acid (Curtman, J. Am. Chem. Soc. 1910, 32. 628.)

Ammonium magnesium arsenate,  
 $\text{NH}_4\text{MgAsO}_4$

Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in acids.

Anhydrous salt is sol. in 2784 pts.  $\text{H}_2\text{O}$  at 15°; in 15,904 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (1 : 3) (0.96 sp. gr.); in 1386 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 : 70); in 8867 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 : 7), in 3014 pts.  $\text{NH}_4\text{Cl}$  (1 pt.) +  $\text{NH}_4\text{OH}$  (0.96 sp. gr.) (10 pts.) +  $\text{Aq}$  (60 pts.); in 32,827 pts. magnesia mixture (Fresenius, Z. anal. 3. 206.)

Anhydrous salt is sol. in 4389 pts.  $\text{NH}_4\text{NO}_3$  +  $\text{Aq}$  (1 : 50), in 2561.5 pts.  $\text{KCl} + \text{Aq}$  (1 : 165); in 1422 pts. ammoniacal solution of 3.5 g. tartaric acid in 250 cc.  $\text{H}_2\text{O}$ , in 933.5 pts. ammoniacal solution of 2.5 g. citric acid in 250 cc.  $\text{H}_2\text{O}$ . (Pulle, Z. anal. 10. 62.)

+ $\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in 2656 pts.  $\text{H}_2\text{O}$  at 15°; in 15,038 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (1 : 3) (0.96 sp. gr.); in 844 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 : 7), in 1315 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 : 70); in 2871 pts.  $\text{NH}_4\text{Cl}$  (1 pt.) +  $\text{NH}_4\text{OH}$  (0.96 sp. gr.) (10 pts.) +  $\text{Aq}$  (60 pts.). (Fresenius)

1000 pts. pure  $\text{H}_2\text{O}$  dissolve 0.14 pt. salt; 1000 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (containing 100 pts.  $\text{NH}_4\text{Cl}$ ) dissolve 0.95 pt. salt; 900 pts.  $\text{H}_2\text{O}$  + 100 pts.  $\text{NH}_4\text{OH}$  (sp. gr. 0.880) dissolve 0.07 pt. salt. (Field, Chem. Soc. 11. 6.)

+6 $\text{H}_2\text{O}$ . Sl. efflorescent. Sl. sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$

Solubility of  $\text{NH}_4\text{MgAsO}_4 + 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  and  $\text{NH}_4$  salts +  $\text{Aq}$ .

Grams salt dissolved in 100 g. solvent

t°	$\text{H}_2\text{O}$	5% $\text{NH}_4\text{NO}_3 + \text{Aq}$	5% $\text{NH}_4\text{Cl} + \text{Aq}$	$\text{NH}_4\text{OH} + \text{Aq}$ (1 pt. $\text{NH}_4\text{OH} + \text{Aq}$ (0.96) + 4 pts. $\text{H}_2\text{O}$ )	4% $\text{NH}_4\text{OH} + \text{Aq}$ + 5% $\text{NH}_4\text{Cl} + \text{Aq}$	4% $\text{NH}_4\text{OH} + \text{Aq}$ + 10% $\text{NH}_4\text{Cl} + \text{Aq}$

(Wenger, Dissert. 1911.)

Ammonium manganous arsenate,

$\text{NH}_4\text{MnAsO}_4 + 6\text{H}_2\text{O}$

Nearly insol. in cold  $\text{H}_2\text{O}$ ; easily sol. in dil. acids; insol. in alcohol (Otto, J. pr. 2. 414.)

Ammonium sodium arsenate,  $\text{NH}_4\text{NaHASO}_4$   
+4 $\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  (Uelsmann, Zeit. f. ges. Nat. 23. 347.)

Ammonium sodium hydrogen arsenate,

$(\text{NH}_4)_2\text{Na}_2\text{H}_2(\text{AsO}_4)_4 + 6\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Fulhol and Senderens, C. R. 94. 649)

Ammonium strontium arsenate,  $\text{NH}_4\text{SrAsO}_4$   
+ $\frac{1}{2}\text{H}_2\text{O}$

Sol. by 10 days' contact in 3229 pts.  $\text{H}_2\text{O}$ , in 11,586 pts. dil.  $\text{NH}_4\text{OH} + \text{Aq}$ , in 199 pts.

of a mixture of 1 pt.  $\text{NH}_4\text{Cl}$  in 7 pts.  $\text{H}_2\text{O}$ , and in 1519 pts. of a solution of 1 pt.  $\text{NH}_4\text{Cl}$  in 10 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  and 60 pts.  $\text{H}_2\text{O}$ . (Lefèvre, A. ch. 1892, (6) 27. 13.)

Ammonium uranyl arsenate,  $\text{NH}_4(\text{UO}_2)_2\text{AsO}_4$   
+ $x\text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , and saline solutions as  $\text{NH}_4\text{Cl} + \text{Aq}$ ; sol. in mineral acids (Pulle, Z. anal. 10. 72)

Ammonium vanadium arsenate,

$\text{NH}_4(\text{VO}_2)_2\text{AsO}_4$ , and  $(\text{NH}_4)_2\text{HASO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4$

See Arseniovanadate, ammonium.

Ammonium arsenate tellurate.

See Arseniotellurate, ammonium.

**Antimony arsenate (?)**

Insol. in  $H_2O$ ; insol. in acids after ignition, but when fresh is sol. in conc boiling  $HCl + Aq$ , and sl sol. in  $HNO_3 + Aq$  (Dumas)

**Barium arsenate,  $Ba_3(AsO_4)_2$** 

1000 pts pure  $H_2O$  dissolve 0.55 pt.  $Ba_3(AsO_4)_2$ , 1000 pts  $NH_4Cl + Aq$  (containing 50 pts  $NH_4Cl$ ) dissolve 1.95 pts  $Ba_3(AsO_4)_2$ ; 900 pts  $H_2O + 100$  pts  $NH_4OH + Aq$  (sp gr = 0.88) dissolve 0.03 pt  $Ba_3(AsO_4)_2$  (Field, Chem. Soc. 11. 6.)

Sol in cold  $HNO_3$ , and  $HCl + Aq$  (Berzelius),  $H_2C_4H_4O_6$ , and  $HC_2H_3O_2 + Aq$  (Anthon)

Solubility in  $H_2O$  is not increased by presence of  $NH_4$ , Na, or K salts. (Laugier)

Not pptd in presence of Na citrate (Spiller)  
 $+ 1\frac{1}{2}H_2O$ . (Salkowsky, J. pt. 104. 129)

**Barium hydrogen arsenate,  $BaHAsO_4 + \frac{1}{2}H_2O$** 

Very sl. sol in  $H_2O$ , but decomp. thereby into  $Ba_3(AsO_4)_2$  and  $BaH_4(AsO_4)_2$ . (Berzelius)

Sl sol. in cold acids.  
 $+ H_2O$  Sl sol in either  $BaCl_2 + Aq$  or  $Na_2HAsO_4 + Aq$  (Maumené, J. B. 1864. 237)

**Barium tetrahydrogen arsenate,  $BaH_4(AsO_4)_2 + 2H_2O$** 

Easily sol. in  $H_2O$ . (Settenberg, Berz. J. B. 26. 206.)

Difficultly sol in little, but decomp. by much  $H_2O$ . Easily sol in  $HCl + Aq$ , less easily in  $HC_2H_3O_2 + Aq$  (Hörmann, Dissert. 1879.)

**Barium arsenate, acid,  $BaO, 2As_2O_5 + 4H_2O$** 

Very sl sol. in  $H_2O$ . (Mitscherlich)

**Barium pyroarsenate,  $Ba_2As_2O_7$** 

Insol. in  $H_2O$ , but decomp. thereby into  $BaHAsO_4 + H_2O$ . (Lefèvre, C. R. 108 1058.)

**Barium potassium arsenate,  $BaKAsO_4$** 

Sl. decomp. by cold  $H_2O$ , rapidly sol in dil. acids (Lefèvre, A. ch. (6) 27. 1)

**Barium sodium arsenate,  $BaNaAsO_4 + 9H_2O$** 

(Joly, C. R. 1887, 104. 1702)

**Barium arsenate chloride,  $3Ba_3(AsO_4)_2, BaCl_2$** 

Insol. in  $H_2O$ ; sol in dil.  $HNO_3 + Aq$  (Lechartier, C. R. 65. 172.)

**Bismuth arsenate, basic,  $BiAsO_4, 3Bi_2O_3$** 

Insol. in  $H_2O$ . Sol. in mineral acids. (Cavazzi, Gazz. ch. it. 14. 289.)  
 $5Bi_2O_3, 2As_2O_5 + 8H_2O$  Min. *Rhagite*

Easily sol. in  $HCl + Aq$ ; sl. sol. in  $HNO_3 + Aq$

**Bismuth arsenate,  $BiAsO_4 + \frac{1}{2}H_2O$** 

Insol. in  $H_2O$ . Insol. in  $HNO_3 + Aq$  in presence of  $H_2AsO_4$  or alkali arsenates  $+ Aq$ ; sol in  $HCl + Aq$  (Salkowsky, J. pr. 104. 129)

Not wholly insol. in  $HNO_3 + Aq$ . (Schneider, J. pr. (2) 20. 418.)

Very sol. in  $H_2AsO_4 + Aq$  (Dumas)

Insol. in  $Bi(NO_3)_3 + Aq$  (Dumas.)

Sol in  $Bi(NO_3)_3 + Aq$ . (Salkowsky.)

Insol. in conc.  $Bi(NO_3)_3 + Aq$  containing a small quantity of  $HNO_3$  (Schneider.)

**Bismuth copper arsenate,  $Bi_2Cu_{20}As_{10}H_{44}O_{70} = Bi_2O_3, 20CuO, 5As_2O_5 + 22H_2O$** 

Min. *Mixite* Decomp. by dil  $HNO_3 + Aq$  into insol.  $BiAsO_4$  and  $Cu_3(AsO_4)_2$ , which goes into solution. (Dana)

**Bismuth uranyl arsenate,  $Bi_2(AsO_4)_2, 8Bi_2O_3H_8, (UO_2)_2(AsO_4)_2$** 

Min *Walpurgite*.

**Cadmium arsenate,  $Cd_2(AsO_4)_2$** 

Ppt. (Salkowsky, J. pr. 104. 129)

$2CdO, As_2O_5$  (Lefèvre, C. R. 110. 405.)

$5CdO, 2As_2O_5 + 5H_2O$  Ppt. (Salkowsky.)

**Cadmium pyroarsenate,  $Cd_2As_2O_7$** 

(de Schulten)

**Cadmium hydrogen arsenate,  $CdHAsO_4 + H_2O$** 

Decomp by  $H_2O$  (Demel, B. 12. 1279)

$CdH_4(AsO_4)_2 + 2H_2O$  Decomp by excess of  $H_2O$ . (de Schulten, Bull. Soc. (3) 1. 473.)

**Cadmium potassium arsenate,  $2CdO, K_2O, As_2O_5$** 

(Lefèvre, C. R. 110. 405)

**Cadmium sodium arsenate,  $CdO, 2Na_2O, As_2O_5$** 

Slowly sol in dil. acids. (Lefèvre, C. R. 110. 405.)

$2CdO, 4Na_2O, 3As_2O_5$  (Lefèvre)

**Cadmium arsenate bromide,  $3Cd_2(AsO_4)_2, CdBr_2$** 

Sol. in very dil.  $HNO_3 + Aq$  (de Schulten, Bull Soc (3) 1. 472.)

**Cadmium arsenate chloride,  $3Cd_2(AsO_4)_2, CdCl_2$** 

Sol in very dil.  $HNO_3 + Aq$ . (de Schulten)

**Cæsium arsenate,  $Cs_2O, 2As_2O_5 + 5H_2O$** 

Ppt. (Ephraim, Z. anorg. 1910, 65. 246.)

**Calcium arsenate,  $Ca_3(AsO_4)_2 + 3H_2O$** 

Ppt. Insol. in  $H_2O$ ; sol. in  $H_2AsO_4 + Aq$ . (Kotschoubey, J. pr. 49. 182)

**Calcium pyroarsenate,  $Ca_2As_2O_7$** 

Slowly decomp by cold  $H_2O$  into  $CaHAsO_4 + 1\frac{1}{2}H_2O$  (Lefèvre.)

Calcium hydrogen arsenate,  $\text{CaHAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ . (Debray, A. ch (3) 61. 419.)  
+  $\text{H}_2\text{O}$ . Min *Haidingerite*. Easily sol in acids

+  $2\frac{1}{2}\text{H}_2\text{O}$  Min. *Pharmacoate* Easily sol in acids.

+  $3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{AsO}_4 + \text{Aq}$ ; also in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{NO}_3$ ,  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ , and  $\text{NH}_4\text{Cl} + \text{Aq}$  (Pfaff)

Calcium tetrahydrogen arsenate,

Sol in  $\text{H}_2\text{O}$ . (Graham.)

+  $\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  Decomp. by much hot  $\text{H}_2\text{O}$  into  $\text{H}_3\text{AsO}_4$  and  $\text{Ca}_3(\text{AsO}_4)_2$  (Hormann, Dissert. 1879.)

Calcium iron (ferric) arsenate,  $6\text{CaO}$ ,  $4\text{Fe}_2\text{O}_3$ ,  $5\text{As}_2\text{O}_5 + 15\text{H}_2\text{O}$  (?)

Min *Arseniosiderite*. Sol in acids

Calcium magnesium arsenate,  $\text{Ca}_2\text{H}_2(\text{AsO}_4)_4$ ,  $\text{Mg}_3\text{H}_2(\text{AsO}_4)_4 + 10\text{H}_2\text{O}$ .

Min *Picrophosmacolite* Easily sol in acids

$\text{Ca}_3(\text{AsO}_4)_2$ ,  $\text{Mg}_3(\text{AsO}_4)_2$  Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Kuhni.)

Min. *Berzelite*. Sol in  $\text{HNO}_3 + \text{Aq}$   
 $\text{Ca}_5\text{Mg}_5\text{H}_{14}(\text{AsO}_4)_{14} + 49\text{H}_2\text{O}$ . Min *Wapplerite*

Calcium potassium arsenate,  $\text{CaKAsO}_4$ .

(Lefèvre, A. ch. (6) 27. 5)

Calcium sodium arsenate,  $\text{CaNaAsO}_4$

(Lefèvre, A. ch. (6) 27. 1)

$4\text{CaO}$ ,  $2\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ . Not attacked by boiling  $\text{H}_2\text{O}$ ; easily sol in dil. acids. (Lefèvre.)

Calcium uranyl arsenate,  $\text{Ca}(\text{UO}_2)_2(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$ .

Min. *Uranospinite*.

Calcium vanadium arsenate,  $\text{CaHAsO}_4$ ,  $2(\text{VO})_2\text{H}_2\text{AsO}_4 + 8\text{H}_2\text{O}$ .

See *Arseniovanadate*, calcium.

Calcium arsenate chloride,  $\text{Ca}_2(\text{AsO}_4)_2$ ,  $\text{CaCl}_2$ .

Insol in  $\text{H}_2\text{O}$ , sol. in dil  $\text{HNO}_3 + \text{Aq}$  (Lechartier, C. R. 65. 172.)

$3\text{Ca}_2(\text{AsO}_4)_2$ ,  $\text{CaCl}_2$ . As above (Lechartier.)

Cerous arsenate,  $\text{CeHAsO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in arsenic acid +  $\text{Aq}$ . (Berzelius.)

Ceric hydrogen arsenate,  $\text{Ce}(\text{HAsO}_4)_2 + 6\text{H}_2\text{O}$ .

Ppt Insol. in  $\text{H}_2\text{O}$  and dil acids (Barbieri, B. 1910, 43. 2216.)

Ceric dihydrogen arsenate,  $\text{Ce}(\text{H}_2\text{AsO}_4)_4 + 4\text{H}_2\text{O}$ .

Sol. in conc.  $\text{HNO}_3$ . (Barbieri l. c.)

Chromic arsenate,  $2\text{Cr}_2\text{O}_3$ ,  $3\text{As}_2\text{O}_5$

Insol in  $\text{H}_2\text{O}$  and conc. boiling acids. (Lefèvre, A. ch (6) 27. 5)

Chromic potassium arsenate,  $2\text{Cr}_2\text{O}_3$ ,  $3\text{K}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ .

(Lefèvre.)

Chromic sodium arsenate,  $2\text{Cr}_2\text{O}_3$ ,  $3\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ .

(Lefèvre)

Cobaltous arsenate, basic,  $4\text{CoO}$ ,  $\text{As}_2\text{O}_3$ .

Easily sol in acids (Gentile, J. B. 1851. 359.)

$\text{Co}(\text{CoOH})\text{AsO}_4$  Insol in  $\text{H}_2\text{O}$ , difficultly sol. in acids (Coloriano)

Cobaltous arsenate,  $\text{Co}_2(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$

Ppt Insol even in boiling  $\text{H}_2\text{O}$ ; easily sol in  $\text{HNO}_3$ ,  $\text{HCl}$ , and  $\text{NH}_4\text{OH} + \text{Aq}$ ; sol. in  $\text{H}_2\text{AsO}_4 + \text{Aq}$  (Proust), sol. in dil.  $\text{FeSO}_4 + \text{Aq}$  (Karsten, Pogg. 60. 266.)

Min. *Cobalt bloom*, *Erythrite*. Easily sol. in acids.

$5\text{CoO}$ ,  $2\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ ; difficultly sol. in acids. (Coloriano, C. R. 103. 273)

$2\text{CoO}$ ,  $\text{As}_2\text{O}_3$  Sl attacked by boiling  $\text{H}_2\text{O}$ ; easily sol. in dil. acids (Lefèvre.)

Cobaltous hydrogen arsenate,  $\text{CoH}_2(\text{AsO}_4)_2$

Sol in  $\text{H}_2\text{O}$ ;

Cobaltous potassium arsenate,  $\text{CoKAsO}_4$

(Lefèvre.)

Cobaltous sodium arsenate,  $\text{CoNaAsO}_4$ .

(Lefèvre.)

$4\text{CoO}$ ,  $2\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ . (Lefèvre.)

Cobaltous vanadium arsenate,

See *Arseniovanadate*, cobaltous.

Cobaltous arsenate ammonia,  $\text{Co}_2(\text{AsO}_4)_2$ ,  $\text{NH}_3 + 7\text{H}_2\text{O}$ .

(Ducru, A. ch. 1901, (7) 22. 185)

$\text{Co}_2(\text{AsO}_4)_2$ ,  $2\text{NH}_3 + 6\text{H}_2\text{O}$ . (Ducru, l. c.)

$\text{Co}_2(\text{AsO}_4)_2$ ,  $3\text{NH}_3 + 5\text{H}_2\text{O}$ . (Ducru, l. c.)

Cuprous arsenate,  $2\text{Cu}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ .

(Hampe, Dissert. 1874.)

$4\text{Cu}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ . (Hampe, l. c.)

Cuprous pyroarsenate,  $\text{Cu}_4\text{As}_2\text{O}_7$ .

Ppt. Sol. in  $\text{NH}_4\text{OH}$  or  $\text{KOH} + \text{Aq}$ . (Reichard, B. 1898, 31. 2166.)

Cupric arsenate, basic,  $8\text{CuO}$ ,  $\text{As}_2\text{O}_5 + 12\text{H}_2\text{O}$

Min. *Chalcophyllite* Easily sol. in acids and  $\text{NH}_4\text{OH} + \text{Aq}$ .

$6\text{CuO}$ ,  $\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$  Min *Aphanesite*, *Choclaite*. Sol. in acids and ammonia.

$5\text{CuO}$ ,  $\text{As}_2\text{O}_5 + 2\text{H}_2\text{O}$ . Min. *Erimite*. Sol in  $\text{HNO}_3 + \text{Aq}$ .

+5H<sub>2</sub>O. Min. *Cornwallite* Sol. in acids, and NH<sub>4</sub>OH + Aq.  
 +9H<sub>2</sub>O. Min. *Tyrolite*.  
 4CuO, As<sub>2</sub>O<sub>3</sub> + H<sub>2</sub>O Insol in H<sub>2</sub>O (Debray, A. ch. (3) 61, 423)  
 Min. *Okunite* Sol in acids, and NH<sub>4</sub>OH + Aq, decomp by hot KOH + Aq  
 +7H<sub>2</sub>O. Min. *Euchroite*. Sol in HNO<sub>3</sub> + Aq  
 +4½H<sub>2</sub>O. (Hirsch, C. C. 1891, I. 15)

#### Cupric arsenate, Cu<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>

Insol in H<sub>2</sub>O. Easily sol. in HCl + Aq, sl. sol. in other acids; sol in NH<sub>4</sub>OH + Aq (Colomano, C. R. 103, 273)  
 Insol in methyl acetate. (Naumann, B. 1909, 42, 3790)  
 Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20, 827)  
 +4H<sub>2</sub>O Decomp by hot H<sub>2</sub>O. (Debray)  
 +5H<sub>2</sub>O Min. *Trichalite* Easily sol. in cold HCl + Aq

#### Cupric arsenate, acid, 5CuO, 2As<sub>2</sub>O<sub>3</sub>

Sol in H<sub>2</sub>SO<sub>4</sub> + Aq (Vogel.)  
 +3H<sub>2</sub>O. (Salkowsky)  
 +8, 9½, and 12½H<sub>2</sub>O (Hirsch)  
 CuHAsO<sub>4</sub> + H<sub>2</sub>O. Insol in H<sub>2</sub>O. (Colomano)  
 +1½H<sub>2</sub>O. Insol. in H<sub>2</sub>O (Debray, A. ch. (3) 61, 419.)  
 8CuO, 3As<sub>2</sub>O<sub>3</sub> + 12H<sub>2</sub>O. (Hirsch.)

#### Cupric lead arsenate, 3CuO, PbO, As<sub>2</sub>O<sub>3</sub> + 2H<sub>2</sub>O

Min. *Bayldonite*. Nearly insol in HNO<sub>3</sub> + Aq.

#### Cupric potassium arsenate, CuKAsO<sub>4</sub>

Slowly sol in NH<sub>4</sub>OH + Aq, easily sol in acids. (Lefèvre, A. ch. (6) 27, 5.)  
 8CuO, K<sub>2</sub>O, As<sub>2</sub>O<sub>3</sub>. Easily sol. in dil. acids. (Lefèvre.)

#### Cupric sodium arsenate, CuNaAsO<sub>4</sub>

(Lefèvre.)  
 3CuO, Na<sub>2</sub>O, 2As<sub>2</sub>O<sub>3</sub> Very sol in dil. acids. (Lefèvre)  
 2Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, NaH<sub>2</sub>AsO<sub>4</sub> + 5H<sub>2</sub>O Ppt (Hirsch, C. C. 1891, I. 15.)  
 6Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, 2NaH<sub>2</sub>AsO<sub>4</sub>, Na<sub>2</sub>HAsO<sub>4</sub> + 13½H<sub>2</sub>O, or 16H<sub>2</sub>O. Ppt. (Hirsch.)  
 3Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, Na<sub>2</sub>HAsO<sub>4</sub> + 9½H<sub>2</sub>O Ppt. (Hirsch.)  
 4Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, Na<sub>2</sub>HAsO<sub>4</sub> + 11H<sub>2</sub>O. Ppt (Hirsch.)

#### Cupric uranyl arsenate, Cu(UO<sub>2</sub>)<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub> + 8H<sub>2</sub>O.

(Werther, A. 68, 312.)  
 Min. *Zeunerite*.

#### Cupric vanadium arsenate,

Cu(VO<sub>2</sub>)<sub>2</sub>H<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub> + 3H<sub>2</sub>O

See Arseniovanadate, cupric.

#### Cupric arsenate ammonia, Cu<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>, 3NH<sub>3</sub> + 4H<sub>2</sub>O

Insol. in cold or hot H<sub>2</sub>O (Damour, J. pr 37, 485)  
 2CuO, As<sub>2</sub>O<sub>3</sub>, 4NH<sub>3</sub> + 3H<sub>2</sub>O. Decomp by H<sub>2</sub>O (Schiff, A. 123, 42.)

#### Cupric arsenate calcium carbonate, 5CuO, As<sub>2</sub>O<sub>3</sub>, CaCO<sub>3</sub> + 4H<sub>2</sub>O, or 9H<sub>2</sub>O.

Min. *Tyrolite*. Easily sol. in acids, and NH<sub>4</sub>OH + Aq

#### Cupric arsenate sodium chloride, 2Cu<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>, NaCl + 7½H<sub>2</sub>O.

Decomp by hot H<sub>2</sub>O. (Hirsch, Dissert. 1891.)  
 3Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, 2NaCl + 13½H<sub>2</sub>O.  
 +17½H<sub>2</sub>O. (Hirsch, l.c.)  
 5Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, 3NaCl + 23H<sub>2</sub>O. (Hirsch.)

#### Didymium arsenate, D<sub>2</sub>H<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>.

Ppt Insol. in H<sub>2</sub>O; sl. sol. in weak acids (Maugnac, A. ch. (3) 38, 164)  
 5D<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, As<sub>2</sub>O<sub>3</sub> + 3H<sub>2</sub>O Ppt.

#### Glucinum arsenate, Gl<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>

Insol. in H<sub>2</sub>O, sol. in H<sub>3</sub>AsO<sub>4</sub> + Aq. (Berzelius)

#### Glucinum hydrogen arsenate, GlHAsO<sub>4</sub>.

Obtained in impure state by heating As<sub>2</sub>O<sub>3</sub> with Gl(OH)<sub>3</sub> in a sealed tube at 220°. (Bleyer, Z. anorg 1912, 75, 287.)

#### Glucinum tetrahydrogen arsenate,

GlH<sub>4</sub>(AsO<sub>4</sub>)<sub>2</sub>  
 Very hygroscopic. (Bleyer, Z. anorg. 1912, 75, 287)

#### Glucinum potassium arsenate, KGlAsO<sub>4</sub>, ½GlO + 5H<sub>2</sub>O.

Unstable. Amorphous Easily hydrolyzed, giving more basic salts. (Bleyer, Z. anorg. 1912, 75, 289.)

#### Glucinum sodium arsenate, NaGlAsO<sub>4</sub>, ½GlO + 6H<sub>2</sub>O

Unstable Easily hydrolyzed. (Bleyer, Z. anorg. 1912, 75, 290.)

#### Iron (ferrous) arsenate, Fe<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub> + 6H<sub>2</sub>O (?)

Ppt. Sl. sol in NH<sub>4</sub>OH + Aq. Insol in (NH<sub>4</sub>)<sub>2</sub>AsO<sub>4</sub> + Aq or other NH<sub>4</sub> salts + Aq. (Wittstein)  
 +8H<sub>2</sub>O Min. *Symplectite*. Sol in HCl + Aq

#### Iron (ferric) arsenate, basic, 16Fe<sub>2</sub>O<sub>3</sub>, As<sub>2</sub>O<sub>3</sub> + 24H<sub>2</sub>O.

Insol. in NH<sub>4</sub>OH + Aq (Berzelius.)  
 2Fe<sub>2</sub>O<sub>3</sub>, As<sub>2</sub>O<sub>3</sub> + 12H<sub>2</sub>O. Insol. in NH<sub>4</sub>OH + Aq  
 3Fe<sub>2</sub>O<sub>3</sub>, 2As<sub>2</sub>O<sub>3</sub>.  
 3Fe<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, Fe<sub>2</sub>O<sub>3</sub>H<sub>4</sub> + 12H<sub>2</sub>O. Min. *Pharmacosiderite*. Easily sol in acids; decomp. by KOH + Aq

**Iron (ferric) arsenate,  $\text{Fe}_2\text{O}_3, \text{As}_2\text{O}_5$** 

Ppt Insol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ .  
Sol in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$  (Metszke, Z. anorg. 1898, 19. 473.)  
+  $4\text{H}_2\text{O}$  Min. *Scorodite*. Easily sol. in  $\text{HCl}$ +Aq; insol in  $\text{HNO}_3$ +Aq  
+  $8\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$ . When freshly pptd., sol in  $\text{NH}_4\text{OH}$ +Aq. Sol. in  $\text{HCl}$  or  $\text{HNO}_3$ +Aq. Insol in  $\text{HC}_2\text{H}_3\text{O}_2$  or  $\text{NH}_4$  salts+Aq (Wittstein)  
Sol. in warm  $\text{H}_2\text{SO}_4$ +Aq or  $(\text{NH}_4)_2\text{SO}_4$ +Aq. (Berthier, A. ch. (3) 7. 79)

**Iron (ferric) arsenate, acid,  $\text{Fe}_2\text{O}_3, 3\text{As}_2\text{O}_5$** 

+  $16.7\text{H}_2\text{O}$   
Ppt; sl sol. in acids with a yellow color, and in  $\text{NH}_4\text{OH}$ +Aq with a red color. (Metszke, Z. anorg. 1898, 19. 476.)  
 $2\text{Fe}_2\text{O}_3, 3\text{As}_2\text{O}_5 + 12\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  or  $\text{HC}_2\text{H}_3\text{O}_2$ +Aq  
Sol in mineral acids  
Sol. only in conc.  $\text{H}_2\text{AsO}_4$ +Aq.  
Sol. in  $(\text{NH}_4)_2\text{AsO}_4$  and other  $\text{NH}_4$  salts+Aq (Wittstein)  
Sol. in  $\text{NH}_4\text{OH}$ +Aq.  
+  $22\frac{1}{2}\text{H}_2\text{O}$  Ppt. Sl. sol. in acids with a yellow color, and in  $\text{NH}_4\text{OH}$ +Aq with a red color. (Metszke, Z. anorg. 1898, 19. 475.)

**Iron (ferroferric) arsenate,  $6\text{FeO}, 3\text{Fe}_2\text{O}_3, 4\text{As}_2\text{O}_5 + 32\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ +Aq. Decomp. by  $\text{KOH}$ +Aq (Wittstein, J. B. 1866. 243)

**Iron (ferric) lead arsenate,  $5\text{Pb}_2(\text{AsO}_4)_3, \text{Pb}_3(\text{AsO}_4)_2$** 

Min. *Carmine Spar. Carminite*. Sol. in acids,  $\text{KOH}$ +Aq dissolves out  $\text{As}_2\text{O}_5$ . (Sandberger.)

**Iron (ferric) potassium arsenate,  $2\text{Fe}_2\text{O}_3, 3\text{K}_2\text{O}, 3\text{As}_2\text{O}_5$** 

Not attacked by boiling  $\text{H}_2\text{O}$ ; easily sol in dil. acids (Lefèvre)  
 $\text{Fe}_2\text{C}_2, \text{K}_2\text{O}, 2\text{As}_2\text{O}_5$ . (Lefèvre.)

**Iron (ferric) sodium arsenate,  $\text{Fe}_2\text{O}_3, \text{Na}_2\text{O}, 2\text{As}_2\text{O}_5$** 

(Lefèvre.)  
 $2\text{Fe}_2\text{O}_3, 3\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$ . (Lefèvre.)

**Lanthanum arsenate,  $\text{La}_2\text{H}_3(\text{AsO}_4)_3$** 

(Frerichs and Smith.)  
Doubtful (Cleve, B. 11. 910.)

**Lead arsenate, basic,  $15\text{PbO}, 2\text{As}_2\text{O}_5$  (?)**

Ppt (Stroinholm, Z. anorg. 1904, 38. 446.)

**Lead arsenate,  $\text{Pb}_3(\text{AsO}_4)_2$** 

Insol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4$  salts+Aq. (Wittstein)

Sol. in 2703.5 pts  $\text{HC}_2\text{H}_3\text{O}_2$ +Aq containing 38.94%  $\text{HC}_2\text{H}_3\text{O}_2$ . (Bertrand, Monit. Scient. (3) 10. 477.)

Sol in sat.  $\text{NaCl}$ +Aq. (Bequerel, C. R. 20. 1523.)

Not pptd. in presence of  $\text{Na}$  citrate. (Spiller.)

**Lead pyroarsenate,  $\text{Pb}_2\text{As}_2\text{O}_7$** 

Insol. in  $\text{H}_2\text{O}$  or  $\text{HC}_2\text{H}_3\text{O}_2$ +Aq Sol. in  $\text{HCl}$  or  $\text{HNO}_3$ +Aq (Rose)  
Decomp. by cold  $\text{H}_2\text{O}$  (Lefèvre.)  
+  $\text{H}_2\text{O} = \text{PbHAsO}_4$  Ppt. (Salkowsky, J. pr. 104. 109.)

**Lead potassium arsenate,  $\text{PbKAsO}_4$** 

(Lefèvre, A. ch. (6) 27. 5.)

**Lead sodium arsenate,  $\text{PbNaAsO}_4$** 

(Lefèvre.)

$4\text{PbO}, 2\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$ . Superficially decomp. by cold  $\text{H}_2\text{O}$  (Lefèvre.)

**Lead arsenate chloride,  $3\text{Pb}_2(\text{AsO}_4)_2, \text{PbCl}_2$** 

Sol. in dil  $\text{HNO}_3$ +Aq. (Lechartier.)  
Min *Mimetite*. Sol in  $\text{HNO}_3$ , and  $\text{KOH}$ +Aq

**Lithium arsenate,  $\text{Li}_3\text{AsO}_4$** 

Ppt. Sol. in dil acids and in  $\text{HC}_2\text{H}_3\text{O}_2$ +Aq. (de Schulten, Bull. Soc (3) 1. 479.)  
 $\text{LiH}_2\text{AsO}_4 + \frac{1}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  into  $\text{H}_2\text{AsO}_4$  and  $\text{Li}_4\text{AsO}_4$ . (Rammelsberg, Pogg. 128. 311.)

**Magnesium arsenate,  $\text{Mg}_3(\text{AsO}_4)_2$** 

Ppt  
Insol in methyl acetate. (Naumann, B. 1909. 42. 3790.)  
+  $7\text{H}_2\text{O}$ , +  $8\text{H}_2\text{O}$ , +  $10\text{H}_2\text{O}$ , and +  $22\text{H}_2\text{O}$ . (Gruhl, Dissert. 1897.)  
+  $8\text{H}_2\text{O}$  Min. *Hörnæsile*. Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids.

**Magnesium hydrogen arsenate,  $\text{MgHAsO}_4$** 

+  $\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (de Schulten, C. R. 100. 263.)

+  $5\text{H}_2\text{O}$ . (Schiefer)  
+  $6\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . 1000 pts. boiling  $\text{H}_2\text{O}$  dissolve 1.5 pts. (Thompson.)

Sol. in  $\text{HNO}_3$ +Aq before ignition, but insol. in acids after ignition. (Graham, A. 29. 29.)

+  $7\text{H}_2\text{O}$ . Min *Roesslerite*. Sol. in  $\text{HCl}$ +Aq.

**Magnesium tetrahydrogen arsenate,  $\text{MgH}_4(\text{AsO}_4)_2$** 

Very deliquescent; sol. in  $\text{H}_2\text{O}$ . (Schiefer.)

**Magnesium potassium arsenate,  $\text{MgKAsO}_4$** 

Insol. in, but decomp. by cold  $\text{H}_2\text{O}$ . (Rose.)

Easily sol. in dil. acids (Lefèvre.)

+  $7\text{H}_2\text{O}$ . (Kinkelin, Dissert. 1893.)

$4\text{MgO}, 2\text{K}_2\text{O}, 3\text{As}_2\text{O}_5$ . Not attacked by boiling  $\text{H}_2\text{O}$ ; slowly sol. in dil. acids. (Lefèvre.)

**Magnesium potassium hydrogen arsenate,  $\text{KMgH}(\text{AsO}_4)_2 + x\text{H}_2\text{O}$** 

Decomp. by  $\text{H}_2\text{O}$  (Kinkelin, Dissert. 1893.)

$Mg_3KH_2(AsO_4)_2 + 5H_2O$ . (Chevron and Drouche, J. B. 1888, 523.)

**Magnesium potassium sodium arsenate**,  $Mg_3KNa(AsO_4)_2 + 10H_2O$ .  
(Kinkelin, Dissert. 1883.)

**Magnesium sodium arsenate**,  $MgNaAsO_4$ .  
Insol. in  $H_2O$ . Very sl. sol. in dil. acids. (Lefèvre.)  
 $4MgO, 2Na_2O, 3As_2O_5$ . (Lefèvre.)

**Magnesium vanadium arsenate**,  
 $MgH_2(VO_2)_2(AsO_4)_2 + 9H_2O$  and  
 $MgHAsO_4, 2(VO_2)_2H_2AsO_4 + 9H_2O$ .  
See Arseniovanadate, magnesium.

**Magnesium arsenate chloride**,  $Mg_3(AsO_4)_2, MgCl_2$

Insol. in  $H_2O$ ; sol. in dil.  $HNO_3 + Aq$  (Lechartier, C. R. 65. 172.)

**Magnesium arsenate fluoride**,  $Mg_3(AsO_4)_2, MgF_2$ .

Insol. in  $H_2O$ ; sol. in dil.  $HNO_3 + Aq$ . (Lechartier.)

**Manganous arsenate, basic**,  $6MnO, As_2O_3 + 3H_2O$  (?).

Min. *Chondroarsenite*. Easily and completely sol. in dil.  $HCl$  and  $HNO_3 + Aq$ .

**Manganous arsenate**,  $Mn_3(AsO_4)_2 + H_2O$ .  
Insol. in  $H_2O$ , sl. sol. in acids. (Coloriano, C. R. 103. 273.)  
 $5MnO, 2As_2O_3 + 5H_2O$ . Insol. in  $H_2O$ . (Coloriano.)

$2MnO, As_2O_3$ . Sl. decomp. by cold  $H_2O$ , but rapidly on heating (Lefèvre)  
 $MnHAsO_4 + H_2O$ . Decomp. by boiling  $H_2O$  into  $5MnO, 2As_2O_3 + 5H_2O$ . Sol. in  $HNO_3, H_2SO_4$ , or  $H_2AsO_4 + Aq$ .

**Manganous tetrahydrogen arsenate**,  
 $MnH_4(AsO_4)_2$ .

Deliquescent. Easily sol. in  $H_2O$ . (Schiefer.)

**Manganous potassium arsenate**,  $MnKAsO_4$ .  
(Lefèvre, A. ch. (6) 27. 5.)

**Manganous sodium arsenate**,  $MnNaAsO_4$ .  
Very sol. in dil. acids (Lefèvre.)  
 $2MnO, 4Na_2O, 3As_2O_5$ . Not attacked by boiling  $H_2O$ ; very sol. in dil. acids (Lefèvre.)

**Manganous arsenate chloride**,  $Mn_3(AsO_4)_2, MnCl_2$

Insol. in  $H_2O$ ; sol. in dil.  $HNO_3 + Aq$ . (Lechartier, A. 68. 259)

**Manganic arsenate**,  $Mn_2(AsO_4)_3 + 2H_2O$ .  
Insol. in  $H_2O$ ; sol. in acids.

**Mercurous arsenate**,  $(Hg_2)_2(AsO_4)_2$ .

Insol. in  $H_2O$ ; difficultly sol. in acids. (Coloriano, C. R. 103. 273.) Ppt (Haack, C. C. 1890, II. 736.)

$Hg_2(AsO_4)_2$ . Insol. in  $H_2O, HC_2H_3O_2$ , or alcohol. Decomp. by cold  $HCl + Aq$ . Sl. sol. in cold  $HNO_3 + Aq$ , from which it is precipitated by  $NH_4OH$  as  $Hg_2HAsO_4$  (Simon, Pogg. 41. 424.)

**Mercurous hydrogen arsenate**,  $Hg_2HASO_4$ .

Insol. in  $H_2O, HC_2H_3O_2$ , or  $NH_4OH + Aq$ . Decomp. by cold  $HCl + Aq$ , sol. in cold  $HNO_3 + Aq$  without decomp; very sl. sol. without decomp. in  $NH_4NO_3 + Aq$  (Simon, Pogg. 41. 424.)

**Mercuric arsenate**,  $Hg_3(AsO_4)_2$ .

Ppt. Sol. in  $H_2AsO_4$  or  $HNO_3 + Aq$ . (Bergman) Very sl. sol. in  $H_2O$ . Easily sol. in  $HCl + Aq$ . Sl. sol. in  $HNO_3 + Aq$ . Insol. in  $H_2AsO_4 + Aq$  (Haack, C. C. 1890, II. 736.)

**Mercurous silver arsenate**,  $Hg_2AgAsO_4$ .

Sol. in hot conc.  $HNO_3$ . (Jacobsen, Bull. Soc. 1909, (4) 5. 948)

**Mercurous arsenate nitrate**,  $Hg_3AsO_4, HgNO_3 + H_2O$

Insol. in  $H_2O$  or  $HC_2H_3O_2$ , sol. in  $HNO_3 + Aq$  (Simon, Pogg. 41. 424.)  
 $3Hg_3AsO_4, 2HgNO_3, 2Hg_2O$  Ppt. (Haack.)

**Molybdenum arsenate**.

Ppt.

**Nickel arsenate, basic**,  $5NiO, As_2O_3$

Min. — (Bergemann.)  
 $Ni(NiOH)AsO_4$ . Difficultly attacked by acids or alkalis. (Coloriano, Bull. Soc. (2) 45. 241.)  
 $5NiO, 2As_2O_3 + 3H_2O$ . As above.

**Nickel arsenate**,  $Ni_2(AsO_4)_2$ .

Min. — (Bergemann)  
 $+ xH_2O$ . Insol. in  $H_2O$ . Sol. in  $H_2AsO_4$ , and conc. mineral acids. Easily sol. in  $NH_4OH + Aq$ .

$+ 2H_2O$ . Insol. in  $H_2O$ ; difficultly sol. in acids. (Coloriano, Bull. Soc. 45. 241)  
 $+ 8H_2O$ . Min. *Nickel-bloom, Annabergite*.

Easily sol. in acids.  
 $NiHASO_4 + H_2O$ . Sol. in  $H_2O$ . Difficultly attacked by acids. (Coloriano, C. R. 103. 274.)

**Nickel potassium arsenate**,  $12NiO, 3K_2O, 5As_2O_3$

(Lefèvre)  
 $2NiO, K_2O, As_2O_5$ . Rapidly sol. in dil. acids. (Lefèvre.)

**Nickel sodium arsenate**,  $NiNaAsO_4$ .

Very slowly sol. in dil. acids (Lefèvre.)  
 $4NiO, 2Na_2O, 3As_2O_5$ . (Lefèvre.)

**Nickel arsenate ammonia**,

$Ni_2(AsO_4)_2 \cdot NH_3 + 7H_2O$ .  
 $Ni_2(AsO_4)_2 \cdot 2NH_3 + 6H_2O$ .  
 $Ni_3(AsO_4)_2 \cdot 3NH_3 + 5H_2O$ . (Ducru, C. R. 1900, 131. 703.)

Palladium arsenate (?).

Ppt

Platinum arsenate (?)

Ppt. Sol in  $\text{HNO}_3 + \text{Aq}$

Potassium arsenate,  $\text{K}_3\text{AsO}_4$ .

Deliquescent Very sol. in  $\text{H}_2\text{O}$  (Graham, Pogg. 32. 47)

Insol. in ethyl acetate (Naumann, B 1904, 37. 3601.)

Potassium hydrogen arsenate,  $\text{K}_2\text{HASO}_4$ .

Sol. in  $\text{H}_2\text{O}$

Potassium dihydrogen arsenate,  $\text{KH}_2\text{AsO}_4$

Sol in 5.3 pts  $\text{H}_2\text{O}$  at  $6^\circ$ , forming a solution of sp. gr. 1.1134. Much more sol. in hot  $\text{H}_2\text{O}$ . Insol in alcohol

Sol. in 28,666 pts boiling cone alcohol. (Wenzel)

Potassium sodium hydrogen arsenate,  $\text{KNaHASO}_4 + 16\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ .

$\text{K}_2\text{Na}_2\text{H}_2(\text{AsO}_4)_4 + 9\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , and not easily decomp. thereby into its constituents (Filhol and Sendeuens, C R 95. 343.)

Potassium strontium arsenate,  $\text{K}_2\text{SrAsO}_4$

(Lefèvre, C. R. 108. 1058)

Potassium vanadium arsenate,  $\text{K}(\text{VO}_2)_2\text{AsO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$ .

See Arsenovanadate, potassium.

Potassium zinc arsenate,  $\text{KZnAsO}_4$ .

(Lefèvre)

Potassium arsenate sulphate.

See Arseniosulphate, potassium.

Rhodium arsenate (?)

Ppt.

Rubidium metaarsenate,  $\text{RbAsO}_3$ .

Sol. in  $\text{H}_2\text{O}$  (Bouchonnet, C R 1907, 144. 642.)

Rubidium arsenate,  $\text{Rb}_3\text{AsO}_4 + 2\text{H}_2\text{O}$

Very hygroscopic; sol. in  $\text{H}_2\text{O}$  to give an alkaline solution. Absorbs  $\text{CO}_2$  from the air. (Bouchonnet, l.c.)

Rubidium pyroarsenate,  $\text{Rb}_4\text{As}_2\text{O}_7$

(Bouchonnet, l.c.)

Rubidium hydrogen arsenate,  $\text{Rb}_2\text{HASO}_4 + \text{H}_2\text{O}$

Absorbs  $\text{CO}_2$  from the air. Very hygroscopic, sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Bouchonnet, l.c.)

Rubidium dihydrogen arsenate,  $\text{RbH}_2\text{AsO}_4$ .

Not hygroscopic. Very sol. in  $\text{H}_2\text{O}$ , aq solution is acid to litmus (Bouchonnet, l.c.)

Silver arsenate,  $\text{Ag}_3\text{AsO}_4$ .

Insol in  $\text{H}_2\text{O}$ . Sol. in acids; easily sol. in  $\text{H}_2\text{AsO}_4 + \text{Aq}$ . (Joly, C. R. 103. 1071.)

11  $\text{H}_2\text{O}$  dissolves 0.0085 g  $\text{Ag}_3\text{AsO}_4$  at  $20^\circ$ . (Whitby, Z. anorg. 1910, 67. 108)

Much less sol. in  $\text{H}_2\text{AsO}_4$  than  $\text{Ag}_3\text{PO}_4$  (Graham.)

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Scheele.)

Sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  Insol. in  $\text{NH}_4$  sulphate, nitrate, or succinate +  $\text{Aq}$  (Wittstein)

Very sl. sol in  $\text{NH}_4\text{NO}_3 + \text{Aq}$ , more easily in  $\text{HCl} + \text{H}_2\text{O}_2 + \text{Aq}$ . (Graham)

Sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ , but not so easily as  $\text{Ag}_3\text{PO}_4$

Not pptd. in presence of Na citrate. (Spiller)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch J 1898, 20. 829)

Silver hydrogen arsenate,  $\text{Ag}_2\text{HASO}_4$ .

Decomp by  $\text{H}_2\text{O}$ , with formation of  $\text{Ag}_3\text{AsO}_4$  (Settberg, Berz J. B. 26. 208)

$\text{Ag}_2\text{HASO}_4$ . Decomp. by  $\text{H}_2\text{O}$  (Joly, C. R. 103. 1071.)

$\text{Ag}_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ . Decomp by  $\text{H}_2\text{O}$  Rather sl. sol in  $\text{HNO}_3 + \text{Aq}$  Very easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Hurtzig and Geuther, A 111. 168).

Silver arsenate ammonia,  $\text{Ag}_3\text{AsO}_4 \cdot 4\text{NH}_3$

Easily sol. in  $\text{H}_2\text{O}$  (Widmann, Bull. Soc. (2) 20. 64)

Silver arsenate sulphate,  $3\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $\text{SO}_3$

Decomp by  $\text{H}_2\text{O}$ , with separation of  $\text{Ag}_3\text{AsO}_4$ ; decomp. by dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Settberg, Berz J. B. 26. 209)

Sodium arsenate,  $\text{Na}_3\text{AsO}_4 + 12\text{H}_2\text{O}$

Permanent in dry air. Sol. in 3.57 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$ . (Graham) 100 pts  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 28 pts  $\text{Na}_3\text{AsO}_4 + 12\text{H}_2\text{O}$ . (Berzelius) Sol in 3.75 pts.  $\text{H}_2\text{O}$  at  $17^\circ$ , or 100 pts.  $\text{H}_2\text{O}$  at  $17^\circ$  dissolve 26.7 pts; or sat.  $\text{Na}_3\text{AsO}_4 + \text{Aq}$  at  $17^\circ$  contains 21.1%  $\text{Na}_3\text{AsO}_4 + 12\text{H}_2\text{O}$  or 10.4%  $\text{Na}_3\text{AsO}_4$ , and has sp. gr. 1.1186. (Schiff, A. 113. 350.)

Melts in crystal  $\text{H}_2\text{O}$  at  $85.5^\circ$

Sp. gr. of  $\text{Na}_3\text{AsO}_4 + \text{Aq}$  at  $17^\circ$

% = %  $\text{Na}_3\text{AsO}_4 + 12\text{H}_2\text{O}$

%	Sp. gr.	%	Sp. gr.	%	Sp. gr.
1	1.0063	9	1.0490	17	1.0945
2	1.0107	10	1.0517	18	1.1003
3	1.0161	11	1.0603	19	1.1061
4	1.0215	12	1.0659	20	1.1121
5	1.0270	13	1.0716	21	1.1179
6	1.0325	14	1.0773	22	1.1238
7	1.0380	15	1.0830		
8	1.0435	16	1.0887		

(Schiff, calculated by Gerlach, Z. anal. 8. 286.)

"Arsenate of soda" dissolves in 60 pts. boiling alcohol (Wenzel.)

$+4\frac{1}{2}\text{H}_2\text{O}$ . (Hall, Chem. Soc. 51. 93)

$+10\text{H}_2\text{O}$ . Efflorescent. (Hall.)

Sodium hydrogen arsenate,  $\text{Na}_2\text{HASO}_4 + 7\text{H}_2\text{O}$ .

Not efflorescent (Schiff).

Solubility in  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ . A table is given which records the g. of  $\text{As}_2\text{O}_3$  in 100 cc of the filtrate. (Curry, J. Am. Chem. Soc. 1915, 37, 1685.)

+  $7\frac{1}{2}\text{H}_2\text{O}$  (Lescœur, C. R. 104, 1171).

+  $12\text{H}_2\text{O}$ . Efflorescent. Sol. in  $\text{H}_2\text{O}$ ; sol. in 1.79 pts  $\text{H}_2\text{O}$  at  $14^\circ$ ; or 100 pts  $\text{H}_2\text{O}$  at  $14^\circ$  dissolve 56 pts  $\text{Na}_2\text{HASO}_4 + 12\text{H}_2\text{O}$ . Sat.  $\text{Na}_2\text{HASO}_4 + \text{Aq}$  contains 35.9%  $\text{Na}_2\text{HASO}_4 + 12\text{H}_2\text{O}$ , or 16.5%  $\text{Na}_2\text{HASO}_4$ , and has sp. gr. = 1.1722 (Schiff, A. 113, 350.)

100 pts  $\text{H}_2\text{O}$  at  $72^\circ$  dissolve 22.268 pts. (Thompson.)

100 pts  $\text{H}_2\text{O}$  dissolve 17.2 pts.  $\text{Na}_2\text{HASO}_4 + 12\text{H}_2\text{O}$  at  $0^\circ$ , and 140.7 pts at  $30^\circ$ . (Tilden, Chem. Soc. 45, 409.)

Melts in crystal  $\text{H}_2\text{O}$  at  $28^\circ$ . (Tilden.)

Sp. gr. of  $\text{Na}_2\text{HASO}_4 + \text{Aq}$  at  $14^\circ$ .

% = %  $\text{Na}_2\text{HASO}_4 + 12\text{H}_2\text{O}$

%	Sp gr	%	Sp gr	%	Sp gr
1	1.0042	15	1.0665	29	1.1358
2	1.0084	16	1.0712	30	1.1410
3	1.0126	17	1.0759	31	1.1463

13	1.0571	27	1.1255		
14	1.0618	28	1.1306		

(Schiff, calculated by Gerlach, Z. anal. 8, 280.)

Insol. in alcohol.

+  $13\frac{1}{2}\text{H}_2\text{O}$  (Setterberg.)

Sodium dihydrogen arsenate,  $\text{NaH}_2\text{AsO}_4 + \text{H}_2\text{O}$

More sol. in  $\text{H}_2\text{O}$  than  $\text{Na}_2\text{AsO}_4$  or  $\text{Na}_2\text{HASO}_4$ . (Schiff.)

+  $2\text{H}_2\text{O}$ . Efflorescent. (Joly and Duffet, C. R. 102, 1391.)

Sodium trihydrogen arsenate,

$\text{NaH}_2(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Fihol and Senderens, C. R. 95, 343.)

Sodium strontium arsenate,  $\text{NaSrAsO}_4$ .

Not attacked by boiling  $\text{H}_2\text{O}$ . (Lefèvre.) +  $9\text{H}_2\text{O}$ . Scarcely sol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 104, 905.)

+  $18\text{H}_2\text{O}$ . (Joly.)

Sodium uranyl arsenate,  $\text{Na}(\text{UO}_2)\text{AsO}_4$

Ppt. (Werther, A. 68, 312.)

Sodium zinc arsenate,  $\text{NaZnAsO}_4$ .

Slowly sol. in dil. acids. (Lefèvre.)

$\text{Na}_2\text{ZnAs}_2\text{O}_7$ . As above. (Lefèvre.)

Sodium arsenate fluoride,  $\text{Na}_2\text{AsO}_4, \text{NaF} + 12\text{H}_2\text{O}$ .

Sol. in 9.5 pts.  $\text{H}_2\text{O}$  at  $25^\circ$ , and 2 pts at  $75^\circ$ . (Briegleb, A. 97, 95.)

Sodium arsenate stannate,  $6\text{Na}_2\text{O}, 2\text{As}_2\text{O}_5, \text{SnO}_2 + 50\text{H}_2\text{O}$ .

More difficultly sol. than sodium stannate. (Haeffely, Phil. Mag. (4) 10, 290.)

$5\text{Na}_2\text{AsO}_4, \text{Na}_2\text{SnO}_3 + 60\text{H}_2\text{O}$  (Prandtl, B. 1907, 40, 2133.)

Sodium arsenate sulphate,  $\text{Na}_4\text{As}_2\text{O}_{10}, 2\text{Na}_2\text{SO}_4$ .

Sol. in  $\text{H}_2\text{O}$  (Mitscherlich.)

$\text{Na}_4\text{As}_2\text{O}_7, \text{Na}_2\text{SO}_4$ . (Setterberg.)

Sodium arsenate tungstate,  $\text{Na}_4\text{As}_2\text{O}_7, \text{Na}_2\text{W}_2\text{O}_{10} + 20\text{H}_2\text{O}$ .

See Arseniotungstate, sodium.

Strontium arsenate,  $\text{Sr}_3(\text{AsO}_4)_2$

Not attacked by boiling  $\text{H}_2\text{O}$ ; easily sol. in dil. acids (Lefèvre, A. ch. (6) 27, 5.)

Strontium pyroarsenate,  $\text{Sr}_2\text{As}_2\text{O}_7$

Decomp. by cold  $\text{H}_2\text{O}$  into  $\text{SrHASO}_4 + \frac{1}{2}\text{H}_2\text{O}$ . (Lefèvre.)

Strontium hydrogen arsenate,  $\text{SrHASO}_4 + \frac{1}{2}\text{H}_2\text{O}$

Insol. in cold, but decomp. by hot  $\text{H}_2\text{O}$  into a basic, and a sol. acid salt. 100 pts  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 0.284 pt. (Thompson, 1831.)

Sol. in  $\text{HCl}$ , and very easily in  $\text{HCl} + \text{Aq}$ . (Kotschoubey, J. pr. 49, 182.)

Sol. in  $\text{HNO}_3 + \text{Aq}$ .  $\text{SrH}_4(\text{AsO}_4)_2 + 2\text{H}_2\text{O}$ . Partly sol. in  $\text{H}_2\text{O}$ . (Hormann, Dissert. 1879.)

Strontium vanadium arsenate,  $\text{SrHASO}_4, 2(\text{VO})_2\text{H}_2\text{AsO}_4 + 7\frac{1}{2}\text{H}_2\text{O}$ .

See Arseniovanadate, strontium.

Strontium arsenate chloride,  $3\text{Sr}_3(\text{AsO}_4)_2, \text{SrCl}_2$ .

Insol. in  $\text{H}_2\text{O}$ , easily sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Lechartier, C. R. 65, 172.)

Thallos arsenate,  $\text{Ti}_2\text{AsO}_4$

Sol. in  $\text{H}_2\text{O}$ . (Willm, A. ch. (4) 5, 5.)

Thallos hydrogen arsenate,  $\text{Ti}_2\text{HASO}_4$

Very easily sol. in  $\text{H}_2\text{O}$ . (Willm.)

Thallos dihydrogen arsenate,  $\text{TiH}_2\text{AsO}_4$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Willm.)

Thallic arsenate,  $\text{TiAsO}_4 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ ; decomp. by  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . (Willm.)

Thorium hydrogen arsenate,  $\text{Th}(\text{HAsO}_4)_2 + 6\text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$  or  $\text{H}_3\text{AsO}_4 + \text{Aq}$  (Berzelius).  
Ppt.; insol. in  $\text{H}_2\text{O}$  (Barbieri, C. A. 1911. 3385)

$\text{Th}(\text{H}_2\text{AsO}_4)_4 + 4\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$  (Barbieri, l. c.)

Tin (stannous) arsenate,  $\text{SnHAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$ . (Lewissen, A. 114. 113)

Tin (stannic) arsenate,  $2\text{SnO}_3, \text{As}_2\text{O}_3$

Ppt. Insol. in  $\text{H}_2\text{O}$  and dil.  $\text{HNO}_3 + \text{Aq}$  (Haeffely, Phil. Mag. (4) 10. 290.)

$\text{Sn}_2(\text{AsO}_4)_4 + 6\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ , sol. in conc.  $\text{HCl} + \text{Aq}$ , and in aqua regia; insol. in  $\text{HNO}_3 + \text{Aq}$  or  $\text{H}_2\text{SO}_4$  (Williams, Proc. Soc. Manchester, 15. 67.)

*Colloidal.* Very slowly sol. in  $\text{H}_2\text{O}$ , from which it is pptd. by  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ , also by  $\text{BaCl}_2$ ,  $\text{CaCl}_2$ ,  $\text{NH}_4\text{Cl}$ , and  $\text{FeCl}_3 + \text{Aq}$ , and by  $\text{AgNO}_3$ , or  $\text{KI} + \text{Aq}$ . Not pptd. by alcohol,  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$ ,  $\text{HgCl}_2$ ,  $\text{Na}_2\text{CO}_3$ ,  $\text{K}_2\text{CO}_3$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . The pptd. jelly is readily sol. in conc. acids, and  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ . (Williams, l. c.)

Tin (stannous) arsenate chloride,  $\text{Sn}_2(\text{AsO}_4)_2, \text{SnCl}_2 + 2\text{H}_2\text{O}$ .

Decomp. on air (Lewissen, A. 114. 113.)

Titanium arsenate (?)

Insol. in  $\text{H}_2\text{O}$ . Sol. in titanio acid, arsenic acid, or  $\text{HCl} + \text{Aq}$ . Sol. in Ti salts +  $\text{Aq}$  (Rose)

Titanyl arsenate,  $5\text{TiO}_3, 2\text{As}_2\text{O}_5$ .

Sol. in acids without decomp. Scarcely attacked by  $\text{KOH}$  or by  $\text{NH}_4\text{OH} + \text{Aq}$ . (Reichard, B. 1894. 27. 1026)

Uranous arsenate,  $\text{U}_3(\text{AsO}_4)_2$ .

Ppt

Uranous hydrogen arsenate,  $\text{UH}_2(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$

Ppt. Sol. in  $\text{HCl} + \text{Aq}$ .

Uranyl arsenate,  $(\text{UO}_2)_2\text{HAsO}_4 + 4\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$ , and saline solutions, as  $\text{NH}_4\text{Cl} + \text{Aq}$ , sol. in the mineral acids; sol. in  $\text{K}_2\text{CO}_3 + \text{Aq}$  (Werther, A. 68. 313)

$(\text{UO}_2)_4\text{H}_4(\text{AsO}_4)_3 + 3\text{H}_2\text{O}$ . (Werther)

$(\text{UO}_2)_2\text{As}_2\text{O}_7$  Insol. in  $\text{H}_2\text{O}$ , sol. in acids.

$(\text{UO}_2)_2(\text{AsO}_4)_2 + 12\text{H}_2\text{O}$ .

Min. *Troegerite*.

Vanadium dihydrogen arsenate,  $(\text{VO})_2\text{H}_2\text{AsO}_4 + 4\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Friedheim, B. 23. 2600)

See Arseniovanadic acid.

Vanadium zinc arsenate,  $(\text{VO})_2\text{ZnH}_2(\text{AsO}_4)_2 + 5\frac{1}{2}\text{H}_2\text{O}$ , and  $2(\text{VO})_2\text{H}_2\text{AsO}_4 + 6\frac{1}{2}\text{H}_2\text{O}$ .

See Arseniovanadate, zinc.

Vanadyl arsenate,  $(\text{VO})_2\text{HAsO}_4 + \text{H}_2\text{O}$ .

Very slowly sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol; easily sol. in  $\text{HCl} + \text{Aq}$  (Berzelius.)

Composition given by Friedheim (B. 23. 2600).

Yttrium arsenate,  $\text{YHAsO}_4$ .

Ppt. Insol. in acetic, easily sol. in mineral acids.

Zinc arsenate, basic,  $4\text{ZnO}, \text{As}_2\text{O}_5 + \text{H}_2\text{O}$

(Friedel, J. B. 1866. 949.)

Min. *Adamite*. Easily sol. in dil.  $\text{HCl} + \text{Aq}$ , and is attacked by  $\text{HC}_2\text{H}_3\text{O}_2$

Zinc arsenate,  $\text{Zn}_3(\text{AsO}_4)_2$ .

(deSchulten, Bull. Soc. (3) 2. 300.)

$+ 3\text{H}_2\text{O}$ . Ppt. Sol. in  $\text{HNO}_3$ , and  $\text{H}_3\text{AsO}_4 + \text{Aq}$ . (Köttig, J. pr. 48. 182.)

$+ 8\text{H}_2\text{O}$

Min. *Köttigite*.

Zinc arsenate, acid,  $\text{Zn}_2\text{H}_2(\text{AsO}_4)_4$

Easily sol. in cold  $\text{HCl} + \text{Aq}$ , less easily in cold  $\text{HNO}_3$ . Sol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  (Gorgeul, Dissert, 1894.)

$+ 3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_3\text{AsO}_4$ , or  $\text{HNO}_3 + \text{Aq}$  (Mitscherlich)

$+ 5\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl} + \text{Aq}$  (Demel, B. 12. 1279.) Could not be obtained, (Colorano, Bull. Soc. (2) 45. 709.)

$2\text{ZnO}, \text{As}_2\text{O}_5$ . Very slowly decomp. by cold, rapidly by boiling  $\text{H}_2\text{O}$ . (Lefèvre.)

$\text{ZnHAsO}_4 + \text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  (Debray, Bull. Soc. (2) 2. 14.)

Decomp. by hot  $\text{H}_2\text{O}$  into  $4\text{ZnO}, \text{As}_2\text{O}_5 + \text{H}_2\text{O}$  (Colorano, C. R. 103. 273.)

$\text{Zn}(\text{ZnOH})_2, \text{As}_2\text{O}_5 + 7\text{H}_2\text{O}$  (Gorgeul.)

Zinc arsenate ammonia,  $\text{Zn}_2(\text{AsO}_4)_2, 2\text{NH}_3 + 3\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in acids,  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . (Bette, A. 15. 141.)

Zirconium arsenate,  $2\text{ZrO}_3, \text{As}_2\text{O}_5 + \frac{1}{2}\text{H}_2\text{O} = (\text{ZrO})\text{HAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$

Ppt. Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ . (Paykull, B. 6. 1467.)

Perarsenic acid.

See Perarsenic acid.

Arsenicotungstic Acid.

Ammonium vanadium arsenicotungstate.

See Arseniovanadicotungstate, ammonium.

Arseniovanadicotungstic acid.

Ammonium arseniovanadicotungstate,

$16(\text{NH}_4)_2\text{O}, 5\text{As}_2\text{O}_5, 15\text{V}_2\text{O}_5, 26\text{WO}_3 + 101\text{H}_2\text{O}$ .

Sl. sol. in cold, readily sol. in hot  $\text{H}_2\text{O}$ . (Rogers, J. Am. Chem. Soc. 1903. 25. 308.)

Arsenimide,  $\text{As}_2(\text{NH})_2$

Decomp. by  $\text{H}_2\text{O}$ . (Hugot, C. R. 1904. 139. 56)

**Arsenioarsenic acid,  $3As_2O_3, 2As_2O_5 + 3H_2O$** 

Decomp. by  $H_2O$ . (Joly, C. R. 100. 1231)  
 $3As_2O_3, As_2O_5 + H_2O$  Decomp. by  $H_2O$  (Joly)  
 $As_2O_3, As_2O_5 + H_2O$  Decomp. by  $H_2O$  (Joly)

See also Arsenic trioxide pentoxide.

**Arseniochromic acid.****Ammonium arseniochromate,  $2(NH_4)_2O, As_2O_3, 4CrO_3 + H_2O$** 

Insol in  $H_2O$ . (Friedheim and Mozkin, Z. anorg. 1894, 6. 280)

$3(NH_4)_2O, As_2O_3, 8CrO_3$  Decomp. by recryst. from  $H_2O$ . (Friedheim and Mozkin, Z. anorg. 1894, 6. 281)

**Potassium arseniochromate,  $2K_2O, As_2O_3, 4CrO_3$** 

Decomp. by recryst. from  $H_2O$  (Friedheim and Mozkin, Z. anorg. 1894, 6. 275)

$2K_2O, As_2O_3, 4CrO_3 + H_2O$  Decomp. by recryst. from  $H_2O$ . (Friedheim and Mozkin, l. c.)

**Arseniomolybdic acid,  $As_2O_3, 6MoO_3 + 10H_2O$** 

By recryst. from  $H_2O$  the comp. with  $18H_2O$  is formed (Pufahl, Dissert. 1888.)

+  $16H_2O$ . Sol. in  $H_2O$  (Debray.)  
 +  $18H_2O$  Completely sol. in  $H_2O$  Sp. gr. of sat. solution at  $18^\circ$  is 2.21 Easily sol. in abs. alcohol. Insol. in  $CS_2$ , liq. hydrocarbons and  $CHCl_3$ . (Pufahl, l. c.)

$As_2O_3, 7MoO_3 + 14H_2O$  (Seyberth, B. 7. 391.)

$As_2O_3, 18MoO_3 + 28H_2O$  Very sol. in  $H_2O$  Sp. gr. of sat. solution at  $18.3^\circ$  = 2.45 and 1 cc contains 2.16 g. acid Easily sol. in absolute alcohol; insol. in  $CS_2$ , liquid hydrocarbons and  $CHCl_3$  (Pufahl, l. c.)

Sol. in ether with subsequent separation into two layers See Phosphotungstic acid. (Drechsel, B. 20. 1452.)

+  $38H_2O$  Efflorescent When recryst. comp. with  $28H_2O$  is formed. (Pufahl, l. c.)

$As_2O_3, 30MoO_3 + 27H_2O$ . Sl. sol. in  $HNO_3 + Aq$ . (Debray, C. R. 78. 1408)

**Ammonium arseniomolybdate,  $(NH_4)_2O, As_2O_3, 2MoO_3 + 3H_2O$** 

(Friedheim, Z. anorg. 1894, 6. 28.)  
 +  $4H_2O$ . (Friedheim, l. c.)

$(NH_4)_2O, As_2O_3, 6MoO_3 + 2H_2O$  Sl. sol. in cold  $H_2O$ , sol. in acids (Debray.)

+  $4H_2O$ . Sl. sol. in cold, very easily sol. in hot  $H_2O$ . (Pufahl, l. c.)

$2(NH_4)_2O, As_2O_3, 6MoO_3 + 6H_2O$ . Sl. sol. in  $H_2O$ . Cannot be recryst. therefrom (Pufahl.)

+  $12H_2O$  (Friedheim, Z. anorg. 1894, 6. 31)

$3(NH_4)_2O, As_2O_3, 6MoO_3 + 4H_2O$ . (Friedheim, l. c.)

+  $8H_2O$ . (Friedheim, l. c.)

$(NH_4)_2O, 2H_2O, 7MoO_3, As_2O_3 + 4H_2O$ . Sol. in hot  $H_2O$  (Seyberth, B. 7. 391)

Not obtained. (Pufahl)

$7(NH_4)_2O, 2As_2O_3, 14MoO_3 + 28H_2O$ . (Friedheim, l. c.)

$5(NH_4)_2O, As_2O_3, 16MoO_3 + 5H_2O$  (Friedheim, Z. anorg. 1894, 6. 31)

$5(NH_4)_2O, As_2O_3, 16MoO_3 + 9H_2O$ . Nearly insol. in cold, sol. in boiling  $H_2O$ . Easily sol. in  $NH_4OH + Aq$  (Gibbs, Am. Ch. J. 3. 402.)

+  $12H_2O$  (Pufahl, l. c.)  
 $2(NH_4)_2O, As_2O_3, 18MoO_3 + 17H_2O$ . (Pufahl, l. c.)

$3(NH_4)_2O, As_2O_3, 18MoO_3 + 14H_2O$  Very sol. in  $H_2O$  and alcohol (Kehrmann, Z. anorg. 1894, 7. 421.)

$3(NH_4)_2O, As_2O_3, 20MoO_3$ . Easily sol. in  $H_2O$  (Debray, C. R. 78. 1408.)

$3(NH_4)_2O, As_2O_3, 24MoO_3 + 12H_2O$ . Decomposed by  $H_2O$ , especially when boiling

Easily sol. in  $NH_4OH + Aq$ , less easily sol. in warm  $H_2SO_4$  and boiling  $H_2AsO_4 + Aq$ . Sl. sol. in molybdic acid +  $Aq$ ,  $HNO_3$ , and conc.  $NH_4NO_3 + Aq$  (Pufahl, l. c.)

**Barium arseniomolybdate,  $BaO, As_2O_3, 6MoO_3 + 10H_2O$**

Sl. sol. in  $H_2O$ . Partially decomp. by boiling (Pufahl, l. c.)

$3BaO, As_2O_3, 6MoO_3$ . Sl. sol. in  $H_2O$ . (Pufahl, l. c.)

$3BaO, As_2O_3, 7MoO_3$  Ppt. (Seyberth.)

$3BaO, As_2O_3, 18MoO_3$ . Decomp. by  $H_2O$ . (Pufahl, l. c.)

**Cadmium arseniomolybdate,  $CdO, 2H_2O, As_2O_3, 6MoO_3 + 11H_2O$**

(Pufahl.)  
 $3CdO, 3H_2O, As_2O_3, 18MoO_3 + 33H_2O$ . (Pufahl)

**Cesium arseniomolybdate,  $Cs_2O, As_2O_3, 6MoO_3$**

Sl. sol. in  $H_2O$  (Pufahl, l. c.)  
 $4Cs_2O, As_2O_3, 26MoO_3 + 15H_2O$ . Ppt. (Ephraim, Z. anorg. 1910, 65. 246)

**Calcium arseniomolybdate,  $CaO, As_2O_3, 6MoO_3 + 10H_2O$**

Rather difficultly sol. in cold  $H_2O$ . (Pufahl, l. c.)

$3CaO, As_2O_3, 6MoO_3$  As Ba salt. (Pufahl, l. c.)

$3CaO, As_2O_3, 18MoO_3 + 32H_2O$ . Very sol. in  $H_2O$ . Solution sat. at  $18^\circ$  has sp. gr. = 2.163. (Pufahl, l. c.)

**Cobalt arseniomolybdate,  $CoO, 2H_2O, As_2O_3, 6MoO_3 + 11H_2O$**

(Pufahl.)  
 $3CoO, 3H_2O, As_2O_3, 18MoO_3 + 33H_2O$ . (Pufahl.)

**Cupric arseniomolybdate,  $CuO, 2H_2O, As_2O_3, 6MoO_3 + 15H_2O$**

(Pufahl.)  
 $3CuO, 3H_2O, As_2O_3, 18MoO_3 + 34H_2O$ . (Pufahl.)

Lithium arseniomolybdate,  $\text{Li}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 14\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Pufahl, l.c.)

$3\text{Li}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 34\text{H}_2\text{O}$ . Solution sat at  $15^\circ$  has sp. gr. of 2.481. (Pufahl, l.c.)

Magnesium arseniomolybdate,  $\text{MgO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 13\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Pufahl, l.c.)

$3\text{MgO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 36\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Pufahl, l.c.)

Manganese arseniomolybdate,  $\text{MnO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$ .

(Pufahl)

$3\text{MnO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 33\text{H}_2\text{O}$  (Pufahl.)

Nickel arseniomolybdate,  $\text{NiO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$

(Pufahl)

$3\text{NiO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 34\text{H}_2\text{O}$  (Pufahl.)

Potassium arseniomolybdate,  $\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{MoO}_3 + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Friedheim, Z. anorg. 2. 314.)

$\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 5\text{H}_2\text{O}$ . Sol. in hot  $\text{H}_2\text{O}$  without decom. (Friedheim, Z. anorg. 1892, 2. 330.)

$\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 25\text{H}_2\text{O}$ . Easily sol. in cold  $\text{H}_2\text{O}$ . Decom. on dilution. (Pufahl, l.c.)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 26\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Pufahl, l.c.)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $20\text{MoO}_3$ . Insol. in  $\text{H}_2\text{O}$  (Debray, C. R. 78. 1408.)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $24\text{MoO}_3 + 12\text{H}_2\text{O}$ . Somewhat sol. in  $\text{H}_2\text{O}$  acidified with  $\text{HNO}_3$ . (Pufahl, l.c.)

Rubidium arseniomolybdate,  $3\text{Rb}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ ,  $5\text{MoO}_3 + 9\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1910, 65. 241)

$\text{Rb}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Pufahl, l.c.)

$4\text{Rb}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 40\text{H}_2\text{O}$ . Pptd (Ephraim, Z. anorg. 1910, 65. 241-4.)

Silver arseniomolybdate,  $3\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 2\text{H}_2\text{O}$

(Pufahl, Leipzig, 1888.)

$6\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 22\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Very sol. in  $\text{NH}_4\text{OH}$  and in dil.  $\text{HNO}_3$ . (Pufahl, l.c.)

$7\text{Ag}_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $36\text{MoO}_3 + 30\text{H}_2\text{O}$ . Sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$  strongly acidified with  $\text{HNO}_3$ . (Pufahl, l.c.)

Sodium arseniomolybdate,  $\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{MoO}_3 + 8\text{H}_2\text{O}$ .

(Friedheim, Z. anorg. 1892, 2. 357.)

$\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 12\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . Solution sat. at  $19.8^\circ$  has sp. gr. = 1.678. (Friedheim, l.c.)

$3\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$ ,  $+ 12\text{H}_2\text{O}$ , and  $+ 13\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . (Pufahl, l.c.)

$3\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 24\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Pufahl, l.c.)

$+ 30\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . (Pufahl, l.c.)

Strontium arseniomolybdate,  $\text{SrO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 10\text{H}_2\text{O}$ .

As Ba salt. (Pufahl, l.c.)

$3\text{SrO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3$ . As Ba salt. (Pufahl, l.c.)

$3\text{SrO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 32\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Pufahl, l.c.)

Thallium arseniomolybdate,  $6\text{Tl}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 2\text{H}_2\text{O}$

Ppt. (Pufahl.)

$8\text{Tl}_2\text{O}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 3\text{H}_2\text{O}$ . Ppt. (Pufahl.)

Zinc arseniomolybdate,  $\text{ZnO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$ .

(Pufahl.)

$3\text{ZnO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 37\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Pufahl.)

### Arseniophosphovanadicotungstic acid.

Ammonium arseniophosphovanadicotungstate,  $88(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $12\text{P}_2\text{O}_5$ ,  $69\text{V}_2\text{O}_5$ ,  $148\text{WO}_3 + 484\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol and ether. (Rogers, J. Am. Chem. Soc. 1903, 25. 313.)

### Arseniophosphovanadicovanadiotungstic acid.

Ammonium arseniophosphovanadicovanadiotungstate,  $99(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $12\text{P}_2\text{O}_5$ ,  $6\text{V}_2\text{O}_5$ ,  $66\text{V}_2\text{O}_5$ ,  $191\text{WO}_3 + 522\text{H}_2\text{O}$ .

Sl. sol. in cold  $\text{H}_2\text{O}$ . (Rogers, J. Am. Chem. Soc. 1903, 25. 314.)

### Arseniophosphovanadiotungstic acid.

Ammonium arseniophosphovanadiotungstate,  $82(\text{NH}_4)_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ ,  $12\text{P}_2\text{O}_5$ ,  $52\text{V}_2\text{O}_5$ ,  $201\text{WO}_3 + 567\text{H}_2\text{O}$ .

Very sol. in warm  $\text{H}_2\text{O}$ . Insol. in organic solvents (Rogers, J. Am. Chem. Soc. 1903, 25. 312.)

### Arseniosulphuric acid.

Ammonium arseniosulphate,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{SO}_3 + 3\text{H}_2\text{O}$

Can be recryst. from  $\text{H}_2\text{O}$ . (Friedheim and Moskin, Z. anorg. 1894, 6. 290.)

Potassium arseniosulphate,  $2\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{SO}_3 + 3\text{H}_2\text{O}$

(Friedheim and Moskin, Z. anorg. 1894, 6. 289.)

$5\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $\text{SSO}_3 + 6\text{H}_2\text{O}$ . (Friedheim and Moskin, Z. anorg. 1894, 6. 291.)

Sodium arseniosulphate,  $2\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $2\text{SO}_3 + 3\text{H}_2\text{O}$ .  
(Friedheim and Mozkin, Z. anorg. 1894, 6. 290.)

### Arseniotelluric acid.

Ammonium arseniotellurate,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $\text{TeO}_3 + 4\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1901, 28. 65.)  
 $4(\text{NH}_4)_2\text{O}$ ,  $3\text{As}_2\text{O}_3$ ,  $2\text{TeO}_3 + 11\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (Weinland.)

Sodium arseniotellurate,  $2\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $2\text{TeO}_3 + 9\text{H}_2\text{O}$   
Ppt. (Weinland, l.c.)

Arseniotungstic acid,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $16\text{WO}_3 + 32\text{H}_2\text{O} = \text{H}_3\text{AsW}_3\text{O}_{28} + 16\text{H}_2\text{O}$  ( $\alpha$ -anhydroarseniotungstic acid)

Sol in  $\text{H}_2\text{O}$  (Kehrmann, A. 245. 45)  
 $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $19\text{WO}_3$  (?). Sp. gr of sat. solution in  $\text{H}_2\text{O}$  is 3.279. (Fremery, B. 17. 296.)

Is a mixture containing principally  $\text{H}_3\text{AsW}_3\text{O}_{28} + 16\text{H}_2\text{O}$  (Kehrmann.)  
 $\text{As}_2\text{O}_3$ ,  $18\text{WO}_3 + x\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (Kehrmann, Z. anorg. 1899, 22. 292.)

### Aluminum ammonium arseniotungstate.

See Aluminumcoarseniotungstate, ammonium.

Ammonium arseniotungstate,  $4(\text{NH}_4)_2\text{O}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $6\text{WO}_3 + 3\text{H}_2\text{O}$ .

Sl. sol. in cold  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$ ; easily sol. in boiling  $\text{H}_2\text{O}$ . (Gibbs, Proc. Am. Acad. 16. 135.)

$7(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $14\text{WO}_3 + 17\text{H}_2\text{O}$ . Very sl. sol. even in boiling  $\text{H}_2\text{O}$ . (Fremery, l.c.)  
 $3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $16\text{WO}_3 + 16\text{H}_2\text{O} = (\text{NH}_4)_3\text{AsW}_3\text{O}_{28} + 8\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$  (Kehrmann)

$5(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $17\text{WO}_3 + 8\text{H}_2\text{O}$ . Can be recryst. from  $\text{H}_2\text{O}$  without decomp. Decomp. by long boiling with  $\text{H}_2\text{O}$ . (Kehrmann, Z. anorg. 1899, 22. 294.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $18\text{WO}_3 + 14$ , or  $18\text{H}_2\text{O}$ . Very sol. in cold  $\text{H}_2\text{O}$ . Can be recryst. from  $\text{H}_2\text{O}$ . (Kehrmann, l.c.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $21\text{WO}_3 + x\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . Easily decomp. on recryst. (Kehrmann, l.c.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $24\text{WO}_3 + 12\text{H}_2\text{O}$ . More sol. in  $\text{H}_2\text{O}$  than corresponding phosphotungstate. (Kehrmann, l.c.)

Barium arseniotungstate,  $2\text{BaO}$ ,  $\text{As}_2\text{O}_3$ ,  $16\text{WO}_3 + x\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Péchar, A. ch. (6) 22. 262.)  
 $7\text{BaO}$ ,  $\text{As}_2\text{O}_3$ ,  $22\text{WO}_3 + 54\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ : Can be recryst. therefrom. (Kehrmann, l.c.)

Potassium arseniotungstate,  $3\text{K}_2\text{O}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $6\text{WO}_3$ .

Insol in  $\text{H}_2\text{O}$ . Readily sol. in alkali hydroxides + Aq. (Gibbs)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $16\text{WO}_3 + 16\text{H}_2\text{O} = \text{K}_2\text{AsW}_3\text{O}_{28} + 8\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (Kehrmann)

$5\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $17\text{WO}_3 + 22\text{H}_2\text{O}$ . Scarcely sol. in cold  $\text{H}_2\text{O}$ . (Kehrmann, Z. anorg. 1899, 22. 295.)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $18\text{WO}_3 + 14\text{H}_2\text{O}$ . Efflorescent. (Kehrmann, l.c.)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $19\text{WO}_3 + 16\text{H}_2\text{O}$  (?). Sol. in  $\text{H}_2\text{O}$ . (Fremery.)

Silver arseniotungstate,  $\text{Ag}_3\text{AsW}_3\text{O}_{28}$ .

Insol in  $\text{H}_2\text{O}$  (Kehrmann, A. 245. 55); perhaps identical with—

$6\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $16\text{WO}_3 + 11\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$ . (Gibbs.)

Sodium arseniotungstate,  $3\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $3\text{WO}_3 + 20\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Lefort, C. R. 92. 1461)

### Arsenious acid, $\text{HAsO}_3$ .

Solubility of  $\text{HAsO}_3$  in amyl alcohol + Aq. at  $25^\circ$ .

$a_w$  = mol of  $\text{HAsO}_3$  in 1 l. of  $\text{H}_2\text{O}$ .

$a_a$  = mol. of  $\text{HAsO}_3$  in 1 l. of amyl alcohol.

$h$  = partition coefficient

$a_w$	$a_a$	$h$
0.0449	0.0082	5.48
0.0446	0.0083	5.38
0.0887	0.0184	5.41
0.0892	0.0161	5.53
0.1800	0.0324	5.55

(Auerbach, Z. anorg. 1903, 37. 356.)

Solubility of  $\text{HAsO}_3$  in sat.  $\text{H}_3\text{BO}_3 + \text{Aq}$  and amyl alcohol.

$a_w$  = mol. of  $\text{HAsO}_3$  in 1 l. of  $\text{H}_2\text{O}$ .

$a_a$  = mol. of  $\text{HAsO}_3$  in 1 l. of amyl alcohol.

$h$  = partition coefficient

$a_w$	$a_a$	$h$
0.0859	0.0161	5.33
0.1720	0.0321	5.35

(Auerbach, l.c.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

See Arsenic trioxide.

### Arsenites.

All arsenites, except those of the alkali metals, are partially or wholly insol in  $\text{H}_2\text{O}$ , but easily sol. in acids; several are sol. in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4\text{Cl} + \text{Aq}$ .

All basic arsenites are sol. in acids except those that give an insol. salt with the bases. Many are sol. in excess of  $\text{As}_2\text{O}_3 + \text{Aq}$

**Aluminum arsenite,  $Al_2O_3, As_2O_3$** 

Sl sol in boiling  $H_2O$ . Easily sol in  $NaOH + Aq$  and in acids (Reichard, B 1894, 27. 1729)

**Aluminum arsenite iodide,  $AlI_3, 6As_2O_3 + 16H_2O$ .**

(Gruhl, Dissert 1897.)

**Ammonium arsenite,  $NH_4AsO_3$** 

Very sol in  $H_2O$ . (Luyne, A. pr. 72. 180.)  
Insol. in acetone. (Eidmann, C. C 1899, II. 1014); (Naumann, B. 1904, 37. 4328.)  
( $NH_4$ )<sub>3</sub> $AsO_3$  (?) Sol. in  $H_2O$ . (Stavenhagen, J. pr. 1895, (2) 51. 11.)  
( $NH_4$ )<sub>4</sub> $AsO_4$ . Very sol in  $H_2O$ . Insol in alcohol or ether. (Stein, A. 74. 218.)  
Could not be obtained. (Stavenhagen.)

**Ammonium arsenite bromide,  $2As_2O_3, NH_4Br$ .**

Sl sol in  $H_2O$ . (Rudorff, B. 19. 2679.)

**Ammonium arsenite chloride,  $As_2O_3, NH_4Cl$** 

Sl sol in  $H_2O$ . Sol. in warm dil.  $NH_4OH + Aq$  (Rudorff)

**Ammonium arsenite iodide,  $2As_2O_3, NH_4I$ .**

Sl sol in boiling  $H_2O$ . Sol in warm dil.  $NH_4OH + Aq$ . (Rudorff.)

**Antimony arsenite (?).**

Ppt Sol in a small amount  $H_2O$ , but insol. in a large quantity. (Berzelius.)  
Completely sol. in  $KOH + Aq$  (Reynolds)

**Barium arsenite,  $Ba(AsO_3)_2$ .**

Easily sol. in  $H_2O$  when recently pptd., but insol. after being dried. Pptd. from aqueous solution by boiling. (Filhol, A. 68. 308)

Only sl. sol. in  $H_2O$ . (Stavenhagen, J. pr. 1895, (2) 51. 18.)

$Ba_3(AsO_3)_2$ . Sl sol in cold  $H_2O$ ; sol. in hot  $H_2O$  and dil. acids. (Stavenhagen, J. pr. 1895, (2) 51. 17.)

$BaH_2(AsO_3)_2$ . Ppt. (Bloxam, Chem. Soc. 15. 281.)

+34 $H_2O$ . Moderately sol. in cold, more easily sol. in hot  $H_2O$ . Insol. in alcohol. (Perper, Dissert. 1894)

$Ba_2As_2O_5 + 2H_2O$ . Easily sol. in  $H_2O$  (Stavenhagen, J. pr. 1895, (2) 51. 18.)

+4 $H_2O$ . Sl. sol. in  $H_2O$ ; also somewhat sol. in alcohol. (Stein, A. 74. 218.)

Sl. sol. in  $H_2AsO_4 + Aq$  and  $BaO_2H_2 + Aq$ . (Dumas.)

Sol. in  $NH_4Cl + Aq$ . (Wackenroder, A. 41. 316.)

Not pptd. from solutions containing Na citrate (Spiller.)

$BaAs_4O_7$ . Sol. in  $H_2O$ . Less sol. in alcohol. (Reichard, B. 1894, 27. 1033.)

**Bismuth arsenite,  $BiAsO_3 + 5H_2O$  (?).**

Easily sol. in  $HNO_3 + Aq$ . (Schnneider, J. p. (2) 20. 419.)

Sl sol in  $H_2O$  (Stavenhagen, J. pr. 1895, (2) 51. 35.)

**Cadmium arsenite,  $Cd_3(AsO_3)_2$** 

Sl. sol. in  $H_2O$ ; easily sol. in  $NH_4OH + Aq$  and dil. acids. (Stavenhagen, l.c.)

$Cd_2As_2O_5$ . Ppt (Reichard, B 1898, 31. 2168)

Sol in acids without decomp; insol. in alkalis. (Reichard, B 1894, 27. 1033)

5 $CdO, As_2O_3 + 12H_2O$  Not attacked by  $KOH, Ba(OH)_2$  or alkali carbonates +  $Aq$ . Insol in  $KCN + Aq$ . (Reichard, Ch. Z. 1902, 26. 1145)

**Cæsium arsenite bromide,  $As_2O_3, CsBr$ .**

Sol. in  $H_2O$ . (Wheeler, Z. anorg. 4. 451.)

**Cæsium arsenite chloride,  $As_2O_3, CsCl$ .**

As above.

**Cæsium arsenite iodide,  $As_2O_3, CsI$ .**

As above.

**Calcium arsenite,  $Ca(AsO_3)_2$** 

Somewhat sol. in  $H_2O$ , sol. in  $Ca(OH)_2 + Aq$  or  $As_2O_3 + Aq$ . (Simon, Pogg. 47. 417.)

$Ca_3(AsO_3)_2$ . Ppt (Kühn, J. B. 1862. 379)

Only sl. sol.  $H_2O$ ; readily sol. in dil. acids (Stavenhagen, l.c.)

Sol. in  $H_2O$ , insol. in alcohol (Reichard, B 1894, 27. 1036.)

3 $CaO, 2As_2O_3 + 3H_2O$ . Sl. sol. in  $H_2O$ ; easily sol. in  $NH_4Cl + Aq$ ; sol. in  $As_2O_3 + Aq$ . (Stein.)

$CaH_2(AsO_3)_2 + xH_2O$  Moderately sol. in  $H_2O$ . Insol in abs. alcohol. (Perper, Dissert. 1894.)

$Ca_2As_2O_5$ . Sl. sol. in  $H_2O$ ; 1 pt. in 3000-4000 pts  $H_2O$ . Alkali chlorides increase solubility slightly. (Stavenhagen, l.c.)

Sl. sol. in  $H_2O$ ; insol in  $H_2O$  containing  $CaO_2H_2$ . (Berzelius)

Not pptd. in presence of 4000-5000 pts  $H_2O$ . (Harting, Leansigne)

Not pptd. from solutions containing  $NH_4$  salts; and when pptd. in sol. in  $(NH_4)SO_4, NH_4NO_3, NH_4C_2H_3O_2$ , and  $NH_4Cl + Aq$ . (Gesenius and Schweigger.)

Sol in  $NH_4(AsO_3)_2 + Aq$  (Schwauenger)

Sol in  $CaCl_2 + Aq$  (Ordway)

Easily sol. in dil. acids. Not pptd. from solutions containing sodium citrate (Spiller)

**Calcium arsenite iodide,  $CaI_2, 3As_2O_3 + 12H_2O$** 

Sl. sol in  $H_2O$ . Decomp. on heating. (Gruhl, Dissert 1897.)

**Chromic arsenite,  $CrAsO_3$ .**

Sol. in  $H_2O$ , but slowly decomp. by boiling. (Neville, C. N. 34. 220.)

Sol. in  $HCl$ ; repptd. by  $NH_4OH + Aq$ ; sol. in  $KOH + Aq$ . (Reichard, B. 1894, 27. 1028.)

**Cobaltous arsenite basic,  $7CoO, As_2O_3$ .**

Very sol. in dil. difficultly sol. in conc.  $H_2SO_4$ . Sol. in conc.  $NaOH$  and in conc.  $NH_4OH + Aq$ . (Reichard, Z. anal. 1903, 42. 19.)

**Cobaltous arsenite,  $3\text{CoO} \cdot \text{As}_2\text{O}_3$ .**

Sol  $\text{KOH} + \text{Aq}$  with decomp. (Identical with salt of Guard) (Reichard, B. 1894, 27. 1031)

+  $4\text{H}_2\text{O}$ . Sl sol. in  $\text{H}_2\text{O}$ ; easily sol. in acids. (Stavenhagen, J. pr. 1895, (2) 51. 39)

$3\text{CoO}$ ,  $2\text{As}_2\text{O}_3 + 4\text{H}_2\text{O}$ . Sol in  $\text{HNO}_3$  (Girard, C. R. 1852, 34. 918.)

$\text{Co}_3\text{H}_2(\text{AsO}_3)_4$ . Insol in  $\text{H}_2\text{O}$ ; sol. in  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Proust)

Only sol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  when formed in a solution containing an excess of those reagents. (Reynoso, C. R. 31. 68)

$\text{Co}_2\text{As}_2\text{O}_5$ . Ppt (Reichard, B. 1898, 31. 2165.)

Sol. in  $\text{HNO}_3$  and  $\text{HCl} + \text{Aq}$ . (Proust)

**Cupric arsenite,  $\text{Cu}(\text{AsO}_3)_2$ .**

(Avery, J. Am. Chem. Soc. 1906, 28. 1161.)

Insol in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

+  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, l.c.)

+  $2\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ , insol. in alcohol. (Stavenhagen, l.c.)

$3\text{CuO}$ ,  $\text{As}_2\text{O}_3$ . Ppt (Stavenhagen, l.c.)

$2\text{CuO}$ ,  $\text{As}_2\text{O}_3$  (Scheele's green) Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{KOH} + \text{Aq}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ , and in most acids. Formula is  $\text{Cu}_2(\text{AsO}_3)_2 + 2\text{H}_2\text{O}$ . (Sharples, C. N. 35. 89)

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  without decomp. Sol in  $\text{KOH} + \text{Aq}$  with decomp (Reichard, B. 1894, 27. 1026)

Insol in pyridine. (Schroeder, Dissert. 1901.)

$5\text{CuO}$ ,  $\text{As}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ , sol in acids,  $\text{NH}_4\text{OH} + \text{Aq}$  and conc  $\text{MOH} + \text{Aq}$  (Reichard, Ch. Z. 1902, 26. 1142)

$x\text{CuO}$ ,  $y\text{As}_2\text{O}_3$ . Min. *Trippskate*. Easily sol in  $\text{HNO}_3$  and in  $\text{HCl} + \text{Aq}$

**Didymium arsenite,  $\text{Dy}_2\text{H}_2(\text{AsO}_3)_4$ .**

Ppt. (Frenche and Smith, A. 191. 355.)

Does not exist (Cleve, B. 11. 910)

**Glucinum arsenite iodide,  $\text{GlH}_2$ ,  $3\text{As}_2\text{O}_3 + 8\text{H}_2\text{O}$** 

Decomp. by  $\text{H}_2\text{O}$  (Gruhl, Dissert. 1897.)

**Gold (aurous) arsenite,  $3\text{Au}_2\text{O}_3 \cdot \text{As}_2\text{O}_3$** 

Decomp by light. (Reichard, B. 1894, 27. 1027)

**Gold (auric) arsenite,  $\text{AuAsO}_3 + \text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$  and dil acids (Stavenhagen, J. pr. 1895, (2) 51. 28.)

**Iron (ferrous) arsenite,  $\text{FeO} \cdot \text{As}_2\text{O}_3$** 

Decomp. in the air when moist; sol in  $\text{NH}_4\text{OH} + \text{Aq}$  when freshly pptd. (Reichard, B. 1894, 27. 1029-30.)

$\text{Fe}_2\text{As}_2\text{O}_6$ . Ppt Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; insol. in  $\text{NH}_3$  arsenite, or other  $\text{NH}_4$  salts +  $\text{Aq}$ . (Wittstein)

**Iron (ferric) arsenite, basic,  $4\text{Fe}_2\text{O}_3 \cdot \text{As}_2\text{O}_3 + 5\text{H}_2\text{O}$ .**

Ppt.  $\text{H}_2\text{O}$  extracts  $\text{As}_2\text{O}_3$ . Sol. in conc acids with separation of  $\text{As}_2\text{O}_3$ . Acetic acid is without action. (Bunsen and Berthold, 1834.)

Sol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ .

**Iron (ferric) arsenite,  $\text{Fe}_2\text{O}_3 \cdot \text{As}_2\text{O}_3$** 

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  when freshly pptd. (Reichard, B. 1894, 27. 1030)

$\text{Fe}_4\text{As}_2\text{O}_9$ . Ppt. (Reichard, B. 1898, 31. 2170)

+  $7\text{H}_2\text{O}$ . Sol. in  $\text{NaOH}$ , and  $\text{KOH} + \text{Aq}$ .

"Ferric arsenite" is sl. sol. in  $\text{Al}_2(\text{SO}_4)_3 + \text{Aq}$ . (Kynaston, Dmg. 235. 326.)

**Lanthanum arsenite,  $\text{La}_2\text{H}_2(\text{AsO}_3)_4$ .**

Ppt. (Frenche and Smith, A. 191. 355)

Does not exist. (Cleve, B. 11. 910.)

**Lead arsenite,  $\text{Pb}(\text{AsO}_3)_2 + x\text{H}_2\text{O}$** 

Sl sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{KOH}$ , but sol in  $\text{NaOH} + \text{Aq}$  (Berzelius.)

$\text{Pb}_2\text{As}_2\text{O}_6$ . Insol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$ ,  $\text{NH}_3$  arsenite, or other  $\text{NH}_4$  salts +  $\text{Aq}$  (Wittstein)

$\text{Pb}_3(\text{AsO}_3)_5$ . Scarcely sol in  $\text{H}_2\text{O}$ , easily sol in  $\text{HNO}_3$ , or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . Boiling  $\text{H}_2\text{O}$  dissolves some  $\text{As}_2\text{O}_3$ . Not completely insol. in  $\text{KOH} + \text{Aq}$ . (Streng, A. 129. 238)

Sol. in acetic acid; insol. in  $\text{H}_2\text{O}$  in the presence of ammonium salts; sol in  $\text{NaOH} + \text{Aq}$ , sl sol. in  $\text{KOH} + \text{Aq}$  (Reichard, B. 1894, 27. 1024.)

+  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in dil. acids. (Stavenhagen, J. pr. 1895, (2) 51. 33.)

**Lead arsenite chloride,  $\text{Pb}_3\text{As}_2\text{O}_6 \cdot 3\text{PbCl}_2$ .**

Min. *Ekdemite*. Easily sol in  $\text{HNO}_3 + \text{Aq}$ , and warm  $\text{HCl} + \text{Aq}$ .

**Magnesium arsenite,  $\text{Mg}_3(\text{AsO}_3)_4$** 

Insol in  $\text{NH}_4\text{OH} + \text{Aq}$ , but sol. in a large excess of  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose.)

Very sol in boiling  $\text{H}_2\text{O}$  and in dil. acids. Sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Reichard, B. 1894, 27. 1032.)

Very sol in  $\text{H}_2\text{O}$  and dil acids. (Stavenhagen, l.c.)

$\text{Mg}_3\text{As}_2\text{O}_6 + 4\text{H}_2\text{O}$  Hydroscopic. Very sol in  $\text{H}_2\text{O}$  and acids. (Stavenhagen, l.c.)

$3\text{MgO} \cdot 2\text{As}_2\text{O}_3 + 3\text{H}_2\text{O} + 15\text{H}_2\text{O}$ , and +  $18\text{H}_2\text{O}$ . (Perper, Dissert. 1894.)

**Magnesium arsenite iodide,  $\text{MgI}_2 \cdot 3\text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$** 

Moderately sol in  $\text{H}_2\text{O}$ . (Gruhl, Dissert. 1897.)

**Manganous arsenite,  $\text{Mn}_2(\text{AsO}_3)_2 + 3\text{H}_2\text{O}$ .**

Sol in  $\text{H}_2\text{O}$ ; insol in alcohol; easily oxidized by moist air. (Stavenhagen, l.c.)

$3\text{MnO} \cdot 2\text{As}_2\text{O}_3$ . (Reichard, B. 1894, 27. 1032.)

$Mn_3H_2As_2O_{10} + 4H_2O$ . Sl sol in  $H_2O$ . Very sol in acids and alkali (Stavenhagen, *l.c.*)  
 $Mn_3As_2O_8$  Ppt (Reichard, B 1898, 31. 2165.)

Mercurous arsenite,  $Hg_2O_3As_2O_3$ .

Decomp by light. Decomp by  $H_2O$  (Reichard, B 1894, 27. 1022)  
 $Hg_2As_2O_3$ . Only sl sol in  $H_2O$ . sol. in dil acids (Stavenhagen, J p 1895, (2) 51. 24.)

Gradually and completely decomposed by  $H_2O$  (Reichard, Ch. Z. 1902, 26. 1143)

Mercuric arsenite,  $Hg_2(AsO_3)_2$ .

Sl sol. in  $H_2O$  (Stavenhagen, *l.c.*)  
 Decomp more easily by  $H_2O$  than is the mercurous comp. (Reichard, Ch. Z. 1902, 26. 1143)

$2HgO, As_2O_3$  Not decomp. by boiling with  $H_2O$  Undecomp. by boiling acids  
 Decomp by  $KOH + Aq$ ,  $K_2CO_3 + Aq$  and  $NH_4OH + Aq$  (Reichard, B 1894, 27. 1021)  
 $Hg_2As_2O_3$  Ppt. Decomp. by boiling  $H_2O$ . Very sl. sol. in  $H_2SO_4 + HCl$ . (Reichard, B 1898, 31. 2170)

Nickel arsenite,  $Ni_2(AsO_3)_2$

Insol. in  $H_2O$ ; easily sol. in  $NH_4OH + Aq$  (Proust.)

Ppt. (Reichard, B. 1898, 31. 2165)  
 $3NiO, 2As_2O_3$ . Sol. in  $NH_4OH + Aq$  (identical with salt of Girard) (Reichard, B 1894, 27. 1031.)

$+ 4H_2O$ . Insol. in  $H_2O$ , sol. in  $NH_4OH + Aq$ . (Proust.)

Sol. in  $KOH + Aq$  (Girard, C R 34. 918)

$2NiO, As_2O_3$  Insol. in  $H_2O$ ; sol. in  $NH_4OH + Aq$ , sol. in  $KOH + Aq$  (Reynoso, C. R. 31. 68)

Platinum arsenite,  $Pt_3(AsO_3)_4$ .

Sol. in  $H_2O$  and alcohol; very unstable (Stavenhagen, *l.c.*)

Potassium arsenite,  $KAsO_2$ .

Sol. in  $H_2O$ ; sl sol. in alcohol (Pasteur, A 68. 309.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601)

Does not exist. (Stavenhagen, *l.c.*)

$K_3AsO_3$  Very sol. in  $H_2O$ , sol. in alcohol. (Stavenhagen, *l.c.*)

$K_4As_2O_6 + 6H_2O$ . Very sol. in  $H_2O$ ; sol. in alcohol. (Stavenhagen, *l.c.*)

$K_2As_4O_7 + 2H_2O$ . Sol. in  $H_2O$ ; sl sol. in alcohol. (Pasteur, A. 68. 309)

Potassium arsenite bromide,  $4As_2O_3, 2KBr$

More sol. in  $H_2O$  than iodide. (Schiff and Sestini, A. 228. 72.)

$2As_2O_3, KBr$ . (Rudorff, B 19. 2675.)

Potassium arsenite chloride,  $2As_2O_3, KCl$

Much more quickly sol. in hot  $H_2O$  than bromide or iodide. (Rudorff, B 19. 2675.)

$As_2O_3, KCl$ . Decomp by  $H_2O$

Potassium arsenite iodide,  $3As_2O_3, 2KI + H_2O$

Sl. sol. in cold  $H_2O$ ; sol. in 20 pts. boiling, and 40 pts. cold  $H_2O$ . (Limmel, Sil. Am. J (2) 18. 583.)

$6KAsO_2, 2KI + 3H_2O$ . Sol. in  $H_2O$  and alcohol. Decomp. by acids. (Harms)

$2KH(AsO_3)_2, As_2O_3, 2KI$ . Sl. sol. in  $H_2O$ . (Harms, A. 91. 371)

$2As_2O_3, KI$ . Very difficultly sol. even in boiling  $H_2O$  Very easily sol. in  $KOH + Aq$ , but much less so in  $K_2CO_3 + Aq$  (Rudorff, B. 19. 2670)

Sol. in 40 pts. cold, 20 pts. hot  $H_2O$ ; sol. in alkalis. (Schiff and Sestini, A. 228. 72)

Potassium arsenite sulphate,  $K_3AsO_3, 10K_2SO_4$ .

(Stavenhagen, Zeit. angew. ch 1894, 8. 166.)

Rubidium arsenite,  $RbAsO_3$ .

Sol. in  $H_2O$ , aq. solution is alkaline to litmus. Insol. in alcohol (Bouchonnet, C. R. 1907, 144. 641.)

Rubidium arsenite bromide,  $As_2O_3, RbBr$

Decomp by  $H_2O$ . (Wheeler, Z. anorg. 4. 451.)

Rubidium arsenite chloride,  $As_2O_3, RbCl$ .

As above

Rubidium arsenite iodide,  $As_2O_3, RbI$

As above.

Silver arsenite,  $Ag_3AsO_3$ .

Insol. in  $H_2O$  Not pptd. in presence of 20,000 pts.  $H_2O$  (Hartnag.)

11  $H_2O$  dissolves 0.0115 g  $Ag_3AsO_3$  at 20° (Whitby, Z. anorg 1910, 67. 108.)

Only sl. sol. in  $H_2O$  and in dil. acids; readily sol. in  $NH_4OH + Aq$  and conc. acids. (Stavenhagen, *l.c.*)

Decomp by light, by  $KOH + Aq$  and by  $NH_4OH + Aq$  (Reichard, B. 1894, 27. 1022-23)

Easily sol. in  $HNO_3 + Aq$  and other acids. (Marcet)

More easily sol. in  $HC_2H_3O_2 + Aq$  than  $Ag_3PO_4$ ; sl. sol. in  $HC_2H_3O_2 + Aq$  (Santos, C. N. 38. 94.)

Insol. in  $KOH + Aq$ . (Kuhn, Arch. Pharm. (2) 69. 267)

Easily sol. in  $NH_4OH + Aq$ . (Marcet.)

Insol. in  $NH_4OH + Aq$ , but sol. therein in presence of alkali nitrates. (Santos, *l.c.*)

Incompletely sol. in  $(NH_4)_2CO_3$ ,  $(NH_4)_2SO_4$ , or  $NH_4NO_3 + Aq$  (Wittstein, Report. 51. 41.)

Decomp. by  $\text{NH}_4\text{Cl} + \text{Aq}$  Sol. in  $\text{KAsO}_4 + \text{Aq.}$  (Kuhn, *l.c.*)

Not pptd. in solutions containing sol citrates (Spiller.)

Sol. in methyl acetate (Naumann, B 1909, 42, 3790)

Sl. sol. in methyl acetate (Bezold, Dissert 1908.)

Insol. in ethyl acetate. (Hamers, Dissert 1906); (Naumann, B 1910, 43, 314.)

+  $\text{H}_2\text{O}$  Very sol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$  and in dil acids (Stavenhagen, J. pr. 1895, (2) 51, 29.)

$2\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ . Ppt. (Pasteur, J. Pharm (3) 13, 395)

Could not be obtained (Stavenhagen, *l.c.*)

$3\text{Ag}_2\text{O}$ ,  $2\text{As}_2\text{O}_3$ . Sol. in cold  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$  (Santos)

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  and in potassium arsenite +  $\text{Aq}$  (Girard, C. R. 34, 918)

Ppt. (Reichard, B. 1898, 31, 2167)

Could not be obtained. (Stavenhagen, *l.c.*)

Silver arsenite ammonia,  $2\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $4\text{NH}_3$ .

Insol. in  $\text{H}_2\text{O}$  or alcohol. (Girard.)

### Sodium arsenites.

Correspond to potassium arsenites, but have not been obtained in crystalline form. All are very sol. in  $\text{H}_2\text{O}$  (Pasteur, A. 68, 308.)

$\text{Na}_3\text{AsO}_3$ . Very sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, *l.c.*)

Insol. in ethyl acetate (Naumann, B 1904, 37, 3802)

Sodium arsenite bromide,  $2\text{As}_2\text{O}_3$ ,  $\text{NaBr}$

Decomp. by warm  $\text{H}_2\text{O}$ . (Rudorff, B 21, 3052.)

Sodium arsenite iodide,  $2\text{As}_2\text{O}_3$ ,  $\text{NaI}$ .

Decomp. by hot  $\text{H}_2\text{O}$ . (Rudorff.)

Strontium arsenite,  $\text{Sr}_2(\text{AsO}_3)_2$ .

Sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, *l.c.*)

Sol. in  $\text{H}_2\text{O}$ , insol. in alcohol (identical with Stein.) (Reichard, B. 1894, 27, 1036)

$\text{Sr}_2\text{As}_2\text{O}_6 + 2\text{H}_2\text{O}$ . Quite easily sol. in  $\text{H}_2\text{O}$  (Stein.)

Sl. sol. in  $\text{H}_2\text{C}$ ,  $\text{SrO}_2\text{H}_2 + \text{Aq.}$  or  $\text{H}_3\text{AsO}_4 + \text{Aq}$  (Dumas)

Very sl. sol. in alcohol (Stein.)

Easily sol. in  $\text{H}_2\text{O}$  and in acids. (Stavenhagen, J. pr. 1895, (2) 51, 17)

$\text{Sr}_2\text{As}_2\text{O}_6$ . Moderately sol. in  $\text{H}_2\text{O}$ . (Reichard, B. 1894, 27, 1036)

Strontium arsenite iodide,  $\text{SrI}_2$ ,  $3\text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$ .

As Ba comp. (Grühl, Dissert. 1897.)

Thallium arsenite,  $\text{Tl}_3\text{AsO}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$  and alcohol, easily sol. in acids, especially in dil  $\text{H}_2\text{SO}_4$ . (Stavenhager, *l.c.*)

Tin (stannous) arsenite,  $\text{Sn}_2(\text{AsO}_3)_2$ .

Ppt., decomp. by acids and alkali. (Reichard, B. 1898, 31, 2169)

+  $2\text{H}_2\text{O}$  Sl. sol. in  $\text{H}_2\text{O}$  Easily sol. in dil. acids and alkalis (Stavenhagen, *l.c.*)

Tin (stannic) arsenite,  $\text{Sn}_2(\text{AsO}_4)_2 + 5\frac{1}{2}\text{H}_2\text{O}$

Sl. sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, *l.c.*)

$5\text{SnO}_2$ ,  $2\text{As}_2\text{O}_3$  Ppt. Sol. in acids without decomp. (Reichard, B. 1894, 27, 1025)

$\text{Sn}_2\text{As}_2\text{O}_{17}$ . Ppt (Reichard, B. 1898, 31, 2169)

Uranium arsenite,  $\text{UO}_2$ ,  $\text{As}_2\text{O}_3$ .

Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; only sl. sol.  $\text{KOH} + \text{Aq.}$  Sol. in acids. (Reichard, B. 1894, 27, 1029)

Zinc arsenite,  $\text{ZnO}$ ,  $\text{As}_2\text{O}_3$ .

Ppt. (Avery, J. Am. Chem. Soc. 1906, 28, 1163)

$3\text{ZnO}$ ,  $\text{As}_2\text{O}_3$  Sol. in acids without decomp. Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Reichard, B. 1894, 27, 1033.)

Arseniovandic acid,  $\text{As}_2\text{O}_3$ ,  $\text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ , but solution easily decomposes; crystallizes from  $\text{H}_2\text{O}$  with  $10\text{H}_2\text{O}$ . Composition is vanadium dihydrogen arsenate  $(\text{VO})_2\text{H}_2\text{AsO}_4$ . (Friedheim, B. 23, 2600.)

+14, and +18  $\text{H}_2\text{O}$ . (Ditte, C. R. 102, 757.) Could not be obtained (Friedheim.)

$3\text{As}_2\text{O}_3$ ,  $2\text{V}_2\text{O}_5$ . (Berzelius.) Correct formula is as above. (Friedheim)

$3\text{H}_2\text{O}$ ,  $7\text{As}_2\text{O}_6$ ,  $6\text{V}_2\text{O}_5$ . (Gibbs, Am. Ch. J. 7, 209.) Could not be obtained. (Friedheim.)

$3\text{H}_2\text{O}$ ,  $5\text{As}_2\text{O}_3$ ,  $8\text{V}_2\text{O}_5 + 24\text{H}_2\text{O}$ . (Gibbs.) Could not be obtained (Friedheim.)

### Arseniovandates.

According to Friedheim (Z. anorg. 1892, 2, 319) the arseniovandates are double arsenates of  $\text{VO}_2$  and  $\text{NH}_4$ .

Ammonium arseniovandate,  $(\text{NH}_4)_2\text{O}$ ,

$\text{As}_2\text{O}_3$ ,  $2\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$

Efflorescent in dry air, sl. sol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . Composition is ammonium divanadium arsenate

$= (\text{VO})_2(\text{NH}_4)\text{AsO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$ . (Friedheim, B. 23, 2600.)

Sl. sol. in cold  $\text{H}_2\text{O}$  Somewhat more easily sol. in hot  $\text{H}_2\text{O}$  with separation of  $\text{V}_2\text{O}_5$ .

(Schmitz-Dumont, Dissert 1891.)

$2(\text{NH}_4)_2\text{O}$ ,  $3\text{As}_2\text{O}_3$ ,  $2\text{V}_2\text{O}_5 + 4\text{H}_2\text{O}$  Cannot be crystallized from  $\text{H}_2\text{O}$ . Composition is  $(\text{NH}_4)_2\text{HAsO}_4 + 2(\text{VO})_2\text{HAsO}_4$ . (Friedheim.)

Decomp. under  $\text{H}_2\text{O}$  to  $(\text{NH}_4)_2\text{O}$ ,  $2\text{V}_2\text{O}_5$ ,  $\text{As}_2\text{O}_3 + 5\text{H}_2\text{O}$ . (Schmitz-Dumont, *l.c.*)

$5(\text{NH}_4)_2\text{O}$ ,  $4\text{As}_2\text{O}_3$ ,  $2\text{V}_2\text{O}_5 + 18\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 102, 1019.) Does not exist (Friedheim, B. 23, 2605.)

Calcium arseniovanadate,  $2\text{CaO}, 3\text{As}_2\text{O}_5, 2\text{V}_2\text{O}_5 + 2\text{H}_2\text{O} = \text{CaHAsO}_4 + 2(\text{VO}_3)\text{H}_2\text{AsO}_4 + 8\text{H}_2\text{O}$

Can be crystallized in presence of vanadic acid without decomp (Friedheim)  
Efflorescent. Sol in  $\text{H}_2\text{O}$  (Schmitz-Dumont, l.c.)

Cobalt arseniovanadate,  $\text{CoO}, \text{As}_2\text{O}_5, \text{V}_2\text{O}_5 + 9\text{H}_2\text{O} = \text{Co}(\text{VO}_3)_2\text{H}_2(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Friedheim.)

Copper arseniovanadate,  $\text{CuO}, \text{As}_2\text{O}_5, \text{V}_2\text{O}_5 + 4\text{H}_2\text{O} = \text{Cu}(\text{VO}_3)_2\text{H}_2(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Friedheim.)

Magnesium arseniovanadate,  $\text{MgO}, \text{As}_2\text{O}_5, \text{V}_2\text{O}_5 + 10\text{H}_2\text{O} = (\text{VO}_3)_2\text{MgH}_2(\text{AsO}_4)_2 + 9\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  (Friedheim.)

Moderately sol. in  $\text{H}_2\text{O}$ . Solution decomp. on standing. (Schmitz-Dumont, l.c.)  
 $2\text{MgO}, 3\text{As}_2\text{O}_5, 2\text{V}_2\text{O}_5 + 23\text{H}_2\text{O} = \text{MgHAsO}_4 + 2(\text{VO}_3)_2\text{H}_2\text{AsO}_4 + 9\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Friedheim.)

Sol. in  $\text{H}_2\text{O}$  but solution decomp. on evaporation. (Schmitz-Dumont, l.c.)

Potassium arseniovanadate,  $\text{K}_2\text{O}, \text{As}_2\text{O}_5, 2\text{V}_2\text{O}_5 + 5\text{H}_2\text{O} = (\text{VO}_3)_2\text{KAsO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Friedheim.)

Sl. sol. in cold  $\text{H}_2\text{O}$  Partially decomp. on heating. (Schmitz-Dumont.)

Strontium arseniovanadate,  $2\text{SrO}, 3\text{As}_2\text{O}_5, 2\text{V}_2\text{O}_5 + 20\text{H}_2\text{O} = \text{SrHAsO}_4 + 2(\text{VO}_3)_2\text{H}_2\text{AsO}_4 + 7\frac{1}{2}\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Friedheim.)

+  $21\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Schmitz-Dumont.)

Zinc arseniovanadate,  $\text{ZnO}, \text{As}_2\text{O}_5, \text{V}_2\text{O}_5 + 6\frac{1}{2}\text{H}_2\text{O} = \text{Zn}(\text{VO}_3)_2\text{H}_2(\text{AsO}_4)_2 + 5\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Friedheim.)

$2\text{ZnO}, 3\text{As}_2\text{O}_5, 2\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$ , and  $+18\text{H}_2\text{O} = \text{ZnHAsO}_4 + 2(\text{VO}_3)_2\text{H}_2\text{AsO}_4$ , and  $+6\frac{1}{2}\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Friedheim.)

### Arseniovanadicotungstic acid.

Ammonium arseniovanadicotungstate,  $17(\text{NH}_4)_2\text{O}, 2\text{As}_2\text{O}_5, 14\frac{1}{2}\text{V}_2\text{O}_5, 29\text{WO}_3 + 98\text{H}_2\text{O}$

Sl. sol. in cold  $\text{H}_2\text{O}$ . Readily sol. in boiling  $\text{H}_2\text{O}$ . Insol. in alcohol, ether, benzene,  $\text{CS}_2$ ,  $\text{CHCl}_3$ , acetone, nitrobenzene, aniline and acetic anhydride. (Rogers, J. Am. Chem. Soc. 1903, 25, 307.)

### Arseniovanadicovanadic acid.

Ammonium arseniovanadicovanadate,  $5(\text{NH}_4)_2\text{O}, 12\text{As}_2\text{O}_5, 12\text{VO}_3, 6\text{V}_2\text{O}_5 + 7\text{H}_2\text{O}$ .

Sl. sol. in cold, sol. in hot  $\text{H}_2\text{O}$ , from which crystallizes—

$4(\text{NH}_4)_2\text{O}, 9\text{As}_2\text{O}_5, 9\text{VO}_3, 8\text{V}_2\text{O}_5 + 11\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 7, 209.)

### Arseniovanadicovanadiotungstic acid.

Ammonium arseniovanadicovanadiotungstate,  $17(\text{NH}_4)_2\text{O}, 2\text{As}_2\text{O}_5, 7\text{V}_2\text{O}_5, 4\text{V}_2\text{O}_3, 32\text{WO}_3 + 73\text{H}_2\text{O}$ .

Sl. sol. in cold, readily sol. in boiling  $\text{H}_2\text{O}$ . (Rogers, J. Am. Chem. Soc. 1903, 25, 310.)

### Arseniovanadiotungstic acid.

Ammonium arsenovanadiotungstate,  $18(\text{NH}_4)_2\text{O}, 2\text{As}_2\text{O}_5, 13\text{V}_2\text{O}_5, 39\text{WO}_3 + 88\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in organic solvents. (Rogers, J. Am. Chem. Soc. 1903, 25, 306.)

### Arseniuretted hydrogen, $\text{AsH}_3$ .

See Arsenic hydride.

### Arsenochromic acid.

Potassium arsenochromate,  $\text{K}_4\text{Cr}_2\text{As}_2\text{O}_{16} + 12\text{H}_2\text{O}$ .

Sol. in moderately conc. mineral acids. (Tarugi, C. C. 1897, II, 724.)

$\text{K}_7\text{Cr}_2\text{As}_2\text{O}_{23} + 24\text{H}_2\text{O}$ . Ppt. Sol. in dil. warm acids (Tarugi.)

Potassium hydrogen arsenochromate,  $\text{K}_4\text{H}_4\text{Cr}_2\text{As}_2\text{O}_{16}$ .

(Tarugi, C. C. 1897, II, 724.)

### Arsenosarseniotungstic acid.

Potassium arsenosarseniotungstate,  $10\text{K}_2\text{O}, 4\text{As}_2\text{O}_5, \text{As}_2\text{O}_3, 21\text{WO}_3 + 26\text{H}_2\text{O}$ .

Precipitate. Sol. in a large amount of hot  $\text{H}_2\text{O}$  (Gibbs, Am. Ch. J. 7, 313.)

### Arsenosomolybdic acid.

Ammonium arsenosomolybdate,  $3(\text{NH}_4)_2\text{O}, 5\text{As}_2\text{O}_5, 12\text{MoO}_3 + 24\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 7, 313.)

Ammonium barium arsenosomolybdate,  $3(\text{NH}_4)_2\text{O}, 2\text{BaO}, 5\text{As}_2\text{O}_5, 10\text{MoO}_3 + 50\text{H}_2\text{O}$ .

Ppt. (Ephraim, Z. anorg. 1910, 66, 57.)

Ammonium cupric arsenosomolybdate,  $(\text{NH}_4)_2\text{O}, \text{CuO}, 2\text{As}_2\text{O}_5, 4\text{MoO}_3 + 2\text{H}_2\text{O}$ , and  $2(\text{NH}_4)_2\text{O}, \text{CuO}, 3\text{As}_2\text{O}_5, 6\text{MoO}_3 + 13\text{H}_2\text{O}$ .

Ppts. (Ephraim, Z. anorg. 1910, 66, 58.)

Barium arsenosomolybdate,  $3\text{BaO}, 2\text{As}_2\text{O}_5, 8\text{MoO}_3 + 13\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$  (Gibbs.)

Copper arsenosomolybdate,  $2\text{CuO}, 3\text{As}_2\text{O}_5, 6\text{MoO}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

Manganese arsenosomolybdate,  $2\text{MnO}, 3\text{As}_2\text{O}_5, 6\text{MoO}_3 + 6\text{H}_2\text{O}$ , and  $+15\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Gibbs.)

**Potassium arsenosomolybdate**,  $3K_2O, As_2O_3, 5MoO_3 + 3H_2O$ .

Easily sol. in  $H_2O$ . (Ephraim, Z. anorg. 1910, 66, 54.)

$3K_2O, As_2O_3, 8MoO_3 + 18H_2O$ . Easily sol in  $H_2O$ . (Ephraim.)

**Sodium arsenosomolybdate**,  $Na_2O, As_2O_3, 2MoO_3 + 6H_2O$ .

Easily sol. in  $H_2O$ . (Ephraim, Z. anorg. 1910, 66, 56.)

$2Na_2O, As_2O_3, 4MoO_3 + 13H_2O$ . Ppt. (Ephraim.)

**Zinc arsenosomolybdate**,  $2ZnO, 3As_2O_3, 6MoO_3 + 6H_2O$ .

Sol. in  $H_2O$ . (Gibbs.)

**Arsenosophosphotungstic acid.**

**Potassium arsenosophosphotungstate**,  $10K_2O, 14As_2O_3, 3P_2O_5, 32WO_3 + 28H_2O$ .

Moderately sol. in cold, very easily in hot  $H_2O$ . (Gibbs.)

$7K_2O, 2As_2O_3, 4P_2O_5, 60WO_3 + 55H_2O$ . Sol in hot  $H_2O$  with decomp. (Gibbs.)

**Potassium sodium arsenosophosphotungstate**,  $5K_2O, Na_2O, 2As_2O_3, 2P_2O_5, 12WO_3 + 15H_2O$ .

(Gibbs, Am. Ch. J. 7, 313.)

**Arsenosotungstic acid.**

**Ammonium arsenosotungstate**,  $7(NH_4)_2O, 2As_2O_3, 18WO_3 + 18H_2O$ .

Sol. in  $H_2O$ . (Gibbs.)

**Barium arsenosotungstate**,  $4BaO, As_2O_3, 9WO_3 + 21H_2O$ .

Precipitate. Nearly insol in  $H_2O$ . (Gibbs.)

**Sodium arsenosotungstate**,  $9Na_2O, 8As_2O_3, 16WO_3 + 55H_2O$ .

Very sol. in  $H_2O$ . (Gibbs, Am. Ch. J. 7, 313.)

**Arsenyl bromide**,  $AsOBr$ .

$H_2O$  dissolves out  $As_2O_3$ ; insol. in alcohol (Sérullas.)

$+H_2O$ . (Wallace, Phil. Mag. (4) 17, 122.)  $As_2O_3Br_2 \approx 2AsBr_3, 3As_2O_3 + 12H_2O$ .

**Arsenyl bromide with MBr.**

See Arsenite bromide, M.

**Arsenyl chloride**,  $AsOCl$ .

Sol. in  $H_2O$  with decomp  $+H_2O$ . (Wallace, Phil. Mag. (4) 16, 358.)

$As_2O_3Cl$ . (Wallace.)

**Arsenyl chloride with MCl.**

See Arsenite chloride, M.

**Arsenyl potassium fluoride**,  $AsOF_2, KF + H_2O$ .

(Marignac, A. 145, 237.)

**Arsenyl iodide**,  $As_2I_2O_{11} = 2AsOI, 3As_2O_3 + 12H_2O$

Decomp. by  $H_2O$ . (Wallace, Phil. Mag. (4) 17, 122.)

Sl. sol. in cold  $H_2O$ , less sol. in alcohol. (Plisson, J. Pharm. 14, 46.)

**Arsenyl iodide with MI.**

See Arsenite iodide, M.

**Arsenyl sulphatiodide**,  $As_{12}I_2S_8O_9$

Scarcely attacked by cold  $H_2O$ . Boiling  $H_2O$  extracts  $AsI_3$ . Decomp. by hot  $HNO_3$  or  $H_2SO_4$ . Easily sol. in  $KOH$ , or  $NH_4OH + Aq$ . (Schneider, J. pr. (2) 36, 513.)

**Arsine.**

See Arsenic hydride.

**Atmospheric air.**

See Air, atmospheric.

**Auriamine**,  $Au(OH)_2NH_2$

(Jacobsen, C. R. 1908, 146, 1214.)

**Diauriamine**,  $Au_2(OH)_4NH_2$ .

(Jacobsen, C. R. 1908, 146, 1214.)

**Sesquiauriamine**,  $NAu_3, NH_3$ .

Decomp. by  $H_2O$  into  $NAu_3$ . (Raschig, A. 235, 341.)

**Auric acid**,  $HAuO_4$ .

Sol. in  $HBr$ , or  $HCl + Aq$ . (Kruss, B. 19, 2546.)

**Ammonium aurate.**

See Auroamidoimide.

**Barium aurate**,  $BaAuO_4 + 5H_2O$ .

Sl. sol. in  $H_2O$ . (Weigand, Zeit. angew. Ch. 1905, 19, 139.)

$+6H_2O$ . Sl. sol. in  $H_2O$ . Sol. in dil.  $H_2SO_4$  and in dil.  $HNO_3$ . Sol. in  $HCl$ . Decomp. by alcohol. (Meyer, C. R. 1907, 145, 806.)

**Calcium aurate (?)**.

Insol. in  $H_2O$ ; sol. in  $CaCl_2 + Aq$ . (Fremy, A. ch. (3) 31, 485.)

$CaAu_2O_4 + 6H_2O$ . As Ba salt. (Meyer, C. R. 1907, 145, 806.)

**Magnesium aurate (?)**.

Ppt. Insol. in  $H_2O$ ; sol. in  $MgCl_2 + Aq$ . (Pelletier.)

**Potassium aurate**,  $KAuO_4 + 3H_2O$ .

Very sol. in  $H_2O$ , and easily decomp. (Fremy, A. ch. (3) 31, 483.)

Sol. in alcohol; the solution in alcohol does not decomp. below  $50^\circ$ . (Figuer, A. ch. (3) 11, 364.)

**Potassium aurate sulphite**,  $KAuO_4, 2K_2SO_3 + 5H_2O$

Sol. in  $H_2O$  with decomp. Nearly insol. in alkaline solutions. (Fremy, A. ch. (3) 31, 485.)

Sodium aurate,  $\text{Na}_3\text{Au}_2\text{O}_4 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{H}_2\text{SO}_4$ , dil.  $\text{HNO}_3$ , and  $\text{HCl}$  with decomp. Decomp. by alcohol. (Meyer, C. R. 1907, 145. 806.)

Strontium aurate,  $\text{SrAu}_2\text{O}_4 + 6\text{H}_2\text{O}$ .

As Ba salt (Meyer.)

Auriumide chloride,  $\text{Au}(\text{NH})\text{Cl}$ .

(Raschig)

Auriumide nitrate,  $\text{Au}_3\text{N}_2\text{H}_2\text{O}$ ,  $2\text{HNO}_3$ , or  $\text{AuN}$ ,  $\text{HNO}_3 + \frac{1}{2}\text{H}_2\text{O}$ , or  $\text{Au}_2\text{O}(\text{NH})_2$ ,  $2\text{HNO}_3$ .

Not deliquescent. Decomp. by hot  $\text{H}_2\text{O}$  into  $\text{Au}_2\text{O}(\text{NH})_2$ . (Schottlander, J. B. 1884. 453.)

Auroamidoimide,  $\text{Au}(\text{HN})\text{NH}_2 + 3\text{H}_2\text{O}$ .

(Fulminating gold.) Insol. in  $\text{H}_2\text{O}$ , not attacked by dil. acids; sol. in conc. acids, and in moderately dil. acids, when freshly precipitated. Insol. in alkalis or alcohol. Sol. in  $\text{KCN} + \text{Aq}$ .

Triauroamine,  $\text{Au}_3\text{N} + 5\text{H}_2\text{O}$ .

Not decomp. by boiling dil. acetic acid,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4$ . (Raschig, A. 1886, 235. 349.)

Auricyanhydric acid,  $\text{HAu}(\text{CN})_4 + 1\frac{1}{2}\text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$ , alcohol, or ether.

See also Bromauricyanides.

Chlorauricyanides.

Iodauricyanides.

Ammonium auricyanide,  $\text{NH}_4\text{Au}(\text{CN})_4$ .

Easily sol. in  $\text{H}_2\text{O}$  or alcohol. Insol. in ether.

Cobaltous auricyanide,  $\text{Co}[\text{Au}(\text{CN})_4]_2 + 9\text{H}_2\text{O}$ .

Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . Sl. sol. in alcohol (Lindbom.)

Potassium auricyanide,  $\text{KAu}(\text{CN})_4 + 1\frac{1}{2}\text{H}_2\text{O}$

Efflorescent. Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . Easily sol. in alcohol.

Silver auricyanide,  $\text{AgAuCN}_4$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

Diaurodiamine nitrate.

See Auriumide nitrate.

Aurobromhydric acid.

See Bromauric acid.

Aurobromic acid.

See Bromauric acid.

Aurochlorhydric acid.

See Chlorauric acid.

Aurochloric acid.

See Chlorauric acid.

Aurocyanhydric acid.

Aurocyanides with  $\text{MCN}$ .

See Cyanide, aurous with  $\text{MCN}$ .

Azinosulphonic acid.

Ammonium azinosulphonate,  $\text{N}_2\text{SO}_2\text{NH}_4$ .

(Traube, B. 1914, 47. 944.)

Barium azinosulphonate,  $(\text{N}_2\text{SO}_2)_2\text{Ba}$

(Traube, B. 1914, 47. 944.)

Potassium azinosulphonate,  $\text{N}_2\text{SO}_2\text{K}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Can be cryst. from boiling abs. alcohol. (Traube, B. 1914, 47. 943.)

Sodium azinosulphonate,  $\text{N}_2\text{SO}_2\text{Na}$ .

(Traube, B. 1914, 47. 944.)

Azoimide,  $\text{HN}_3$ .

Miscible with  $\text{H}_2\text{O}$  and alcohol (Curtius and Radershausen, J. pr. (2) 43. 207.)

Stable in aq. solution; decomp. slowly by dil. boiling  $\text{HCl}$ . (Curtius, J. pr. 1898, (2) 58. 265.)

For salts of  $\text{HN}_3$ , see azoimide of metal under metal.

Azoimide, hydroxylamine,  $\text{N}_2\text{H}_4\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Gradually volatilizes at ord. temp. (Dennis, J. Am. Chem. Soc. 1907, 29. 22.)

Azophosphoric acid.

See Pyrophosphamic acid.

Deutazophosphoric acid.

See Pyrophosphodamic acid.

Barium, Ba.

Decomp. by  $\text{H}_2\text{O}$  and abs. alcohol. (Guntz, C. R. 1901, 133. 874.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 327.)

Barium amalgam,  $\text{BaHg}_{12}$ .

Stable in contact with liquid amalgam up to  $30^\circ$ . Can be cryst. from  $\text{Hg}$  without decomp. if temp. does not exceed  $30^\circ$ . (Kerp, Z. anorg. 1900, 25. 68.)

$\text{BaHg}_{12}$ . Stable in contact with liquid amalgam from  $30^\circ$ – $100^\circ$ . Can be cryst. from  $\text{Hg}$  without decomp. at any temp. within these limits. (Kerp.)

Barium amide,  $\text{Ba}(\text{NH}_2)_2$ .

B.-pt  $280^\circ$ . (Mentrel, C. C. 1903, I. 276.)

Decomp. by  $\text{H}_2\text{O}$  (Guntz and Mentrel, Bull. Soc. 1903, (3) 29. 578.)

Barium potassium amide.

See Potassium ammonobarate.

Barium ammonia,  $\text{Ba}(\text{NH}_3)_6$ .

Takes fire in the air. Only sl. sol. in liquid  $\text{NH}_3$ . Violently decomp. by  $\text{H}_2\text{O}$ . (Mentrel, C. R. 1902, 135. 740.)

**Barium arsenide,  $\text{Ba}_3\text{As}_2$** Decomp. by  $\text{H}_2\text{O}$ . (Lebeau, C. R. 1899, 129. 48.)**Barium azoimide,  $\text{Ba}(\text{N}_3)_2$** 

Very sl. hygroscopic, explosive

12.5 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $0^\circ$   
 16 2 " " " 100 "  $\text{H}_2\text{O}$  " 10  $5^\circ$

 17 3 " " " 100 "  $\text{H}_2\text{O}$  " 17"

0.0172 pts are sol. in 100 pts. abs alcohol at  $16^\circ$ .

Insol. in ether. (Curtius, J. pr. 1898, (2) 58. 290)

See also Barium nitride.

**Barium boride,  $\text{BaB}_2$** Sol. in fused oxidizing agents, not decomp. by  $\text{H}_2\text{O}$ ; insol. in aq acids; sl sol. in conc.  $\text{H}_2\text{SO}_4$ , sol. in dil and conc.  $\text{HNO}_3$ . (Moissan, C. R. 1897, 125, 634.)**Barium subbromide sodium bromide,  $\text{BaBr}$ ,  $\text{NaBr}$** Decomp. by  $\text{H}_2\text{O}$ . (Guntz, C. R. 1903, 136. 750.)**Barium bromide,  $\text{BaBr}_2$ , and  $+2\text{H}_2\text{O}$** 100 pts.  $\text{H}_2\text{O}$  dissolve—

Ch. 10. 787)100 g.  $\text{BaBr}_2 + \text{CH}_3\text{OH}$  contain 0.4 g.  $\text{BaBr}_2$  at the critical temp. (Centnerszwer, Z. phys. Ch. 1910, 72. 437)At  $15^\circ$ , 1 pt. by weight is sol in:

36 pts. methyl alcohol, sp. gr. 0.709  
 207 " ethyl " " 0.8035  
 652 " propyl " " 0.8085

(Rohland, Z. anorg. 1897, 15. 413.)

Nearly insol in boiling amyl alcohol, 10 cem dissolving only an amt. equal to 1.3 mg  $\text{BaO}$  (Browning, Sill. Am J. 144. 459)

Sol. in acetone. (Naumann, B. 1904, 37. 4328; Eidmann, C. C. 1899, II 1014)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Difficultly sol. in methyl acetate (Naumann, B. 1909, 42. 3789)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

**Barium cadmium bromide,  $\text{BaBr}_2$ ,  $\text{CdBr}_2 + 4\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ . (v. Hauer, W. A. B. 20. 40.)**Barium rhodium bromide.**

See Bromorhodite, barium.

**Barium bromide ammonia,  $\text{BaBr}_2 \cdot 8\text{NH}_3$ .**Decomp. by  $\text{H}_2\text{O}$ . (Joannis, C. R. 1905, 140. 1244.)**Barium bromide hydrazine,  $\text{BaBr}_2 \cdot 2\text{N}_2\text{H}_4$ .**Hydroscopic. Very sol. in  $\text{H}_2\text{O}$ . Insol in alcohol. (Franzen, Z. anorg 1908, 60. 291.)**Barium bromofluoride,  $\text{BaBr}_2 \cdot \text{BaF}_2$ .**Insol. in and undecomp. by boiling alcohol. Sol. in  $\text{HBr}$  and in  $\text{HNO}_3$ . Decomp. by  $\text{H}_2\text{O}$ , hot  $\text{H}_2\text{SO}_4$ , dil.  $\text{HCl}$ , dil.  $\text{HNO}_3$ , or dil. acetic acid. (Defacqz, C. R. 1904, 138. 199)**Barium carbide,  $\text{BaC}_2$ .**Decomp. by  $\text{H}_2\text{O}$ . (Maquenne, C. R. 144. 360.)Sp. gr. 3.75. Easily decomp. by  $\text{H}_2\text{O}$  and dil. acids (Moissan, Bull. Soc. 1894, (3) 11. 1008.)

Barium carbonyl, Ba(CO)<sub>2</sub>.

Sol. in H<sub>2</sub>O. (Guntz and Mentrel, Bull. Soc. 1903, (3) 29. 586.)

Barium subchloride, BaCl

Decomp. by H<sub>2</sub>O. (Guntz, C. R. 1903, 136. 751.)

Barium subchloride sodium chloride, BaCl, NaCl

Decomp. by H<sub>2</sub>O (Guntz, C. R. 1903, 136. 750)

Barium chloride, BaCl<sub>2</sub>, and +2H<sub>2</sub>O.

Permanent in dry air.

100 pts H<sub>2</sub>O at t° dissolves (a) pts BaCl<sub>2</sub> and (b) pts BaCl<sub>2</sub>+2H<sub>2</sub>O

t°	a	b	t°	a	b
15 04	34 80	43 50	74 89	59 94	65 51
40 31	43 84	55 63	105 48	59 58	77 80

(Gay-Lussac, A. ch. (2) 11. 309)

100 pts H<sub>2</sub>O at t° dissolves 32 62 + 0.2711 pts. BaCl<sub>2</sub> (Kopp)

100 pts H<sub>2</sub>O dissolves pts. BaCl<sub>2</sub>+2H<sub>2</sub>O at t°.

t°	Pts. BaCl <sub>2</sub> +2H <sub>2</sub> O	t°	Pts. BaCl <sub>2</sub> +2H <sub>2</sub> O

35	39 5				

(Mulder, calculated from his own and other observations. Scheik. Verhandel. 1864. 45.)

The saturated solution contains—

60.3 pts. BaCl<sub>2</sub> to 100 pts. H<sub>2</sub>O, and boils at 104.1°. (Mulder.)

60.1 pts. BaCl<sub>2</sub> to 100 pts. H<sub>2</sub>O, and boils at 104.4°. (Legrand.)

61.8 pts. BaCl<sub>2</sub> to 100 pts. H<sub>2</sub>O, and boils at 104.5°. (Griffith.)

59.58 pts BaCl<sub>2</sub> to 100 pts. H<sub>2</sub>O, and boils at 105.48° (Gay-Lussac); at 106° (Kremers).

54.1 pts BaCl<sub>2</sub> to 100 pts. H<sub>2</sub>O, and forms crust at 104.4°; highest temperature observed, 104.9°. (Gerlach, Z anal. 26. 426.)

Sat. BaCl<sub>2</sub>+Aq contains at:

100° 130° 144° 160° 180° 215°  
36 37 3 37 5 38.9 40.7 43.1% BaCl<sub>2</sub>

(Étard, A. ch. 1894, (7) 2. 535.)

Aq. solution contains 27.6% BaCl<sub>2</sub> at 30°. (Shreinemakers, C. C. 1910, I. 9.)

Solubility of  $\text{BaCl}_2 + 2\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  equals 1.745 mol.-litre at  $30^\circ$ . (Masson, Chem. Soc. 1911, 99, 1136.)

$\text{BaCl}_2 + \text{Aq}$  sat. at  $8^\circ$  has sp gr 1.27 (Anthon)  
 $\text{BaCl}_2 + \text{Aq}$  sat at  $15^\circ$  has sp gr 1.282 (Michel and Krafft.)

$\text{BaCl}_2 + \text{Aq}$  sat at  $18.1^\circ$  has sp gr 1.285, and contains 44.31 pts  $\text{BaCl}_2 + 2\text{H}_2\text{O}$  to 100 pts  $\text{H}_2\text{O}$ . (Karsten.)

(Schreinemakers and Massink, Chem. Weekbl. 1910, 7. 213.)

100 pts. absolute methyl alcohol dissolve 2.18 pts.  $\text{BaCl}_2$  at  $15.5^\circ$ , and 7.3 pts.  $\text{BaCl}_2, 2\text{H}_2\text{O}$  at  $6^\circ$ . (de Bruyn, Z. phys. Ch. 10. 783.)

At  $15^\circ \text{C}$ . 1 pt. by weight is sol. in:—  
78 pts. methyl alcohol of sp. gr. 0.790  
7,000 " ethyl " " " " 0.8035  
100,000 " propyl " " " " 0.8085  
(Rohland, Z. anorg. 1897, 15. 413.)

Absolutely insol. in boiling amyl alcohol. (Browning, Sill. Am. J. 144. 459.)  
Absolutely insol. in acetic ether. (Cann, C. R. 102. 363.)

Very sl. sol. in acetone (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

100 pts. by weight of glycerine dissolve 10 pts.  $\text{BaCl}_2$  at  $15.5^\circ$ . (de Bruyn, Z. phys. Ch. 10. 783.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.) (Eidmann, C. C. 1899, II. 1014.)

Insol. in benzonitrile (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in anhydrous pyridine, 97% pyridine + Aq. and 95% pyridine + Aq. Sl. sol. in 93% pyridine + Aq. (Kahlenberg, J. Am. Chem. Soc. 1903, 30. 1107.)

+  $\text{H}_2\text{O}$  Solution of monohydrate sat. at  $6^\circ$  contains 31.57%  $\text{BaCl}_2$  (Schreinemakers, Chem. Weekbl. 1910, 7. 213.)

2.5 grams of the monohydrate are sol. in 100 cc. of methyl alcohol at  $14^\circ$ . (Kirschner, Z. phys. Ch. 1911, 76. 176.)

Exact solubility in methyl alcohol cannot be determined as  $\text{BaCl}_2 + \text{H}_2\text{O}$  separates out from a sat. solution of the dihydrate. (Kirschner, Z. phys. ch. 1911, 76. 177.)

Barium cadmium chloride,  $\text{BaCl}_2, \text{CdCl}_2 + 4\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (v. Hauer.)

(Rimbach, B. 1897, 30. 3083)

Barium mercuric chloride, basic, BaCl<sub>2</sub>, HgO + 6H<sub>2</sub>ODecomp. by H<sub>2</sub>O (André, C. R. 104. 431.)Barium mercuric chloride, BaCl<sub>2</sub>, 2HgCl<sub>2</sub> + 2H<sub>2</sub>OEfflorescent in dry air, sol. in H<sub>2</sub>O (v. Bonsdorff, Pogg. 17. 130)The salt BaCl<sub>2</sub>, 2HgCl<sub>2</sub> + 2H<sub>2</sub>O described by Bonsdorff does not form under the conditions which he gives. (Foote, Am. Ch. J. 1904, 32. 251)BaCl<sub>2</sub>·3HgCl<sub>2</sub>·6H<sub>2</sub>O. Solubility determinations with mixtures of BaCl<sub>2</sub> and HgCl<sub>2</sub> show that these chlorides do not form a double salt at 25°, but that a transition temp. exists at about 17.2° below which the salt BaCl<sub>2</sub>·3HgCl<sub>2</sub>·6H<sub>2</sub>O forms. (Foote, Am. Ch. J. 1904, 32. 251.)+ 8H<sub>2</sub>O. Less sol. in H<sub>2</sub>O than the Sr and Mg double salts. (Swan, Am. Ch. J. 1898, 20. 433.)Barium rhodium chloride, 3BaCl<sub>2</sub>, Rh<sub>2</sub>Cl<sub>4</sub>.

See Chlororhodite, barium.

Barium stannous chloride, BaCl<sub>2</sub>, SnCl<sub>2</sub> + 4H<sub>2</sub>O.Sol. in H<sub>2</sub>O. (Poggiale, C. R. 20. 1183.)

Barium stannic chloride.

See Chlorostannate, barium.

Barium uranium chloride, BaCl<sub>2</sub>·UCl<sub>4</sub>.Decomp. by H<sub>2</sub>O. (Aloy, Bull. Soc. 1899, (3) 21. 265.)Barium zinc chloride, BaCl<sub>2</sub>, ZnCl<sub>2</sub> + 4H<sub>2</sub>O. Deliquescent, and sol. in H<sub>2</sub>O. (Warner, C. N. 27. 271)Pptd. from warm solution only. (Ephraim, Z. anorg. 1910, 67. 381)  
+ 2½H<sub>2</sub>O Pptd. from cold solution. (Ephraim)Barium chloride hydrazine, BaCl<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>.

Hydroscopic. (Franzen, Z. anorg. 1908, 60. 290)

Barium chloride hydroxylamine, BaCl<sub>2</sub>, 2NH<sub>2</sub>OH.Very sol. in H<sub>2</sub>O. (Crismer, Bull. Soc. (3) 3. 118)Barium chloride sulphuric anhydride, BaCl<sub>2</sub>, 2SO<sub>3</sub>.Decomp. by H<sub>2</sub>O (Schultz-Sellack, B. 4. 113.)

Barium chlorofluoride, BaClF.

Difficultly sol. in H<sub>2</sub>O, but much more sol. than BaF<sub>2</sub>. Decomp. by H<sub>2</sub>O, so that when washed on filter, the filtrate contains more BaCl<sub>2</sub> than BaF<sub>2</sub>. (Berzelius, Pogg. 1. 19.)Insol. in and undecomp. by boiling alcohol; sol. in conc. HCl and HNO<sub>3</sub>. Decomp. by hot H<sub>2</sub>O, hot H<sub>2</sub>SO<sub>4</sub>, dil. acetic acid, dil. HCl or dil. HNO<sub>3</sub>. (Defacqz, C. R. 1904, 138. 198.)Barium cyanamide, BaCN<sub>2</sub>.Decomp. by H<sub>2</sub>O. (Frank, C. C. 1902, II. 774.)

**Barium subfluoride sodium fluoride, BaF, NaF**

Decomp. by H<sub>2</sub>O. (Guntz, C. R. 1903, 136. 750.)

**Barium fluoride, BaF<sub>2</sub>**

Scarcely sol. in H<sub>2</sub>O (Berzelius); less sol. in H<sub>2</sub>O than CaF<sub>2</sub>.

1 liter H<sub>2</sub>O dissolves 1630 mg. BaF<sub>2</sub> at 18°. (Kohlrausch, Z. phys. Ch. 1904, 60. 356.)

1605 mg. are contained in 1 l of sat. solution at 18°. (Kohlrausch, Z. phys. Ch. 1903, 64. 168.)

Insol. in molten MnCl<sub>2</sub>, MnBr<sub>2</sub>, MnI<sub>2</sub>, MnCl<sub>2</sub>+BaCl<sub>2</sub>, MnBr<sub>2</sub>+BaBr<sub>2</sub> and MnI<sub>2</sub>+BaI<sub>2</sub> (Defacqz, A. ch. 1904, (8) 1. 350.)

Easily sol. in HCl, HNO<sub>3</sub>, or HF+Ag. (Gay-Lussac and Thénard.)

Sl. sol. in liquid HF. (Franklin, Z. anorg. 1905, 46. 2.)

Insol. in ethyl acetate (Naumann, B. 1910, 43. 314.)

Sol. in an aqueous solution of sodium citrate. (Spiller.)

**Barium tin (stannic) fluoride.**

See Fluostannate, barium.

**Barium tellurium fluoride, BaF<sub>2</sub>, 2TeF<sub>4</sub>**

Decomp. by H<sub>2</sub>O. (Högbom, Bull. Soc (2) 35. 60.)

**Barium titanium fluoride.**

See Fluotitanate, barium.

**Barium titanyl fluoride, TiO<sub>2</sub>F<sub>2</sub>, BaF<sub>2</sub>**

See Fluoxypertitanate and fluoxytitanate, barium.

**Barium uranyl fluoride.**

See Fluoxyuranate, barium.

**Barium vanadyl fluoride.**

See Fluoxyvanadate, barium.

**Barium zirconium fluoride, 3BaF<sub>2</sub>, 2ZrF<sub>4</sub>+2H<sub>2</sub>O.**

Insoluble precipitate. (Marignac.)

See also Fluozirconate, barium.

**Barium fluoiodide, BaF<sub>2</sub>, BaI<sub>2</sub>**

Decomp. by H<sub>2</sub>O, dil HCl, dil. HNO<sub>3</sub> or hot H<sub>2</sub>SO<sub>4</sub>. Sol. in HI and HNO<sub>3</sub>. Insol. in and undecomp. by boiling alcohol. Decomp. by dil. acetic acid (Defacqz, C. R. 1904, 138. 199.)

**Barium hydride, BaH.**

Decomp. by H<sub>2</sub>O or HCl+Ag. (Winkler, B. 24. 1979.)

Decomp. by H<sub>2</sub>O. (Guntz, C. R. 1901, 132. 964.)

**Barium hydrosulphide, BaS<sub>2</sub>H<sub>2</sub>**

Easily sol. in H<sub>2</sub>O. Insol. in alcohol.

+4H<sub>2</sub>O. Sol. in H<sub>2</sub>O, and the solution dissolves S (Veley, Chem. Soc. 49. 369.)

**Barium hydroxide, BaO<sub>2</sub>H<sub>2</sub>**

100 pts cold H<sub>2</sub>O dissolve 5 pts. BaO<sub>2</sub>H<sub>2</sub> boiling 50

(Davy)

100 pts H<sub>2</sub>O at 20° dissolve 3 45 pts BaO

(Bancroft, C. R. 41. 509)

32.12	0.82	BaO 2H <sub>2</sub> O
34.72	0.59	"
41.09	0.57	BaO 2H <sub>2</sub> O + NaOH H <sub>2</sub> O
42	0	NaOH H <sub>2</sub> O

(Schreinemakers, Z. phys. Ch. 1909, 68, 84.)

50% alcohol dissolves less than 0.5% of its wt. of BaO<sub>2</sub>H<sub>2</sub>+8H<sub>2</sub>O. (Beckmann, J. pr. 1883, (2) 27, 138.)

**Barium subiodide sodium iodide, BaI, NaI.**

Decomp. by H<sub>2</sub>O. (Guntz, C. R. 1903, 136, 750.)

**Barium iodide, BaI<sub>2</sub>.**

Not deliquescent. Very sol in H<sub>2</sub>O and alcohol. 100 pts. of anhydrous salt dissolve: at 0° 19 5° 30° 40° 60° 90° 106° in 59 48 44 43 41 37 35 pts. H<sub>2</sub>O. (Kremers, Pogg. 103, 366.)

Sp. gr. of BaI<sub>2</sub>+Aq containing:

5	10	15	20	25	30% BaI <sub>2</sub>
1.045	1.091	1.143	1.201	1.265	1.333
35	40	45	50	55	60% BaI <sub>2</sub>
1.412	1.495	1.596	1.704	1.825	1.970

(Kremers, Pogg. 111, 63, calculated by Gerlach, Z. anal. 8, 279.)

Easily sol. in alcohol (Henry.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47, 1369.)

Sol in acetone (Naumann, B. 1904, 37, 4328; Erdmann, C. C. 1899, II 1014.)

Sol. in methyl acetate. (Naumann, B. 1906, 42, 3789.)

+2H<sub>2</sub>O At 15°C, 1 pt. by weight in sol. in:

22	pts. methyl alcohol	sp. g.	0.790
93	"	"	0.8035
307	"	"	0.8085

(Rohland, Z. anorg 1897, 15, 413.)

+7H<sub>2</sub>O. (Thomson, B. 10, 1343.)

The composition of the hydrates formed by BaI<sub>2</sub> at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by BaI<sub>2</sub> and of the conductivity and sp. gr. of BaI<sub>2</sub>+Aq. (Jones, Am. Ch. J. 1905, 34, 306.)

**Barium iodide, basic, Ba(OH)I+9H<sub>2</sub>O.**

See Barium oxyiodide.

**Barium bismuth iodide, BaI<sub>3</sub>, 2BiI<sub>3</sub>+18H<sub>2</sub>O.**

Deliquescent; decomp. by H<sub>2</sub>O. (Linau, Pogg. 111, 240.)

**Barium cadmium iodide, BaI<sub>2</sub>, CdI<sub>2</sub>+5H<sub>2</sub>O.**

Deliquescent. (Croft.)

**Barium mercuric iodide, BaI<sub>2</sub>, 2HgI<sub>2</sub>.**

Decomp. by much H<sub>2</sub>O (Boullay.)

BaI<sub>2</sub>, HgI<sub>2</sub> Sol. in H<sub>2</sub>O (Boullay.)

Sp. gr. of sat. solution = 3.575-3.588. (Rohrbach, W. Ann. 20, 169.)

+5H<sub>2</sub>O. (Duboin, C. R. 1903, 143, 314.)

2BaI<sub>2</sub>, 3HgI<sub>2</sub>+16H<sub>2</sub>O. (Duboin, C. R. 1906, 142, 888.)

BaI<sub>2</sub>, 5HgI<sub>2</sub>+8H<sub>2</sub>O As the corresponding Ca salt. (Duboin, C. R. 1906, 142, 888.)

3BaI<sub>2</sub>, 5HgI<sub>2</sub>+21H<sub>2</sub>O. Very deliquescent. (Duboin, C. R. 1906, 142, 889.)

**Barium stannous iodide.**

Very sol in H<sub>2</sub>O (Boullay.)

**Barium zinc iodide, BaI<sub>2</sub>, 2ZnI<sub>2</sub>.**

Deliquescent, and sol. in H<sub>2</sub>O. (Rammelsberg.)

+4H<sub>2</sub>O. Very hygroscopic. (Ephraim, Z. anorg. 1910, 67, 385.)

**Barium nitride, Ba<sub>3</sub>N<sub>2</sub>.**

Decomp. H<sub>2</sub>O violently, not alcohol. (Maquenne, A. ch. (6) 29, 219.)

Ba<sub>3</sub>N<sub>4</sub>

See Barium azoimide.

**Barium oxide, BaO**

Sol in H<sub>2</sub>O with evolution of heat

Easily sol. in dil HNO<sub>3</sub>, or HCl+Aq.

Solubility in NaOH+Aq. See Barium hydroxide.

Solubility in Na<sub>2</sub>O, HCl, +H<sub>2</sub>O at 30°. (Schreinemakers, Z. phys. Ch. 1909, 68, 98.)

Solubility in Na<sub>2</sub>O, NaCl, BaCl<sub>2</sub>+Aq at 30°. (Schreinemakers.)

Insol. in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20, 827.)

Sol. with combination in absolute alcohol and anhydrous wood-spirit. Insol in ether.

Easily sol. in absolute methyl alcohol

1 l. absolute ethyl alcohol sat. with BaO at 9° contains 213.8 g BaO. (Berthelot, B.M. Soc. 8, 389.)

Sol. in methyl alcohol. (Neuberg and Neumann, Biochem. Z. 1905, 1, 173.)

Insol. in acetone (Erdmann, C. C. 1899, II, 1014, Naumann, B. 1904, 37, 4329.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790.)

See also Barium hydroxide.

**Barium peroxide, BaO<sub>2</sub>.**

• Insol. in H<sub>2</sub>O, decomp. by boiling H<sub>2</sub>O.

Sol. in acids with formation of hydrogen dioxide.

Forms hydrate with  $8\text{H}_2\text{O}$ ; also  $10\text{H}_2\text{O}$  (Berthelot, A. ch. (5) 21. 157), also a compound  $\text{BaO}_2 \cdot \text{H}_2\text{O}_2$ , which is very unstable, sl. sol. in cold  $\text{H}_2\text{O}$ , and insol in alcohol or ether (Schöne, A. 192. 257)

+ $8\text{H}_2\text{O}$ . 100 cc pure  $\text{H}_2\text{O}$  dissolve 0.168 g  $\text{BaO}_2 \cdot 8\text{H}_2\text{O}$ ; if  $\text{H}_2\text{O}$  contains 0.3 g  $\text{Ba}(\text{OH})_2 \cdot 8\text{H}_2\text{O}$ , only 0.102 g.  $\text{BaO}_2 \cdot 8\text{H}_2\text{O}$  are dissolved; if 0.6 g  $\text{Ba}(\text{OH})_2 \cdot 8\text{H}_2\text{O}$  only 0.019 g.  $\text{BaO}_2 \cdot 8\text{H}_2\text{O}$  are dissolved. (Schöne, A. 1878, 192. 266.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014, Naumann, B. 1904, 37. 4329.)

**Barium oxybromide,  $\text{Ba}(\text{OH})\text{Br} + 2\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Beckmann, J. pr. (2) 27. 132)

$\text{BaBr}_2 \cdot \text{BaO} + 5\text{H}_2\text{O}$  Sl. sol. in  $\text{H}_2\text{O}$  (Tas-silly, C. R. 1895, 120. 1340)

**Barium oxychloride,  $\text{Ba}(\text{OH})\text{Cl} + 2\text{H}_2\text{O}$**

Decomp. by  $\text{H}_2\text{O}$  (Beckmann, J. pr. (2) 26. 388, 474.)

**Barium mercury oxychloride,  $\text{BaCl}_2 \cdot \text{HgO} + 8\text{H}_2\text{O}$**

Decomp. by  $\text{H}_2\text{O}$  (André, C. R. 104. 431.)

**Barium oxyiodide,  $\text{Ba}(\text{OH})\text{I} + 9\text{H}_2\text{O}$**

Decomp. by  $\text{H}_2\text{O}$  and alcohol. (Beckmann, B. 14. 2154)

$\text{BaI}_2 \cdot \text{BaO} + 9\text{H}_2\text{O}$  Sl. sol. in  $\text{H}_2\text{O}$  (Tas-silly, C. R. 1895, 120. 1340)

**Barium oxysulphides,  $\text{Ba}_7\text{O}_5\text{S}_4 + 58\text{H}_2\text{O}$ ,  
 $\text{Ba}_4\text{OS} + 10\text{H}_2\text{O}$ ,  $\text{Ba}_4\text{OS}_2 + 28\text{H}_2\text{O}$ .**

Very unstable; decomp. by recrystallization into  $\text{BaS}_2\text{H}_2$  and  $\text{BaO}_2\text{H}_2$

**Barium phosphide,  $\text{BaP}_2$**

Decomp. by  $\text{H}_2\text{O}$ . (Dumas, A. ch. 32. 364.)

$\text{Ba}_3\text{P}_4$ . Crystallized. Sol. in dil. acids; insol. in conc. acids, decomp. by  $\text{H}_2\text{O}$ . Insol. in organic solvents at ord. temp. (Jabon, C. R. 1899, 129. 765)

**Barium selenide,  $\text{BaSe}$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp.

Sl. sol. in  $\text{H}_2\text{O}$  (Favre, C. R. 102. 1469.)

**Barium silicide,  $\text{Ba}_2\text{Si}$ .**

(Jungst, C. C. 1905, I. 195.)

$\text{BaSi}_2$ . Slowly decomp. by  $\text{H}_2\text{O}$ , not by  $\text{NH}_4\text{OH} + \text{Aq}$ . Rapidly decomp. by conc.  $\text{NaOH}$ . Sol. in  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$  and  $\text{H}_3\text{PO}_4$  with evolution of spontaneously inflammable gas. Sol. in  $\text{HF}$  and  $\text{HCl}$ . Sol. in acetic acid without evolution of gas. (Moissan, *Traité* ch. min. 1904, III. 680.)

Decomp. rapidly in both hot and cold  $\text{H}_2\text{O}$  (Bradley, C. N. 1900, 62. 150.)

**Barium sulphide,  $\text{BaS}$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp.

Crystallized. Decomp. by  $\text{H}_2\text{O}$ .

Attacked by cold conc.  $\text{HNO}_3$ . (Mourlot, A. ch. 1899, (7) 17. 521.)

Cryst. modification is less readily acted on by an and other reagents than the amorphous modification, sol. in fuse oxidizing agents. (Mourlot, C. R. 1898, 126. 645.)

+ $\text{H}_2\text{O}$ . (Neuberg and Neumann, *Biochem. Z.* 1906, 1. 174.)

+ $6\text{H}_2\text{O}$ . Slowly sol. in boiling  $\text{H}_2\text{O}$ , with decomp.; insol. in, but decomp. by boiling alcohol (Schöne)

**Barium sulphide,  $\text{Ba}_2\text{S}_7 + 25\text{H}_2\text{O}$  (?)**

Sol. in  $\text{H}_2\text{O}$ . (Schöne, Pogg. 112. 215)

**Barium trisulphide,  $\text{BaS}_3$**

Sol. in large amount of boiling  $\text{H}_2\text{O}$ . (Schöne, Pogg. 112. 215)

**Barium tetrasulphide,  $\text{BaS}_4 + \text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ , especially if hot, sol. in 2.42 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ ; insol. in  $\text{CS}_2$  or alcohol. (Schöne, Pogg. 112. 224)

+ $2\text{H}_2\text{O}$ . (Veley, *Chem. Soc.* 49. 369.)

**Barium pentasulphide,  $\text{BaS}_5$ .**

Known only in solution.

**Barium mercuric sulphide,  $\text{BaS} \cdot \text{HgS} + 5\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  (Wagner, J. pr. 98. 23.)

**Barium nickel sulphide,  $\text{BaS} \cdot 4\text{NiS}$ .**

Sol. in warm conc.  $\text{HCl}$  (Bellucci, C. A. 1909, 293.)

**Barium stannic sulphide.**

See Sulphostannate, barium.

**Barium uranyl sulphide,  $6\text{BaS} \cdot \text{UO}_2\text{S} + x\text{H}_2\text{O}$  (?)**

Decomp. by  $\text{HCl} + \text{Aq}$ . (Remelé, Pogg. 124. 159.)

**Baryta.**

See Barium oxide;  $\text{BaO}$ .

**Beryllium,  $\text{Be}$ .**

For beryllium and its salts, see Glucinum and the corresponding salts.

**Bismuth,  $\text{Bi}$ .**

Not attacked by  $\text{H}_2\text{O}$ . Very slowly attacked by  $\text{HCl} + \text{Aq}$  (Troost). Very sl. sol. in conc.  $\text{HCl} + \text{Aq}$  (Schutzenberger, Willm). Not attacked by dil.  $\text{HCl} + \text{Aq}$  (Naquet and Hanriot). Very slowly attacked by cold  $\text{HCl} + \text{Aq}$  (Godeffroy). According to very careful experiments pure  $\text{Bi}$  is absolutely unattacked by hot or cold, dil. or conc.  $\text{HCl} + \text{Aq}$  except in presence of oxygen (Ditte and Metzner, A. ch. (6) 29. 397.)

Not attacked by dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Decomp.

by hot conc  $\text{H}_2\text{SO}_4$ . Easily sol. in dil or conc.  $\text{HNO}_3$ +Aq. or aqua regia.

Not attacked by pure  $\text{HNO}_3$ +Aq. of 1.52 to 1.42 sp. gr. at  $20^\circ$ , violently attacked by a more dil. acid, but the acid becomes concentrated thereby. Conc.  $\text{HNO}_3$ +Aq. attacks only by heating or adding  $\text{NO}_2$ . (Millon, A. ch. (3) 6. 95.)

Insol. in liquid  $\text{NH}_3$  (Gore, Am. Ch. J. 1898, 20. 827.)

$\frac{1}{2}$  ccm. oleic acid dissolves 0.0091 g. Bi in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

#### Bismuth arsenide, $\text{Bi}_2\text{As}_3$

(Descamp, C. R. 86. 1065.)

#### Bismuth dibromide, $\text{Bi}_2\text{Br}_4$ .

Not known in a pure state (Weber, Pogg. 107. 599.)

#### Bismuth tribromide, $\text{BiBr}_3$ .

Very deliquescent. Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol or ether.

Sol. in  $\text{AlBr}_3$  (Isbekow, Z. anorg. 1913, 84. 27.)

#### Bismuth hydrogen bromide, $\text{BiBr}_3 \cdot 2\text{HBr} + 4\text{H}_2\text{O}$ .

Deliquescent.

Decomp. in the air (Aloy, Bull. Soc. 1906, (3) 35. 398.)

#### Bismuth cesium bromide, $2\text{BiBr}_3 \cdot 3\text{CsBr}$ .

Ppt. Insol. in  $\text{HBr}$ .

Sol. in  $\text{HCl}$  and in  $\text{HNO}_3$  (Hutchins, J. Am. Chem. Soc. 1907, 29. 33.)

#### Bismuth potassium bromide, $\text{BiBr}_3 \cdot 2\text{KBr}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Aloy, Bull. Soc. 1906, (3) 35. 398.)

#### Bismuth bromide ammonia, $\text{BiBr}_3 \cdot 3\text{NH}_3$ .

Sol. in  $\text{HCl}$ +Aq.

$\text{BiBr}_3 \cdot 2\text{NH}_3$  (?)

$2\text{BiBr}_3 \cdot 5\text{NH}_3$  Not deliquescent; not decomp. by  $\text{H}_2\text{O}$ , easily sol. in dil. acids (Muir, Chem. Soc. 29. 144.)

#### Bismuth bromide potassium chloride,

$\text{K}_2\text{BiCl}_2\text{Br}_2 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Atkinson, Chem. Soc. 43. 289.)

#### Bismuth dichloride, $\text{Bi}_2\text{Cl}_4$ .

Very deliquescent. Decomp. by  $\text{H}_2\text{O}$ , dil. acids, or conc.  $\text{NH}_4\text{Cl}$ +Aq. (Weber, Pogg. 107. 596.)

#### Bismuth trichloride, $\text{BiCl}_3$ .

Deliquescent. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl}$ +Aq. and alcohol. Not decomp. by  $\text{H}_2\text{O}$  in presence of citrates. (Spiller.)

0.08 g. sol. in 100 ccm. liquid  $\text{H}_2\text{S}$  (Antony, C. C. 1905, I. 1692.)

Moderately sol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)

1 g.  $\text{BiCl}_3$  is sol. in 5.59 g. acetone at  $18^\circ$ . Sp. gr. of sat. solution  $18^\circ/4^\circ = 0.9194$  (Naumann, B. 1904, 37. 4331.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

1 pt. is sol. in 60.36 pts. ethyl acetate at  $18^\circ$ . Sp. gr. at  $18^\circ/40^\circ = 0.9106$ . (Naumann, B. 1910, 43. 320.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

#### Bismuth chloride, $\text{Bi}_2\text{Cl}_6$ (?)

Decomp. by  $\text{H}_2\text{O}$ . (Dehéraïn, C. R. 54. 724.)

#### Bismuth hydrogen chloride, $2\text{BiCl}_3 \cdot \text{HCl} + 3\text{H}_2\text{O}$ .

Not deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Engel, C. R. 106. 1797.)

$\text{BiCl}_3 \cdot 2\text{HCl}$ . (Jacquelin, A. ch. (2) 62. 363.)

#### Bismuth cesium chloride, $\text{BiCl}_3 \cdot 3\text{CsCl}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sl. sol. in cold dil.  $\text{HCl}$ +Aq. but easily sol. on warming. (Brigham, Am. Ch. J. 14. 181.)

$2\text{BiCl}_3 \cdot 3\text{CsCl}$  As above. (Brigham.)

$\text{BiCl}_3 \cdot 6\text{CsCl}$  Easily sol. in  $\text{H}_2\text{O}$  and dil.  $\text{HCl}$ +Aq. (Godefroy, B. 8. 9.)

Does not exist. (Brigham.)

#### Bismuth hydrazine chloride, $\text{BiCl}_3$ ,

$3\text{N}_2\text{H}_4\text{HCl}$ .

Sol. in acids, from which it is pptd. by  $\text{H}_2\text{O}$ . (Ferranti, C. A. 1912. 1613.)

#### Bismuth nitrosyl chloride, $\text{BiCl}_3 \cdot \text{NOCl}$ .

Very deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Sudborough, Chem. Soc. 59. 662.)

#### Bismuth potassium chloride, $\text{BiCl}_3 \cdot \text{KCl} + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Cannot be recryst. except from conc.  $\text{BiCl}_3$ + $\text{HCl}$ . Decomp. by  $\text{HCl}$ +Aq. into  $\text{BiCl}_3 \cdot 2\text{KCl} + 2\text{H}_2\text{O}$ . (Brigham, Am. Ch. J. 14. 167.)

$\text{BiCl}_3 \cdot 2\text{KCl}$ . Decomp. by  $\text{H}_2\text{O}$ . (Arppe, Pogg. 64. 37.)

Deliquescent

Sol. in  $\text{H}_2\text{O}$  with decomp. into the oxychloride when excess  $\text{H}_2\text{O}$  is used (Aloy, Bull. Soc. 1906, (3) 35. 397.)

+ $2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Jacquelin, J. pr. 14. 1.)

Sol. in moderately conc.  $\text{HCl}$ +Aq.

$\text{BiCl}_3 \cdot 3\text{KCl}$ . Decomp. by  $\text{H}_2\text{O}$  (Arppe.) Does not exist. (Brigham.)

**Bismuth rubidium chloride,  $\text{BiCl}_3$ ,  $\text{RbCl}$  +  $\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ ; sol. in dil  $\text{HCl}$  +  $\text{Aq}$ , from which  $\text{BiCl}_3$ ,  $3\text{RbCl}$  crystallizes (Brigham, Am. Ch. J. 14, 174.)

$\text{BiCl}_3$ ,  $3\text{RbCl}$  Decomp. by  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HCl}$  +  $\text{Aq}$  without decomp. (Brigham.)

$\text{BiCl}_3$ ,  $6\text{RbCl}$ . Decomp. by  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl}$  +  $\text{Aq}$  (Codeffroy, B. S. 9); does not exist. (Brigham.)

$10\text{BiCl}_3$ ,  $23\text{RbCl}$  (?). As above (Brigham.)

**Bismuth sodium chloride,  $\text{BiCl}_3$ ,  $2\text{NaCl}$  +  $\text{H}_2\text{O}$**

+  $3\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Arppe, Pogg. 64, 237.)

$\text{BiCl}_3$ ,  $3\text{NaCl}$

**Bismuth thallous chloride,  $\text{BiCl}_3$ ,  $3\text{TlCl}$ .**

Ppt. (Ephraim, Z. anorg 1909, 61, 254.)

$\text{BiCl}_3$ ,  $6\text{TlCl}$ . Ppt. (Ephraim.)

**Bismuth chloride ammonia,  $2\text{BiCl}_3$ ,  $\text{NH}_3$ .**

Stable (Dehéran, C. R. 54, 724.)

$\text{BiCl}_3$ ,  $2\text{NH}_3$ . (D.)

$\text{BiCl}_3$ ,  $3\text{NH}_3$ . (D.)

**Bismuth chloride nitric oxide,  $\text{BiCl}_3$ ,  $\text{NO}$ .**

Very hygroscopic. (Thomas, C. R. 1895, 121, 129.)

**Bismuth chloride nitrogen peroxide,  $\text{BiCl}_3$ ,  $\text{NO}_2$**

Decomp. by moist air, but stable in dry air. (Thomas, C. R. 1896, 122, 613.)

**Bismuth chloride selenide.**

See Bismuth selenochloride.

**Bismuth trifluoride,  $\text{BiF}_3$ .**

Insol. in  $\text{H}_2\text{O}$  or alcohol. (Gott and Murr, Chem. Soc. 53, 138.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 827.)

**Bismuth hydrogen fluoride,  $\text{BiF}_3$ ,  $3\text{HF}$**

Deliquescent. Decomp. by boiling  $\text{H}_2\text{O}$ . (Murr, Chem. Soc. 39, 21.)

**Bismuth gold,  $\text{Au}_2\text{Bi}$ .**

Insol. in equal pts. of  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9, 71.)

**Bismuthous hydroxide,  $\text{Bi}(\text{OH})_3$ .**

Sol. in strong acids. Insol. in solutions of alkalis, alkali carbonates,  $(\text{NH}_4)_2\text{CO}_3$ , or  $\text{NH}_4\text{NO}_3$ ; or of amyl amine (Wurtz). When recently pptd. is sol. in  $\text{NH}_4\text{Cl}$  +  $\text{Aq}$ , but insol. in  $\text{NH}_4\text{NO}_3$  +  $\text{Aq}$  (Brett, 1837). Not pptd. in presence of Na citrates (Spiller).

Solubility of freshly pptd.  $\text{Bi}(\text{OH})_3$  in  $\text{NaOH}$  +  $\text{Aq}$

g $\text{NaOH}$ per l.	g $\text{Bi}$ dissolved per l. at $20^\circ$	g $\text{Bi}$ dissolved per l. at $100^\circ$

(Moser, Z. anorg 1909, 61, 386.)

$\text{Bi}_2\text{O}_3$ ,  $2\text{H}_2\text{O}$ .

$\text{Bi}_2\text{O}_3$ ,  $\text{H}_2\text{O}$ . (Muir, Chem. Soc. 32, 131.)

See also Bismuth trioxide.

**Bismuth tetrahydroxide,  $\text{Bi}_4\text{O}_4$ ,  $\text{H}_2\text{O}$**

$\text{Bi}_4\text{O}_4$ ,  $2\text{H}_2\text{O}$ . (Wernicke, Pogg. 141, 109.)

**Bismuthic hydroxide (Bismuthic acid),  $\text{Bi}_2\text{O}_3$ ,  $\text{H}_2\text{O}$**

Insol. in  $\text{H}_2\text{O}$ ; easily decomp. by acids. (Fremy, A. ch. (3) 12, 495.) Decomp. by  $\text{H}_2\text{SO}_4$ ; not attacked by  $\text{SO}_2$  +  $\text{Aq}$ ; neither dissolved nor decomp. by dil  $\text{HNO}_3$  +  $\text{Aq}$ , but slowly converted into an allotropic modification (?) Partially decomp. by conc.  $\text{HNO}_3$ . Slowly but wholly dissolved by hot conc.  $\text{HNO}_3$ . Sl. sol. in conc  $\text{KOH}$  +  $\text{Aq}$  (Arppe.) Sol. in about 100 pts boiling  $\text{KOH}$  +  $\text{Aq}$ , so conc. that it solidifies on removing the lamp. (Murr, Chem. Soc. 51, 77.)

$\text{Bi}_2\text{O}_3$ ,  $2\text{H}_2\text{O}$ . (Bödeker, A. 123, 61.)

Does not exist (Hoffmann and Geuther.)

**Bismuth iodide,  $\text{BiI}_3$ .**

Not attacked by cold  $\text{H}_2\text{O}$ , but by boiling,  $\text{BiOI}$  is formed. 100 pts. absolute alcohol dissolve  $3\frac{1}{4}$  pts. salt at  $20^\circ$ . (Gott and Muir, Chem. Soc. 57, 138.)

Sol. in  $\text{HNO}_3$  and  $\text{HI}$  +  $\text{Aq}$ , from which it is reprecip. by  $\text{H}_2\text{O}$  or alcohol. Sol. in  $\text{KI}$  +  $\text{Aq}$  or  $\text{KOH}$  +  $\text{Aq}$ . (Rammelsberg.)

Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 827.)

100 g. absolute alcohol dissolve 3.5 g.  $\text{BiI}_3$  at  $20^\circ$  (Gott and Mur, Chem. Soc. 57, 138)

\* Sol. in acetone (Naumann, B. 1904, 37, 4328)

100 pts. methylene iodide dissolve 0.15 pt.  $\text{BiI}_3$  at  $12^\circ$ , and very little more at higher temperatures. (Retgers, Z. anorg. 3, 343.)

Sol. in methyl acetate (Naumann, B. 1909, 42, 3790.)

Bismuth hydrogen iodide,  $\text{BiI}_3$ ,  $\text{HI} + 4\text{H}_2\text{O}$ . (Arppe, Pogg. 44, 248.)

Bismuth cesium iodide,  $3\text{CsI} \cdot 2\text{BiI}_3$ .  
Very sl. sol. in  $\text{H}_2\text{O}$  (Wells, Am. J. Sci. 1897, (4) 3, 464)

Bismuth calcium iodide,  $2\text{BiI}_3$ ,  $\text{CaI}_2 + 18\text{H}_2\text{O}$   
Deliquescent; decomp. by  $\text{H}_2\text{O}$ . (Linau, Pogg. 111, 240.)

Bismuth magnesium iodide,  $2\text{BiI}_3$ ,  $\text{MgI}_2 + 12\text{H}_2\text{O}$ .  
Deliquescent; decomp. by  $\text{H}_2\text{O}$ . (Linau, Pogg. 111, 240.)

Bismuth potassium iodide,  $\text{BiI}_3$ ,  $4\text{KI}$ .  
Ppt. (Arppe, Pogg. 44, 237)

$\text{BiI}_3$ ,  $3\text{KI}$  (Astre, C. R. 110, 1137)  
 $\text{BiI}_3$ ,  $2\text{KI}$ . Sol. in acetic ether. (Astre)  
 $+ 4\text{H}_2\text{O}$ . Sol. in small amt  $\text{H}_2\text{O}$  without pptn., but decomp. by much  $\text{H}_2\text{O}$ .

$\text{BiI}_3$ ,  $2\text{KI}$ ,  $\text{HI}$  (Arppe.)  
 $2\text{BiI}_3$ ,  $3\text{KI} + 2\text{H}_2\text{O}$ . (Astre.)  
 $\text{BiI}_3$ ,  $\text{KI} + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Nicklès, C. R. 51, 1097)

$2\text{BiI}_3$ ,  $\text{KI}$ . Sol. in acetic ether. (Astre.)

Bismuth sodium iodide,  $\text{BiI}_3$ ,  $\text{NaI} + \text{H}_2\text{O}$ .  
Deliquescent; decomp. by  $\text{H}_2\text{O}$ . (Nicklès, C. R. 51, 1097)

$2\text{BiI}_3$ ,  $3\text{NaI} + 12\text{H}_2\text{O}$  As above. (Linau, Pogg. 111, 240.)

Bismuth zinc iodide,  $2\text{BiI}_3$ ,  $\text{ZnI}_2 + 12\text{H}_2\text{O}$ .  
Very deliquescent. (Linau, Pogg. 111, 240.)

Bismuth iodide ammonia,  $\text{BiI}_3$ ,  $3\text{NH}_3$   
Decomp. by  $\text{H}_2\text{O}$  (Rammelsberg.)

Bismuth iodide zinc bromide.  
Sol. in  $\text{H}_2\text{O}$  (Linau, Pogg. 111, 240.)

Bismuth nitride.  
Explosive. (Fischer, B. 1910, 43, 1471)  
 $\text{BiN}$ . Ppt. Decomp. by  $\text{H}_2\text{O}$  or dil acids (Franklin, J. Am. Chem. Soc. 1905, 27, 847.)

Bismuth dioxide,  $\text{Bi}_2\text{O}_3$ .  
Sol. in conc.  $\text{HNO}_3 + \text{Aq}$ . Decomp. by strong acids, and boiling  $\text{KOH} + \text{Aq}$ .  
Decomp. by  $\text{H}_2\text{O}$  (Tanatar, Z. anorg. 1901, 27, 438.)

# Bismuth dioxide, $\text{Bi}_2\text{O}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in conc. acids.

Solubility of  $\text{Bi}_2\text{O}_3$  in  $\text{HNO}_3 + \text{Aq}$  at  $20^\circ$ .

Solubility in $\text{NaOH} + \text{Aq}$ at $25^\circ$		
Conc. of $\text{NaOH}$ Mol./l.	g $\text{Bi}_2\text{O}_3$ in 100 cc of solution. Mean result	
1.0	0.0013 $\pm$ 0.0002	
2.0	0.0026 $\pm$ 0.0002	
3.0	0.0049 $\pm$ 0.0005	

(Knox, Chem. Soc. 1909, 95, 1787.)

Insol. in acetone. (Eidmann, C C 1899, II, 1014.)

Min. *Bismite* Easily sol. in  $\text{HNO}_3 + \text{Aq}$ .

See also Bismuthous hydroxide.

**Bismuth tetroxide,  $\text{Bi}_2\text{O}_4$ .**

Sol. in conc.  $\text{HCl} + \text{Aq}$ , with evolution of  $\text{Cl}_2$ ; in oxygen acids with evolution of  $\text{O}$ . Less easily sol. in conc.  $\text{H}_2\text{SO}_4$  than in  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ .

**Bismuth oxide,  $\text{Bi}_2\text{O}_3$  (?).**

(Hoffmann and Geuther.)

**Bismuth pentoxide,  $\text{Bi}_2\text{O}_5$**

Sol. in dil acids. Combines with  $\text{H}_2\text{O}$  to form bismuthic hydroxide, which see (Hasebroek, B. 20, 213.)

**Bismuth oxybromide, etc.**

See Bismuthyl bromide, etc.

**Bismuth palladium,  $\text{PdBi}_3$ .**

Insol. in equal pts.  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9, 70.)

**Bismuth platinum,  $\text{PtBi}_3$ .**

Insol. equal pts.  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9, 69.)

**Bismuth phosphide,  $\text{BiP}$**

(Cavazzi.)

**Bismuth triselenide,  $\text{Bi}_2\text{Se}_3$**

Insol. in  $\text{H}_2\text{O}$ , alkalis, or alkali sulphides +  $\text{Aq}$ , sl. attacked by  $\text{HCl} + \text{Aq}$ ; oxidized by  $\text{HNO}_3 + \text{Aq}$ . (Schneider, Pogg 94, 628.)  
Min. *Frenzelite*.

**Bismuth potassium selenide.**

See Selenobismuthite, potassium.

**Bismuth selenochloride,  $\text{Bi}_2\text{SeCl}$**

Not attacked by  $\text{H}_2\text{O}$ ; very sl. sol. in  $\text{HCl} + \text{Aq}$ , easily and completely sol. with decomp. in  $\text{HNO}_3 + \text{Aq}$  (Schneider.)

**Bismuth disulphide,  $\text{Bi}_2\text{S}_3 + 2\text{H}_2\text{O}$  (?).**

Insol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{HCl} + \text{Aq}$

**Bismuth trisulphide,  $\text{Bi}_2\text{S}_3$ .**

Insol. in  $\text{H}_2\text{O}$ .

1 l.  $\text{H}_2\text{O}$  dissolves  $0.35 \times 10^{-4}$  moles  $\text{Bi}_2\text{S}_3$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58, 294.)

Easily sol. in moderately dil.  $\text{HNO}_3 + \text{Aq}$ , and conc.  $\text{HCl} + \text{Aq}$ , with separation of  $\text{S}$ . Insol. in alkalis, alkali sulphides,  $\text{Na}_2\text{S}_2\text{O}_3$ , or  $\text{KCN} + \text{Aq}$ , insol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett). Insol. in potassium thiocarbonate +  $\text{Aq}$  (Rosenblatt, Z. anal. 26, 15.)

Insol. in alkali hydroxides or alkali hydro-sulphides.

Insol. in  $2\text{N}-(\text{NH}_4)_2\text{S} + \text{Aq}$ .

0.0090 g.  $\text{Bi}_2\text{S}_3$  is sol. in 100 cc.  $\text{N}-\text{Na}_2\text{S}_3 + \text{Aq}$  at  $25^\circ$ . (Knox, Chem. Soc. 1909, 95, 1764.)

Somewhat sol. in  $\text{Na}_2\text{S} + \text{Aq}$ . 75 cc. of  $\text{Na}_2\text{S} + \text{Aq}$  (sp. gr. 1.06) dissolve an amt. of  $\text{Bi}_2\text{S}_3$  corresponding to 0.031 g.  $\text{Bi}_2\text{O}_3$ . (Stillman, J. Am. Chem. Soc. 1896, 18, 683.)

Solubility in  $\text{Na}_2\text{S} + \text{NaOH} + \text{Aq}$  at  $25^\circ$ .

Conc. of $\text{Na}_2\text{S}$ Mol./l.	Conc. of $\text{NaOH}$ Mol./l.	g $\text{Bi}_2\text{S}_3$ in 100 cc. of solution
0.5	1.0	0.0185
1.0	1.0	0.0838

(Knox, Chem. Soc. 1909, 95, 1763.)

**Bismuth sulphide pptd. from acid solution** is not dissolved by subsequent treatment with  $\text{K}_2\text{S} + \text{Aq}$ . (Stone, J. Am. Chem. Soc. 1896, 18, 1091.)

Sol. in  $\text{K}_2\text{S} + \text{Aq}$ . (Ditte, C. R. 1895, 120, 187.)

Solubility in  $\text{K}_2\text{S} + \text{KOH} + \text{Aq}$  at  $25^\circ$ .

Conc. of $\text{K}_2\text{S}$ Mol./l.	Conc. of $\text{KOH}$ Mol./l.	g $\text{Bi}_2\text{S}_3$ in 100 cc. of solution
0.5	1.0	0.0240
1.0	1.0	0.1230
1.25	1.25	0.2354

(Knox, Chem. Soc. 1909, 95, 1763.)

Solubility in alkali sulphides + Aq at 25°.

Alkali sulphide	Conc. of alkali sulphide Mol/l	g Bi <sub>2</sub> S <sub>3</sub> in 100 cc of solution

K <sub>2</sub> S	0.5	0.0042
	1.0	0.0337
	1.25	0.0639

(Knox, Chem. Soc. 1909, 95. 1762.)

Decomp. by FeCl<sub>3</sub> + Aq (Cammerer, C. C. 1891, II. 525.)

Insol. in KCN + Aq (Hoffmann, A. 1884, 223. 134.)

Min. *Bismuthinite*. Easily sol. in HNO<sub>3</sub> + AqBismuth cuprous sulphide, Bi<sub>2</sub>S<sub>3</sub>, Cu<sub>2</sub>S.Insol. in H<sub>2</sub>O. Sol. with decomp. in HNO<sub>3</sub> + Aq (Schneider, J. pr. (2) 40. 564.)Min *Emplectonite*.Bismuth potassium sulphide, Bi<sub>2</sub>S<sub>3</sub>, K<sub>2</sub>S.

(Schneider, Pogg. 136. 460.)

Insol. in ethyl acetate (Naumann, B. 1910, 43. 314.)

Bi<sub>2</sub>S<sub>3</sub>. 4K<sub>2</sub>S + 4H<sub>2</sub>O. Decomp. by H<sub>2</sub>O. Very sol. in K<sub>2</sub>S + Aq. Efflorescent in dry air. (Ditte, C. R. 1895, 120. 186.)

See also Sulphobismuthite, potassium.

Bismuth silver sulphide, Bi<sub>2</sub>S<sub>3</sub>, Ag<sub>2</sub>S.Insol. in cold HCl, or HNO<sub>3</sub>. Sol. in warm HNO<sub>3</sub> with separation of S, in boiling HCl with separation of H<sub>2</sub>S.Min. *Plenargyrite*, *Matildite*

(Schneider, J. pr. 1890, (2) 41. 414.)

Bismuth sodium sulphide, Bi<sub>2</sub>S<sub>3</sub>, Na<sub>2</sub>S.

(Schneider.)

Bismuth sulphide telluride, Bi<sub>2</sub>S<sub>3</sub>, 2Bi<sub>2</sub>Te.Min. *Tetradymite*. Sol. in HNO<sub>3</sub> with separation of S.Bi<sub>2</sub>S<sub>3</sub>, 2Bi<sub>2</sub>Te.Min *Joseite*. As above.

Bismuth sulphobromide, BiSBr.

(Mur and Eagles, Chem. Soc. 1895, 67. 91.)

Bismuth sulphochloride, BiSCl

Insol. in H<sub>2</sub>O or dil. HCl + Aq. Sol. in conc. HCl, or HNO<sub>3</sub> + Aq. Decomp. by alkalis + Aq. (Schneider, Pogg. 93. 464.)

Bismuth sulphoiodide, BiSI.

Not attacked by boiling H<sub>2</sub>O, and dil. acids. Decomp. by hot conc. HCl + Aq, and HNO<sub>3</sub> + Aq. KOH + Aq. dissolves out I<sub>2</sub>. (Schneider, Pogg. 110. 114.)Bismuth telluride, Bi<sub>2</sub>Te.Min. *Tetradymite*. Sol. in HNO<sub>3</sub> + Aq

See also Bismuth sulphide telluride.

Bismuthic acid, HBiO<sub>3</sub>.

See Bismuthic hydroxide.

Potassium bismuthate, KBiO<sub>3</sub>Sol. in H<sub>2</sub>O. (Arppe)KH(BiO<sub>3</sub>)<sub>2</sub>. Insol. in H<sub>2</sub>O.Not decomp. by boiling H<sub>2</sub>O (André, C. R. 113. 860.)No salts of HBiO<sub>3</sub> can exist. (Muir and Carnegie, Chem. Soc. 51. 77.)

Bismuthicotungstic acid.

Ammonium bismuthicotungstate, 3(NH<sub>4</sub>)<sub>2</sub>O, 2Bi<sub>2</sub>O<sub>3</sub>, 11WO<sub>3</sub> + 10H<sub>2</sub>O

A yellow oil which dries to a yellow glass. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1232.)

Potassium bismuthicotungstate, 3K<sub>2</sub>O, 2Bi<sub>2</sub>O<sub>3</sub>, 11WO<sub>3</sub> + 15H<sub>2</sub>O.

A yellow oil which dries to a pale yellow glass. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1233.)

Strontium bismuthicotungstate, 3SrO, 2Bi<sub>2</sub>O<sub>3</sub>, 11WO<sub>3</sub> + 11H<sub>2</sub>O.A yellow wax, insol. in pure H<sub>2</sub>O, but sol. in H<sub>2</sub>O containing a few drops HNO<sub>3</sub>. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1233.)

Bismuthyl bromide, BiOBr.

Insol. in H<sub>2</sub>O, sol. in moderately conc. HBr + Aq.Insol. in H<sub>2</sub>O (Herz, Z. anorg. 1903, 36. 348.)Bi<sub>2</sub>O<sub>3</sub>Br<sub>6</sub>. Insol. in H<sub>2</sub>O, easily sol. in conc. HCl, or HNO<sub>3</sub> + Aq; less sol. in dil. HNO<sub>3</sub> + Aq.Bi<sub>11</sub>O<sub>13</sub>Br<sub>7</sub>. As the preceding comp. (Muir.)

Bismuthyl chloride, BiOCl

Insol. in H<sub>2</sub>O or dil. acids. Sol. in conc. HCl, or HNO<sub>3</sub> + Aq.Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 327.)

Insol. in acetone. (Naumann, B. 1904, 34. 4329.)

+ H<sub>2</sub>O. (Heintz, Pogg. 63. 55.)+ 3H<sub>2</sub>O. (Phillips, Br. Arch. (1) 39. 41.)Bi<sub>2</sub>O<sub>3</sub>Cl<sub>3</sub>. (Arppe.)BiO<sub>2</sub>Cl<sub>2</sub>. Insol. in H<sub>2</sub>O; sol. in hot HCl, or HNO<sub>3</sub> + Aq. (Muir.)

Bismuthyl fluoride, BiOF.

Insol. in H<sub>2</sub>O; sol. in HCl, HBr, or HI + Aq. (Gott and Muir, Chem. Soc. 33. 139.)BiOF, 2HF. Insol. in H<sub>2</sub>O.

**Bismuthyl iodide, BiOI**

Not decomp. by  $H_2O$  or alkaline solutions  
Sol. in  $HCl + Aq.$  Decomp. by  $HNO_3 + Aq.$   
(Schneider, J. pr. 79. 424)

Insol. in  $KCl$ , or  $KI + Aq.$   
 $3BiOI, 7Bi_2O_3$ . Sol. in dil.  $HCl$ ; decomp.  
by  $HNO_3$ ; insol. in boiling  $H_2O$  and alkali.  
(Blyth, C. N. 1896, 74. 200)

$BiI_3, 5Bi_2O_3$ . Ppt. Sl. sol. in  $HC_2H_3O_2 + Aq.$   
Not decomp. by  $H_2O$ . (Fletcher and  
Cooper, Pharm. J. (3) 13. 254.)

$4BiI_3, 5Bi_2O_3$ . Easily sol. in  $HCl + Aq.$   
Decomp. by  $HNO_3 + Aq.$  Sl. attacked by  
 $H_2SO_4$ , somewhat sol. in  $H_2C_4H_4O_6$ , and  
 $KHC_4H_4O_6 + Aq.$

Sol. in  $(NH_4)_2S$ , and  $KOH + Aq.$  (Storer's  
Dict.)

**Bismuthyl sulphide,  $Bi_2O_3S$ .**

(Hermann, J. pr. 75. 452.)  
 $Bi_2O_3S$ . Insol. in  $H_2O$  (Scherpenberg,  
C. C. 1889, II. 641.)

$Bi_2O_3S$   
Min. *Karelinite*.

**Boracic acid.**

See Boric acid.

**Borax.**

See Tetraborate, sodium.

**Boric acid, anhydrous,  $B_2O_3$** 

See Boron trioxide.

**Metaboric acid,  $HBO_2$ .**

Sol. in  $H_2O$   
Sl. sol. in hot glacial acetic acid. (Holt,  
Chem. Soc. 1911, 100. (2) 720.)

**Orthoboric acid,  $H_3BO_3$ .**

Sol. in 83 pts.  $H_2O$  at  $10^\circ$   
" 25 " "  $20^\circ$   
" 3 " "  $100^\circ$ .  
(Bezezeus)

Sol. in 20 pts.  $H_2O$  at  $18.75^\circ$  (Abl)  
100 pts.  $H_2O$  at  $100^\circ$  dissolve 2 pts. (Ure's Dict.)

1 pt. crystallized acid dissolves in—

25 66 pts.  $H_2O$  at  $19^\circ$ .  
14 88 " "  $25^\circ$ .  
12 66 " "  $37.5^\circ$ .  
10 16 " "  $50^\circ$ .  
6 12 " "  $62.5^\circ$ .  
4 73 " "  $75^\circ$ .  
3 55 " "  $87.5^\circ$ .  
2 97 " "  $100^\circ$ .

Or, 100 pts.  $H_2O$  dissolve at—

$19^\circ$  3 9 pts.  $H_3BO_3$ .  
 $25^\circ$  6 8 " "  
 $37.5^\circ$  7 8 " "  
 $50^\circ$  9 8 " "  
 $62.5^\circ$  16 0 " "  
 $75^\circ$  21 0 " "  
 $87.5^\circ$  28 0 " "  
 $100^\circ$  34 0 " "

Or, sat. aqueous solution contains at—

$19^\circ$  3 75%  $H_3BO_3$ .  
 $25^\circ$  6 27 " "  
 $37.5^\circ$  7 32 " "  
 $50^\circ$  8 96 " "  
 $62.5^\circ$  14 04 " "  
 $75^\circ$  17 44 " "  
 $87.5^\circ$  21 95 " "  
 $100^\circ$  25 17 " "

(Brandes and Farnhaber, Arch. Pharm. 7. 50.)

1 litre  $H_2O$  dissolves at—

$0^\circ$  19 47 g.  $H_3BO_3$ .  
 $12^\circ$  29 20 " "  
 $20^\circ$  39 92 " "  
 $40^\circ$  60 91 " "  
 $62^\circ$  114 16 " "  
 $80^\circ$  168 15 " "  
 $102^\circ$  291 16 " "

(Ditte, C. R. 85. 1069.)

1 l.  $H_2O$  dissolves 0.901 mol.  $H_3BO_3$  at  $25^\circ$ .  
(Herz, Z. anorg. 1910, 66. 359)

1 l.  $H_2O$  dissolves 0.898 mol.  $H_3BO_3$  at  $25^\circ$ .  
Sp. gr. of the solution = 1.0168. (Müller, Z.  
phys. Ch. 1907, 57. 529.)

1 l.  $H_2O$  dissolves 0.887 mol.  $H_3BO_3$  at  $25^\circ$   
and 1.025 mol. at  $30^\circ$ . (Ageno and Valla,  
Ist. Ven. (VIII) 14. II, 331.)

Solubility in  $H_2O$  at  $t^\circ$ .

$t^\circ$	g. $H_3BO_3$ in 100 g. of the solution

115	45 0
120	52 4

(Nasini and Ageno, Z. phys. Ch. 1909, 69.  
483.)

Solubility curve for orthoboric acid in  
 $H_2O$  at various temp. up to  $120^\circ$ . (Nasini  
and Ageno, Gazz. ch. it. 1911, 41. (1) 131)

Sp. gr. of  $H_3BO_3 + Aq$  sat at  $8^\circ$  = 1.014 (Anthon, A.  
24. 241.)  
Sp. gr. of  $H_3BO_3 + Aq$  sat at  $15^\circ$  = 1.0245 (Stolba, J.  
pr. 90. 457.)

Sp. gr. of  $H_3BO_3 + Aq$  at  $15^\circ$ .

% $H_3BO_3$	Sp. gr.	% $H_3BO_3$	Sp. gr.
1	1.0034	4	1.0147
2	1.0069	Sat. sol.	1.015
3	1.0106		

(Gerlach, Z. anal. 28. 473)

25.3	10.60

(Herz.)

Solubility in  $\text{NaCl} + \text{Aq}$  at  $25^\circ$ .

Millimoles $\text{NaCl}$ in 10 ccm. of the solution	Millimoles $\text{H}_3\text{BO}_3$ in 10 ccm of the sat. solution
	9.01
8.2	8.49
15.2	8.25
29.4	8.20

(Herz.)

Solubility in  $\text{H}_2\text{O}$  is increased by presence of  $\text{KCl}$ ,  $\text{KNO}_3$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{NaNO}_3$ , and  $\text{Na}_2\text{SO}_4$ .

In general the solubility in  $\text{H}_2\text{O}$  is increased by the presence of both electrolytes and non-electrolytes. (Bogdan, C. C. 1903, II. 2.)

Sol. in borax +  $\text{Aq}$ . (McLauchlan, Z. anorg. 1903, 37. 371.)

Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Unattacked and undissolved by liquid  $\text{NO}_2$ . (Frankland, Chem. Soc. 1901, 79. 1362.)

Sol. in 6 pts. alcohol (Wittstein), 5 pts. boiling alcohol (Wenzel). Only traces dissolve in anhydrous ether. (Schiff) Sol. in 100 pts. ether. (Hager's Comm.) Sol. in several essential oils.

1 l.  $\text{H}_2\text{O}$  sat. with amyl alcohol dissolves 0.8952 mol.  $\text{H}_3\text{BO}_3$  at  $25^\circ$ . (Auerbach, Z. anorg. 1903, 37. 357.)

Solubility of  $H_3BO_3$  in amyl alcohol + Aq at  $t^\circ$ .M = millimols  $H_3BO_3$  in 1 l. of  $H_2O$ A = millimols  $H_3BO_3$  in 1 l. of alcohol

(Abegg, Z. anorg. 1903, 35. 131)

See also Boron trioxide.

Pyroboric (tetraboric) acid, H<sub>2</sub>B<sub>4</sub>O<sub>7</sub>.Sol. in H<sub>2</sub>O.Sp. gr. of solutions of boric acid, calculated as H<sub>2</sub>B<sub>4</sub>O<sub>7</sub>, containing—6 3 1 27 1 91 2 54% H<sub>2</sub>B<sub>4</sub>O<sub>7</sub>  
1 0034 1 0069 1 0106 1 0147 sp. gr.

Sat. solution at 15° has sp. gr. 1.015. (Geilach, Z. anal. 28. 473)

Insol. in hot glacial acetic acid. (Holt, Chem. Soc. 1911, 100. (2) 720.)

## Borates.

No borate is quite insol. in H<sub>2</sub>O, the alkali borates are very sol. The less sol. borates are easily decomp. by H<sub>2</sub>O; the easily sol. salts are also decomp., but less quickly. The less sol. borates are easily sol. in H<sub>2</sub>BO<sub>3</sub>, HNO<sub>3</sub>, etc. They are more sol. in H<sub>2</sub>O containing tartaric acid or potassium tartrate than in pure H<sub>2</sub>O. (Souberain) The normal borates of the alkaline-earth are sol. to no inconsiderable extent in H<sub>2</sub>O, and more readily in hot, than in cold H<sub>2</sub>O. (Berzelius, Pogg. 34. 568.)

All borates are insol. or sl. sol. in alcohol.

Aluminum borate, 2Al<sub>2</sub>O<sub>3</sub>, B<sub>2</sub>O<sub>3</sub>Min. *Jeremievite*.+ 3H<sub>2</sub>O. Ppt. (Rose, Pogg. 91. 452.)3Al<sub>2</sub>O<sub>3</sub>, B<sub>2</sub>O<sub>3</sub>. *Crystallized* Insol. in HNO<sub>3</sub> + Aq. (Ebelmen, A. ch. (3) 33. 62.)3Al<sub>2</sub>O<sub>3</sub>, 2B<sub>2</sub>O<sub>3</sub> + 7H<sub>2</sub>O. Ppt. (Rose, l. c.)

## Ammonium borate.

The system (NH<sub>4</sub>)<sub>2</sub>O, B<sub>2</sub>O<sub>3</sub>, H<sub>2</sub>O at 60° has

been studied by Sborgi (Real Ac. Lanc. 1915 (5) 24. I, 1225.)

#### Ammonium diborate.

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328)

Ammonium tetraborate,  $(\text{NH}_4)_2\text{B}_4\text{O}_7 + 4\text{H}_2\text{O}$ , or perhaps  $\text{NH}_4\text{H}(\text{BO}_3)_2 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in 12 pts. cold  $\text{H}_2\text{O}$ ; decomp. by heat (Rammelsberg, Pogg. 90. 21.)

Sol. in acetone. (Eidmann, C. C. 1899, II 1014)

Ammonium octaborate,  $(\text{NH}_4)_2\text{B}_8\text{O}_{13} + 6\text{H}_2\text{O}$ .

Sol. in 8 pts. cold, decomp. by boiling  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 90. 21.)

Min. *Lurdelleite* Sol. in  $\text{H}_2\text{O}$  with decomp.

Ammonium dekaborate,  $(\text{NH}_4)_2\text{B}_{10}\text{O}_{16} + 6\text{H}_2\text{O}$ .

Permanent. Sol. in  $\text{H}_2\text{O}$  (Rammelsberg.)  
+  $8\text{H}_2\text{O}$  (Atterberg, Bull. Soc. (2) 22. 350.)

Ammonium dodekaborate,  $(\text{NH}_4)_2\text{B}_{12}\text{O}_{18} + 9\text{H}_2\text{O}$ .

Sol. in hot  $\text{H}_2\text{O}$ . (Bechi, Sill Am J (2) 17. 129)

Ammonium perborate,  $\text{NH}_4\text{BO}_3$

See Perborate, ammonium.

Ammonium calcium borate,  $(\text{NH}_4)_2\text{CaB}_4\text{O}_{11} = \text{CaB}_4\text{O}_7 + 4(\text{NH}_4)_2\text{O}$

(Ditte, C. R. 96. 1863.)

Ammonium magnesium borate.

Sol. in  $\text{H}_2\text{O}$ , decomp. by boiling (Rammelsberg, Pogg. 49. 451.)

Ammonium zinc borate,  $4(\text{NH}_4)_2\text{B}_4\text{O}_7$ ,  $\text{Zn}(\text{BO}_3)_2 + 5\text{H}_2\text{O}$ .

(Ditte, C. R. 96. 1663)

Barium borate,  $\text{Ba}(\text{BO}_3)_2$ .

Ppt. (Ouvrard, C. R. 1906, 142. 283)

Sol. in 3,300 pts. 45% alcohol.

" 7,800 " 50 "

" 25,000 " 60 "

" 55,000 " 75 "

(Berg, Z. anal. 16. 25.)

+  $10\text{H}_2\text{O}$ . Sl. sol. in cold, more readily in hot  $\text{H}_2\text{O}$ , especially in presence of ammonium salts. (Berzelius, Pogg. 34. 568.) Sol. in sodium citrate + Aq. (Spiller.) Insol. in wood spirit. (Ebelmen)

$2\text{BaO} \cdot \text{B}_2\text{O}_3$  Decomp. by  $\text{H}_2\text{O}$  forming  $\text{BaO}$ ,  $\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$  (Ouvrard, C. R. 1906, 142. 283)

$3\text{BaO} \cdot \text{B}_2\text{O}_3$ . Easily sol. in mineral acids. Sl. attacked by dil. acetic acid (Ouvrard, C. R. 1901, 132. 258)

$\text{Ba}_3\text{B}_4\text{O}_{13}$ . Slowly sol. in warm dilute  $\text{HNO}_3$  + Aq (Ditte, C. R. 77. 892)

+  $5\text{H}_2\text{O}$  Sol. in 100 pts. cold, and more freely in hot  $\text{H}_2\text{O}$ . When freshly pptd. sol. in cold  $\text{NH}_4\text{Cl}$  + Aq (Wackenroder, A. 41. 315);  $\text{NH}_4\text{NO}_3$  + Aq (Brett, Phil Mag. (3) 10. 96); and  $\text{BaCl}_2$  + Aq (Rose).

$\text{Ba}_3\text{B}_4\text{O}_{13} + 13\frac{1}{2}\text{H}_2\text{O}$ . (Laurent, A. ch. (2) 67. 215.)

$\text{Ba}_4\text{B}_5\text{O}_{16}$ . (Bloxam, Chem. Soc. 14. 143.)

$\text{Ba}_2\text{B}_{10}\text{O}_{15} + 6\text{H}_2\text{O}$  Sol. in 100 pts. cold  $\text{H}_2\text{O}$ . Easily sol. in ammonium nitrate, or chloride, or barium chloride + Aq. (Rose, Pogg. 87. 1.)

$\text{Ba}_2\text{B}_6\text{O}_{11}$ . Easily sol. in warm dilute acids.

+  $15\text{H}_2\text{O}$ . (Laurent, A. ch. (2) 67. 215.)

Barium borate bromide,  $3\text{BaO} \cdot 5\text{B}_2\text{O}_3$ ,  $\text{BaBr}_2$ . (Ouvrard, C. R. 1906, 142. 283.)

Barium borate chloride,  $3\text{BaO} \cdot 5\text{B}_2\text{O}_3$ ,  $\text{BaCl}_2$ .

Unaffected by  $\text{H}_2\text{O}$ . Sol. in acids. (Ouvrard, C. R. 1906, 142. 283)

Bismuth borate,  $\text{BiBO}_3 + 2\text{H}_2\text{O}$ .

Ppt. Sl. sol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{S}$ . Not decomp. by  $\text{KOH}$  + Aq (Vanino, J. pr. 1906, (2) 74. 152.)

Cadmium borate,  $\text{Cd}_3(\text{BO}_3)_2$ .

Insol. in  $\text{H}_2\text{O}$ , easily sol. in dil. acids. (Ouvrard, C. R. 1900, 130. 174)

$\text{Cd}(\text{BO}_3)_2$  Difficultly sol. in  $\text{H}_2\text{O}$  (Stromeyer); insol. in  $\text{H}_2\text{O}$ , sol. in  $\text{HCl}$  + Aq (Odling); easily sol. in warm  $\text{NH}_4\text{Cl}$  + Aq (Rose).

(Guertler, Z. anorg. 1904, 40. 242)

$3\text{CdO} \cdot 2\text{B}_2\text{O}_3 + 3\text{H}_2\text{O}$ . Ppt. Sl. sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 88. 299)

$\text{CdO} \cdot 2\text{B}_2\text{O}_3 + 2\text{H}_2\text{O}$ . (Ditte, A. ch. 1883, (5) 30. 255)

$\text{CdO} \cdot 4\text{B}_2\text{O}_3 + 10\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ ; decomp. on heating. (Ditte, A. ch. 1883, (5) 30. 255)

Cadmium borate bromide,  $6\text{CdO} \cdot 8\text{B}_2\text{O}_3$ ,  $\text{CdBr}_2$ .

Insol. in  $\text{H}_2\text{O}$  and fuming  $\text{HCl}$  or  $\text{HBr}$  + Aq. (Rousseau and Allaire, C. R. 1894, 119. 72)

Cadmium borate chloride,  $6\text{CdO} \cdot 8\text{B}_2\text{O}_3$ ,  $\text{CdCl}_2$ .

(Rousseau and Allaire, C. R. 1894, 118. 1256.)

Cadmium borate iodide,  $6\text{CdO} \cdot 8\text{B}_2\text{O}_3$ ,  $\text{CdI}_2$ .

(Allaire, C. R. 1898, 127. 557.)

Cesium borate,  $\text{Cs}_2\text{B}_6\text{O}_{16}$ .

Very sol. in  $\text{H}_2\text{O}$ , less in alcohol (Reischle, Z. anorg. 4. 116.)

**Calcium borate,  $\text{Ca}(\text{BO}_2)_2$ .**

Sl sol. in  $\text{H}_2\text{O}$ , insol in alkali chlorides, or boiling conc. acetic acid + Aq, sol. in cold or hot solutions of ammonium salts, especially ammonium nitrate, in  $\text{CaCl}_2$  + Aq, and also easily sol in dilute mineral acids at  $50^\circ$ . (Ditte, C. R. 80. 490, 561.)

+  $2\text{H}_2\text{O}$ .

+  $4\text{H}_2\text{O}$ , two modifications of which one is very unstable (van't Hoff and Meyerhoffer, A 1906, 351. 101.)

+  $6\text{H}_2\text{O}$ . When warmed in  $\text{H}_2\text{O}$  it goes over into  $\text{CaB}_2\text{O}_4 + 4\text{H}_2\text{O}$ . (van't Hoff and Meyerhoffer.)

Sol in  $\text{H}_2\text{O}$  without decomp., 1 l solution contains 2 g. salt (Ditte, C. R. 96. 1663.)

$\text{CaB}_2\text{O}_7$ . Decomp. by  $\text{H}_2\text{O}$  (Blount, C. N. 54. 208.)

Insol in methyl acetate. (Naumann, B 1909, 42. 3790.)

+  $3\text{H}_2\text{O}$  (Ditte, C. R. 96. 1663.)

+  $4\text{H}_2\text{O}$ . Min. *Bechthite*.

+  $6\text{H}_2\text{O}$ . Min. *Borocalcite*. Sol. in acids  $\text{CaB}_2\text{O}_5 + 4\text{H}_2\text{O}$

+  $8\text{H}_2\text{O}$  Unstable. On standing in the solution in which it is formed it changes into  $\text{CaB}_2\text{O}_{10} + 4\text{H}_2\text{O}$

+  $12\text{H}_2\text{O}$ . Unstable; Goes over into  $\text{CaB}_2\text{O}_{10} + 8\text{H}_2\text{O}$ . (van't Hoff and Meyerhoffer, A 1906, 351. 104.)

$\text{CaB}_2\text{O}_{10} + 12\text{H}_2\text{O}$  (Ditte, C. R. 96. 1663.)

$2\text{CaO} \cdot \text{B}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ , sol. in dil. acids. (Ouvrard, C. R. 1905, 141. 353.)

$\text{Ca}_2\text{B}_2\text{O}_{11}$  (Ditte, C. R. 77. 785.)

+  $3\text{H}_2\text{O}$  Min. *Pandermite*, *Priceite*. See  $4\text{CaO} \cdot 5\text{B}_2\text{O}_3 + 9\text{H}_2\text{O}$

+  $5\text{H}_2\text{O}$ . Min. *Colemanite*.

If all the Ca is in form of colemanite, the solution contains in 100 g, 4.8 g.  $\text{H}_3\text{BO}_3$ , and 0.1 g. CaO (van't Hoff, B. A. B. 1907, 653.)

+  $7\text{H}_2\text{O}$ .

+  $9\text{H}_2\text{O}$ . (van't Hoff and Meyerhoffer, A. 1906, 351. 101.)

$3\text{CaO} \cdot \text{B}_2\text{O}_3$ . Easily sol. in 'dil. acids. (Ouvrard, C. R. 1901, 132. 258.)

$3\text{CaO} \cdot 5\text{B}_2\text{O}_3 + 9\text{H}_2\text{O}$  (van't Hoff, B. A. B. 1908, II 568.)

$4\text{CaO} \cdot 5\text{B}_2\text{O}_3 + 9\text{H}_2\text{O}$ . True composition of Pandemite. (van't Hoff, B. A. B 1906, II 572.)

**Calcium iron (ferrous) borate silicate,**

$\text{Ca}_2\text{FeB}_3\text{Si}_2\text{O}_{16}$

Min *Homilite*. Easily sol in  $\text{HCl}$  + Aq

**Calcium magnesium borate,  $\text{CaO} \cdot \text{MgO} \cdot 3\text{B}_2\text{O}_3 + 6\text{H}_2\text{O}$ .**

Min. *Hydroboracite*. Somewhat sol in  $\text{H}_2\text{O}$ . Easily sol. in warm  $\text{HCl}$  + Aq or  $\text{HNO}_3$  + Aq.  $3\text{CaO} \cdot 3\text{MgO} \cdot 4\text{B}_2\text{O}_3$  (Ditte, C. R. 77. 894.)

**Calcium sodium borate,  $2\text{CaO} \cdot \text{Na}_2\text{O} \cdot 5\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$ .**

(van't Hoff, B. A. B. 1907, 303)

$\text{Ca}_2\text{B}_{10}\text{O}_{18} \cdot \text{Na}_2\text{B}_4\text{O}_{10} + 15$ , or  $24\text{H}_2\text{O}$ .

Min. *Natroborocalcite*, *Ulexite*. Decomp. by boiling with  $\text{H}_2\text{O}$ . Sol in acids

$\text{Ca}_2\text{Na}_2\text{B}_{12}\text{O}_{22} + 15\text{H}_2\text{O}$ . Min *Franklandite*. Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl}$ , and  $\text{HNO}_3$  + Aq

**Calcium borate bromide,  $3\text{CaO} \cdot 3\text{B}_2\text{O}_3 \cdot \text{CaBr}_2$ .**

Sl. attacked by  $\text{H}_2\text{O}$  Very sol. in dilute acetic acid. (Ouvrard, C. R. 1905, 141. 1023.)

$3\text{CaO} \cdot 5\text{B}_2\text{O}_3 \cdot \text{CaBr}_2$  Hardly attacked by cold  $\text{H}_2\text{O}$  or very dil acetic acid. Sol. in strong acids, even when dilute. (Ouvrard, C. R. 1905, 141. 1023.)

**Calcium borate chloride,  $\text{Ca}_2\text{B}_2\text{O}_6 \cdot \text{CaCl}_2$ .**

Decomp. quickly by moist air or  $\text{H}_2\text{O}$ , slowly by absolute alcohol (Chateher, C. R. 99. 276.)

$3\text{CaO} \cdot 3\text{B}_2\text{O}_3 \cdot \text{CaCl}_2$ . (Ouvrard, C. R. 1905, 141. 353.)

$3\text{CaO} \cdot 5\text{B}_2\text{O}_3 \cdot \text{CaCl}_2$ . Sl. attacked by cold  $\text{H}_2\text{O}$  and dil acetic acid + Aq Strong acids dissolve even when very dilute. (Ouvrard, C. R. 1905, 141. 352.)

**Calcium borate silicate,  $2\text{CaO} \cdot \text{B}_2\text{O}_3 \cdot 2\text{SiO}_2 + \text{H}_2\text{O}$ .**

Min. *Dalolite*. Sol. in  $\text{HCl}$  + Aq with separation of gelatinous silica

+  $2\text{H}_2\text{O}$  Min *Botryolite*.

$\text{CaO} \cdot \text{B}_2\text{O}_3 \cdot \text{SiO}_2$ . Min. *Danburite* Very sl. attacked by  $\text{HCl}$  + Aq before ignition.

**Chromous borate.**

Precipitate. Sol. in free acids, insol. in borax + Aq. (Moberg)

**Chromic borate,  $7\text{Cr}_2\text{O}_3 \cdot 4\text{B}_2\text{O}_3$ .**

Insol in  $\text{H}_2\text{O}$ ; sol. in excess of borax + Aq. (Hebberling, C. C 1870. 122.)

**Chromic magnesium borate,  $3\text{Cr}_2\text{O}_3 \cdot 6\text{MgO} \cdot 2\text{B}_2\text{O}_3$** 

Not attacked by acids (Ebelmen, A. ch. (3) 33. 52.)

$2\text{Cr}_2\text{O}_3 \cdot 9\text{MgO} \cdot 3\text{B}_2\text{O}_3$  (Mallard, C. R. 105. 1260.)

**Cobaltous borate,  $3\text{CoO} \cdot 2\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 88. 299.)  $3\text{CoO} \cdot \text{B}_2\text{O}_3$ . (Mallard, C. R. 105. 1260.)  $2\text{CoO} \cdot \text{B}_2\text{O}_3$ . (Ouvrard, C. R. 1900, 130. 337.)

**Cobaltous borate bromide,  $6\text{CoO} \cdot 8\text{B}_2\text{O}_3 \cdot \text{CoBr}_2$ .**

(Rousseau and Allaire, C. R. 1894, 119. 73.)

**Cobaltous borate chloride,  $6\text{CoO} \cdot 8\text{B}_2\text{O}_3 \cdot \text{CoCl}_2$** 

(Rousseau and Allaire, C. R. 1894, 118. 1257.)

**Cobaltous borate iodide,  $6\text{CoO} \cdot 8\text{B}_2\text{O}_3 \cdot \text{CoI}_2$ .**

(Allaire, C. R. 1898, 127. 557.)

**Cuprous borate,  $3\text{Cu}_2\text{O} \cdot 2\text{B}_2\text{O}_3$** 

(Guertler, Z. anorg. 1904, 38. 459.)

**Cupric borate.**

Composition depends on temperature and concentration of solutions. Boiling  $H_2O$  dissolves out all the boric acid. Sol. in acids, slowly sol. in hot conc.  $NH_4Cl + Aq$ .

$Cu(BO_2)_2$ . Insol. in cold dil. acids, even HF. Slowly sol. in hot conc.  $HCl$ . Not attacked by alkalis or alkali carbonates +  $Aq$ . (Guertler, Z. anorg. 1904, 38, 456.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

**Cupric borate ammonia**,  $CuB_4O_7 \cdot 4NH_3 + 8H_2O$ .

Efflorescent. Can be recrystallized from a little  $NH_4OH + Aq$ . (Pasternack, A. 161, 237.)

**Didymium borate**,  $DiBO_3$ .

Insol. in  $H_2O$  acidulated with  $HCl + Aq$  (Cleve, Bull. Soc. (2) 43, 363.)

$Di_2(B_4O_7)_2$ . Insol. in  $H_2O$ ; sol. in acids (Freuchs and Smith, A. 191, 355.)

**Glucinum borate, basic**,  $5GHO \cdot B_2O_3$ .

Insol. in  $H_2O$ ; sol. in acids (Kruss and Morant, B. 23, 735.)

**Iron (ferrous) borate.**

Ppt.  $H_2O$  dissolves out all the boric acid. (Tunerman.)

**Iron (ferric) borate**,  $Fe_2(BO_2)_4 + 3H_2O$ .

Ppt. Insol. in  $H_2O$ .  
Min. *Lagovate*. Sol. in acids.  
 $2Fe_2O_3 \cdot 3B_2O_3$  (Mallard, C. R. 105, 1260.)  
 $6Fe_2O_3 \cdot B_2O_3 + 6H_2O$ . Ppt. (Rose, Pogg. 89, 473.)

$9Fe_2O_3 \cdot B_2O_3 + 9H_2O$ . Ppt. (Rose.)

**Iron (ferric) magnesium borate**,  $3Fe_2O_3 \cdot 6MgO \cdot 2B_2O_3$ .

Insol. in  $H_2O$ . Sol. in conc.  $HCl + Aq$  (Ebelmen, A. ch. (3) 33, 53.)  
 $2Fe_2O_3 \cdot 9MgO \cdot 3B_2O_3$  (Mallard, C. R. 105, 1260.)

**Iron (ferroferric) magnesium borate**,  $3MgO \cdot FeO \cdot Fe_2O_3 \cdot B_2O_3$ .

Min. *Ludwigite*. Slowly sol. in  $HCl + Aq$ , when finely powdered.

**Iron (ferrous) borate bromide**,  $6FeO \cdot 8B_2O_3 \cdot FeBr_3$ .

Slowly sol. in hot  $HNO_3 + Aq$  (Rousseau and Allaire, C. R. 116, 1445.)

**Iron (ferrous) borate chloride**,  $6FeO \cdot 8B_2O_3 \cdot FeCl_2$ .

Slowly sol. in hot  $HNO_3 + Aq$  (Rousseau and Allaire, C. R. 116, 1195.)

**Lanthanum borate**,  $2La_2O_3 \cdot B_2O_3$ .

(Nordenskjöld, Pogg. 114, 618.)

$La_2(B_4O_7)_2$ . Ppt. (Smith.)

Formula is  $La_2B_4O_{15} + xH_2O$ . (Cleve, B. 11, 910.)

**Lead borate, basic,**

$2PbO \cdot B_2O_3 + 2H_2O$ . Ppt.  
 $4PbO \cdot 3B_2O_3 + 4H_2O$ . Ppt.  
 $+ 5H_2O$ . Ppt.  
 $6PbO \cdot 5B_2O_3 + 6H_2O$ . Ppt.  
 $8PbO \cdot 3B_2O_3 + 8H_2O$ . Ppt.  
 $9PbO \cdot 5B_2O_3 + 9H_2O$ . Ppt. (Rose, Pogg. 87, 470.)

**Lead borate**,  $Pb(BO_2)_2 + H_2O$ .

Insol. in  $H_2O$ . Easily sol. in dil.  $HNO_3$ , or boiling  $HC_2H_3O_2 + Aq$ . Decomp. by  $H_2SO_4$ ,  $HCl$ , also by boiling  $KOH$ , or  $NaOH + Aq$ . Insol. in alcohol. (Herapath, Phil. Mag. (3) 34, 375.)

Sol. in  $NH_4Cl + Aq$ ; sol. in sat.  $NaCl + Aq$ .  
 $2PbO \cdot 3B_2O_3 + 4H_2O$  (Herapath.)  
 $PbB_4O_7 + 4H_2O$ . Slightly sol. in pure  $H_2O$ , but insol. in solutions of Na salts as  $Na_2B_4O_7 + Aq$ . (Souberran.)

**Lead borate chloride**,  $Pb(BO_2)_2 \cdot PbCl_2 + H_2O$ .

Insol. in cold, very slowly decomp. by hot  $H_2O$  into its constituents. Easily sol. in dil. hot  $HNO_3 + Aq$ ; insol. in alcohol. (Herapath, Phil. Mag. (3) 34, 375.)

**Lead borate nitrate**,  $Pb(BO_2)_2 \cdot Pb(NO_3)_2 + H_2O$ .

Insol. in alcohol. (Herapath.)

**Lithium borate**,  $LiBO_2$ .

Solubility in $H_2O$ . 100 g. $H_2O$ dissolve g. $LiBO_2$ at $t^\circ$ .			
$t^\circ$	g. $LiBO_2$	$t^\circ$	g. $LiBO_2$
0	0.7	30	4.9
10	1.4	40	11.12
20	2.6	45	20.

(Le Chatelier, C. R. 1897, 124, 1094.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37, 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

$+ 8H_2O$  (Le Chatelier, Bull. Soc. 1899, (3) 21, 35.)

$+ 16H_2O$ . Effloresces in the air, slowly sol. in cold  $H_2O$ , rapidly in hot  $H_2O$  (Le Chatelier, C. R. 1897, 124, 1092.)

$Li_2H_4(BO_3)_2 + 14H_2O$ . (Reischle, Z. anorg. 4, 166.)

$Li_2B_4O_7$ . Deliquescent; easily sol. in  $H_2O$ . (Arfvedson, A. ch. 10, 82.)

Sol. in acetone. (Eidmann, C. C. 1899, II, 1014.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

$+ 5H_2O$ . Insol. in alcohol (Filsinger, Arch. Ph. (3) 8, 198.)

$\text{Li}_2\text{O}$ ,  $3\text{B}_2\text{O}_3 + 6\text{H}_2\text{O}$  Very sol. in  $\text{H}_2\text{O}$ , insol. in alcohol (Filsinger).  
 $\text{Li}_2\text{O}$ ,  $4\text{B}_2\text{O}_3$  Insol. in  $\text{H}_2\text{O}$  (Le Chatelier, Bull. Soc. 1899, (3) 21. 35).  
 $+10\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Filsinger)

"Acid lithium borate" is less sol. than the tetraborate (Gmelin)

$\text{Li}_2\text{O}$ ,  $5\text{B}_2\text{O}_3 + 10\text{H}_2\text{O}$  (Dukelski, C. A. 1908. 1089)

**Magnesium borate**,  $\text{Mg}(\text{BO}_2)_2$ .

(Ditte, C. R. 77. 893.)  
 $+3\text{H}_2\text{O}$ . Min *Pinnole*  
 $+4\text{H}_2\text{O}$ . (Laurent, A. ch (2) 67. 215)  
 $+8\text{H}_2\text{O}$ . Insol. in cold or hot  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl} + \text{Aq}$ . Decomp. by conc.  $\text{HCl} + \text{Aq}$  into  $\text{H}_3\text{BO}_3$  and  $\text{MgCl}_2$ . (Wohler.)  
 $\text{MgB}_4\text{O}_7 + 8\text{H}_2\text{O}$ . (Popp, A. Suppl 8. 1)  
 $\text{MgO}$ ,  $3\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$  Very slowly sol. in  $\text{H}_2\text{O}$ . (Rose, A. 84. 221.)  
 Sol. in 75 pts cold  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 49. 445.)

$2\text{MgO}$ ,  $\text{B}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ , but sol. in  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . (Guertler, Z. anorg. 1904, 40. 236.)

$+ \text{H}_2\text{O}$ . Very sl sol. in  $\frac{1}{10}$  N  $\text{HCl} + \text{Aq}$ . (van't Hoff, B. A. B 1907, 658.)

Min *Aschurite*  
 $3\text{MgO}$ ,  $\text{B}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids. (Ebelmen, A. 80. 208.)

Very sl. sol. in cold, but somewhat decomp. by boiling  $\text{H}_2\text{O}$  (Rammelsberg.)

$+9\text{H}_2\text{O}$  Somewhat sol. in cold  $\text{H}_2\text{O}$  (Wohler, Pogg. 28. 525)

$3\text{MgO}$ ,  $2\text{B}_2\text{O}_3$ . Sol. in warm  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3 + \text{Aq}$  (Ditte, C. R. 77. 993.)

$\text{MgO}$ ,  $6\text{B}_2\text{O}_3 + 18\text{H}_2\text{O} = \text{Mg}(\text{BO}_2)_2$ ,  $10\text{HBO}_2 + 13\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 49. 445.)

$3\text{MgO}$ ,  $4\text{B}_2\text{O}_3$  Sol. in hot dil acids, insol. in acetic acid (Ditte, C. R. 77. 993.)

$5\text{MgO}$ ,  $2\text{B}_2\text{O}_3 + 1\frac{1}{2}$ , and  $3\text{H}_2\text{O}$  Min. *Szabolite* Difficultly sol. in  $\text{HCl} + \text{Aq}$

$9\text{MgO}$ ,  $\text{B}_2\text{O}_3$  (Mallard, C. R. 106. 260)

**Magnesium manganous borate**,  $3\text{MgB}_2\text{O}_6$ ,  $4\text{Mn}_2\text{B}_2\text{O}_6 + 7\text{H}_2\text{O}$ .

Min *Sussexite*. Sol. in  $\text{HCl} + \text{Aq}$

**Magnesium potassium borate**,  $\text{KMg}_3\text{B}_{11}\text{O}_{34} + 9\text{H}_2\text{O}$ .

Min. *Kaliborite*. Insol. in  $\text{H}_2\text{O}$  (Feit, Ch. Z. 1889, 13. 1188)

$2\text{MgO}$ ,  $2\text{K}_2\text{O}$ ,  $11\text{B}_2\text{O}_3 + 20\text{H}_2\text{O}$  (van't Hoff and Lichtenstein, B. A. B 1904, 936.)

**Magnesium sodium borate**,  $\text{Mg}_2\text{B}_4\text{O}_{11}$ ,  $\text{Na}_2\text{B}_4\text{O}_7 + 30\text{H}_2\text{O}$ .

Eflorescent. About as sol. in cold  $\text{H}_2\text{O}$  as borax; solution separates out a Mg borate on warming, which redissolves on cooling. Decomp. by boiling  $\text{H}_2\text{O}$ . (Rammelsberg)

**Magnesium strontium borate**,  $3\text{MgO}$ ,  $3\text{SrO}$ ,  $4\text{B}_2\text{O}_3$

Easily sol. in dil. acids. (Ditte, C. R. 77. 895)

**Magnesium borate bromide**,  $2\text{Mg}_3\text{B}_5\text{O}_{16}$ ,  $\text{MgBr}_2$  or  $6\text{MgO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{MgBr}_2$ . (Rousseau and Allaire, C. R. 1894, 119. 71)

**Magnesium borate chloride**,  $2\text{Mg}_3\text{B}_5\text{O}_{16}$ ,  $\text{MgCl}_2$

Min *Boracile* Insol. in  $\text{H}_2\text{O}$ , slowly sol. in acids (Kraut)

*Stassfurthite* Easily sol. in warm acids. (Bischof)

**Magnesium borate iodide**,  $6\text{MgO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{MgI}_2$

(Allaire, C. R. 1898, 127. 556.)

**Magnesium borate phosphate**,  $\text{Mg}(\text{BO}_2)_2$ ,  $2\text{MgHPO}_4 + 7\text{H}_2\text{O}$

Min. *Lüneburgite*.

**Magnesium borate sulphate**,  $2\text{Mg}_2\text{B}_4\text{O}_6$ ,  $3\text{MgSO}_4 + 12\text{H}_2\text{O}$ .

Min. *Magnesium sulphoborate*. Sol. in mineral acids when ground (Nauert, B. 1893, 26. 874)

**Manganous borate**,  $\text{MnB}_4\text{O}_7$  (?).

Insol. in  $\text{H}_2\text{O}$  (Berzelius), very sl sol. in  $\text{H}_2\text{O}$  (Thomas, Am. Ch. J. 4. 358); decomp. by warm, slowly by cold  $\text{H}_2\text{O}$  Sol. in  $\text{MgSO}_4 + \text{Aq}$  (Berzelius).

$+3\text{H}_2\text{O}$ . (Endemann and Paisley, Zeit. angew. Ch. 1903, 16. 176.)

$+5\text{H}_2\text{O}$ . Ppt (Endemann and Paisley.) Very hygroscopic. (Endemann, Am. Ch. J. 1903, 29. 72)

$3\text{MnO}$ ,  $\text{B}_2\text{O}_3$  (Mallard, C. R. 105. 1260.) Not attacked by  $\text{H}_2\text{O}$  Very sol. in acids (Ouvrard, C. R. 1900, 130. 336)

$3\text{MnO}$ ,  $2\text{B}_2\text{O}_3$ . (Mallard)

$\text{MnH}_2(\text{BO}_2)_2$  Very sl sol. in  $\text{H}_2\text{O}$ .

Solubility in 2%  $\text{Na}_2\text{SO}_4 + \text{Aq}$ . At  $18.5^\circ$ , 0.77 g.  $\text{MnH}_2(\text{BO}_2)_2$  are dissolved per litre;

at  $40^\circ$ , 0.65 g.; at  $60^\circ$ , 0.36 g., at  $80^\circ$ , 0.12 g.

Solubility in 2%  $\text{NaCl} + \text{Aq}$ . 1 l solution dissolves 1.31 g. salt at  $18.2^\circ$ , 0.6 g. at  $59^\circ$ ; and 0.29 g. at  $80^\circ$ .

Solubility in 2%  $\text{CaCl}_2 + \text{Aq}$ . 1 l.  $\text{CaCl}_2 + \text{Aq}$  dissolves 2.91 g. salt at  $17.6^\circ$ ; 2.44 g. at  $43.0^\circ$ ; 2.25 g. at  $61^\circ$ ; and 1.35 g. at  $80^\circ$ . (Hartley and Ramage, Chem. Soc. 63. 129.)

**Manganous borate bromide**,  $6\text{MnO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{MnBr}_2$ .

(Rousseau and Allaire, C. R. 1894, 119. 73.)

**Manganous borate chloride**,  $6\text{MnO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{MnCl}_2$ .

(Rousseau and Allaire, C. R. 1894, 118. 1257.)

**Molybdenum borate**,  $\text{MoO}_2$ ,  $2\text{B}_2\text{O}_3$  (?).

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_3\text{BO}_3 + \text{Aq}$  (Berzelius)

**Molybdenum borate,  $\text{Mo}_3\text{O}_7, \text{B}_2\text{O}_3$ .**

Precipitate. Insol. in  $\text{H}_2\text{O}$ ; sl sol in a solution of boric acid (Berzelius)

See **Boromolybdic Acid**.

**Nickel borate,  $\text{Ni}(\text{BO}_3)_2 \cdot 2\text{H}_2\text{O}$ .**

Insol in  $\text{H}_2\text{O}$ . Easily sol in acids. Easily sol in warm  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose, Pogg 88. 299.)

$2\text{NiO}, \text{B}_2\text{O}_3 + x\text{H}_2\text{O}$  Easily sol. in acids. (Rose.)

$3\text{NiO}, 2\text{B}_2\text{O}_3 + 5\text{H}_2\text{O}$  Easily sol. in acids. (Rose.)

$3\text{NiO}, \text{B}_2\text{O}_3$ . Not attacked by  $\text{H}_2\text{O}$ , sol in acids. (Ouvrard, C. R. 1900, 130. 337)

**Nickel borate bromide,  $6\text{NiO}, 8\text{B}_2\text{O}_3, \text{NiBr}_2$ .**

(Rousseau, C. R. 1894, 119. 73)

**Nickel borate chloride,  $6\text{NiO}, 8\text{B}_2\text{O}_3, \text{NiCl}_2$ .**

(Rousseau, C. R. 1894, 118. 1257.)

**Potassium borates.**

Solubility of  $\text{B}_2\text{O}_3$  in  $\text{K}_2\text{O} + \text{Aq}$  at  $30^\circ$

Solution contains		Solid phase
% by wt $\text{K}_2\text{O}$	% by wt $\text{B}_2\text{O}_3$

At  $30^\circ$  only the three potassium borates  $\text{K}_2\text{O}, \text{B}_2\text{O}_3 + 2.5\text{H}_2\text{O}$ ;  $\text{K}_2\text{O}, 2\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$  and  $\text{K}_2\text{O}, 5\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$  exist in stable form.

(Dukelski, Z anorg 1906, 50. 42.)

**Potassium metaborate,  $\text{KBO}_2$ .**

Sol in small amount of  $\text{H}_2\text{O}$ . (Berzelius, Pogg 34. 568.)

$+1\frac{1}{2}\text{H}_2\text{O}$ . Only stable hydrate (Dukelski, Z anorg 1906, 50. 42)

$+1\frac{1}{2}\text{H}_2\text{O}$  (Atterberg, Bull. Soc. (2) 22. 350)

**Potassium tetraborate,  $\text{K}_2\text{B}_4\text{O}_7$ .**

Very sol. in  $\text{H}_2\text{O}$ .

$+4\text{H}_2\text{O}$  (Atterberg, Bull. Soc. (2) 22. 350.)

Only stable hydrate. (Dukelski, l. c.)

$+5\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$ ; more sol. than  $\text{K}_2\text{B}_4\text{O}_{10}$  or  $\text{K}_2\text{B}_{10}\text{O}_{16}$ .

$+6\text{H}_2\text{O}$ . (Atterberg, l. c.)

**Potassium hexaborate,  $\text{K}_2\text{B}_6\text{O}_{10} + 5$ , and  $8\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ .

Does not exist. (Dukelski, l. c.)

**Potassium dekaborate,  $\text{K}_2\text{B}_{10}\text{O}_{16} + 8\text{H}_2\text{O}$ .**

Sol in  $\text{H}_2\text{O}$ . (Rammelsberg.)

Only hydrate. (Dukelski)

**Potassium dodekaborate,  $\text{K}_2\text{B}_{12}\text{O}_{18} + 10\text{H}_2\text{O}$ .**

Sl sol. in cold, very sol. in hot  $\text{H}_2\text{O}$ . (Laurent, A. ch. 67. 215.)

$= \text{K}_2\text{B}_{10}\text{O}_{16}$  (Rammelsberg.)

Does not exist (Dukelski.)

**Potassium borate fluoride,  $\text{KBO}_2, \text{KF}$ .**

Sol in  $\text{H}_2\text{O}$ . (Schiff and Sestini, A. 228. 72)

$\text{KBO}_2, 2\text{KF}$  Sol. in little, decomp. by much  $\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  (Schiff and Sestini, A. 228. 72)

**Rubidium borate,  $\text{Rb}_2\text{B}_4\text{O}_7$ .**

Anhydrous. (Reischle, Z. anorg. 4. 166.)

$+6\text{H}_2\text{O}$  Not deliquescent or efflorescent.

Sol in  $\text{H}_2\text{O}$ . (Reissig, A. 127. 33)

**Samarium borate,  $\text{SmBO}_3$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$  (Cleve, Bull. Soc. (2) 43. 1670.)

**Scandium borate,  $\text{ScBO}_3$ .**

Sol. in dil. acids. (Crookes, Phil Trans. 1910, 210. A. 364.)

**Silver borate,  $\text{AgBO}_2$ .**

Sl. sol in  $\text{H}_2\text{O}$ . By washing with  $\text{H}_2\text{O}$  the boric acid is dissolved out (Rose, Pharm. Centralbl. 1853. 205.)

Sol with decomp. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  (Herschel); sol in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  if pptd. cold.

1 l.  $\text{H}_2\text{O}$  dissolves ca.  $6 \times 10^{-2}$  gram-atoms at  $25^\circ$ . (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

Insol in ethyl acetate (Naumann, B. 1910, 43. 314)

$3\text{Ag}_2\text{O}, 4\text{B}_2\text{O}_3$ . (Rose, l. c.)

## Sodium borates.

Solubility of  $B_2O_3$  in  $Na_2O + Aq$  at  $30^\circ$ .

Solution contains		Solid phase
% by wt $Na_2O$	% by wt $B_2O_3$

0 64	6 11	"
	3 54	"

At  $30^\circ$ , only the four sodium borates  $Na_2O, B_2O_3 + 4H_2O$ ,  $Na_2O, B_2O_3 + 8H_2O$ ,  $Na_2O, 2B_2O_3 + 10H_2O$ ; and  $Na_2O, 5B_2O_3 + 10H_2O$  exist as stable phases (Dukelski, Z. anorg. 1906, 50. 46.)

Sodium metaborate,  $NaBO_2$ .

Anhydrous. Easily sol in  $H_2O$ , with evolution of heat.

+ $H_2O$ . Easily sol in  $H_2O$ . (Benedikt.)  
 + $2H_2O$ . Easily sol. in  $H_2O$ . (Benedikt, B 7. 703.)

+ $3H_2O$ . Easily sol. in  $H_2O$ . (Berzelius.)  
 + $4H_2O$ . Sl. efflorescent. Sol. in hot, less sol. in cold  $H_2O$ . Melts at  $57^\circ$  in its crystal  $H_2O$ . (Dukelski, Z. anorg. 50. 42.)

+ $4\frac{1}{2}H_2O$ . (Attenberg, Z. anorg. 1906, 48. 370.)

+ $5\frac{1}{2}H_2O$  (Attenberg.)

+ $8H_2O$ . (Attenberg)  
 + $4H_2O$  and + $8H_2O$  are the only hydrates formed. (Dukelski)

System  $Na_2O, B_2O_3, H_2O$  at  $60^\circ$  investigated by Sborgh. (Real. Ac. Linc 1915, (5) 24. I, 443.)

Sodium tetraborate,  $Na_2B_4O_7$  (Borax)

100 g  $H_2O$  dissolve at:

$5^\circ$   $10^\circ$   $21^\circ$   $5^\circ$   $30^\circ$   $37^\circ$   $5^\circ$

1 3 1 6 2 8 3 9 5.6 g. anhydrous salt.

$45^\circ$   $50^\circ$   $54^\circ$   $55^\circ$   $56^\circ$   $57^\circ$

8.1 10 5 13.3 14.2 15 0 16 0 g. anhydrous salt.

(Horn and van Wagener, Am. Ch. J. 1903, 30. 347.)

Insol. in ethyl acetate (Naumann, B. 1910, 43. 314.)

Sol. in amyl alcohol in the presence of meta-arsonic acid and excess of  $H_2BO_3$  (Auerbach, Z. anorg. 1903, 37. 358.)

+ $4H_2O$ .

+ $5H_2O$

100 g  $H_2O$  dissolve at.

$65^\circ$   $70^\circ$   $80^\circ$   $90^\circ$   $100^\circ$

22.0 24.4 31.4 40.8 52.3 g. anhydrous salt

(Horn and van Wagener, Am. Ch. J. 1903, 30. 347.)

+ $6H_2O$ . Grows opaque in the air. (Bechi, Sill. Am. J. (2) 17. 129.)

+ $10H_2O$ . Only stable hydrate. (Dukelski, Z. anorg. 50. 30.) Efflorescent on surface in dry air. Not efflorescent when free from  $Na_2CO_3$  (Sims)

Sol. in 12 pts. cold, and 2 pts. hot  $H_2O$ . Sat. cold  $Na_2B_4O_7 + Aq$  contains 9.23%, and sat. hot  $Na_2B_4O_7 + Aq$  contains 33.3%  $Na_2B_4O_7$  (Gmelin)  
 Sol. in 20 pts. cold, and 6 pts. boiling  $H_2O$  (Wallerius)

Sol. in 15 pts.  $H_2O$  at  $18.75^\circ$  (Abl.)  
 100 pts.  $H_2O$  at  $15.5^\circ$  dissolve 5 pts., at  $65^\circ$ , 40 pts., at  $100^\circ$ , 106 pts.  $Na_2B_4O_7 + 10H_2O$ . (Ure's Dictionary)  
 100 pts. sat.  $Na_2B_4O_7 + Aq$  at  $105.5^\circ$  contain 32.5 pts.  $Na_2B_4O_7$ , or 100 pts.  $H_2O$  dissolve 110.54 pts.  $Na_2B_4O_7$ , or 1 pt.  $Na_2B_4O_7$  in sol. in 0.9047 pt.  $H_2O$  at  $106.5^\circ$  (Griffith, Quar. J. Sci. 18. 90)

Solubility in 100 pts.  $H_2O$  at  $t^\circ$ .

$t^\circ$	Pts. $Na_2B_4O_7$	Pts. $Na_2B_4O_7 + 10H_2O$	$t^\circ$	Pts. $Na_2B_4O_7$	Pts. $Na_2B_4O_7 + 10H_2O$
0	1 49	2 83	60	18 09	40 43
10	2 42	4 65	70	24 22	57 85
20	4 05	7 88	80	31 17	76 19
30	6 00	11 90	90	40 14	116 06
40	8 79	17 90	100	55 16	201 43
50	12 93	27 41			

(Poggiale, A. ch. (3) 8. 46.)

100 pts.  $H_2O$  dissolve 1.4 pts.  $Na_2B_4O_7$  at  $0^\circ$ , and 55.3 pts. at  $100^\circ$ . (Mulder)  
 $Na_2B_4O_7 + Aq$  sat. at  $15^\circ$  has sp. gr. = 1.0199, and contains 3.926 pts.  $Na_2B_4O_7$  to 100 pts.  $H_2O$ . (Michel and Kiaft, A. ch. (3) 41. 471)

$\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  sat at  $17^\circ$  has sp gr = 1.0208 (Stolba, J pr. 97. 503)

Sp gr. of  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  at  $15^\circ$

$\frac{\text{C}}{\text{Na}_2\text{B}_4\text{O}_7}$	$\frac{\text{C}}{\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}}$	Sp gr	$\frac{\text{C}}{\text{Na}_2\text{B}_4\text{O}_7}$	$\frac{\text{C}}{\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}}$	Sp gr
1	0.52	1.0049	4	2.11	1.0199
2	1.06	1.0099	5	2.64	1.0249
3	1.59	1.0149	6	3.17	1.0299

(Gerlach, Z anal 28. 473.)

Sp gr. of  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  sat. at  $15^\circ = 1.032$  (Gerlach)

Sat  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  boils at  $105.5^\circ$ , and contains 110.5 pts  $\text{Na}_2\text{B}_4\text{O}_7$  to 100 pts  $\text{H}_2\text{O}$ . (Griffith)

Sat.  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  forms a crust at  $103^\circ$ , and contains 60.14 pts  $\text{Na}_2\text{B}_4\text{O}_7$  to 100 pts  $\text{H}_2\text{O}$ ; highest temp observed,  $104.3^\circ$  (Gerlach, Z. anal. 26. 427)

B-pt. of  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  containing pts  $\text{Na}_2\text{B}_4\text{O}_7$  to 100 pts  $\text{H}_2\text{O}$ .

B-pt	Pts $\text{Na}_2\text{B}_4\text{O}_7$	B-pt	Pts $\text{Na}_2\text{B}_4\text{O}_7$
100 $5^\circ$	8.64	103 $0^\circ$	61.2
101 0	17.2	103 5	75.4
101 5	26.5	104 0	90.8
102 0	37.5	104 5	109.0
102 5	48.5	104 6	112.3

(Gerlach, Z anal 26. 452)

M-pt of  $\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$  is  $75.5^\circ$  (Thlden, Chem. Soc. 45. 407)

Insol in alcohol

100 g alcohol (0.941 sp. gr) dissolve 2.48 g at  $15.5^\circ$  (U. S. P.)

Sol in alcoholic solution of  $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2$ . (Stromeyer)

Sol in 147 pts glycerine of 1.225 sp gr. (Vogel)

Sol in 1 pt glycerine (Schultze, Arch. Pharm (3) 6. 149)

100 g glycerine dissolve 60.3 g at  $15.5^\circ$  (U. S. P.)

Min Tineal.

Sodium borate,  $\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$ .

Sol. in 5-6 pts cold  $\text{H}_2\text{O}$ . (Bolley, A. 68. 122.) Perhaps sodium hydrogen tetraborate  $\text{NaHB}_4\text{O}_7 + 4\frac{1}{2}\text{H}_2\text{O}$ .

$\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Atterberg, Z. anorg. 48. 370)

Stabile (Dukelski, Z anorg. 50. 42.)

+11 $\text{H}_2\text{O}$  (Laurent, C. R. 29. 5)

Sodium borate fluoride,  $\text{NaBO}_2, 3\text{NaF} + 4\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ .

Basarow (B 7. 112) considers this salt to be a mixture.

$\text{Na}_2\text{B}_4\text{O}_7, 12\text{NaF} + 22\text{H}_2\text{O}$ . Can be separated into its constituents by  $\text{H}_2\text{O}$  (Berzelius, Berz J. B. 23. 96)

Strontium borate,  $\text{Sr}(\text{BO}_2)_2$ .

(Ditte, C R 77. 788)

Easily hydrated by  $\text{H}_2\text{O}$  forming  $\text{SrO}, \text{B}_2\text{O}_3 + 2\text{H}_2\text{O}$ . Very sol. in dil acetic acid (Ouvrard, C R. 1906, 142. 282)

Insol. in acetone (Naumann, B. 1904, 37. 4329.)

+2 $\text{H}_2\text{O}$  (Ouvrard, l. c)

+4 $\text{H}_2\text{O}$  (Ouvrard, l. c)

+5 $\text{H}_2\text{O}$  1 l.  $\text{H}_2\text{O}$  dissolves 2.3 g. at  $10^\circ$ .

(Ditte, A. ch. 1883 (5) 30. 253.)

$\text{SrB}_4\text{O}_7$ . Insol in  $\text{H}_2\text{O}$ ; sol in dil. acids.

(Guertier, Z anorg. 1904, 40. 243)

+4 $\text{H}_2\text{O}$  Sol. in 130 pts. boiling  $\text{H}_2\text{O}$  100 pts  $\text{H}_2\text{O}$  at  $100^\circ$  dissolve 7.7 pts (Ure's Dict.). Easily sol. in cold  $\text{NH}_4$  salts +  $\text{Aq}$ , sol. in cold  $\text{HNO}_3 + \text{Aq}$ .

2 $\text{SrO}, \text{B}_2\text{O}_3$ . Easily decomp. by  $\text{H}_2\text{O}$  forming  $\text{B}_2\text{O}_3, \text{SrO}, 4\text{H}_2\text{O}$  Very sol. in acids. (Ouvrard, C. R. 1906, 142. 282)

3 $\text{SrO}, \text{B}_2\text{O}_3$ . Less easily attacked by  $\text{H}_2\text{O}$  than Ca comp Very sol. in mineral acids. Sl attacked by dil. acetic acid. (Ouvrard, C R. 1901, 132. 258.)

$\text{SrB}_4\text{O}_7$  Very sl. sol. in  $\text{H}_2\text{O}$ ; sol in acids. (Laurent)

$\text{SrB}_4\text{O}_{11} + 7\text{H}_2\text{O}$  Ppt. (Laurent.)

+12 $\text{H}_2\text{O}$ . (Ditte)

$\text{Sr}_3\text{B}_4\text{O}_{13}$ . Sol. in cold mineral acids and acetic acid. (Ditte, C. R. 77. 785.)

2 $\text{SrO}, 3\text{B}_2\text{O}_3$ . Easily sol. in acids (Ditte, l. c)

Strontium borate bromide,  $3\text{SrO}, 5\text{B}_2\text{O}_3, \text{SrBr}_2$ .

As the chloride (Ouvrard, C R. 1906, 142. 283.)

Strontium borate chloride,  $3\text{SrO}, 5\text{B}_2\text{O}_3, \text{SrCl}_2$ .

Sl. attacked by cold  $\text{H}_2\text{O}$ , not attacked by dilute acetic acid. (Ouvrard, C. R. 1906, 142. 282.)

Thallous borate,  $\text{TlBO}_2 + \frac{1}{2}\text{H}_2\text{O}$ .

Decomp. in the air (Buchta, J pr. 1913, (2) 88. 784)

$\text{Tl}_2\text{B}_4\text{O}_7$  (Buchta)

$\text{Tl}_2\text{B}_4\text{O}_7$ . Ppt. Sol. in boiling  $\text{H}_2\text{O}$ , insol. in cold dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Crookes)

+2 $\text{H}_2\text{O}$ . (Buchta, J. pr 1913 (2) 88. 774.)

$\text{Tl}_2\text{B}_4\text{O}_{10} + 3\text{H}_2\text{O}$  (Buchta.)

$\text{Tl}_2\text{B}_4\text{O}_{13} + 4\text{H}_2\text{O}$  (Buchta.)

$\text{Tl}_2\text{B}_{10}\text{O}_{18} + 8\text{H}_2\text{O}$  (Buchta.)

$\text{Tl}_2\text{B}_{10}\text{O}_{18} + 7\text{H}_2\text{O}$  (Buchta.)

Thorium borate (?).

Precipitate. Insol in  $\text{H}_2\text{O}$  and  $\text{H}_3\text{BO}_3 + \text{Aq}$  (Berzelius)

Tin (stannous) borate (?).

Ppt. (Wenzel.)

**Divanadyl borate.**

Insol. in  $H_2O$ ; sol. in  $H_2BO_3 + Aq$  (Berzelius)

**Ytterbium borate,  $YbBO_3$ .**

Insol. in conc.  $HCl$ ; sol. in  $HF$  (Cleve, Z anorg 1902, 32. 148)

**Yttrium borate.**

Precipitate. (Berlin, Pogg. 13. 105.)

**Zinc borate,  $3ZnO, 2B_2O_3$ .**

(Mallard, C. R. 105. 1260.)

Decomp. by  $H_2O$ , very sol. in dil. acids. (Ouvrard, C. R. 1900, 130. 336)

$ZnO, 2B_2O_3 + 4H_2O$  Sol. in  $H_2O$  with decomp. (Ditte, A. ch 1883, (5) 30. 256)

$3ZnO, 4B_2O_3 + H_2O$  Ppt. (Holdermann, Arch. Pharm. 1904, 242. 567.)

$ZnO, 4B_2O_3 + 10H_2O$  (Ditte, A. ch. 1883, (5) 30. 256)

$9ZnO, 4B_2O_3 + 9H_2O$  Sl. sol. in  $H_2BO_3 + Aq$  (Rose, Pogg. 88. 299)

$3ZnO, B_2O_3$  Insol. in mineral acids. (le Chatelier, C. R. 113. 1034)

**Zinc borate ammonia,  $ZnB_2O_7, 4NH_3 + 6H_2O$ .**

Easily sol. in  $NH_4OH, HC_2H_3O_2, H_2SO_4, HCl$ , and  $HNO_3 + Aq$ . (Büchner, A. 161. 234.)

**Zinc borate bromide,  $6ZnO, 8B_2O_3, ZnBr_2$ .**

(Rousseau and Allau, C. R. 116. 1446.)

**Zinc borate chloride,  $6ZnO, 8B_2O_3, ZnCl_2$ .**

Insol. in  $HCl$  (Rousseau, C. R. 1894, 118. 1256)

**Zinc borate iodide,  $6ZnO, 8B_2O_3, ZnI_2$ .**

(Allau, C. R. 1898, 127. 556.)

**Zirconium borate, (?)**

Insol. in  $H_2O$ .

**Perboric acid.**

See Perboric Acid.

**Boric phosphoric acid.**

See Phosphoboric acid.

**Boric tungstic acid.**

See Borotungstic acid.

**Boric acid sulphur trioxide.**

See Borosulphuric acid.

**Borimide,  $B_2(NH)_2$** 

Decomp. by  $H_2O$ ; insol. in all indifferent solvents; sol. in liquid  $NH_3 + S$  to form a dark blue solution. (Stock, B. 1901, 34. 3044.)

**Borimide hydrochloride,  $B_2(NH)_2, 3HCl$ .**

Decomp. by  $H_2O$ , insol. in all ordinary organic solvents (Stock, B. 1901, 34. 3045.)

**Borofluorhydric acid,  $HBFl_4$ .**

See Fluoboric acid.

**Borofluorides.**

See Fluoborides.

**Boromolybdic acid.**

Sol. in  $H_2O$ . Decomp. by alcohol. (Berzelius)

**Boron, B**

(a) *Amorphous.* Somewhat sol. in pure  $H_2O$ , when not ignited. Salts and acids separate it out of aqueous solution. Upon evaporation of  $H_2O$  solution a crust is formed, which is only partially sol. in  $H_2O$  (Berzelius, Pogg. 2. 113.) Decomp. by hot  $H_2SO_4$  and cold moderately conc.  $HNO_3 + Aq$ . Strongly ignited amorphous B is much less easily attacked by reagents than freshly pptd., and is insol. in  $H_2O$ . (Berzelius.) Insol. in caustic alkalis +  $Aq$ ; also in alcohol and ether.

Above boron was very impure. (Moissan, C. R. 114. 392.)

Pure B is not attacked by acids, but has a strong reducing action on  $KMnO_4 + Aq, FeCl_3 + Aq$ , etc (Moissan, C. R. 114. 617)

Does not melt at  $1500^\circ$ . Readily sol. in conc. acids, as  $H_2SO_4, HNO_3, H_3PO_4$ , very sl. sol. in hydric acids; decomp.  $H_2O$  at red heat. (Moissan, A. ch 1895, (7) 6. 313-14)

Insol. in liquid  $NH_3$  (Gore, Am. Ch. J. 1898, 20. 827)

(b) *Crystallized* 1 Insol. in  $H_2O, HCl$ , or  $KOH + Aq$ . Very slightly and slowly attacked by boiling conc.  $H_2SO_4$ . Gradually sol. in hot conc.  $HNO_3$ . Formula is  $Al_2B_{10}$ . (Hampe, A. 183. 75.)

2. Very slightly attacked by conc.  $HCl$  or  $H_2SO_4$ , slowly but completely sol. in conc.  $HNO_3$ ; insol. in  $KOH + Aq$ . Formula is  $C_2Al_2B_{10}$  (Hampe.)

$C_2Al_2B_{10}$ . *Crystalline* Insol. in a solution of  $CrO_2$  in  $H_2SO_4$ . Insol. in hot conc.  $HCl$  and  $H_2SO_4$ . Sol. in hot conc.  $HNO_3$  (Biltz, B. 1910, 43. 303)

**Boron tribromide,  $BBr_3$ .**

Sol. in  $H_2O$  or alcohol with decomp. (Nickles, C. R. 60. 800)

**Boron phosphorus bromide,  $BBr_3, PBr_3$ .**

Decomp. by  $H_2O$ .

Sol. in  $CS_2$  and  $CHCl_3$ . Decomp. by alcohol, ether, etc. (Tarble, C. R. 116. 1521.)

$BBr_3, PBr_3$ . Sl. sol. in cold, easily in hot  $CS_2$ . (Tarble.)

**Boron bromide ammonia,  $BBr_3, 4NH_3$** 

Decomp. by  $H_2O$  and alkalis. (Besson, C. R. 114. 542.)

**Boron bromide phosphine,  $BBr_3, PH_3$** 

Violently decomp. by  $H_2O$  (Besson, C. R. 113. 78)

**Boron bromide phosphorus trichloride,**

Decomp. by  $\text{H}_2\text{O}$ . Sol in  $\text{BBr}_3$ ,  $\text{PCl}_3$ ,  $\text{CS}_2$ , and  $\text{CHCl}_3$ . Insol. in petroleum ether. (Taible, C. R. 1901, 132. 84.)

**Boron bromide phosphorus pentachloride,**

Sol in  $\text{BBr}_3$  and  $\text{CS}_2$ ; decomp. by  $\text{H}_2\text{O}$ , insol. in light petroleum. (Taible, C. R. 1901, 132. 85.)

**Boron bromide phosphorus diiodide,  $2\text{BBr}_3\text{,P}_2\text{I}_4$** 

Sol in  $\text{BBr}_3$ ,  $\text{CS}_2$ ,  $\text{CHCl}_3$ ; insol. in light petroleum; decomp. by  $\text{H}_2\text{O}$ . (Taible, C. R. 1901, 132. 205.)

**Boron bromide phosphoryl chloride,  $\text{BBr}_3\text{,POCl}_3$** 

Very easily decomp. (Oddo and Tealdi, Gazz. ch. it. 1903, 33. (2) 431.)

**Boron bromoiodide,  $\text{BBr}_2\text{I}$** 

Decomp. violently by  $\text{H}_2\text{O}$ . (Besson, C. R. 112. 100.)

**Boron bromosulphide,  $\text{B}_2\text{S}_3\text{,BBr}_3$** 

Decomp. by  $\text{H}_2\text{O}$ . (Stock, B. 1901, 34. 3040.)

**Boron carbide,  $\text{B}_2\text{C}$** 

Very stable, insol. in  $\text{HF}$  and in  $\text{HNO}_3$ ; sol. in  $\text{KOH}$  at red heat. (Moissan, Bull. Soc. 1894, (3) 11. 1101.)

Insol. in acids, sol. in fused alkali. (Moissan, C. R. 1894, 118. 559.)

$\text{BC}$  or  $\text{B}_2\text{C}_2$ . Insol. in all the usual solvents. (Mullhauser, Z. anorg. 5. 92.)

**Boron trichloride,  $\text{BCl}_3$** 

Rapidly absorbed by  $\text{H}_2\text{O}$  and alcohol with decomposition.

**Boron nitrosyl chloride,  $\text{BCl}_3\text{,NOCl}$** 

Decomp. violently by  $\text{H}_2\text{O}$ . (Geuther, J. pr. (2) 8. 854.)

**Boron phosphoryl chloride,  $\text{BCl}_3\text{,POCl}_3$** 

Decomp. immediately by  $\text{H}_2\text{O}$ . (Gustavson, Zeit. Chem. 1870. 521.)

**Boron chloride ammonia,  $2\text{BCl}_3\text{,3NH}_3$** 

Decomp. by  $\text{H}_2\text{O}$ . (Berzelius, Pogg. 2. 147.)

**Boron chloride phosphine,  $\text{BCl}_3\text{,PH}_3$** 

Decomp. by  $\text{H}_2\text{O}$ . (Besson, C. R. 110. 516.)

**Boron chlorosulphide,  $\text{B}_2\text{S}_3\text{,BCl}_3$** 

Decomp. by  $\text{H}_2\text{O}$ . (Stock, B. 1901, 34. 3040.)

**Boron trifluoride,  $\text{BF}_3$** 

$\text{H}_2\text{O}$  absorbs 700 vols.  $\text{BF}_3$  gas to form a

liquid of 1.77 sp. gr. On boiling,  $\frac{1}{3}$  of the  $\text{BF}_3$  is given off, and a residue boiling at  $165\text{--}200^\circ$ , with composition  $\text{BF}_3 + 2\text{H}_2\text{O}$  or  $\text{HBO}_2 + 3\text{HF}$ , is left. (J. Davy, A. ch. 86. 178.)

1 cc.  $\text{H}_2\text{O}$  absorbs at  $0^\circ$  and 762 mm. pressure 1.057 cc.  $\text{BF}_3$ .

1 vol. conc.  $\text{H}_2\text{SO}_4$  of 1.85 sp. gr. absorbs 50 vols.  $\text{BF}_3$ .

Absorbed by alcohol with decomp.

Cold oil of turpentine absorbs 6.8% of  $\text{BF}_3$ .

**Boron fluoride ammonia,  $\text{BF}_3\text{,NH}_3$ ,  $\text{BF}_3\text{,2NH}_3$ , and  $\text{BF}_3\text{,3NH}_3$** 

Decomp. by  $\text{H}_2\text{O}$ .

**Boron fluoride cyanhydric acid,  $\text{BF}_3\text{,HCN}$** 

Very unstable. (Pateau, C. R. 113. 85.)

**Boron fluoride phosphine,  $2\text{BF}_3\text{,PH}_3$** 

Very unstable at ordinary temp. Decomp. by  $\text{H}_2\text{O}$ . (Besson, C. R. 110. 80.)

**Boron hydride,  $\text{BH}_3$** 

Not obtained free from  $\text{H}$ . Sol. in  $\text{H}_2\text{O}$ . (Jones, Chem. Soc. 35. 41.)

See Cyclohexaborene.

$\text{B}_2\text{H}_{10}$ . B.-pt.  $16\text{--}17^\circ$  at 760 mm.

Very unstable. Takes fire spontaneously in the air.

Decomp. by  $\text{H}_2\text{O}$ , dil.  $\text{HCl}$ , and oxidized by conc.  $\text{HNO}_3$  with explosive violence.

Absorbed by  $\text{NaOH} + \text{Aq}$ .

Decomp. by alcohol. Sol. in dry benzene. (Stock, B. 1912, 45. 3562.)

$\text{B}_2\text{H}_{12}$ . B.-pt.  $100^\circ$  at atmospheric pressure.

Decomp. by  $\text{H}_2\text{O}$ . With aqueous alkalis, hydrogen is evolved. (Stock, B. 1912, 45. 3565.)

$\text{B}_2\text{H}_6$ . Insol. in  $\text{HCl}$ . Sol. in aqua regia and  $\text{Br}_2 + \text{Aq}$ . (Winkler, B. 1890, 23. 778.)

$\text{B}_{10}\text{H}_{14}$ . M.-pt.  $99.5^\circ$ ; not attacked by cold or boiling  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{NaOH} + \text{Aq}$ . Sol. in alcohol, ether, benzene, and  $\text{CS}_2$ . (Stock, B. 1913, 46. 3360.)

**Boron iodide,  $\text{BI}_3$** 

Very hygroscopic, and instantly decomp. by  $\text{H}_2\text{O}$  or alcohol. Very sol. in  $\text{CS}_2$ ,  $\text{CCl}_4$ ,  $\text{C}_6\text{H}_6$ , less sol. in  $\text{PCl}_3$ ,  $\text{AsCl}_3$ , and a great many organic liquids. (Moissan, C. R. 112. 717.)

**Boron iodide ammonia,  $\text{BI}_3\text{,5NH}_3$** 

Decomp. by  $\text{H}_2\text{O}$ . (Besson, C. R. 114. 542.)

**Boron iodophosphide,  $\text{BI}_3\text{P}$** 

Very hygroscopic; decomp. by  $\text{H}_2\text{O}$ . Not attacked by cold conc.  $\text{H}_2\text{SO}_4$ , even if fuming, but on heating decomposition takes place. Very sl. sol. in  $\text{CS}_2$ . Insol. in benzene,  $\text{PCl}_3$ , or  $\text{CCl}_4$ . (Moissan, C. R. 113. 624.)

$\text{BIP}$ . Less hygroscopic than  $\text{BI}_3\text{P}$ , but otherwise the properties are similar. (Moissan.)

**Boron nitride, BN.**

Insol in  $H_2O$ , conc  $HNO_3$ , conc.  $HCl$  +  $Aq$ , or conc. solutions of alkalis.  
Decomp by hot conc  $H_2SO_4$  or  $HF$ .  
(Wohler, A 74. 70.)

**Boron trioxide,  $B_2O_3$ .**

Deliquescent. Sol. in  $H_2O$  with a large increase in temp (Ditte, C R. 85. 1069)

1 pt dissolves—

at 18.75°	in 47.01 pts.	$H_2O$ .
" 25°	" 27.75 "	"
" 37.5°	" 18.73 "	"
" 50°	" 15.13 "	"
" 62.5°	" 9.29 "	"
" 75°	" 7.28 "	"
" 87.5°	" 5.58 "	"
" 100°	" 4.74 "	"

Or 100 pts.  $H_2O$  dissolve—

at 18.75°	2.13 pts.	$B_2O_3$
" 25°	3.60 "	"
" 37.5°	4.24 "	"
" 50°	6.61 "	"
" 62.5°	10.76 "	"
" 75°	13.73 "	"
" 87.5°	17.92 "	"
" 100°	21.09 "	"

(Brandes and Firnhaber, Arch. Pharm. 7. 50)

1 litre  $H_2O$  dissolves—

at 0°	11.00 g	$B_2O_3$ .
" 12°	16.50 "	"
" 20°	22.49 "	"
" 40°	39.50 "	"
" 62°	64.50 "	"
" 80°	95.00 "	"
" 102°	164.50 "	"

(Ditte, C. R. 85. 1069)

Sat.  $H_2O$  solution boils at 100° (Brandes and Firnhaber.)

Sat  $H_2O$  solution boils at 103.3° (Griffiths, Quar J. Sci 18. 90.)

Sol. in acetic acid, hot conc  $HCl$  +  $Aq$ ,  $HNO_3$ , and  $H_2SO_4$ . From the three latter it separates on cooling or dilution with  $H_2O$ .

Solubility in  $Na_2O$  +  $Aq$  at 30°.

See Borates, sodium.

Solubility in  $K_2O$  +  $Aq$  at 30°.

See Borates, potassium.

Insol in hot glacial acetic acid. (Holt, Chem. Soc 1911, 100. (2) 720.)

Insol in alcohol (Graham.)

Sol. in alcohol (Berzelius, Ebelmen.)

Sol. in oils.

See also Boric acid.

**Boron trioxide potassium fluoride,  $B_2O_3, 2KF$ .**

Gradually sol in  $H_2O$  Decomp. by much  $H_2O$ . Insol. in alcohol. (Schiff and Sestini, A. 228. 82)

**Boron oxychloride,  $BOCl_3$ .**

(Gustavson, Zeit Chem. 1870. 521.)

$BOCl_3$ . Slowly decomp. by  $H_2O$ . (Coulcler, J. pr (2) 18. 399.)

Oxychlorides of either the above formulae do not exist, the true formula for boron oxychloride is  $B_2O_3Cl_2$ . (Lorenz, A. 247. 226.)

**Boron phosphide,  $BP$ .**

Insol in  $H_2O$ . Sol. in conc. boiling alkalis +  $Aq$  with decomp. Decomp. by  $HNO_3$  +  $Aq$  (Besson, C. R 113. 78)

Insol. in  $PCl_3$ ,  $AsCl_3$ ,  $SbCl_3$ ,  $CCl_4$ , and in fact in all known solvents.

Not attacked by boiling  $H_2O$ , conc.  $HCl$ , or  $HI$  +  $Aq$ . Sol. in conc.  $HNO_3$  with decomp. on heating. Not attacked by cold  $H_2SO_4$ . (Moissan, C. R 113. 726)

$B_2P_3$ . Not attacked by boiling conc.  $HNO_3$  +  $Aq$ . Insol. in all solvents. (Moissan)

**Boron phosphoriodide.**

See Boron iodophosphide.

**Boron selenide,  $B_2Se_3$ .**

Violently decomp by  $H_2O$ . (Sabatier, C. R 112. 1000)

**Boron trisulphide,  $B_2S_3$ .**

Decomp with violence with  $H_2O$ . Combines with alcohol and ether. (Fremy, A. ch (3) 38. 312.)

Insol. in most solvents, but sl. sol. in  $PCl_3$  without decomp.; more sol. in  $SCl_2$ , but does not crystallize from the solution. (Moissan, C. R. 115. 203)

**Boron trisulphide ammonia,  $B_2S_3, 6NH_3$** 

Ppt (Stock, B 1901, 34. 3042.)

**Boron pentasulphide,  $B_2S_5$ .**

Decomp. by  $H_2O$  and alcohol. (Moissan, C. R. 115. 271)

**Borosulphuric acid,  $BOHSO_4 + SO_3$** 

Decomp. by  $H_2O$ . (Schultz-Sellac, B. 4. 12.)

$B(HSO_4)_3$ . Very deliquescent. Easily sol. in fuming  $H_2SO_4$  (D'Arcy, Chem Soc. 55. 155)

$SO_3(O,BO)_2$ . Hygroscopic. Deliquescent. Sol. in  $H_2O$  with decomp. Decomp. by cold alcohols. (Pictet, Bull. Soc 1908, (4) 3. 1121.)

$(SO_3)_2B_2O_3$ . Hygroscopic. Deliquescent. Sol. in  $H_2O$  with decomp. Decomp. by cold alcohols (Pictet, Bull. Soc. 1908, (4) 3. 1121.)

**Boronotungstic acid,  $H_4B_2W_6O_{12} + 22H_2O = 9WO_3, B_2O_3, 2H_2O + 22H_2O$ .**

Sol. in less than  $\frac{1}{2}$  pt.  $H_2O$ , and as easily sol. in alcohol and ether. Sp. gr. of aqueous solution is somewhat under 3. (Klein, A. ch. (5) 28. 370.)

**Aluminum boronotungstate,  $Al_4(B_2W_6O_{12})_3 + 66H_2O$ .**

Extremely sol. in  $H_2O$ . (Klein.)

**Ammonium —,  $(NH_4)_4B_2W_6O_{12} + 18H_2O$ .**

Quickly effloresces. (Klein.)

**Barium boronotungstate**,  $\text{Ba}_2\text{B}_2\text{W}_9\text{O}_{32} + 19\text{H}_2\text{O}$ .

Sol. in 4 pts. cold, and less than  $\frac{1}{2}$  pt. hot  $\text{H}_2\text{O}$ . (Klein.)

**Cadmium** —,  $\text{Cd}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$

Deliquescent

100 pts. of salt dissolve in less than 8 pts.  $\text{H}_2\text{O}$  at  $19^\circ$ . Sp. gr. of solution is 3.28. (Klein.)

Sp. gr. of sat. solution at  $15.6^\circ/4^\circ = 3.2887$ , at  $16.2^\circ/4^\circ = 3.2868$  (Kahlbaum, Z. anorg. 1902, 29. 229.)

**Calcium** —,  $\text{Ca}_2\text{B}_2\text{W}_9\text{O}_{32} + 15\text{H}_2\text{O}$ .

Sol. in  $\frac{1}{10}$  pt.  $\text{H}_2\text{O}$ . Solution has sp. gr. = 3.10. (Klein.)

**Cerium** —,  $\text{Ce}_2(\text{B}_2\text{W}_9\text{O}_{32})_2 + 57\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ , sp. gr. of solution is over 3

**Chromium** —,  $\text{Cr}_2(\text{B}_2\text{W}_9\text{O}_{32})_2 + 74\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ ; sp. gr. of solution is 2.80 (Klein.)

**Cobalt** —,  $\text{Co}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ , sp. gr. of solution sat. at  $19^\circ = 3.30$ . (Klein.)

100 pts.  $\text{H}_2\text{O}$  dissolve 306.8 pts. anhydrous salt at  $16.2^\circ$ ; 288 pts. at  $18.5^\circ$ ; 299.7 pts. at  $19.6^\circ$ ; 286 pts. at  $21.8^\circ$

Sp. gr. of solution sat. at  $19.2^\circ/4^\circ = 3.1369$  (Kahlbaum, Z. anorg. 1902, 29. 218.)

**Copper** —,  $\text{Cu}_2\text{B}_2\text{W}_9\text{O}_{32} + 19\text{H}_2\text{O}$ .

25 pts.  $\text{H}_2\text{O}$  dissolve 100 pts. salt. Sp. gr. of solution = 2.6. (Klein.)

**Lead** —,  $\text{Pb}_2\text{B}_2\text{W}_9\text{O}_{32} + 11\text{H}_2\text{O}$ .

Sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$  (Klein.)

**Lithium** —, (?)

Very sol. in  $\text{H}_2\text{O}$ . Sp. gr. of solution is about 3.

**Magnesium** —,  $\text{Mg}_2\text{B}_2\text{W}_9\text{O}_{32} + 22\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Klein.)

**Manganous** —,  $\text{Mn}_2\text{B}_2\text{W}_9\text{O}_{32} + 17\text{H}_2\text{O}$

100 pts. dissolve in 13 pts.  $\text{H}_2\text{O}$ . Sp. gr. of solution at  $19^\circ = 3.15$ . (Klein.)

**Mercurous** —,  $3\text{Hg}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $9\text{WO}_3 + 14\text{H}_2\text{O}$  (?).

Precipitate

Insol. in  $\text{H}_2\text{O}$ . (Klein.)

Sol. in 20,000 pts. dil. cold, and 1000 pts. boiling  $\text{HNO}_3$  + Aq. of 1.42 sp. gr.

**Nickel** —,  $\text{Ni}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ ; sp. gr. of sat. solution at  $19^\circ = 3.32$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 261.6 pts. at  $21.2^\circ$ . Sp. gr.  $15.75^\circ/4^\circ$  of solution = 2.2959. (Kahlbaum, Z. anorg. 1902, 29. 218.)

**Potassium boronotungstate**,  $\text{K}_2\text{B}_2\text{W}_9\text{O}_{32} + 13\text{H}_2\text{O}$ .

5 pts. salt dissolve in 8 pts.  $\text{H}_2\text{O}$  at  $19^\circ$  to form a solution of 1.38 sp. gr. The solution sat. at  $100^\circ$  has sp. gr. of over 2. (Klein.)

**Silver** —,  $\text{Ag}_2\text{B}_2\text{W}_9\text{O}_{32} + 14\text{H}_2\text{O}$

Very sl. sol. in  $\text{H}_2\text{O}$ .

**Sodium** —,  $\text{Na}_2\text{H}_2\text{B}_2\text{W}_9\text{O}_{32} + 23\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ . Solution sat. at  $19^\circ$  contains 84 pts. salt to 16 pts.  $\text{H}_2\text{O}$ . (Klein.)

$\text{Na}_2\text{B}_2\text{W}_9\text{O}_{32} + 12\text{H}_2\text{O}$  Sol. in less than  $\frac{1}{2}$  pt.  $\text{H}_2\text{O}$ .

**Thallium** —,  $\text{Tl}_2\text{B}_2\text{W}_9\text{O}_{32} + 5\text{H}_2\text{O}$

Sl. sol. in hot  $\text{H}_2\text{O}$  and nearly insol. in cold  $\text{H}_2\text{O}$ . (Klein.)

**Uranyl** —,  $(\text{UO}_2)_2(\text{B}_2\text{W}_9\text{O}_{32})_2 + 30\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  (Klein.)

Sp. gr. of solution = 3.1

**Zinc** —,  $\text{Zn}_2\text{B}_2\text{W}_9\text{O}_{32} + 2\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Sp. gr. of solution = 3.15. (Klein.)

**Borodecitungstic acid**.

**Barium borodecitungstate**,  $\text{Ba}_2\text{B}_2\text{W}_{10}\text{O}_{32} + 20\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Klein, C. R. 99. 35.)

**Boroduodecitungstic acid**,  $\text{H}_2\text{B}_2\text{W}_{12}\text{O}_{41} = 4\text{H}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $12\text{WO}_3$

Known only in solution, which decomposes into boronotungstic acid and tungstic acid, when evaporated to a certain concentration (Klein, C. R. 99. 35.)

**Barium potassium boroduodecitungstate**,  $3\text{BaO}$ ,  $\text{K}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $12\text{WO}_3 + 28\text{H}_2\text{O}$ .

**Potassium** —,  $\text{K}_2\text{B}_2\text{W}_{12}\text{O}_{41} + 21\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  (Klein.)

$2\text{K}_2\text{O}$ ,  $12\text{WO}_3$ ,  $\text{B}_2\text{O}_3 + 18\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Klein.)

**Boroquatordecitungstic acid**,  $\text{H}_{12}\text{B}_2\text{W}_{14}\text{O}_{51} = 6\text{H}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $14\text{WO}_3$ .

Has not been obtained in the free state. (Klein, A. ch. (5) 28. 353.)

**Barium boroquatordecitungstate**,  $\text{Ba}_2\text{B}_2\text{W}_{14}\text{O}_{51} = 3\text{BaO}$ ,  $\text{B}_2\text{O}_3$ ,  $14\text{WO}_3 + 5\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Klein.)

**Barium sodium** —,  $3\frac{1}{2}\text{BaO}$ ,  $1\frac{1}{2}\text{Na}_2\text{O}$ ,  $5\text{H}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $14\text{WO}_3 + 29\text{H}_2\text{O}$

**Potassium** —,  $3\text{K}_2\text{O}$ ,  $\text{H}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $14\text{WO}_3 + 22\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Klein.)

**Silver** —,  $\text{Ag}_2\text{H}_2\text{B}_2\text{W}_{14}\text{O}_{51} + 7\text{H}_2\text{O}$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ . (Klein.)

**Sodium** —,  $\text{Na}_2\text{H}_2\text{B}_2\text{W}_{14}\text{O}_{51} + 29\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Klein.)

Sodium strontium boroguanthiooctungstic acid,  $3\frac{1}{2}\text{SrO}$ ,  $1\frac{1}{4}\text{Na}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $14\text{WO}_3 + 29\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Klein)

**Boroundegintitungstic acid.**

Barium boroundegintitungstic acid,  $4\text{BaO}$ ,  $\text{B}_2\text{O}_3$ ,  $19\text{WO}_3 + 30\text{H}_2\text{O}$

Can be cryst from  $\text{H}_2\text{O}$ . (Ebenhusen, Dissert 1905.)

Boroguanthioetrigintitungstic acid,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3 + 66\text{H}_2\text{O}$ .

Deliquescent. Somewhat more sol. in  $\text{H}_2\text{O}$  than  $\text{B}_2\text{O}_3$ ,  $28\text{WO}_3 + 62\text{H}_2\text{O}$ . Also more stable (Copaux, C R 1908, 147. 975.)

Barium boroguanthioetrigintitungstic acid,  $5\text{BaO}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3 + 54\text{H}_2\text{O}$

100 pts.  $\text{H}_2\text{O}$  dissolve 50 pts. salt. (Copaux, A. ch. 1909, (8) 17. 217.)

$6\text{BaO}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3 + 58\text{H}_2\text{O}$  (Copaux, l. c.)

Cadmium —,  $5\text{CdO}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3 + 51\text{H}_2\text{O}$

Extremely sol. in  $\text{H}_2\text{O}$ . (Copaux, l. c.)

Calcium —,  $5\text{CaO}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3 + 44\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Copaux, l. c.)

Lithium —,  $15\text{Li}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3 + 38\text{H}_2\text{O}$ . (Copaux, l. c.)

Magnesium —,  $5\text{MgO}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3 + 42\text{H}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$ . (Copaux, l. c.)

Mercurous —,  $9\text{Hg}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3 + 25\text{H}_2\text{O}$ .

(Copaux, l. c.)

Potassium —,  $5\text{K}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3 + 36\text{H}_2\text{O}$ .

(Copaux, l. c.)

Sodium —,  $5\text{Na}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $24\text{WO}_3 + 5\text{H}_2\text{O}$ . As  $\text{NH}_4$  salt. (Copaux, l. c.)

**Boroguanthioetrigintitungstic acid.**

Potassium boroguanthioetrigintitungstic acid,  $5\text{K}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $25\text{WO}_3 + 34\text{H}_2\text{O}$ . (Ebenhusen, Dissert. 1905.)

Boroduodetrigintitungstic acid,  $\text{B}_2\text{O}_3$ ,  $28\text{WO}_3 + 62\text{H}_2\text{O}$ .

Decomp in boiling aqueous solution. (Copaux, C. R. 1908, 147. 975.)

Potassium boroduodetrigintitungstic acid,  $6\text{K}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $28\text{WO}_3 + 42\text{H}_2\text{O}$ .

Decomp. by boiling alkalies. (Copaux, A. ch. 1909 (8) 17. 217.)

**Borovanadic acid.**

Sol. in  $\text{H}_2\text{O}$ . Easily decomp. (Guyard, Bull. Soc. (2) 25. 354.)

**Metabromantimonic acid**,  $\text{HSbBr}_3 + 3\text{H}_2\text{O}$ .

Very hygroscopic. Loses  $\text{Br}_2$  in the air. Decomp. by  $\text{H}_2\text{O}$  with separation of antimonic acid. (Weinland, B. 1903, 36. 256.)

**Ammonium metabromantimonate**,  $\text{NH}_4\text{SbBr}_6 + \text{H}_2\text{O}$ .

Loses  $\text{Br}_2$  in the air. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, l. c.)

**Iron (ferric) metabromantimonate**,  $\text{Fe}(\text{SbBr}_6)_3 + 14\text{H}_2\text{O}$ .

Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, l. c.)

**Lithium metabromantimonate**,  $\text{LiSbBr}_6 + 4\text{H}_2\text{O}$

Very hygroscopic. Loses  $\text{Br}_2$  in the air. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, l. c.)

**Nickel metabromantimonate**,  $\text{Ni}(\text{SbBr}_6)_2 + 12\text{H}_2\text{O}$ .

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, l. c.)

**Potassium metabromantimonate**,  $\text{KSbBr}_6 + \text{H}_2\text{O}$ .

Loses  $\text{Br}_2$  in the air. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, l. c.)

**Bromarsenious acid.**

See Arsenyl bromide.

**Bromauric acid**,  $\text{HAuBr}_4 + 3\text{H}_2\text{O}$ .

(Lengfeld, Am. Ch. J. 1901, 26. 329.)

+  $5\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Thomsen, J. pr. (2) 13. 337.)

+  $6\text{H}_2\text{O}$ . Sol. in ether and  $\text{CHCl}_3$  without decomp. (Lengfeld, Am. Ch. J. 1901, 26. 329.)

**Ammonium bromaurate**,  $\text{NH}_4\text{AuBr}_4$ .

Ppt. (Guthrie, Z. anorg. 1914, 85. 358.)

**Barium bromaurate.**

Not deliquescent. Sol. in  $\text{H}_2\text{O}$ . (v. Bonsdorff, Pogg. 17. 261.)

**Cæsium bromaurate**,  $\text{CsAuBr}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$  or alcohol. Insol. in ether. (Wells and Wheeler, Sill. Am. J. 144. 157.)

Ppt. (Guthrie, Z. anorg. 1914, 85. 360.)

**Cerium bromaurate**,  $\text{CeAuBr}_6 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Jolin, Bull. Soc. (2) 21. 533.)

**Didymium bromaurate**,  $\text{DiAuBr}_6 + 9\text{H}_2\text{O}$ .

Very deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Lanthanum bromaurate**,  $\text{LaAuBr}_6 + 9\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Cleve)

**Magnesium bromaurate.**

Deliquescent in moist air. (v. Bonsdorff)

**Manganese bromaurate.**

Deliquescent. (v. Bonsdorff.)

**Potassium bromaurate,  $\text{KAuBr}_4$** 

Sl sol in  $\text{H}_2\text{O}$ . More sol in cold alcohol than in  $\text{H}_2\text{O}$  (v Bonsdorff)

+  $2\text{H}_2\text{O}$  Sol in 5.12 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , 1.56 pts at  $40^\circ$ , and 0.48 pt at  $67^\circ$ . Decomp by ether. Sl sol in  $\text{KBr} + \text{Aq.}$  (Schottlander, A 217, 314.)

+  $5\text{H}_2\text{O}$  Efflorescent (v Bonsdorff)

**Rubidium bromaurate,  $\text{RbAuBr}_4$** 

As caesium bromaurate

Ppt (Guthrie, Z anorg. 1914, 85, 359.)

**Samarium bromaurate,  $\text{SmAuBr}_4 + 10\text{H}_2\text{O}$** 

Very deliquescent. (Clevé, Bull. Soc. (2) 43, 165.)

**Sodium bromaurate,  $\text{NaAuBr}_4$** 

Slowly sol. in  $\text{H}_2\text{O}$  (v Bonsdorff)

**Zinc bromaurate,  $\text{Zn}(\text{AuBr}_4)_2$** 

Very deliquescent. (v. Bonsdorff)

**Bromauric acid.**

Not known in free state.

**Barium bromauricyanide,  $\text{Ba}[\text{Au}(\text{CN})_2\text{Br}]_2 + 10\text{H}_2\text{O}$** 

Very sol. in hot or cold  $\text{H}_2\text{O}$ , also in alcohol (Lindbom, Lund Univ Arkiv 12, No 6)

**Cadmium bromauricyanide,  $\text{Cd}[\text{Au}(\text{CN})_2\text{Br}]_2 + 6\text{H}_2\text{O}$** 

Very sol. in hot or cold  $\text{H}_2\text{O}$ , but solution is unstable (Lindbom)

**Calcium bromauricyanide,  $\text{Ca}[\text{Au}(\text{CN})_2\text{Br}]_2 + 10\text{H}_2\text{O}$** 

Extremely sol. in  $\text{H}_2\text{O}$  and alcohol (Lindbom.)

**Cobalt bromauricyanide,  $\text{Co}[\text{Au}(\text{CN})_2\text{Br}]_2 + 9\text{H}_2\text{O}$** 

Moderately sol. in  $\text{H}_2\text{O}$ . Less sol than other bromauricyanides. (Lindbom)

**Potassium bromauricyanide,  $\text{KAu}(\text{CN})_2\text{Br}_2 + 3\text{H}_2\text{O}$** 

Sol. in  $\text{H}_2\text{O}$  and alcohol

**Sodium bromauricyanide,  $\text{NaAu}(\text{CN})_2\text{Br}_2 + 2\text{H}_2\text{O}$** 

Very sol. in  $\text{H}_2\text{O}$  or alcohol

**Strontium bromauricyanide,  $\text{Sr}[\text{Au}(\text{CN})_2\text{Br}]_2 + x\text{H}_2\text{O}$** 

Very sol. in  $\text{H}_2\text{O}$  or alcohol

**Zinc bromauricyanide,  $\text{Zn}[\text{Au}(\text{CN})_2\text{Br}]_2 + 8\text{H}_2\text{O}$** 

Easily sol. in cold or hot  $\text{H}_2\text{O}$ .

**Bromhydric acid,  $\text{HBr}$ .**

Very sol. in  $\text{H}_2\text{O}$ .

The most concentrated  $\text{HBr} + \text{Aq}$  has a sp. gr. of 1.78, and contains 82.02%  $\text{HBr}$  (Champion and Pellat, C. R. 70, 620) This, or a weak acid on heating leaves a residue, which

distils unchanged at  $125-125.5^\circ$  under 785 mm. pressure, and contains 48.17%  $\text{HBr}$  (Topsoe); at  $126^\circ$  under 758 mm. pressure, and contains 46.83%  $\text{HBr}$  (Bineau), and has sp. gr. = 1.486 at  $20^\circ$  (Bineau), sp. gr. = 1.48 at  $20^\circ$  (Champion and Pellat), sp. gr. = 1.49 at  $20^\circ$  (Topsoe).

According to Roscoe (A. 116, 214) an acid of constant composition, obtained by boiling a stronger or weaker acid, if distilled under 752-763 mm pressure, contains 47.38-47.86%  $\text{HBr}$ , and boils at  $126^\circ$  at 760 mm. pressure, but the composition is dependent on the pressure, as, for example, under 1952 mm pressure, the residue boils at  $153^\circ$ , and contains 46.3%  $\text{HBr}$ . (Roscoe)

By conducting dry air through  $\text{HBr} + \text{Aq}$  an acid is obtained containing 51.65%  $\text{HBr}$  if at  $16^\circ$ , and 49.35%  $\text{HBr}$  if at  $100^\circ$  (Roscoe).

1 vol  $\text{H}_2\text{O}$  dissolves 600 vols  $\text{HBr}$  at  $10^\circ$ . (Berthelot, C. R. 76, 679)

1 pt  $\text{H}_2\text{O}$  at  $t^\circ$  and 760 mm pressure dissolves pts  $\text{HBr}$

$t^\circ$	Pts $\text{HBr}$	$t^\circ$	Pts $\text{HBr}$	$t^\circ$	Pts $\text{HBr}$
-25	2 550	-5	2 280	+50	1 715

(Biel, C. C 1882. 148.)

Absorbed by alcohol with formation of  $C_2H_5Br$ 

The composition of the hydrates formed by HBr at different dilutions is calculated from determinations of the lowering of the fr. pt produced by HBr and of the conductivity and sp. gr. of HBr + Aq. (Jones, Am. Ch J 1905, 34 326)

+  $H_2O$ . (Roozeboom, R t c. 5. 363)+  $2H_2O$  (Berthelot, A ch (5) 14. 369.)

(Pickering Chem. Soc 1894, 64 (2) 232)

Mpt  $-11.2^{\circ}$ . (Pickering, l c.)+  $3H_2O$ . Mpt.  $-48^{\circ}$ . (Pickering.)+  $4H_2O$ . Mpt  $-55^{\circ}$ . (Pickering)+  $5H_2O$ . (Pickering)**Bromhydric cyanhydric acid,  $3HBr$ ,  $2HCN$ .**Decomp by  $H_2O$  and alcohol.

Insol. in ether (Gautier, A ch (4) 17. 141.)

**Bromic acid,  $HBrO_3$** 

Known only in aqueous solution

Solution evaporated on water bath decomposes when it contains 4.26%  $HBrO_3$ . In vacuo, an acid containing 50.59%  $HBrO_3$  corresponding to formula  $HBrO_3 + 7H_2O$  can be obtained.Not decomp. by dil.  $HNO_3$  or  $H_2SO_4 + Aq$ . Conc  $H_2SO_4$  decomposesAlcohol and ether are quickly oxidized by  $HBrO_3$ .**Bromates.**Most of the bromates are very sol. in  $H_2O$ , a few are sl sol, but none are insol., the least sol. being  $AgBrO_3$  and  $Hg_2(BrO_3)_2$ .**Aluminum bromate,  $Al(BrO_3)_3$ .**

Deliquescent (Rammelsberg, Pogg. 55. 63.)

+  $9H_2O$ . Mpt  $62.3^{\circ}$  Less hygroscopic

than  $\text{Al}(\text{ClO}_2)_3$ . (Dobrosserdow, C. C. 1907. I, 1723.)

**Ammonium bromate,  $\text{NH}_4\text{BrO}_3$ .**

Decomposes spontaneously; sol in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 52. 85.)

**Barium bromate,  $\text{Ba}(\text{BrO}_3)_2$ .**

Solubility of  $\text{Ba}(\text{BrO}_3)_2$  in  $\text{H}_2\text{O}$ . 100 g. sat.  $\text{Ba}(\text{BrO}_3)_2 + \text{Aq}$  at  $t^\circ$  contain g anhydrous  $\text{Ba}(\text{BrO}_3)_2$ .

$t^\circ$	grams $\text{Ba}(\text{BrO}_3)_2$	$t^\circ$	grams $\text{Ba}(\text{BrO}_3)_2$
Eutectic point -0.034° = 0.002°	0.280	50°	1.72

(Harkins, J. Am. Chem. Soc. 1911, 33. 1815.)

+  $\text{H}_2\text{O}$ . Sol. in 130 pts. cold, and 24 pts. boiling  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 52. 81.)

Decomp. by  $\text{H}_2\text{SO}_4$  or  $\text{HCl} + \text{Aq}$ .

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

**Bismuth bromate.**

Known only in solution, which decomp. on evaporation. (Rammelsberg, Pogg. 55. 76.)

**Cadmium bromate,  $\text{Cd}(\text{BrO}_3)_2 + \text{H}_2\text{O}$**

Sol. in 0.8 pt. cold  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 55. 74.)

+  $2\text{H}_2\text{O}$  (Topsoe, J. B. 1872, 164.)

**Cadmium bromate ammonia,  $\text{Cd}(\text{BrO}_3)_2 \cdot 3\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 55. 74.)

$\text{Cd}(\text{BrO}_3)_2 \cdot 4\text{NH}_3$ . Ppt. (Ephraim, B. 1915, 48. 51.)

**Calcium bromate,  $\text{Ca}(\text{BrO}_3)_2 + \text{H}_2\text{O}$ .**

Sol. in 1.1 pts. cold  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 52. 98.)

**Cerous bromate,  $\text{Ce}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$**

Easily sol. in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 55. 63.)

Mpt. 49°; very sol. in  $\text{H}_2\text{O}$  with decomp. (James, J. Am. Chem. Soc. 1909, 31. 914.)

**Cobaltous bromate,  $\text{Co}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$ .**

Sol. in 2.2 pts. cold  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rammelsberg, Pogg. 55. 71.)

**Cupric bromate, basic,  $6\text{CuO} \cdot \text{Br}_2\text{O}_3 + 10\text{H}_2\text{O}$ .**

Ppt. (Rammelsberg, Pogg. 55. 78.)

**Cupric bromate,  $\text{Cu}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 52. 92.)

**Cupric bromate ammonia,  $\text{Cu}(\text{BrO}_3)_2 \cdot 4\text{NH}_3$ .**

Completely sol. in a little  $\text{H}_2\text{O}$ , but decomp. by dilution.

Insol. in alcohol (Rammelsberg, Pogg. 52. 92.)

**Didymium bromate,  $\text{D}_1(\text{BrO}_3)_2 + 9\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  (Maignac.)

**Dysprosium bromate,  $\text{Dy}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$ .**

Mpt. 78°. Easily sol. in  $\text{H}_2\text{O}$ . Difficultly sol. in alcohol. (Jantsch, B. 1911, 44. 1275.)

**Erbium bromate,  $\text{Er}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$ .**

Very sol. in alcohol and  $\text{H}_2\text{O}$ .

**Glucinum bromate.**

Deliquescent.

**Iron (ferrous) bromate,  $\text{Fe}(\text{BrO}_3)_2$**

Sol. in  $\text{H}_2\text{O}$ , but solution decomp. very easily.

**Iron (ferric) bromate,  $5\text{Fe}_2\text{O}_3 \cdot \text{Br}_2\text{O}_3 + 30\text{H}_2\text{O}$**

Partially sol. in  $\text{H}_2\text{O}$ , with separation of a more basic salt. Sol. in  $\text{HBO}_3 + \text{Aq}$  (Rammelsberg, Pogg. 55. 68.)

**Lanthanum bromate,  $\text{La}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$ .**

Sol. in  $3\frac{1}{2}$  pts.  $\text{H}_2\text{O}$  at 15° (Maignac, Ann. Min. (5) 15. 274.)

Mpt. 37.5° in its water of crystallization 416 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at 25°. (James, J. Am. Chem. Soc. 1909, 31. 913.)

**Lead bromate, basic**,  $3\text{PbO}$ ,  $\text{Pb}(\text{BrO}_3)_2 + 2\text{H}_2\text{O}$

Ppt (Strömholm, Z anorg 1904, 38. 441)

**Lead bromate**,  $\text{Pb}(\text{BrO}_3)_2$ .

Sl. sol. in  $\text{H}_2\text{O}$   $13.37 \times 10^{-4}$  g. are contained in 1 liter of sat solution at  $20^\circ$  (Böttger, Z phys. Ch 1903, 46. 603)

+  $\text{H}_2\text{O}$ . Sol. in 75 pts cold  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 52. 96.)

**Lithium bromate**,  $\text{LiBrO}_3$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. A 55. 63)

Not deliquescent (Pohlitz, B. 23. 515 R.)

Sp. gr. of solution sat at  $18^\circ = 1.833$ , and contains 60.4%  $\text{LiBrO}_3$ . (Myhus, B 1897, 30. 1718.)

+  $\text{H}_2\text{O}$ . Not deliquescent. (Pohlitz, B.)

**Magnesium bromate**,  $\text{Mg}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$

Efflorescent. Sol in 1.4 pts cold  $\text{H}_2\text{O}$  at  $15^\circ$ . Melts in its water of crystallization when heated (Rammelsberg, Pogg. 52. 89.)

**Mercurous bromate, basic**,  $2\text{Hg}_2\text{O}$ ,  $\text{Bi}_2\text{O}_3$

Insol in warm  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Rammelsberg, Pogg. 55. 79.)

**Mercurous bromate**,  $\text{Hg}_2(\text{BrO}_3)_2$ .

Decomp by  $\text{H}_2\text{O}$  into basic salt. Difficultly sol in  $\text{HNO}_3 + \text{Aq}$ ; easily sol. in  $\text{HCl} + \text{Aq}$  (Rammelsberg.)

**Mercuric bromate, basic**,  $2\text{HgO}$ ,  $\text{Br}_2\text{O}_3 + \text{H}_2\text{O}$

Slowly decomp. by cold, quickly by hot  $\text{H}_2\text{O}$  into oxide and an acid salt.

Easily sol in dil. acids. (Topsoe, W. A. B. 66. 2. 2)

**Mercuric bromate**,  $\text{HgBrO}_3 + 2\text{H}_2\text{O}$ .

Sol in 650 pts. cold, and 64 pts. boiling  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{HNO}_3 + \text{Aq}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ . (Rammelsberg, Pogg. 55. 79.)

**Mercuric bromate ammonia**.

Sol with decomp in  $\text{HCl} + \text{Aq}$ . (Storer's Diet.)

**Neodymium bromate**,  $\text{Nd}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$ .

Mpt.  $66.7^\circ$ . 146 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $25^\circ$ . (James, J. Am. Chem. Soc. 1909, 31. 915.)

**Nickel bromate**,  $\text{Ni}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$ .

Sol. in 3.58 pts. cold  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 55. 69)

**Nickel bromate ammonia**,  $\text{Ni}(\text{BrO}_3)_2, 2\text{NH}_3$ .

Sol in  $\text{H}_2\text{O}$ , with decomposition of the major portion. Insol. in alcohol. (Rammelsberg, l. c.)

$\text{Ni}(\text{BrO}_3)_2, 6\text{NH}_3$ . Ppt (Ephraim, B. 1915, 48. 50)

**Potassium bromate**,  $\text{KBrO}_3$

100 pts.  $\text{H}_2\text{O}$  dissolve 6.58 pts  $\text{KBrO}_3$  at  $15^\circ$  (Rammelsberg). 100 pts.  $\text{H}_2\text{O}$  dissolve 5.83 pts  $\text{KBrO}_3$  at  $17.1^\circ$  (Pohl W. A. B. 6.

595), at  $0^\circ$ , 3.11 pts.; at  $20^\circ$ , 6.92 pts., at  $40^\circ$ , 13.24 pts., at  $60^\circ$ , 22.76 pts.; at  $80^\circ$ , 33.90 pts., at  $100^\circ$  49.75 pts  $\text{KBrO}_3$ . Sat. solution boils at  $104^\circ$  (Kremers, Pogg. 97. 5.)

1 l.  $\text{H}_2\text{O}$  at  $25^\circ$  dissolves 0.4715 moles  $\text{KBrO}_3$  (Geffcken, Z. phys. Ch 1904, 49. 296.)

1 l  $\text{H}_2\text{O}$  dissolves 0.478 mol  $\text{KBrO}_3$  at  $25^\circ$ . (Rothmund, Z. phys. Ch. 1909, 69. 539.)

Sp. gr. of  $\text{KBrO}_3 + \text{Aq}$  at  $19.5^\circ$ .

%KBrO <sub>3</sub> Sp. gr.	1	2	3	4	5
	1.009	1.016	1.024	1.031	1.039

%KBrO <sub>3</sub> Sp. gr.	6	7	8	9	10
	1.046	1.054	1.062	1.070	1.079

(Gerlach, Z. anal. 8. 290)

Solubility of  $\text{KBrO}_3$  in salts +  $\text{Aq}$  at  $25^\circ$

Salt	Moles of $\text{KBrO}_3$ sol in 1 liter of				
	3-N solution	N solution	2-N solution	3-N solution	4-N solution
$\text{NaNO}_3$	0.7545	0.6497	0.7680	0.9026	1.031
$\text{NaCl}$	0.5220	0.5616	0.6042	0.6244	0.640

(Geffcken, Z. phys. Ch. 1904, 49. 296)

Easily sol in liquid  $\text{HF}$ . (Franklin, Z. anorg. 1905, 46. 2)

Sl. sol in alcohol. (Rammelsberg)

Insol in absolute alcohol

Solubility in organic compds. +  $\text{Aq}$  at  $25^\circ$ .

(Rothmund, Z. phys. Ch. 1909, 69. 539.)

Insol. in acetone (Eidmann, C. C. 1899, II 1014, Naumann, B. 1904, 37, 4329)  
Insol. in ethyl acetate (Naumann, B. 1910, 43, 314)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790)

**Praseodymium bromate**,  $\text{Pr}(\text{BrO}_3)_3 \cdot 9\text{H}_2\text{O}$ .

Mpt. 56.5°. 190 pts. are sol. in 100 pts  $\text{H}_2\text{O}$  at 25°. (James, J. Am. Chem. Soc. 1909, 31, 914)

**Samarium bromate**,  $\text{Sm}(\text{BrO}_3)_3 \cdot 9\text{H}_2\text{O}$

Mpt. 75° 114 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at 25°. Very sl. sol. in alcohol. (James, J. Am. Chem. Soc. 1909, 31, 915)

**Scandium bromate**.

(Crookes, Roy. Soc. Proc. 1906, 80, A, 518)

**Silver bromate**,  $\text{AgBrO}_3$ .

1 pt.  $\text{H}_2\text{O}$  dissolves 0.00810 pt.  $\text{AgBrO}_3$  at 24.5°. (Noyes, Z. phys. Ch. 6, 246.)

Sol in 595.3 pts  $\text{H}_2\text{O}$  at 25°  
Sol in 320.4 pts  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.21) at 25°

Sol in 22 pts  $\text{NH}_4\text{OH} + \text{Aq}$  (sp. gr. 0.96) at 25° (Long, Gazz. ch. it. 13, 87.)

1 l  $\text{H}_2\text{O}$  dissolves 1.71 g  $\text{AgBrO}_3$  at 27° (Whitby, Z. anorg. 1910, 67, 108)

Sl. sol. in  $\text{H}_2\text{O}$  1.59 x  $10^{-4}$  g. are contained in 1 liter of sat. solution at 20° (Böttger, Z. phys. Ch. 1903, 46, 603)

Insol. in  $\text{HNO}_3$ . (Lowig.) Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$

**Silver bromate ammonia**,  $\text{AgBrO}_3 \cdot 2\text{NH}_3$

Decomp. in air or by  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 52, 94)

**Sodium bromate**,  $\text{NaBrO}_3$ .

Sol in 2.7 pts  $\text{H}_2\text{O}$  at 15°. (Rammelsberg)  
100 pts.  $\text{H}_2\text{O}$  dissolve at—  
0° 20° 40° 60° 80° 100°  
27.54 34.48 50.25 62.57 75.90 90.9 pts.  $\text{NaBrO}_3$ .  
(Kremers, Pogg. 94, 271.)

Easily forms supersaturated solutions  
Sat. solution boils at 109°. (Kremers)  
 $\text{NaBrO}_3 + \text{Aq}$  containing 10.10%  $\text{NaBrO}_3$  has sp. gr. 20°/20° = 1.0818  
 $\text{NaBrO}_3 + \text{Aq}$  containing 11.09%  $\text{NaBrO}_3$  has sp. gr. 20°/20° = 1.0900.  
(Le Blanc and Rohland, Z. phys. Ch. 1896 19, 278.)

Sp. gr. of  $\text{NaBrO}_3 + \text{Aq}$  at 19.5°

% $\text{NaBrO}_3$	5	10	15
Sp. gr.	1.041	1.083	1.129
% $\text{NaBrO}_3$	20	25	30
Sp. gr.	1.178	1.231	1.289

(Kremers, Pogg. 97, 5, calculated by Gerlach, Z. anal. 8, 290.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 829.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790)

Insol. in ethyl acetate (Naumann, B. 1910, 43, 314)

**Sodium bromate bromide**,  $3\text{NaBrO}_3, 2\text{NaBr} + 3\text{H}_2\text{O}$

Decomp. by  $\text{H}_2\text{O}$  or alcohol. (Fitzsche.)

**Strontium bromate**,  $\text{Sr}(\text{BrO}_3)_2 \cdot \text{H}_2\text{O}$

Sol in 3 pts.  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 52, 84), less sol. in  $\text{H}_2\text{O}$  than  $\text{SrBr}_2 \cdot 6\text{H}_2\text{O}$ . (Lowig)

**Thallous bromate**,  $\text{TlBrO}_3$

Sl. sol. in hot  $\text{H}_2\text{O}$ , easily sol. in  $\text{HNO}_3 + \text{Aq}$  (Oettinger.)

Easily sol. in  $\text{H}_2\text{O}$  and dil. acids (Ditte, A. ch. (6) 21, 145)

**Terbium bromate**,  $\text{Tb}(\text{BrO}_3)_3 \cdot 9\text{H}_2\text{O}$ .

Not deliquescent. (Potratz, C. N. 1905, 92, 3.)

**Thallous bromate**,  $\text{TlBrO}_3$

1 l  $\text{H}_2\text{O}$  at 39.75° dissolves 2.216 x  $10^{-3}$  g. mol. (Noyes and Abbott, Z. phys. Ch. 1895, 16, 130)

Sl. sol. in  $\text{H}_2\text{O}$ . 3.46 x  $10^{-1}$  gram are contained in 1 liter of sat. solution at 20° (Böttger, Z. phys. Ch. 1903, 46, 608.)

**Thalic bromate**,  $\text{Ti}(\text{BrO}_3)_3 \cdot 3\text{H}_2\text{O}$

Very hygroscopic. Easily decomp. by  $\text{H}_2\text{O}$ . (Gewecke, Z. anorg. 1912, 75, 275)

**Thulium bromate**,  $\text{Tm}_2(\text{BrO}_3)_6 \cdot 18\text{H}_2\text{O}$

Pptd. from sat. aqueous solution by 95% alcohol

$\text{NH}_4\text{OH}$  is the best precipitant (James, J. Am. Chem. Soc. 1911, 33, 1342)

**Tin (stannous) bromate (?)**.

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ .

**Uranyl bromate**,  $4\text{UO}_2 \cdot 3\text{Br}_2\text{O}_3 + 16\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  (Rammelsberg)

**Yttrium bromate**,  $\text{Y}(\text{BrO}_3)_3 \cdot 9\text{H}_2\text{O}$

More easily sol. in  $\text{H}_2\text{O}$  than  $\text{Y}(\text{IO}_3)_3$ . Sl. sol. in alcohol Insol. in ether. (Cleve.)

Mpt. 74°. 168 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at 25°

Sl. sol. in alcohol (James, J. Am. Chem. Soc. 1909, 31, 916.)

**Zinc bromate**,  $\text{Zn}(\text{BrO}_3)_2 \cdot 6\text{H}_2\text{O}$

Sol. in 1 pt cold  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 52, 90.)

**Zinc bromate ammonia**,  $\text{Zn}(\text{BrO}_3)_2 \cdot 2\text{NH}_3 + 3\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Rammelsberg, Pogg. 52, 90)  
 $\text{Zn}(\text{BrO}_3)_2 \cdot 4\text{NH}_3$  Ppt. (Ephraim, B. 1915, 48, 51)

**Perbromic acid**.

See Perbromic acid.

**Bromides.**

Most bromides are sol in  $H_2O$ , many in alcohol, and some in ether.

$AgBr$  and  $Hg_2Br_2$  are insol. in  $H_2O$  or acids,  $PbBr_2$  and  $TlBr$  are sl. sol. therein.  $Cu_2Br_2$  is insol. in  $H_2O$ , sol in acids.

See under each element

**Bromine,  $Br_2$** 

1 pt.  $Br$  dissolves at  $15^\circ$  up 33 pts.  $H_2O$ . (Lowig, Pogg 14 485.)

1 pt  $Br$  dissolves at  $15^\circ$  in 31 pts  $H_2O$ . (Dancer, Chem Soc 15. 477.)

Solubility of  $Br$  in 100 pts.  $H_2O$  at  $t^\circ$

$t^\circ$	Pts Br.	$t^\circ$	Pts Br	$t^\circ$	Pts Br
5	3 600	15	3 226	25	3 167
10	3 327	20	3 208	30	3 126

(Dancer, l. c.)

A sat. aqueous solution of  $Br$  contains 4.05%  $Br$  at  $0^\circ$ ; 3.80%  $Br$  at  $3^\circ$ ; 3.33%  $Br$  at  $10^\circ$ . (Roozeboom, R. t e 3. 29, 59, 73, 84.)

1 l.  $H_2O$  dissolves 34 g.  $Br$  at  $25^\circ$ . (Jakowkin, Z phys. Ch. 1896, 20. 25.)

1 pt is sol in 30 pts  $H_2O$ . (Dietze, Chem Soc. 1899, 76 (2) 150.)

100 pts  $H_2O$  dissolve at:  
 $0^\circ$  10 34° 19 96° 30 17° 40 03° 49 85°  
 4 167 3 740 3 578 3 437 3 446 3 522  
 pts. bromine.

Liquid bromine as such is insol in  $H_2O$ ; only the vapor dissolves. (Winkler, Ch. Z 1899, 23. 688.)

1 l.  $H_2O$  dissolves 33.95 g  $Br_2$  at  $25^\circ$ . (Mc-Lauchlan, Z phys. Ch. 1903, 44. 617.)

Solubility of bromine vapor in  $H_2O$  at  $t^\circ$ .

$\alpha$  = coefficient of absorption

(Slessor, N. Edin Phil. J. 7. 237.)

Sp gr. of  $Br_2 + Aq$  at  $32.5^\circ$ .

% $Br_2$ by weight	Sp. gr.
0 7214	0.999814
1.1172	1.002520
1.6448	1.006100
1.9856	1.008870
2 5960	1.013200

(Joseph, Chem. Soc. 1915, 107. 3.)

Sol. in conc.  $HCl$ ,  $HBr$ ; conc. solutions of bromides, and in liquid  $SO_2$ . (Sestini, Zeit. Chem. 1868. 718.)

Much more sol in  $HCl + Aq$  than in  $H_2O$ .  
 100 cc.  $HCl + Aq$  of 1.153 sp. gr. dissolve 36.4 g.  $Br$  at  $12^\circ$ .

More sol. in  $SrCl_2$ , and  $BaCl_2 + Aq$  than in  $H_2O$ . (Berthelot, C. R. 100. 761.)

Bromine is not more sol. in  $\text{KBr} + \text{Aq}$  than in  $\text{H}_2\text{O}$  (?). (Balard.)

$\text{KBr} + \text{Aq}$  containing 1 pt.  $\text{KBr}$  to 6 pts  $\text{H}_2\text{O}$  takes up as much  $\text{Br}$  as it already contains; when this solution is heated the dissolved  $\text{Br}$  is separated. 1 pt.  $\text{KBr} + 1$  pt  $\text{H}_2\text{O}$  takes up twice as much  $\text{Br}$  as it already contains, much heat being evolved. This solution loses  $\text{Br}$  on exposure to the air or when heated. (Löwig.)

#### Solubility of $\text{Br}_2$ in $\text{KBr} + \text{Aq}$ .

g. Mols. $\text{KBr}$ per l.	g. at. $\text{Br}$ dissolved per l at 18°	g at $\text{Br}$ dissolved per l at 28.5°
0 00	0.4448	0 4282

$\frac{1}{4}$ -N	7 402	254 4
$\frac{1}{8}$ -N	7 609	252 8
$\frac{1}{16}$ -N	7 713	251 2

(Jakowkin, l. c.)

Crystallizes at  $4^\circ$  with  $10\text{H}_2\text{O}$ .

**Bromine chloride,  $\text{BrCl}$ .**

Sol. in  $\text{H}_2\text{O}$ ,  $\text{CS}_2$ , ether, etc

**Bromine fluoride,  $\text{BrF}_3$ .**

Fumes in the air. Decomp. by  $\text{H}_2\text{O}$ . (Lebeau, C. R. 1905, 141, 1019.)

**Bromine oxides.**

No oxides of bromine are known in the free state. See hypobromous, bromic, and perbromic acids

**Bromiridic acid.**

**Ammonium bromiridate,  $(\text{NH}_4)_2\text{IrBr}_5$**

Less sol. in cold  $\text{H}_2\text{O}$  than the K salt (Birnbbaum, Zeit Chem 1865, 22.)

Very sol. in cold  $\text{H}_2\text{O}$  (Guthier, B 1909, 42, 3910)

**Cesium bromiridate,  $\text{Cs}_2\text{IrBr}_6$**

Sol in  $\text{H}_2\text{O}$  (Guthier, B. 1909, 42, 3911)

**Potassium bromiridate,  $\text{K}_3\text{IrBr}_6$ .**

Moderately sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .

Insol. in alcohol or ether  
Sol in cold  $\text{H}_2\text{O}$  and in  $\text{HBr}$  + Aq (Guthier, B 1909, 42, 3910)

**Rubidium bromiridate,  $\text{Rb}_2\text{IrBr}_5$**

Very sol. in cold  $\text{H}_2\text{O}$  Sol in hot dil.  $\text{HBr}$  + Aq (Guthier, B 1909, 42, 3911)

**Sodium bromiridate.**

Dehquescient Easily sol in  $\text{H}_2\text{O}$ , alcohol, or ether.

**Bromiridous acid,  $\text{H}_2\text{Ir}_2\text{Br}_{12} + 6\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Birnbbaum, 1864.)

**Ammonium bromiridite,  $(\text{NH}_4)_3\text{Ir}_2\text{Br}_{12} + \text{H}_2\text{O}$ .**

Difficultly sol in  $\text{H}_2\text{O}$ . (Birnbbaum)

**Potassium bromiridite,  $\text{K}_4\text{Ir}_2\text{Br}_{12} + 6\text{H}_2\text{O}$ .**

Efflorescent. Sol in  $\text{H}_2\text{O}$ .

**Silver bromiridite,  $\text{Ag}_3\text{Ir}_2\text{Br}_{12}$ .**

Ppt Insol. in  $\text{H}_2\text{O}$  or acids.

**Sodium bromiridite,  $\text{Na}_3\text{Ir}_2\text{Br}_{12} + 24\text{H}_2\text{O}$ .**

Efflorescent. Very sol. in  $\text{H}_2\text{O}$ .

**Bromocarbonatoplatin diamine carbon-**

**ate,  $\text{CO}_2[\text{Pt}(\text{N}_2\text{H}_5)_2]_2(\text{CO}_3)_2 + 4\text{H}_2\text{O}$ .**

Ppt.

**Bromocarbonatoplatin diamine carbonate**

**bromoplatin diamine nitrate,**

**$\text{CO}_2[\text{Pt}(\text{N}_2\text{H}_5)_2]_2(\text{CO}_3)_2$ ,  $2\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2(\text{NO}_3)_2$ .**

**Bromochloroplatin diamine chloride,**

**$\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{Cl}_2$ .**

Very sl. sol. in  $\text{H}_2\text{O}$  (Cleve.)

**chlorobromide,  $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{Cl}_2$  (?)**

Very sl. sol. in  $\text{H}_2\text{O}$

**Bromochloroplatinic acid.**

**Potassium bromochloroplatinate,  $\text{K}_2\text{PtCl}_2\text{Br}_2$**

(Pitkin, J. Am. Chem. Soc. 2, 408.)

Mixture. (Herty, J. Am Chem. Soc 1896, 18, 136.)

$\text{K}_2\text{PtCl}_2\text{Br}_2$ . Sl. sol. in cold  $\text{H}_2\text{O}$ ; much more sol. in hot  $\text{H}_2\text{O}$ . (Pitkin.)

Mixture. (Herty.)

$\text{K}_2\text{PtCl}_2\text{Br}_2$ . As above.

$\text{K}_2\text{PtCl}_2\text{Br}_2$ . (Pigeon, A. ch. 1894, (7) 2, 488.)

$\text{K}_2\text{PtCl}_2\text{Br}_2$ . (Pitkin.)

**Bromochromic acid.**

**Potassium bromochromate,  $\text{KCrO}_5\text{Br}_2 = \text{CrO}_5(\text{Br})\text{OK}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Hentze, J. pr (2) 4, 225.)

<b>Dibromochromium chloride</b> , [Cr(H <sub>2</sub> O) <sub>4</sub> Br <sub>2</sub> ]Cl + 2H <sub>2</sub> O. Ppt. Nearly insol. in fuming HCl. (Bjerrum, B 1907, 40. 2918)	<b>Bromomolybdenum phosphate</b> , Br <sub>4</sub> Mo <sub>3</sub> H <sub>4</sub> (PO <sub>4</sub> ) <sub>2</sub> Precipitate Insol. in H <sub>2</sub> O. (Atterberg)

(Cleve.)**Bromoplatin*semi*diamine bromide,** $\text{Br}_2\text{Pt}(\text{NH}_3)_2\text{Br}$ Sl. sol. in cold  $\text{H}_2\text{O}$ . (Cleve.)**Bromoplatin*di*amine anhydronitrate,** $\text{Br}_2\text{Pt}_2(\text{N}_2\text{H}_5)_2(\text{NO}_3)_2$ . $(\text{NH}_3\text{NH}_2)_2$ Sol. in  $\text{HNO}_3 + \text{Aq}$ .

**Bromoplatin diamine chloride,**

Ppt (Cleve.)

— nitrate,  $\text{Br}_2\text{Pt}_2(\text{N}_2\text{H}_4)_4(\text{NO}_3)_4 + 2\text{H}_2\text{O}$ .Moderately sol in hot  $\text{H}_2\text{O}$ .— sulphate,  $\text{Br}_2\text{Pt}_2(\text{N}_2\text{H}_4)_4(\text{SO}_4)_2 + 2\text{H}_2\text{O}$ .

Ppt. (Cleve)

**Bromoplatinic acid,  $\text{H}_2\text{PtBr}_6 + 9\text{H}_2\text{O}$ .**Very deliquescent, and sol in  $\text{H}_2\text{O}$ , alcohol, ether, chloroform, or acetic acid. (Topsøe, J B 1888. 273.)**Ammonium bromoplatinate,  $(\text{NH}_4)_2\text{PtBr}_6$ .**Sol in 200 pts  $\text{H}_2\text{O}$  at  $15^\circ$ . (Topsøe)100 pts  $(\text{NH}_4)_2\text{PtBr}_6 + \text{Aq}$  sat. at  $20^\circ$  contain 0.50 pt dry salt. (Halberstadt, B 17. 2965.)**Barium bromoplatinate,  $\text{BaPtBr}_6 + 10\text{H}_2\text{O}$ .**Sl deliquescent. Very sol in  $\text{H}_2\text{O}$ **Cesium bromoplatinate,  $\text{Cs}_2\text{PtBr}_6$ .**Sl. sol. in dil.  $\text{HBr} + \text{Aq}$ . (Obermaier, Dissert.)**Calcium bromoplatinate,  $\text{CaPtBr}_6 + 12\text{H}_2\text{O}$** Sl. deliquescent Very sol. in  $\text{H}_2\text{O}$ .**Cobalt bromoplatinate,  $\text{CoPtBr}_6 + 12\text{H}_2\text{O}$ .**

Deliquescent.

**Copper bromoplatinate,  $\text{CuPtBr}_6 + 8\text{H}_2\text{O}$** Very deliquescent. sol. in  $\text{H}_2\text{O}$ .**Lead bromoplatinate,  $\text{PbPtBr}_6$ .**Easily sol in  $\text{H}_2\text{O}$ , but decomp. by large amount.**Lead tetrabromoplatinate,  $[\text{PtBr}_4(\text{OH})_2]\text{Pb}, \text{PbOH}$ .**Insol in  $\text{H}_2\text{O}$ . (Miolati, C. C. 1900, II. 810.)**Magnesium bromoplatinate,  $\text{MgPtBr}_6 + 12\text{H}_2\text{O}$ .**

Not deliquescent.

**Manganese bromoplatinate,  $\text{MnPtBr}_6 + 6\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$   
+  $12\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .**Mercuric tetrabromoplatinate,  $[\text{PtBr}_4(\text{OH})_2]\text{Hg}$** Insol. in  $\text{H}_2\text{O}$  (Miolati, C C 1900, II. 810.)**Nickel bromoplatinate,  $\text{NiPtBr}_6 + 12\text{H}_2\text{O}$** 

Deliquescent

**Potassium bromoplatinate,  $\text{K}_2\text{PtBr}_6$** Sl sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (v Bonsdorff, Pogg 19. 344.)Sol. in 10 pts. boiling  $\text{H}_2\text{O}$  (Pitkin, C. N. 41. 218)100 pts.  $\text{K}_2\text{PtBr}_6 + \text{Aq}$  sat. at  $20^\circ$  contain 2.02 pts dry salt. (Halberstadt, B. 17. 2962)**Praseodymium bromoplatinate,  $\text{PrBr}_3.\text{PtBr}_3 + 10\text{H}_2\text{O}$ .**Deliquescent, very sol in  $\text{H}_2\text{O}$ , sol. in  $\text{HBr}$ . (Von Schule, Z anorg. 1898, 18. 353.)**Rubidium bromoplatinate,  $\text{Rb}_2\text{PtBr}_6$** Sl. sol. in dil  $\text{HBr} + \text{Aq}$ . (Obermaier, Dissert.)**Silver bromoplatinate,  $\text{Ag}_2\text{PtBr}_6$** Insol. in  $\text{H}_2\text{O}$ . (Miolati, C. C. 1900, II. 810)**Silver tetrabromoplatinate,  $[\text{PtBr}_4(\text{OH})_2]\text{Ag}_2$ .**Ppt, insol. in  $\text{H}_2\text{O}$  (Miolati, l c)**Sodium bromoplatinate,  $\text{Na}_2\text{PtBr}_6 + 6\text{H}_2\text{O}$** Easily sol in  $\text{H}_2\text{O}$  and alcohol.**Strontium bromoplatinate,  $\text{SrPtBr}_6 + 10\text{H}_2\text{O}$ .**Sl. deliquescent Very sol. in  $\text{H}_2\text{O}$ .**Thallium tetrabromoplatinate,**Insol. in  $\text{H}_2\text{O}$  (Miolati, C. C 1900, II. 810.)**Ytterbium bromoplatinate,  $\text{YbBr}_3.3\text{H}_2\text{PtBr}_6 + 30\text{H}_2\text{O}$** 

Ppt. (Cleve, Z anorg 1902, 32. 138)

**Zinc bromoplatinate,  $\text{ZnPtBr}_6 + 12\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ .**Bromoplatinocyanhydric acid,**

See Perbromoplatinocyanhydric acid.

**Potassium bromoplatinocyanide,  $5\text{K}_2\text{Pt}(\text{CN})_6$ ,  $\text{K}_2\text{Pt}(\text{CN})_4\text{Br}_2 + 18\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ **Bromoplatinous acid.****Potassium bromoplatinite,  $\text{K}_2\text{PtBr}_4 + 2\text{H}_2\text{O}$ .**Extremely sol. in  $\text{H}_2\text{O}$ . (Billmann and Andersen, B. 1903, 36. 1566.)**Bromopurpleochromium bromide,**Less sol. in  $\text{H}_2\text{O}$  than chloropurpleochromium chloride (Jørgensen, J. pr. (2) 25. 83.)— bromoplatinate,  $\text{BrCr}(\text{NH}_3)_4\text{PtBr}_3$   
(Jørgensen, l. c.)— chloride,  $\text{BrCr}(\text{NH}_3)_4\text{Cl}_2$ .More sol in  $\text{H}_2\text{O}$  than the bromide.  
(Jørgensen, l. c.)

**Bromopurpleochromium chromate,**  
 $\text{BrCr}(\text{NH}_3)_4\text{CrO}_4$ .Precipitate (Jørgensen, *l. c.*)— nitrate,  $\text{BrCr}(\text{NH}_3)_4(\text{NO}_3)_2$ .More sol than bromide and less than chloride (Jørgensen, *l. c.*)**Bromopurplecobaltic bromide,**  
 $\text{CoBr}(\text{NH}_3)_5\text{Br}_2$ Sol in 530 pts.  $\text{H}_2\text{O}$  at  $10^\circ$ . Insol. in alcohol,  $\text{NH}_4\text{Br}$ ,  $\text{KBr}$ , or  $\text{HBr} + \text{Ag}$ . More sol in hot  $\text{H}_2\text{O}$  containing a little  $\text{HBr}$ . (Jørgensen, *J. pr.* (2) 19 49.)**Bromopurplecobaltic mercuric bromide,**  
 $\text{CoBr}(\text{NH}_3)_5\text{Br}_2, 3\text{HgBr}_2$ More sol in  $\text{H}_2\text{O}$  than the corresponding  $\text{HgCl}_2$  salt. (J.)

— bromoplatinate.

Very sl sol in cold  $\text{H}_2\text{O}$  (J.)— chloride,  $\text{CoBr}(\text{NH}_3)_5\text{Cl}_2$ Difficultly sol in cold  $\text{H}_2\text{O}$ , but much more easily than the bromide. Insol. in dil  $\text{HCl} + \text{Ag}$ , and in alcohol— mercuric chloride,  $\text{CoBr}(\text{NH}_3)_5\text{Cl}_2, 3\text{HgCl}_2$ .Sl sol in  $\text{H}_2\text{O}$ 

— chloroplatinate.

Nearly or quite insol. in  $\text{H}_2\text{O}$  (J.)— chromate,  $\text{CoBr}(\text{NH}_3)_5\text{CrO}_4$ .Nearly insol in  $\text{H}_2\text{O}$ — dithionate,  $\text{CoBr}(\text{NH}_3)_5\text{S}_2\text{O}_6$ .Nearly insol in  $\text{H}_2\text{O}$ — fluosilicate,  $\text{CoBr}(\text{NH}_3)_5\text{SiF}_6$ .Very sl sol in cold  $\text{H}_2\text{O}$ ; insol in alcohol.— nitrate,  $\text{CoBr}(\text{NH}_3)_5(\text{NO}_3)_2$ .More sol in  $\text{H}_2\text{O}$  than the bromide, but less than the chloride. Wholly insol in dil.  $\text{HNO}_3 + \text{Ag}$  or alcohol— oxalate,  $\text{CoBr}(\text{NH}_3)_5\text{C}_2\text{O}_4$ Nearly insol in  $\text{H}_2\text{O}$ — sulphate,  $\text{CoBr}(\text{NH}_3)_5\text{SO}_4$ .Can be crystallized from very dil.  $\text{H}_2\text{SO}_4 + \text{Ag}$ . Insol. in alcohol.+  $6\text{H}_2\text{O}$ . Efflorescent**Bromopurpleorhodium bromide,**  
 $\text{BrRh}(\text{NH}_3)_5\text{Br}_2$ Much less easily sol in  $\text{H}_2\text{O}$  than the chlorochloride. Insol. in dil.  $\text{HBr} + \text{Ag}$  and alcohol (Jørgensen, *J. pr.* (2) 27 433.)— bromoplatinate,  $\text{BrRh}(\text{NH}_3)_5\text{PtBr}_6$ .Almost insol. in  $\text{H}_2\text{O}$ — fluosilicate,  $\text{BrRh}(\text{NH}_3)_5\text{SiF}_6$ Sl sol in  $\text{H}_2\text{O}$ . Sol in boiling  $\text{NaOH} + \text{Ag}$  as roseo salt**Bromopurpleorhodium nitrate,**  
 $\text{BrRh}(\text{NH}_3)_5(\text{NO}_3)_2$ Sl sol in  $\text{H}_2\text{O}$ , but much more sol than the bromide**Bromorhodos acid.****Ammonium bromorhodate,  $(\text{NH}_4)_2\text{RhBr}_4$** Sol in  $\text{H}_2\text{O}$  (Goloubkine, *Chem. Soc.* 1911, 100 (2) 45)Sol. in  $\text{H}_2\text{O}$  (Gutbier, *B.* 1908, 41. 215.)**Barium bromorhodite,  $\text{BaRhBr}_3$** Sol in  $\text{H}_2\text{O}$  (Goloubkine, *l. c.*)**Cesium bromorhodite,  $\text{Cs}_2\text{RhBr}_6$** Difficultly sol in  $\text{H}_2\text{O}$ . (Gutbier, *l. c.*)**Potassium bromorhodite,  $\text{K}_2\text{RhBr}_6$** Very sol. in  $\text{H}_2\text{O}$  (Goloubkine, *l. c.*)Sol in  $\text{H}_2\text{O}$  (Gutbier, *l. c.*)**Rubidium bromorhodite,  $\text{Rb}_2\text{RhBr}_6$** Sol in  $\text{H}_2\text{O}$  (Goloubkine, *l. c.*)Difficultly sol in  $\text{H}_2\text{O}$  (Gutbier, *l. c.*)**Sodium bromorhodite,  $\text{Na}_2\text{RhBr}_6$** Very sol. in  $\text{H}_2\text{O}$ . (Goloubkine, *l. c.*)**Bromoruthenic acid.****Potassium bromoruthenate,  $\text{K}_2\text{RuBr}_6$** Very sol in  $\text{H}_2\text{O}$ . (Howe, *J. Am. Chem. Soc.* 1904, 26. 946)**Potassium aquobromoruthenate,**  
 $\text{K}_2\text{Ru}(\text{H}_2\text{O})\text{Br}_6$ .Ppt. (Howe, *l. c.*)**Rubidium bromoruthenate,  $\text{Rb}_2\text{RuBr}_6$** Sol in  $\text{H}_2\text{O}$  (Howe, *l. c.*)**Rubidium aquobromoruthenate,**  
 $\text{Rb}_2\text{Ru}(\text{H}_2\text{O})\text{Br}_6$ .Ppt. (Howe, *l. c.*)**Bromoruthenious acid.****Cesium bromoruthenite,  $\text{CsRuBr}_6 + \text{H}_2\text{O}$** Ppt. (Howe, *J. Am. Chem. Soc.* 1904, 26. 945)**Potassium bromoruthenite,  $\text{K}_2\text{RuBr}_6$** Very sol. in  $\text{H}_2\text{O}$  with decomp. Very sol. in dil.  $\text{HBr}$  (Howe, *l. c.*)**Rubidium bromoruthenite,  $\text{Rb}_2\text{RuBr}_6 + \text{H}_2\text{O}$** Sol. in dil.  $\text{HBr}$ . (Howe, *l. c.*)**Bromoselenic acid.****Ammonium bromoselenate,  $(\text{NH}_4)_2\text{SeBr}_6$** Sol in  $\text{H}_2\text{O}$  with decomp. (Muthmann and Schäfer, *B.* 26. 1008.)**Cesium bromoselenate,  $\text{Cs}_2\text{SeBr}_6$** Sl sol. in  $\text{H}_2\text{O}$  (Lenher, *J. Am. Chem. Soc.* 1898, 20. 571.)**Potassium bromoselenate,  $\text{K}_2\text{SeBr}_6$** As  $\text{NH}_4$  salt. (M and S.)

<b>Rubidium bromoselenate</b> , $\text{Rb}_2\text{SeBr}_4$ Less sol in $\text{H}_2\text{O}$ than K salt (Lenher, <i>l. c.</i> )	<b>Manganous bromostannate</b> , $\text{MnSnBr}_6 + 6\text{H}_2\text{O}$ Deliquescent (Raymann and Preis.)
<b>Bromopyroselenious acid.</b>	<b>Nickel bromostannate</b> , $\text{NiSnBr}_6 + 8\text{H}_2\text{O}$ Deliquescent (Raymann and Preis.)
<b>Ammonium bromopyroselenite</b> , $\text{NH}_4\text{Br} \cdot 2\text{SeO}_3 + 2\text{H}_2\text{O}$ More easily sol in $\text{H}_2\text{O}$ than corresponding Cl compound (Muthmann and Schafer, B 1893, 26. 1014.)	<b>Potassium bromostannate</b> , $\text{K}_2\text{SnBr}_6$ Sol in $\text{H}_2\text{O}$ (Topsoe)
<b>Potassium bromopyroselenite</b> , $\text{KBr} \cdot 2\text{SeO}_3 + 2\text{H}_2\text{O}$ Sol. in $\text{H}_2\text{O}$ . (Muthmann and Schafer, B. 26. 1008.)	<b>Rubidium bromostannate.</b> Sol in $\text{H}_2\text{O}$ . (Raymann and Preis.)
<b>Bromosmic acid.</b>	<b>Sodium bromostannate</b> , $\text{Na}_2\text{SnBr}_6 + 6\text{H}_2\text{O}$ . Not deliquescent, but extremely sol in $\text{H}_2\text{O}$ (Seubert, B 20. 796.)
<b>Ammonium bromosmate</b> , $(\text{NH}_4)_2\text{OsBr}_4$ Only sl sol in $\text{H}_2\text{O}$ (Rosenheim, Z. anorg. 1899, 21. 135.)	<b>Strontium bromostannate</b> , $\text{SrSnBr}_6 + 6\text{H}_2\text{O}$ . Very hygroscopic, and sol in $\text{H}_2\text{O}$ (Raymann and Preis.)
<b>Cæsium bromosmate</b> , $\text{Cs}_2\text{OsBr}_4$ Nearly insol in $\text{H}_2\text{O}$ and dil. HBr (Gutbier, B. 1913, 46. 2103.)	<b>Bromosulphatoplatindiamine sulphate</b> , $\begin{array}{c} \text{Br} > \text{Pt}(\text{N}_2\text{H}_4)_2\text{SO}_4 \\ \text{SO}_4 > \text{Pt}(\text{N}_2\text{H}_4)_2\text{SO}_4 \\ \text{Br} > \text{Pt}(\text{N}_2\text{H}_4)_2\text{SO}_4 \end{array} + \text{H}_2\text{O}$ Rather easily sol. in hot $\text{H}_2\text{O}$
<b>Potassium bromosmate</b> , $\text{K}_2\text{OsBr}_4$ Only sl. sol in $\text{H}_2\text{O}$ (Rosenheim, <i>l. c.</i> )	<b>Bromosulphobismuthous acid.</b>
<b>Rubidium bromosmate</b> , $\text{Rb}_2\text{OsBr}_4$ Difficultly sol in $\text{H}_2\text{O}$ and in dil. HBr. (Gutbier, <i>l. c.</i> )	<b>Cuprous bromosulphobismuthite</b> , $2\text{Cu}_2\text{S}, \text{Bi}_2\text{S}_3, 2\text{Bi}_2\text{SO}_4$ . Stable in the air and insol in $\text{H}_2\text{O}$ at ord. temp. Partially decomp by boiling $\text{H}_2\text{O}$ . Decomp by mineral acids with the evolution of $\text{H}_2\text{S}$ . (Ducatte, C R. 1902, 134. 1212.)
<b>Silver bromosmate</b> , $\text{Ag}_2\text{OsBr}_4$ Ppt, insol in $\text{H}_2\text{O}$ (Rosenheim, <i>l. c.</i> )	<b>Lead bromosulphobismuthite</b> , $\text{PbS}, \text{Bi}_2\text{S}_3, 2\text{Bi}_2\text{SO}_4$ . Insol. in $\text{H}_2\text{O}$ . Decomp. by boiling $\text{H}_2\text{O}$ . Decomp. by dil. mineral acids with evolution of $\text{H}_2\text{S}$ . (Ducatte, <i>l. c.</i> )
<b>Sodium bromosmate</b> , $\text{Na}_2\text{OsBr}_4 + 4\text{H}_2\text{O}$ . Sol in $\text{H}_2\text{O}$ (Rosenheim, <i>l. c.</i> )	<b>Bromotantalum bromide</b> , $(\text{Ta}_2\text{Br}_{12})\text{Br}_2 + 7\text{H}_2\text{O}$ . Stable in the air when in the solid state. Sol in $\text{H}_2\text{O}$ without decomp. Sol. in propyl alcohol (Chapin, J Am Chem. Soc 1910, 32. 328.)
<b>Bromostannic acid</b> , $\text{H}_2\text{SnBr}_6 + 8\text{H}_2\text{O}$ . Very deliquescent. Sol. in $\text{H}_2\text{O}$ . (Seubert, B 20. 794.)	<b>Bromotantalum chloride</b> , $(\text{Ta}_2\text{Br}_{12})\text{Cl}_2 + 7\text{H}_2\text{O}$ . (Chapin, <i>l. c.</i> )
<b>Ammonium bromostannate</b> , $(\text{NH}_4)_2\text{SnBr}_6$ Very deliquescent, and sol. in $\text{H}_2\text{O}$ . (Raymann and Preis, A. 223. 323.)	<b>Bromotantalum hydroxide</b> , $(\text{Ta}_2\text{Br}_{12})(\text{OH})_2 + 10\text{H}_2\text{O}$ Sl sol. in HCl. Stable in the air below $100^\circ$ . Sol in alcohol. Insol. in ether (Chapin, <i>l. c.</i> )
<b>Cæsium bromostannate.</b> Sol in $\text{H}_2\text{O}$ . (Raymann and Preis.)	<b>Bromotantalum iodide</b> , $(\text{Ta}_2\text{Br}_{12})\text{I}_2 + 7\text{H}_2\text{O}$ . (Chapin, <i>l. c.</i> )
<b>Calcium bromostannate</b> , $\text{CaSnBr}_6 + 6\text{H}_2\text{O}$ . Very deliquescent. Sol. in $\text{H}_2\text{O}$ . (Raymann and Preis.)	<b>Bromotelluric acid.</b>
<b>Cobalt bromostannate</b> , $\text{CoSnBr}_6 + 10\text{H}_2\text{O}$ . Deliquescent (Raymann and Preis.)	<b>Ammonium bromotellurate</b> , $(\text{NH}_4)_2\text{TeBr}_6$ Less sol. in $\text{H}_2\text{O}$ than K salt. (Muthmann and Schmidt, B. 1893, 26. 1011.)
<b>Ferrous bromostannate</b> , $\text{FeSnBr}_6 + 6\text{H}_2\text{O}$ . Deliquescent. (Raymann and Preis.)	
<b>Lithium bromostannate</b> , $\text{Li}_2\text{SnBr}_6 + 6\text{H}_2\text{O}$ . Extremely deliquescent (Leteur, C R. 113. 541.)	
<b>Magnesium bromostannate</b> , $\text{MgSnBr}_6 + 10\text{H}_2\text{O}$ . Deliquescent (Raymann and Preis.)	

**Cæsium bromotellurate, Cs<sub>2</sub>TeBr<sub>6</sub>.**

Decomp. by H<sub>2</sub>O  
 100 pts HBr+Ag (sp. gr 1.49) dissolve  
 0.02 pt. at 22°  
 100 pts HBr+Ag (sp. gr. 1.08) dissolve  
 0.13 pt. at 22°  
 Insol. in alcohol. (Wheeler, Sill Am J. 145. 267.)

**Potassium bromotellurate, K<sub>2</sub>TeBr<sub>6</sub>+3H<sub>2</sub>O.**

Sol. in little, decomp by much H<sub>2</sub>O (v. Hauer.)  
 Contains 2H<sub>2</sub>O (Wheeler, Sill. Am. J. 145. 267.)  
 Efflorescent.  
 100 pts. HBr+Ag (sp. gr 1.49) dissolve  
 6.57 pts at 22°  
 100 pts. HBr+Ag (sp. gr 1.08) dissolve  
 62.90 pts. at 22°  
*Anhydrous* Stable on air (Wheeler.)

**Rubidium bromotellurate, Rb<sub>2</sub>TeBr<sub>6</sub>.**

Sol in a little hot H<sub>2</sub>O, but H<sub>2</sub>TeO<sub>5</sub> separates on cooling  
 100 pts HBr+Ag (sp. gr 1.49) dissolve  
 0.26 pt. at 22°  
 100 pts HBr+Ag (sp. gr. 1.08) dissolve  
 3.88 pts at 22°. (Wheeler.)

**Bromotetramine chromium bromide, CrBr(NH<sub>3</sub>)<sub>4</sub>Br<sub>2</sub>+H<sub>2</sub>O.**

Easily sol in H<sub>2</sub>O (Cleve.)

**— chloride, CrBr(NH<sub>3</sub>)<sub>4</sub>Cl<sub>2</sub>+H<sub>2</sub>O.**

Sol in H<sub>2</sub>O. (Cleve.)

**— sulphate, CrBr(NH<sub>3</sub>)<sub>4</sub>SO<sub>4</sub>+H<sub>2</sub>O.**

Easily sol. in H<sub>2</sub>O. (Cleve.)

**Bromotetramine cobaltic sulphate,**

BrCo(NH<sub>3</sub>)<sub>4</sub>SO<sub>4</sub>, or Br<sub>2</sub>Co<sub>2</sub>(NH<sub>3</sub>)<sub>4</sub>(SO<sub>4</sub>)<sub>2</sub>.

Sol. in H<sub>2</sub>O. (Vortmann and Blasberg, B. 22. 2852.)

**Cadmium, Cd.**

Not attacked by H<sub>2</sub>O. Sol. in HCl, or dil. H<sub>2</sub>SO<sub>4</sub>+Ag, but more easily in HNO<sub>3</sub>+Ag  
 Sol. in HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>+Ag

Chemically pure Cd like Zn is almost insol. in dil acids, with the exception of HNO<sub>3</sub>. (Weeren, B. 1891, 24. 1798.)

Sol. in HClO<sub>3</sub>+Ag without evolution of H. (Hendrixson, J. Am. Chem. Soc. 1904, 26. 256.)

Cadmium is sol. in molten CdCl<sub>2</sub> and can be recryst. therefrom. (Auerbach, Z. anorg. 1901, 28. 42.)

From 4 g. Cd in 32 g molten CdCl<sub>2</sub> at 650°, 2.197 g. were dissolved in ½ hr. (Helfenstein, Z. anorg. 1900, 23. 295.)

Moderately quickly sol. in K<sub>2</sub>S<sub>2</sub>O<sub>8</sub>+Ag  
 More slowly sol. in (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub>+Ag. (Levi, Gazz. ch. it. 1908, 38 (1) 683.)

Sol. in (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub>+Ag without evolution of gas. (Turrentine, J. phys. Chem. 1907, 11. 627.)

Sol. in sulphostannates+Ag (Storch, B. 1883, 18. 2015)

½ com. oleic acid dissolves 0.0293 g. Cd in 6 days (Gates, J. phys. Chem 1911, 15. 143.)

Not attacked by sugar solution. (Klein and Berg, C R. 102. 1170.)

**Cadmium amalgam, Cd<sub>2</sub>Hg.**

Stable from 0°–44°. Can be cryst from Hg without decomp. if temp. does not exceed 44° (Kerp Z. anorg. 1900, 25. 68.)

**Cadmium amide, Cd(NH<sub>2</sub>)<sub>2</sub>.**

Decomp. by H<sub>2</sub>O. (Bohart, J. phys. Chem. 1915, 19. 543)

**Cadmium arsenide, Cd<sub>2</sub>As.**

(Descamps, C. R. 85. 1022)  
 Cd<sub>2</sub>As<sub>2</sub>. Sol in dil cold HNO<sub>3</sub>. Attacked by aqua regia. (Granger, C. R. 1904, 138. 575.)

**Cadmium azoimide, Cd(N<sub>3</sub>)<sub>2</sub>.**

Ppt. (Curtius, J pr. 1898, (2) 58. 294.)

**Cadmium subbromide, Cd<sub>2</sub>Br<sub>3</sub>.**

Decomp. by H<sub>2</sub>O (Morse and Jones, Am. Ch J. 1890, 12. 460.)

**Cadmium bromide, CdBr<sub>2</sub>.**

Deliquescent. Very sol in H<sub>2</sub>O.

Solubility in H<sub>2</sub>O at t°

t°	% CdBr <sub>2</sub>	t°	% CdBr <sub>2</sub>
—4	32.0	48	60.0
—1	34.7	71	61.2
+1	36.3	104	61.8
2	36.0	155	63.7
9	41.9	170	65.2
14	46.0	215	69.9
25	52.6	232	70.1
35	59.6	245	71.5

Solid phase above 100° is CdBr<sub>2</sub>+½H<sub>2</sub>O. (Etard, A. ch. 1894, (7) 2. 541)

See also under CdBr<sub>2</sub>+H<sub>2</sub>O and CdBr<sub>2</sub>+4H<sub>2</sub>O

Sp. gr. of CdBr<sub>2</sub>+Ag at 19.5° containing:

	5	10	15	20	25 % CdBr <sub>2</sub>
1.043	1.090	1.141	1.199	1.260	
30	35	40	45	50 % CdBr <sub>2</sub>	
1.326	1.400	1.481	1.578	1.680	

(Kremers, calculated by Gerlach, Z. anal. 8. 280.)

CdBr<sub>2</sub>+Ag containing 18.06% CdBr<sub>2</sub> has sp. gr 20°/20°=1.1378.

CdBr<sub>2</sub>+Ag containing 21.39% CdBr<sub>2</sub> has sp. gr. 20°/20°=1.1866.

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 282.)

Sp. gr. of CdBr<sub>2</sub>+Ag containing 35.84% CdBr<sub>2</sub>=1.4231 at 19.4°/4°. (Hallwachs, W. Ann. 1899, 68. 27)

0.5138	12.46	1.1211

(Forehheimer, Z. phys. Ch. 1900, 34. 29)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827)

Sol. in  $\text{AlBr}_3$ . (Isbekow, Z. anorg. 1913, 84. 27)

Sol. in  $\text{HCl} + \text{Aq}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , alcohol, or ether (Beuthemot, A. ch. 44. 387)

Sol. in 0.94 pt.  $\text{H}_2\text{O}$ , 3.4 pts. abs. alcohol, 250 pts. ether, and 18 pts. alcohol-ether (1:1) (Eder, Dingl. 221. 89.)

Anhydrous  $\text{CdBr}_2$  is sol. in acetone (Krug and M'Elroy)

1 g.  $\text{CdBr}_2$  is sol. in 64.5 g. acetone at  $18^\circ$ . Sp. gr. of sat. solution  $18^\circ/4^\circ = 0.8073$  (Naumann, B. 1904, 37. 4337.)

Sol. in acetone (Eidmann, C. C. 1899, II, 1014)

Insol. in mustard oil. (Mathews, J. phys. Chem. 1905, 9. 647.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

Insol. in ethyl acetate (Naumann, B. 1910, 43. 314)

Sol. in chinoline. (Beckmann and Gabel, Z. anorg. 1906, 51. 236)

100 g. benzonitrile dissolve 0.857 g.  $\text{CdBr}_2$  at  $18^\circ$ . (Naumann, B. 1914, 47. 1370.)

Mol. weight determined in pipondine. (Ferehland, Z. anorg. 1897, 15. 17.)

+  $\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

100 g. of the sat. solution contain at:

$35^\circ$   $40^\circ$   $45^\circ$   $60^\circ$   $80^\circ$   $100^\circ$   
60.29 60.65 60.75 61.10 61.29 61.63 g.  $\text{CdBr}_2$ .  
(Diets, Z. anorg. 1899, 20. 261)

+  $1\frac{1}{2}\text{H}_2\text{O}$  (Fetard, A. ch. 1894, (7) 2. 541.)

+  $4\text{H}_2\text{O}$  Efflorescent (Rammelsberg, Pogg. 56. 241.)

Solubility in  $\text{H}_2\text{O}$

100 g. of the sat. solution contain at:

$0^\circ$   $18^\circ$   $30^\circ$   $38^\circ$   
37.92 48.90 56.90 61.84 g.  $\text{CdBr}_2$ .

Sp. gr. of sat. solution at  $18^\circ = 1.683$ .

(Diets, Z. anorg. 1899, 20. 261.)

100 g. sat. solution of  $\text{CdBr}_2 + 4\text{H}_2\text{O}$  in absolute alcohol contain 20.93 g.  $\text{CdBr}_2$  at  $15^\circ$ .

100 g. sat. solution of  $\text{CdBr}_2 + 4\text{H}_2\text{O}$  in absolute ether contain 0.4 g.  $\text{CdBr}_2$  at  $15^\circ$ . (Eder, Dingl. 221. 89.)

Cadmium hydrogen bromide.

Decomp. by  $\text{H}_2\text{O}$ . (Berthelot, C. R. 91. 1024.)

Cadmium caesium bromide,  $\text{CdBr}_2, \text{CsBr}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Wells and Walden, Z. anorg. 5. 270.)

$\text{CdBr}_2, 2\text{CsBr}$ . Decomp. by  $\text{H}_2\text{O}$  into above comp. (W. and W.)

$\text{CdBr}_2, 3\text{CsBr}$ . Decomp. by  $\text{H}_2\text{O}$  into  $\text{CdBr}_2, \text{CsBr}$ . (W. and W.)

Cadmium potassium bromide,  $\text{CdBr}_2, \text{KBr} + \frac{1}{2}\text{H}_2\text{O}$ .

Sol. in 0.79 pt.  $\text{H}_2\text{O}$  at  $15^\circ$ ; pptd. by alcohol and ether (Eder, Dingl. 221. 89.)

+  $\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  without decomp. from  $0.4^\circ$  to  $-112.5^\circ$ . (Rimbach, B. 1905, 38, 1554.)

100 pts. of the solution contain at:

$0.4^\circ$   $15.8^\circ$   $50^\circ$   $112.5^\circ$   
53.75 58.68 68.25 78.10 pts. of the salt.

$\text{CdBr}_2, 4\text{KBr}$ . Sol. in 1.40 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ ; pptd. by alcohol and ether. (Eder, Dingl. 221. 89.)

Cannot be prepared in a pure state as it is decomp. by  $\text{H}_2\text{O}$  below  $160^\circ$ . (Rimbach, B. 1905, 38. 1560.)

Cadmium rubidium bromide,  $\text{CdBr}_2, \text{RbBr}$ .

Sol. in  $\text{H}_2\text{O}$  without decomp. from  $0.4^\circ$  to  $-107.5^\circ$ .

100 pts. of the solution contain at:

$0.4^\circ$   $14.5^\circ$   $49.2^\circ$   $107.5^\circ$   
32.65 41.87 58.54 75.77 pts. of the salt..

(Rimbach, B. 1905, 38. 1556.)

$\text{CdBr}_2, 4\text{RbBr}$ . Sol. in  $\text{H}_2\text{O}$  without decomp. from  $0.5^\circ$  to  $114.5^\circ$ .

100 pts. of the solution contain at:

$0.5^\circ$   $13.5^\circ$   $51.5^\circ$   $114.5^\circ$   
47.95 55.17 68.82 79.04 pts. of the salt.

(Rimbach, B. 1905, 38. 1561.)

Cadmium sodium bromide,  $\text{CdBr}_2$ ,  $\text{NaBr} + 2\frac{1}{2}\text{H}_2\text{O}$

Sol. at  $15^\circ$  in 104 pts  $\text{H}_2\text{O}$ , 37 pts abs. alcohol, and 190 pts ether (sp. gr. 0.729). (Eder, Dingl. 221. 89.)

$3\text{CdBr}_2$ ,  $2\text{NaBr} + 6\text{H}_2\text{O}$ . Stable in conc. solutions and decomp. only by great dilution (Jones and Knight, Am. Ch. J. 1899, 22. 134.)

Cadmium bromide ammonia,  $\text{CdBr}_2 \cdot 2\text{NH}_3$

Can be crystallized out of warm  $\text{NH}_4\text{OH} + \text{Aq.}$  (Croft, Phil. Mag. 21. 355.)

$\text{CdBr}_2 \cdot 3\text{NH}_3$ . (Tassaly, C. R. 1897, 124. 1023.)

$\text{CdBr}_2 \cdot 4\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$ . (Croft.)

Cadmium bromide cupric oxide,  $\text{CdBr}_2$ ,  $3\text{CuO} + 3\text{H}_2\text{O}$ . (Mailhe, A. ch. 1902, (7) 27. 383.)

Cadmium bromide hydrazine,  $\text{CdBr}_2 \cdot 2\text{N}_2\text{H}_4$

Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Fianzen, Z. anorg. 1908, 60. 280.)

Cadmium bromide hydroxylamine,  $\text{CdBr}_2 \cdot 2\text{NH}_2\text{OH}$

Sol. in hot  $\text{H}_2\text{O}$  with formation of a basic salt. Sol. in dil. acids. Insol. in alcohol and ether. (Adams, Am. Ch. J. 1902, 28. 218.)

Cadmium subchloride,  $\text{Cd}_2\text{Cl}_3$

Decomp. by  $\text{H}_2\text{O}$  and by acids. (Morse and Jones, Am. Ch. J. 1890, 12. 490.)

Cadmium chloride,  $\text{CdCl}_2$

Sol. at  $20^\circ$   $40^\circ$   $60^\circ$   $80^\circ$   $100^\circ$

in 0.71 0.72 0.72 0.70 0.67 pts  $\text{H}_2\text{O}$ .

(Kremers Pogg. 103. 57.)

+5H<sub>2</sub>O. (Worobieff, Z. anorg. 1898, 18, 386.)

**Cadmium hydrogen chloride, CdCl<sub>2</sub>, 2HCl + 7H<sub>2</sub>O.**

Decomp in air. (Berthelot, C. R. 91, 1024)

**Cadmium caesium chloride, CdCl<sub>2</sub>, 2CsCl.**

Easily sol. in H<sub>2</sub>O and dil. HCl + Aq; insol. in conc. HCl + Aq. (Godefroy, B. 8, 9.)

Nearly insol. in CsCl + Aq (Wells and Walden, Z. anorg. 5, 286.)

CdCl<sub>2</sub>, CsCl. Sl. sol. in H<sub>2</sub>O, nearly insol. in CdCl<sub>2</sub> + Aq. (Wells and Walden)

**Cadmium calcium chloride, 2CdCl<sub>2</sub>, CaCl<sub>2</sub> + 7H<sub>2</sub>O**

Rather deliquescent, and very sol. in H<sub>2</sub>O. When ignited is only sl. sol. in H<sub>2</sub>O with evolution of heat. (v. Hauer, J pr. 63, 432.)

CdCl<sub>2</sub>, 2CaCl<sub>2</sub> + 12H<sub>2</sub>O. Very deliquescent. (v. Hauer.)

**Cadmium cobaltous chloride, 2CdCl<sub>2</sub>, CoCl<sub>2</sub> + 12H<sub>2</sub>O**

Deliquescent Sol in H<sub>2</sub>O. (v. Hauer, W A B. 17, 331)

**Cadmium cupric chloride, CdCl<sub>2</sub>, CuCl<sub>2</sub> + 4H<sub>2</sub>O.**

Sol in H<sub>2</sub>O (v. Hauer, W A B 17, 331.)

**Cadmium hydrazine chloride, CdCl<sub>2</sub>, N<sub>2</sub>H<sub>4</sub>.HCl.**

Unstable in the air when moist Very sol. in H<sub>2</sub>O, sl. sol. in alcohol; sol in NH<sub>3</sub> + Aq.

(Curtius, J. pr 1894, (2) 50, 334.)

CdCl<sub>2</sub>.2N<sub>2</sub>H<sub>4</sub>.HCl + 4H<sub>2</sub>O Very sol in H<sub>2</sub>O, sl sol in alcohol (Curtius, J pr. 1894, (2) 50, 335)

**Cadmium iron (ferrous) chloride, 2CdCl<sub>2</sub>, FeCl<sub>2</sub> + 12H<sub>2</sub>O.**

Sol. in H<sub>2</sub>O (v Hauer, W. A. B 17, 331)

**Cadmium lithium chloride, CdCl<sub>2</sub>, LiCl + 3½H<sub>2</sub>O.**

Very deliquescent Decomp by solution in H<sub>2</sub>O, but not in alcohol. (Chassevant, A. ch. (6) 30, 39)

**Cadmium magnesium chloride, 2CdCl<sub>2</sub>, MgCl<sub>2</sub> + 12H<sub>2</sub>O.**

Deliquescent in moist, stable in dry air. Easily sol in H<sub>2</sub>O with absorption of heat. Much more sol. in hot than in cold H<sub>2</sub>O. (v. Hauer)

Solubility in H<sub>2</sub>O at t°

60 6	40 67	68 55
105 1	51 67	106 91

(Rimbach, B. 1897, 30. 3079)

CdCl<sub>2</sub>, 2KCl. 100 pts. H<sub>2</sub>O at 15.5° dissolve 33.45 pts. Sl. sol. in alcohol (Croft, Phil Mag. (3) 21. 356.)

Solubility in salts +Aq at 16°.

CdCl<sub>2</sub>, 2KCl is sol without decomp. in the following salt solutions at 16°.

Salt	Mols salt in 100 mole H <sub>2</sub> O	In 1 litre of the solution mole			Sp. gr. of the solution
		CdCl <sub>2</sub>	KCl	RCl	
LiCl	9 3	0 166	0 663	4 483	1 1380
CaCl <sub>2</sub>	3 8	0.270	1 080	1 887	1.2333
KCl	2 378	0.507	3 195		1.214

(Rimbach, B. 1905, 38. 1568.)

CdCl<sub>2</sub>, 4KCl. More sol. in H<sub>2</sub>O than CdCl<sub>2</sub>, KCl (v. Hauer.)  
100 g H<sub>2</sub>O dissolve at.

19.3° 29.7° 40.1° 54.5°  
41.65 49.05 57.55 69.91 g. CdCl<sub>2</sub>, 4KCl  
(Sudhaus, Miner. Jahrb. Beil.-Bd. 1914, 37, 24.)

Solubility in H<sub>2</sub>O at t°.

t°	100 pts solution contain pts		
	Cd	Cl	K
4 0	3 64	9 84	8 31
23.6	5 66	14 02	11 52
50 2	9.10	18 09	13 60
108 8	11 97	23 08	17 10
109 0	11 91	23 15	17 22

(Rimbach, B. 1897, 30. 3080.)

Decomp. by H<sub>2</sub>O.

Can be recryst. without decomp. from LiCl, CaCl<sub>2</sub>, or MgCl<sub>2</sub>+Aq. (Rimbach, B. 1905, 38. 1565.)

The salt is sol. without decomp. in HCl+Aq containing 19.8 mole HCl per 100 mole H<sub>2</sub>O at 16°

1 l. of the solution contains 0.033 mole CdCl<sub>2</sub>, 0.132 mole KCl and 8.828 mole HCl; sp. gr. of the solution = 1.1403 (Rimbach, B. 1905, 38. 1568.)

Cadmium rubidium chloride, CdCl<sub>2</sub>, 2RbCl  
Sol in H<sub>2</sub>O and HCl+Aq. (Godeffroy, B. 8. 9.)

CdCl<sub>2</sub>, RbCl Solubility in H<sub>2</sub>O at t°.  
100 pts by wt. of the solution contain pts by wt. RbCl, CdCl<sub>2</sub>.

t°	Pts. RbCl, CdCl <sub>2</sub>
1 2	12 97
14.5	16 80
41 4	25 31
57 6	30 83
103 9	46 62

CdCl<sub>2</sub>, RbCl is sol. in H<sub>2</sub>O without decomp from 0-104° (Rimbach, B. 1902, 35. 1303)

CdCl<sub>2</sub>, 4RbCl.

Solubility of CdCl<sub>2</sub>, 4RbCl and CdCl<sub>2</sub>, RbCl in H<sub>2</sub>O at t°.

t°	In 100 pts by wt. of the solution			Composition of the solid phase	
	Pts by wt Cd	Pts by wt Cl	Pts. by wt Rb	Mol.-% mono-salt	Mol.-% tetra-salt
0.7	0 65	6.52	14 73	30	70

13.8	1.32	7 86	16 93	16	84
42 4	3.21	11 35	22 45	14	86
59 0	4 61	13 41	25 31	33	67
108 4	8 94	18 57	31.15		..

(Rimbach, B. 1902, 35. 1305.)

Decomp. by H<sub>2</sub>O between 0° and 108°.  
(Rimbach, B. 1905, 38. 1571.)

Sol in conc. HCl without decomp. (Rimbach, B. 1905, 38. 1571.)

Not sol. in CaCl<sub>2</sub>+Aq and LiCl+Aq without decomp. (Rimbach, B. 1905, 38. 1571.)

Cadmium sodium chloride, CdCl<sub>2</sub>, 2NaCl+3H<sub>2</sub>O

Sol in 1.4 pts. H<sub>2</sub>O at 16° (Croft)  
100 mol. H<sub>2</sub>O dissolve at

19.3° 29.7° 40.1° 54.5°  
3.93 4.29 4.73 5.18 mol. CdCl<sub>2</sub>, 2NaCl+3H<sub>2</sub>O.

Stable between 19° and 55°  
(Sudhaus, Miner. Jahrb. Beil.-Bd. 1914, 37, 25.)

Sl sol in alcohol or wood alcohol (Croft.)

Cadmium strontium chloride, 2CdCl<sub>2</sub>, SrCl<sub>2</sub>+7H<sub>2</sub>O

Sol in H<sub>2</sub>O (v. Hauer)

Cadmium chloride ammonia, CdCl<sub>2</sub>, 2NH<sub>3</sub>.

Nearly insol. in H<sub>2</sub>O. (v. Hauer.)

CdCl<sub>2</sub>, 3NH<sub>3</sub>+ $\frac{1}{2}$ H<sub>2</sub>O.

CdCl<sub>2</sub>, 4NH<sub>3</sub>+ $\frac{1}{2}$ H<sub>2</sub>O.

CdCl<sub>2</sub>, 6NH<sub>3</sub>. (André, C. R. 104. 908)

CdCl<sub>2</sub>, 6NH<sub>3</sub>. Difficultly sol. in cold H<sub>2</sub>O.  
(Schuler, A. 87. 34.)

**Cadmium chloride cupric oxide,  $\text{CdCl}_2$ ,  $3\text{CuO} + 3\text{H}_2\text{O}$ .**

Not decomp. by  $\text{H}_2\text{O}$  (Mailhe, A. ch. 1902, (7) 27. 378 and 174.)

**Cadmium chloride hydrazine,  $\text{CdCl}_2$ ,  $2\text{N}_2\text{H}_4$ .**

Insol. in  $\text{H}_2\text{O}$ .

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Franzen, Z anorg 1908, 60. 279.)

+  $\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Curtius, J pr. 1894, (2) 50. 345)

**Cadmium chloride hydroxylamine,  $\text{CdCl}_2$ ,  $2\text{NH}_2\text{OH}$**

Sl sol in cold, somewhat more in warm  $\text{H}_2\text{O}$ . Very sol in hydroxylamine +  $\text{Aq}$ . Very sl sol. in alcohol and other organic solvents (Cusmer, Bull. Soc. (3) 3. 116)

Aq solution sat. at  $20^\circ$  contains about 1%. (Antonoff, C. C. 1905, II. 810)

**Cadmium fluoride,  $\text{CdF}_2$ .**

Difficultly sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HF} + \text{Aq}$ . (Berzelius, Pogg. 1. 28)

Very sol in  $\text{H}_2\text{O}$ , insol. in 95% alcohol, sol. in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3 + \text{Aq}$  with evolution of  $\text{HF}$ . (Pouleno, C. R. 116. 582)

1 l  $\text{H}_2\text{O}$  dissolves 0.289 mol  $\text{CdF}_2$  at  $25^\circ$ , or 100 cc. sat. aqueous solution contains 4.36 g.  $\text{CdF}_2$  at  $25^\circ$ . (Jaeger, Z anorg. 1901, 27. 35.)

1 l. of 1.08-N  $\text{HF}$  dissolves 0.372 mol.  $\text{CdF}_2$  at  $25^\circ$ . (Jaeger, Z anorg 1901, 27. 35)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827)

**Cadmium ceric fluoride,  $\text{CdF}_2 \cdot 2\text{CeF}_4 \cdot 7\text{H}_2\text{O}$**

Ppt. Decomp by  $\text{H}_2\text{O}$ . (Rambach, A. 1909, 368. 106.)

**Cadmium columbium fluoride.**

See Fluocolumbate, cadmium.

**Cadmium molybdenyl fluoride.**

See Fluoxymolybdate, cadmium.

**Cadmium silicon fluoride.**

See Fluosilicate, cadmium.

**Cadmium stannic fluoride.**

See Fluostannate, cadmium.

**Cadmium titanium fluoride.**

See Fluotitanate, cadmium.

**Cadmium zirconium fluoride.**

See Fluozirconate, cadmium.

**Cadmous hydroxide,  $\text{CdOH}$ .**

Insol. in  $\text{H}_2\text{O}$ . Decomp by acids into cadmic salt (Morse and Jones, Am. Ch. J. 12. 488)

**Cadmium hydroxide,  $\text{CdO}_2\text{H}_2$**

Insol. in  $\text{H}_2\text{O}$ .

1 l.  $\text{CdO}_2\text{H}_2 + \text{Aq}$  contains 0.0026 g.  $\text{CdO}_2\text{H}_2$

at  $25^\circ$  (Bodlander, Z. phys. Ch. 1898, 27. 66)

Solubility in  $\text{H}_2\text{O} = 2.6 \times 10^{-4}$  (Herz, Z. anorg. 1900, 24. 126.)

Sol in acids; very sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; insol in  $\text{KOH}$ ,  $\text{NaOH}$ ,  $\text{Na}_2\text{CO}_3$ ,  $\text{K}_2\text{CO}_3$ , and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ .

Easily sol in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{NH}_4\text{NO}_3$ , and  $\text{NH}_4$  succinate +  $\text{Aq}$ . (Wittstein)

Freshly pptd  $\cdot \text{CdO}_2\text{H}_2$  is sol in alkali haloids +  $\text{Aq}$ . (Bersch, Z. phys. Ch. 1891, 8. 392)

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  increases with increase in concentration of  $\text{NH}_4\text{OH}$  (Euler, B. 1903, 36. 3401)

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ .

$\text{NH}_3$ norm	$\mu$ . $\text{CdO}$ per l
0.5	0.24
1.0	0.62
1.8	1.33
4.6	4.92

(Bonsdorff, Z. anorg. 1904, 41. 187)

Insol in ethyl, and methyl amine +  $\text{Aq}$ . (Wurtz)

Very sl. sol in  $\text{HCN} + \text{Aq}$  even when freshly pptd (Schuler, A. 87. 48.)

Not pptd in presence of  $\text{Na}$  citrate (Spiller), and many non-volatile organic substances (Rose)

**Cadmium iodide,  $\text{CdI}_2$**

Sol. in 113 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Eder, Dingl. 221. 89.)

Sol at  $20^\circ$   $40^\circ$   $60^\circ$   $80^\circ$   $100^\circ$   
in 1.08 1.00 0.93 0.86 0.75 pts  $\text{H}_2\text{O}$ .

(Kremers, Pogg. 103. 57.)

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 284)

Sol. in chinolin (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)  
 100 g. benzonitrile dissolve 1.6295 g.  $\text{CdI}_2$  at  $18^\circ$  (Naumann, B 1914, 47. 1370.)  
 Insol. in methylene iodide. (Retgers, Z anorg 3. 343.)  
 Sl. sol. in ethylamine. (Shunn, J phys Chem 1907, 11. 538.)  
 Insol. in  $\text{CS}_2$  (Arcetowski, Z. anorg 1849, 6. 357.)  
 Solubility in methyl acetate = 0.7–1.5%; 2.1% at bpt. (Schneider and Steiner, J pr 1909, (2) 79. 49.)  
 Sol. in methyl acetate (Naumann, B 1909, 42. 3790.)  
 1 pt. is sol. in 54.3 pts. ethyl acetate at  $18^\circ$   
 The sat. solution has  $D_{18^\circ/4^\circ} = 0.9145$ . (Naumann, B 1910, 43. 318.)  
 Insol. in mustard oil. (Mathews, J. phys. Chem 1905, 9. 647.)  
 Mol. weight determined in piperidine, pyridine, methyl and ethyl sulphide. (Werner, Z anorg 1897, 15. 17.)

**Cadmium hydrogen iodide,  $\text{CdI}_2 \cdot \text{HI} + 3\text{H}_2\text{O}$ .**  
 Decomp. in air (Dobroserdow, C C 1900, II. 527.)

**Cadmium caesium iodide,  $\text{CdI}_2 \cdot \text{CsI} + \text{H}_2\text{O}$ .**  
 Sol. in  $\text{H}_2\text{O}$  without decomp. (Wells and Walden, Z anorg. 5. 271.)  
 $\text{CdI}_2 \cdot 2\text{CsI}$ . As above.  
 $\text{CdI}_2 \cdot 3\text{CsI}$ . Decomp. by  $\text{H}_2\text{O}$  into the above salt.

**Cadmium hydrazine iodide,  $\text{CdI}_2 \cdot 2\text{N}_2\text{H}_4\text{HI}$**   
 Sol. in  $\text{H}_2\text{O}$  (Ferratini, C A. 1912. 1612.)

**Cadmium mercuric iodide.**  
 Very sol. in  $\text{H}_2\text{O}$ . (Berthelot, J Pharm 14. 613.)  
 $\text{CdI}_2 \cdot 3\text{HgI}_2$ . Sol. in  $\text{H}_2\text{O}$ . Can be recrystallized in alcohol. (Clarke and Kebler, Am. Ch. J. 5. 235.)

**Cadmium potassium iodide,  $\text{CdI}_2 \cdot \text{KI} + \text{H}_2\text{O}$**   
 Sol. in 0.94 pt  $\text{H}_2\text{O}$  at  $15^\circ$ . (Eder, Dingl. 221. 89.)  
 $\text{CdI}_2 \cdot 2\text{KI} + 2\text{H}_2\text{O}$ . Deliquescent. Extremely sol. in  $\text{H}_2\text{O}$ . Sol. at  $15^\circ$  in 0.73 pt  $\text{H}_2\text{O}$ . Sl. sol. in alcohol and wood spirit, but less than  $\text{CdI}_2$ . (Croft.)  
 • Sol. at  $15^\circ$  in 1.4 pts. absolute alcohol, 24.5 pts. ether (0.729 sp gr), and 4.5 pts. alcohol-ether (1 : 1). (Eder, l. c.)

Sp. gr. of  $\text{K}_2\text{CdI}_4 + \text{Aq}$  at  $18^\circ$ .

% $\text{K}_2\text{CdI}_4$	1	5	10	15	20
Sp. gr.	1.0065	1.0384	1.0808	1.1269	1.1770

(Wershofen, Z phys Ch. 1890, 5. 493.)

Sol. in ethyl acetate. (Naumann, B 1904, 37. 3601.)

**Cadmium sodium iodide,  $\text{CdI}_2 \cdot 2\text{NaI} + 6\text{H}_2\text{O}$**

Deliquescent (Croft.)  
 Sol. at  $15^\circ$  in 0.63 pt  $\text{H}_2\text{O}$ , 0.86 pt abs alcohol, and 10.1 pts. ether (sp. gr. 0.729) (Eder, Dingl. 221. 89.)

**Cadmium strontium iodide,  $\text{CdI}_2 \cdot \text{SrI}_2 + 8\text{H}_2\text{O}$**

Deliquesces in moist, effloresces in dry air, sol. in  $\text{H}_2\text{O}$  (Croft.)

**Cadmium iodide ammonia,  $\text{CdI}_2 \cdot 2\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Rammelsberg.)  
 $\text{CdI}_2 \cdot 4\text{NH}_3$ . (Dawson and McCrae, Chem Soc. 1900, 77. 1246.)  
 $\text{CdI}_2 \cdot 6\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$ ; sol. in warm, less sol. in cold  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rammelsberg.)

**Cadmium iodide hydrazine,  $\text{CdI}_2 \cdot 2\text{N}_2\text{H}_4$**

Easily sol. in warm  $\text{NH}_4\text{OH} + \text{Aq}$  (Franzen, Z anorg 1903, 60. 281.)

**Cadmium iodide hydroxylamine,  $\text{CdI}_2 \cdot 3\text{NH}_2\text{OH}$ .**

Sol. in  $\text{H}_2\text{O}$  and alcohol. Insol. in ether. (Adams, Am Ch. J 1902, 28. 218.)

**Cadmium iodide selenide,  $\text{CdI}_2 \cdot 3\text{CdSe}$ .**

Easily decomp. (Fonzes-Diacon, C. R 1900, 131. 897.)

**Cadmium iodosulphide,  $\text{CdI}_2 \cdot 2\text{CdS}$ .**

Ppt. (Naumann, B. 1904, 37. 4338.)

**Cadmium suboxide,  $\text{Cd}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ , acids and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Tanatar, Z anorg. 1901, 27. 433.)  
 $\text{Cd}_2\text{O}$ . Properties as cadmium hydroxide (Morse and Jones.)

**Cadmium oxide,  $\text{CdO}$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Easily sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ , less in  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Brett, 1837.)

Insol in KOH, NaOH,  $K_2CO_3$ , and  $Na_2CO_3$  + Aq.

See also Cadmium hydroxide.

Solubility in (calcium sulcrate+sugar)+Aq

1 l solution containing 418.6 g. sugar and 34.3 g.  $CaO$  dissolves 0.22 g.  $CdO$ .

1 l. solution containing 174.4 g. sugar and 14.1 g.  $CaO$  dissolves 0.43 g.  $CdO$

(Bodenbender, J. B. 1865. 600)

Insol in acetone (Naumann, B. 1904, 37. 4329)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790.)

Insol in ethyl acetate (Naumann, B. 1904, 37. 3801.)

Cadmium peroxide,  $Cd_2O_3$  or  $Cd_2O_2(?)$ .

(Haas)

$CdO_2$ ,  $Cd(OH)_2$ . (Kouriloff, A. ch. (6) 23. 431)

Very stable towards  $H_2O$  Insol in  $NH_4OH$  + Aq (Haas, B. 1884, 17. 2253)

$4CdO_2$ ,  $Cd(OH)_2$ . Ppt Insol in  $NaOH$  + Aq (Eykmann, C. C. 1905, I 1629)

$5CdO_2$ ,  $CdO + 3H_2O$  Ppt. (Teletow, C. A. 1912, 43)

Cadmium oxybromide,  $CdO$ ,  $CdBr_2 + H_2O$ .

Decomp. by  $H_2O$  (Tassily, C. R. 1897, 124. 1023.)

+  $2H_2O$ . Stable in dry air; insol. in  $H_2O$ . (Tassily, C. R. 1897, 124. 1022)

+  $3H_2O$ . Slowly decomp. by  $H_2O$ . (Tassily, C. R. 1897, 124. 1022)

+  $7H_2O$  (Mailhe, C. R. 1901, 132. 1561.)

Cadmium oxychloride,  $CdCl_2$ ,  $CdO + H_2O$

Sl. sol. in hot  $H_2O$  (Habermann, M. Ch. 5. 432)

+  $7H_2O$  (Mailhe, Bull Soc 1901, (3) 25. 791)

$2CdO$ ,  $CdCl_2$  Insol in  $H_2O$ , but slowly decomp. thereby. (Canzoneri, Gazz. ch. it. 1897, 27. (2) 488)

Cadmium oxyiodide,  $CdO$ ,  $CdI_2 + H_2O$

Decomp. by  $H_2O$ . (Tassily, C. R. 1897, 124. 1023.)

+  $3H_2O$ . Stable in dry air, insol. in  $H_2O$ . (Tassily, C. R. 1897, 124. 1022.)

Cadmium phosphide,  $Cd_3P_2$ .

Sol. in  $HCl$  + Aq with evolution of  $PH_3$ . (Stromeyer.)

$Cd_3P_2$ . Sol. in conc.  $HCl$  + Aq. (Emmerling, B. 12. 152.)

Easily decomp. by acids. (Kulsch, A. 231. 327.)

$CdP_2$ . Decomp. by boiling conc.  $HCl$  + Aq. (Renault, C. R. 76. 283)

Cadmium selenide,  $CdSe$ .

Sol in  $HCl$  + Aq. (Uelsmann, A. 116. 122)

Easily decomp. by acids. (Fonze-Diacon, C. R. 1900, 131. 897.)

Cadmium sulphide,  $CdS$

Insol in  $H_2O$

Solubility in  $H_2O$  at  $16-18^\circ = 6.6 \times 10^{-6}$  mols. per l (Biltz, Z. phys. Ch. 1907, 58. 291.)

1 l  $H_2O$  dissolves  $900 \times 10^{-6}$  mols  $CdS$  (artificial greenockite) at  $18^\circ$ .

1 l  $H_2O$  dissolves  $8.86 \times 10^{-4}$  mols. pptd.  $CdS$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 294)

Difficultly sol in hot dil  $HCl$  + Aq. Easily sol. in conc.  $HCl$  + Aq (Stromeyer.) Sol in  $HNO_3$  + Aq (Messner), and boiling dil.  $H_2SO_4$  + Aq (1.6). (A. W. Hoffmann, A. 115. 286.) Very sl. sol in  $NH_4OH$  + Aq. (Wackenroder, Report 46. 226) Insol in  $KOH$ , or  $(NH_4)_2S$  + Aq. Appreciably sol. in an acid solution of  $NH_4Cl$ . (Baxter and Hines, Z. anorg. 1905, 44. 160)

Much more sol. in  $(NH_4)_2S$  + Aq than usually supposed. (Ditte, C. R. 35. 402.) Solubility increases by warming, and at  $68^\circ$  is twice that at ordinary temperatures. A sat. solution of  $(NH_4)_2S$  dissolves about 2 g  $CdS$  to a litre. Alkali sulphides dissolve much less (Ditte.)

Fresenius (Z. anal. 20. 236) could not confirm the above. According to Fresenius,  $CdS$  is not appreciably sol in  $(NH_4)_2S$  + Aq

Insol in  $Na_2SO_3$  or  $KCN$  + Aq (Fresenius.)

Insol. in  $NH_4Cl$  or  $NH_4NO_3$  + Aq. (Brett.)

Sol in alkali sulpho-molybdates, -tungstates, -vanadates, -arsenates, -antimonates, -stannates + Aq (Storch, B. 18. 2015.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 827)

Insol in acetone (Naumann, B. 1904, 37. 4329, Eidmann, C. C. 1899, II 1014.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314)

Min Greenockite. Sol in  $HCl$  + Aq

Colloidal.—Solution of 4 g. colloidal C in a litre  $H_2O$  remains transparent several days. If it contains 11 g.  $CdS$  in a litre, it is completely coagulated in 24 hours. Solutions of salts of the following concentration cause an immediate coagulation in an aqueous solution of  $CdS$  containing 3.52 g in a litre.

(Prost, Belg Acad Bull (3) 14. 312, J B. 1887. 537)

#### Cadmium pentasulphide, $\text{CdS}_5$

Insol. in  $\text{H}_2\text{O}$  (Schuff, A. 115. 74)  
Mixture of  $\text{CdS}$  and  $\text{S}$  (Follenius, Z anal 13. 412)

#### Cadmium potassium sulphide, $\text{K}_2\text{CdS}_4$

(Milbauer, Z. anorg. 1904, 42. 439)

#### Cadmium sodium sulphide, $3\text{CdS}, \text{Na}_2\text{S}$

Decomp. by  $\text{H}_2\text{O}$  (Schneider, J. pr (2) 8. 29)

#### Cadmium sulphoiodide.

See Cadmium iodosulphide.

#### Cadmium telluride, $\text{CdTe}$

Not attacked by dil acids. Attacked in the cold only by  $\text{HNO}_3$ . (Tibbals, J. Am. Chem Soc. 1909, 31. 908)

#### Cadmic acid.

#### Potassium cadmate.

Insol. in  $\text{H}_2\text{O}$ , but gradually decomp. when in contact therewith (Meunier, C. R. 63. 330)

#### Cæsium, $\text{Cs}$ .

• Decomp.  $\text{H}_2\text{O}$  with great violence (Setterberg, A. 211. 100.)  
Very sol. in liqnd  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20. 827)

#### Cæsium acetylide acetylene, $\text{Cs}_2\text{C}_2, \text{C}_2\text{H}_2$ .

Insol. in  $\text{C}_2\text{H}_6$  and in  $\text{CHCl}_3$  (Moussan, C. R. 1903, 136. 1218.)

#### Cæsium amide, $\text{CsNH}_2$

Decomp. by  $\text{H}_2\text{O}$  Very sol. in liqnd  $\text{NH}_3$ . (Rengade, C. R. 1905, 140. 1185)

#### Cæsium ammonia, $\text{Cs}_3\text{NH}_3$ .

Sol. in liqnd  $\text{NH}_3$  (Moussan, C. R. 1903, 136. 1177)

#### Cæsium azoimide, $\text{CsN}_3$ .

Deliquescent Stable in aq solution  
224.2 pts sol. in 100 pts  $\text{H}_2\text{O}$  at  $0^\circ$   
307.4 " " 100 "  $\text{H}_2\text{O}$  "  $16^\circ$   
1.0366 " " 100 " abs. alcohol "  $16^\circ$   
Insol in puræther (Curtius, J pr 1898, (2) 58. 283.)

#### Cæsium bromide, $\text{CsBr}$ .

Ppt (Chabrie, C. R. 1901, 132. 679)  
Sat.  $\text{CsBr} + \text{Aq}$  at  $25^\circ$  contains 55.23%  $\text{CsBr}$ . (Foote, Am. Ch. J. 1907, 37. 125)

#### Cæsium tribromide, $\text{CsBr}_3$

Sol in  $\text{H}_2\text{O}$ , decomp by alcohols. (Wells, Sil. Am J 143. 17.)

#### Cæsium pentabromide, $\text{CsBr}_5$

Very unstable (Wells and Wheeler, Sil. Am J 144. 42.)

#### Cæsium cobalt bromide, $\text{Cs}_2\text{CoBr}_4$ .

Decomp. by  $\text{H}_2\text{O}$  (Campbell, Z anorg. 1894, 8. 128.)

Decomp. by  $\text{H}_2\text{O}$  and by alcohol (Campbell, Am J Sci 1894, (3) 48. 418)  
 $\text{Cs}_2\text{CoBr}_4$  Decomp. by  $\text{H}_2\text{O}$  (Campbell, Z. anorg. 1894, 8. 126)

Decomp. by  $\text{H}_2\text{O}$  and by alcohol (Campbell, Am J. Sci. 1894, (3) 48. 418.)

#### Cæsium copper bromide, $\text{CsBr}, \text{CuBr}_2$ .

Sol in  $\text{H}_2\text{O}$  without decomp (Wells and Walden, Z. anorg 5. 304.)  
2  $\text{CsBr}, \text{CuBr}_2$ . (W and W.)

#### Cæsium iridium bromide.

See Bromiridate, cæsium.

#### Cæsium iron (ferric) bromide, $\text{Cs}_2\text{FeBr}_4$

Sol in  $\text{H}_2\text{O}$  (Walden, Z. anorg. 1894, 7. 332.)

$\text{Cs}_2\text{FeBr}_4 + \text{H}_2\text{O}$  (Walden, Z. anorg 1894, 7. 332)

#### Cæsium lead bromide, $\text{CsBr}, 2\text{PbBr}_2$

Nearly stable in aqueous solution. (Walden, Sil. Am J. 145. 127.)

$\text{CsBr}, \text{PbBr}_2$  Decomp by  $\text{H}_2\text{O}$ . (Walden.)

4 $\text{CsBr}, \text{PbBr}_2$  As above.

Solubility determinations show that the double salts formed by cæsium and lead bromides at  $25^\circ$  are  $\text{CsPb}_2\text{Br}_3$ ,  $\text{CsPbBr}_3$  and  $\text{Cs}_2\text{PbBr}_4$ . (Foote, Am. Ch. J. 1907, 37. 125.)

#### Cæsium magnesium bromide, $\text{CsBr}, \text{MgBr}_2 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wheeler and Campbell, Z. anorg 5. 275)

**Cæsium mercuric bromide, CsBr, 2HgBr<sub>2</sub>.**

Not decomp by H<sub>2</sub>O. 100 pts solution sat. at 16° contain 0.807 pt CsBr, 2HgBr<sub>2</sub>. Sl. sol. in hot strong alcohol, from which CsBr, HgBr<sub>2</sub>, separates on cooling. (Wells, Sil. Am. J. 144. 221)

CsBr, HgBr<sub>2</sub>. Decomp by H<sub>2</sub>O into above salt. Sol in alcohol without decomp. (Wells)

2CsBr, HgBr<sub>2</sub>. Decomp. by H<sub>2</sub>O into CsBr, 2HgBr<sub>2</sub>

3CsBr, HgBr<sub>2</sub> As above

**Cæsium molybdenyl bromide, 2CsBr, MoOBr<sub>2</sub>.**

(Weinland and Knoll, Z. anorg. 1905, 44. 107)

**Cæsium nickel bromide, CsNiBr<sub>2</sub>**

Decomp by H<sub>2</sub>O (Campbell, Z. anorg. 1894, 8. 126)

Decomp. by H<sub>2</sub>O and by alcohol. (Campbell, Am. J. Sci. 1894, (3) 48. 418.)

**Cæsium osmium bromide.**

See Bromosmate, cæsium.

**Cæsium palladium bromide.**

See Bromopalladate, cæsium and bromopalladate, cæsium.

**Cæsium platinum bromide.**

See Bromoplatinate, cæsium.

**Cæsium ruthenium bromide.**

See Bromoruthenite, cæsium.

**Cæsium selenium bromide.**

See Bromoselenate, cæsium.

**Cæsium tellurium bromide.**

See Bromotellurate, cæsium.

**Cæsium thallic bromide, CsBr, TlBr<sub>2</sub>.**

Sol. in H<sub>2</sub>O with decomp. (Pratt, Z. anorg. 1895, 9. 19)

By recryst. from H<sub>2</sub>O, forms 3CsBr, 2TlBr<sub>2</sub>. (Pratt, Am. J. Sci. 1895, (3) 49. 403.)

3CsBr, 2TlBr<sub>2</sub>. Can be recryst. unchanged from H<sub>2</sub>O. (Pratt, Am. J. Sci. 1895, (3) 49. 402.)

**Cæsium tin (stannic) bromide.**

See Bromostannate, cæsium.

**Cæsium zinc bromide, 3CsBr, ZnBr<sub>2</sub>.**

Sol. in H<sub>2</sub>O. (Wells and Campbell, Z. anorg. 5. 275)

2CsBr, ZnBr<sub>2</sub>. As above

**Cæsium bromide columbium oxybromide, 2CsBr, CoOBr<sub>2</sub>**

Unstable in moist air. Decomp. by H<sub>2</sub>O. (Weinland, B. 1906, 39. 3059.)

**Cæsium bromochloride, CsBr<sub>2</sub>Cl.**

Properties as CsBr<sub>2</sub> (Wells)  
CsBrCl<sub>2</sub> As above (Wells.)

**Cæsium mercuric bromochloride, Cs<sub>2</sub>HgCl<sub>2</sub>Br<sub>2</sub>**

Decomp. by H<sub>2</sub>O finally to HgBr<sub>2</sub> (Wells, Sil. Am. J. 144. 121)

Cs<sub>2</sub>HgCl<sub>2</sub>Br. As above.

CsHgClBr<sub>2</sub>. As above.

CsHg<sub>2</sub>ClBr<sub>2</sub>. As above

CsHg<sub>3</sub>ClBr<sub>2</sub>. As above

**Cæsium bromochloroiodide, CsBrClI**

More sol. in H<sub>2</sub>O than in alcohol. Not decomp. at once by ether (Wells.)

**Cæsium bromiodide, CsBrI<sub>2</sub>**

Decomp. by H<sub>2</sub>O. Sol. in alcohol. Decomp. by ether with residue of CsBr (Wells, Sil. Am. J. 143. 17)

CsBr<sub>2</sub>I. More sol. in H<sub>2</sub>O than in alcohol. Not decomp by ether

CsBr<sub>2</sub>I + Aq sat. at 20° contains about 4.45% CsBr<sub>2</sub>I. (Wells)

**Cæsium carbide, Cs<sub>2</sub>C<sub>2</sub>**

Decomp. by cold H<sub>2</sub>O. (Moissan, C. R. 1903, 136. 1221)

**Cæsium chloride, CsCl.**

Very deliquescent, sol. in H<sub>2</sub>O and alcohol

Solubility of CsCl at t°

t°	Pts by wt of CsCl in 100 pts solution
0	3
10	61.9
20	63.5
30	64.9
40	66.3
50	67.4

(Hinrichsen, Z. phys. Ch. 1904, 50. 99)

Solubility of CsCl at t°.

t°	% CsCl	t°	% CsCl
0	61.7	60	69.7
10	63.6	70	70
20	65.1	80	71.4
30	66.4	90	72.2
40	67.5	100	73.0
50	68.0	119.4	74.4

(Berkeley, Trans. Roy. Soc. 1904, 203. A. 208)

A normal solution of CsCl has sp. gr. at 25° = 1.1076 (Wagner, Z. phys. Ch. 1890, 5. 36)

Sp. gr. at 20°/4° of a normal solution of CsCl = 1.125815. (Haigh, J. Am. Chem. Soc. 1912, 34. 1151)

Sp. gr. of CsCl+Ag.			
CsCl equiv per 1 at 18°	Sp. gr. at 0°/10°	Sp. gr. at 18°/18°	Sp. gr. at 30°/30°

0.00	6.90	HgCl <sub>2</sub>

(Foote, Am. Ch. J. 1903, 30. 340.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

100 g. solution in acetone sat. at 25° contain 0.032 g. CsCl (Foote and Haigh, J. Am. Chem. Soc. 1911, 33. 461.)

Solubility of CsCl+HgCl<sub>2</sub> in acetone at 25°.

Solution contains		Solid phase
% HgCl <sub>2</sub>	% CsCl	
57.74	0.00	HgCl <sub>2</sub>

(Foote and Haigh, J. Am. Ch. Soc. 1911, 33. 461.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Solubility in glycol at ord. temp. = 10.6-10.8% (de Coninck, Belg. Acad. Bull. 1905. 359.)

Insol. in anhydrous pyridine and in 97% pyridine+Ag. Sol. in 95% pyridine+Ag. and in 93% pyridine+Ag. (Kahlenberg, J. Am. Chem. Soc. 1908, 30. 1107.)

Caesium chromium chloride, 2CsCl.CrCl<sub>3</sub>+H<sub>2</sub>O

Stable in the air. Sol. in H<sub>2</sub>O. (Wells, Z. anorg. 1895, 10. 182.)  
2CsCl.CrCl<sub>3</sub>+4H<sub>2</sub>O; hygroscopic; very sol. in H<sub>2</sub>O. (Wells, l. c.)

Caesium tetra-aquochromium chloride, CrCl<sub>3</sub>(OH<sub>2</sub>)<sub>4</sub>.Cl, 2CsCl.

Ppt (Werner, B. 1901, 34. 1602.)

Caesium cobalt chloride, CsCoCl<sub>3</sub>+2H<sub>2</sub>O.

Decomp. by H<sub>2</sub>O and alcohol. (Campbell, Z. anorg. 1894, 8. 126.)  
Cs<sub>2</sub>CoCl<sub>5</sub>. Decomp. by H<sub>2</sub>O and by alcohol. (Campbell, Z. anorg. 1894, 8. 126.)  
Cs<sub>2</sub>CoCl<sub>5</sub>. Decomp. by H<sub>2</sub>O and by alcohol. (Campbell, Z. anorg. 1894, 8. 126.)

Caesium cuprous chloride, CsCl, Cu<sub>2</sub>Cl<sub>2</sub>.

Decomp. by H<sub>2</sub>O into CuCl<sub>2</sub>, CsCl. (Wells, Z. anorg. 5. 306.)  
3CsCl, Cu<sub>2</sub>Cl<sub>2</sub>. (Wells.)  
6CsCl, Cu<sub>2</sub>Cl<sub>2</sub>. (Wells.)

Caesium cupric chloride, 2CsCl, CuCl<sub>2</sub>.

Easily sol. in H<sub>2</sub>O and dil. HCl+Ag; insol. in conc. HCl+Ag (Godeffroy, B. 8. 9.)

Sol in small amount  $H_2O$  without decomp. (Wells and Dupee, Z. anorg. 5. 300)  
 $+2H_2O$  Efflorescent (W. and D.)  
 $3CsCl, 2CuCl_2 + 2H_2O$   
 $CsCl, CuCl_2$ . Sol in  $H_2O$  without decomp (W. and D.)

**Cæsius gold chloride.**

See Chloraurate, cæsius.

**Cæsius iridium tetrachloride.**

See Chloriridate, cæsius.

**Cæsius iron (ferric) chloride,  $CsFeCl_4 + \frac{1}{2}H_2O$ .**

Sol in  $H_2O$ . Decomp in the air (Walden, Z. anorg. 1894, 7. 332)  
 $Cs_2FeCl_6 + H_2O$  Sol. in  $H_2O$  (Walden)  
 $Cs_3FeCl_6 + H_2O$ . Sol in  $H_2O$  (Walden)

**Cæsius lanthanum chloride,  $Cs_3LaCl_6 + 4H_2O$**

Very hygroscopic. Easily sol in  $H_2O$  (R. J. Meyer, Z. anorg. 1914, 86. 273.)

**Cæsius lead chloride,  $CsCl, 2PbCl_2$**

Nearly stable in aqueous solution (Campbell, Silf. Am. J. 145. 126)

$CsCl, PbCl_2$ . Decomp by  $H_2O$ . (Campbell)  
 $4CsCl, PbCl_2$ . As above (Campbell.)

**Cæsius lead tetrachloride.**

See Chloroplumbate, cæsius.

**Cæsius magnesium chloride,  $CsCl, MgCl_2 + 6H_2O$**

Sol. in  $H_2O$  (Wells and Campbell, Z. anorg. 5. 275)

**Cæsius manganous chloride,  $CsCl, MnCl_2 + 2H_2O$ .**

Not deliquescent; sol in  $H_2O$ . (Saunders, Am Ch J 14. 143)

$2CsCl, MnCl_2$ . (Godeffroy.)  
 $+2\frac{1}{2}H_2O$ . (Godeffroy.)  
 $+3H_2O$  Sol in  $H_2O$  Conc  $HCl + Aq$  precipitates anhydrous salt from aqueous solution. (Godeffroy, B 8. 9.)

The only salt which exists contains  $2H_2O$ . (Saunders, Am Ch. J 14. 143)

**Cæsius manganic chloride,  $2CsCl, MnCl_2$ .**

Easily decomp. (Meyer and Best, Z. anorg 1899, 22. 187)

**Cæsius mercuric chloride,  $CsCl, HgCl_2$ .**

100 pts. solution sat. at  $17^\circ$  contain 1.406 pts.  $CsHgCl_3$ . Not decomp by  $H_2O$  Insol. in absolute alcohol, but sol. on diluting with  $\frac{1}{2}$  vol  $H_2O$ . (Wells, Silf. Am. J 144. 221.)

$2CsCl, HgCl_2$  Easily sol. in  $H_2O$  and dil.  $HCl + Aq$ ; insol. in conc  $HCl + Aq$ . (Godeffroy)

$3CsCl, HgCl_2$ . Decomp. by  $H_2O$ , on recrystallizing from  $H_2O$ ,  $CsCl, HgCl_2$  is finally formed (Wells, Silf. Am. J. 144. 221.)

$CsCl, 5HgCl_2$  Decomp by  $H_2O$  (Wells)  
 Solubility determinations show that the only double salts of  $CsCl$  and  $HgCl_2$  which exist at  $25^\circ$  are  $Cs_3HgCl_6, Cs_2HgCl_4, CsHgCl_3, CsHg_2Cl_3, CsHg_3Cl_{11}$ . (Foote, Am Ch. J. 1903, 30. 340)

**Cæsius molybdenum chloride,  $Cs_2MoCl_6 + H_2O$ .**

Sol in  $H_2O$ . Nearly insol in alcohol and ether. (Chilesotti, C. C 1903, II. 652)

**Cæsius molybdenyl chloride,  $CsCl, MoO_2Cl_2 + H_2O$**

Hygroscopic. Decomp by  $H_2O$  (Weinland and Knoll, Z. anorg. 1905, 44. 93)

$2CsCl, MoO_2Cl_2$  Hygroscopic. Decomp. by  $H_2O$  (Weinland and Knoll, Z. anorg. 1905, 44. 92.)

$2CsCl, 6MoO_2Cl_2 + 22H_2O$ . Very hygroscopic. Decomp. by  $H_2O$ . (Weinland and Knoll, Z. anorg. 1905, 44. 94.)

$2CsCl, MoOCl_3$  Only sl. sol in  $H_2O$  (Nordenskjöld, B. 1901, 34. 1573.)

**Cæsius neodymium chloride,  $Cs_3NdCl_6 + 5H_2O$**

Very hygroscopic. Easily sol in  $H_2O$  (R. J. Meyer, Z. anorg 1914, 86. 273)

**Cæsius nickel chloride,  $2CsCl, NiCl_2$**

As the corresponding Cu salt  
 $CsNiCl_3$ . Decomp by  $H_2O$  and by alcohol (Campbell, Am. J. Sci. 1894, (3) 48. 418)

**Cæsius palladium dichloride.**

See Chloropalladate, cæsius.

**Cæsius palladium tetrachloride.**

See Chloropalladate, cæsius.

**Cæsius praseodymium chloride,  $Cs_3PrCl_6 + 5H_2O$ .**

Very hygroscopic. Easily sol. in  $H_2O$ . (R. J. Meyer, Z. anorg. 1914, 86. 273.)

**Cæsius rhodium chloride.**

See Chlororhodite, cæsius.

**Cæsius ruthenium chloride.**

See Chlororuthenite, cæsius and chlororuthenate, cæsius.

**Cæsius oxyruthenium chloride,  $Cs_3RuO_2Cl_4$ .**

Ppt; decomp. by  $H_2O$ ; sol in cold  $HCl$ . (Howe, J. Am. Chem. Soc 1901, 23. 779.)

**Cæsius samarium chloride,  $Cs_3SmCl_6 + 5H_2O$ .**

Very hygroscopic. Easily sol in  $H_2O$ . (R. J. Meyer, Z. anorg 1914, 86. 273.)

**Cæsium silver chloride,  $2\text{CsCl}$ ,  $\text{AgCl}$**   
Easily decomp by  $\text{H}_2\text{O}$  (Wells and Wheeler, *Sill. Am. J.* 144. 155)

**Cæsium tellurium chloride.**  
*See* Chlorotellurate, cæsium.

**Cæsium thalic chloride,  $2\text{CsCl}$ ,  $\text{TiCl}_3$**   
By recryst. from  $\text{H}_2\text{O}$  forms  $3\text{CsCl}$ ,  $2\text{TiCl}_3$  (Pratt, *Am. J. Sci.* 1895, (3) 49. 398.)

+ $\text{H}_2\text{O}$  Readily sol in hot  $\text{H}_2\text{O}$  but  $3\text{CsCl}$ ,  $2\text{TiCl}_3$  cryst. from the solution (Pratt, *Am. J. Sci.* 1895, (3) 49. 399.)

$3\text{CsCl}$ ,  $2\text{TiCl}_3$  Can be recryst. from  $\text{H}_2\text{O}$  without change. (Pratt, *Am. J. Sci.* 1895, (3) 49. 401)

$3\text{CsCl}$ ,  $\text{TiCl}_3$  +  $2\text{H}_2\text{O}$  Sol in 36.4 pts.  $\text{H}_2\text{O}$  at  $17^\circ$  and 3 pts. at  $100^\circ$ . (Godefroy, *Zeitsch. d. allgem. oesterr. Apothekerv.* 1880. No. 9)

**Cæsium tin (stannic) chloride.**  
*See* Chlorostannate, cæsium.

**Cæsium titanium chloride,  $\text{TiCl}_3$ ,  $2\text{CsCl}$  +  $\text{H}_2\text{O}$ .**

Difficultly sol in  $\text{H}_2\text{O}$ . (Stahler, B 1904, 37. 4409)

**Cæsium tungsten chloride,  $\text{Cs}_2\text{W}_2\text{Cl}_9$**   
Nearly insol. in cold  $\text{H}_2\text{O}$ .  
Sol. in a hot mixture of equal pts  $\text{H}_2\text{O}$  and conc  $\text{HCl}$

Nearly insol. in conc  $\text{HCl}$   
Sol. in very dil.  $\text{NaOH}$  +  $\text{Aq}$   
Nearly insol. in most organic solvents. (Olsson, B. 1913, 46. 574.)

**Cæsium uranous chloride,  $\text{Cs}_2\text{UCl}_6$ .**  
As K salt. (Aloy, *Bull. Soc.* 1899, (3) 21. 264.)

**Cæsium uranyl chloride,  $2\text{CsCl}$ ,  $(\text{UO}_2)\text{Cl}_2$ .**  
Sol in  $\text{H}_2\text{O}$ . (Wells, *Z. anorg.* 1895, 10. 183)

100 pts of the solution contain at  $20.75^\circ$ , 56.07 pts.  $\text{UO}_2\text{Cl}_2$ ,  $2\text{CsCl}$ . (Rambach, B. 1904, 37. 468)

Pptd. from aq. solution by gaseous  $\text{HCl}$  (Wells, *Am. J. Sci.* 1894, (3) 50. 251.)

**Cæsium vanadium chloride,  $\text{Cs}_2\text{VdCl}_5$  +  $\text{H}_2\text{O}$ .**  
Difficultly sol. in  $\text{H}_2\text{O}$  and alcohol. (Stahler, B 1904, 37. 4412.)

**Cæsium zinc chloride,  $3\text{CsCl}$ ,  $\text{ZnCl}_2$ .**  
Sol. in  $\text{H}_2\text{O}$ . (Wells and Campbell, *Z. anorg.* 5. 275.)

$2\text{CsCl}$ ,  $\text{ZnCl}_2$ . Easily sol in  $\text{H}_2\text{O}$  and dil  $\text{HCl}$  +  $\text{Aq}$ . Insol. in conc.  $\text{HCl}$  +  $\text{Aq}$ . (Godefroy)

**Cæsium chloride chromic oxychloride,  $2\text{CsCl}$ ,  $\text{CrOCl}_3$ .**  
Decomp. in the air  
Sol in conc  $\text{HCl}$  without decomp (Wenland, B 1906, 39. 4045)

**Cæsium chloride columbium oxychloride,  $2\text{CsCl}$ ,  $\text{CbOCl}_3$ .**  
Decomp. by  $\text{H}_2\text{O}$  (Wenland, B 1906, 39. 3057)

**Cæsium chloroiodide,  $\text{CsCl}_2\text{I}$**   
Properties as  $\text{CaBiClI}$ . (Wells)  
 $\text{CsCl}_2\text{I}$  Sol. in  $\text{H}_2\text{O}$ , from which it can be recrystallized without decomp (Wells and Wheeler)

**Cæsium mercuric chloroiodide,  $\text{Cs}_2\text{HgCl}_2\text{I}_2$**   
Decomp. instantly by  $\text{H}_2\text{O}$  to  $\text{HgI}_2$  (Wells.)

**Cæsium fluoride,  $\text{CsF}$ .**  
Ppt (Chabré, C. R 1901, 132. 680.)  
+  $1\frac{1}{2}\text{H}_2\text{O}$ . 100 g.  $\text{H}_2\text{O}$  dissolve 366.5 g  $\text{CsF}$  at  $15^\circ$ . (de Forcrand, C. R 1911, 152. 1210.)

**Cæsium hydrogen fluoride,  $\text{CsHF}_2$ .**  
Ppt (Chabré, C. R 1901, 132. 680)

**Cæsium tantalum fluoride.**  
*See* Fluotantalate, cæsium.

**Cæsium tellurium fluoride,  $\text{CsF}_2\text{TeF}_6$ .**  
Decomp. by  $\text{H}_2\text{O}$  (Wells, *Am. J. Sci.* 1901, (4) 12. 190)

**Cæsium titanium fluoride.**  
*See* Fluotitanate, cæsium.

**Cæsium zirconium fluoride.**  
*See* Fluozirconate, cæsium.

**Cæsium hydride,  $\text{CsH}$**   
Decomp. by  $\text{H}_2\text{O}$  with evolution of  $\text{H}_2$  (Moissan, C. R. 1903, 136. 589)

**Cæsium hydroxide,  $\text{CsOH}$ .**  
Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . Sol. in alcohol.  
79.41%  $\text{CsOH}$  is contained in a sat. aq. solution at  $15^\circ$  (de Forcrand, C. R. 1909, 149. 1844.)

75.08%  $\text{CsOH}$  is contained in sat aq. solution at  $30^\circ$ . (Schreinemakers, C. C 1909, I 11)

**Cæsium iodide,  $\text{CsI}$ .**  
Sol in  $\text{H}_2\text{O}$   
100 pts  $\text{H}_2\text{O}$  dissolve 44 pts  $\text{CsI}$  at  $0^\circ$ ; 66.3 pts at  $14.5^\circ$ ; 160 pts. at  $61^\circ$ .  
Sp. gr of  $\text{CsI}$  +  $\text{Aq}$  sat. at  $14^\circ$  = 1.393. (Betekoff, *Bull. Soc. Pétersb.* (4) 2. 197.)

**Cæsium periodide.**

Solubility determinations show that  $\text{CsI}_2$  and  $\text{CsI}_4$  are the only periodides of cæsium existing between  $-4^\circ$  and  $+73^\circ$  (Foote, *Am. Ch. J.* 1903, 29. 203)

**Cæsium triiodide,  $\text{CsI}_3$** 

1 ccm. sat.  $\text{CsI} + \text{Aq}$  dissolves 0.0097 g.  $\text{CsI}_3$ , and sp. gr. of solution is 1.154. Only sl. decomp. by solution in  $\text{H}_2\text{O}$ . Much more sol. in alcohol than in  $\text{H}_2\text{O}$ . Not immediately decomp. by ether. (Wells, *Sill. Am. J.* 143. 17)

**Cæsium pentafluoride,  $\text{CsI}_5$** **Cæsium cobalt iodide,  $\text{Cs}_2\text{CoI}_4$** 

Decomp. by  $\text{H}_2\text{O}$  (Campbell, *Z. anorg.* 1894, 8. 12)

Deliquescent; decomp. by  $\text{H}_2\text{O}$  and by alcohol. (Campbell, *Am. J. Sci.* 1894, (3) 48. 418.)

**Cæsium lead iodide,  $\text{CsPbI}_2$** 

Sl. sol. in hot  $\text{CsI} + \text{Aq}$  (Wheeler, *Sill. Am. J.* 145. 129)

**Cæsium mercuric iodide,  $\text{CsI}, 2\text{HgI}_2$** 

Decomp. by  $\text{H}_2\text{O}$  finally into  $\text{HgI}_2$ . (Wells, *Sill. Am. J.* 144. 221)

$2\text{CsI}, 3\text{HgI}_2$ . Decomp. by  $\text{H}_2\text{O}$  finally into  $\text{HgI}_2$

$\text{CsI}, \text{HgI}_2$ . As above.

$2\text{CsI}, \text{HgI}_2$ . Decomp. by  $\text{H}_2\text{O}$ ; insol. in alcohol

$3\text{CsI}, \text{HgI}_2$ . As above

**Cæsium silver iodide,  $\text{CsI}, \text{AgI}$** 

(Penfield, *Z. anorg.* 1. 100)

$\text{CsI}, 2\text{AgI}$ . More sol. in hot than in cold acetone. (Marsh, *Chem. Soc.* 1913, 103. 782.)

**Cæsium tellurium iodide.**

See Iodotellurate, cæsium.

**Cæsium thallium iodide,  $\text{CsI}, \text{TlI}_3$** 

Decomp. by  $\text{H}_2\text{O}$ . (Pratt, *Am. J. Sci.* 1895, (3) 49. 403.)

**Cæsium zinc iodide,  $3\text{CsI}, \text{ZnI}_2$** 

Sol. in  $\text{H}_2\text{O}$ . (Wells and Campbell, *Z. anorg.* 5. 275)

$2\text{CsI}, \text{ZnI}_2$ . As above.

**Cæsium oxide,  $\text{Cs}_2\text{O}$** 

Absorbs  $\text{H}_2\text{O}$  and  $\text{CO}_2$  from the air. Decomp. by  $\text{H}_2\text{O}$  and by liquid  $\text{NH}_3$ . (Rengade, *C. R.* 1906, 143. 593.)

**Cæsium dioxide,  $\text{Cs}_2\text{O}_2$** 

Decomp. by  $\text{H}_2\text{O}$ . (Rengade, *C. R.* 1905, 140. 1537.)

**Cæsium trioxide,  $\text{Cs}_2\text{O}_3$** 

Decomp. by  $\text{H}_2\text{O}$  (Rengade, *C. R.* 1905, 140. 1537.)

**Cæsium tetroxide,  $\text{Cs}_2\text{O}_4$** 

Decomp. by  $\text{H}_2\text{O}$  (Rengade, *C. R.* 1905, 140. 1538)

**Cæsium sulphide,  $\text{Cs}_2\text{S} + 4\text{H}_2\text{O}$** 

Deliquescent, very sol. in  $\text{H}_2\text{O}$ . (Biltz, *Z. anorg.* 1906, 48. 300.)

**Cæsium disulphide,  $\text{Cs}_2\text{S}_2$** 

Anhydrous Sol. in  $\text{H}_2\text{O}$ . Hygroscopic. (Biltz, *Z. anorg.* 1906, 50. 72.)

$+\text{H}_2\text{O}$  From  $\text{Cs}_2\text{S}_2 + \text{Aq}$ . Hygroscopic. (Biltz, *Z. anorg.* 1906, 50. 72)

**Cæsium trisulphide,  $\text{Cs}_2\text{S}_3$** 

Anhydrous Sol. in  $\text{H}_2\text{O}$ . Not hygroscopic (Biltz, *Z. anorg.* 1906, 50. 75.)

$+\text{H}_2\text{O}$ . From  $\text{Cs}_2\text{S}_3 + \text{Aq}$ . (Biltz, *Z. anorg.* 1906, 50. 76.)

**Cæsium tetrasulphide,  $\text{Cs}_2\text{S}_4$** 

Sol. in  $\text{H}_2\text{O}$ . Insol. in abs. alcohol (Biltz, *Z. anorg.* 1906, 48. 305)

**Cæsium pentasulphide,  $\text{Cs}_2\text{S}_5$** 

Mpt.  $2^\circ$ . Not hygroscopic. Very sol. in cold 70% alcohol. (Biltz, *B.* 1905, 88. 120.)

**Cæsium hydrogen sulphide,  $\text{CsHS}$** 

Deliquescent, very sol. in  $\text{H}_2\text{O}$ . (Biltz, *Z. anorg.* 1906, 48. 300.)

**Cæsium copper tetrasulphide,  $\text{CsCuS}_4$** 

Sl. sol. in cold  $\text{H}_2\text{O}$ .

Decomp. by conc. and dil.  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$ .

Sl. sol. in alcohol. (Biltz, *B.* 1907, 40. 978.)

**Calcium, Ca**

Decomp.  $\text{H}_2\text{O}$  violently. Slowly attacked by cold  $\text{H}_2\text{SO}_4$ . Dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  or  $\text{HCl} + \text{Aq}$  attack violently and dissolve. Dil.  $\text{HNO}_3 + \text{Aq}$  oxidises, but fuming  $\text{HNO}_3$  scarcely attacks even on boiling. (Bunsen and Matthiessen.) Not attacked by anhydrous alcohol. (Lies-Bodart and Jobin, *A. ch.* (3) 54. 364.)

Pure Ca is only very slowly decomp. by  $\text{H}_2\text{O}$  at ordinary temp., sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ . (Moissan, *C. R.* 1898, 129. 589)

Insol. in liquid  $\text{NH}_3$ . (Gore, *Am. Ch. J.* 1898, 20. 827)

$\frac{1}{2}$  ccm. oleic acid dissolves 0.0334 g. Ca in 6 days. (Gates, *J. phys. Chem.* 1911, 15. 143.)

**Calcium amalgam,  $\text{Ca}_2\text{Hg}$** 

Decomp.  $\text{H}_2\text{O}$  readily. (Féré, *C. R.* 1898, 127. 619)

$\text{CaHg}$ . Rapidly decomp. in moist air. (Echurgen, *Z. anorg.* 1900, 25. 425.)

Calcium amide,  $\text{Ca}(\text{NH}_2)_2$ .

(Moissan, A. ch 1899, (7) 18. 326.)

Calcium ammonia,  $\text{Ca}, 4\text{NH}_3$

Decomp. at ordinary temp; takes fire in contact with the air, sl. sol in liquid  $\text{NH}_3$  (Moissan, C. R. 1898, 127. 691)

$\text{Ca}, 8\text{NH}_3$  (Kraus, J. Am. Chem. Soc 1908, 30. 665.)

Calcium arsenide,  $\text{Ca}_3\text{As}_2$ .

Decomp by cold  $\text{H}_2\text{O}$ ; insol in cold fuming  $\text{HNO}_3$ , very sol. in hot  $\text{HNO}_3$  (Lebeau, C. R. 1899, 128. 98.)

Calcium azoimide,  $\text{Ca}(\text{N}_3)_2$

Hydroscopic; explosive \*

38 l pts. sol. in 100 pts.  $\text{H}_2\text{O}$  at  $0^\circ$   
45 0 " " " 100 "  $\text{H}_2\text{O}$  " 15.2  
0 211 " " " 100 " abs alcohol " 16

Sol in  $\text{H}_2\text{O}$ , decomp when heated and on standing in the air. (Dennis, Z anorg 1898, 17. 21.)

Insol in pure ether. (Curtius, J. pr. 1898, (2) 58. 286.)

Calcium boride,  $\text{CaB}_2$

Not decomp by  $\text{H}_2\text{O}$  at  $250^\circ$ ; sol. in fused oxidizing agents.

Insol. in aq. acids, sl. sol. in conc  $\text{H}_2\text{SO}_4$ ; sol. in dil. or conc.  $\text{HNO}_3$  (Moissan, C. R. 1897, 126. 631-32)

Calcium bromide,  $\text{CaBr}_2$

Very deliquescent. 100 pts  $\text{H}_2\text{O}$  dissolve—  
at  $0^\circ$  20° 40° 60° 105°  
125 143 213 278 312 pts  $\text{CaBr}_2$   
(Kremers, Pogg. 103. 65.)

Sl. sol in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827)

Very sol. in alcohol (Henry).  
Sol in acetone. (Eidmann, C. C 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

Sol in methyl acetate. (Naumann, B. 1909, 42. 3790)

Sol. in ethyl acetate (Naumann, B. 1910, 43. 314)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370)  
+4 $\text{H}_2\text{O}$  (Kuznetsov, C. A. 1911. 842.)  
+6 $\text{H}_2\text{O}$

Calcium manganous bromide,  $\text{CaMnBr}_4 + 4\text{H}_2\text{O}$

Sl. hydroscopic Unstable. (Ephraim, Z. anorg 1910, 67. 377)

Calcium mercuric bromide.

Decomp by  $\text{H}_2\text{O}$  (v. Bonsdorff)

Calcium molybdenyl bromide,  $\text{CaBr}_2, 2\text{MoOBr}_2 + 7\text{H}_2\text{O}$ .

(Weinland and Knoll, Z. anorg. 1905, 44. 112)

Calcium stannic bromide.

See Bromostannate, calcium.

Calcium bromide ammonia,  $\text{CaBr}_2, 6\text{NH}_3$ .

Sol in  $\text{H}_2\text{O}$  (Raunmelsberg, Pogg. 55. 230)

Calcium bromide hydrazine,  $\text{CaBr}_2, 3\text{N}_2\text{H}_4$

Easily sol in  $\text{H}_2\text{O}$ . (Franzen, Z. anorg. 1908, 60. 288)

Calcium bromofluoride,  $\text{CaBr}_2, \text{CaF}_2$

Decomp by  $\text{H}_2\text{O}$ . (Defacqz, A. ch 1904, (8) 1. 357.)

Calcium carbide,  $\text{CaC}_2$

Sp. gr. 2.22 at  $18^\circ$ . Insol in fuming  $\text{HNO}_3$  and conc.  $\text{H}_2\text{SO}_4$ , but readily decomp. by dil. acids and  $\text{H}_2\text{O}$  (Moissan, Bull. Soc. 1894, (3) 11. 1005.)

Insol. in  $\text{HCl}$  in the cold, but decomp. at red heat. Strong min. acids do not act in the cold; sol. in glacial acetic in the cold; sol. in fused alkali (Venable, J. Am. Chem. Soc. 1895, 17. 307-310)

Calcium chloride,  $\text{CaCl}_2$

Very deliquescent Very sol. in  $\text{H}_2\text{O}$  with evolution of heat.

Anhydrous  $\text{CaCl}_2$  is sol in 1 459 pts  $\text{H}_2\text{O}$  (Gerlach)  
Anhydrous  $\text{CaCl}_2$  is sol in 1 58 pts  $\text{H}_2\text{O}$  at  $10.2^\circ$  (Kremers, Pogg. 103. 65.)

Anhydrous  $\text{CaCl}_2$  is sol in 1 36 pts  $\text{H}_2\text{O}$  at  $20^\circ$ , 0.83 pt  $\text{H}_2\text{O}$  at  $40^\circ$ , 0.72 pt  $\text{H}_2\text{O}$  at  $60^\circ$ .  $\text{CaCl}_2 + 6\text{H}_2\text{O}$  is sol. in 0.5 pt  $\text{H}_2\text{O}$  at  $0^\circ$ , and 2.05 pt at  $18^\circ$  (Gmelin)

$\text{CaCl}_2$  is sol. in 1.5 pts cold, and 0.8 pt boiling  $\text{H}_2\text{O}$  (Foureroy)

$\text{CaCl}_2 + \text{Aq}$  sat in the cold contains 40.7%  $\text{CaCl}_2$ . (Foureroy)

$\text{CaCl}_2 + \text{Aq}$  sat at  $12.5^\circ$  contains 53.8%  $\text{CaCl}_2$  (Hassensfratz)

100 pts  $\text{H}_2\text{O}$  dissolve 165.7 pts.  $\text{CaCl}_2 + 6\text{H}_2\text{O}$  at  $0^\circ$ ; 71.41 pts. at  $40^\circ$ . (Tilden, Chem. Soc. 45. 409.)

100 pts  $\text{H}_2\text{O}$  dissolve 60.3 pts.  $\text{CaCl}_2$  from  $\text{CaCl}_2 + 6\text{H}_2\text{O}$  at  $0^\circ$ , and solution has sp. gr. = 1.367. (Engel, Bull. Soc. (2) 47. 318.)

Solubility of  $\text{CaCl}_2 + 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at  $t^\circ$ .

(Menschutkin, Z. anorg. 1907, 54. 95.)

Insol. in benzonitrile (Naumann, B. 1914,  
47. 1370)

Insol. in ethyl acetate (Naumann, B.  
1910, 43. 314.)

Sl. sol. in anhydrous pyridine.

Sol. in 97%, 95% and 93% pyridine + Aq  
(Kahlenberg, J. Am. Chem. Soc. 1908, 30.  
1107)

100 g. sat. solution of CaCl<sub>2</sub> in sat. sugar +  
Aq at 31.25° contain 42.84 g. sugar + 25.25 g.  
CaCl<sub>2</sub>, or 100 g. H<sub>2</sub>O dissolve 135.1 g. sugar  
+ 79.9 g. CaCl<sub>2</sub> at 31.25°. (Köhler, Z. Ver.  
Zuckerind, 1907, 47. 447.)

+H<sub>2</sub>O. (Bakhuys Roozeboom.) See above.

+2H<sub>2</sub>O. (Bakhuys Roozeboom.) See above.

+4H<sub>2</sub>O. Two modifications. (Bakhuys  
Roozeboom.) See above.

$\alpha$  and  $\beta$  modifications ( $\alpha$ =stable form)  
(Kuznetsov, C. A. 1911, 842)

+6H<sub>2</sub>O. Very deliquescent. Sol. in H<sub>2</sub>O  
with absorption of much heat.

250 pts. CaCl<sub>2</sub> + 6H<sub>2</sub>O with 100 pts. H<sub>2</sub>O  
at 10.5° lower the temp. 23.2°. (Rüdorff, B.  
2. 68.)

Melts in crystal H<sub>2</sub>O at 28° (Tilden, Chem.  
Soc. 45. 409); at 30.2° (Bakhuys Roozeboom.)

Sat. solution in H<sub>2</sub>O contains at:

-22°	-17°	-5°	-5°	+4°
31.5	32.4	35.1	35.2	36.5% salt,
8°	22°	29°	35°	49°
37.9	42.1	46.1	49.0	55.1% salt,
63°	80°	104°	115°	
55.9	57.5	58.5	58.6% salt.	

(Étaud, A. ch. 1894, (7) 2. 532.)

Sat. solution of CaCl<sub>2</sub> + 6H<sub>2</sub>O contains

44.77 g.  $\text{CaCl}_2$  at  $25^\circ$ . (Schneinemakers and Figuee, Chem Weekbl. 1911, 8. 685)  
*See also above*

(Bodtke, Z. phys Ch 1897, 22. 510)

Calcium hydroxylamine chloride,  $\text{CaCl}_2$ ,  
 $3\text{NH}_2\text{OH}$ , HCl

(Antonow, J. Russ Phys Chem. Soc. 1905, 37. 479.)

Calcium iodine trichloride,  $2\text{ICl}_3$ ,  $\text{CaCl}_2 + 8\text{H}_2\text{O}$ .

Hydroscopic. (Weinland, Z anorg. 1902, 30. 142.)

Calcium mercuric chloride,  $\text{CaCl}_2$ ,  $5\text{HgCl}_2 + 8\text{H}_2\text{O}$ .

Decomp by cold  $\text{H}_2\text{O}$ , which dissolves out  $\text{CaCl}_2$ , but all dissolves on heating. (v. Bonsdorff, 1829.)

$\text{CaCl}_2$ ,  $2\text{HgCl}_2 + 6\text{H}_2\text{O}$  Deliquescent. Very sol in  $\text{H}_2\text{O}$ . (v. Bonsdorff)

$\text{CaCl}_2$ ,  $6\text{HgCl}_2 + 6\text{H}_2\text{O}$  Very deliquescent. Decomp by  $\text{H}_2\text{O}$  (Stromholm, J. pr 1902, (2) 66. 521.)

Calcium lead chloride, basic.

*See Calcium lead oxychloride.*

Calcium magnesium chloride,  $\text{CaCl}_2$ ,  $2\text{MgCl}_2 + 12\text{H}_2\text{O}$

Min *Tachhydrite*. Deliquescent 100 pts  $\text{H}_2\text{O}$  dissolve 160 3 pts at  $18.75^\circ$ . By dissolving 20 pts in 80 pts.  $\text{H}_2\text{O}$  the temp is raised  $7.75^\circ$ . (Bischof)

Calcium mercuric chloride, basic,  $\text{CaCl}_2$ ,  $2\text{HgO} + 4\text{H}_2\text{O}$ .

*See Calcium mercuric oxychloride.*

Calcium thallic chloride,  $2\text{TiCl}_3$ ,  $\text{CaCl}_2 + 6\text{H}_2\text{O}$ .

Can be cryst from  $\text{H}_2\text{O}$ . (Gewecke A. 1909, 366. 222.)

Calcium tin (stannic) chloride.

*See Chlorostannate, calcium.*

Calcium uranium chloride,  $\text{CaCl}_2$ ,  $\text{UCl}_4$

Decomp by  $\text{H}_2\text{O}$  (Aloy, Bull. Soc. 1899, (3) 21. 265)

Calcium zinc chloride.

$\text{CaZnCl}_4 + 5\frac{1}{2}\text{H}_2\text{O}$ , and  $\text{Ca}_2\text{ZnCl}_6 + 6\text{H}_2\text{O}$  Very hygroscopic (Ephraim, Z. anorg 1910, 67. 379)

Calcium chloride ammonia,  $\text{CaCl}_2$ ,  $8\text{NH}_3$

Sol in  $\text{H}_2\text{O}$  with decomp. (Faraday.)

Calcium chloride hydrazine,  $\text{CaCl}_2$ ,  $2\text{N}_2\text{H}_4$ (?)

Ppt (Franzen, Z. anorg 1908, 60. 288)

Calcium chloride hydroxylamine,  $\text{CaCl}_2$ ,  $\text{NH}_2\text{OH} + 5\text{H}_2\text{O}$

Not hygroscopic (Antonow, J. Russ. Phys Chem. Soc 1905, 37. 479.)

$\text{CaCl}_2$ ,  $2\text{NH}_2\text{OH}$

+  $\text{H}_2\text{O}$ . Aqueous solution sat. at  $20^\circ$  contains 56.6 pts salt.

+  $2\text{H}_2\text{O}$  (Antonow, l. c)

$2\text{CaCl}_2$ ,  $3\text{NH}_2\text{OH} + 6\text{H}_2\text{O}$ . (Antonow, l. c.)

$2\text{CaCl}_2$ ,  $5\text{NH}_2\text{OH} + 4\text{H}_2\text{O}$  (Antonow, l. c.)

Calcium chloride lead oxide,  $\text{CaCl}_2$ ,  $3\text{PbO} + 3\text{H}_2\text{O}$ .

*See Calcium lead oxychloride.*

Calcium chloroferrite,  $\text{CaO}$ ,  $\text{CaCl}_2$ ,  $\text{Fe}_2\text{O}_3$

Insol in  $\text{H}_2\text{O}$  (le Chatelier, C. R. 99. 276.)

Calcium chlorofluoride,  $\text{CaF}_2$ ,  $\text{CaCl}_2$

Decomp. by  $\text{H}_2\text{O}$ , by very dil. HCl,  $\text{HNO}_3$  or acetic acid, by hot dil or conc.  $\text{H}_2\text{SO}_4$ . Sol. in conc. HCl or  $\text{HNO}_3$ . Insol. in, and not decomp by cold or boiling alcohol. (Defacqz, A. ch. 1904, (8) 1. 355)

Calcium cyanamide, basic,  $\text{CN}_2(\text{CaOH})_2 + 6\text{H}_2\text{O}$

Sl. sol. in  $\text{H}_2\text{O}$ . (Meyer, J. pr 1878, (2) 18. 425)

Calcium cyanamide,  $\text{CaCN}_2$

Decomp. by  $\text{H}_2\text{O}$ . (Meyer, J. pr 1878, (2) 18. 425.)

Calcium subfluoride,  $\text{CaF}$ .

Decomp. by  $\text{H}_2\text{O}$ .

Sol. in hot dil. HCl and somewhat sol. in dil. acetic acid.

Somewhat sol. in boiling absolute alcohol. (Wohler, Z. anorg. 1909, 61. 81)

Calcium fluoride,  $\text{CaF}_2$

Sol in 26,923 pts  $\text{H}_2\text{O}$  at  $15.5^\circ$  (Wilson, Ch. Gaz 1860. 366)

1 l.  $\text{H}_2\text{O}$  dissolves 16 mg.  $\text{CaF}_2$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 60. 356.)

16.3 mg in 1 l. of sat. solution at  $18^\circ$ . (Kohlrausch, Z. phys Ch. 1908, 64. 168)

When pptd. not completely insol in  $H_2O$ ; scarcely sol in dil., more sol. in conc.  $HCl + Aq$ , decomp. by conc.  $H_2SO_4$ , not decomp. by dil. alkaline solutions. (Fresenius)

Not decomp. by conc.  $H_2SO_4$  below  $40^\circ$ , but forms a transparent syrup.  $CaF_2$  is pptd. from this solution by addition of  $H_2O$ .

Sol. in conc.  $HCl$ , and  $HNO_3 + Aq$  in the same way, but the liquid is not viscid. Very sl. sol. in  $HF$ . Boiling  $HCl + Aq$  dissolves slightly. Decomp. by boiling  $HNO_3 + Aq$ . Sol. in  $NH_4$  salts +  $Aq$ . (Rose.)

Partly decomp. by boiling  $K_2CO_3$ , and  $Na_2CO_3 + Aq$ . (Dulong, A. ch. 82. 278.)

Insol. in liquid  $HF$ . (Franklin, Z. anorg. 1905, 46. 2)

Insol. in acetone (Naumann, B. 1904, 37. 4329)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate (Naumann, B. 1910, 43. 314.)

Min. Fluoride (*Fluorspar*). Calculated from electrical conductivity of  $CaF_2 + Aq$ , 11  $H_2O$  dissolves 14 mg  $CaF_2$  at  $18^\circ$ . (Kohl- tausch and Rose, Z. phys. Ch. 12. 241)

Calcium hydrogen fluoride,  $CaH_2F_4 + 6H_2O$

Decomp. by boiling  $H_2O$ . Sol. in  $HF + Aq$ . (Fremy, A. ch. (3) 47. 35)

Calcium tantalum fluoride.

See Fluotantalate, calcium.

Calcium stannic fluoride.

See Fluostannate, calcium.

Calcium titanium fluoride.

See Fluotitanate, calcium.

Calcium fluoiodide,  $CaF_2 \cdot CaI_2$ .

Very deliquescent. Decomp. by cold  $H_2O$ , more rapidly by hot  $H_2O$ , by dil.  $HCl$ ,  $HNO_3$ ,  $H_2SO_4$ , conc.  $H_2SO_4$ , and by alcohol and by ether if these reagents are not absolute. (De- faeqz, A. ch. 1904, (8) 1. 358)

Calcium hydride,  $CaH_2$ .

Decomp. by  $HCl + Aq$  (Winkler, B. 24. 1975. (Moldenhauer, Z. anorg. 1913, 82. 136)

$CaH_2$ . Readily decomp. by  $H_2O$  and dil. acids, almost insol. in conc. acids. Insol. in benzene, turpentine and alkyl haloids. (Mois- san, C. R. 1898, 127. 30-31.)

Decomp.  $H_2O$  and ether, sol. in dil.  $H_2SO_4$  and  $HNO_3$ ; almost insol. in conc.  $H_2SO_4$  and  $HNO_3$ . (von Lengyl, C. C. 1898, II. 262.)

Insol. in  $CCl_4$ ,  $CS_2$ , alcohols and ethers. No known solvent. (Moissan, C. C. 1903, I. 563.)

Calcium hydrosulphide,  $CaS_2H_2$

Cryst. with  $6H_2O$ . Extremely sol. in  $H_2O$  and alcohol.  $\frac{1}{4}$  of its weight of  $H_2O$  at or-

dinary temp. more than suffices to hold it in solution (Divers and Shmidzu, Chem. Soc. 45. 271.)

Sp. gr. of aqueous solution containing 32% anhydrous  $CaS_2H_2$  (64%  $CaS_2H_2 + 6H_2O$ ) = 1.255; 37.5%  $CaS_2H_2$  (75.5%  $CaS_2H_2 + 6H_2O$ ) = 1.310. (Divers and Shmidzu.)

Calcium hydroxide,  $CaO \cdot H_2O$ .

See also Calcium oxide.

Sl. sol. in cold, and less in hot  $H_2O$ .

1 pt.  $CaO$  dissolves at  $t^\circ$  in pts.  $H_2O$

## Solubility of CaO in KCl and NaCl + Aq.

Curves are given which show that the solubility of lime in solutions of either NaCl or

KCl is a maximum for all temps. when the solution contains about 60 g of salt per l. It is a minimum at any fixed temp when the solution is sat., the solubility then being much less than in pure  $\text{H}_2\text{O}$  of the same temp. A solution of NaCl dissolves more lime at all temps. and concentrations than a corresponding solution of KCl. In all cases the maximum solubility of lime occurs when the temp is lowest. With solutions of all concentrations the solubility decreases regularly as the temp. increases (Cabot, J Soc Chem Ind. 1897, 16, 417-419.)

Solubility in KCl + Aq increases with increased quantities of KCl and then diminishes, becoming less than the solubility in  $\text{H}_2\text{O}$  alone (Kernot, Gazz. ch. it 1908, 38, (1) 532.)

KOH or NaOH + Aq containing 1 pt. KOH or NaOH in 100 pts.  $\text{H}_2\text{O}$  do not dissolve more than  $\frac{1}{10000}$  pt  $\text{CaO}_2\text{H}_2$ , but it is sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Pelouze, A ch (3) 83. 11.)

## Solubility in NaOH + Aq at t°.

2 00	0 186	8.5	91.5
1 00	0.165	14.2	85.8

(Berthelot, A. ch. (3) 46. 176.)

1000 g  $\text{H}_2\text{O}$  dissolve 1.251 g.  $\text{CaO}$ , 1000 g.  $\text{H}_2\text{O} + 50$  g glycerine dissolve 1.865 g.  $\text{CaO}$ ; 1000 g  $\text{H}_2\text{O} + 100$  g. glycerine dissolve 2.583 g  $\text{CaO}$ ; 1000 g.  $\text{H}_2\text{O} + 200$  g. glycerine dissolve 4.040 g.  $\text{CaO}$ , 1000 g  $\text{H}_2\text{O} + 400$  g glycerine dissolve 6.569 g.  $\text{CaO}$  (Carles, Arch Pharm (3) 4. 558.)

Insol in pure glycerine.

Solubility of  $\text{CaO}_2\text{H}_2$  in glycerine + Aq at  $25^\circ$ .  
G = g glycerine in 100 g. glycerine + Aq.  
 $\frac{1}{2}\text{Ca}(\text{OH})_2$  = millimols sol in 100 cc. glycerine + Aq.

G	$\frac{1}{2}\text{Ca}(\text{OH})_2$	Sp. gr
0	4 3	1 0003
7 15	8 13	1 0244
20 44	14 9	1.0537
31 55	22 5	1 0842
40 95	40 1	1 1137
48 7	44 0	1 1356
69 2	95 8	1 2027

(Herz and Knoch, Z. anorg. 1905, 46. 193.)

Solubility in glycerine + Aq at  $25^\circ$ 

Solution contains			Sp gr
% $\text{Ca}(\text{OH})_2$	% glycerine	% $\text{H}_2\text{O}$	
0 117	0	.	
0 178	3 50	96 32	1 008
0 413	15 59	80 28	
0 48	17 84	81 68	1 042
0 88	34 32	64 80	1 088
1 34	55 04	43 62	1 149

Solid phase in this system is  $\text{CaO}_2\text{H}_2$ .  
(Cameron and Patten, J phys. Chem. 1911, 15. 71)

100 pts sugar dissolved in  $\text{H}_2\text{O}$  dissolve 55.6 pts  $\text{CaO}$  (Osann), 50 pts  $\text{CaO}$  (Urn), 49.6 pts  $\text{CaO}$  (Daniell), 29-30 pts  $\text{CaO}$  (Huntton), 23 pts  $\text{CaO}$  (Seubert)

Sugar solution at  $100^\circ$  takes up  $\frac{1}{4}$  mol  $\text{CaO}$  for each mol sugar; at  $0^\circ$ , if it contains not less than 25% of sugar, it takes up 2 mol  $\text{CaO}$  to 1 mol sugar (Dunbrunfaut)

Amount dissolved is proportional to the density and temperature of the solutions

Solubility of  $\text{CaO}$  in sugar + Aq

Pts sugar dissolved in 100 pts $\text{H}_2\text{O}$	Relation of $\text{CaO}$ to sugar	
	$\text{CaO}$	Sugar
40	21.0	79.8
37.5	20.8	79.2

35 40 45 50 55 60%  $\text{CaI}_2$ .  
1.398 1.477 1.567 1.665 1.78 1.91  
(Kremers, calculated by Gerlach, Z anal. 8. 285.)

Sol in absolute alcohol. (Gay-Lussac, A ch. 91. 57.)

Sol in acetone. (Naumann, B 1904, 37.

4328, Erdmann, C C 1899, II. 1014.)

Sol in ethyl acetate (Naumann, B. 1910, 43. 314.)

+4 $\text{H}_2\text{O}$ . (Kuznetsov, C A 1911. 842.)

+6 $\text{H}_2\text{O}$ . Sat aq. solution contains at

−23° +7° 10° 19°  
61.0 65.0 65.1 66.3% salt

51° 64° 130° 248°  
69.4 75.0 81.3 87.1% salt

(Etard, A. ch. 1894, (7) 2. 543.)

+7 $\text{H}_2\text{O}$ . (Kuznetsov.)

Calcium periodide,  $\text{CaI}_4 + 15\text{H}_2\text{O}$

(Mosner, A. ch. 1897, (7) 12. 401.)

$\text{CaI}_4$ . (Herz and Bulla, Z. anorg. 1911, 71. 255.)

Calcium mercuric iodide,  $\text{CaI}_2 \cdot \text{HgI}_2 + 8\text{H}_2\text{O}$ .

Very deliquescent. Sol. in  $\text{H}_2\text{O}$ , alcohols, allyl iodide, aldehyde, acetic acid, ethyl oxalate and aniline. Sl. sol in nitrobenzene. Completely insol. in  $\text{CHCl}_3$ ,  $\text{CCl}_4$ , ethyl iodide, ethylene bromide,  $\text{C}_6\text{H}_6$ , monochlorobenzene and toluene. (Dubouin, C R. 1906, 142. 573.)

= 3 $\text{CaI}_2$ , 4 $\text{HgI}_2 + 24\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  with pptn. of red  $\text{HgI}_2$ .

Very sol in alcohols, glycerine, ethyl acetate, methyl and isobutyl propionate, allyl iodide, aldehyde, acetone, aniline and ethyl oxalate. Insol or sl. sol in nitrobenzene. Insol in  $\text{CHCl}_3$ ,  $\text{C}_6\text{H}_6$ , ethyl iodide, monochlorobenzene, etc. (Dubouin, C R. 1906, 142. 397.)

$\text{CaI}_2$ , 2 $\text{HgI}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . (Boullay)

$\text{CaI}_2$ , 5 $\text{HgI}_2 + 8\text{H}_2\text{O}$ . Decomp by  $\text{H}_2\text{O}$ ,

alcohols, glycerine, aldehyde, and acetic acid, slowly by nitrobenzene and ethyl oxalate. Insol in monochlorobenzene, toluene,  $\text{CHCl}_3$  and ethylene bromide (Dubouin, l. c.)

Calcium silver iodide,  $\text{CdI}_2$ , 2 $\text{AgI} + 6\text{H}_2\text{O}$

Immediately decomp by  $\text{H}_2\text{O}$  (Simpson, Roy Soc Proc 27. 120.)

Calcium zinc iodide,  $\text{CaI}_2$ ,  $\text{ZnI}_2 + 8\text{H}_2\text{O}$

Very hygroscopic. (Ephraim, Z anorg. 1910, 67. 384.)

Calcium iodide ammonia,  $\text{CaI}_2 \cdot 6\text{NH}_3$

(Isambert, C. R. 66. 1259.)

Calcium nitride,  $\text{Ca}_3\text{N}_2$

Sol. in dil acids; insol in conc. (water free) acids (Moussan, C. R. 1898, 127. 499.)

Calcium oxide,  $\text{CaO}$ .

Decomp. by  $\text{H}_2\text{O}$ , with evolution of much heat, to form  $\text{CaO}_2 \cdot \text{H}_2$ , which see for solubility in  $\text{H}_2\text{C}$ , etc.

Calcium peroxide,  $\text{CaO}_2$

Very sl. sol. in  $\text{H}_2\text{O}$ , easily sol. in acids, and  $\text{NH}_4$  salts +  $\text{Aq}$  Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Conroy, Chem. Soc (2) 11, 808.)

+2 $\text{H}_2\text{O}$ . True composition is  $\text{CaO}_2 \cdot \text{H}_2 + \text{H}_2\text{O}_2$ . (de Forcrand, C. R. 1900, 130. 1390.)  
+8 $\text{H}_2\text{O}$ . Efflorescent. Difficultly sol. in  $\text{H}_2\text{O}$  with gradual decomp. Insol in alcohol or ether (Gay-Lussac and Thénard, A ch (2) 8. 313.)

Calcium oxybromide,  $3\text{CaO}$ ,  $\text{CaBr}_2 + 16\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol. Very easily sol. in hydracids and dil.  $\text{HNO}_3$ . (Tassilly, C. R. 1894, 119. 372.)

Calcium oxychloride,  $\text{Ca}_2\text{O}_2\text{Cl}_2 + 15\text{H}_2\text{O} = 3\text{CaO}$ ,  $\text{CaCl}_2 + 15\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  or alcohol. (Rose) Formula is  $\text{Ca}_2\text{HO}_2\text{Cl} + 7\text{H}_2\text{O}$ . (Grimshaw, C N. 30. 280.)

+16 $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  into  $\text{CaO}_2 \cdot \text{H}_2$  and  $\text{CaCl}_2$  until a maximum of 85 g.  $\text{CaCl}_2$  are dissolved per litre. (Ditte, C. R. 91. 576.)

4 $\text{CaO}$ ,  $\text{CaCl}_2 + 14\text{H}_2\text{O}$  (Schreinemakers and Fige, Chem. Weekbl. 1911, 8. 685.)  
 $\text{CaO}$ ,  $\text{CaCl}_2$ . (Schreinemakers and Fige)

Calcium lead oxychloride,  $\text{CaCl}_2$ ,  $\text{CaO}$ , 2 $\text{PbO} + 4\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  with decomp (André, C. R. 104. 359.)

$\text{CaCl}_2$ , 3 $\text{PbO} + 3\text{H}_2\text{O}$ . (André.)

Calcium mercuric oxychloride,  $\text{CaCl}_2$ , 2 $\text{HgO} + 4\text{H}_2\text{O}$

Decomp. immediately by  $\text{H}_2\text{O}$ . (Klinger, B 16. 997.)

Calcium oxydide,  $3\text{CaO}$ ,  $\text{CaI}_2 + 16\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ , alcohol, and acids. Sol. in hydrochloric acid and in very dil.  $\text{HNO}_3$ . (Tassily, C. R. 1894, 119. 372.)

Calcium oxysulphide,  $\text{Ca}_4\text{O}_2\text{S}_4 + 12\text{H}_2\text{O} = 3\text{CaO}$ ,  $\text{CaS}_4 + 12\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Not acted on by absolute alcohol. (Schone, Pogg. 117. 77.)

According to Geuther (A. 224. 178) =  $\text{CaS}_8$ ,  $2\text{CaO} + 10$ , or  $11\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl} + \text{Aq}$  with separation of S.

$\text{Ca}_4\text{O}_2\text{S}_4 + 18\text{H}_2\text{O} = 4\text{CaO}$ ,  $\text{CaS}_4 + 18\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ , but not acted on by absolute alcohol. (Schone, Pogg. 117. 82.)

According to Geuther (A. 224. 178) =  $\text{CaS}_8$ ,  $3\text{CaO} + 14$ , or  $15\text{H}_2\text{O}$ .

$\text{Ca}_4\text{O}_2\text{S}_8 + 20\text{H}_2\text{O} = 5\text{CaO}$ ,  $\text{CaS}_8 + 20\text{H}_2\text{O}$  (Rose, Pogg. 55. 433.)

Sol. in 400 pts. cold, decomp. by boiling  $\text{H}_2\text{O}$  (Buchner), sl. sol. in cold, much more in hot  $\text{H}_2\text{O}$ , but it is not deposited on cooling. Aqueous solution sat. at  $6^\circ\text{--}7^\circ 2'$  has sp. gr. = 1.0105 (Herschel); sol. in alcohol (Gay-Lussac); insol. in alcohol (Gmelin).

Calcium phosphide,  $\text{CaP}$ .

Deliquescent. Decomp. in moist air or with  $\text{H}_2\text{O}$ . Not attacked by conc.  $\text{HNO}_3$ , but decomp. by dil.  $\text{HNO}_3 + \text{Aq}$  (Thénard, A. ch. (3) 14. 14.)

$\text{Ca}_2\text{P}_2$ . Crystallized.

Decomp. by  $\text{H}_2\text{O}$ .

Not attacked by conc.  $\text{H}_2\text{SO}_4$ . Violently attacked by dil.  $\text{H}_2\text{SO}_4$ .

Not attacked by abs. alcohol, ether, benzene or oil of turpentine (Moissan, C. R. 1899, 128. 792.)

$\text{Ca}_2\text{P}_2$ . Insol. in liquid  $\text{CO}_2$ . (Buchner, Z. phys. Ch. 1906, 54. 674.)

Calcium selenide,  $\text{CaSe}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Very easily decomp. (Fabre, C. R. 102. 1469.)

Calcium silicide,  $\text{CaSi}_2$ .

Slowly decomp. by  $\text{H}_2\text{O}$ , sol. in conc.  $\text{H}_2\text{SO}_4$  and dil.  $\text{HNO}_3$  with evolution of  $\text{H}_2$ . With conc.  $\text{HCl}$  it gives  $\text{H}_2$ , Si and silicon hydride; with dil.  $\text{HCl}$ ,  $\text{H}_2$  and a yellow substance. Sol. in alkali +  $\text{Aq}$  or  $\text{NH}_3 + \text{Aq}$  with evolution of  $\text{H}_2$  (Moissan, C. R. 1902, 134. 505.)

Two modifications:

(a) Only sl. sol. in  $\text{HNO}_3$ ; decomp.  $\text{H}_2\text{O}$  to give an insol. ppt. on addition of  $\text{HCl}$ .

(b) Easily sol. in  $\text{HNO}_3$  and acetic acid; decomp.  $\text{HCl}$  to give a ppt. which is sol. in  $\text{KOH} + \text{Aq}$ . (de Chalmot, Am. Ch. J. 1896, 18. 320.)

$\text{Ca}_2\text{Si}_2$ . Slowly decomp. by  $\text{H}_2\text{O}$ , rapidly by dil. acetic acid or by  $\text{H}_2\text{SO}_4 + \text{Aq}$  without evolution of spontaneously inflammable gas. (Hönigschmid, M. 1909, 30. 497.)

Decomp. by dil. min. acids, with evolution

of spontaneously inflammable gas. (Hackspill, Bull. Soc. 1908, (4) 3. 619.)

$\text{Ca}_2\text{Si}_2$ . Insol. in all solvents. Decomp. by boiling  $\text{H}_2\text{O}$ , by conc.  $\text{HCl}$  and by acetic acid. Sol. in dil. alkali and alkali carbonates +  $\text{Aq}$ . Hardly attacked by conc.  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3$ . (Kolb, Z. anorg. 1909, 64. 349.)

$\text{Ca}_{11}\text{Si}_{10}$ . Easily decomp. by boiling with  $\text{H}_2\text{O}$ . Decomp. by dil. acetic acid, dil. or conc.  $\text{HCl}$ . (Kolb, Z. anorg. 1909, 64. 349 and 356.)

Calcium silicotrinitride,  $\text{CaSi}_2\text{N}_3$ .

(Kolb, Z. anorg. 1909, 64. 363.)

$\text{Ca}_2\text{Si}_2\text{N}_4$ . Slowly decomp. by boiling with  $\text{H}_2\text{O}$ , somewhat more rapidly with dil.  $\text{NaOH} + \text{Aq}$ . Slowly decomp. by conc.  $\text{HCl}$  (Kolb, l. c.)

$\text{Ca}_{11}\text{Si}_{10}\text{N}_{14}$ . Completely decomp. by  $\text{HCl}$ . (Kolb, l. c.)

Calcium sulphide,  $\text{CaS}$ .

500 pts.  $\text{H}_2\text{O}$  dissolve 1 pt.  $\text{CaS}$  completely, less  $\text{H}_2\text{O}$  dissolves out  $\text{CaS}_2\text{H}_2$  and leaves  $\text{CaO}_2\text{H}_2$ . Very much  $\text{H}_2\text{O}$  decomposes completely into  $\text{CaO}_2\text{H}_2$  and  $\text{H}_2\text{S}$ . (Béchamp, A. ch. (4) 16. 222.)

Not decomp. by  $\text{H}_2\text{O}$ , and only sl. sol. therein at ordinary temp. (Pelouze.)

After 48 hours contact with  $\text{CaS}$ , 1 l.  $\text{H}_2\text{O}$  contains at

$10^\circ$	$18^\circ$	$40^\circ$	$60^\circ$	$90^\circ$
0.15	0.23	0.30	0.48	0.83 g. $\text{CaS}$ .

After boiling for 2 hours, 0.27 g.  $\text{CaS}$  is dissolved, addition of  $\text{NaCl}$  diminishes solubility, but  $\text{Na}_2\text{SO}_4$  increases it. Lime-water dissolves at  $14^\circ$  0.18 g.  $\text{CaS}$ , the same amount which  $\text{H}_2\text{O}$  dissolves at  $60^\circ$ . Milk of lime dissolves 0.55 g. at  $60^\circ$ .  $\text{H}_2\text{O}$  containing 3 to 79 g.  $\text{Na}_2\text{O}$  per litre dissolves only traces of  $\text{CaS}$  at  $10^\circ$ , but at  $40\text{--}60^\circ$ , or by boiling, a large amount of  $\text{Na}_2\text{S}$  is formed. (Kolb, A. ch. (4) 7. 126.)

Sol. in 12,500 pts.  $\text{H}_2\text{O}$  at  $12.6^\circ$  (Scheurer-Kestner, Répert. chim. appl. 1882. 331.)

Sat.  $\text{Na}_2\text{CO}_3 + \text{Aq}$  has scarcely any action on  $\text{CaS}$ , but a dilute solution has more action. (Kolb.)

Sol. in  $\text{H}_2\text{O}$  and sulphur, forming  $\text{CaS}_4$ .

Insol. in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate (Naumann, B. 1904, 37. 3601.)

Insol. in methylal. (Eidmann, C. C. 1899, II. 1014.)

Sol. in 10 pts. glycine (Cap and Garot, J. Pharm. (3) 26. 81.)

Sol. in sugar +  $\text{Aq}$  (Stolle, C. C. 1900, I. 1044.)

Calcium tetrakisulphide,  $\text{CaS}_4$ .

Known only in solution.

**Calcium pentasulphide,  $\text{CaS}_5$ .**

Sol in  $\text{H}_2\text{O}$  and alcohol. (Berzelius)  
 Exists only in aqueous solution (Schöne,  
 Pogg 117 73.)

**Calcium hydroxyl sulphide,  $\text{Ca}(\text{OH})\text{SH} + 3\text{H}_2\text{O}$ .**

Easily sol in  $\text{H}_2\text{O}$  with immediate decomp  
 and separation of  $\text{Ca}(\text{OH})_2$ . Insol in alcohol,  
 but slowly decomp thereby (Divers and  
 Shmidt, Chem. Soc 45 270)

**Calcium stannic sulphide.**

See Sulphostannate, calcium.

**Calomel.**

See Mercurous chloride.

**Carbamic acid.****Ammonium carbamate acid carbonate (commercial carbonate of ammonia)**

See Carbonate carbamate, ammonium hydro-

gen.  
 (salts of hartshorn),  $2\text{NH}_4\text{HCO}_3$ ,  
 $\text{NH}_4\text{CONH}_2$ .

See Carbonate carbamate, ammonium hydro-

**Carbazote silicon,  $\text{C}_3\text{SiN}$ .**

Insol. in acids, even HF; also in boiling  
 $\text{KOH} + \text{Aq}$  (Schutzenberger and Colson,  
 C R. 92 1508.)

**Carbon, C.**

Insol. in all solvents.

Diamond is unacted upon by  $\text{KClO}_3 + \text{fum.}$   
 $\text{HNO}_3$ , graphite forms graphitic acid by  
 $\text{KClO}_3 + \text{fum. HNO}_3$ ; amorphous carbon is  
 sol. in  $\text{KClO}_3 + \text{fum. HNO}_3$  (Berthelot, A.  
 ch. (4) 19. 399.)

Diamond is sol in molten iron at  $1160^\circ$   
 Amorphous carbon is insol. in molten iron at  
 $1160^\circ$ , but becomes sol. therein by heating to  
 $1400^\circ$  (Hempel, B. 18. 998)

Insol in liquid  $\text{CO}_2$ . (Buehner, Z. phys.  
 Ch. 1906, 54. 674.)

Charcoal is insol in liquid  $\text{NH}_3$ . (Gore,  
 Am Ch J 1898, 20. 830.)

The quantity of carbon dissolved by iron  
 diminishes by increasing phosphorus, falling  
 by about 0.5% for each additional 2.0% of  
 phosphorus (Fettweis, Metallurgie, 1906,  
 3. 60.)

Solubility in iron is reduced by the presence  
 of tin and of sulphur. (Wüst, Metallurgie,  
 1906, 3. 169.)

The solubility of C in iron is increased by  
 the presence of chromium, 9.2% C dissolved  
 when 62% Cr is present in the mixture.  
 (Goerens, Metallurgie, 1907, 4. 18.)

**Carbon boride,  $\text{CB}_2$ .**

Insol. in boiling  $\text{HNO}_3 + \text{Aq}$ . (Joly, C R  
 97. 456)

**Carbon suboxide,  $\text{C}_3\text{O}_2$ .**

B.-pt  $+7^\circ$  at 761 mm  
 Sol in  $\text{H}_2\text{O}$  with formation of malonic acid.  
 Slowly decomp on standing in a sealed  
 tube (Dübs, B. 1906, 39. 606)

**Carbon monoxide, CO**

Sol in 50 vols recently boiled  $\text{H}_2\text{O}$ . (Davy)  
 Sol in 16 vols  $\text{H}_2\text{O}$  (de Saussure)  
 Sol in 27 vols  $\text{H}_2\text{O}$  (Dalton)  
 100 vols  $\text{H}_2\text{O}$  dissolve 0.2 vols CO at  $18^\circ$ . (de Saussure)

Solubility of CO in  $\text{H}_2\text{O}$ : 1 vol  $\text{H}_2\text{O}$  at  $t^\circ$  dis-  
 solves V vols. CO reduced to  $0^\circ$  and 760 mm.

6	0.02857	13	0.02504	20	0.02312

(Bunsen's Gasometry, pp. 287, 128, 146)

Coefficient of absorption = 0.032874—  
 $0.00081632t + 0.000016421t^2$ . (Bunsen and  
 Pauli, A. 93. 16.)

**Solubility of CO in  $\text{H}_2\text{O}$ .**

$\beta$  = Vol CO absorbed by 1 vol  $\text{H}_2\text{O}$  at a  
 partial pressure of 760 mm

$\beta^1$  = Vol. CO (reduced to  $0^\circ$  and 760 mm)  
 absorbed by 1 vol. of  $\text{H}_2\text{O}$  under a total pres-  
 sure of 760 mm

$q$  = g. CO dissolved by 100 g.  $\text{H}_2\text{O}$  at a  
 total pressure of 760 mm.

(Cassuto, Phys. Zeit. 1904, 5. 236.)

Coefficient of absorption of CO in H<sub>2</sub>O at 25° equals 0.0154. (Findlay and Creighton, Biochem. J. 1911, 5. 294.)

Cuprous chloride in an hydrochloric acid or ammoniacal solution, and ammoniacal solutions of cuprous salts absorb large amounts of CO. (Leblanc, C. R. 30. 488.)

Cuprous chloride dissolved in HCl + Aq absorbs 15-20 vols CO. (Berthelot, A. ch. (3) 51. 66.)

Absorbed by KOH, NaOH, Ba(OH)<sub>2</sub>, and Ca(OH)<sub>2</sub> + Aq, more readily by ether, alcohol, and wood spirit, with formation of formic acid (Berthelot, A. ch. (3) 61. 463.)

Sol. in HCN. (Böttger, B. 10. 1122.)  
1 vol alcohol absorbs 0.20443 vols CO gas at all temperatures between 0° and 25° (Carius, A. 94. 135.)

100 vols. alcohol (0.84 sp. gr.) dissolve 14.5 vols. CO at 18°, 100 vols rectified naphtha (0.784 sp. gr.), 20.0 vols CO at 18°, 100 vols oil of lavender (0.88 sp. gr.), 15.6 vols CO at 18°, 100 vols olive oil (0.915 sp. gr.), 14.2 vols CO at 18°, 100 vols sat KCl + Aq (1.168 sp. gr.), 5.2 vols CO at 18° (de Saussure, 1814.)

1 vol. oil of turpentine absorbs 0.16-0.20 vol. CO (de Saussure.)

Sol in ether. (Regnault.)

Insol. in caoutchouc

Coefficient of absorption for petroleum = 0.123 at 20°, and 0.134 at 10°. (Gniwiasz and Walisz, Zeit. phys. Ch. 1. 70.)

Carbon dioxide, CO<sub>2</sub>.

## Gas.—

H<sub>2</sub>O dissolves about its own vol. CO<sub>2</sub> at the ordinary temperature (the solution obtained being of 1.0018 sp. gr.) and pressure, and an additional vol. for the pressure of each additional atmosphere to which it is subjected.

The power of H<sub>2</sub>O to absorb CO<sub>2</sub> does not increase in precisely the same ratio as the pressure. (Soubeiran.) 5 vols. CO<sub>2</sub> dissolve in 1 vol. H<sub>2</sub>O at 7 atmos. pressure, and much greater pressure is necessary in order to increase the amount of gas dissolved, but up to 4 or 5 atmospheres the amount of gas dissolved is very nearly proportional to the pressure. (Courbe, J. Pharm. 26. 121.)

100 vols. H<sub>2</sub>O at 12.75° absorb 118 vols. CO<sub>2</sub> (Cavendish), at 29.44°, 84 vols. CO<sub>2</sub> (Henry); at 15.66°, 106 vols. CO<sub>2</sub> (Saunders), at 15.66°, 108 vols. CO<sub>2</sub> (Henry); at 15.66°, 100 vols. CO<sub>2</sub> (Dalton).

100 vols. H<sub>2</sub>O at t° C. absorb V vols. of CO<sub>2</sub> gas reduced to 0° F. and 30 in. pressure

(Rogers, Am. J. Sci. (2) 6. 107.)

1 vol. H<sub>2</sub>O at 5° abs. ; 1 vol. CO<sub>2</sub> at 10° scarcely 1 temp. CO<sub>2</sub> + Aq sat. at 2° has 16 CO<sub>2</sub> escapes upon exposing the solution to the air, the more quickly the higher the temperature. But as CO<sub>2</sub> diminishes, the remainder is more obstinately held, so that boiling for ½ hour is necessary to expel it completely. (Borgman.)

Solubility of CO<sub>2</sub> in H<sub>2</sub>O. 1 vol. H<sub>2</sub>O at t° and 760 mm. dissolves V vols. CO<sub>2</sub> gas reduced to 0° and 760 mm.

Sl. sol. in HCl + Aq.

100 vols H<sub>2</sub>SO<sub>4</sub> of 1.840 sp. gr. absorb 45 vols CO<sub>2</sub> (de Saussure)

H<sub>2</sub>SO<sub>4</sub> of ordinary density at 15.50° and common pressure absorbs 94% of its vol. of CO<sub>2</sub>, fuming H<sub>2</sub>SO<sub>4</sub>, 125%; the absorption for pure H<sub>2</sub>O under the same conditions being 68% (Rogers, Am. J. Sci. (2) 6, 115)

H<sub>2</sub>SO<sub>4</sub> absorbs 7-10% CO<sub>2</sub>. (Hasiwetz, W. A. B. 20, 193.)

Coefficient of absorption by conc. H<sub>2</sub>SO<sub>4</sub> = 0.932, which is the same as that by H<sub>2</sub>O; but this diminishes on diluting, and is at its lowest limit 0.666, when the composition of the solution is H<sub>2</sub>SO<sub>4</sub>, H<sub>2</sub>O; upon further dilution the coefficient of solubility gradually increases, and when 58 H<sub>2</sub>O are present to 1 H<sub>2</sub>SO<sub>4</sub>, the

coefficient of absorption is 0.857 (Set-schenow, J. B. 1876, 46.)

Absorption of CO<sub>2</sub> by H<sub>2</sub>SO<sub>4</sub> + Aq.

Sat. K <sub>2</sub> Al <sub>2</sub> (SO <sub>4</sub> ) <sub>3</sub> + Aq (containing 9.14% of K <sub>2</sub> Al <sub>2</sub> (SO <sub>4</sub> ) <sub>3</sub> + 24H <sub>2</sub> O)	1.047	70
Sat. KNO <sub>3</sub> + Aq (containing 20.6% of KNO <sub>3</sub> )	1.139	57
Sat. NaNO <sub>3</sub> + Aq (containing 20.4% of NaNO <sub>3</sub> )	1.206	45
Sat. H <sub>2</sub> C <sub>2</sub> H <sub>3</sub> O <sub>6</sub> + Aq (containing 53.37% of H <sub>2</sub> C <sub>2</sub> H <sub>3</sub> O <sub>6</sub> )	1.288	41

About half as sol. in NaCl + Aq (15% NaCl) as in H<sub>2</sub>O

Much more sol. in Na<sub>2</sub>HPO<sub>4</sub> + Aq or Na<sub>2</sub>CO<sub>3</sub> + Aq than in H<sub>2</sub>O, the quantity dissolved increasing with the amount of salt in the solution. The solubility in these solutions depends on the coefficient of solubility in H<sub>2</sub>O plus the product of a constant coefficient multiplied by the amount of salt in the solution; this constant equals 0.069 for Na<sub>2</sub>HPO<sub>4</sub> and 0.088 for Na<sub>2</sub>CO<sub>3</sub>. (Fernet, A. ch. (3) 47. 307.)

Fernet's determinations are not accurate. (L. Meyer, A. Suppl. 2. 157.)

1 mol Na<sub>2</sub>HPO<sub>4</sub> in dil Na<sub>2</sub>HPO<sub>4</sub> + Aq absorbs 2 mols CO<sub>2</sub> (Setchenow.)

Solutions of salts of similar constitution are equivalent in regard to their power of absorption of CO<sub>2</sub>, when they contain the same percentage of crystal water. Experiments were made with solutions of alum, MgSO<sub>4</sub>·7H<sub>2</sub>O, and ZnSO<sub>4</sub>·7H<sub>2</sub>O, containing 10% of the salts. The MgSO<sub>4</sub> solution absorbed the greatest proportional amount of CO<sub>2</sub>, and the alum the least. The further rule was deduced that with salts of similar constitution

absorptometric equivalents are identical with the chemical equivalents. (Setchenow, B. 6. 1461.)

Salts can be divided into two classes, according as CO<sub>2</sub> has chemical action on the salt or not. In the first case, i. e., when there is chemical combination or action of CO<sub>2</sub> on the salt in solution, the amount of CO<sub>2</sub> absorbed increases with increasing concentration of the solution; in the second case, however, the amount of CO<sub>2</sub> decreases with the strength of the solution. Several salts can be arranged in a series as regards their power of absorption, beginning with that which has the greatest, as follows: Na<sub>2</sub>CO<sub>3</sub>, Na<sub>2</sub>B<sub>4</sub>O<sub>7</sub>, Na<sub>2</sub>HPO<sub>4</sub>, Na<sub>2</sub>C<sub>2</sub>H<sub>3</sub>O<sub>6</sub>, Na<sub>2</sub>C<sub>2</sub>H<sub>3</sub>O<sub>7</sub>, Na<sub>2</sub>C<sub>2</sub>O<sub>4</sub>, Na<sub>2</sub>C<sub>2</sub>H<sub>3</sub>O<sub>5</sub>, MnO<sub>2</sub>, MCl, M<sub>2</sub>SO<sub>4</sub>. The division between the two classes occurs in this series at Na<sub>2</sub>C<sub>2</sub>O<sub>4</sub>.

The matter is discussed at length in the original papers. (Setchenow, Mémoires Acad. St. Petersb. 22. No. 3. Also further, Setchenow, *ib.* 34. No. 3, and 35. No. 7. See also Ostwald, *Allgemeine Chemie*, 2te Aufl. vol. I, p. 629.)

Solubility of CO<sub>2</sub> in salts + Aq at 15.2°.

CO<sub>2</sub> = cc. CO<sub>2</sub> (at 0° and 760 mm.) dissolved per cc. of salt solution.

(Sethenow, A. ch. 1892, (6) 25. 226.)

CO<sub>2</sub> is not disengaged at ordinary temp. from H<sub>2</sub>O, in which  $\frac{1}{1000}$  pt of CaCO<sub>3</sub> or MgCO<sub>3</sub> is held in solution thereby. These solutions have a great power of retaining CO<sub>2</sub>, even at a boiling temp. or with diminished pressure, and they also absorb CO<sub>2</sub> from the air in much larger quantity than pure H<sub>2</sub>O. (Bureau.)

BaCO<sub>3</sub> in H<sub>2</sub>O also retains CO<sub>2</sub>, even after long boiling. (Storer)

CO<sub>2</sub> is also absorbed from the air by Na<sub>2</sub>CO<sub>3</sub>, or K<sub>2</sub>CO<sub>3</sub> + Aq, especially if dilute

Absorption of CO<sub>2</sub> by NaCl + Aq at t°

100	315.0	224.3
200	337.4	223.1
400	389.3	225.6
650	498.1	231.2

t = -59°, sp gr = 1.032

Pressure	Coefficient of absorption	Solubility
100	94.3	75.8
200	98.45	77.1
400	103.6	77.6
700	112.9	79.0

(Stern, Z. phys. Ch 1912, 81. 468.)

Solubility of CO<sub>2</sub> in ether at 0° = 7.33, at 10° = 6.044; at 15° = 5.46. (Christoff, Z. phys. Ch. 1912, 79. 459.)

Coefficient of absorption in chloroform is 0.20376 at 36.57 mm., and 4.43757 at 762 mm. pressure. (Woukoloff, C. R. 109. 62.)

100 vols of following liquids absorb vols. CO <sub>2</sub> at 18°—		
	Sp gr	Vols CO <sub>2</sub>
Ether	0.727	217
Rectified naphtha	0.784	169
Oil of turpentine	0.860	163
Oil of lavender (freshly distilled)	0.850	191
Oil of thyme	0.860	188
Lancet oil	0.940	163
Ohve oil	0.915	151
Gum-arabic + Aq (containing 25% of the gum)	1.082	75
Cane-sugar + Aq (containing 25% of sugar)	1.104	72

(de Saussure, l. c.)

1 vol oil of turpentine absorbs 17-19 vols CO<sub>2</sub> (Saussure.)

1 vol spirit at 10° absorbs 2 vols. CO<sub>2</sub> (de Saussure.)

1 vol. ohve oil at 10° absorbs 1 + vol CO<sub>2</sub> (de Saussure.)

1 vol oil of turpentine at 10° absorbs 2 vols CO<sub>2</sub> (Bergman.)

1 vol. caoutchouc absorbs 11 vols CO<sub>2</sub> (Bergman.)

Coefficient of absorption for petroleum is 1.17 at 20° and 1.31 at 10°. (Gniwiasz and Walfisz, Zeit. phys. Ch. 1. 70.)

100 vols. petroleum absorb 70 vols CO<sub>2</sub> at 10°. (Robinet, C. R. 58. 608.)

Solubility of  $\text{CO}_2$  in  $\frac{N}{2}$  solutions of various organic substances at  $20^\circ$ .

Substances	Sp gr of $\frac{N}{2}$ solution	Coeff of absorption	cc $\text{CO}_2$ dissolved in 1000 g $\text{H}_2\text{O}$
Dextrose	1.0328	0.792	841
Mannite	1.03031	0.782	833
Glycerine	1.01413	0.843	864

895	0.941	1223	0.940
983	0.940	1302	0.942

(Findlay and Craghton, Chem Soc. 1910. 97. 555.)

Solubility of CO<sub>2</sub> in CS<sub>2</sub> increases approx. proportionally with the pressure. The absorption is greater at lower temp. and less at higher temp. than is required by Dalton's law. (Woukoloff, C. R. 1889, 108. 674.)

Absorption of CO<sub>2</sub> by sugar + Aq.

Sugar + Aq	Grams CO <sub>2</sub> absorbed by 75 cc of solution at 15° and 720 mm
1/10-N sugar solution	0.1225
1/2-N " "	0.1089
1-N " "	0.0931

(Christoff, Z. phys. Ch 1905, 53. 829.)

Absorption of CO<sub>2</sub> in sugar + Aq at 20°.

Conc. of solution	Sp. gr	Coefficient of absorption
1/8 mol. per l.	1.01513	0.846
1/4 " " "	1.03125	0.815
1/2 " " "	1.06372	0.758
1 " " "	1.12809	0.649

(Usher, Chem. Soc. 1910, 97. 72.)

*Liquid*.—Not miscible with H<sub>2</sub>O, though slightly sol therein, or with fatty oils; miscible with alcohol, ether, CS<sub>2</sub>, and the essential oils. (Thilorier, Mitchell.)

Unacted upon by H<sub>2</sub>O; sol. in alcohol, ethers, petroleum, oil of turpentine, and CS<sub>2</sub>. (Mareska and Donny.)

Petroleum dissolves 5 to 6 vols. liquid CO<sub>2</sub>. (Caillietet, C. R. 75. 1271.)

Sl. sol. in CS<sub>2</sub>. (Caillietet.)

*Solid*.—When immersed in H<sub>2</sub>O, rapidly volatilizes and dissolves. With alcohol or ether it forms a semi-fluid mixture (Channing, Am. J. Sci. (2) 5. 186.)

Only slightly sol. in anhydrous ether, but may be mixed therewith to a paste. (Thilorier.)

Sol in methyl chloride below -65° to the point of sat. without decomp. (Villard, C. R. 1895, 120. 1413.)

+6H<sub>2</sub>O. (Villard, C. R. 1894, 119. 369.)

Carbon selenide, C<sub>2</sub>Se

Sol only in hot conc. H<sub>2</sub>SO<sub>4</sub>. (v. Bartsch, Ch Z 1906, 30. 810.)

C<sub>2</sub>Se Insol. in H<sub>2</sub>O, CS<sub>2</sub>, and ether. Easily sol. in hot conc. H<sub>2</sub>SO<sub>4</sub>; sol in conc. NaOH + Aq from which it is pptd by HCl. (v. Bartsch)

Carbon silicide CSi.

(*Carborundum*). Not attacked by any acids, even HF; sl. attacked by caustic alkalis or carbonates (Acheson, C. N. 68. 179.)

Not attacked by KOH + Aq. (Schutzenberger, C. R. 114. 1089.)

Carbon monosulphide, CS

Insol in H<sub>2</sub>O, alcohol, oil of turpentine, or benzene, somewhat sol. in CS<sub>2</sub> or ether; sol in warm HNO<sub>3</sub>; sol in conc. KOH + Aq. (Siddot, C. R. 81. 32.)

Readily absorbed by alcohol and aniline. (Dewinger, J. pr. 1895, (2) 51. 349.)

Carbon disulphide, CS<sub>2</sub>.

Very sl. sol. in H<sub>2</sub>O.

11. H<sub>2</sub>O dissolves 2-3 g. CS<sub>2</sub> (Ckianidi, Bull. Soc. 43. 562); 3.5-4.5 g. (Peligot, ib 43. 563).

30 cc. CS<sub>2</sub> shaken with 8000 cc. H<sub>2</sub>O at 20-23° for 18 days decreased 11 cc. in 9 days and 1.4 cc. in the next 3 days by diffused light, and 0.8 cc. in the last 5 days (no light). Part of the CS<sub>2</sub> was decomp. and 7.85 cc. were dissolved, therefore H<sub>2</sub>O dissolves 1/1000 of its weight CS<sub>2</sub>. (Sestini, Gazz. ch. it. 1. 473.)

Solubility of CS<sub>2</sub> in H<sub>2</sub>O

100 pts. H<sub>2</sub>O dissolve 0.203 pts CS<sub>2</sub> at 12-13°

" " 0.191 " " 15-16°

" " 0.168 " " 25-27°

" " 0.145 " " 30-33°

(Page, C. N. 41. 195.)

Solubility of CS<sub>2</sub> in H<sub>2</sub>O. a = g. CS<sub>2</sub> in 1000 cc. solution at t°.

a	t°	a	t°	a	t°
2.04	0	1.79	20	1.11	40
1.99	5	1.69	25	0.70	45
1.94	10	1.55	30	0.14	49
1.87	15	1.37	35		

(Chancel and Parmentier, C. R. 100. 773.)

100 g. H<sub>2</sub>O dissolve at t°:

t° 0 - 10 20 30

0.258 0.239 0.201 0.195 g. CS<sub>2</sub>.

(Rex, Z. phys. Ch. 1906, 55. 365.)

Absorption of CS<sub>2</sub> vapor by H<sub>2</sub>O at t°

t°	Coefficient of absorption
0	3 573
10	2 189
20	1 346
30	0 799

Calc. from data of Chancel and Parmentier, C. R. 100. 733.)

(Winkler, Z. phys. Ch. 1906, 55. 352)

Vapors of CS<sub>2</sub> are most easily absorbed by alcoholic solution of KOH. Sl. absorbed by KOH+Aq. and very slowly by CuSO<sub>4</sub>, Pb(C<sub>2</sub>H<sub>3</sub>O<sub>2</sub>)<sub>2</sub>+Aq. conc. H<sub>2</sub>SO<sub>4</sub>, or CaCl<sub>2</sub> in HCl+Aq. (Berthelot, A. ch. (3) 61. 74)

Solubility in alcohol S=strength of alcohol in per cent by weight; P=pts. CS<sub>2</sub> which dissolve in 10 ccm. alcohol at 17°.

S	P	S	P
100	∞	91 37	5 00
98 5	18 20	84 12	3 00
98 15	13 20	76 02	2 00
96 95	10 00	48 40	0 20
93 54	7 00	47 90	0 00

(Tuchschmidt and Follenius, B. 4. 583.)

Miscible with absolute alcohol, ether, ethereal and fatty oils, and liquid CO<sub>2</sub>

Tricarbon disulphide, C<sub>3</sub>S<sub>2</sub>.

Insol. in H<sub>2</sub>O; easily sol. in alcohol, ether, chloroform, benzene, and CS<sub>2</sub>. The alcoholic and ethereal solutions decomp. on standing. (Lengyel, B. 28. 2960.)

Sol. in alcohol with decomp. Sol. in CS<sub>2</sub> and in benzene. (Stock, B. 1912, 45. 3575.)

Solid modification. Insol. in H<sub>2</sub>O and ordinary solvents. Sol. in KOH+Aq. (Lengyel.)

## Carbon sulphoselenide, CSSe

Mpt. -85°, bpt +84°

Decomp. by light. Not attacked by H<sub>2</sub>O. Sol. in hot conc. HNO<sub>3</sub>. Decomp. by Br<sub>2</sub> to an oil. Sol. in alcohol with decomp. Miscible with CS<sub>2</sub>. (Stock, B. 1914, 47. 150.)

## Carbon sulphotelluride, CSTe.

Mpt -54°. Very unstable.

Miscible with CS<sub>2</sub> and benzene without decomp. (Stock, B. 1914, 47. 142.)

## Carbonatochloroplatin diamine carbonate chloroplatin diamine nitrate.

CO<sub>2</sub> [Pt N<sub>2</sub>H<sub>4</sub>] (CO<sub>2</sub>)<sub>2</sub>, Cl<sub>2</sub>Pt(N<sub>2</sub>H<sub>4</sub>NO<sub>2</sub>)<sub>2</sub>.  
Cl<sub>2</sub> [Pt N<sub>2</sub>H<sub>4</sub>] (CO<sub>2</sub>)<sub>2</sub>, Cl<sub>2</sub>Pt(N<sub>2</sub>H<sub>4</sub>NO<sub>2</sub>)<sub>2</sub>.  
Precipitate. (Cleve, J. B. 1867. 321)

## Carbonatonitratoplatin diamine carbon-

ate, CO<sub>2</sub> (NO<sub>2</sub>)<sub>2</sub> [Pt(N<sub>2</sub>H<sub>4</sub>)<sub>2</sub>](CO<sub>2</sub>)<sub>2</sub>

Sol. in boiling H<sub>2</sub>O (Cleve.)

Carbonatotetramine cobaltic bromide, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>Br.

Much less sol. than chloride. (Jorgensen, Z. anorg. 2. 279)

— carbonate, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>CO<sub>2</sub>+3H<sub>2</sub>O

Very sol. in H<sub>2</sub>O. (Jorgensen.)

— chloraurate, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>AuCl<sub>4</sub>+  
½H<sub>2</sub>O.

Somewhat sol. in H<sub>2</sub>O; nearly absolutely insol. in alcohol. (Jorgensen)

— chloride, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>Cl.

Easily sol. in H<sub>2</sub>O; insol. in alcohol. (Jorgensen.)

— chloroplatinate, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>PtCl<sub>6</sub>+  
2H<sub>2</sub>O.

Nearly insol. in H<sub>2</sub>O and alcohol. (Jorgensen)

— chloroplatinite, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>PtCl<sub>4</sub>

Nearly insol. in H<sub>2</sub>O; wholly in alcohol. (Jorgensen)

— dithionate, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>S<sub>2</sub>O<sub>6</sub>.

Ppt. (Jorgensen.)

— iodide, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>I.

Much less sol. than bromide or chloride (Jorgensen.)

— nitrate, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>NO<sub>2</sub>+½H<sub>2</sub>O.

Sol. in about 15 pts. cold H<sub>2</sub>O, insol. in alcohol. (Jorgensen.)

— sulphate, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>SO<sub>4</sub>+3H<sub>2</sub>O.

Considerably less sol. in H<sub>2</sub>O than the nitrate. (Jorgensen.)

Carbonic acid, H<sub>2</sub>CO<sub>3</sub>

See Carbon dioxide.

## Carbonates.

Carbonates of Na, K, Rb, and Cs are easily sol. in H<sub>2</sub>O; carbonates of Li and Tl are much less sol.; other carbonates are nearly or quite insol. All carbonates are sol. to some extent in H<sub>2</sub>O containing CO<sub>2</sub>. All carbonates, except those of NH<sub>4</sub>, Rb, and Cs, are insol. in alcohol.

Sol. in those acids which are themselves sol. in H<sub>2</sub>O, except HCN and H<sub>2</sub>BO<sub>3</sub>.

Insol. in liquid NH<sub>3</sub> (Franklin, Am. Ch. J. 1896, 20. 824)

**Aluminum carbonate, basic.**

$5\text{Al}_2\text{O}_3, 6\text{CO}_2 + 37\text{H}_2\text{O} = 3\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 14\text{H}_2\text{O}$ . (Seubert, Z. anorg. 1893, 4. 67)

$\text{Al}_2\text{O}_3, \text{CO}_2$ . (Paikmann, Sil. Am. J. (2) 34. 324)

$3\text{Al}_2\text{O}_3, 2\text{CO}_2 + 16\text{H}_2\text{O}$ . (Muspratt and Danson, A. 72. 120)

$3\text{Al}_2\text{O}_3, 2\text{CO}_2 + 9\text{H}_2\text{O}$ . (Wallace, Chem. Gaz. 1858, 410)

$5\text{Al}_2\text{O}_3, 3\text{CO}_2 + 18\text{H}_2\text{O}$ . (Bley, J. pr. 39. 11.)

$2\text{Al}_2\text{O}_3, \text{CO}_2 + 6\text{H}_2\text{O} = 10\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$ . Sol. in cold dil. acids. (Schlumberger, Bull. Soc. 1895, (3) 13. 46)

+  $8\text{H}_2\text{O}$ . (Urban and Renoul, J. Pharm. (4) 30. 340.) =  $10\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 9\text{H}_2\text{O}$  (Seubert, Z. anorg. 1893, 4. 67.)

$3\text{Al}_2\text{O}_3, 3\text{CO}_2 + 40\text{H}_2\text{O}$ . (Langlois, A. ch. (3) 48. 505)

All are precipitates, insol. in  $\text{H}_2\text{O}$ , sol in acids, and give off  $\text{CO}_2$  at slight heat.

There are no definite carbonates of aluminum. (Cameron, J. phys. Chem. 1908, 12. 572.)

**Aluminum ammonium carbonate,  $\text{Al}_2\text{O}_3, \text{CO}_2, (\text{NH}_4)_2\text{CO}_3 + 4\text{H}_2\text{O}$ .**

Precipitate. (Rose, Pogg. 91. 460.)

**Aluminum sodium carbonate,  $\text{Al}_2\text{O}_3, \text{CO}_2, 2\text{Na}_2\text{CO}_3 + 24\text{H}_2\text{O}$ .**

Precipitate. Sol. in cold dil. acids. (Bley, J. pr. 39. 22.)

**Ammonium carbonate,  $(\text{NH}_4)_2\text{CO}_3 + \text{H}_2\text{O}$ .**

Sol. at  $15^\circ$  in its own weight  $\text{H}_2\text{O}$ . Solution in  $\text{H}_2\text{O}$  gives off gas at  $70-75^\circ$ , and boils at  $75-80^\circ$ . Sl. sol. in cold dil.  $\text{NH}_4\text{OH} + \text{Aq}$ , more sol. at ordinary temp. Insol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Divers, Chem. Soc. (2) 8. 171, 259, and 364.)

Insol. in liq.  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 826)

Insol. in alcohol.

Insol. in  $\text{CS}_2$ . (Aicetowski, Z. anorg. 1894, 6. 257.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

100 g. pure glycerine dissolve 20 g  $(\text{NH}_4)_2\text{CO}_3$  at  $15^\circ$  (Ossendowski, Pharm. J. 1907, 79. 575)

**Ammonium hydrogen carbonate,  $\text{NH}_4\text{HCO}_3$ .**

Sol. at  $15^\circ$  in about 8 pts.  $\text{H}_2\text{O}$ . (Berthollet, J. Phys. 66. 168.)

Sol. at  $12.8^\circ$  in about 6 pts.  $\text{H}_2\text{O}$ . (J. Davy, N. Edinb. J. 16. 245.)

Solution decomp. on air or by gentle heat or by addition of the solid salt. (Berthollet)

100 pts.  $\text{H}_2\text{O}$  dissolve at  $0^\circ$ , 11.9 pts; at  $10^\circ$ , 15.85 pts; at  $20^\circ$ , 21 pts; at  $30^\circ$ , 27 pts.  $\text{NH}_4\text{HCO}_3$ . (Dibbitts, J. pr. (2) 10. 417.)

**Solubility of  $\text{NH}_4\text{HCO}_3$  in  $\text{NH}_4\text{Cl} + \text{Aq}$ , sat. with  $\text{CO}_2$ , at  $t^\circ$ .**

$t^\circ$	g. per 100 g. $\text{H}_2\text{O}$		Sp. gr. of sat. solution
	$\text{NH}_4\text{Cl}$	$\text{NH}_4\text{HCO}_3$	
$0^\circ$	0 29.08	11.9 3.6	1.077

$30^\circ$	0 39.7	27.0 9.1	

(Fedotieff, Z. phys. Ch. 1904, 49. 168)

**Solubility of  $\text{NH}_4\text{HCO}_3$  in  $\text{NaHCO}_3 + \text{Aq}$ , sat. with  $\text{CO}_2$  at  $t^\circ$ .**

$t^\circ$	g. per 100 g. $\text{H}_2\text{O}$		Sp. gr. of sat. solution
	$\text{NaHCO}_3$	$\text{NH}_4\text{HCO}_3$	
$0^\circ$	0 4.82	11.90 10.94	1.072
$15^\circ$	0 5.92	18.64 17.06	1.064 1.090
$30^\circ$	0 7.0	27.0 23.0	

(Fedotieff, Z. phys. Ch. 1904, 49. 168.)

**Solubility of  $\text{NH}_4\text{HCO}_3$  in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  at  $t^\circ$ .**

$t^\circ$	g. per 100 g. $\text{H}_2\text{O}$		Sp. gr. of sat. solution
	$\text{NH}_4\text{NO}_3$	$\text{NH}_4\text{HCO}_3$	
$0^\circ$	0 118	11.90 4.52	1.2625
$15^\circ$	0 23.26 49.82 103.4 128.9 166.9	18.64 12.91 10.33 8.25 7.79 7.49	1.064 1.113 1.164 1.242 1.269 1.302
$30^\circ$	0 231.9	26.96 12.57	

(Fedotieff and Koltunoff, Z. anorg. 1914, 85. 251.)

Insol. in alcohol. (J. Davy.)

Insol. in acetone. (Eidmann, C. C. 1899, II 1014; Naumann, B. 1904, 37. 4329.)

Ammonium dihydrogen carbonate,  
( $\text{NH}_4$ ) $\text{H}_2(\text{CO}_3)_3 + \text{H}_2\text{O}$ .

Sol. in 5 pts  $\text{H}_2\text{O}$  at  $15^\circ$ ; decomp by more  $\text{H}_2\text{O}$  or by heat. (Divers, Chem. Soc. (2) 8, 171, 359, and 364.)

\* Sl. sol. in alcohol.

Ammonium hydrogen carbonate carbamate,  
 $2\text{NH}_4\text{HCO}_3, \text{NH}_4\text{CONH}_2$ . (*Salts of harts-horn.*)

1 pt. salt dissolves at:

$13^\circ$  in 4 pts.  $\text{H}_2\text{O}$ .

$16.7^\circ$  " 3.3 "

$32.2^\circ$  " 2.7 "

$40.6^\circ$  " 2.4 "

$49^\circ$  " 2 "

(J. Davy, N. Edinb J 18. 245.)

Strong alcohol dissolves out carbamate, and the carbonate remains undissolved.

$\text{NH}_4\text{HCO}_3, \text{NH}_4\text{CO}_2\text{NH}_3$ . (*Commercial carbonate of ammonia.*)

Sol. at  $15^\circ$  in 4 pts.  $\text{H}_2\text{O}$ , at  $65^\circ$  in  $1\frac{1}{2}$  pts.  $\text{H}_2\text{O}$ . (Divers.)

30 pts. salt + 100 pts  $\text{H}_2\text{O}$  lower temp. from  $15.3^\circ$  to  $3.2^\circ$ . (Rtdorff, B. 2. 68.)

Sol in 1 667 pts cold, and 0 833 pt. hot  $\text{H}_2\text{O}$  (Fourcroy.)

100 pts  $\text{H}_2\text{O}$  at  $13^\circ$  dissolve 25 pts.

" "  $17^\circ$  " 30 "

" "  $37^\circ$  " 37 "

" "  $41^\circ$  " 40 "

" "  $49^\circ$  " 50 "

(Berzelius)

100 pts  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 38 pts.; at  $100^\circ$ , 100 pts (Tre's Dict.)

Sol. in 2 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$ , and in less than 1 pt. boiling  $\text{H}_2\text{O}$ ; sat. solution at  $15.5^\circ$  contains 33.3%, and sat. boiling solution 50%. (Abt.)

Sat. aqueous solution at  $10^\circ$  contains 15.7%. (Eller.)

Sat. aqueous solution at (?) contains 6.1%. (Mussembroek.)

Sat. solution in the cold contains 37.5%. (Fourcroy.)

Does not dissolve as such in  $\text{H}_2\text{O}$ , ( $\text{NH}_4$ ) $\text{CO}_3$  dissolves out first, and  $\text{NH}_4\text{HCO}_3$  later. (Scanlon)

Sp gr of carbonate of ammonia + Aq at  $12^\circ$ .

(Lunge, Chem. Ind. 1883. 2)

Sp. gr. of aqueous solution of salt with composition 31.3%  $\text{NH}_3$ , 56.6%  $\text{CO}_2$ , 12.1%  $\text{H}_2\text{O}$ . 100 pts. of solution contain—

6.58 9.96 14.75 19.83 25.71 pts. salt  
1.0219 1.0337 1.0497 1.0672 1.0863 sp. gr.

29.74 35.85 40.23 44.90 pts. salt.

1.0995 1.1174 1.1297 1.1414 sp. gr.

(J. H. Smith, Chem. Ind. 1883. 3.)

Conc. alcohol dissolves out carbamate and leaves carbonate (Hunefeld, J. pr. 7. 25.)

Insol. in acetone. (Naumann, B. 1904, 37, 4328.)

Ammonium cerous carbonate, ( $\text{NH}_4$ ) $\text{CO}_3$ ,  
 $\text{Ce}_2(\text{CO}_3)_3 + 6\text{H}_2\text{O}$ .

Ppt. Very sl. sol. in conc. ( $\text{NH}_4$ ) $\text{CO}_3$  + Aq. (Meyer, Z. anorg. 1904, 41. 104.)

Ammonium chromous carbonate, ( $\text{NH}_4$ ) $\text{CO}_3$ ,  
 $\text{CrCO}_3 + \text{H}_2\text{O}$ .

Decomp. by moist air; sol. in dil  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$ . (Baugé, C. R. 1896, 122. 476.)

Ammonium cobaltous carbonate, ( $\text{NH}_4$ ) $\text{CO}_3$ ,  
 $\text{CoCO}_3 + 4\text{H}_2\text{O}$ .

Permanent. Sol. in  $\text{H}_2\text{O}$ . (Dewille, A. ch. (3) 35. 460.)

( $\text{NH}_4$ ) $\text{Co}_2\text{O}_7$ ,  $2\text{CoO}$ ,  $4\text{CO}_2$  +  $9\text{H}_2\text{O}$ . Quickly decomp. on air; sol. in  $\text{H}_2\text{O}$  (Dewille.)  
+  $12\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

Ammonium didymium carbonate, ( $\text{NH}_4$ ) $\text{CO}_3$ ,  
 $\text{Dy}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ . (Cleve.)

Ammonium dysprosium carbonate,  
 $\text{NH}_4\text{Dy}(\text{CO}_3)_3 + \text{H}_2\text{O}$ .

Only sl. sol. in  $\text{H}_2\text{O}$ . (Jantsch, B. 1911, 44. 1277.)

**Ammonium glucinum carbonate**,  $2(\text{NH}_4)_2\text{CO}_3 \cdot 3\text{GhCO}_3(?)$ .

Very sol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . Nearly insol in alcohol (Debray).

Composition is  $(\text{NH}_4)_2\text{CO}_3 \cdot 2\text{GhCO}_3 \cdot \text{Gl}(\text{OH})_2 + 2\text{H}_2\text{O}$ . (Humpidge, Royal Soc. Proc. 39. 1.)

**Ammonium lanthanum carbonate**,  $\text{La}_2(\text{CO}_3)_3 \cdot (\text{NH}_4)_2\text{CO}_3 + 4\text{H}_2\text{O}$ .

Ppt. (Meyer, Z. anorg. 1904, 41. 102.)

**Ammonium magnesium carbonate**,  $(\text{NH}_4)_2\text{Mg}(\text{CO}_3)_2 + 4\text{H}_2\text{O}$ .

Sol. in 71 pts.  $\text{H}_2\text{O}$  with decomp.; more sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Divers, Chem. Soc. 51. 196.)

$\text{H}_2\text{O}$  containing  $(\text{NH}_4)_2\text{CO}_3$  dissolves very slightly; more sol. in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{Cl}$ . (Favre, A. ch. (3) 10. 473.)

**Ammonium magnesium hydrogen carbonate**,  $(\text{NH}_4)_2\text{Mg}_2\text{H}_2(\text{CO}_3)_4 + 8\text{H}_2\text{O}$ , or  $12\text{H}_2\text{O}$ .

Decomp. on air. (Deville, A. ch. (3) 35. 454.)

**Ammonium neodymium carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Nd}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

Ppt. Sl. sol. in conc.  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Meyer, Z. anorg. 1904, 41. 106.)

**Ammonium nickel carbonate**,  $\text{NH}_4\text{HCO}_3 \cdot \text{NiCO}_3 + 4\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Deville, A. ch. (3) 35. 452.)

**Ammonium praseodymium carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Pr}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

Ppt. Insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Meyer, Z. anorg. 1904, 41. 105.)

**Ammonium samarium carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Sm}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

Ppt

**Ammonium scandium carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot 2\text{Sc}_2(\text{CO}_3)_3 + 6\text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$ . Sol. in cold alkali-carbonate + Aq, less sol. in hot. (R. Meyer, Z. anorg. 1910, 67. 410.)

**Ammonium tin (stannous) carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot 2\text{SnCO}_3 + 3\text{H}_2\text{O}$ .

Decomp. by cold  $\text{H}_2\text{O}$ . (Deville, A. ch. (3) 35. 456.)

**Ammonium uranyl carbonate**,  $2(\text{NH}_4)_2\text{CO}_3 \cdot \text{UO}_2\text{CO}_3$ .

Sol. at  $15^\circ$  in 20 pts.  $\text{H}_2\text{O}$ , more abundantly in  $\text{H}_2\text{O}$  containing  $(\text{NH}_4)_2\text{CO}_3$ . (Ebelmen.)

Insol. in pure  $\text{H}_2\text{O}$ , sol. in  $\text{H}_2\text{O}$  containing  $(\text{NH}_4)_2\text{CO}_3$ . Solution is decomp. by boiling. (Berzelius.)

Sol. in  $\text{SO}_2 + \text{Aq}$  (Berthier, A. ch. (3) 7. 76.)

$3(\text{NH}_4)_2\text{CO}_3 \cdot 2(\text{UO}_2)_2\text{CO}_3 + 4\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Giolitta C. C. 1905, II. 227.)

**Ammonium vanadyl carbonate**,  $3(\text{NH}_4)_2\text{O} \cdot 7\text{VO}_2 \cdot 5\text{CO}_2 + 16\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ .

Sol. in acids and alkalis. (Koppel, Z. anorg. 1905, 45. 350.)

**Ammonium yttrium carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Y}_2(\text{CO}_3)_3 + 2\text{H}_2\text{O}$ .

Insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Mosander.)

**Ammonium zinc carbonate, basic**,  $3\text{ZnO} \cdot \text{NH}_4\text{OH} \cdot 2\text{CO}_2 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Kassner, Arch. Pharm. (3) 27. 673.)

**Ammonium zinc carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{ZnCO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . (Deville.)

Quite sol. in  $\text{H}_2\text{O}$ ; more sol. than  $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{MgCO}_3$ . Tolerably permanent in the air. Slowly decomp. by cold, rapidly by hot  $\text{H}_2\text{O}$ .

Very sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Not attacked by alcohol (Favre, A. ch. (3) 10. 481.)

**Barium carbonate**,  $\text{BaCO}_3$ .

Sol. in 4304 pts. cold, and 2304 pts. boiling  $\text{H}_2\text{O}$ . (Fourcroy.)

Sol. in 47,320 pts.  $\text{H}_2\text{O}$  (Bineau, A. ch. (3) 51. 290.)

Sol. in 14,137 pts.  $\text{H}_2\text{O}$  at  $16-20^\circ$ , and 15,421 pts. at  $100^\circ$  (Fresenius.)

Sol. in 12,027 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  (Kiemers, Pogg. 85. 247.)

Calculated from electrical conductivity of solution, 1 pt.  $\text{BaCO}_3$  is sol. in 64,070 pts.  $\text{H}_2\text{O}$  at  $8.8^\circ$  and 45,566 pts. at  $24.2^\circ$  (Holleman, Z. phys. Ch. 12. 125.)

#### Solubility in $\text{H}_2\text{O}$ at $t^\circ$

$t^\circ$	g. sol. in 100 g. $\text{H}_2\text{O}$
14	$4.32 \times 10^{-4}$
18	$4.57 \times 10^{-4}$
23	$4.89 \times 10^{-4}$
27	$5.22 \times 10^{-4}$
32	$5.69 \times 10^{-4}$
38	$6.27 \times 10^{-4}$

(Weissenberger, Z. phys. Ch. 1914, 88. 266.)

"Solubility product" =  $8.1 \times 10^{-8}$  mol. l. (McCoy and Smith, J. Am. Chem. Soc. 1911, 33. 473.)

Sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$ . (See *barium hydrogen carbonate*.)

Easily sol. in dil. acids. Not acted upon by conc.  $\text{HNO}_3 + \text{Aq}$ .

Not decomp. by 1 pt.  $\text{H}_2\text{SO}_4 + 6$  pts. absolute alcohol. Slowly decomp. by 1 pt.

$\text{HNO}_3$  + 6 pts. absolute alcohol Slowly decomp by 1 pt.  $\text{H}_2\text{C}_2\text{O}_4$  + 6 pts absolute alcohol.

Not decomp by absolute alcoholic solutions of racemic, tartaric, citric, or glacial acetic acids (Babington and Phillips, 1816.)

Almost completely insol. in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3$ , when digested in such a solution and allowed to stand. 1 pt.  $\text{BaCO}_3$  dissolves in 141,000 pts of such a solution (Fresenius)

Not more sol. in  $\text{NaCl}$  + Aq than in  $\text{H}_2\text{O}$ . (Karsten)

Sol in cold  $\text{NH}_4\text{Cl}$ ,  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4$  succinate + Aq. (Vogel, J. pr 7. 453.)

2 mols.  $\text{NH}_4\text{Cl}$  dissolved in  $\text{H}_2\text{O}$  dissolve 1 mol.  $\text{BaCO}_3$  by continued boiling (Smith, Phil. Mag. J. 9. 540)

Solubility in  $\text{H}_2\text{O}$  increases by addition of  $\text{NH}_4\text{Cl}$ , at first strongly, then less strongly and finally strongly again. (D'Augustino and Pellegrino, Gazz. ch. it. 1908, 38 (1) 532)

Somewhat sol. in  $\text{K}_2\text{CO}_3$  + Aq. (Waackroder, A. 24. 30.)

Solubility of  $\text{BaCO}_3$  in  $\text{KCl}$  + Aq at bpt. of solution

g KCl per 100 g solution	g. $\text{BaCO}_3$ per 1000 cc sat. solution
0 15	0 0847
1	0 1781
3	0 2667
10	0 4274
30	0 3550

(Cantoni and Goguelia, Bull. Soc. 1905, (3) 33. 13.)

Solubility of  $\text{BaCO}_3$  in  $\text{NaCl}$  + Aq at bpt of solution

g NaCl per 100 g solution	g. $\text{BaCO}_3$ per 1000 cc sat. solution
0 15	0.0587
1	0 0787
3	0 1056
10	0.1575
30	0.2784

(Cantoni and Goguelia, l c)

Solubility of  $\text{BaCO}_3$  in 10%  $\text{KCl}$  + Aq at  $t^\circ$ .

$t^\circ$	g $\text{BaCO}_3$ per 1000 cc sat solution
10	0.2175
20	0.2408
40	0 2972
60	0 3491
80	0.4049

(Cantoni and Goguelia, l c.)

Solubility of  $\text{BaCO}_3$  in 10%  $\text{NaCl}$  + Aq at  $t^\circ$

$t^\circ$	g $\text{BaCO}_3$ per 1000 cc sat solution
10	0 1085
20	0 1126
40	0 1231
60	0 1303
80	0 1418

(Cantoni and Goguelia, l c.)

Slowly sol in conc  $\text{Na}_2\text{SO}_4$ ,  $\text{MgSO}_4$ ,  $\text{ZnSO}_4$ ,  $\text{Ca(NO}_3)_2$ , or  $\text{CaCl}_2$  + Aq, but insol in  $\text{ZnCl}_2$  + Aq. (Karsten.)

Sl decomp by boiling  $\text{K}_2\text{SO}_4$  + Aq.

Sl decomp in the cold by 1 pt.  $\text{K}_2\text{SO}_4$  + 2 pts  $\text{Na}_2\text{SO}_4$  + Aq.

Decomp by salts of Al, Mn, Cr, Fe, U, Bi, Cd, Cu, Hg, Pb, Sn<sup>II</sup>, Sn<sup>IV</sup>, Hg<sub>2</sub>, Rh, Ir, Au, with pptn. of oxide of metal. (Rose, Tr.)

Pptn. of  $\text{BaCO}_3$  is hindered by presence of alkali citrates or metaphosphates.

Sol in solutions of various salts, as in the case of calcium carbonate (see Calcium carbonate). The solvent power of these solutions for barium carbonate is somewhat less than for calcium carbonate.

Insol in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3602)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II 1014.)

Min. *Witherite*

Barium hydrogen carbonate,  $\text{BaH}_2(\text{CO}_3)_2$  (?)

100 pts  $\text{H}_2\text{O}$  containing  $\text{CO}_2$  dissolve 0.079 pt  $\text{BaCO}_3$ . (Bineau)

100 pts  $\text{H}_2\text{O}$  containing  $\text{CO}_2$  dissolve 0.17 pt  $\text{BaCO}_3$ . (Lassaigne)

100 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  under a pressure of 4-6 atmospheres dissolve 0.725 pt.  $\text{BaCO}_3$ . Upon evaporating,  $\text{BaCO}_3$  is deposited. (Wagner, Z anal. 6. 167.)

$\text{BaCO}_3$  is sol. in 833 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  at  $10^\circ$ . (Lassaigne.)

$\text{BaCO}_3$  is sol. in 830 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  at  $10^\circ$ . (Fourerroy.)

$\text{BaCO}_3$  is sol in 1550 pts  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  at  $10^\circ$ . (Bergman)

100 cc  $\text{H}_2\text{O}$  sat with  $\text{CO}_2$  dissolve 0.73 g.

$\text{BaH}_2(\text{CO}_3)_2$  (McCoy and Smith, J. Am. Chem. Soc. 1911, 33. 473.)

Barium calcium carbonate,  $\text{BaCO}_3$ ,  $\text{CaCO}_3$ .

Min. *Barytocalcite*, *Bronzite*. Sol. in dil. acids

Barium uranyl carbonate,  $\text{BaO}$ ,  $2\text{UO}_3$ ,  $2\text{CO}_2$  +  $5\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$ . (Blinkoff Dissert 1900)

+  $8\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Blinkoff.)

**Bismuth carbonate, basic,  $(\text{BiO})_2\text{CO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ , sol. in acids. Insol. in  $\text{CO}_2 + \text{Aq.}$  (Bergman.)

Completely sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ ; sl. sol. in  $\text{K}_2\text{CO}_3 + \text{Aq.}$ ; insol. in  $\text{Na}_2\text{CO}_3 + \text{Aq.}$  (Lau-gier)

Absolutely insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  unless  $\text{H}_3\text{PO}_4$  or  $\text{H}_2\text{AsO}_4$  are present. (Berzelius.)

Insol. in  $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{K}_2\text{CO}_3$ , or  $\text{Na}_2\text{CO}_3 + \text{Aq.}$  (Rose.)

Sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Wackenroder) Insol. in  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  (Brett)

Sol. in  $\text{CaCl}_2 + \text{Aq.}$  (Pearson)

Min. *Bismuthosphacrite*.

$3\text{Bi}_2\text{O}_3$ ,  $\text{CO}_2$ . Min. *Bismuthite*. Easily sol. in acids

$4\text{Bi}_2\text{O}_3$ ,  $3\text{CO}_2 + 4\frac{1}{2}\text{H}_2\text{O}$ . Min *Bismuth spa*. Easily sol. in acids

**Bismuth potassium carbonate,  $\text{Bi}_3\text{OK}_4(\text{CO}_3)_4 + \text{H}_2\text{O}$ .**

Decomp. by large quantities of  $\text{H}_2\text{O}$ . (Reynolds, Chem. Soc. 1898, 73. 266.)

**Cadmium carbonate,  $\text{CdCO}_3$**

Insol. in  $\text{H}_2\text{O}$ , easily sol. in acids; insol. in  $\text{K}_2\text{CO}_3$ , and  $\text{Na}_2\text{CO}_3 + \text{Aq.}$ ; very sl. sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Fresenius)

Easily sol. in  $\text{NH}_4$  sulphate, nitrate, and succinate + Aq (Wittstein.)

Sol. in  $\text{KCN} + \text{Aq.}$ ; sol. in cold  $\text{NH}_4\text{Cl} + \text{Aq.}$ , less sol. in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett, 1837.)

Not prevented from pptn by non-volatile organic substances. (Rose)

Not pptd. from solutions containing sodium citrate. (Spiller.)

Insol. in liquid  $\text{NH}_3$  (Gore, Am. Ch. J. 1898, 20. 827.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 814)

Insol. in acetone. (Naumann, B. 1904, 37. 4320.)

$+ \frac{1}{2}\text{H}_2\text{O}$ . (Lefort, J. B. 1847. 346.)

(Kraut, Z. anorg. 1897, 13. 14.)

**Cadmium carbonate hydrazine,  $\text{CdCO}_3 \cdot 2\text{N}_2\text{H}_4$ .**

Easily sol. in cold  $\text{NH}_4\text{OH} + \text{Aq.}$  (Franzen, Z. anorg. 1908, 60. 281.)

**Cesium carbonate,  $\text{Cs}_2\text{CO}_3$ .**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ .

100 pts. absolute alcohol dissolve 11.1 pts.  $\text{Cs}_2\text{CO}_3$  at  $19^\circ$ ; 20.1 pts.  $\text{Cs}_2\text{CO}_3$  at boiling temp. (Bunsen.)

**Cesium hydrogen carbonate,  $\text{CsHCO}_3$ .**

Not deliquescent. Sol. in  $\text{H}_2\text{O}$ .

**Calcium carbonate basic,  $\text{CaO} \cdot \text{CaCO}_3 + \text{H}_2\text{O}$ .**

Hardened by  $\text{H}_2\text{O}$ , but not dissolved. (Raoult, C. R. 92. 189.)

**Calcium carbonate,  $\text{CaCO}_3$**

More sol. in cold than in hot  $\text{H}_2\text{O}$  (Gmelin)  
When recently pptd., sol. in 8334 pts. boiling, and 10,501 pts. cold  $\text{H}_2\text{O}$ , much less sol. in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3$ , 85,246 pts. of which dissolve 1 pt.  $\text{CaCO}_3$ . (Fresenius (1846), A. 59. 122)

Sol. in 16,000 pts. pure  $\text{H}_2\text{O}$  (Brandes, 1825)

Sol. in 12,838 pts. pure  $\text{H}_2\text{O}$  at  $15^\circ$ . (Kremers, Pogg. 86. 247)

Sol. in 16,000–24,000 pts. pure  $\text{H}_2\text{O}$  (Bucholz)

1 l.  $\text{H}_2\text{O}$  dissolves 34 mg.  $\text{CaCO}_3$  (Chevalier, Z. anal. 8. 91; Hoffmann, Z. anal. 4. 414.)

1 l.  $\text{H}_2\text{O}$  may contain 0.016 g.  $\text{CaCO}_3$ . t. e., 1 pt. is sol. in 62,500 pts.  $\text{H}_2\text{O}$ . (Bureau, A. ch. (3) 51. 290)

1 l.  $\text{H}_2\text{O}$  dissolves 0.02 g.  $\text{CaCO}_3$ , t. e., 1 pt.  $\text{CaCO}_3$  is sol. in 50,000 pts.  $\text{H}_2\text{O}$ . (Peligot.) Solubility is much affected by  $\text{CO}_2$  of the air.

1 l.  $\text{H}_2\text{O}$  at  $16^\circ$  dissolves 13.1 mg.  $\text{CaCO}_3$ . (Sohlberg, C. R. 74. 1552.)

Calculated from electrical conductivity of  $\text{CaCO}_3 + \text{Aq.}$  1 pt.  $\text{CaCO}_3$  is sol. in 99,500 pts.  $\text{H}_2\text{O}$  at  $8.7^\circ$ , and 80,040 pts. at  $23.8^\circ$ . (Holle-mann, Z. phys. Ch. 12. 125)

By continued boiling  $\text{CaH}_2(\text{CO}_3)_2$ , 38 mg.  $\text{CaCO}_3$  remain in solution. (Weltzien, A. 136. 165)

**Solubility in  $\text{H}_2\text{O}$  at different pressures.**

Pressure in atmós.	Solubility
1	1079
2	1403
4	1820
6	2109

(Fingel, C. R. 101. 949.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.0005 pt. (calculated as  $\text{CaO}$ ) from pptd.  $\text{CaCO}_3$ , and 0.0027 pt. from calcspar. (Lubavim, J. russ. Soc. 24. 389)

1 l.  $\text{H}_2\text{O}$  dissolves 13 mg.  $\text{CaCO}_3$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1893, 12. 241)

1 l.  $\text{CO}_2$  free water dissolves 17.4 mg.  $\text{CaO}$  or 31.0 mg.  $\text{CaCO}_3$  (Gothe, Ch. Z. 1915, 39. 305.)

$\text{CaCO}_3$  dissolves in 9662 pts.  $\text{H}_2\text{O}$  at  $12^\circ$ . (Pollacci, C. C. 1896, II. 946)

1 l.  $\text{H}_2\text{O}$  free from  $\text{CO}_2$  dissolves 9.6 mg.  $\text{CaCO}_3$  (McCoy and Smith, J. Am. Chem. Soc. 1911, 33. 473)

Found dissolved in 10,000 pts. sea water. (Davy)

Pptd. amorphous  $\text{CaCO}_3$  dissolves in 1600 pts. sea water Pptd. crystalline  $\text{CaCO}_3$  dissolves in 8000 pts. sea water. (Irvine and Young, Chem. Soc. 66. 344.)

Artificial sea water sat. with  $\text{CO}_2$  dissolves  $\text{CaCO}_3$  corresponding to 57.27 mg. of combined  $\text{CO}_2$  per litre at  $15^\circ$ .

Sea water which contains 52–55 mg. neutral combined  $\text{CO}_2$  per litre must be sat. with  $\text{CaCO}_3$ . (Cohen, Chem. Soc. 1900, 78 (2) 725)

For action of  $\text{H}_2\text{CO}_3 + \text{Aq.}$  see *Calcium hydrogen carbonate*

Sol. in  $\text{H}_2\text{SO}_4$ , even when native Sol in acids generally. When treated with acids in closed vessels effervescence ceases on increase of pressure, but is renewed at once on removing it. (Lank, 1814.)

Unacted upon by conc.  $\text{HNO}_3$ , even when boiling, as  $\text{Ca}(\text{NC}_2)_2$ ; is insol in conc.  $\text{HNO}_3$ .

Not decomp. by mixture of 1 pt.  $\text{H}_2\text{SO}_4$  and 6 pts. absolute alcohol, but immediately by  $\text{HNO}_3$ +absolute alcohol.

Not decomp. by absolute alcoholic solutions of oxalic, racemic, tartaric, citric, or glacial acetic acids (Babington and Phillips, 1816.)

Unacted upon by glacial  $\text{HC}_2\text{H}_3\text{O}_2$ , even when boiling.

Freshly pptd.  $\text{CaCO}_3$  is sol. in cold  $\text{NH}_4\text{Cl}$ +Aq; but the solution becomes cloudy on exposure to air, a portion, however, of  $\text{CaCO}_3$  remains dissolved, which cannot be pptd. even by boiling. If ppt. is washed and allowed to stand 24 hours, it is not as sol. in  $\text{NH}_4\text{Cl}$  as at first, but natural  $\text{CaCO}_3$  is not wholly insol in  $\text{NH}_4\text{Cl}$ +Aq; it is, however, much less sol than  $\text{MgCO}_3$  (Vogel, J. pr. 7. 453.)

Sol. in boiling  $\text{NH}_4\text{Cl}$ +Aq with evolution of  $\text{NH}_3$  (Demareay, 1834.)

When  $\text{NH}_4\text{OH}$ +Aq, incompletely sat. with  $\text{CO}_2$ , is mixed with  $\text{CaCl}_2$ +Aq, no ppt. occurs even during several days, if kept in a closed vessel, and only a slight ppt. if the mixture is exposed to the air, but  $\text{CaCO}_3$  is pptd. if the solution is boiled.

$\text{NH}_4\text{OH}$ +Aq wholly sat. with  $\text{CO}_2$  produces ppt. when mixed with  $\text{CaCl}_2$ +Aq, but pptn. is not complete until heat is applied. Also when an excess of  $\text{CaCl}_2$ +Aq is added to a solution of crystallized carbonate of ammonia, only a portion of the  $\text{CaCO}_3$  is pptd. until the solution is boiled. (Vogel, 1814.)

When  $\text{CaCl}_2$ +Aq mixed with  $\text{NH}_4\text{OH}$ +Aq is exposed to an atmos. of pure  $\text{CO}_2$ , no ppt. occurs for several hours, but  $\text{CaCO}_3$  is completely pptd. in several days. (Vogel.)

When recently pptd., readily sol. in  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4\text{NO}_3$ +Aq. (Biett, 1837; Wackenroder, A. 41. 315.)

When recently pptd., readily sol. in  $(\text{NH}_4)_2\text{CO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{NO}_3$ ,  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4$  succinate+Aq. (Wittstein.)

Sol. in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ +Aq. (Thomson.)

More sol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3$ +Aq, or in neutral potassium, or sodium salts+Aq than in  $\text{H}_2\text{O}$ . (Fresenius.)

From solutions in  $\text{NH}_4$  salts,  $\text{NH}_4\text{OH}$ , and  $(\text{NH}_4)_2\text{CO}_3$ +Aq precipitate  $\text{CaCO}_3$  more completely than  $\text{BaCO}_3$ . (Fresenius.)

When boiled with  $\text{NH}_4\text{Cl}$ +Aq,  $\text{CaCO}_3$  is dissolved, and  $(\text{NH}_4)_2\text{CO}_3$  given off. (D. Smith.)

$\text{CaCl}_2$ +Aq prevents pptn. of  $\text{CaCO}_3$  in the cold, as do also  $\text{NH}_4\text{Cl}$ ,  $\text{KCl}$ , or  $\text{NaCl}$ +Aq, but it is pptd. when boiled, if the latter solutions are not too conc.  $\text{K}_2\text{SO}_4$ ,  $\text{KNO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ , or  $\text{Na}_2\text{SO}_4$ +Aq have a similar effect. A large excess of  $(\text{NH}_4)_2\text{CO}_3$ +Aq when quickly added to  $\text{CaCl}_2$ +Aq produces

no ppt. in the cold.  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3$ +Aq act likewise. (Storer, Am J Sci. (2) 25. 41.)

1 g.  $\text{CaCO}_3$  requires 13.98 g.  $\text{NH}_4\text{Cl}$ , 8.380 g.  $(\text{NH}_4)_2\text{SO}_4$ , or 14.438 g.  $\text{NH}_4\text{NO}_3$ , to effect solution. (Bertrand, Monit Sci (3) 10. 477.)

Less sol. in Na than in  $\text{NH}_4$  salts, but more than in K salts. (Berthelot.)

When  $\text{NH}_4\text{OH}$ +Aq, partially neutralized by  $\text{CO}_2$ , is mixed with  $\text{CaO}_2\text{H}_2$ +Aq, no cloudiness appears until the mixture is boiled; when more  $\text{CO}_2$  has been added to  $\text{NH}_4\text{OH}$ +Aq, a ppt. appears at first, which disappears and only reappears on addition of much  $\text{CaO}_2\text{H}_2$ +Aq; but  $\text{NH}_4\text{OH}$ +Aq does not dissolve pptd.  $\text{CaCO}_3$ . (Vogel.)

#### Solubility in $\text{NH}_4$ salts+Aq at 25°.

$\text{NH}_4$ salt	Millimols $\text{NH}_4$ salt per l	Millimols $\text{CaO}$ dissolved per l
$\text{NH}_4\text{Cl}$	1000	6.770
	500	5.008
	250	3.724
	125	2.743
$\text{NH}_4\text{NO}_3$	500	5.267
	250	3.830
	125	2.779
	62.5	2.004
Triammonium citrate	500	66.87
	250	39.80
	125	22.64
	62.5	14.92

(Rundell, Z. phys. Ch. 1909, 70. 454.)

#### Solubility of $\text{CaCO}_3$ in $\text{NH}_4\text{Cl}$ +Aq at 12-18° Time, 98 days

g per l of sat. solution	
$\text{NH}_4\text{Cl}$	$\text{CaCO}_3$
53.5	0.423
100	0.609
200	0.645

(Cantoni and Gogueha, Bull. Soc. 1905, (3) 33. 27.)

#### Solubility of $\text{CaCO}_3$ in $\text{NH}_4\text{NO}_3$ +Aq at 18°.

g per l of sat. solution	
$\text{NH}_4\text{NO}_3$	$\text{CaCO}_3$
0	0.131
5	0.211
10	0.258
20	0.340
40	0.462
80	0.584

(Berju and Kosmaniko, Landw. Vers. Sta. 1904, 60. 422.)

$\text{CaO}_2\text{H}_2 + \text{Aq}$  dissolves a little  $\text{CaCO}_3$ .  
(Welter and Berthollet, 1789)

$\text{CaO}_2\text{H}_2 + \text{Aq}$  retains a little  $\text{CaCO}_3$  in solution at ordinary temperature, which is pptd. on boiling. (Eliot and Storer, Proc. Am. Acad 1880, 5, 63.)

$\text{CaO}_2\text{H}_2 + \text{Aq}$ , mixed with dil.  $\text{NaOH}$ ,  $\text{KOH}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ , gives no immediate ppt. when  $\text{CO}_2$  is passed through it, unless boiled.

Sol. in boiling  $\text{MgCl}_2 + \text{Aq}$  even when dilute. (Cousté.)

Not decomp. when boiled with  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{CaSO}_4$ ,  $\text{MgSO}_4$ , and  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ , but partially decomp. by boiling with  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{HPO}_4$ ,  $\text{K}_2\text{HPO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{HPO}_4$ ,  $\text{K}_2\text{HAsO}_4$ ,  $\text{Na}_2\text{HAsO}_4$ ,  $\text{K}_2\text{C}_2\text{O}_4$ ,  $(\text{NH}_4)_2\text{C}_2\text{O}_4$ ,  $\text{NaF}$ , and  $\text{K}_2\text{CrO}_4 + \text{Aq}$ . With the  $\text{NH}_4$  salts the decomposition is complete (Dulong, A. ch. 82, 286.)

Not decomp by alkali sulphates +  $\text{Aq}$  (Malaguti)

Precipitation of  $\text{CaCO}_3$  is much hindered by alkali citrates or metaphosphates

The solubility of  $\text{CaCO}_3$  in  $\text{CO}_2$ -free water

is therefore increased by the addition of NaCl, NaNO<sub>3</sub> or Na<sub>2</sub>SO<sub>4</sub>, 10H<sub>2</sub>O, but decreased by the addition of Na<sub>2</sub>CO<sub>3</sub> or CaCl<sub>2</sub>, 6H<sub>2</sub>O.

(Gothe, Ch. Z. 1915, 39. 306.)

Sol. in ferric chloride or nitrate + Aq with evolution of CO<sub>2</sub> and pptn. of Fe<sub>2</sub>O<sub>3</sub>.H<sub>2</sub>O (Fuchs, 1831); also in chlorides or nitrates of Al, Mn, Cr, or U, but not in FeCl<sub>3</sub> + Aq.

Sol. in cold SnCl<sub>4</sub> + Aq with pptn. of SnO<sub>2</sub>. Insol. in conc. Na<sub>2</sub>SO<sub>4</sub>, MgSO<sub>4</sub>, BaCl<sub>2</sub>, MgCl<sub>2</sub>, Pb(NO<sub>3</sub>)<sub>2</sub>, or AgNO<sub>3</sub> + Aq (Karsten.)

Abundantly sol when freshly precipitated in CaCl<sub>2</sub> + Aq, and MgSO<sub>4</sub> + Aq (Hunt.)

Absolutely insol. at 15-19° in BaO.H<sub>2</sub> + Aq; also on boiling

1 l. H<sub>2</sub>O containing 3-4 g. MgSO<sub>4</sub> dissolves 1-2 g. CaCO<sub>3</sub>, and also 1 g. MgCO<sub>3</sub>. (Hunt, Am. J. Sci. (2) 26. 109.)

100 pts. NaCl + Aq (2.525% NaCl) dissolve 0.0037 pt. (calculated as CaO) pptd CaCO<sub>3</sub>, and 0.0053 pt. calc spar. (Lubavin, J. russ. Soc. 24. 389.)

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in liquid CO<sub>2</sub>. (Buchner, Z. phys. Ch. 1906, 54. 674.)

Alcohol dissolves traces of CaCO<sub>3</sub>. (Grischow.)

Sol. in Na citrate + Aq. (Spiller.)

Sol. in Ca succrate + Aq. (Barreswill.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II 1014.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Amorphous. Solubility in H<sub>2</sub>O cannot be determined because of its instability. (Kendall, Phil. Mag. 1912, (6) 23. 972.)

Min. Calcite. In contact with air free from CO<sub>2</sub>, 1 l. H<sub>2</sub>O dissolves at:

25°	50°	100°
0.01433	0.01504	0.01779 g. calcite.

(Kendall, Phil. Mag. 1912, (6) 23. 964.)

In contact with air containing 3.7 pts. CO<sub>2</sub> per 10,000, the solubility of calcite in H<sub>2</sub>O was found to be 0.04608 g. per l. at 25° and 0.02925 g. per l. at 50°. (Kendall, Phil. Mag. 1912, (6) 23. 973.)

Min. Aragonite. In contact with air free from CO<sub>2</sub>, 1 l. H<sub>2</sub>O dissolves at:

25°	50°	100°
0.01528	0.01617	0.01902 g. aragonite.

(Kendall, Phil. Mag. 1912, (6) 23. 964.)

+5H<sub>2</sub>O. Efflorescent.  
+6H<sub>2</sub>O. (Pelouze.)

Calcium hydrogen carbonate, CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>.

Known only in aqueous solution.

CaCO<sub>3</sub> dissolves in CO<sub>2</sub> + Aq

CaCO<sub>3</sub> is sol. in 1428 pts. H<sub>2</sub>O sat. with CO<sub>2</sub> at 0°, and 1136 pts. at 10° (Lassaigne, J. ch. med. 4. 312.)

Bineau could dissolve, even in large quantities of H<sub>2</sub>O sat. with CO<sub>2</sub>, only 4% enough CaCO<sub>3</sub> to form CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>.

Chate dissolves in 994.5 pts. H<sub>2</sub>O sat. with CO<sub>2</sub>, while Iceland spar requires 3140 pts. (Bischhof.)

CaCO<sub>3</sub> is sol. in 1015 pts. H<sub>2</sub>O sat. with CO<sub>2</sub> at 21° and 748.3 mm. (Warrington, Chem. Soc. 6. 296.)

Solubility of CaCO<sub>3</sub> in CO<sub>2</sub> + Aq at p pressure in atmospheres CaO + CO<sub>2</sub> = mg. CO<sub>2</sub> and CaO dissolved, corresponding to CaCO<sub>3</sub> = mg. CaCO<sub>3</sub>.

p	CaO + CO <sub>2</sub>	CaCO <sub>3</sub>

0.5533	1846	885.5
0.7297	2270	972
0.9841	2884	1086

(Schlosing, C. R. 74. 1522.)

With high pressure, 1 l. H<sub>2</sub>O containing CO<sub>2</sub> dissolves at most 3 g. CaCO<sub>3</sub>. This maximum is reached at 5° under 4 atmospheres' pressure; at 10-13° under 5 atmospheres; and at 20° under 7 atmospheres. (Caro, Arch. Pharm. (3) 4. 145.)

CaCO<sub>3</sub> is sol. in about 1000 pts. H<sub>2</sub>CCl<sub>3</sub> + Aq, and solubility is considerably increased by Na<sub>2</sub>SO<sub>4</sub> or MgSO<sub>4</sub>.

1000 pts. H<sub>2</sub>O sat. with CO<sub>2</sub> dissolve pts. Carrara marble at t°, and B = height of barometer in millimetres.

t°	B	Pts. CaCO <sub>3</sub>	t°	B	Pts. CaCO <sub>3</sub>
7.5	754	1.224	22.0	746	0.920
8.5	752	1.202	26.0	740	0.875
9.5	754	1.115	26.5	743	0.860
20.5	741	0.975	27.0	741	0.885
21.5	744	0.935	28.0	737	0.770

Or, from 7.5-9.5°, 1000 pts. H<sub>2</sub>O sat. with CO<sub>2</sub> dissolve 1.181 pts. CaCO<sub>3</sub>; from 20.5-22° 0.9487 pt. CaCO<sub>3</sub>; from 26-28°, 0.855 pt. CaCO<sub>3</sub>.

Other varieties of  $\text{CaCO}_3$  are dissolved as follows in 1000 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$ .

Variety	t°	B	Pts $\text{CaCO}_3$
Litneburg chalk . . .	18	740	0 835
Pptd. $\text{CaCO}_3$ . . .	18	740	0 950
Iceland spar . . .	18	735	1 970
Calcite . . .	12	754	1 223
Traversella . . .	12	754	212
Dolomite, semi-transparent . . .	11 5	749	0.654

....	....	....	38.5	9 5
....	....	....	38.5	9 5

(Treadwell and Reuter, Z. anorg. 1898, 17. 185.)

1 l.  $\text{H}_2\text{O}$  sat. with carbonic acid dissolves 1.30 g.  $\text{CaCO}_3$  at 13.2°; 1.45 g. at 2.8° (Treadwell, Z. anorg. 1898, 17. 189.)

At 30° C. in equilibrium with the air, not more than 3 per cent of the calcium present is combined as  $\text{CaCO}_3$ . At lower temperatures and lesser concentrations the percentage of normal carbonate is even less, and practically all the calcium present is combined as  $\text{Ca}(\text{HCO}_3)_2$ . (Cameron and Briggs, J. phys. Chem. 1901, 5. 549.)

With pressures less than 4.5 atmospheres of  $\text{CO}_2$ , no other than normal calcium carbonate or a hydrate of the normal carbonate can exist as the solid phase at 0° (Cameron, J. phys. Chem. 1908, 12. 566.)

Solubility in  $\text{H}_2\text{O}$  in contact with air, containing  $\text{CO}_2$  with varying partial pressures at t°.

P = partial pressure of  $\text{CO}_2$ .

t = 15°

(Cameron and Seidell, J. phys. Chem. 1902, 6. 53.)

Data are also given for solubility of CaCO<sub>3</sub> in NaCl+Na<sub>2</sub>SO<sub>4</sub>+Aq, and CaCO<sub>3</sub>+CaSO<sub>4</sub> in NaCl+Na<sub>2</sub>SO<sub>4</sub>+Aq (Cameron, Bell and Robinson.)

Calcium copper uranium carbonate, CaCO<sub>3</sub>, 3CuCO<sub>3</sub>, 4U(CO<sub>3</sub>)<sub>2</sub>+24H<sub>2</sub>O.  
Sol. in acids.

Calcium lead carbonate, xCaCO<sub>3</sub>, yPbCO<sub>3</sub>.  
Min. *Plumbocalcite*.

Calcium magnesium carbonate, CaCO<sub>3</sub>, MgCO<sub>3</sub>.

Min *Dolomite* 1 l H<sub>2</sub>O sat. with CO<sub>2</sub> at 18° and 750 min. dissolves 0.31 g. dolomite. (Cossa, B 2. 697.)

Not obtained by evaporating solution, but can be crystallized from CO<sub>2</sub>+Aq between 100° and 200°. (Hoppe-Seyler.)

Dolomite is dissolved by CO<sub>2</sub> and H<sub>2</sub>O, but solution is prevented partially by CaCO<sub>3</sub>, and wholly by MgCO<sub>3</sub>. (Leather and Sen, C. A. 1915. 181.)

Insol in cold dil acids. (Dolomieu, J. Phys 39. 1)

Insol in cold acetic acid. (Forchhammer.)

Calcium potassium carbonate, CaK<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>.

Decomp. by H<sub>2</sub>O. (Reynolds, Chem Soc. 1895, 73. 265; Butschli, C. A. 1907, 2223) 2CaCO<sub>3</sub>, 3K<sub>2</sub>CO<sub>3</sub>+6H<sub>2</sub>O. (Butschli.)

Calcium sodium carbonate, CaNa<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>.

*Anhydrous*. Decomp by H<sub>2</sub>O.  
+2H<sub>2</sub>O (Butschli, C. A. 1907. 2223.)  
+5H<sub>2</sub>O Min *Gaylussite*. Sparingly sol. in H<sub>2</sub>O

Calcium uranyl carbonate, CaCO<sub>3</sub>, UO<sub>2</sub>CO<sub>3</sub>+20H<sub>2</sub>O

Min *Liebigite* Sol in HCl+Aq.  
+1H<sub>2</sub>O. Decomp. by H<sub>2</sub>O (Blinkoff, Dissert. 1900.)

2CaO, 4UO<sub>3</sub>, 3CO<sub>2</sub>+24H<sub>2</sub>O Decomp. by H<sub>2</sub>O (Blinkoff, Dissert. 1900.)

Calcium carbonate chloride, CaCO<sub>3</sub>, CaCl<sub>2</sub>+6H<sub>2</sub>O.

Sol. in H<sub>2</sub>O with immediate decomp. (Fritzsche, J. pr. 83. 213.)

Cerous carbonate, Ce<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>+5, and 9H<sub>2</sub>O.

Insol. in H<sub>2</sub>O, and solution of CO<sub>2</sub> in H<sub>2</sub>O. (Vauquehn.)

Somewhat sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq (Jolin)  
Insol. in neutral salt solutions and neutral alkali carbonates+Aq; easily sol. in SO<sub>2</sub>+Aq. (Berthier, A. ch. (3) 7. 77)

Ceric carbonate, Ce(CO<sub>3</sub>)<sub>2</sub>+½H<sub>2</sub>O.

Precipitate (Hisinger, A. ch 94. 108)  
Insol in H<sub>2</sub>O. Sol. in slight traces in Na<sub>2</sub>CO<sub>3</sub>+Aq; al. sol. in NaHCO<sub>3</sub>+Aq, and in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq (Rose)

Cerous lanthanum carbonate fluoride.

Min. *Baluerte*, *Hamartite*, *Hydrofluocerite*. Slowly decomp. by HCl+Aq, easily by H<sub>2</sub>SO<sub>4</sub>

Cerous potassium carbonate, Ce<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>, K<sub>2</sub>CO<sub>3</sub>+3H<sub>2</sub>O.

Ppt. (Jolin.)  
Ce<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>, K<sub>2</sub>CO<sub>3</sub>+12H<sub>2</sub>O. Ppt  
Sol. in 30% K<sub>2</sub>CO<sub>3</sub>+Aq. (Meyer, Z. anorg. 1904, 41. 103.)

**Potassic potassium carbonate**,  $\text{C}_2\text{O}_3(\text{CO}_3)_2$ ,  $4\text{K}_2\text{CO}_3 + 12\text{H}_2\text{O}$ .

*Crystalline*. Sl. sol in  $\text{H}_2\text{O}$  containing  $\text{K}_2\text{CO}_3$ ; sol. in dil  $\text{H}_2\text{SO}_4$  with decomp. (Job, C. R. 1899, 128. 1098.)

**Cerous sodium carbonate**,  $\text{Ce}_2(\text{CO}_3)_3$ ,  $2\text{Na}_2\text{CO}_3 + 2\text{H}_2\text{O}$ .

Ppt (John).  $2\text{Ce}_2(\text{CO}_3)_3$ ,  $3\text{Na}_2\text{CO}_3 + 24\text{H}_2\text{O}(?)$ . Ppt. Easily decomp (Meyer, Z. anorg. 1904, 41. 103)

**Chromous carbonate**,  $\text{CrCO}_3$ .

Sol in much  $\text{H}_2\text{O}$ ; sl. sol in  $\text{KHCO}_3 + \text{Aq}$ . (Moberg, J. pr. 44. 328; Moissan, A. ch. (5) 21. 199.)

**Chromic carbonate, basic**,  $\text{Cr}_2\text{O}_3$ ,  $2\text{CO}_2$

Precipitate. (Parkmann, Sil Am J (2) 34. 321.)

$\text{Cr}_2\text{O}_3$ ,  $\text{CO}_2 + 4\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ ; sol in acids, when freshly pptd. is sol in  $\text{K}_2\text{CO}_3$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , and still more sol. in  $\text{KOH} + \text{Aq}$ . (Meissner.)

Insol. in ethyl acetate (Naumann, B. 1910, 43. 314); methyl acetate. (Naumann, B. 1909, 42. 3790)

$2\text{Cr}_2\text{O}_3$ ,  $\text{CO}_2 + 6\text{H}_2\text{O}$  Precipitate (Langlois, A. ch. (3) 48. 502)

**Chromous potassium carbonate**,  $\text{CrCO}_3$ ,  $\text{K}_2\text{CO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  when freshly prepared; slowly polymerizes; stable in dry air, decomp. in moist air; sol. in acids with decomp (Baugé, C. R. 1898, 126. 1568)

**Chromous sodium carbonate**,  $\text{CrNa}_2(\text{CO}_3)_2 + \text{H}_2\text{O}$

Decomp. when heated In Aq. solution, passes into the hydrate containing 10 mols  $\text{H}_2\text{O}$ . (Baugé, C. R. 1897, 125. 1179)

+10  $\text{H}_2\text{O}$ . Very sol in cold  $\text{H}_2\text{O}$ ; Aq. solution decomp. below  $100^\circ$ ; effloresces in the air, sol in  $\text{HCl} + \text{Aq}$  and  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Baugé, C. R. 1897, 125. 1178.)

**Cobaltous carbonate, basic**,  $5\text{CoO}$ ,  $2\text{CO}_2 + 4\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ ; sol. in  $(\text{NH}_4)_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{NH}_4\text{NO}_3$ , and  $\text{NH}_4\text{Cl} + \text{Aq}$

Sol. in cold  $\text{NH}_4\text{NO}_3$ , and  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Brett, 1887.)

Sol. in  $\text{CO}_2 + \text{Aq}$ , and acid alkali carbonates + Aq, from which it is pptd. on boiling. Very sl. sol. in conc  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3 + \text{Aq}$ ; largely sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , and partly sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Berzelius.)

Not pptd. from solutions containing Na citrate. (Spiller.)

$4\text{CoO}$ ,  $\text{CO}_2 + 4\text{H}_2\text{O}$ . Ppt. (Beetz.) +  $3\text{H}_2\text{O}$ . (Meigen, C. C. 1905, I. 1363.)

**Cobaltous carbonate, basic**,  $3\text{CoO}$ ,  $\text{CO}_2 + 2\text{H}_2\text{O}$ .

(Meigen, C. C. 1905, I. 1363)

$3\text{H}_2\text{O}$  (Rose, Pogg. 84. 551)

$3\text{CoO}$ ,  $2\text{CO}_2 + 4\text{H}_2\text{O}$  (Biatin, Z. anal. 6. 76)

$2\text{CoO}$ ,  $\text{CO}_2 + 3\frac{1}{2}\text{H}_2\text{O}$ . Converted into  $5\text{CoO}$ ,  $2\text{CO}_2 + 4\text{H}_2\text{O}$  by  $\text{H}_2\text{O}$  (Beetz)

**Cobaltous carbonate,  $\text{CoCO}_3$ .**

*Anhydrous* Not attacked by cold conc  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . (Senarmont, A. ch. (3) 30. 129)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827)

Min *Sphaerocobaltite*. Sl. attacked by cold  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ .

+  $\frac{1}{2}\text{H}_2\text{O}$ . Sol. in acids. (Dewille, A. ch. (3) 33. 95.)

+  $6\text{H}_2\text{O}$ . (Dewille)

Decomp. by  $\text{H}_2\text{O}$  with formation of a basic carbonate. (Berzelius)

**Cobaltous potassium carbonate**,  $\text{CoCO}_3$ ,  $\text{K}_2\text{CO}_3 + 4\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Dewille, A. ch. (3) 33. 90.)

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Reynolds, Chem. Soc. 1898, 73. 264)

$\text{CoCO}_3$ ,  $\text{KHCO}_3 + 4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Dewille.)

**Cobaltous sodium carbonate**,  $\text{CoCO}_3$ ,  $\text{Na}_2\text{CO}_3 + 4\text{H}_2\text{O}$ , and  $10\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Dewille, A. ch. (3) 33. 75.)

**Cupric carbonate, basic.**

The compounds produced by pptn. of copper solutions by carbonates are unstable and possess varying solubilities in solutions of  $\text{CO}_2$ . On treatment with solutions of  $\text{CO}_2$ , these substances pass over into an apparently stable compound possessing a definite solubility in solutions of  $\text{CO}_2$  of definite concentration, which solubility increases with the concentration of  $\text{CO}_2$ . Solubility of this compound in various salts + Aq is recorded. (Free, J. Am. Chem. Soc. 1908, 30. 1374.)

$8\text{CuO}$ ,  $\text{CO}_2 + 5\text{H}_2\text{O}$  (Dewille, A. ch. (3) 33. 75)

$6\text{CuO}$ ,  $\text{CO}_2$ . (Field, Chem. Soc. 14. 70)

$3\text{CuO}$ ,  $\text{CO}_2 + 2\text{H}_2\text{O}$ . (Favre, A. ch. (3) 10. 119)

$5\text{CuO}$ ,  $2\text{CO}_2 + 6\text{H}_2\text{O}$ . (Struve.)

$2\text{CuO}$ ,  $\text{CO}_2 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids, even  $\text{H}_2\text{SO}_4 + \text{Aq}$ ; sl. sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$ , 30,720 pts. of the solution containing 1 pt.  $\text{CuO}$ . (Jahn)

Sol. in 4690 pts.  $\text{H}_2\text{CO}_3 + \text{Aq}$  sat. at 4-6 atmos pressure. (Wagner)

Sol. in 3833 pts. sat.  $\text{H}_2\text{CO}_3 + \text{Aq}$ . (Lassaigne, J. ch. méd. 4. 312)

Sol. in  $\text{NH}_4$  salts + Aq. Partially sol. in  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3 + \text{Aq}$ , and more sol. in

$\text{NaHCO}_3$ , or  $\text{KHCO}_3 + \text{Aq}$ ; sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Favre, A. ch. (3) 10. 18.)

Less sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  than  $\text{CuO}$  in  $\text{NH}_4\text{OH} + \text{Aq}$  (Thomson, 1831.) Sol. in  $\text{KCN} + \text{Aq}$ . (Berzelius.) Sol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett.)

Sol. in ferric salts with pptn. of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ .  
Insol. in liq.  $\text{NH}_3$ . (Franklin and Kraus, Am. Ch. J. 1898, 20. 827.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone (Naumann, B. 1904, 37. 4329; Erdmann, C. C. 1899, II. 1014.)

Sol. in ethyl amine carbonate +  $\text{Aq}$ . (Wurtz.)

Sol. in cane sugar +  $\text{Aq}$  (Peschier, Repert. 1820, 6. 85.)

Not pptd. from solutions containing sodium citrate (Spiller.)

Insol. in pyridine. (Schroeder, Dissert. 1901.)

Min. *Malachite*. Sol. in acids, and  $\text{NH}_4\text{OH} + \text{Aq}$ .

+  $2\text{H}_2\text{O}$  (Favre.)

$8\text{CuO}$ ,  $5\text{CO}_2 + 7\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1900, 24. 137.)

$3\text{CuO}$ ,  $2\text{CO}_2 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , also in hot conc.  $\text{NaHCO}_3 + \text{Aq}$ .

Min. *Azurite*.

Copper potassium carbonate, basic,  $8\text{CuO}$ ,  $2\text{K}_2\text{CO}_3$ ,  $7\text{CO}_2 + 17\text{H}_2\text{O}$ .

Ppt.; decomp. by  $\text{H}_2\text{O}$ . (Groger, B. 1901, 34. 430.)

Mixture. (Wood and Jones, C. A. 1907. 2667.)

$5\text{CuO}$ ,  $4\text{CO}_2$ ,  $\text{K}_2\text{CO}_3 + 10\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Deville, A. ch. (3) 33. 102.)

Cupric potassium carbonate,  $\text{CuCO}_3$ ,  $\text{K}_2\text{CO}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Wood and Jones, C. A. 1907. 2667.)

+  $\text{H}_2\text{O}$ . (Wood and Jones.)

+  $4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Reynolds, Chem. Soc. 1898, 73. 263.)

Could not be obtained. (Wood and Jones.)

$2\text{CuCO}_3$ ,  $\text{K}_2\text{CO}_3 + 4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Wood and Jones.)

Cupric sodium carbonate,  $\text{CuCO}_3$ ,  $\text{Na}_2\text{CO}_3$ .

Not decomp. by cold  $\text{H}_2\text{O}$ . (Debray, C. R. 49. 218.)

+  $3\text{H}_2\text{O}$ .

Cupric zinc carbonate,  $2\text{CuO}$ ,  $3\text{ZnO}$ ,  $2\text{CO}_2 + 3\text{H}_2\text{O}$ , or  $3\text{CuO}$ ,  $9\text{ZnO}$ ,  $4\text{CO}_2 + 8\text{H}_2\text{O}$ .

Min. *Aurichalcite*. Easily sol. in  $\text{HCl} + \text{Aq}$ .

Cupric carbonate ammonia (cuprammonium carbonate),  $\text{CuCO}_3$ ,  $2\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Insol. in alcohol and ether. Sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Favre, A. ch. (3) 10. 116.)

Didymium carbonate,  $\text{D}_{12}(\text{CO}_3)_3 + \text{H}_2\text{O}$ , or  $6\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Only traces dissolve in  $\text{CO}_2 + \text{Aq}$ . Insol. in solutions of alkali carbonates or bicarbonates +  $\text{Aq}$ . (Marignac, A. ch. (3) 38. 166.) Very sl. sol. in conc.  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+  $8\text{H}_2\text{O}$  (Cleve, Bull. Soc. (2) 43. 363.)

Didymium potassium carbonate,  $\text{D}_{12}(\text{CO}_3)_3$ ,  $\text{K}_2\text{CO}_3 + 4\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  (Cleve, Bull. Soc. (2) 43. 363.)

+  $12\text{H}_2\text{O}$ . (Cleve.)

Didymium sodium carbonate,  $2\text{D}_{12}(\text{CO}_3)_3$ ,  $3\text{Na}_2\text{CO}_3 + 9\text{H}_2\text{O}$ .

Ppt. (Cleve.)

$\text{D}_{12}(\text{CO}_3)_3$ ,  $2\text{Na}_2\text{CO}_3 + 8\text{H}_2\text{O}$ . Ppt. (Cleve.)

Dysprosium carbonate,  $\text{Dy}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Jantsch, B. 1911, 44. 1277.)

Erbium carbonate,  $\text{Er}_2\text{O}_3$ ,  $2\text{CO}_2 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Hoglund.)

Erbium sodium carbonate,  $\text{Er}_2(\text{CO}_3)_3$ ,  $5\text{Na}_2\text{CO}_3 + 36\text{H}_2\text{O}$ .

Efflorescent. Decomp. by  $\text{H}_2\text{O}$ .

Gadolinium carbonate, basic,  $\text{Gd}(\text{OH})\text{CO}_3 + \text{H}_2\text{O}$ .

Ppt. (Benedicks, Z. anorg. 1900, 22. 417.)

Glucinum carbonate, basic,  $3\text{GfO}$ ,  $\text{CO}_2$ ;  $4\text{GfO}$ ,  $\text{CO}_2$ ;  $5\text{GfO}$ ,  $\text{CO}_2 + 5\text{H}_2\text{O}$ , etc.

Not perceptibly sol. in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{CO}_3 + \text{Aq}$ .

Decomp. by boiling  $\text{H}_2\text{O}$ . Easily sol. in acids.

Sol. in  $\text{NH}_4$  salts, and  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ .

Sol. in alkali carbonates, especially  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Vauquelin.)

Sl. sol. in  $\text{K}_2\text{CO}_3 + \text{Aq}$ . When solution in  $(\text{NH}_4)_2\text{CO}_3$  is boiled, a more basic carbonate is pptd. (Rose.)

Glucinum carbonate,  $\text{GfCO}_3 + 4\text{H}_2\text{O}$ .

Efflorescent. Sol. in 278 pts.  $\text{H}_2\text{O}$ . (Klatzo, J. pr. 106. 242.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 828.)

No definite carbonate of glucinum exists (Cameron, J. phys. Chem. 1908, 12. 572.)

Glucinum potassium carbonate,  $3\text{HCO}_3\text{K}$ ,  $2\text{K}_2\text{CO}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ , but decomp. by boiling. (Jebay.) Less easily sol. in alcohol.

Indium carbonate,  $\text{In}_2(\text{CO}_3)_3$ .

Ppt. Insol. in  $\text{K}_2\text{CO}_3$ , or  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . Sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Winkler, J. pr. 94. 1)

Iron (ferric) carbonate, basic.

$9\text{Fe}_2\text{O}_3 \cdot \text{CO}_2 + 12\text{H}_2\text{O}$ . (Wallace, Chem. Gaz. 1868. 410)

$3\text{Fe}_2\text{O}_3 \cdot \text{CO}_2 + 4\text{H}_2\text{O}$ , and  $8\text{H}_2\text{O}$ . (Barrat, C N 1. 110.)

$+6\text{H}_2\text{O}$ . (Wallace.)  $2\text{Fe}_2\text{O}_3 \cdot \text{CO}_2 + 1\frac{1}{2}\text{H}_2\text{O}$ . (Rother, Pharm. J. Trans. (3) 4. 576.)

$\text{Fe}_2\text{O}_3 \cdot \text{CO}_2$ . (Parkmann, Sil. Am. J. (2) 34. 321.)

These and other similar basic salts are ppts., easily decomp. on standing into  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ .

Iron (ferrous) carbonate,  $\text{FeCO}_3$ .

Insol. in  $\text{H}_2\text{O}$ .

Sol in acids, even in  $\text{H}_2\text{CO}_3 + \text{Aq}$ .

See Carbonate, ferrous hydrogen.

Min. *Siderite*, *Spathic ore*. Sl. attacked by chl. acids. Sol in  $\text{H}_2\text{CO}_3 + \text{Aq}$  under pressure.

Insol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Biett.)  $+ \text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ , easily sol. in acids; sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$ .

Sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . Sol. in ferric salts  $+ \text{Aq}$  with evolution of  $\text{CO}_2$  and pptn. of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ .

Soluble in an aqueous solution of cane sugar

100 pts  $\text{H}_2\text{CO}_3 + \text{Aq}$  dissolve 0.72 pt.  $\text{FeCO}_3$ . (Wagner.)

$\text{FeCO}_3$  dissolves in 1381 pts  $\text{H}_2\text{O}$  saturated with  $\text{CO}_2$ , under a pressure of 4-6 atmospheres. (Wagner, J. B. 1867. 135.)

1 l.  $\text{H}_2\text{O}$  dissolves 6.1907 g.  $\text{FeCO}_3$  (pure) under a  $\text{CO}_2$  pressure of 2 atmos (Ehlert, Z. Elektrochem 1912, 18. 728)

Solubility in various salts  $+ \text{Aq}$  in presence of  $\text{CO}_2$  under pressure of 2 atmos.

Salt	With $\text{CO}_2$ of 2 atmos pressure	
	g salt per 1000 g $\text{H}_2\text{O}$	1 l. of solvent dissolves g $\text{FeCO}_3$

	sat at $+14^\circ$	9.5780
$\text{MgSO}_4 + 7\text{H}_2\text{O}$	105 3	6.2423
	sat. at $+18^\circ$	7.3922

(Ehlert, Z. Elektrochem. 1912, 18. 728.)

A bicarbonate of ferrous iron is not formed under pressures of  $\text{CO}_2$  up to 5 atmospheres at  $0^\circ$ . (Cameron, J. phys. Chem. 1908, 12. 571)

Iron (ferrous) magnesium carbonate,  $\text{FeCO}_3 \cdot \text{MgCO}_3$ .

Min. *Pistomesite*.

$\text{FeCO}_3 \cdot 2\text{MgCO}_3$ . Min. *Mesitite*.

Iron (ferrous) potassium carbonate,  $\text{FeK}_2(\text{CO}_3)_2 + 4\text{H}_2\text{O}$ .

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Reynolds. Chem. Soc. 1898, 73. 205.)

Lanthanum carbonate,  $\text{La}_2(\text{CO}_3)_3 + \text{H}_2\text{O}$ ,  $3\text{H}_2\text{O}$ , and  $8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ .  $\text{CO}_2 + \text{Aq}$  dissolves traces.

Insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ .

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Min. *Lanthanite*.

Solubility in salts  $+ \text{Aq}$  free from  $\text{CO}_2$ .

Salt	g. salt per 1000 g. $\text{H}_2\text{O}$	1 l. of solvent dissolves g $\text{FeCO}_3$
$\text{NaCl}$	351 2	0.35042
$\text{MgCl}_2 + 6\text{H}_2\text{O}$	2300.0	4.2049

	sat. at $+14^\circ$	0.93444
$\text{MgSO}_4 + 7\text{H}_2\text{O}$	105 3	1.4667
	sat at $+18^\circ$	2.9334

(Ehlert, Z. Elektrochem. 1912, 18. 728.)

Iron (ferrous) hydrogen carbonate,  $\text{FeH}_2(\text{CO}_3)_2(?)$ .

Known only in aqueous solution.

By conducting  $\text{CO}_2$  at ordinary pressure through  $\text{H}_2\text{O}$ , in which Fe is suspended, a solution containing 9.1 pts  $\text{FeCO}_3$  to 10,000 pts.  $\text{H}_2\text{O}$  is obtained. (v. Hauer, J. pr. 81. 391.)

Lanthanum potassium carbonate,  $\text{La}_2(\text{CO}_3)_3 \cdot \text{K}_2\text{CO}_3 + 12\text{H}_2\text{O}$ .

Sol. in 30%  $\text{K}_2\text{CO}_3 + \text{Aq.}$  (Meyer, Z. anorg. 1904, 41, 101)

Lanthanum sodium carbonate,  $2\text{La}_2(\text{CO}_3)_3 \cdot 3\text{Na}_2\text{CO}_3 + 20\text{H}_2\text{O} (?)$ .

Ppt Easily decomp (Meyer, Z anorg 1901, 41, 102)

Lead carbonate, basic,  $2\text{PbCO}_3 \cdot \text{PbO} \cdot \text{H}_2\text{O}$ ,  $5\text{PbCO}_3 \cdot 3\text{PbO} \cdot \text{H}_2\text{O}$ ,  $3\text{PbCO}_3 \cdot \text{PbO} \cdot \text{H}_2\text{O}$ ,  $5\text{PbCO}_3 \cdot \text{PbO} \cdot \text{H}_2\text{O}$

*White Lead.* Insol. in  $\text{H}_2\text{O}$  Nearly insol in  $\text{H}_2\text{CO}_3 + \text{Aq.}$  even under pressure Sol in dil, insol in conc.  $\text{KOH} + \text{Aq}$  Insol in normal, or acid alkali carbonates +  $\text{Aq.}$  (Böttger)

Sol in cold dil.  $\text{NH}_4\text{Cl} + \text{Aq}$  (Brett.)  
 $\text{PbCO}_3 \cdot \text{PbO} \cdot \text{H}_2\text{O}$  Very sl. sol. in  $\text{H}_2\text{O}$ . (Yorke)

$2\text{PbCO}_3 \cdot \text{PbO} \cdot \text{H}_2\text{O}$   
Solubility is less than 0.0002 millimol Pb in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$  (Pleissner, C C 1907, II 1056.)

When not exposed to air, sol in 32,000 pts.  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  (0.2 g. per l.); 26,000 pts.  $\text{KNO}_3 + \text{Aq}$  (0.2 g. per l.), 23,000 pts.  $\text{CaCl}_2 + \text{Aq}$  (0.2 g. per l.), 4600 pts.  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (0.2 g. per l.), 4300 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$

When exposed to air in beakers, sol in 43,000 pts.  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  (0.2 g. per l.); 43,000 pts.  $\text{KNO}_3 + \text{Aq}$  (0.2 g. per l.); 26,000 pts.  $\text{CaCl}_2 + \text{Aq}$  (0.2 g. per l.); 26,000 pts.  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (0.2 g. per l.), 4300 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  (0.2 g. per l.) (Murr, Chem. Soc. 31, 664)

Insol in methyl acetate (Naumann, B. 1909, 42, 3790.)

$3\text{PbO} \cdot 4\text{PbCO}_3 + 2\text{H}_2\text{O}$ . Ppt. (Stromholm, Z. anorg. 1904, 38, 446.)

Lead carbonate,  $\text{PbCO}_3$ .

Sol in 30,551 pts.  $\text{H}_2\text{O}$  at ordinary temp.

Sol in 23,450 pts.  $\text{H}_2\text{O}$  with little ammonium acetate, carbonate, and free ammonia; and in somewhat less  $\text{H}_2\text{O}$ , containing much ammonium nitrate with carbonate and free ammonia (Freemans, A. 59, 124.)

Calculated from electrical conductivity of  $\text{PbCO}_3 + \text{Aq.}$  1 l  $\text{H}_2\text{O}$  dissolves 3 mg.  $\text{PbCO}_3$  at  $10^\circ$  (Kohlrausch and Rose, Z. phys. Ch. 12, 241)

Solubility is 0.0002 millimol. Pb in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$ . (Pleissner, C. C. 1907, II 1056.)

Sl sol. in  $\text{H}_2\text{O}$   $1.5 \times 10^{-3}$  g are contained in 1 l of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch 1903, 46, 604.)

Easily sol. in acids, even  $\text{HC}_2\text{H}_3\text{O}_2$ , but not decomp by conc.  $\text{HNO}_3 + \text{Aq}$  on account of insolubility of  $\text{Pb}(\text{NO}_3)_2$  in  $\text{HNO}_3 + \text{Aq}$ . Insol. in a mixture of 1 pt.  $\text{H}_2\text{SO}_4$  and 6 pts absolute alcohol, or in an alcoholic solution of racemic or tartaric acids

Insol in  $\text{H}_2\text{CO}_3 + \text{Aq.}$  (Jahn, A. 28, 117) Very sl. sol. in  $\text{H}_2\text{CO}_3 + \text{Aq.}$  but solution is prevented by traces of various salts (Tinnerman) Sol. in 7144 pts. sat.  $\text{H}_2\text{CO}_3 + \text{Aq.}$  (Lassaigne, J. ch. méd. 4, 312)  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  under 4-6 atmos pressure dissolves only traces of Pb; 1000 pts. of solution containing 0.5 pt.  $\text{PbCO}_3$ . (Wagner, Z anal 6, 167)

Solubility of  $\text{PbCO}_3$  in  $\text{H}_2\text{CO}_3 + \text{Aq}$  at  $18^\circ$ .

mg per l	
$\text{CO}_2$	$\text{PbCO}_3$
0	1.75
2.8	6
5.4	7
14.4	8.2
26	9.9
43.5	10.9
106	15.4

(Pleissner, C. C. 1907, II 1056.)

Sol in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq.}$  and  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Weppen, 1837.) Sol. in  $\text{KOH} + \text{Aq.}$ ; not absolutely insol at ord. temp. in an excess of  $\text{K}_2\text{CO}_3$  or  $\text{Na}_2\text{CO}_3 + \text{Aq.}$  and still more sol. at  $100^\circ$ ; but absolutely insol. in  $\text{NaHCO}_3$ ,  $\text{KHCO}_3$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  (Rose.) Insol. in  $\text{NH}_4\text{OH} + \text{Aq.}$ ; sol. in  $\text{KOH}$  or  $\text{NaOH} + \text{Aq.}$ ; decomp. by boiling  $\text{Ca}(\text{NO}_3)_2 + \text{Aq.}$  (Berzelius.)

Sl decomp (Perron), not at all decomp. (Malaguti) by alkali sulphates +  $\text{Aq.}$

Partially decomp. by boiling with  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{CaSO}_4$ ,  $\text{MgSO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $\text{NaNH}_4\text{HPO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $\text{Na}_2\text{B}_4\text{O}_7$ ,  $\text{K}_2\text{AsO}_4$ ,  $\text{Na}_2\text{AsO}_4$ ,  $\text{K}_2\text{C}_2\text{O}_4$ ,  $\text{Na}_2\text{C}_2\text{O}_4$ ,  $\text{NaF}$ , and  $\text{K}_2\text{CrO}_4 + \text{Aq.}$  With the  $\text{NH}_4$  salts, the decomp. is complete (Dulong, A. ch. 82, 290.)

Easily sol. in hot  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Brett, Rose.)

When 1 mol.  $\text{PbCO}_3$  is boiled with 1 mol.  $\text{K}_2\text{C}_2\text{O}_4$ , 15% of the  $\text{PbCO}_3$  is decomp.; with 1 mol.  $\text{K}_2\text{CO}_3$ , 93.28% is decomp. (Malaguti.)

Not decomp. by  $\text{K}_2\text{SO}_4 + \text{Aq}$  (Rose.)

Insol. in liquid  $\text{NH}_3$  (Franklin, Am Ch. J. 1898, 20, 823.)

Sol in an aqueous solution of acetates (Mercer, 1844.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790.)

Not pptd. in presence of Na citrate. (Spiller)

Min. *Cerussite*.

Lead sodium carbonate,  $4\text{PbCO}_3 \cdot \text{Na}_2\text{CO}_3$ .

Insol. in  $\text{H}_2\text{O}$  (Berzelius, Pogg. 47, 199.)

Lead carbonate bromide,  $\text{PbCO}_3 \cdot \text{PbBr}_2$ .

Insol. in  $\text{H}_2\text{O}$ . (Storer's Diet)

Lead carbonate chloride,  $\text{PbCO}_3, \text{PbCl}_2$   
 Insol in  $\text{H}_2\text{O}$ . (Miller, Chem Soc (2) 8, 37.)  
 Min *Phosgenite*. Easily sol. in acids.

Lead carbonate iodide,  $\text{PbCO}_3, \text{PbI}_2$   
 Insol. in  $\text{H}_2\text{O}$  (Poggiale)

Lead carbonate sulphate,  $\text{PbCO}_3, \text{PbSO}_4$ .  
 Min *Lanarkite*. Sol in  $\text{HNO}_3 + \text{Aq}$  with residue of  $\text{PbSO}_4$ .  
 $3\text{PbCO}_3, \text{PbSO}_4$  Min *Leadhillite*. As above.

Lithium carbonate,  $\text{Li}_2\text{CO}_3$ .  
 100 pts  $\text{H}_2\text{O}$  dissolve 1 pt  $\text{Li}_2\text{CO}_3$  (Vauquelin, A. ch. 7. 284.)  
 100 pts.  $\text{H}_2\text{O}$  at  $13^\circ$  dissolve 0.769 pt.  $\text{Li}_2\text{CO}_3$ ; at  $102^\circ$ , 0.778 pt.  $\text{Li}_2\text{CO}_3$  (Kremers, Pogg. 99. 48.)  
 100 pts  $\text{H}_2\text{O}$ , cold or hot, dissolve 1.2 pts.  $\text{Li}_2\text{CO}_3$ . (Troost, A. ch. (3) 51. 103.)  
 100 pts  $\text{H}_2\text{O}$  dissolve 1.4787 pts. at  $15^\circ$ . 0.7162 pt. at  $100^\circ$  (Diaper, C. N. 55. 169)

100 pts  $\text{H}_2\text{O}$  dissolve pts.  $\text{Li}_2\text{CO}_3$  at  $t^\circ$ .

$t^\circ$	Pts $\text{Li}_2\text{CO}_3$	$t^\circ$	Pts $\text{Li}_2\text{CO}_3$
0	1.539	75	0.866
10	1.406	100	0.728
20	1.329	102	0.796
50	1.181	...	.

0.796 pt is dissolved at  $102^\circ$  in less than  $\frac{1}{4}$  hour, and 0.955 in 1 hour (Beketow, J. russ Soc. 1884. 591.)

Sat. solution at  $15^\circ$  has sp. gr. 1.014, and contains 1 g.  $\text{Li}_2\text{CO}_3$  to 70 g.  $\text{H}_2\text{O}$ , while solution sat. at  $0^\circ$  has sp. gr. 1.0168 and contains 1 g.  $\text{Li}_2\text{CO}_3$  in 64.6 g.  $\text{H}_2\text{O}$ . By long spontaneous evaporation at  $15^\circ$  a solution can be obtained of 1.0278 sp. gr. containing 1 g.  $\text{Li}_2\text{CO}_3$  in 45.57 g.  $\text{H}_2\text{O}$ . (Flückiger, Arch. Pharm. (3) 25. 549.)

By boiling for an instant with  $\text{H}_2\text{O}$  a solution is obtained, which has sp. gr. 1.0074 and contains 1 g.  $\text{Li}_2\text{CO}_3$  to 139 g.  $\text{H}_2\text{O}$ . (Flückiger, Arch. Pharm. (3) 26. 543.)

0.1687 mol. is sol in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ . (Rothmund, Z. phys. Ch. 1909, 69. 531.)

Sat.  $\text{Li}_2\text{CO}_3 + \text{Aq}$  contains at:

$95^\circ$        $75^\circ$   
 0.723      0.833% by wt  $\text{Li}_2\text{CO}_3$ .

(Tschuganoff, Z. anorg. 1914, 86. 159)

Sat solution boils at  $102^\circ$ . (Kremers.)  
 More sol in  $\text{CO}_2 + \text{Aq}$  than in  $\text{H}_2\text{O}$ . 100

pts. sat.  $\text{CO}_2 + \text{Aq}$  dissolve 5.25 pts  $\text{Li}_2\text{CO}_3$ . (Troost.) See  $\text{LiHCO}_3$ .  
 Sol in  $\text{NH}_4$  salts +  $\text{Aq}$ .

Solubility in salts +  $\text{Aq}$  at  $25^\circ$

(Rothmund, Z. phys. Ch. 1909, 69, 531.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790); ethyl acetate. (Naumann, B. 1904, 37, 3601.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II, 1014.)

Lithium hydrogen carbonate, LiHCO<sub>3</sub>.

100 pts. H<sub>2</sub>O dissolve 5.501 pts. at 13°. (Bewad, B. 17, 406 R.)

Magnesium carbonate, basic,  $Mg_3C_2O_7 + 3H_2O = 3MgO, 2CO_2 + 3H_2O$  or  $2MgCO_3, MgO \cdot H_2O + 2H_2O$ . (Fritzsche, Pogg. 37. 810.)

\**Magnesia alba*,  $3MgCO_3, Mg(OH)_2 + 4H_2O, 4MgCO_3, Mg(OH)_2 + 5H_2O$ , or  $5MgCO_3, 2Mg(OH)_2 + 7H_2O$ .

Very al. sol. in  $H_2O$ . Sol in 10,000 pts. hot or cold  $H_2O$  (Bineau)

Sol. in 2500 pts. cold, and 9000 pts. hot  $H_2O$ . (Fyfe.)

Sol. in  $H_2O$  containing  $CO_2$

Very easily sol. in acids

Easily sol. in dil.  $HCl + Aq$ .

Easily sol. in  $NH_4$  sulphate, nitrate, or succinate +  $Aq$ , also in  $(NH_4)_2CO_3 + Aq$ . (Wittstein.) Sol. in cold  $Na_2CO_3, K_2CO_3, K_2SO_4, KCl$ , or  $KNO_3 + Aq$  (Longchamp); also in  $NH_4Cl + Aq$ , separating out on heating.

(Vogel, J. pr. 7. 455.) Slowly sol. in conc.  $BaCl_2, CaCl_2$ , or  $ZnSO_4 + Aq$  (Karsten.) Sol. in  $MgSO_4 + Aq$  (Dulong)

Sol. in ferric salts +  $Aq$  with evolution of  $CO_2$  and pptn. of  $Fe_2O_3 \cdot H_2O$ . (Fuchs)

Sol. in boiling  $Co, Ni, Zn, Mn$ , or  $Cu$  nitrates or chlorides +  $Aq$ .

Min. *Hydromagnesite*,  $4MgO, 3CO_2 + 4H_2O$ .

+  $10H_2O$ . Sol. in considerable amount in  $H_2CO_3 + Aq$  as  $MgH_2(CO_3)_2 + Aq$ . (Engel, C. R. 100. 911)

Magnesium carbonate,  $MgCO_3$ .

*A hydrous*. Insol. in  $H_2O$ . 1 l  $H_2O$  dissolves 103 mg.  $MgCO_3$ . (Chevalot, Z. anal. 8. 91.) Sol. in 5071 pts  $H_2O$  at  $16^\circ$ . (Kremers.)

$MgCO_3$  combines with  $H_2O$  to form  $MgCO_3 \cdot 3H_2O$ , and +  $5H_2O$ , which are less sol. in  $H_2O$  than anhydrous salt. (Engel, C. R. 101. 814)

Very hygroscopic. About 20 g. are sol. in 1 l.  $H_2O$ . (Engel, C. R. 1899, 129. 598.)

0.7156 g. are sol. in 1 l.  $H_2O$  at  $15^\circ$ .

0.627 g. are sol. in 1 l.  $H_2O$  at  $15^\circ$  with vapour pressure of  $CO_2$  equal to zero.

0.977 grams are sol. in 1 l.  $H_2O$  at  $15^\circ$  with vapour pressure  $CO_2$  equal to 1 atmos. (Treadwell and Reuter, Z. anorg. 1898, 17. 202.)

94.4 mg are sol. in 1 l. of  $CO_2$ -free water. (Gothe, Ch. Z. 1915, 39. 306.)

Solubility in  $H_2O$  in equilibrium with  $Mg(HCO_3)_2$  and  $CO_2$ .

System:  $MgCO_3, Mg(HCO_3)_2$  and  $CO_2$  at  $30^\circ C$ .

In a solution near the saturation point and in equilibrium with atmospheric air upwards of 50 per cent of the magnesium is in the form of the normal carbonate. When the solution is brought in contact with the solid phase, the proportion of the base combined as normal carbonate falls to about 34 per cent, or lower. (Cameron and Briggs, J. phys. Chem. 1901, 5. 552-3.)

For solubility in  $H_2CO_3 + Aq$ , see *Magnesium hydrogen carbonate*.

Scarcely acted upon by  $HCl + Aq$ . (Senarmont)

The solubility of  $MgCO_3$  in  $NaCl + Aq$  when in contact with ordinary air increases with increasing concentration of  $NaCl$  up to a maximum, and then decreases. (Cameron and Seidell, J. phys. Chem. 1903, 7. 579.)

Solubility of  $MgCO_3$  in salts +  $Aq$  in equilibrium with an atmosphere free from  $CO_2$ .

$NaCl + Aq$ ;  $t = 23^\circ$

1.70 g. "	138.80
4.25 g. "	137.20

Solubility in salts + Aq.—Continued

g salt added per litre	mg $\text{MgCO}_3$ dissolved per litre
0.805 g. $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$	145.05
1.61 g. "	162.05
4.03 g. "	150.75
0.53 g. $\text{Na}_2\text{CO}_3$	98.6
1.06 g. "	53.5
2.65 g. "	15.7
0.51 g. $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	47.0
1.02 g. "	39.5
2.55 g. "	35.3

The solubility of  $\text{MgCO}_3$  in  $\text{CO}_2$ -free water is increased by the addition of  $\text{NaCl}$ ,  $\text{NaNO}_3$ , or  $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$  but decreased by the addition of  $\text{Na}_2\text{CO}_3$  or  $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$ .

(Gothe, Ch. Z 1915, 39, 306.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 828.)

Insol. in acetone. (Naumann, B 1904, 37, 4329.)

Insol. in acetone and in methylal. (Eidmann, C O 1899, II, 1014.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790), ethyl acetate (Naumann, B. 1904, 37, 3801.)

Min. *Magnesia*. Very sl. attacked by warm conc.  $\text{HCl} + \text{Aq}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 0.0027 pt., calculated as  $\text{MgO}$ . (Lubavyn.)

Solution in  $\text{H}_2\text{O}$  contains 0.018 g.  $\text{Mg}$  and 0.065 g.  $\text{CO}_2$  per l. at  $20^\circ$ . (Wells, J. Am. Chem. Soc. 1915, 37, 1705.)

Solution in  $\text{H}_2\text{O}$  containing 27.2 g.  $\text{NaCl}$  per l. contains 0.028 g.  $\text{Mg}$  and 0.086 g.  $\text{CO}_2$  per l. at  $20^\circ$ . (Wells, J. Am. Chem. Soc. 1915, 37, 1705.)

+  $\text{H}_2\text{O}$ .  
 +  $2\text{H}_2\text{O}$ . Decomp. by suspension in  $\text{H}_2\text{O}$  into basic salt. (Engel, C. R. 100, 911.)

+  $3\text{H}_2\text{O}$ . Small quantities of this salt are wholly dissolved by much  $\text{H}_2\text{O}$ . (Bineau.)

The solution contains in 100 pts. at—

$0^\circ$  0.5° 8° 16°  
 0.15 0.153 0.155 0.179 pts.  $\text{MgCO}_3 + 3\text{H}_2\text{O}$ .  
 (Norgaard, 1850.)

Decomp. by boiling  $\text{H}_2\text{O}$  into a basic insol. salt and  $\text{CO}_2$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 0.1518 pt at  $19^\circ$ . (Fritzsche, Pogg. 37, 304.)

Sol. in 48 pts.  $\text{H}_2\text{O}$  and decomp. by large amt. (Fourcroy.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.1518 pt. at  $19^\circ$ , or sol. in 668 pts  $\text{H}_2\text{O}$  at  $19^\circ$ . (Beckurts, J. B. 1881, 212.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.0812 pt., calculated as  $\text{MgO}$  (Lubavyn, J. russ. Soc. 24, 389.)

Solution in  $\text{H}_2\text{O}$  contains 0.36 g.  $\text{Mg}$  and 1.01 g.  $\text{CO}_2$  per l. at  $20^\circ$ . (Wells, J. Am. Chem. Soc. 1915, 37, 1707.)

Solubility in  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  has been determined at  $20^\circ$ ,  $25^\circ$ ,  $30^\circ$ ,  $34^\circ$  and  $39^\circ$  and

at  $\text{CO}_2$  pressures corresponding with 0.5 to 30.8%  $\text{CO}_2$  in the gas phase. (Leather and Sen, Chem. Soc. 1915, 108 (2) 13.)

Easily sol. in acids, even when dil.

Not decomp. by 1 pt.  $\text{H}_2\text{SO}_4$  + 6 pts alcohol, or by alcoholic solutions of glacial acetic, racemic, or tartaric acids, but is slowly decomp. by alcoholic solution of citric acid, or  $\text{HNO}_3$  + abs alcohol. (Butini, 1827.)

100 pts.  $\text{NaCl}$  + Aq (2.525%) dissolve 0.1250 pt., calculated as  $\text{MgO}$ . (Lubavm.)

1%  $\text{Na}_2\text{CO}_3$  + Aq, when mixed with 1%  $\text{MgSO}_4$  + Aq, cause no ppt., but 1.5–2% solutions ppt. this salt. (Brandes, 1825.)

More sol. in  $\text{NH}_4\text{Cl}$  + Aq than  $\text{CaCO}_3$ . Sol. in  $\text{NH}_4\text{NO}_3$  + Aq, but less easily than in  $\text{NH}_4\text{Cl}$  + Aq.

### Solubility in $\text{KHCO}_3$ + Aq at $t^\circ$ .

Values are given in mol./litre.

$t^\circ$	K	Mg	Solid phase
15°	0 0	0 0095	$\text{MgCO}_3 + 3\text{H}_2\text{O}$
	0 0992	0 0131	"

	0 5088	0 0184	$\text{MgCO}_3 + 3\text{H}_2\text{O} + \text{MgCO}_3$
			$\text{KHCO}_3 + 4\text{H}_2\text{O}$
	0 6231	0 0153	$\text{MgCO}_3, \text{KHCO}_3 + 4\text{H}_2\text{O}$
	0 8435	0 0119	"

The experiments were performed in such a way as to prevent, as far as possible, loss of  $\text{CO}_2$  from the solutions.

(Auerbach, Z. Elektrochem. 1904, 10. 164.)

1 l.  $\text{H}_2\text{O}$ , containing 6%  $\text{MgSO}_4 + 7\text{H}_2\text{O}$  and

a little  $\text{NaCl}$ , dissolves 5 g  $\text{MgCO}_3$ . (Hunt, Sill. Am. J. (2) 42, 49.)

More sol. in cold alkali borates + Aq than in hot. (Wittstein.)

Sol in Na citrate + Aq.

+  $4\text{H}_2\text{O}$ . Efflorescent.

+  $5\text{H}_2\text{O}$ . Two modifications.

$\alpha$ . Plates. Sol in 600 pts.  $\text{H}_2\text{O}$  at  $0-7^\circ$ ; solution gradually separates out  $\text{MgCO}_3 + 2\text{H}_2\text{O}$ .  $\text{H}_2\text{CO}_3$  + Aq sat. at 3–4 atmos. pressure dissolves 9% at  $0-4^\circ$ .  $\text{MgSO}_4$  + Aq dissolves 4% moist salt at  $3-4^\circ$ , and it is easily sol. in  $\text{Na}_2\text{CO}_3$ , or  $\text{NaHCO}_3$  + Aq. (Norgaard.)

$\beta$ . Prisms. More efflorescent than  $\alpha$ . Sol in 600 pts  $\text{H}_2\text{O}$  but not in  $\text{MgSO}_4$ , or  $\text{Na}_2\text{CO}_3$  + Aq. Both forms are decomp. by boiling  $\text{H}_2\text{O}$ . (Norgaard.)

### Magnesium hydrogen carbonate, $\text{MgH}_2(\text{CO}_3)_2(?)$ .

Known only in solution.

1 l.  $\text{H}_2\text{CO}_3$  + Aq sat. at 1 atmos. pressure dissolves 23.5 g  $\text{MgCO}_3$ . (Bureau.)

1 l. carbonic acid water dissolves 0.115 g. magnesite at  $18^\circ$  and 0.75 m. pressure (Cossa, B. 2. 807.)

1 pt  $\text{MgCO}_3$  dissolves in  $\text{H}_2\text{O}$  saturated with  $\text{CO}_2$  at  $5^\circ$  and a pressure of—

1	2	3	4	5	6 atmospheres
in 161	144	134	100	7	110
					76 pts. $\text{H}_2\text{O}$

(Merkel, Techn. J. B. 1867. 213.)

$\text{H}_2\text{CO}_3$  + Aq sat at 3–4 atmos. pressure and  $0-4^\circ$  dissolved 9%  $\text{MgCO}_3 + 5\text{H}_2\text{O}$ . (Norgaard.)

$\text{MgCO}_3 + 3\text{H}_2\text{O}$  is sol in 72.4 pts.  $\text{H}_2\text{CO}_3$  + Aq sat. at  $20^\circ$  and ord. pressure; 30.5 pts.  $\text{H}_2\text{CO}_3$  + Aq sat. at 2 atmos. pressure, 26.0 pts  $\text{H}_2\text{CO}_3$  + Aq sat at 3 atmos. pressure, 21.1 pts.  $\text{H}_2\text{CO}_3$  + Aq sat. at 4 atmos pressure; 17.09 pts.  $\text{H}_2\text{CO}_3$  + Aq sat. at 5 atmos pressure (Beckurts, J. B. 1881. 212.)

1.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  at p pressure and  $t^\circ$  dissolves g  $\text{MgCO}_3$ .

p atmos	$t^\circ$	g $\text{MgCO}_3$	p mm	$t^\circ$	g $\text{MgCO}_3$
1 0	19 5	27 79	751	13 4	28 45
2 1	19 5	33 11	760	19 5	25 79
3 2	19 7	37 3	762	29 3	21 95
4 7	19 0	43 5	764	46	15 7
5 6	19 2	46 2	764	62	10 4
6 2	19 2	48 51	765	70	8.1
7 5	19 5	51 2	765	82	4 9
9 0	18 7	56 59	765	91	2 4
..	...		765	100	0 0

(Engel and Ville, C. R. 93. 34.)

The low figures of other observers are due to their using basic carbonates. By very careful experiments it was found that 1 l.  $\text{H}_2\text{O}$

sat. with  $\text{CO}_2$  at 1 atmos. pressure and  $t^\circ$  dissolved the following amts. of  $\text{MgCO}_3$ :

$t^\circ$	$\frac{\text{g.}}{\text{cc. CO}_2}$	$t^\circ$	$\frac{\text{g.}}{\text{MgCO}_3}$	$t^\circ$	$\frac{\text{g.}}{\text{MgCO}_3}$
3 5	35.6	18	22 1	40	22 1
12	28 5	30	15 8	50	9 5

(Engel, C. R. 100. 444.)

1.9540 g. are sol. 1 l.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Treadwell and Reuter, Z. anorg. 1898, 17. 202.)

$\text{MgH}_2(\text{CO}_3)_2$  is not stable except in the presence of free  $\text{CO}_2$ .

At  $15^\circ$  and 760 mm., a solution having the partial pressure of  $\text{CO}_2=0$ , contains 1.9540 g.  $\text{MgH}_2(\text{CO}_3)_2$  and 0.7156 g.  $\text{MgCO}_3$  per liter. (Treadwell and Reuter, Z. anorg. 1898, 17. 204.)

Solubility of  $\text{MgH}_2(\text{CO}_3)_2$  in  $\text{H}_2\text{O}$  containing carbonic acid, at  $15^\circ$ .

% carbonate and in the form of $\text{CO}_2$ and $\text{H}_2\text{O}$	partial pressure mm. Hg.	mg. free $\text{CO}_2$	mg. $\text{MgH}_2(\text{CO}_3)_2$ in 100 cc. of the solution	mg. $\text{MgCO}_3$ in 100 cc. of the solution	mg. Mg

(Treadwell and Reuter, Z. anorg. 1898, 17. 200.)

No bicarbonate of magnesium is formed under pressures of  $\text{CO}_2$  up to five atmospheres at  $0^\circ$ . (Cameron, J. phys. Chem. 1903, 12. 570.)

A critical analysis and recalculation of results of Engel and others is given by Johnston (J. Am. Chem. Soc. 1915, 37. 2001.)

Solubility in  $\text{NaCl}+\text{Aq}$  at  $23^\circ\text{C}$ . in equilibrium with an atmosphere of  $\text{CO}_2$

g. $\text{NaCl}$ per liter	g. $\text{Mg}(\text{HCO}_3)_2$ per liter

(Cameron and Seidell, J. phys. Chem. 1903, 7. 582.)

Solubility in  $\text{Na}_2\text{SO}_4+\text{Aq}$  at  $23^\circ\text{C}$  in equilibrium with an atmosphere of  $\text{CO}_2$ .

Strength of $\text{Na}_2\text{SO}_4+\text{Aq}$	g. $\text{Mg}(\text{HCO}_3)_2$ in 100 ccm.
0 0	1.463
12%	1.616
saturated	1.612

(Cameron and Seidell.)

**Magnesium potassium carbonate,**  
 $\text{MgK}_2(\text{CO}_3)_2+4\text{H}_2\text{O}$ .

Quickly decomp. by cold  $\text{H}_2\text{O}$ . (Deville, A. ch. (3) 33. 87.)

Ppt. Decomp. by  $\text{H}_2\text{O}$  (Reynolds, Chem. Soc. 1898, 73. 204.)

$\text{MgKH}(\text{CO}_3)_2+4\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ , but decomp. thereby into an insol. basic Mg carbonate, and  $\text{MgH}_2(\text{CO}_3)_2$  and  $\text{KHCO}_3$ , which dissolve (Berzelius.)

**Magnesium rubidium hydrogen carbonate,**  
 $\text{MgRbH}(\text{CO}_3)_2+4\text{H}_2\text{O}$ .

Decomp. in the air (Erdmann, A. 1897, 294. 75.)

**Magnesium sodium carbonate,  $\text{MgCO}_3$ ,**  
 $\text{Na}_2\text{CO}_3$ .

Quickly decomp. with  $\text{H}_2\text{O}$ . (Deville, A. ch. (3) 33. 89.)  
 $+15\text{H}_2\text{O}$ . (Norgaard.)

**Magnesium sodium carbonate sodium chloride,  $\text{MgCO}_3$ ,  $\text{Na}_2\text{CO}_3$ ,  $\text{NaCl}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (de Schulten, C. R. 1896, 122. 1427.)

**Manganous carbonate,  $\text{MnCO}_3$**

Permanent. Practically insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{CO}_3+\text{Aq}$  and in acids generally.

1 l.  $\text{H}_2\text{O}$  dissolves 0.065 g. at  $25^\circ$ . (Agono and Valla, Att. Accad. Linc. 1911, 20. II. 708.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Min. *Rhodochroite*.

$+1/2$ , or  $1\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. Sol. in  $\text{H}_2\text{CO}_3+\text{Aq}$ . 1 pt.  $\text{MnCO}_3$  requires 2000 pts.  $\text{H}_2\text{CO}_3+\text{Aq}$  for solution.

(Lassaigne.) Sol. in 7680 pts  $H_2O$ , and 3840 pts.  $H_2O$  containing  $CO_2$ . (Jahn.) When freshly precipitated is sol. in  $NH_4$  salts + Aq. (Wittstein.) Not more sol. in  $H_2O$  containing  $Na_2CO_3$  or  $K_2CO_3$  than in pure  $H_2O$ . (Ebelmen.) Insol. in  $NH_4Cl$ , or  $NH_4NO_3$  + Aq. (Brett.)

Sol. in ferric salts + Aq, with evolution of  $CO_2$  and pptn. of  $Fe_2C_2H_6$ . (Fuchs.) Not pptd. in presence of Na citrate. (Spuller.)

**Manganous potassium carbonate,**  
 $MnK_2(CO_3)_2 + 4H_2O$ .

Ppt. Decomp. by  $H_2O$  alone.  
Sl sol. in  $Mn(C_2H_3O_2)_2$  + Aq or  $K_2CO_3$  + Aq. (Reynolds, Chem. Soc 1898, 73. 204.)

**Manganous carbonate hydroxylamine,**  
 $4MnCO_3, 3NH_2OH + 2H_2O$

Ppt Sol. in acids. (Goldschmidt and Syngros, Z. anorg. 5, 138.)

**Mercurous carbonate,  $Hg_2CO_3$**

Ppt. Decomp. by hot  $H_2O$ . Sol. in hot or warm  $NH_4Cl$  + Aq, but less easily than mercuric carbonate, less sol. in  $NH_4NO_3$  + Aq. (Brett, 1837.)

Sl. sol. in  $K_2CO_3$  + Aq; partially sol with decomp. in  $NH_4OH$  + Aq. (Wittstein)

**Mercuric carbonate, basic,  $4HgO, CO_2$**

Can be washed with cold  $H_2O$  without decomp. (Millon, A. ch. (3) 19. 368.)

$3HgO, CO_2$ . Insol. in cold  $H_2O$ . Sol. in  $CO_2$  + Aq; sl. sol. in  $K_2CO_3$  + Aq. Easily sol. in  $NH_4Cl$  + Aq (Berzelius.)

**Neodymium potassium carbonate,  $Nd_2(CO_3)_2, K_2CO_3 + 12H_2O$**

Ppt. Sol. in 30%  $K_2CO_3$  + Aq. (Meyer, Z. anorg. 1904, 41. 105.)

**Neodymium sodium carbonate,  $2Nd_2(CO_3)_2, 3Na_2CO_3 + 22H_2O(?)$**

Ppt. Easily decomp.  
Sl. sol. in conc.  $Na_2CO_3$  + Aq. (Meyer, Z. anorg. 1904, 41. 106.)

**Nickel carbonate, basic,  $3NiO, CO_2 + 5H_2O$**

Min. *Zaratite*. Easily sol in  $HCl$  + Aq.  
Pptd. nickel carbonate is a basic salt of varying composition Insol in  $H_2O$  or  $H_2CO_3$  + Aq Sol. in acids Sol. in  $(NH_4)_2CO_3$  + Aq;

very sl. sol. in  $Na_2CO_3$  + Aq; sol in warm  $NH_4Cl$  + Aq, and  $KCN$  + Aq (Rose)

Not pptd. in presence of Na citrate (Spuller.)

**Nickel carbonate,  $NiCO_3$**

1 l  $H_2O$  dissolves 0.0925 g at 25% (Agemo and Valla, Att. Accad. Linc. 1911, 20, II. 706.)

Not attacked by cold conc.  $HCl$ , or  $HNO_3$  + Aq. (Senarmont, A. ch. (3) 30. 138.)

+  $6H_2O$  Sol. in acids (Deville, A. ch. (3) 35. 446.)

See also Carbonate, nickel, basic.

**Nickel potassium carbonate,  $NiCO_3, K_2CO_3 + 4H_2O$**

Ppt (Deville, A. ch. (3) 33. 96)  
 $NiCO_3, KHCO_3 + 4H_2O$  Decomp. by  $H_2O$ , but may be washed by  $KHCO_3$  + Aq without decomp. (Rose, Pogg. 84. 566)

**Nickel sodium carbonate,  $NiCO_3, Na_2CO_3 + 10H_2O$**

Ppt. (Deville)

**Nickel carbonate hydroxylamine,  $2Ni(OH)_2, 4NiCO_3, 5NH_2OH + 7H_2O$**

Ppt. (Goldschmidt and Syngros, Z. anorg. 1894, 5. 143.)

$2Ni(OH)_2, 4NiCO_3, 6NH_2OH + 6H_2O$

Ppt. (Goldschmidt and Syngros.)

**Palladium carbonate,  $PdCO_3, 9PdO + 10H_2O$**

Insol in  $H_2O$ ; partly sol. in  $NH_4OH$  + Aq; sl. sol. in  $Na_2CO_3$  + Aq, sol. in acids. (Kane, 1842.)

**Potassium carbonate,  $K_2CO_3$**

Deliquescent. Very sol. in  $H_2O$  with evolution of heat

Sol in 1.05 pts.  $H_2O$  at 3°, 0.962 pt. at 6°, 0.900 pt. at 12.6°, 0.747 pt. at 20°, and 0.490 pt. at 70° (Osann)

Sol in 0.82 pt.  $H_2O$ . (M. R. and P.)

Sol in 0.922 pt.  $H_2O$  at 15° (Gränel)

Sol. in 1 pt.  $H_2O$  (Ubl)

100 pts.  $H_2O$  at 15° dissolve 100 pts.  $K_2CO_3$ . (Ure's Diet.)

When  $K_2CO_3 + Aq$  is sat. with  $NH_3$ , two layers form. When  $K_2CO_3$  is added to  $NH_4OH + Aq$ , it dissolves with formation of two layers and evolution of  $NH_3$ . The same takes place also when sat.  $K_2CO_3 + Aq$  and  $NH_4OH + Aq$  are brought together. (Girard, Bull. Soc. (2) 43. 552.)

Solubility of  $K_2CO_3 + KHCO_3$  in  $H_2O$  at  $70^\circ$ .

\* Solution separates into two layers.  
(de Waal, Dissert. Leiden, 1910)A full discussion of the solubility of  $K_2CO_3$  in methyl, ethyl, propyl, isopropyl, and allyl alcohols is given by Frankforter and Frary (J. phys. Ch. 1913, 17, 402), and Frankforter and Temple (J. Am. Chem. Soc. 1915, 37, 2697).

$K_2CO_3$  will "salt out" acetone from aqueous solution. The table shows the composition of the solutions at the points at which inhomogeneous solutions of  $K_2CO_3$ , acetone and  $H_2O$  just become homogeneous at 20°. 100 g. of the solution contain

$K_2CO_3$	$H_2O$	acetone	$K_2CO_3$	$H_2O$	acetone
18.84	73.22	7.94	2.43	55.36	42.21
13.32	71.38	15.30	22.29	72.81	4.90
11.83	70.34	17.83	17.86	73.12	9.02
10.13	69.03	20.84	15.81	72.53	11.66

3.80	59.79	36.41	0.50	40.69	58.81
3.18	57.95	38.87	0.46	40.48	60.06
2.73	56.50	40.77	.	.	.

(Frankforter and Cohen, J. Am. Chem. Soc. 1914, 36, 1121.)

Insol in benzonitrile (Naumann, B. 1914, 47, 1370.)

Insol in methyl acetate (Naumann, B. 1909, 42, 3790); ethyl acetate. (Naumann, B. 1910, 34, 314.)

Sol in phenol.

Sol. in 13.5 pts. glycerine of 1.225 sp gr. (Vogel, N. Repert. 16, 557.)

100 g. sat.  $K_2CO_3$  + sugar + Aq contains 22.44 g.  $K_2CO_3$  and 56 g. sugar at 31.25° (Köhler, Z. Ver. Zuckerind 1897, 47, 447.)

+  $H_2O$ .

+  $1\frac{1}{2}H_2O$ . Very deliquescent. (Pohl.) Deliquescent only in very moist air. (Städeler.)

Sol. in  $H_2O$  with evolution of heat. (Pohl.)

Sol. at 17.6° with absorption of heat, at 32° with evolution of heat, and at 25° with neither absorption nor evolution of heat. (Berthelot, C. R. 78, 1722.)

Sat. solution of  $K_2CO_3$  +  $1\frac{1}{2}H_2O$  in  $H_2O$  contains 53.27 g. anhydrous  $K_2CO_3$  in 100 g. solution at 80°. (de Waal, Dissert. 1910.)

+  $2H_2O$ . Salt usually given as containing  $1\frac{1}{2}H_2O$  contains  $2H_2O$ . (Gerlach, Z. anal. 26, 460.)

Sat. solution of  $K_2CO_3$  +  $2H_2O$  contains 112 g. anhydrous  $K_2CO_3$  in 100 g.  $H_2O$  at 25°. (Osaka, J. Tok. Ch. Soc. 1911, 32, 870.)

+  $4H_2O$ . Not deliquescent in closed vessels. (Gerlach, l. c.)

Potassium hydrogen carbonate,  $KHCO_3$ .

Not deliquescent.

Sol. in 3.5 pts  $H_2O$  at 15° (Redwood) Sol in 4 pts  $H_2O$  at moderate temperatures (Bergmann) Sol in 0.8334 pt. boiling  $H_2O$  (Pelletier); in 4 pts. cold, and 1.2 pts. boiling  $H_2O$  (M. R. and P.'s Pharm.) Sol in 4 pts  $H_2O$  at 18.75° (Abt.) 100 pts  $H_2O$  at 13.3° dissolve 30 pts and at 100°, 83 pts (Ure's Diet) 100 pts  $H_2O$  at 10-11° dissolve 26.1 pts  $KHCO_3$ , and the sp gr of solution is 1.1535 (Anshon, Dingl 161 216)

100 pts.  $H_2O$  dissolve at—

0°	10°	20°	30°
19.61	23.23	26.91	30.57 pts. $KHCO_3$ ,
40°	50°	60°	70°
34.15	37.92	41.35	45.24 pts. $KHCO_3$ .

(Poggiale, A. ch. (3) 8, 468.)

100 pts  $H_2O$  dissolve pts.  $KHCO_3$  at t°.

t°	Pts $KHCO_3$	t°	Pts $KHCO_3$
0	22.4	40	45.2
20	33.2	60	46.4

(Dibbitts, J. pr. (2) 10, 417.)

Sp gr. of  $KHCO_3$  + Aq at 15° containing 5%  $KHCO_3$  = 1.0823; containing 10%  $KHCO_3$  = 1.0674. (Kohlrausch, Z. anal. 28, 472.)

Sol. in 1200 pts. boiling alcohol. (Berthelot.) Insol. in alcohol. (Dumas.)

100 pts.  $H_2O$  dissolve 19.3 pts.  $KHCO_3$  and 8.3 pts.  $NaHCO_3$ , if the sat. solution of latter is sat. with former; and 26.1 pts  $KHCO_3$  and 6.0 pts  $NaHCO_3$ , if the sat. solution of the former is sat with the latter, all at 10° (Mulder, J. B. 1866, 67.)

Insol. in sat.  $K_2CO_3$  + Aq. (Engel, C. R. 102, 365.)

Solubility of  $KHCO_3$  +  $KNO_3$  in  $H_2O$  in an atmosphere of  $CO_2$ .

1 litre of the solution contains			
at 14.5°		at 25.2°	
Mol $KHCO_3$	Mol $KNO_3$	Mol $KHCO_3$	Mol $KNO_3$
0.00	2.33	0.00	3.28
0.39	2.17	0.89	2.84
0.76	2.03	1.33	2.65
1.16	1.92	1.91	2.45
1.55	1.81	.	.

This case is complicated by the fact that  $KNO_3$  is more sol. in  $H_2O$  sat with  $CO_2$  than in pure  $H_2O$ .

(Touren, C. R. 1900, 131, 261.)

Insol. in benzonitrile (Naumann, B. 1914, 47, 1370.)

Insol in methyl acetate (Naumann, B. 1909, 42, 3790); ethyl acetate (Naumann, B. 1910, 43, 314.)

Potassium praseodymium carbonate,  $K_2CO_3$ ,  $Pr_2(CO_3)_3$  +  $12H_2O$ .

Ppt. Sol. in 20%  $K_2CO_3$  + Aq (Meyer, Z. anorg. 1904, 41, 104.)

Potassium samarium carbonate,  $K_2CO_3 \cdot Sm_2(CO_3)_3 + 12H_2O$ .  
(Cleve.)

Potassium silver carbonate,  $KAgCO_3$ .  
Decomp. by  $H_2O$ . (de Schulten, C. R. 105. 811.)

Ppt. Decomp. by  $H_2O$ . (Reynolds, Chem. Soc 1898, 73 265.)

Potassium sodium carbonate,  $KNaCO_3 + 6H_2O$

Slightly efflorescent. Sol. in 0.75 pt  $H_2O$  at  $12.5^\circ$ ; in 0.54 pt.  $H_2O$  at  $15^\circ$ .

Sat. solution at  $15^\circ$  has sp gr. = 1.366. (Stolba, J. pr. 94. 406.)

Decomp. by recrystallizing from  $H_2O$ , but crystallizes undecomposed from sat.  $K_2CO_3 + Aq$ .

Sol. in  $H_2O$  (Osaka, C. A. 1911. 2601.)  
See  $K_2CO_3 + Na_2CO_3$  under  $Na_2CO_3$ .

+  $3H_2O$ . (Kreman and Zitey, M. 1909. 30. 317.) Does not exist (Osaka.)

$K_2CO_3 \cdot 2Na_2CO_3 + 18H_2O$ . Sl. efflorescent. Very sol. in  $H_2O$ . (Marignac.)

Potassium stannous carbonate,  $K_2CO_3 \cdot 2SnCO_3 + 2H_2O$

Decomp. by  $H_2O$  (Deville)

Potassium uranyl carbonate,  $2K_2CO_3 \cdot (UO_2)_2CO_3$ .

Sol. without decomp. in 13.5 pts.  $H_2O$  at  $16^\circ$ , and in somewhat less warm  $H_2O$ . Sol. in boiling  $H_2O$  with decomp.

More sol. in  $K_2CO_3$ , or  $KHCO_3 + Aq$  than in  $H_2O$ . (Rose.)

Insol. in alcohol. (Ebelmen, A. ch. (3) 5. 189.)

Potassium zinc carbonate,  $4K_2O \cdot 6ZnO \cdot 11CO_2 + 8H_2O$ .

Can be washed with cold  $H_2O$  without decomp. (Deville, A. ch. (3) 33. 99.)

Praseodymium carbonate,  $Pr_2(CO_3)_3 + 8H_2O$ .

Sol. in  $H_2O$ . (von Schule, Z. anorg. 1898, 18. 362.)

Praseodymium sodium carbonate,  
 $2Pr_2(CO_3)_3 \cdot 3Na_2CO_3 + 22H_2O(?)$ .

Ppt. Easily decomp. (Meyer, Z. anorg. 1904, 41. 105.)

Radium carbonate.

Less sol. in  $H_2O$  than corresponding Ba comp. (Curne, Dissert 1903.)

Rubidium carbonate,  $Rb_2CO_3$ .

Very deliquescent, and sol. in  $H_2O$ . 100 pts. absolute alcohol dissolve 0.74 pt.  $Rb_2CO_3$ . (Bunsen.)

Rubidium hydrogen carbonate,  $RbHCO_3$ .

Not deliquescent. Easily sol. in  $H_2O$ . (Bunsen.)

Samarium carbonate,  $Sm_2(CO_3)_3 + 3H_2O$ .  
Insol. in  $H_2O$ . (Cleve, Bull. Soc. (2) 43. 168.)

Samarium sodium carbonate,  $Sm_2(CO_3)_3 \cdot Na_2CO_3 + 16H_2O$ .

Ppt. (Cleve.)

Scandium carbonate,  $Sc_2(CO_3)_3 + 12H_2O$ .

(Crookes, Roy. Soc. Proc. 1908, 80, A. 518.)

Scandium sodium carbonate,  $Sc_2(CO_3)_3 \cdot 4Na_2CO_3 + 6H_2O$ .

Difficultly sol. in  $H_2O$ .

Sol. in cold, less sol. in hot alkali carbonates +  $Aq$  (R. Meyer, Z. anorg. 1910, 67. 410.)

Silver carbonate,  $Ag_2CO_3$ .

Somewhat sol. in  $H_2O$ . Sol. in 31,978 pts.  $H_2O$  at  $15^\circ$ . (Kremers, Pogg. 85. 248.) 1 g.  $Ag_2CO_3$  dissolves in 21 boiling  $H_2O$ . (Joulin, A. ch. (4) 30. 260.)

Solubility in  $H_2O$  at  $25^\circ = 1.16 \times 10^{-4}$  mol./l. (Spencer and Le Pla, Z. anorg. 1910, 65. 14.)

1 l.  $H_2O$  at  $25^\circ$  dissolves  $1.2 \times 10^{-4}$  gram atoms of silver. (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

Insol. in  $H_2CO_3 + Aq$  (Beigman.) Sol. in 961 pts.  $H_2CO_3 + Aq$ . (Lassagne.) 1 l. sat.  $H_2CO_3 + Aq$  dissolves 0.846 g.  $Ag_2CO_3$  at  $15^\circ$ . (Johnson, C. N. 54. 75.)

Sol. in  $(NH_4)_2CO_3 + Aq$  or  $NH_4OH + Aq$ ; sl. sol. in  $K_2CO_3 + Aq$  (Wittstaten.) Easily sol. in  $Na_2S_2O_3 + Aq$  (Herschel, 1819.) Sol. in hot  $NH_4Cl + Aq$ , and sl. sol. in  $NH_4NO_3 + Aq$ . (Brett, 1837.) Not pptd. in presence of  $Na$  citrate (Spiller.) Decomp. by  $HCl + Aq$ , and chlorides +  $Aq$ .

Somewhat sol. in conc.  $NaNO_3 + Aq$ . (de Connick, Belg. Acad. Bull. 1909, 333.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in alcohol

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

Silver carbonate ammonia.

Easily sol. in  $H_2O$ . Sol. in  $NH_4OH + Aq$ , from which it is precipitated by absolute alcohol. (Berzelius.)

$Ag_2CO_3 \cdot 4NH_3$ . Ppt. Insol. in alcohol. (Kcen, C. N. 31. 231.)

Sodium carbonate,  $Na_2CO_3$ .

Anhydrous. Sol. in  $H_2O$  with evolution of heat.

Sol. in 5.967 pts.  $H_2O$  at  $15^\circ$ . (Freemant.) 100 pts.  $H_2O$  at  $14^\circ$  dissolve 7.74 pts.  $Na_2CO_3$ , or 20.64 pts.  $Na_2CO_3 \cdot 10H_2O$  is sol. in rather less than 1 pt. boiling  $H_2O$ . (Thomson, 1831.)

Sol. in 2 pts.  $H_2O$  (Bogman.)

Sol. in 2 pts.  $H_2O$  at  $18.75^\circ$ . (Abl.)

Solubility in 100 pts  $H_2O$  at  $t^\circ$ 

$t^\circ$	Pts $Na_2CO_3$	Pts $Na_2CO_3 + 10H_2O$	$t^\circ$	Pts $Na_2CO_3$	Pts $Na_2CO_3 + 10H_2O$

20	30 83	123 12	104 6	48 50	420 68

(Poggend., A. ch. (3) 8 468)

Possesses four different degrees of solubility, according to different states of molecular constitution and degrees of hydration (Lowel, A. ch. (3) 44, 330)

Little more sol. at 34–38° than at 104°, but maximum of solubility is probably at 15° (Lowel.)

Solubility of  $Na_2CO_3$ ,  $Na_2CO_3 + 10H_2O$ ,  $Na_2CO_3 + 7H_2O$  (a), and  $Na_2CO_3 + 7H_2O$  (b) in  $H_2O$ .

$t^\circ$	Sat. solution of $Na_2CO_3 + 10H_2O$ contains—		Sat. solution of $Na_2CO_3 + 7H_2O$ (b) contains—			Sat. solution of $Na_2CO_3 + 7H_2O$ (a) contains—		
	Pts $Na_2CO_3$ in 100 pts $H_2O$	Pts $Na_2CO_3 + 10H_2O$ in 100 pts $H_2O$	Pts $Na_2CO_3$ in 100 pts $H_2O$	Pts $Na_2CO_3 + 7H_2O$ (b) in 100 pts $H_2O$	Pts $Na_2CO_3 + 10H_2O$ in 100 pts $H_2O$	Pts $Na_2CO_3$ in 100 pts $H_2O$	Pts $Na_2CO_3 + 7H_2O$ (a) in 100 pts $H_2O$	Pts $Na_2CO_3 + 10H_2O$ in 100 pts $H_2O$

(Lowel, A. ch. (3) 33, 382)

100 pts  $H_2O$  at 14° dissolve 60.4 pts.  $Na_2CO_3 + 10H_2O$ ; at 36°, 833 pts.; at 104°, 445 pts. Solubility increases to 36°, then diminishes (Payen, A. ch. (3) 43, 233.)

There are apparently two maxima of solubility; the one occurring at 15°, or even lower, as warm solutions cool; the other at 34–38°, when cold solutions are warmed (Payen, A. ch. (3) 44, 330)

(Mulder, Scheik Verhand. 1864, 129.)

Unable to form supersaturated solutions.

Supersat.  $Na_2CO_3 + Aq$  (2 pts.  $Na_2CO_3$ ,  $10H_2O$ : 1 pt.  $H_2O$ ) may be kept in a flask closed with cotton wool. (Schroder.)

When supersat.  $Na_2CO_3 + Aq$  is exposed to low temperatures, the  $10H_2O$  salt crystallizes out; but under other circumstances two other salts are formed, each containing  $7H_2O$ ; one is four times as sol. at 10° as the  $10H_2O$  salt, and the other twice as sol. See above. (Lowel, A. ch. (3) 33, 337.)

See also  $Na_2CO_3 + H_2O$ ,  $7H_2O$ , and  $10H_2O$ .

(Cameron and Briggs, J. phys. Chem. 1901, 5. 540.)

100 g. a.cohol of 0.941 sp. gr. dissolve 1.2 g.  $\text{NaHCO}_3$  at  $15^\circ$

100 g. glycerol dissolve 8 g.  $\text{NaHCO}_3$  at  $15^\circ$ . (Ossendowski, Pharm. J. 1907, 79. 575.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

Sodium dihydrogen tricarbonates,

More sol. than  $\text{NaHCO}_3$ , less sol. than  $\text{Na}_2\text{CO}_3$  in  $\text{H}_2\text{O}$ . (Rose, Pogg. 34. 160.)

100 pts.  $\text{H}_2\text{O}$  dissolve, calculated as  $2\text{Na}_2\text{O}$ ,  $3\text{CO}_2$ —

at $0^\circ$	12.63 pts.	at $60^\circ$	29.68 pts.

(Poggiale, A. ch. (3) 8. 468.)

Min. *Trona*, *Urao*. See  $\text{Na}_2\text{H}(\text{CO}_3)_2 + 2\text{H}_2\text{O}$ .

**Trisodium hydrogen carbonate**,  $\text{Na}_3\text{H}(\text{CO}_3)_2 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

True formula of "Trona" and "Urao" (Zepharovich, *Zet. Kryst.* 13. 135, de Mondesir, C. R. 104. 1595.)

**Sodium thorium carbonate**,  $3\text{Na}_2\text{CO}_3 \cdot \text{Th}(\text{CO}_3)_2 + 12\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Cleve.)

**Sodium uranyl carbonate**,  $2\text{Na}_2\text{CO}_3 \cdot (\text{UO}_2)_2\text{CO}_3$ .

Slowly sol. in  $\text{H}_2\text{O}$ . Solution sat. at  $15^\circ$  has sp gr = 1.161 (Anthon, *Dingl.* 166. 207.)

**Sodium yttrium carbonate**,  $\text{Na}_2\text{CO}_3 \cdot \text{Y}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

Ppt. Not decomp. by cold  $\text{H}_2\text{O}$  (Cleve.)

**Sodium zinc carbonate**,  $3\text{Na}_2\text{O} \cdot 8\text{ZnO} \cdot 11\text{CO}_2 + 8\text{H}_2\text{O} = 3\text{Na}_2\text{CO}_3 \cdot 8\text{ZnCO}_3 + 8\text{H}_2\text{O}$ .

Sl. decomp. by pure  $\text{H}_2\text{O}$  (Wohler.)

Less easily decomp. by  $\text{H}_2\text{O}$  than most double carbonates. (Deville, A. ch. (3) 33. 101.)

$\text{Na}_2\text{O} \cdot 3\text{ZnO} \cdot 4\text{CO}_2 + 3\text{H}_2\text{O}$ . (Kraut, Z. anorg. 1897, 13. 13.)

**Sodium carbonate sulphite**,  $\text{Na}_2\text{CO}_3 \cdot 2\text{Na}_2\text{SO}_3 + 2\text{H}_2\text{O}$ .

Sol. in hot  $\text{H}_2\text{O}$ , sl. sol. in cold  $\text{H}_2\text{O}$ . (Johnson, J. Soc. Chem. Ind. 1895, 14. 271.)

**Strontium carbonate**,  $\text{SrCO}_3$ .

Sol. in 18,045 pts.  $\text{H}_2\text{O}$  at ordinary temp. (Fresenius.)

Sol. in 12,522 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Kremers, *Pogg.* 85. 247.)

Sol. in 33,000 pts.  $\text{H}_2\text{O}$ . (Bineau, C. R. 41. 511.)

Less sol. in  $\text{H}_2\text{O}$  than  $\text{SrSO}_4$ . (Dulong.)

Sol. in 1536 pts. boiling  $\text{H}_2\text{O}$  (Hope, *Edinb. Trans.* 4. 5.)

Calculated from electrical conductivity of  $\text{SrCO}_3 + \text{Aq}$ ,  $\text{SrCO}_3$  is sol. in 121,760 pts.  $\text{H}_2\text{O}$  at  $8.8^\circ$  and 91,468 pts. at  $24.3^\circ$  (Holleman, Z. phys. Ch. 12. 130.)

1 l.  $\text{H}_2\text{O}$  dissolves 11 mg.  $\text{SrCO}_3$  at  $18^\circ$  (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

"Solubility product" =  $15.67 \times 10^{-10}$  mol. litre. (McCoy and Smith, J. Am. Chem. Soc. 1911, 33. 473.)

Sol. in 833 pts.  $\text{H}_2\text{CO}_3 + \text{Aq}$  at  $10^\circ$ . (Gmelin.)

Sol. in 56,545 pts.  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3$ .

Quite sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ , but reprecipitated on addition of  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Fresenius.)

Partially decomp. by boiling with aqueous solutions of  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{CaSO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{MgSO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{HPO}_4$ ,  $\text{K}_2\text{SO}_3$ ,  $\text{Na}_2\text{SO}_3$ ,  $(\text{NH}_4)_2\text{SO}_3$ ,  $\text{Na}_2\text{B}_4\text{O}_7$ ,

$\text{Na}_2\text{AsO}_3$ ,  $\text{K}_2\text{AsO}_3$ ,  $\text{K}_2\text{C}_2\text{O}_4$ ,  $\text{Na}_2\text{C}_2\text{O}_4$ ,  $\text{NaF}$ , and  $\text{K}_2\text{CrO}_4$ . Decomp. is complete with the  $\text{NH}_4$  salts. (Dulong, A. ch. 82. 286.)

Sl. decomp. by  $\text{Na}_2\text{SO}_4$ , or  $\text{K}_2\text{SO}_4 + \text{Aq}$ . (Persoz.)

Easily sol. in  $\text{NH}_4$  chloride, nitrate, or succinate +  $\text{Aq}$ , but less so than  $\text{BaCO}_3$ . (Fresenius.) Sol. in ferric salts +  $\text{Aq}$ , with pptn of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Sol. in Na citrate +  $\text{Aq}$ . (Spiller.) Not decomp. by a mixture of 1 pt.  $\text{H}_2\text{SO}_4$  and 6 pts. absolute alcohol, or by alcoholic solutions of tartaric, racemic, citric, or glacial acetic acids; immediately decomp. by  $\text{HNO}_3$  + absolute alcohol, or  $\text{H}_2\text{C}_2\text{O}_4$  + abs. alcohol.

Solubility of  $\text{SrCO}_3$  in  $\text{NH}_4\text{Cl} + \text{Aq}$ .

% $\text{NH}_4\text{Cl}$	% $\text{SrCO}_3$
5.35	0.179
10	0.259
20	0.358

(Cantoni and Goguelin, *Bull. Soc.* 1905, (3) 33. 13.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3602.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in acetone and in methylal (Eidmann, C. C. 1899, II. 1014.)

Min. *Strontianite*.

**Strontium hydrogen carbonate.**

$\text{SrCO}_3$  is sol. in 850 pts. of a sat. solution of  $\text{CO}_2$  in  $\text{H}_2\text{O}$ .

**Strontium uranyl carbonate**,  $\text{SrO} \cdot 2\text{UO}_3 \cdot 2\text{CO}_2 + 16\text{H}_2\text{O}$ .

As  $\text{Ba}$  comp. (Blmkoff, *Dissert.* 1900.)

**Terbium carbonate.**

Ppt. Insol. in excess  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Potratz, C. N. 1905, 92. 3.)

**Thallous carbonate**,  $\text{Tl}_2\text{CO}_3$ .

100 pts.  $\text{H}_2\text{O}$  dissolve pts.  $\text{Tl}_2\text{CO}_3$  (C = according to Crookes; L = according to Lamy) at—

$15.5^\circ$	$18^\circ$	$62^\circ$	$100^\circ$	$100.8^\circ$
4.2	5.23	12.85	27.2	22.4
C	L	L	C	L

Insol. in absolute alcohol (L), and ether (C).

Insol. in acetone and pyridine. (Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

**Thallous carbonate, acid**,  $\text{Tl}_2\text{O} \cdot 2\text{CO}_2$ .

Rather easily sol. in cold  $\text{H}_2\text{O}$ . (Carstanjen.)

$\text{TiHCO}_3$ . (Giorgia, Gazz. ch. it. 1894, 24, 474-479.)

Thallous carbonate platinoeyanide,  $\text{Ti}_2\text{CO}_3 \cdot \text{Ti}_2\text{Pt}(\text{CN})_4$ .

Sl. sol. in hot, insol. in cold  $\text{H}_2\text{O}$ . (Friswell, Chem. Soc. (2) 9, 461.)

Thorium carbonate, basic,  $2\text{ThO}_2 \cdot \text{CO}_2 + 3\text{H}_2\text{O}$ .

Insol. in  $\text{CO}_2 + \text{Aq}$ , but sol. in excess of alkali carbonates +  $\text{Aq}$ , if conc.

Tin (stannous) carbonate,  $2\text{SnO}_2 \cdot \text{CO}_2$ .

Easily decomp. on air; insol. in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{CO}_3 + \text{Aq}$ . (Deville, A. ch. (3) 35, 448.)

Uranyl carbonate, basic,  $5(\text{UO}_2)(\text{OH})_2 \cdot 3(\text{UO}_2)\text{CO}_2 + 6\text{H}_2\text{O}$ .

Ppt. (Seubert and Elten, Z. anorg. 1893, 4, 80.)

Ytterbium carbonate, basic,  $\text{Yb}(\text{OH})\text{CO}_3 + \text{H}_2\text{O}$ .

Ppt. (Cleve, Z. anorg. 1902, 32, 146.)

Ytterbium carbonate,  $\text{Yb}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

Ppt. (Cleve, Z. anorg. 1902, 32, 146.)

Yttrium carbonate,  $\text{Y}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , very sl. sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$ . Sol. in  $\text{SO}_2 + \text{Aq}$  and all mineral acids. Sol. in  $\text{NH}_4$  salts, and alkali carbonates +  $\text{Aq}$  to some extent. More sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  than in  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Berlin.) More sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  than cerium, but 5 or 6 times less sol. than glucinum carbonate (Vauquelin.) Sol. in large excess of  $\text{KHCO}_3 + \text{Aq}$ . (Rose.) Slowly sol. in  $\text{NH}_4$  salts +  $\text{Aq}$ . (Berzelius.)

Zinc carbonates, basic,  $8\text{ZnO} \cdot \text{CO}_2 + 2\text{H}_2\text{O}$ ;  $5\text{ZnO} \cdot 2\text{CO}_2 + 3$ , or  $7\text{H}_2\text{O}$ ;  $3\text{ZnO} \cdot \text{CO}_2 + \text{H}_2\text{O}$ ;  $11\text{ZnO} \cdot 4\text{CO}_2 + 14\text{H}_2\text{O}$ ;  $14\text{ZnO} \cdot 5\text{CO}_2 + 9\text{H}_2\text{O}$ ;  $2\text{ZnO} \cdot \text{CO}_2 + \text{H}_2\text{O}$ ;  $8\text{ZnO} \cdot 3\text{CO}_2 + 5\text{H}_2\text{O}$ , etc.

All ppts formed from Zn salts and carbonates +  $\text{Aq}$ . Sol. in 2000-3000 pts. cold  $\text{H}_2\text{O}$ , separates out on heating and does not redissolve on cooling. (Schindler.) Sol. in 20,895 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Kremers, Pogg. 85, 248) Sol. in 44,600 pts.  $\text{H}_2\text{O}$  at ord. temp. (Fresenius)

Sol. in 1428 pts. sat.  $\text{H}_2\text{CO}_3 + \text{Aq}$ . (Lassaigne.) Sol. in 189 pts.  $\text{H}_2\text{CO}_3 + \text{Aq}$  sat. at 4-6 atmos. (Wagner, Z. anal. 6, 107.) Easily sol. in  $\text{KOH}$ ,  $\text{NaOH}$ ,  $\text{NH}_4\text{OH}$ ,  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , and in acids. Somewhat sol. in alkali bicarbonates and  $\text{NH}_4$  salts +  $\text{Aq}$ . (Fresenius.) Sol. in hot (Fuchs), also cold (Brett, 1837)  $\text{NH}_4\text{Cl} + \text{Aq}$ ; less sol. in  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Brett.)

Sol. in all  $\text{NH}_4$  salts +  $\text{Aq}$  excepting  $(\text{NH}_4)_2\text{S} + \text{Aq}$ . (Terreil, Bull. Soc. (2) 9, 441.)

Insol. in  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3 + \text{Aq}$ . Sol. in ferric salts +  $\text{Aq}$  with pptn. of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . (Fuchs, 1831.)

The carbonates described by Boussingault, Waackroder, Rose, and probably all salts between  $\text{ZnO}$ ,  $\text{CO}_2$  and  $5\text{ZnO} \cdot 2\text{CO}_2$  are mixtures. (Kraut, Z. anorg. 1897, 13, 1-15.)

$3\text{ZnO} \cdot \text{CO}_2 + 2\text{H}_2\text{O}$ . Min. Zinc bloom, Hydrazinide.

$\text{ZnCO}_3$ ,  $3\text{ZnO} \cdot \text{H}_2\text{O}$ . Min. Auriscalcic.

Zinc carbonate,  $\text{ZnCO}_3$ .

1 l.  $\text{H}_2\text{O}$  at  $15^\circ$  dissolves 0.01 g.; 1 l.  $\text{H}_2\text{O}$  dissolves  $1.64 \times 10^{-4}$  mols., or 0.206 g.  $\text{ZnCO}_3$  at  $25^\circ$ . (Agono and Valla, Att. acc. Line. 1911, 20, II 706.)

1 l. 5.85%  $\text{NaCl} + \text{Aq}$  dissolves 0.0583 g.; 1 l. 7.45%  $\text{KCl} + \text{Aq}$  dissolves 0.0477 g.  $\text{ZnCO}_3$ . (Essen, Gm.-K. 4, 1, 680.)

Sol. in acids,  $\text{KOH} + \text{Aq}$ , and  $\text{NH}_4$  salts +  $\text{Aq}$ .

Sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$ .

Solubility in various salts +  $\text{Aq}$ .

Solvent	g $\text{ZnCO}_3$ sol in 1 l. of the solvent
10% $\text{NaNO}_3 + \text{Aq}$	0.058981
sat. $\text{NaNO}_3 + \text{Aq}$	0.149000
5% $\text{NaCl} + \text{Aq}$	0.021730
10% $\text{NaCl} + \text{Aq}$	0.046564
sat. $\text{NaCl} + \text{Aq}$	0.130380
10% $\text{Na}_2\text{SO}_4 + \text{Aq}$	0.009513
sat. $\text{Na}_2\text{SO}_4 + \text{Aq}$	0.015521

(Ehlers, Z. Elektrochem. 1912, 18, 728.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 830.)

Insol. in acetone. (Eidmann, C. C. 1899, II 1014; Naumann, B. 1904, 37, 4329.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790); ethyl acetate. (Naumann, B. 1910, 43, 314.)

Min. Calamine, Smithsonite.

Calamine is sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  only in the presence of  $\text{NH}_4$  salts (Brandhorst, Zeit. angew. Ch. 1904, 17, 513.)

+  $1/6\text{H}_2\text{O}$ . (Mikusch, Z. anorg. 1908, 58, 366.)

+  $\text{H}_2\text{O}$ . (Belar, Zeit. Kryst. 1890, 17, 126.)

Zinc carbonate ammonia,  $\text{ZnCO}_3 \cdot \text{NH}_3$ .

Slowly decomp. by  $\text{H}_2\text{O}$ , but not on the air, or by boiling with alcohol (Favre, A. ch. (3) 10, 474.)

Zinc carbonate hydroxylamine,  $\text{ZnCO}_3 \cdot 2\text{NH}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by acids. (Goldschmidt and Syngros, Z. anorg. 5, 129.)

Zirconium carbonate,  $3\text{ZrO}_2 \cdot \text{CO}_2 + 6\text{H}_2\text{O}$ .

Decomp. by hot  $\text{H}_2\text{O}$ , all  $\text{CO}_2$  being given off. (Hermann.)

Sol. in alkali carbonates +  $\text{Aq}$ .

**Percarbonic acid.**

See Percarbonic acid.

**Carbonic anhydride, CO<sub>2</sub>.**

See Carbon dioxide.

**Carbonophosphoric acid.**

Potassium carbonophosphate, (K<sub>2</sub>HPO<sub>4</sub>)<sub>2</sub>, 2CO<sub>2</sub>, 2KHCO<sub>3</sub>.

Known only in solution. (Baillé, C. R. 1903, 137. 566.)

**Carbonyl bromide, COBr<sub>2</sub>.**

Decomp. by H<sub>2</sub>O (Besson, C. R. 1895, 120. 192)

**Carbonyl platinumous bromide, CO, PtBr<sub>2</sub>.**

Sol. in H<sub>2</sub>O with almost instant decomp. Sol. in absolute alcohol. (Pullinger, Chem. Soc. 59. 603)

Quite easily sol. in hot C<sub>6</sub>H<sub>6</sub>, insol. in ligroune, and can be crystallized from CCl<sub>4</sub>. Very easily sol. in HBr + Aq. (Mylus and Forster, B 24. 2432)

**Carbonyl bromochloride, COClBr.**

Decomp. by H<sub>2</sub>O. (Besson.)

**Carbonyl chloride, COCl<sub>2</sub>.**

Phosgene. Cold H<sub>2</sub>O dissolves 1-2 vols. COCl<sub>2</sub> gas with slow decomposition. Alcohol decomp. immediately. Immediately absorbed by KOH, or NH<sub>4</sub>OH + Aq. Very sol. in glacial HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, benzene, and most liquid hydrocarbons (Berthelot, Bull. Soc. (2) 13. 14.)

Sol. in SCl<sub>2</sub>

1 vol. AsCl<sub>3</sub> absorbs 10 vols. COCl<sub>2</sub>

**Dicarbonyl cuprous chloride, Cu<sub>2</sub>Cl<sub>2</sub>, 2CO + 4H<sub>2</sub>O.**

Decomp. by air (Jones, Am. Ch. J. 1899, 22. 305)

**Carbonyl platinumous chloride, 2COCl<sub>2</sub>, PtCl<sub>2</sub>**

Sl. deliquescent. Easily sol. in H<sub>2</sub>O without decomp.; sl. sol. in alcohol. Almost insol. in CCl<sub>4</sub>. (Pullinger, Chem. Soc. 59. 600.)

**Monocarbonyl platinumous chloride, CO, PtCl<sub>2</sub>.**

Decomp. by H<sub>2</sub>O and alcohol; sol. in hot CCl<sub>4</sub>. (Schützenberger, A. ch. (4) 15. 100)

Sol. in conc. HCl + Aq. (Mylus and Forster)

**Dicarbonyl platinumous chloride, 2CO, PtCl<sub>2</sub>.**

Decomp. by H<sub>2</sub>O and alcohol. Sol. in CCl<sub>4</sub>. (Schützenberger)

Decomp. by conc. HCl + Aq. into CO and CO, PtCl<sub>2</sub>. (Mylus and Forster.)

**Sesquicarbonyl platinumous chloride, 3CO, 2PtCl<sub>2</sub>.**

Decomp. by H<sub>2</sub>O or alcohol. Much more sol. in CCl<sub>4</sub> than 2CO, PtCl<sub>2</sub>

**Carbonyl platinumous iodide, CO, PtI<sub>2</sub>.**

Not hygroscopic. Insol. in, but slowly decomp. by, H<sub>2</sub>O. Easily sol. in benzene or ether, also in alcohol, which decomp. on warming; sol. in HI + Aq. (Mylus and Forster.)

**Carbonyl platinumous sulphide, CO, PtS.**

Easily decomp. Insol. in ordinary solvents. (Mylus and Forster)

**Carbonyl sulphide, COS.**

H<sub>2</sub>O absorbs 1 vol. COS.

Absorption of COS by H<sub>2</sub>O at t°

t°	Coefficient of absorption
0	1 333
10	0 835
20	0 561
30	0 403

(Winkler, Z. phys. Ch. 1906, 55. 351.)

1 ccm. H<sub>2</sub>O at 13.5° and 756 mm. pres. dissolves 0.8 ccm. COS. (Hempel, Zeit. angew. ch. 1901, 14. 867.)

1 ccm. of a hydrochloric acid solution of Cu<sub>2</sub>Cl<sub>2</sub> absorbs about 0.2 ccm. COS (Hempel.)

**Carbonyl ferrocyanhydric acid.**

H<sub>2</sub>Fe(CO)(CN)<sub>5</sub>

Very sol. in H<sub>2</sub>O; decomp. on heating. (Müller, A. ch. (6) 17. 94.)

**Cobalt carbonyl ferrocyanide.**

Sl. sol. in H<sub>2</sub>O, very sol. in dil. HNO<sub>3</sub> + Aq. (M.)

**Cupric carbonyl ferrocyanide,**

Cu<sub>2</sub>[Fe(CO)(CN)<sub>5</sub>]<sub>2</sub>.

Insol. in H<sub>2</sub>O, H<sub>2</sub>SO<sub>4</sub>, or dil. HNO<sub>3</sub> + Aq. (M.)

**Iron (ferric) carbonyl ferrocyanide,**

Fe<sub>2</sub>[Fe(CO)(CN)<sub>5</sub>]<sub>2</sub>.

Insol. in H<sub>2</sub>O. Sol. in H<sub>2</sub>C<sub>2</sub>O<sub>4</sub> + Aq. Insol. in acetic, lactic, succinic, tartaric, and citric acids + Aq, but easily sol. in the neutral salts of those acids. Insol. in KCl, or KNO<sub>3</sub> + Aq, but sensibly sol. in Na<sub>2</sub>HPO<sub>4</sub> + Aq. Insol. even on warming in very dil. H<sub>2</sub>SO<sub>4</sub>, or H<sub>2</sub>PO<sub>4</sub> + Aq. (Müller.)

**Potassium carbonyl ferrocyanide,**

K<sub>2</sub>[Fe(CO)(CN)<sub>5</sub>]<sub>2</sub> + 3½ H<sub>2</sub>O.

100 pts. H<sub>2</sub>O dissolve 148 pts. at 16°. (Müller, C. R. 104. 992.)

**Silver carbonyl ferrocyanide,**  
 $\text{Ag}_3\text{Fe}(\text{CO})(\text{CN})_5$ 

Insol. in  $\text{H}_2\text{O}$ ; sl. sol. in dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ , or  $\text{HNO}_3$ +Aq; scarcely attacked by conc.  $\text{HCl}$ + $\text{H}_2\text{O}_2$ +Aq. (Müller.)

**Sodium carbonyl ferrocyanide,**  
 $\text{Na}_3\text{Fe}(\text{CO})(\text{CN})_5+6\text{H}_2\text{O}$ 

Sol. in  $\text{H}_2\text{O}$  (Müller.)

**Uranyl carbonyl ferrocyanide,**  
 $(\text{UO}_2)_2[\text{FeCO}(\text{CN})_5]+5\text{H}_2\text{O}$ 

Sl. sol. in  $\text{H}_2\text{O}$ , but more easily if  $\text{H}_2\text{O}$  is acidified with  $\text{HCl}$ + $\text{H}_2\text{O}_2$ .

**Cericotungstic acid.****Ammonium cericotungstate,**  $2(\text{NH}_4)_2\text{O}$ ,  
 $\text{Ce}_2\text{O}_3$ ,  $16\text{WO}_3+2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. by boiling therewith (Smith, J. Am. Chem. Soc. 1904, 26, 1481.)

**Cerium, Ce.**

Decomp. pure  $\text{H}_2\text{O}$  very slowly at ordinary temp. Not attacked by cold conc.  $\text{H}_2\text{SO}_4$  or red fuming  $\text{HNO}_3$ . Sol. in dil.  $\text{H}_2\text{SO}_4$ +Aq,  $\text{HNO}_3$ +Aq, and conc. or dil.  $\text{HCl}$ +Aq. (Hillebrand and Norton, Pogg. 155, 633.)

**Cerous bromide,  $\text{CeBr}_3$ .**

*Anhydrous.* As the chloride. (Robinson, Proc. Roy. Soc. 37, 150.)

Sol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37, 4328.)

Sol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

+ $x\text{H}_2\text{O}$ . Very deliquescent. (Jolin.)

**Cerium gold bromide,  $\text{CeBr}_3$ ,  $\text{AuBr}_3+8\text{H}_2\text{O}$ .**

See Bromaurate, cerium.

**Cerium carbide,  $\text{CeC}_2$ .**

Decomp. by fused alkali nitrates, chlorates, hydroxides and carbonates; and by conc.  $\text{H}_2\text{SO}_4$  on heating. Insol. in conc.  $\text{HNO}_3$ ; decomp. by  $\text{H}_2\text{O}$  and dil. acids (Moussan, C. R. 1896, 123, 359.)

$\text{CeC}_2$ . Not attacked by hot conc. acids. (Delefontaine, J. B. 1865, 176.)

**Cerous chloride,  $\text{CeCl}_3$ .**

*Anhydrous.* Deliquescent. Sol. in  $\text{H}_2\text{O}$  with hissing and evolution of heat; sol. in alcohol.

Sol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37, 4328.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

+ $7\text{H}_2\text{O}$ . Insol. in  $\text{NH}_4\text{OH}$ +Aq. (Den-  
nis, Z. anorg. 1894, 7, 280.)

+ $7\frac{1}{2}\text{H}_2\text{O}$ . Deliquescent. (Berzelius.)

Decomp. by boiling with  $\text{H}_2\text{O}$ . Sol. in 1 pt.  $\text{H}_2\text{O}$  at ord. temp. and 3-4 pts. alcohol. (Dumas.)

**Ceric chloride.**

Known only in solution, which decomposes by slight heat. (Berzelius.)

**Cerous mercuric chloride.**

Not deliquescent. (v. Bonsdorff.)

$\text{CeCl}_3$ ,  $4\text{HgCl}_2+10\text{H}_2\text{O}$ . Permanent; easily sol. in  $\text{H}_2\text{O}$ . (Jolin, Bull. Soc. (2) 21, 533.)

**Cerium stannic chloride.**

See Chlorostannate, cerium.

**Cerous chloride zinc iodide.**

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Holzmann, J. pr. 84, 76.)

**Cerous fluoride,  $\text{CeF}_3$ .**

Insol. ppt.

+ $\frac{1}{2}\text{H}_2\text{O}$ .

**Ceric fluoride,  $\text{CeF}_4$ .**

Insoluble precipitate (Berzelius.)

+ $\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ . (Brauner, B. 14, 1944.)

**Ceric cobaltous fluoride,  $2\text{CeF}_4$ ,  $\text{CoF}_2+7\text{H}_2\text{O}$ .**

Ppt. Easily decomp. by  $\text{H}_2\text{O}$  (Rimbach, A. 1909, 368, 107.)

**Ceric cupric fluoride,  $2\text{CeF}_4$ ,  $\text{CuF}_2+7\text{H}_2\text{O}$ .**

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Rimbach, l. c.)

**Ceric nickel fluoride,  $2\text{CeF}_4$ ,  $\text{NiF}_2+7\text{H}_2\text{O}$ .**

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Rimbach, l. c.)

**Ceric potassium fluoride,  $2\text{CeF}_4$ ,  $3\text{KF}+2\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . (Brauner, B. 14, 1944; 15, 109.)

Could not be obtained pure. (Rimbach, l. c.)

**Ceric zinc fluoride,  $2\text{CeF}_4$ ,  $\text{ZnF}_2+7\text{H}_2\text{O}$ .**

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Rimbach, l. c.)

**Ceroctic fluoride,  $2\text{CeF}_3$ ,  $\text{CeF}_4$ .**

Mm. Fluoceric.

**Cerium hydride,  $\text{CeH}_3$ .**

Decomp. by acids. (Winkler, B. 24, 873.)

$\text{CeH}_3$ . Decomp. in moist air; decomp. by hot or cold  $\text{H}_2\text{O}$ ; sol. in acids with evolution of  $\text{H}_2$ . Decomp. by alkalis. (Muthmann, A. 1902, 325, 286.)

**Cerous hydroxide,  $\text{Ce}_2\text{O}_3$ ,  $x\text{H}_2\text{O}$ .**

Easily sol. in acids. Insol. in excess of alkali hydroxides+Aq. Sol. in  $(\text{NH}_4)_2\text{CO}_3$ +Aq

100 cem. of a solution in glycerine+Aq containing about 60% by vol. of glycerine contain 7.9 g.  $\text{Ce}_2\text{O}_3$ . (Müller, Z. anorg. 1905, 43, 322.)

Exists in two modifications: one insol. in

cold  $\text{HCl} + \text{Aq.}$ ; the other sol. in cold  $\text{HCl} + \text{Aq.}$  (Brauner, C. N. 1895, 71. 283.)

### Ceric hydroxide, $2\text{CeO}_2, 3\text{H}_2\text{O}$ .

Sol. in  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ ; also in  $\text{HCl} + \text{Aq.}$ , forming cerous chloride and free chlorine. Insol. in hydrofluoric, acetic, or formic acids +  $\text{Aq.}$  Somewhat sol. in dil.  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq.}$  (Ordway, Am. J. Sci. (2) 26. 205.) Insol. in  $\text{NH}_4\text{OH}$ ,  $\text{KOH}$ , and  $\text{NaOH} + \text{Aq.}$  Sl. sol. in alkali carbonates +  $\text{Aq.}$  (Dumas.)

Sl. sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  (Ordway.)  
100 ccm. of a solution in glycerine +  $\text{Aq.}$  containing about 60% by vol. of glycerine contain 0.08 g.  $\text{CeO}_2$ . (Müller, Z. anorg. 1905, 43. 232.)

### Cerous iodide, $\text{CeI}_2$ .

Sol. in acetone. (Eidmann, C. C. 1899, II 1014; Naumann, B. 1904, 37. 4328.)  
+  $9\text{H}_2\text{O}$ . Very deliquescent and sol. in  $\text{H}_2\text{O}$ . (Lange, J. pr. 82. 134.)  
Sol. in alcohol.

### Cerium nitride, $\text{CeN}$ .

Decomp. by  $\text{H}_2\text{O}$  and alkali. Sol. in mineral acids with formation of cerous and ammonium salts. (Muthmann, A. 1902, 325. 272.)

### Cerous oxide, $\text{Ce}_2\text{O}_3$ .

When ignited, insol. in  $\text{HCl} + \text{Aq.}$ , when long digested with  $\text{H}_2\text{SO}_4$ , is sol. in  $\text{HCl} + \text{Aq.}$  with addition of alcohol.

### Ceric oxide, $\text{CeO}_2$ .

When ignited, is only dissolved in traces, even on heating, by  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq.}$  Sol. in conc.  $\text{H}_2\text{SO}_4$  when warmed. Sol. in the cold in a solution of  $\text{KI}$  in  $\text{HCl} + \text{Aq.}$  (Bunsen), in a mixture of  $\text{HCl}$  and  $\text{FeCl}_3 + \text{Aq.}$ , or any reducing substance.

### Cerium peroxide, $\text{Ce}_2\text{O}_6$ .

Insol. in boiling conc. acids. Sol. in  $\text{H}_2\text{SO}_4$  by long digestion. (Popp, A. 131. 361.)

Probably does not exist. (Rammelsberg, Pogg. 108. 40.)

$\text{Ce}_2\text{O}_5$ . (Hermann, J. pr. 30. 184.)

Probably does not exist. (Rammelsberg.)

$\text{CeO}_2 + x\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq.}$  (Popp, A. 131. 361); (Lecoq de Boisbaudran, C. R. 100. 605.)

$\text{CeO}_2 + \text{H}_2\text{O}_2$ , according to Cleve (Bull. Soc. (2) 43. 57.)

### Cerium oxycarbide, $\text{CeC}_2, 2\text{CeO}_2$ .

Stable in the air. Slowly attacked by cold  $\text{H}_2\text{O}$ . With hot  $\text{H}_2\text{O}$  and with acids, it gives unsat. hydrocarbons. (Sterba, C. R. 1902, 134. 1058.)

### Cerium oxychloride, $\text{CeOCl}$ .

Slightly attacked by hot conc.  $\text{HCl} + \text{Aq.}$  Slowly sol. in conc.  $\text{HNO}_3 + \text{Aq.}$  (Wöhler.)

Easily sol. in dil. acids. (Didier, C. R. 101. 882.)

### Cerium oxychloride tungsten trioxide, $\text{CeOCl}, \text{WO}_3$ .

(Didier, C. R. 102. 823.)

### Cerium selenide.

Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in acids. (Berzelius.)

### Cerium silicide, $\text{CeSi}_2$ .

Insol. in  $\text{H}_2\text{O}$ , by which it is acted upon only very slowly.

Sol. in  $\text{HCl}$  and  $\text{HF} + \text{Aq.}$  with evolution of  $\text{H}_2$ .

Not attacked by alkalis +  $\text{Aq.}$  or  $\text{NH}_4\text{OH} + \text{Aq.}$

Insol. in organic solvents. (Sterba, C. R. 1902, 135. 170.)

### Cerium silicide, $\text{Ce}_2\text{Si}_3$ .

Insol. in acids (Ullik, W. A. B. 52. 2. 115.)

### Cerium disulphide, $\text{CeS}_2$ .

Not decomp. by cold  $\text{H}_2\text{O}$ .

Slowly sol. in cold dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  and acetic acid. Rapidly sol. in warm dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  and acetic acid with decomp. (Biltz, B. 1908, 41. 3342.)

### Cerium sesquisulphide, $\text{Ce}_2\text{S}_3$ .

Insol. in, and not decomp. by,  $\text{H}_2\text{O}$ , but easily decomp. by the weakest acids. (Mosander); (Didier, C. R. 100. 1461.)

### Monochloramine, $\text{NH}_2\text{Cl}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Raschig, Ch. Z. 1907, 31. 926.)

### Chlorotetramine comps.

See Chlorotetramine comps.

### Metachlorantimonie acid, $\text{HSbCl}_4 + 4\frac{1}{2}\text{H}_2\text{O}$ .

Hydroscopic. Sol. in  $\text{H}_2\text{O}$  with decomp.; sol. in alcohol, acetone, and acetic acid (Weinland, Z. anorg. 1905, 44. 43.)

### Metachlorantimonie acid ammonia, $\text{HSbCl}_4, 2\text{NH}_3$ .

Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Weinland and Schmid, Z. anorg. 1905, 44. 59.)

### Aluminum metachlorantimonate, $\text{Al}(\text{SbCl}_4)_3 + 15\text{H}_2\text{O}$ .

Hydroscopic.

Sol. in dil.  $\text{HCl} + \text{Aq.}$  (Weinland, B. 1903, 36. 254.)

- Ammonium metachlorantimonate**,  $\text{NH}_4\text{SbCl}_6 + \text{H}_2\text{O}$ .  
Hydroscopic.  
Sol. in  $\text{H}_2\text{O}$ . Solution decomp. slowly when cold, rapidly on warming.  
Sol. in dil.  $\text{HCl}$ . (Weinland, B. 1903, 36, 251.)
- Cadmium metachlorantimonate ammonia**,  $\text{Cd}(\text{SbCl}_4)_2 \cdot 7\text{NH}_3$ .  
Ppt. (Weinland and Schmid, Z. anorg. 1905, 44, 56.)
- Calcium metachlorantimonate**,  $\text{Ca}(\text{SbCl}_4)_2 + 9\text{H}_2\text{O}$ .  
Hydroscopic.  
Sol. in dil.  $\text{HCl} + \text{Aq}$  (Weinland, B. 1903, 36, 253.)
- Chromium metachlorantimonate**,  $\text{Cr}(\text{SbCl}_4)_3 + 13\text{H}_2\text{O}$ .  
Hydroscopic.  
Sol. in dil.  $\text{HCl} + \text{Aq}$ . (Weinland.)
- Chromium orthochlorantimonate**,  $\text{CrSbCl}_6 + 10\text{H}_2\text{O}$ .  
Hydroscopic.  
Sol. in dil.  $\text{HCl} + \text{Aq}$ . (Weinland.)
- Cupric metachlorantimonate ammonia**,  $\text{Cu}(\text{SbCl}_4)_2 \cdot 5\text{NH}_3$ .  
(Weinland and Schmid, Z. anorg. 1905, 44, 55.)
- Glucinum metachlorantimonate**,  $\text{Gl}(\text{SbCl}_4)_2 + 10\text{H}_2\text{O}$ .  
Very hydroscopic.  
Sol. in dil.  $\text{HCl}$ . (Weinland, B. 1903, 36, 252.)
- Iron (ferric) orthochlorantimonate**,  $\text{FeSbCl}_6 + 8\text{H}_2\text{O}$ .  
Hydroscopic.  
Can easily be cryst. from dil.  $\text{HCl} + \text{Aq}$ . (Weinland.)
- Lithium metachlorantimonate**,  $\text{LiSbCl}_6 + 4\text{H}_2\text{O}$ .  
Very hydroscopic.  
Sol. in dil.  $\text{HCl} + \text{Aq}$ . (Weinland, l. c.)
- Magnesium pyrochlorantimonate**,  $\text{MgSbCl}_4 + 9\text{H}_2\text{O}$ .  
Hydroscopic.  
Sol. in dil.  $\text{HCl} + \text{Aq}$ . (Weinland.)
- Nickel metachlorantimonate ammonia**,  $\text{Ni}(\text{SbCl}_4)_2 \cdot 6\text{NH}_3$ .  
Sol. in  $\text{H}_2\text{O}$ . (Weinland and Schmid, Z. anorg. 1905, 44, 57.)
- Potassium metachlorantimonate**,  $\text{KSbCl}_6 + \text{H}_2\text{O}$ .  
Hydroscopic.  
Sol. in  $\text{H}_2\text{O}$ . Solution decomp. slowly when cold, rapidly when warmed.
- Sol. in dil.  $\text{HCl} + \text{Aq}$ . (Weinland, B. 1903, 36, 250.)
- Rubidium metachlorantimonate**,  $\text{RbSbCl}_6$ .  
Hydroscopic.  
Sol. in dil.  $\text{HCl} + \text{Aq}$  (Weinland.)
- Silver metachlorantimonate ammonia**,  $\text{AgSbCl}_6 \cdot 2\text{NH}_3$ .  
Decomp. by  $\text{H}_2\text{O}$ . (Weinland and Schmid.)
- Zinc metachlorantimonate ammonia**,  $\text{Zn}(\text{SbCl}_4)_2 \cdot 4\text{NH}_3$ .  
(Weinland and Schmid.)
- Chlorarsenious acid**.  
See Arsenyl chloride.
- Chlorauric acid**,  $\text{HAuCl}_4 + 4\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ , alcohol, and ether.  
Sol. in  $\text{POCl}_3$ . (Walden, Z. anorg. 1900, 25, 212.)  
Difficultly sol. in  $\text{PCl}_5$ . (Walden.)  
Cryst. with  $3\text{H}_2\text{O}$  as stated by Weber and Schettlander and not with  $4\text{H}_2\text{O}$  as stated by Thomsen. (Schmidt, C. C. 1906, II, 855.)
- Chloraurates**.  
All chloraurates are easily sol. in  $\text{H}_2\text{O}$  and in alcohol. (v. Bonsdorff, 1829.)
- Ammonium chloraurate**,  $\text{NH}_4\text{AuCl}_4 + \text{H}_2\text{O}$ .  
Very easily sol. in  $\text{H}_2\text{O}$ .  
 $+ 2\text{H}_2\text{O}$ . Very easily sol. in  $\text{H}_2\text{O}$ .
- Barium chloraurate**,  $\text{Ba}(\text{AuCl}_4)_2 + 2\text{H}_2\text{O}$ .  
Deliquescent in moist air. Sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff, Pogg. 17, 261.)
- Cadmium chloraurate**.  
Not deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff.)
- Cæsium chloraurate**,  $\text{CsAuCl}_4$ .  
100 pts. aqueous sat. solution contain at:  

10°	20°	30°	40°	50°
0.5	0.8	1.7	3.2	5.4

 pts. anhydrous salt,  

60°	70°	80°	90°	100°
8.2	12.0	16.3	21.7	27.5

 pts. anhydrous salt.  
(Rosenblatt, B. 19, 2538.)  
 $+ \frac{1}{2}\text{H}_2\text{O}$ . (Wells and Wheeler, Am. J. (3) 44, 157.)
- Calcium chloraurate**,  $\text{Ca}(\text{AuCl}_4)_2 + 6\text{H}_2\text{O}$ .  
Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff.)
- Cerium chloraurate**,  $\text{CeCl}_3 \cdot \text{AuCl}_3 + 10\text{H}_2\text{O}$ .  
Extremely deliquescent. Easily sol. in  $\text{H}_2\text{O}$  and absolute alcohol. (Holzmann, C. C. 1863, 206.)  
 $+ 13\text{H}_2\text{O}$ . (Jolin, Bull. Soc. (2) 21, 534.)

**Cobalt chloraurate,  $\text{Co}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  and alcohol (Topsoe).

**Didymium chloraurate,  $\text{DiCl}_2, \text{AuCl}_3 + 10\text{H}_2\text{O}$**

Very deliquescent. (Cleve, Bull. Soc. (2) 43. 361.)

$2\text{DiCl}_2, 3\text{AuCl}_3 + 20\text{H}_2\text{C}$ . (Cleve)

**Gadolinium chloraurate,  $\text{GdCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$**

Sol. in  $\text{H}_2\text{C}$ . (Benedicks, Z anorg 1900, 22. 404.)

**Lanthanum chloraurate,  $\text{LaCl}_3, \text{AuCl}_3 + 5\text{H}_2\text{O}$ .**

Deliquescent in moist air Sol. in  $\text{H}_2\text{O}$ . (Cleve, B. 8. 128.)

**Lithium chloraurate,  $\text{LiAuCl}_4$ .**

100 pts. aqueous solution contain at:

10° 20° 30° 40°  
53.1 57.7 62.5 67.3 pts. anhydrous salt,

50° 60° 70° 80°  
72.0 76.4 81.0 85.7 pts. anhydrous salt.

(Rosenbladt.)

+  $2\text{H}_2\text{O}$  (Antony and Lucchesi, Gazz. ch. it. 1890, 20. 601)

+  $4\text{H}_2\text{O}$ . Not stable

Sol. in  $\text{H}_2\text{O}$  and alcohol (Fasbender, C. C. 1894, I. 409.)

**Magnesium chloraurate,  $\text{Mg}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$ .**

Somewhat deliquescent Sol. in  $\text{H}_2\text{O}$  and alcohol. (Topsoe.)

+  $12\text{H}_2\text{O}$ .

**Manganese chloraurate,  $\text{Mn}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$**

Deliquescent Sol. in  $\text{H}_2\text{O}$  and alcohol. (Topsoe.)

+  $12\text{H}_2\text{O}$ .

**Nickel chloraurate,  $\text{Ni}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$**

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol (Topsoe.)

**Potassium chloraurate,  $\text{KAuCl}_4$ .**

Anhydrous. Very stable. (Lainer, W. A. B. 99, 2b. 247.)

100 pts. solution in  $\text{H}_2\text{O}$  contain at:

10° 20° 30°  
27.7 38.2 48.7 pts. anhydrous salt.

40° 50° 60°  
59.2 70.0 80.2 pts. anhydrous salt.

(Rosenbladt, B. 19. 2538.)

Sol. in  $\text{H}_2\text{O}$  and alcohol; insol. in ether. (Fasbender, C. C. 1894, I. 409.)

1 pt. is sol. in 4 pts. 98% alcohol. (Fasbender, C. C. 1894, II 609.)

+  $2\text{H}_2\text{O}$  Efflorescent

+  $\frac{1}{2}\text{H}_2\text{O}$ .

**Praseodymium chloraurate,  $\text{PrCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$**

Very sol. in  $\text{H}_2\text{O}$ ; sol. in conc.  $\text{HCl}$ . (von Schule, Z anorg 1898, 18. 354.)

**Rubidium chloraurate,  $\text{RbAuCl}_4$ .**

100 pts. sat.  $\text{RbAuCl}_4 + \text{Aq}$  contain at:

10° 20° 30° 40° 50°  
4.6 9.0 13.4 17.7 22.2 pts. anhydrous salt,

60° 70° 80° 90° 100°  
26.6 31.0 35.3 39.7 44.2 pts. anhydrous salt.

(Rosenbladt.)

1 pt. sol. in 54 pts. 98% alcohol. Insol. in ether (Fasbender, C. C. 1894, II 609.)

**Samarium chloraurate,  $\text{SmCl}_3, \text{AuCl}_3 + 10\text{H}_2\text{O}$ .**

Deliquescent Easily sol. in  $\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 43. 165.)

**Scandium chloraurate,  $3\text{ScCl}_3, 2\text{AuCl}_3 + 21\text{H}_2\text{O}$ .**

Very deliquescent. (Crookes, Phil. Trans. 1910, 210. A, 365.)

**Silver chloraurate,  $\text{AgAuCl}_4$ .**

Decomp. in the air.

Decomp. by  $\text{H}_2\text{O}$ ,  $\text{HCl}$  and  $\text{NH}_3$ . (Herrmann, B. 1894, 27. 597.)

**Sodium chloraurate,  $\text{NaAuCl}_4 + 2\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$  and absolute alcohol.

100 pts. aqueous solution contain at:

10° 20° 30°  
58.2 60.2 64.0 pts. anhydrous salt,

40° 50° 60°  
69.4 77.5 90.0 pts. anhydrous salt.

(Rosenbladt.)

Easily sol. in  $\text{NaCl} + \text{Aq}$ .

Easily sol. in  $\text{H}_2\text{O}$ , alcohol and ether. (Fasbender, C. C. 1894, I. 409.)

**Strontium chloraurate.**

Sol. in  $\text{H}_2\text{O}$ . (v. Bonsdorff.)

**Thallium chloraurate.**

(Carstanjen.)

**Ytterbium chloraurate,  $\text{YbCl}_3, \text{AuCl}_3 + 9\text{H}_2\text{O}$ .**

Ppt. (Cleve, Z anorg. 1902, 32. 138.)

**Yttrium chloraurate,  $\text{YtCl}_3, 2\text{AuCl}_3 + 16\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Zinc chloraurate,  $\text{Zn}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Topsoe.)

+  $12\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff.)

**Chlorauricyanhydric acid.**

Barium chlorauricyanide,  $\text{Ba}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  or alcohol. (Landbom, Lund Univ. Arsk. 12. No. 6.)

Potassium chlorauricyanide,  $\text{KAu}(\text{CN})_2\text{Cl}_2 + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  or alcohol.

Strontium chlorauricyanide,  $\text{Sr}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 8\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ .

Zinc chlorauricyanide,  $\text{Zn}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 7\text{H}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$

**Chlorhydric acid, HCl**

*Liquid* Miscible with liquid  $\text{CO}_2$ , and  $\text{H}_2\text{S}$ .

*Gas* Absorbed by  $\text{H}_2\text{O}$  with production of much heat.

$\text{H}_2\text{O}$  absorbs 400–500 vols at ord. temp and pressure or a little less than 1 pt. by weight. (Dalton.)

1 vol  $\text{H}_2\text{O}$  absorbs 480 vols at  $0^\circ$ , sp. gr. of sat. solution is 1.2109 (Davis).

1 vol  $\text{H}_2\text{O}$  absorbs 417 822 vols at  $20^\circ$ , the vol. increasing to 1 4138 vols., 1 vol of  $\text{HCl} + \text{Aq}$  then contains 311 vols  $\text{HCl}$ , has sp. gr. 1.1958, and contains 40 30%  $\text{HCl}$  by weight. (Thompson, 1831.)

1 vol  $\text{H}_2\text{O}$  absorbs 404 vols and sat. solution has 1 21 sp. gr. and contains 42 4%  $\text{HCl}$  by weight. (Wirsten.)

$\text{H}_2\text{O}$  sat. at  $0^\circ$  contains 480 times its vol of  $\text{HCl}$  and sp. gr. = 1.2109, sat. at ord. temp. contains 38 4% of its weight in  $\text{HCl}$ , and sp. gr. = 1.192 (Berzelius).

1 vol  $\text{H}_2\text{O}$  absorbs 5 vols  $\text{HCl}$  at  $0^\circ$ , and 700 mm. pressure, and the liquid formed has the given sp. gr., and contains the given per cent  $\text{HCl}$ .

$t^\circ$	$\gamma$	Sp. gr.	% $\text{HCl}$
0	325.2	1.2257	45.148
4	494.7	1.2265	44.361
8	480.3	1.2187	43.828
12	471.3	1.2148	43.277
14	462.4	1.2074	42.829
18	451.2	1.2064	42.314
18.25	450.7	1.2056	42.283
23	435.0	1.2014	41.536

(Deicke, Pogg. 119 156)

At 760 mm. pressure 1 g.  $\text{H}_2\text{O}$  absorbs g  $\text{HCl}$  at  $t^\circ$ .

$t^\circ$	g. $\text{HCl}$	$t^\circ$	g. $\text{HCl}$	$t^\circ$	g. $\text{HCl}$
0	0.825	22	0.710	44	0.618
2	0.814	24	0.700	46	0.611

10	0.772	32	0.665	54	0.582
12	0.762	34	0.657	56	0.575
14	0.752	36	0.649	58	0.568
16	0.742	38	0.641	60	0.561
18	0.731	40	0.633	.	..
20	0.721	42	0.626	.	.

(Roscoe and Dittmar.)

Conc.  $\text{HCl} + \text{Aq}$  loses  $\text{HCl}$ , and dil  $\text{HCl} + \text{Aq}$  loses  $\text{H}_2\text{O}$  on warming, until an acid of constant composition is formed, containing 20.18%  $\text{HCl}$ , with a sp. gr. of 1.101 at  $15^\circ$ , which can be distilled unchanged at  $110^\circ$  (Bineau, A. ch (3) 7. 257.)

The above is true if barometer is at 760 mm., but the composition changes with the pressure as follows—

mm Hg	% $\text{HCl}$	mm Hg	% $\text{HCl}$	mm Hg	% $\text{HCl}$
50	23.2	800	20.2	1700	18.8
100	22.9	900	19.9	1800	18.7
200	22.3	1000	19.7	1900	18.6
300	21.8	1100	19.5	2000	18.5
400	21.4	1200	19.4	2100	18.4
500	21.1	1300	19.3	2200	18.3
600	20.7	1400	19.1	2300	18.2
700	20.4	1500	19.0	2400	18.1
760	20.24	1600	18.9	2500	18.0

(Roscoe and Dittmar.)

Conc.  $\text{HCl} + \text{Aq}$  gradually gives off  $\text{HCl}$  on the air until it has a sp. gr. 1.128 at  $15^\circ$ , and contains 25 2%  $\text{HCl}$ . (Bineau, l. c.)

According to Roscoe and Dittmar, this depends on the temperature. If a current of air is passed through  $\text{HCl} + \text{Aq}$ , acid or water is given off according as the acid is strong or weak, until an acid of constant composition for a given temperature is formed, as follows—

Temp	% $\text{HCl}$	Temp	% $\text{HCl}$	Temp	% $\text{HCl}$
$0^\circ$	25.0	$35^\circ$	23.9	$70^\circ$	22.6
5	24.9	40	23.8	75	22.3
10	24.7	45	23.6	80	22.0
15	24.6	50	23.4	85	21.7
20	24.4	55	23.2	90	21.4
25	24.3	60	23.0	95	21.1
30	24.1	65	22.8	100	20.7

From the above it is seen that the acid which distills unchanged at a given pressure, that is, boils at a certain constant temperature, is identical with the acid which undergoes no change in composition by a current of dry air at the same temperature, and under the ordinary pressure, thus—

mm Hg	B - pt	% $\text{HCl}$	Temp of air current	% $\text{HCl}$
100	61–62°	22.8	62°	22.9
200	76–77	22.1	77	22.2
300	84–85	21.7	85	21.7
380	91	21.3	91	21.4
490	97	20.9	98	21.1
620	103	20.6		

(Roscoe and Dittmar.)

Solubility of HCl in H<sub>2</sub>O at 0° under different degrees of pressure. P=partial pressure in mm. Hg,  $\pm$  e., total pressure minus the tension of aqueous vapour at the given temp.; G=grammes of HCl dissolved in 1 g. H<sub>2</sub>O at the pressure P and 0° temp.

P	G	P	G

(Schrenemakers, Z. phys. Ch. 1912, 79, 553.)

+  $H_2O$ . F.-pt. -15.35°.

Very sol. in  $H_2O$  but only slightly sol. in HCl. (Rupert, J. Am. Chem. Soc. 1909, 31, 866.)

+  $2H_2O$ . M.-pt. -17.4°

+  $3H_2O$ . M.-pt. -24.8° (Pickering, B. 1893, 26, 280.)

The composition of the hydrates formed by HCl at different dilutions is calculated

from determinations of the lowering of the f.-pt. produced by HCl, and of the conductivity and sp. gr. of HCl+Aq (Jones, Am. Ch. J. 1905, 34. 323.)

**Chlorhydric cyanhydric acid, 3HCl, 2HCN.**

Decomp. by H<sub>2</sub>O or alcohol; sol. in HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>. Insol. in ether, chloroform, or acetic ether. (Claisen, B. 16. 309.)

HCl, HCN Sol. in H<sub>2</sub>O, absolute alcohol, HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, and CHCl<sub>3</sub>, with decomp; decomp. is especially rapid in H<sub>2</sub>O (Gautier, A. ch (4) 17. 130)

**Chloric acid, HClO<sub>3</sub>.**

Known only in aqueous solution, which can be concentrated in vacuo to a sp gr. of 1.282 at 14.2°, and then contains 40.10% HClO<sub>3</sub>, corresponding to HClO<sub>3</sub>+7H<sub>2</sub>O; if left longer in vacuo over H<sub>2</sub>SO<sub>4</sub> an acid corresponding to HClO<sub>3</sub>+4½H<sub>2</sub>O is obtained. Aqueous solution of HClO<sub>3</sub> decomp. at 40°. (Kammerer, Pogg. 138. 390.)

**Chlorates.**

All chlorates except mercurous chlorate are sol. in H<sub>2</sub>O, most of them are deliquescent; many are sol. in alcohol.

**Aluminum chlorate, Al(ClO<sub>3</sub>)<sub>3</sub>+6H<sub>2</sub>O.**

Very hygroscopic. (Dobroserdow, C. C. 1904, II 177.)

+9H<sub>2</sub>O. Very sol. in cold but much less than in hot H<sub>2</sub>O. (Dobroserdow.)

**Ammonium chlorate, NH<sub>4</sub>ClO<sub>3</sub>**

Easily sol. in H<sub>2</sub>O; less sol. in alcohol.

Much less sol. in H<sub>2</sub>O at 0° than NaClO<sub>3</sub>. (Storer.)

Very sl. sol. in absolute alcohol. (Wachter, J. pr. 30. 321)

**Barium chlorate, Ba(ClO<sub>3</sub>)<sub>2</sub>+H<sub>2</sub>O.**

Sol. in 4 pts. cold, and less hot H<sub>2</sub>O. (Chevenux.)

100 pts. H<sub>2</sub>O dissolve at:

0° 20° 40° 60° 80° 100°

22.8 37.0 52.1 77.5 98.0 126.4 pts. Ba(ClO<sub>3</sub>)<sub>2</sub>.

100 grams sat. Ba(ClO<sub>3</sub>)<sub>2</sub>+Aq at t° contain grams anhydrous Ba(ClO<sub>3</sub>)<sub>2</sub>

t°	Grams Ba(ClO <sub>3</sub> ) <sub>2</sub>	t°	Grams Ba(ClO <sub>3</sub> ) <sub>2</sub>

\* Bpt. of sat. solution.

(Carlson, Dissert. 1910.)

Only slight traces dissolve in absolute alcohol. (Wachter, J. pr. 30. 334.)

Sol in acetone. (Eidmann, C. C. 1899, II. 1014.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethylacetate (Naumann, B. 1910, 43. 314.)

**Bismuth chlorate.**

Known only in solution, which decomp. on evaporation

**Cadmium chlorate, Cd(ClO<sub>3</sub>)<sub>2</sub>+2H<sub>2</sub>O.**

Very deliquescent; sol. in H<sub>2</sub>O and alcohol. Melts in crystal H<sub>2</sub>O at 80°. (Wachter, J. pr. 30. 321.)

**Solubility in H<sub>2</sub>O.**

Sat. solution contains at:

Sol in acetone. (Naumann, B. 1904, 37. 4328.)

**Cadmium chlorate ammonia, Cd(ClO<sub>3</sub>)<sub>2</sub>, 6NH<sub>3</sub>.**

Ppt. (Ephraim, B. 1915, 48. 49.)

**Cæsium chlorate, CsClO<sub>3</sub>.**

100 g. H<sub>2</sub>O dissolve at:

0°	8°	19.8°	30°	42.2°
2 46	3.50	6 28	9 53	14.94
50°	77°	99°		
19.40	41 65	76.5 g	CsClO <sub>3</sub> .	

(Calzolari, Acc. Sc. med di Ferrara, 1911, 85. 150.)

**Calcium chlorate, Ca(ClO<sub>3</sub>)<sub>2</sub>+2H<sub>2</sub>O.**

Deliquescent; very sol. in H<sub>2</sub>O and alcohol. (Wachter, J. pr. 30. 323)

Melts in its water of crystallization at over 100°.

Sp. gr. of solution sat at 18° = 1.729, containing 64%  $\text{Ca}(\text{ClO}_3)_2$ . (Mylius B. 1897, 30; 1718.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014, Naumann, B. 1904, 37. 4328.)

#### Chromic chlorate.

Easily sol. in  $\text{H}_2\text{O}$ . (Prudhomme, C. C. 1890, I. 668.)

#### Cobaltous chlorate, $\text{Co}(\text{ClO}_3)_2 \cdot 2\text{H}_2\text{O}$ .

(Meusser, B. 1902, 35. 1418.)

+4 $\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at:

18°	21°	35°	47°	61°
64.19	64.39	67.09	69.66	76.12%

Sp. gr. of solution containing 64.19%  $\text{Co}(\text{ClO}_3)_2$  at 18° = 1.861. (Meusser, B. 1902, 35. 1418.)

+6 $\text{H}_2\text{O}$ . Very deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. Melts in crystal  $\text{H}_2\text{O}$  at 50°. (Wächter, J. pr. 30. 321.)

Solubility in  $\text{H}_2\text{O}$

Sat. solution contains at:

-21°	-19°	0°	+10.5°
53.30	53.61	57.45	61.83%

(Meusser, B. 1902, 35. 1418.)

#### Cupric chlorate, basic, $\text{Cu}(\text{ClO}_3)_2 \cdot 3\text{Cu}(\text{OH})_2$ .

Insol. in  $\text{H}_2\text{O}$ . Very sol. in dil. acids. Sol. in warm conc.  $\text{Cu}(\text{ClO}_3)_2 + \text{Aq}$ , the solubility increasing with the conc. and temp. (Bourgeois, Bull. Soc. 1898, (3) 19. 950.)

#### Cupric chlorate, $\text{Cu}(\text{ClO}_3)_2 \cdot 4\text{H}_2\text{O}$ .

Solubility in  $\text{H}_2\text{O}$

Sat. solution contains at:

-31°	-21°	+0.8°	18°	45°
54.59	57.12	58.51	62.17	66.17

59.6° 71°  
69.42 76.9%  $\text{Cu}(\text{ClO}_3)_2$ .

Sp. gr. of the solution containing 62.17%  $\text{Cu}(\text{ClO}_3)_2$  at 18° = 1.695. (Meusser, B. 1902, 35. 1420.)

+6 $\text{H}_2\text{O}$ . Very deliquescent. Easily sol. in  $\text{H}_2\text{O}$  and alcohol. Melts in its crystal  $\text{H}_2\text{O}$  at 65°. (Wächter, J. pr. 30. 321.)

Sp. gr. of  $\text{Cu}(\text{ClO}_3)_2 + \text{Aq}$  at 15°.

% $\text{Cu}(\text{ClO}_3)_2$	2.106	4.778	6.945
Sp. gr.	1.01620	1.03857	1.05714

% $\text{Cu}(\text{ClO}_3)_2$	10.016	14.387
Sp. gr.	1.0844	1.12531

(Traube, Gm.-K. 5. I, 921.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

#### Cupric chlorate ammonia, $\text{Cu}(\text{ClO}_3)_2 \cdot 4\text{NH}_3$ .

Ppt. Not hygroscopic. Insol. in alcohol.  $\text{Cu}(\text{ClO}_3)_2 \cdot 6\text{NH}_3$ . Not hygroscopic. (Ephraïm, B. 1915, 48. 46.)

#### Erbium chlorate, $\text{Er}(\text{ClO}_3)_3 \cdot 8\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol.

#### Glucinum chlorate.

Known only in aqueous solution, which decomposes on evaporation.

#### Ferrous chlorate.

Known only in solution.

#### Ferric chlorate, $\text{Fe}(\text{ClO}_3)_3$ .

Sol. in  $\text{H}_2\text{O}$ .

Basic salt. Insol. in  $\text{H}_2\text{O}$ .

#### Lanthanum chlorate, $\text{La}(\text{ClO}_3)_3$ .

Deliquescent. (Cleve.)

#### Lead chlorate, $\text{Pb}(\text{ClO}_3)_2 \cdot \text{H}_2\text{O}$ .

Deliquescent; easily sol. in  $\text{H}_2\text{O}$  and alcohol. (Wächter, J. pr. 30. 321.)

Sp. gr. of solution sat at 18° = 1.947 and contains 60.2%  $\text{Pb}(\text{ClO}_3)_2$ . (Mylius, B. 1897, 30. 1718.)

100 g.  $\text{H}_2\text{O}$  dissolve 440 g.  $\text{Pb}(\text{ClO}_3)_2$  at 18°; sp. gr. of sat. solution = 1.63. (Carlson, Dissert. 1910.)

#### Lithium chlorate, $\text{LiClO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

Very deliquescent and sol. in  $\text{H}_2\text{O}$ . Very easily sol. in alcohol. Melts at 50° in its crystal water. (Wächter, J. pr. 30. 321.)

$\text{LiClO}_3 + \text{Aq}$  sat. at 18° contains 75.8%  $\text{LiClO}_3$ . Sp. gr. = 1.815. (Mylius, B. 1897, 30. 1718.)

483 g.  $\text{LiClO}_3$  dissolve in 100 g.  $\text{H}_2\text{O}$  at 15°; sp. gr. of solution = 1.82. (Carlson, Dissert. 1910.)

Contains 3 $\text{H}_2\text{O}$  and is not deliquescent. (Lagorio, Zeit. f. Kryst. 15. 80.)

Salt is anhydrous. (Retgers, Z. phys. Ch. 5. 449.)

#### Magnesium chlorate, $\text{Mg}(\text{ClO}_3)_2$ .

128.1 g.  $\text{Mg}(\text{ClO}_3)_2$  dissolve in 100 g.  $\text{H}_2\text{O}$  at 19°; sp. gr. of solution = 1.59. (Carlson, Dissert. 1910.)

Sp. gr. of solution containing 56.5%  $\text{Mg}(\text{ClO}_3)_2$  at 18° = 1.564. (Meusser, l.c.)

Sp. gr. of solution sat at 18° = 1.594, containing 56.3%  $\text{Mg}(\text{ClO}_3)_2$ . (Mylius, B. 1897, 30. 1718.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

+2 $\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at:

39.5°	61°	68°	93°
65.37	69.46	70.69	73.71%

(Meusser, B. 1902, 35. 1416.)

+4H<sub>2</sub>O. Solubility in H<sub>2</sub>O.

Sat. solution contains at:

42°	65.5°
63.82	69.12% Mg(ClO <sub>4</sub> ) <sub>2</sub> .

(Meusser, l.c.)

+6H<sub>2</sub>O. Very deliquescent and sol in H<sub>2</sub>O. Very easily sol. in alcohol. Melts at 40° in its crystal water. (Wächter, J. pr. 30. 325.)

Solubility in H<sub>2</sub>O.

Sat. solution contains at:

-18°	0°	+18°	29°	35°
51.64	53.27	59.50	60.23	63.65% Mg(ClO <sub>4</sub> ) <sub>2</sub> .

(Meusser)

Manganous chlorate, Mn(ClO<sub>3</sub>)<sub>2</sub>.

Known only in solution which decomposes on evaporation. (Wächter.)

Mercurous chlorate, Hg<sub>2</sub>(ClO<sub>3</sub>)<sub>2</sub>.

a. Easily sol. in alcohol and H<sub>2</sub>O. (Wächter, J. pr. 30. 321.)

β. Insol. in H<sub>2</sub>O; easily sol. in HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq. (Wächter.) Decomp. by boiling H<sub>2</sub>O.

Mercuric chlorate, 2HgO, Cl<sub>2</sub>O<sub>2</sub> + H<sub>2</sub>O

Deliquescent. Decomp. by H<sub>2</sub>O into oxide and an acid salt. (Wächter.)

Sol. in 4 pts. cold H<sub>2</sub>O (Chevenix, 1802.)

Nickel chlorate, Ni(ClO<sub>3</sub>)<sub>2</sub> + 4H<sub>2</sub>O.

Solubility in H<sub>2</sub>O

Sat. solution contains at:

48.5°	55°	65°	79.5°
67.60	68.78	69.05	75.50% Ni(ClO <sub>3</sub> ) <sub>2</sub> .

(Meusser, B. 1902, 35. 1419.)

+6H<sub>2</sub>O. Deliquescent. Easily sol in H<sub>2</sub>O and alcohol. Melts in crystal H<sub>2</sub>O at 80°. (Wächter, J. pr. 30. 321.)

Solubility in H<sub>2</sub>O.

Sat. solution contains at:

-18°	-8°	0°	+18°	40°
49.55	51.52	52.66	56.74	64.47% Ni(ClO <sub>3</sub> ) <sub>2</sub> .

Sp. gr. of solution containing 56.74% Ni(ClO<sub>3</sub>)<sub>2</sub> at 18° = 1.661.

Goes over into 4H<sub>2</sub>O salt at 39°. (Meusser.)

156 g. Ni(ClO<sub>3</sub>)<sub>2</sub> dissolve in 100 g. H<sub>2</sub>O at 16°; sp. gr. of solution = 1.76. (Carlson, Dissert. 1910.)

Nickel chlorate ammonia, Ni(ClO<sub>3</sub>)<sub>2</sub>, 6NH<sub>3</sub>.

Ppt. (Ephraim, B. 1915, 48. 47.)

Potassium chlorate, KClO<sub>3</sub>.

Sol. in H<sub>2</sub>O with absorption of heat.

Sol. in about 10 pts cold, and in much less hot H<sub>2</sub>O. (Chevenix, 1802.)

Sol. in 30.03 pts H<sub>2</sub>O at 0°, 17.85 pts. at 13.3°, and in 1.66 pts at 104.78°. (M. R. and F.)

Sol in 16 pts H<sub>2</sub>O at 18.73°. (Abt.)  
100 pts H<sub>2</sub>O at 15.5° dissolve 6.2 pts., at 100°, 40 pts. (Uic'n Diet.)

100 pts H<sub>2</sub>O dissolve pts KClO<sub>3</sub> at t°

35.8	102.5		

(Gerlach, Z. anal. 28, 450.)

Saturated solution boils at 105°. (Kremer.)

Saturated solution boils at 104.2°, and contains 61.5 pts.  $KClO_3$  to 100 pts.  $H_2O$ . (Legrand.)

Saturated solution boils at 103.3°, and contains 60.6 pts.  $KClO_3$  to 100 pts.  $H_2O$  (Griffiths.)

Saturated solution boils at 104.4°. (Gerlach, Z. anal. 28, 427.)

Sol. in pure  $HNO_3$  without decomp., but decomp. at once by  $HNO_3$  containing  $NO_2$  (Millon, A. ch. (3) 6, 92.)

Sol. in sat.  $NH_4Cl$  + Aq without causing pptn.

1 mol. (= 129 pts.)  $KClO_3$  dissolves in 2493 vols.  $H_2O$ ; in 2208 vols.  $H_2O$  when 1 mol. (= 59 pts.)  $NaCl$  is added; in 2060 vols.  $H_2O$  with 2 mols. (= 118 pts.)  $NaCl$ ; and in 1910 vols.  $H_2O$  with 4 mols. (= 236 pts.)  $NaCl$ . (Gladstone, Chem. Soc. 16, 302)

$KClO_3$  is sol. in about—

29.50 pts.  $H_2O$ .

35.50 pts.  $NH_4OH$  + Aq conc.

39.00 pts. dil.  $NH_4OH$  + Aq (1 vol. conc. : 3 vols.  $H_2O$ ).

30.50 pts.  $HNO_3$  + Aq (1 vol. conc.  $HNO_3$  : 5 vols.  $H_2O$ ).

33.0 pts.  $HCl$  + Aq (1 vol. conc.  $HCl$  : 4 vols.  $H_2O$ ).

48.00 pts.  $HC_2H_3O_2$  + Aq (1 vol. commercial  $HC_2H_3O_2$  : 1 vol.  $H_2O$ ).

31.50 pts.  $NH_4Cl$  + Aq (1 pt.  $NH_4Cl$  : 10 pts.  $H_2O$ ).

18.00 pts.  $NH_4NO_3$  + Aq (1 pt.  $NH_4NO_3$  : 10 pts.  $H_2O$ ).

34.00 pts.  $NH_4C_2H_3O_2$  + Aq (dil.  $NH_4OH$  + Aq + dil.  $HC_2H_3O_2$  + Aq).

32.50 pts.  $Na_2C_2O_4$  + Aq (commercial  $HC_2H_3O_2$  +  $Na_2CO_3$  diluted with 4 vols.  $H_2O$ ).

31.50 pts.  $Cu(C_2H_3O_2)_2$  + Aq (See Stolba, Z. anal. 2, 390.)

33.50 pts. cane-sugar (1 pt. cane-sugar : 10 pts.  $H_2O$ ).

36.50 pts. grape-sugar (1 pt. grape-sugar : 10 pts.  $H_2O$ ). (Pearson, Zeit. Chem. 1869, 662.)

Addition of K salts to sat.  $KClO_3$  + Aq ppts  $KClO_3$  in such a way, that the sum of the

KClO<sub>3</sub> remaining in solution and the K in the salt added, is a constant, which constant is equal to the solubility of KClO<sub>3</sub>, so that the following formula represents the coefficient of solubility of KClO<sub>3</sub> after addition of a K salt,  $3.2 + 0.109t + 0.0043t^2$  - K of salt added. (Blarez, C. R. 112. 1213)

(Carlson, Dissert. 1910.)

Insol. in methyl acetate. (Naumann, B.  
 1909, 42. 3790); ethyl acetate. (Naumann,  
 B. 1910, 43. 314.)

100 g. glycerol dissolve 20 g.  $\text{NaClO}_3$  at  
 15.5°. (Ossendowski, Pharm. J. 1907, 79.  
 575.)

Strontium chlorate,  $\text{Sr}(\text{ClO}_3)_2 \cdot 5\text{H}_2\text{O}$ .

Very deliquescent, and sol in  $\text{H}_2\text{O}$ . (Topsoe, W. A. B. 66, 2, 29.)

Sp. gr. of solution sat. at  $18^\circ$  containing 63.3%  $\text{Sr}(\text{ClO}_3)_2 = 1.839$ . (Mylius, B. 1897, 90, 1718.)

Easily sol in  $\text{H}_2\text{O}$ , less in alcohol, but more sol in alcohol than  $\text{SrCl}_2$ . (Souclay, A. 102, 381.)

Insol in absolute alcohol (Wachter)

Thallous chlorate,  $\text{TlClO}_3$ .

Sol. in  $\text{H}_2\text{O}$ , but decomp. by heating

100 pts  $\text{H}_2\text{O}$  dissolve at:

$0^\circ$   $20^\circ$   $50^\circ$   $80^\circ$   $100^\circ$

2.80 3.92 12.67 36.65 57.31 pts.  $\text{TlClO}_3$

(Muir, Chem. Soc. 29, 857.)

1 l.  $\text{TlClO}_3 + \text{Aq}$  sat. at  $10^\circ$  contains 25.637 g.  $\text{TlClO}_3$ . (Roozeboom, Z. phys. Ch. 8, 532.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.134 equivalents  $\text{TlClO}_3$  at  $20^\circ$ , or 38.51 g. in 1 l. of the solution (mean of 10 experiments). (Noyes and Farrell, J. Am. Chem. Soc. 1911, 33, 1657.)

Solubility in  $\text{Ti}_2\text{SO}_4 + \text{Aq}$  at  $20^\circ$ .

G equiv. per l.		Solid phase
$\text{TiClO}_3$	$\text{Ti}_2\text{SO}_4$	
0.1058	0.1366	$\text{TiClO}_3 + \text{Ti}_2\text{SO}_4$

(Noyes and Farrell, *l.c.*.)

Thallie chlorate,  $\text{Th}(\text{ClO}_3)_3 + 4\text{H}_2\text{O}$ .

Very deliquescent; sol. in  $\text{H}_2\text{O}$ . Decomp. slowly in the air. (Gewecke, Z. anorg. 1912, 75, 273.)

Ytterbium chlorate.

Sol. in  $\text{H}_2\text{O}$  (Popp, A. 131, 179.)

Yttrium chlorate,  $\text{Y}(\text{ClO}_3)_3 + 8\text{H}_2\text{O}$

Deliquescent. Easily sol. in alcohol. Sl. sol. in ether. (Cleve.)

Zinc chlorate,  $\text{Zn}(\text{ClO}_3)_2 + 4\text{H}_2\text{O}$ .

Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at:

$+18^\circ$   $30^\circ$   $40^\circ$   $55^\circ$   
66.52 67.66 69.06 75.44%  $\text{Zn}(\text{ClO}_3)_2$ .

Sp. gr. of solution containing 66.52%  $\text{Zn}(\text{ClO}_3)_2$  at  $18^\circ = 1.916$ .

(Meusser, B. 1902, 35, 1417.)

More sol. in  $\text{H}_2\text{O}$  than chlorates of Mg, Co, Ni or Cu, less sol than chlorate of Cd; more sol. than  $\text{Zn}(\text{NO}_3)_2$  (Meusser, *l.c.*)

$+6\text{H}_2\text{O}$ . Very deliquescent. Easily sol in  $\text{H}_2\text{O}$  and alcohol. Melts in crystal  $\text{H}_2\text{O}$  at  $60^\circ$ . (Vauquelin, A. ch. 95, 113.)

Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at:

$-18^\circ$   $0^\circ$   $8^\circ$   $15^\circ$   
55.62 59.19 60.20 67.32%  $\text{Zn}(\text{ClO}_3)_2$   
(Meusser, *l.c.*)

Sp. gr. of solution sat. at  $18^\circ$  containing 65%  $\text{Zn}(\text{ClO}_3)_2 = 1.914$  (Mylius, B. 1897, 90, 1718.)

Zinc chlorate ammonia,  $\text{Zr}(\text{ClO}_3)_2 \cdot 4\text{NH}_3$ .

$\text{Zn}(\text{ClO}_3)_2 \cdot 6\text{NH}_3$ . Ppt. (Ephraim, B. 1915, 48, 48.)

Perchloric acid

See Perchloric acid.

Chlorides.

Most chlorides are sol. in  $\text{H}_2\text{O}$ ; a few, however, are insol or nearly so therein, the chief of which are  $\text{AgCl}$ ,  $\text{Hg}_2\text{Cl}_2$ ,  $\text{Cu}_2\text{Cl}_2$ ,  $\text{PtCl}_2$ , and  $\text{AuCl}$ . Several chlorides are decomp into insol. basic salts or hydroxides, either by the addition of  $\text{H}_2\text{O}$ , as in the case of  $\text{BiCl}_3$  and  $\text{SbCl}_3$ , or on evaporating the aqueous solution, as  $\text{AlCl}_3$ ,  $\text{ZnCl}_2$ ,  $\text{MgCl}_2$ , etc.

Some chlorides are sol. in alcohol or ether.

See under each element

Chlorine,  $\text{Cl}_2$ .

The maximum solubility of  $\text{Cl}$  in  $\text{H}_2\text{O}$  is at  $10^\circ$  (Schonfeld); at  $8-10^\circ$  (Gay-Lussac); at  $9-10^\circ$  (Pelouze).

Solubility decreases from  $0-0^\circ$ ; at  $100^\circ$  the solubility = 0 (Gay-Lussac.)

$\text{Cl}_2 + \text{Aq}$  sat. at  $6^\circ$  has sp. gr. = 1.003 (Berthelot)

1 vol.  $\text{H}_2\text{O}$  at  $t^\circ$  absorbs vols  $\text{Cl}$  reduced to  $0^\circ$  and 760 mm. pressure.

\*Eutectic.

(Bray)

Chlorine oxide, Cl<sub>2</sub>O<sub>17</sub>

Very easily decomp. (Millon, A 46. 281.)  
Probably a mixture of ClO<sub>2</sub> and O

Chlorine heptoxide, Cl<sub>2</sub>O<sub>7</sub>

Explosive, decomp. by H<sub>2</sub>O, sol. in well cooled benzene with sl. decomp. (Michael, Am. Ch. J 1909, 23. 447.)

Chloriridiamine chloride,

Sl. sol. in cold, easily in hot H<sub>2</sub>O. (Skoblikoff, A 84. 275.)

— nitrate, Cl<sub>2</sub>Ir(N<sub>2</sub>H<sub>5</sub>NO<sub>2</sub>)<sub>2</sub>.  
Sol. in H<sub>2</sub>O.

— sulphate, Cl<sub>2</sub>Ir(N<sub>2</sub>H<sub>5</sub>)SO<sub>4</sub>.

Sl. sol. in cold, much more easily in hot H<sub>2</sub>O

Chloriridic acid.

Chloriridates.

Most of the chloriridates are very difficultly sol. in H<sub>2</sub>O, but a little more sol. than the corresponding chloroplatinates. Insol. or nearly so in alcohol, but not so difficultly sol. as the chloroplatinates. (Rose.)

Ammonium chloriridate, (NH<sub>4</sub>)<sub>2</sub>IrCl<sub>6</sub>.

Sol. in 20 pts. cold H<sub>2</sub>O (Vanquelin); sl. sol. in cold, much more in hot H<sub>2</sub>O (Claus); sol. in HCl+aq. (Soblewsky); insol. in cold NH<sub>4</sub>Cl+aq. (Claus); insol. in alcohol (Berzelius).

100 pts H<sub>2</sub>O dissolve at.

14.4° 26.8° 39.4°

0.699 0.905 1.226 pts. (NH<sub>4</sub>)<sub>2</sub>IrCl<sub>6</sub>,

52.2° 61.2° 69.3°

1.608 2.130 2.824 pts. (NH<sub>4</sub>)<sub>2</sub>IrCl<sub>6</sub>

(Rimbach and Kortzen, Z. anorg. 1907, 52. 407.)

Cæsium chloriridate, Cs<sub>2</sub>IrCl<sub>6</sub>.

Only sl. sol. in H<sub>2</sub>O. (Delépine, C. R. 1908, 146. 1268.)

Lithium chloriridate, Li<sub>2</sub>IrCl<sub>6</sub>.

Somewhat deliquescent; very sol. in H<sub>2</sub>O. (Antony, Gazz. ch. it 23, 1. 190.)

Potassium chloriridate, K<sub>2</sub>IrCl<sub>6</sub>

Sl. sol. in cold H<sub>2</sub>O, sol. in 15 pts. boiling H<sub>2</sub>O; less sol. in H<sub>2</sub>O containing HCl; insol. in alcohol or sat. KCl, and CaCl<sub>2</sub>+Aq.

Insol. in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20. 829.)

Rubidium chloriridate, Rb<sub>2</sub>IrCl<sub>6</sub>.

Very sl. sol. in H<sub>2</sub>O. (Rumbach, Z. anorg. 1907, 52. 408.)

Sodium chloriridate, Na<sub>2</sub>IrCl<sub>6</sub>+6H<sub>2</sub>O

Easily sol. in H<sub>2</sub>O; sol. in alcohol of 0.837 sp gr.

Thallium chloriridate, Tl<sub>2</sub>IrCl<sub>6</sub>.

Decomp. by hot HCl forming Tl<sub>2</sub>IrCl<sub>6</sub>. (Delépine, C. R. 1909, 149. 1073.)

Chloriridium pentamine comps.

See Iridopentamine chloro comps.

Chloriridosulphurous acid.

Potassium chloriridosulphite, K<sub>4</sub>Ir<sub>2</sub>Cl<sub>2</sub>(SO<sub>3</sub>)<sub>4</sub>, 4KCl+12H<sub>2</sub>O

Insol. in cold, decomp. by hot H<sub>2</sub>O.

K<sub>4</sub>Ir<sub>2</sub>Cl<sub>2</sub>(SO<sub>3</sub>)<sub>4</sub>, 2K<sub>2</sub>SO<sub>3</sub>. Decomp. by H<sub>2</sub>O  
Cl<sub>2</sub>Ir<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub>, 8KCl+4H<sub>2</sub>O. Sol. in H<sub>2</sub>O;  
insol. in alcohol. (Claus, J. pr. 42. 354.)

Chloriridous acid.

Ammonium chloriridite, (NH<sub>4</sub>)<sub>2</sub>IrCl<sub>5</sub>.

Decomp. by H<sub>2</sub>O. (Delépine, C. R. 1908, 146. 1268.)

+1½H<sub>2</sub>O Sol. in H<sub>2</sub>O. (Claus.)

IrCl<sub>5</sub>(H<sub>2</sub>O)(NH<sub>4</sub>)<sub>2</sub>. (Delépine)

Cæsium chloriridite, IrCl<sub>5</sub>(H<sub>2</sub>O)Cs<sub>2</sub>.

(Delépine.)

Lithium chloriridite, Li<sub>2</sub>IrCl<sub>5</sub>+12H<sub>2</sub>O

Deliquescent; sol. in H<sub>2</sub>O and alcohol. (Delépine, C. R. 1914, 158. 1277.)

Lithium sodium chloriridite, Li<sub>2</sub>NaIrCl<sub>5</sub>+12H<sub>2</sub>O.

Stable in aq. solution in the presence of excess of lithium salt. (Delépine, C. R. 1914, 158. 1278.)

LiNa<sub>2</sub>IrCl<sub>5</sub>+12H<sub>2</sub>O Stable in aq. solution in the presence of excess of sodium salt (Delépine, C. R. 1914, 158. 1278.)

Potassium chloriridite, K<sub>2</sub>IrCl<sub>5</sub>.

Decomp. by H<sub>2</sub>O. (Delépine.)

+3H<sub>2</sub>O. Easily sol. in H<sub>2</sub>O; insol. in alcohol; insol. in sat. KCl+aq. (Berzelius.)  
IrCl<sub>5</sub>(H<sub>2</sub>O)K<sub>2</sub>. (Delépine)

Rubidium chloriridite,  $\text{IrCl}_3(\text{H}_2\text{O})\text{Rb}_2$ .  
(Delépine.)

Silver chloriridite,  $\text{Ag}_3\text{IrCl}_6$ .

Insol. in  $\text{H}_2\text{O}$  or acids; sl. sol. in  $\text{NH}_4\text{OH}$  +

Aq. Ppt. (Delépine, Bull. Soc. 1910, (4), 7.55.)

Sodium chloriridite,  $\text{Na}_3\text{IrCl}_6 \cdot 12\text{H}_2\text{O}$ .

Efflorescent, sol. in  $\frac{1}{2}$  pt.  $\text{H}_2\text{O}$ . Insol. in alcohol. Melts in crystal  $\text{H}_2\text{O}$  at  $50^\circ$ .

Thallium chloriridite,  $\text{Tl}_3\text{IrCl}_6$ .

Sol. in hot  $\text{HCl}$ ; pptd. on cooling. (Delépine, C. R. 1909, 149. 1073.)

Chlorotetramine chromium comps.

See Chlorotetramine chromium comps.

Chloro-azoisimide,  $\text{N}_3\text{Cl}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Raschig, B. 1908, 41. 4194.)

Chlorobromo comps:

See Bromochloro comps.

Chlorocarbonic acid.

See Carbonyl chloride.

Chlorochromic acid,  $\text{CrO}_2\text{OH}$   
 $\text{Cl}$

Known only in its salts.

$\text{CrO}_2\text{Cl}_2$ . See Chromyl chloride.

Ammonium chlorochromate,  $\text{NH}_4\text{CrO}_2\text{Cl} =$   
 $\text{CrO}_2\text{ONH}_4$

More sol. in  $\text{H}_2\text{O}$  than the K salt. (Pelgot, A. ch. 52. 283.)

Barium chlorochromate chloride,

$\text{Ba}(\text{CrO}_2\text{Cl})_2, \text{BaCl}_2$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . (Pratorius, A. 201. 1.)

+  $\text{H}_2\text{O}$ . Not deliquescent.

Calcium chlorochromate,  $\text{Ca}(\text{CrO}_2\text{Cl})_2$ .

Deliquescent. (Pelgot.)

+  $5\text{H}_2\text{O}$ . Very deliquescent. (Pratorius.)

Chromous chlorochromate.

See Trichromyl chloride.

Cobalt chlorochromate,  $\text{Co}(\text{CrO}_2\text{Cl})_2 \cdot 9\text{H}_2\text{O}$ .

Deliquescent; melts at  $40^\circ$  in crystal  $\text{H}_2\text{O}$  (Pratorius.)

Lithium chlorochromate,  $\text{LiCrO}_2\text{Cl}$

Sol. in  $\text{H}_2\text{O}$  acidified with  $\text{HCl}$  without decomp (Löwenthal, Z. anorg. 1894, 6. 357.)

Magnesium chlorochromate,  $\text{Mg}(\text{CrO}_2\text{Cl})_2$

Deliquescent. (Pelgot.)

+  $9\text{H}_2\text{O}$ . Less deliquescent than the other chlorochromates (Pratorius, A. 201. 1.)

Very hygroscopic; sol. in  $\text{H}_2\text{O}$  acidified with  $\text{HCl}$  without decomp (Löwenthal, Z. anorg. 1894, 6. 359.)

Nickel chlorochromate,  $\text{Ni}(\text{CrO}_2\text{Cl})_2 \cdot 9\text{H}_2\text{O}$ .

Deliquescent; melts in its crystal  $\text{H}_2\text{O}$  at  $46-48^\circ$  (Pratorius.)

Potassium chlorochromate,  $\text{KCrO}_2\text{Cl} =$

$\cdot \text{CrO}_2(\text{Cl})\text{OK}$

Sol. in  $\text{H}_2\text{O}$  with decomp. Cryst. from  $\text{H}_2\text{O}$  containing  $\text{HCl}$  without decomp. (Pelgot.)

Sol. in acetone (Naumann, B. 1904, 37. 4328.)

Sodium chlorochromate,  $\text{NaCrO}_2\text{Cl}$ .

Deliquescent (Pelgot.)

+  $2\text{H}_2\text{O}$ . Deliquescent (Pratorius.)

Strontium chlorochromate,  $\text{Sr}(\text{CrO}_2\text{Cl})_2 +$   
 $4\text{H}_2\text{O}$ .

Deliquescent; melts in crystal  $\text{H}_2\text{O}$  at  $72^\circ$ . (Pratorius.)

Thallous chlorochromate,  $\text{TlCrO}_2\text{Cl}$ .

Decomp. by  $\text{H}_2\text{O}$  (Lachaud and Lepierre, C. R. 103. 198.)

Zinc chlorochromate,  $\text{Zn}(\text{CrO}_2\text{Cl})_2 \cdot 9\text{H}_2\text{O}$

Deliquescent; melts at  $37.5^\circ$  in crystal  $\text{H}_2\text{O}$ . (Pratorius.)

Very hygroscopic, very sol. in  $\text{H}_2\text{O}$  and acids. (Löwenthal, Z. anorg. 1894, 6. 360.)

Dichlorochromium bromide,

$[\text{Cr}(\text{H}_2\text{O})_4\text{Cl}_2]\text{Br}$ .

Very deliquescent. Sol. in fuming  $\text{HBr}$ , in a mixture of equal volumes ether and fuming  $\text{HBr}$ , in alcohol and in acetone. (Bjerrum, B. 1907, 40. 2019.)

Chlorochromotetrammonium comps.

See Chlorotetramine chromium comps.

Chlorocolumbium bromide,  $(\text{Cb}_2\text{Cl}_{12})\text{Br}_2 +$   
 $7\text{H}_2\text{O}$ .

Sol. in a small quantity of cold  $\text{H}_2\text{O}$ . (Harned, J. Am. Chem. Soc. 1913, 35. 1083.)

Chlorocolumbium chloride,  $(\text{Cb}_2\text{Cl}_{12})\text{Cl}_2 +$   
 $7\text{H}_2\text{O}$ .

Insol. in cold, sol. in boiling  $\text{H}_2\text{O}$ .

Not easily decomp. by boiling with  $\text{NH}_4\text{OH}$ . Conc.  $\text{HNO}_3$  decomp. a boiling solution of this comp. Completely sol. in conc. alkalis (Harned, J. Am. Chem. Soc. 1913, 35. 1080.)

**Chlorocolumbium hydroxide**,  $(\text{Cb}_2\text{Cl}_{12})(\text{OH})_2 + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids and alkalis (Harned, J. Am. Chem. Soc. 1913, **35**, 1082.)

**Chloroctamine cobaltic carbonate**,

Very sol. in  $\text{H}_2\text{O}$  (Vortmann and Blasberg, B. **22**, 2051.)

$\text{Cl}_2\text{Co}_2(\text{NH}_3)_8(\text{CO}_3)_2 + \text{H}_2\text{O}$  (Vortmann and Blasberg.)

**Chloroferrous acid**.

Calcium chloroferrite,  $\text{CaO}$ ,  $\text{CaCl}_2$ ,  $\text{Fe}_2\text{O}_3$ .

Insol. in  $\text{H}_2\text{O}$ . (Le Chatelier, C. R. **99**, 276.)

**Dichlorofulminoplatinum**,

Insol. in  $\text{H}_2\text{O}$  (v. Meyer, J. pr. (2) **18**, 305.)

**Trichlorofulminoplatinum**,

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . (v. Meyer.)

**Tetrachlorofulminoplatinum**,

Insol. in  $\text{H}_2\text{O}$ . (v. Meyer.)

**Chlorohydroxylonitratoplatinumdiamine nitrite**,  $(\text{OH})\text{ClNO}_2\text{Pt}(\text{NH}_3)_2\text{NO}_2$

Easily sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)

**Chlorohydroxylplatindiamine bromide**,

Sl. sol. in  $\text{H}_2\text{O}$

— carbonate,  $\text{OH} \cdot \text{Pt}(\text{N}_2\text{H}_5)_2\text{CO}_3$

Insol. in  $\text{H}_2\text{O}$ . (Cleve.)

— chloride,  $\text{OH} \cdot \text{Pt}(\text{N}_2\text{H}_5\text{Cl})_2$

Sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

— chromate,  $\text{OH} \cdot \text{Pt}(\text{N}_2\text{H}_5)_2\text{CrO}_4$

Nearly insol. in  $\text{H}_2\text{O}$

— dichromate,  $\text{OH} \cdot \text{Pt}(\text{N}_2\text{H}_5)_2\text{Cr}_2\text{O}_7$

Ppt (Cleve.)

— nitrate (Raewsky's nitrate),

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . (Gerhardt.)

**Chlorohyposulphuric acid**,  $\text{S}_2\text{O}_3\text{Cl}_4$ .

See Sulphur oxytetrachloride.

**Chloromanganic acid**.

See Manganic hydrogen chloride.

**Chloromercurosulphurous acid**.

**Ammonium chloromercurosulphite**,

Sol. in  $\text{H}_2\text{O}$ . (Barth, Z. phys. Ch. **9**, 305.)

**Barium chloromercurosulphite**,

Insol. in  $\text{H}_2\text{O}$  (Barth.)

**Potassium chloromercurosulphite**,  $\text{KSO}_3\text{HgCl}$

Sol. in  $\text{H}_2\text{O}$ . (Barth.)

**Sodium chloromercurosulphite**,  $\text{NaSO}_3\text{HgCl} + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Barth.)

**Chloromolybdenum bromide**,

Insol. in  $\text{H}_2\text{O}$  and dil. acids; sol. in alcohol.  $+6\text{H}_2\text{O}$  At first easily sol. in  $\text{H}_2\text{O}$ , but a precipitate soon forms. Can be crystallized from dil.  $\text{HBr} + \text{Aq}$  Sol. in alcohol and ether. (Blomstrand.)

**Chloromolybdenum potassium bromide**,

Decomp. by  $\text{H}_2\text{O}$ . Can be cryst. from  $\text{HBr} + \text{Aq}$  (Blomstrand.)

**Chloromolybdenum chloride**,  $\text{Cl}_4\text{Mo}_2\text{Cl}_4 = \text{molybdenum dichloride}$ ,  $\text{MoCl}_5$

Insol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl} + \text{Aq}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ ; sl. sol. in  $\text{HNO}_3$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ,  $\text{NaOH} + \text{Aq}$ , or  $\text{KOH} + \text{Aq}$ , with separation of precipitate on boiling; sol. in alcohol and ether. (Blomstrand, J. pr. **77**, 96.)

Very sol. in conc.  $\text{HCl}$ . (Rosenheim and Kohn, Z. anorg. **1910**, **66**, 2.)

$+3\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ .

$+4\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Liechta and Kempe, A. **170**, 351.)

$+6\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Blomstrand.)

**Chloromolybdenum hydrogen chloride**,

Sol. in  $\text{H}_2\text{O}$ , but ppt. forms after a few minutes. (Rosenheim and Kohn, Z. anorg. **1910**, **66**, 5.)

**Chloromolybdenum potassium chloride**,

Decomp. by pure  $\text{H}_2\text{O}$ ; can be recrystallized from  $\text{HCl} + \text{Aq}$  (Blomstrand, J. pr. **77**, 108.)

**Chloromolybdenum hydroxide**,  $\text{Cl}_4\text{Mo}_6(\text{OH})_2 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or alcohol. Easily sol. in strong acids if fresh, and washed only with cold  $\text{H}_2\text{O}$ . If washed with warm  $\text{H}_2\text{O}$ , it is less sol. in acids. If precipitated hot, is insol. in acids, even  $\text{H}_2\text{SO}_4$  or fuming  $\text{HNO}_3$ . (Blomstrand, J. pr. 77. 100.)

+  $8\text{H}_2\text{O}$ .

**Chloromolybdenum iodide**,  $\text{Cl}_4\text{Mo}_6\text{I}_2 + 3\text{H}_2\text{O}$

Precipitate

+  $6\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and alcohol

**Chloromolybdenum potassium iodide**,  $\text{Cl}_4\text{Mo}_6\text{I}_2, 2\text{KI} + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Recryst. from  $\text{HI} + \text{Aq}$ . (Blomstrand.)

**Chloromolybdenum oxybromide**,  $\text{Cl}_4\text{Mo}_6 \begin{smallmatrix} \text{OH} \\ \text{Br} \end{smallmatrix} + 2\text{H}_2\text{O}$ .

Insol. in alcohol. (Blomstrand, J. pr. 77. 116.)

**Chloromolybdic acid**,  $\text{MoOCl}_2(\text{OH}) + 7\text{H}_2\text{O}$ .

Very hygroscopic. (Weinland, B. 1904, 37. 572.)

**Diammonium tetrachloromolybdate**,  $\text{MoCl}_4(\text{ONH}_2)_2 + 2\text{H}_2\text{O}$ .

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dilute acids, alkalies, and ammonia. (Weinland, Z. anorg. 1905, 44. 83.)

**Cæsium chlorotrimolybdate, acid**,

$\text{Mo}_6\text{O}_{11}\text{Cl}_{14}(\text{Cs}_2\text{O}) + 22\text{H}_2\text{O}$ .

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dilute acids, alkalies, and ammonia. (Weinland, l.c.)

**Monocæsium trichloromolybdate**,

$\text{MoOCl}_4(\text{OCs}) + \text{H}_2\text{O}$

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dilute acids, alkalies, and ammonia. (Weinland.)

**Dicæsium tetrachloromolybdate**,

$\text{MoCl}_4(\text{OCs})_2$

Hygroscopic. Sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in dilute acids, alkalies, and ammonia. (Weinland, Z. anorg. 1905, 44. 83.)

**Monopotassium trichloromolybdate**,

$\text{MoOCl}_4(\text{OK}) + \text{H}_2\text{O}$ .

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dilute acids, alkalies, and ammonia. (Weinland.)

**Dipotassium tetrachloromolybdate**,

$\text{MoCl}_4(\text{OK})_2 + 2\text{H}_2\text{O}$

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dilute acids, alkalies, and ammonia. (Weinland.)

**Potassium hydrogen chlorotrimolybdate**,  $\text{Mo}_6\text{O}_{11}\text{Cl}_{14}, \text{K}_2\text{O} + 6\text{H}_2\text{O}$ .

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dilute acids, alkalies, and ammonia. (Weinland.)

**Monorubidium trichloromolybdate**,

$\text{MoOCl}_4(\text{ORb}) + \text{H}_2\text{O}$ .

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dilute acids, alkalies, and ammonia. (Weinland.)

**Darubidium tetrachloromolybdate**,

$\text{MoCl}_4(\text{ORb})_2$ .

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dilute acid, alkalies, and ammonia. (Weinland.)

**Chloronitratoplatinamine nitrite**,

$\begin{smallmatrix} \text{Cl} \\ \text{NO}_2 \end{smallmatrix} \text{Pt}(\text{NH}_2\text{NO}_2)_2$ .

Easily sol. in  $\text{H}_2\text{O}$ .

**Chloronitratoplatin diamine nitrate**,

$\begin{smallmatrix} \text{Cl} \\ \text{NO}_2 \end{smallmatrix} \text{Pt}(\text{N}_2\text{H}_4\text{NO}_2)_2$

Decomp. by  $\text{H}_2\text{O}$  with formation of  $\begin{smallmatrix} \text{Cl} \\ \text{OH} \end{smallmatrix} \text{Pt}(\text{NH}_3)_2\text{NO}_2)_2$ .

— sulphate,  $\begin{smallmatrix} \text{Cl} \\ \text{NO}_2 \end{smallmatrix} \text{Pt}(\text{N}_2\text{H}_4)_2\text{SO}_4 + \text{H}_2\text{O}$ .

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .

**Chloronitritotetramine cobaltic chloride**,

$\text{Cl}(\text{NO}_2)\text{Co}(\text{NH}_2)_4\text{Cl}$ .

Not very sol. in cold  $\text{H}_2\text{O}$ . (Jørgensen, Z. anorg. 5. 195.)

**Chloronitritoplatin semidiamine chloride**,

$\text{Cl}_2(\text{NO}_2)\text{Pt}(\text{NH}_2)_2\text{Cl}$ .

100 pts. solution in  $\text{H}_2\text{O}$  sat. at  $18^\circ$  contain 1.8 pts. salt; sat. at  $100^\circ$ , 6 pts.

Insol. in abs. alcohol or ether. Not decomp. by conc.  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ , and by  $\text{H}_2\text{SO}_4$  only at a high heat.

Formula given was  $\text{PtN}_4\text{H}_{12}\text{Cl}_6\text{O}_4$ . (Peylone, J. B. 1855. 421.)

— nitrite,  $\text{Cl}_2(\text{NO}_2)\text{Pt}(\text{NH}_2)_2\text{NO}_2$ .

Sol. in  $\text{H}_2\text{O}$ . (Blomstrand.)

**Chlorophosphatoplatin diamine phosphate**,

$\begin{smallmatrix} \text{ClPt}(\text{N}_2\text{H}_4)_2 \\ \text{PO}_4 \end{smallmatrix} + 2\text{H}_2\text{O}$ .

Nearly insol. in cold, and only very sl. sol. in hot  $\text{H}_2\text{O}$ . (Raewsky.)

**Chloronitrous acid**.

**Iridium potassium chloronitrite**,  $\text{Ir}_2\text{Cl}_6(\text{NO}_2)_4, 6\text{KCl}$ .

Ppt., decomp. by boiling  $\text{H}_2\text{O}$ . Sol. in cold  $\text{H}_2\text{O}$ . (Leidic, C. R. 1902, 134. 1583.)

$\text{Ir}_2\text{K}_{12}\text{Cl}_{16}(\text{NO}_2)_8 + 4\text{H}_2\text{O}$ . Ppt. (Quennessen, C. R. 1905, 141. 258.)

### Chloropalladic acid.

#### Chloropalladates.

The chloropalladates are generally very sol. in  $\text{H}_2\text{O}$ , and sol in alcohol (v. Bonsdorff, Pogg. 17. 264.)

#### Ammonium chloropalladate, $(\text{NH}_4)_2\text{PdCl}_6$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius)

#### Barium chloropalladate.

Sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff.)

#### Cadmium chloropalladate.

As above.

#### Cæsium chloropalladate, $\text{Cs}_2\text{PdCl}_6$ .

Nearly insol. in cold  $\text{H}_2\text{O}$  Decomp. by boiling with  $\text{H}_2\text{O}$  or by hot conc.  $\text{H}_2\text{SO}_4$ . (Gutbier, B. 1905, 38. 2386.)

#### Calcium chloropalladate.

Deliquescent, sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff, 1829.)

#### Glucinum chloropalladate, $\text{GlPdCl}_6 + 8\text{H}_2\text{O}$ .

Very hygroscopic, and sol. in  $\text{H}_2\text{O}$ .

#### Magnesium chloropalladate, $\text{MgPdCl}_6 + 6\text{H}_2\text{O}$ .

Deliquescent; sol. in  $\text{H}_2\text{O}$ .

#### Nickel chloropalladate, $\text{NiPdCl}_6 + 6\text{H}_2\text{O}$ .

Extremely deliquescent.

#### Potassium chloropalladate, $\text{K}_2\text{PdCl}_6$ .

Sl. sol. in cold  $\text{H}_2\text{O}$ . Decomp. by long boiling with  $\text{H}_2\text{O}$ . Sl. sol. in dil.  $\text{HCl} + \text{Aq}$  without decomp. Insol. in  $\text{NH}_4\text{Cl}$ ,  $\text{KCl}$ , or  $\text{NaCl} + \text{Aq}$ . Insol. in alcohol. (Berzelius.)

#### Rubidium chloropalladate, $\text{Rb}_2\text{PdCl}_6$ .

Insol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$  or by hot conc.  $\text{H}_2\text{SO}_4$ . (Gutbier, B. 1905, 38. 2387.)

#### Zinc chloropalladate, $\text{ZnPdCl}_6 + 6\text{H}_2\text{O}$ .

Very deliquescent. (v. Bonsdorff.)

### Chloropalladous acid

#### Aluminum chloropalladate, $\text{Al}_2\text{Pd}_2\text{Cl}_{12} + 20\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Wolkow, B. 7. 804.)

#### Ammonium chloropalladate, $(\text{NH}_4)_2\text{PdCl}_6 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. Sol in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Claus.)

Easily sol. in  $\text{H}_2\text{O}$ . (Gutbier, B. 1905, 38. 2386.)

#### Barium chloropalladate.

Easily sol. in  $\text{H}_2\text{O}$  or alcohol.

#### Cadmium chloropalladate.

Not deliquescent

#### Cæsium chloropalladate, $\text{Cs}_2\text{PdCl}_6$ .

Can be cryst. from hot  $\text{H}_2\text{O}$  (Gutbier, B. 1905, 38. 2386)

#### Calcium chloropalladate.

Deliquescent Sol. in  $\text{H}_2\text{O}$  or alcohol

#### Glucinum chloropalladate, $\text{GlPdCl}_6 + 6\text{H}_2\text{O}$ .

Very hygroscopic, very sol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Wolkow.)

#### Magnesium chloropalladate.

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . (v. Bonsdorff.)

#### Manganese chloropalladate.

Sol. in  $\text{H}_2\text{O}$  and alcohol.

#### Nickel chloropalladate.

Sol. in  $\text{H}_2\text{O}$ .

#### Potassium chloropalladate, $\text{K}_2\text{PdCl}_6$ .

Much more sol. in hot than cold  $\text{H}_2\text{O}$ . (Joannis, C. R. 95. 295.) Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Berzelius.) Sol. in cold sat.  $\text{KCl} + \text{Aq}$ . (Gibbs, Sill. Am. J. (2) 31. 70.) Insol. in alcohol. (Wollaston) Somewhat sol. in alcohol of 0.84 sp. gr, but insol. in absolute alcohol; decomp. on boiling (Berzelius.)

#### Rubidium chloropalladate, $\text{Rb}_2\text{PdCl}_6$ .

Can be cryst from hot  $\text{H}_2\text{O}$  (Gutbier, B. 1905, 38. 2387.)

#### Sodium chloropalladate.

Deliquescent Sol. in  $\text{H}_2\text{O}$  and alcohol.

#### Zinc chloropalladate.

Very deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff)

#### Chlorophosphoarseniodic acid, $2\text{IrCl}_3 \cdot 3\text{H}_2\text{PO}_3 \cdot 5\text{H}_2\text{AsO}_4(?)$ .

Very sol. in  $\text{H}_2\text{O}$ . (Geisenheimer.)

#### Lead chlorophosphoarseniodate, $4\text{IrCl}_3 \cdot 3\text{Pb}_2\text{H}_2(\text{PO}_3)_2 \cdot 3\text{Pb}_2(\text{PO}_4)_2 \cdot 5\text{Pb}_2\text{H}_2(\text{AsO}_4)_2$ .

Insol. in  $\text{H}_2\text{O}$ .

#### Chlorophosphoridic acid, $2\text{IrCl}_3 \cdot 3\text{H}_2\text{PO}_4 \cdot 3\text{H}_2\text{PO}_3$ .

Very sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Geisenheimer, A. ch. (6) 23. 254.)  $2\text{IrCl}_3 \cdot 3\text{H}_2\text{PO}_4$ . Sol. in  $\text{H}_2\text{O}$  and alcohol.

Ammonium chlorophosphoride,  $2\text{IrCl}_2$ ,  
 $3(\text{NH}_4)_3\text{PO}_4$ ,  $3(\text{NH}_4)_2\text{HPO}_4$ .

Very deliquescent. Very sol in  $\text{H}_2\text{O}$ .  
 (Geisenheimer)

Lead chlorophosphoride,  $4\text{IrCl}_2$ ,  
 $3\text{Pb}_2(\text{PO}_4)_3$ ,  $3\text{PbH}_2(\text{PO}_4)_2$ .

Insol. in  $\text{H}_2\text{O}$  or acetic acid; very sol in dil.  
 $\text{HNO}_3 + \text{Aq}$  (Geisenheimer.)

Silver chlorophosphoride,  $2\text{IrCl}_2$ ,  
 $3\text{AgH}_2\text{PO}_4$ ,  $3\text{AgH}_3\text{PO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ , and  
 $\text{NH}_4\text{OH} + \text{Aq}$ . (Geisenheimer.)

Chlorophosphoplatinic acid.

See Chloroplatinophosphoric acid.

Chlorophosphoric acid.

Thorium chlorophosphate,  $3\text{ThO}_2$ ,  $\text{ThCl}_4$ ,  
 $2\text{P}_2\text{O}_5$ .

Insol. in  $\text{H}_2\text{O}$  and acids; decomp. by boiling  
 with  $\text{H}_2\text{SO}_4$  and fusing with alkali carbonates.  
 (Colani, C R 1909, 149. 208)

Chloroplatinamine chloride,  $\text{Cl}_2\text{Pt} \begin{smallmatrix} \text{NH}_4\text{Cl} \\ \text{NH}_3\text{Cl} \end{smallmatrix}$

Sol in about 700 pts.  $\text{H}_2\text{O}$  at  $0^\circ$ , and 33–34  
 pts. at  $100^\circ$ . Not attacked by boiling conc.  
 $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Sol. in boiling  $\text{KOH} + \text{Aq}$   
 with decomp. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Cleve,  
 Sv. V. A. H 10, § 30.)

— nitrite,  $\text{Cl}_2\text{Pt}(\text{NH}_3\text{NO}_2)_2$ .

Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ .

— nitrite silver nitrite,  $\text{Cl}_2\text{Pt}(\text{NH}_3\text{NO}_2)_2$ ,  
 $\text{AgNO}_2$ .

Easily sol. in hot, sl. sol. in cold  $\text{H}_2\text{O}$ .  
 (Cleve.)

— nitritochloride,  $\text{Cl}_2\text{Pt} \begin{smallmatrix} \text{NH}_3\text{NO}_2 \\ \text{NH}_4\text{Cl} \end{smallmatrix}$

Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

Chloroplatinidiamine bromide,

$\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5\text{Br})_2$ .

Sl. sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)

— chloride (Gros' chloride),

$\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5\text{Cl})_2$ .

Nearly insol in cold, and only sl. sol. in hot  
 $\text{H}_2\text{O}$ . Sol. in hot conc.  $\text{KOH} + \text{Aq}$ , with decomp.  
 (Grunn)

Sol. in cold  $\text{KOH} + \text{Aq}$  without decomp.  
 Nearly insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Buckton.)  
 $+ \text{H}_2\text{O}$ . (Raewsky.)

— chloroplatinate,  $\text{NCl}_2\text{Pt}(\text{N}_2\text{H}_5\text{Cl})_2$ ,  $\text{PtCl}_4$ .

Easily sol. in hot  $\text{H}_2\text{O}$ .

— chloroplatinite,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5\text{Cl})_2$ ,  $\text{PtCl}_2$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

Chloroplatinidiamine chromate,

$\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{CrO}_4$ .

Nearly insol. in  $\text{H}_2\text{O}$ . (Cleve)

— chromate,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{Cr}_2\text{O}_7$ .

Sl. sol in cold, more sol. in hot  $\text{H}_2\text{O}$ .  
 (Cleve.)

— nitrate (Gros' nitrate),  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5\text{NO}_2)_2$

Much more easily sol. in hot than in cold  
 $\text{H}_2\text{O}$ . Sol. in hot  $\text{KOH} + \text{Aq}$  with decomp.  
 Nearly insol. in conc.  $\text{HNO}_3 + \text{Aq}$ .

— nitritochloride,  $\text{Cl}_2\text{Pt} \begin{smallmatrix} \text{N}_2\text{H}_5\text{NO}_2 \\ \text{N}_2\text{H}_5\text{Cl} \end{smallmatrix}$

Ppt (Jorgensen.)

— phosphate.

See Chlorophosphatoplatinidiamine phosphate.

— sulphate,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5)_2\text{SO}_4$ .

Sl. sol. in both cold or hot  $\text{H}_2\text{O}$  (Cleve.)  
 $+ 2\text{H}_2\text{O}$ . Sl. sol in cold, easily in hot  
 $\text{H}_2\text{O}$ . (Grunn)

— sulphocyanide,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_5)_2(\text{CNS})_2$   
 $+ \text{H}_2\text{O}$ .

Ppt. (Cleve.)

Chloroplatinononodiamine chloride,

$\text{Cl}_2\text{Pt} \begin{smallmatrix} (\text{NH}_3)_2\text{Cl} \\ \text{NH}_3\text{Cl} \end{smallmatrix}$

Quite easily sol in  $\text{H}_2\text{O}$ . (Cleve)

Chloroplatinsemidiamine carbonate chloride,  
 $2\text{Pt}(\text{NH}_3)_2\text{Cl}_2$ ,  $\text{Pt}_2(\text{NH}_3)_4\text{Cl}_2(\text{CO}_3)_2$

Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol and ether.  
 Decomp. by cold  $\text{HCl} + \text{Aq}$ . (Schon, Z. anorg  
 1897, 13. 37)

Chloroplatinsemidiamine chloride,

$\text{Cl}_2\text{Pt}(\text{NH}_3)_2\text{Cl}$ .

Sol. in 300 pts.  $\text{H}_2\text{O}$  at  $0^\circ$ , and 65 pts. at  
 $100^\circ$ . Not decomp. by conc.  $\text{H}_2\text{SO}_4$ . Sol. in  
 $\text{KOH} + \text{Aq}$  without decomp. (Cleve.)

Chloroplatinic acid,  $\text{H}_2\text{PtCl}_6 + 6\text{H}_2\text{O}$ .

Deliquescent Sol in  $\text{H}_2\text{O}$ , alcohol, or ether.  
 $+ 4\text{H}_2\text{O}$ . Deliquescent (Pigeon, C R.  
 112. 1218)

$\text{PtCl}_4$ ,  $\text{HCl} + 2\text{H}_2\text{O}$  (Pigeon.)

Aluminum chloroplatinate,  $\text{AlCl}_3$ ,  $\text{PtCl}_4 +$   
 $16\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$  and alcohol (Welkow, B.  
 7. 304)

Insol. in ether.

Ammonium chloroplatinate,  $(\text{NH}_4)_2\text{PtCl}_6$ .

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$   
 (Fresenius)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.666 pt. at ord  
 temp. and 12.5 pts at  $100^\circ$ . (Crookes, C. N.  
 9. 37.)

Insol. in cold HCl + Aq. Separates out on cooling from solution in hot HCl, HNO<sub>3</sub>, or H<sub>2</sub>SO<sub>4</sub>. (Fischer.)

Very sl. sol. in cold, easily in hot NH<sub>4</sub>OH + Aq. (Fresenius.)

Conc. NH<sub>4</sub>Cl + Aq. ppts. it almost completely from aqueous solution (Böttger.)

Sol. in NH<sub>4</sub> succinate + Aq. (Dopping.)

Less sol. in H<sub>2</sub>PtCl<sub>6</sub> + Aq. than in H<sub>2</sub>O. (Rogojski, A. ch. (3) 41. 452.)

Sol. in SnCl<sub>4</sub> + Aq. (Fischer.)

Very sol. with decomp. in KCN + Aq. (Claus.)

At 15–20°, sol. in 26,535 pts. 97.5% alcohol, in 1470 pts. 76% alcohol, and in 665 pts. 55% alcohol. If free HCl is present, it is sol. in 672 pts. 76% alcohol. (Fresenius, A. 69. 118.)

Insol. in absolute alcohol or ether.

**Barium chloroplatinate**, BaPtCl<sub>6</sub> + 6H<sub>2</sub>O

Permanent, sol. in H<sub>2</sub>O; decomp. by alcohol (v. Bonsdorff, Pogg. 17. 250.)

**Barium monochloroplatinate**, PtCl(OH)<sub>2</sub>Ba + H<sub>2</sub>O.

Insol. in H<sub>2</sub>O and in org. solvents. (Bellucci, C. C. 1903, I 131.)

**Barium pentachloroplatinate**, OH.PtCl<sub>5</sub>Ba + H<sub>2</sub>O.

(Miolati, Chem. Soc. 1900, 78. (2) 732.)

**Cadmium chloroplatinate**, CdPtCl<sub>6</sub> + 6H<sub>2</sub>O

Deliquescent, and easily sol. in H<sub>2</sub>O. (v. Bonsdorff.)

**Cæsium chloroplatinate**, Cs<sub>2</sub>PtCl<sub>6</sub>.

100 pts. H<sub>2</sub>O dissolve at:

0°	10°	20°	30°
0.024	0.050	0.079	0.110
40°	50°	60°	70°
0.142	0.177	0.213	0.251

pts. Cs<sub>2</sub>PtCl<sub>6</sub>.

(Bunsen, Pogg. 113. 337.)

Sol. in 1308 pts. H<sub>2</sub>O at 15°, and 261 pts. at 100°. (Crookes, C. N. 9. 205.)

**Calcium chloroplatinate**, CaPtCl<sub>6</sub> + 8H<sub>2</sub>O

Deliquescent; easily sol. in H<sub>2</sub>O. (v. Bonsdorff.)

**Calcium monochloroplatinate**, PtCl(OH)<sub>2</sub>Ca + H<sub>2</sub>O.

Insol. in H<sub>2</sub>O and in org. solvents. (Bellucci, C. C. 1903, I 131.)

**Cerium chloroplatinate**, CeCl<sub>3</sub>, PtCl<sub>4</sub> + 13H<sub>2</sub>O.

Deliquescent; very sol. in H<sub>2</sub>O or alcohol; insol. in ether. (Maignac.)

4CeCl<sub>3</sub>, 3PtCl<sub>4</sub> + 8H<sub>2</sub>O. Deliquescent; easily sol. in H<sub>2</sub>O or alcohol, insol. in ether. (Holzmann, J. pr. 84. 80.)

**Chromium chloroplatinate**, CrCl<sub>3</sub>, PtCl<sub>4</sub> + 10½H<sub>2</sub>O.

Deliquescent. (Nilson, B. 9. 1056.)

+ 10H<sub>2</sub>O. Very sol. in H<sub>2</sub>O and alcohol. Nearly insol. in acetone. (Higley, J. Am. Chem. Soc. 1904, 26.617.)

**Cobalt chloroplatinate**, CoPtCl<sub>6</sub> + 6H<sub>2</sub>O.

Very deliquescent. (Jørgensen.)

**Copper chloroplatinate**, CuPtCl<sub>6</sub> + 6H<sub>2</sub>O.

Deliquescent in moist air. (v. Bonsdorff.)

**Didymium chloroplatinate**, D<sub>2</sub>Cl<sub>3</sub>, PtCl<sub>4</sub> + 13½H<sub>2</sub>O.

Less deliquescent than the cerium salt. (Maignac.)

+ 10½H<sub>2</sub>O. Deliquescent. (Cleve, Bull. Soc. (2) 43. 361.)

**Erbium chloroplatinate**, ErCl<sub>3</sub>, PtCl<sub>4</sub> + 11H<sub>2</sub>O.

Very deliquescent. (Cleve.)

**Gadolinium chloroplatinate**, GdCl<sub>3</sub>, PtCl<sub>4</sub> + 10H<sub>2</sub>O.

Ppt. (Benedicko, Z. anorg. 1900, 22. 204.)

**Glucinum chloroplatinate**, GlPtCl<sub>6</sub> + 8H<sub>2</sub>O.

Deliquescent in moist air. Very sol. in H<sub>2</sub>O, moderately in alcohol. Insol. in ether. (Welkow, B. 6. 1288.)

**Indium chloroplatinate**, 2InCl<sub>3</sub>, 5PtCl<sub>4</sub> + 36H<sub>2</sub>O.

Deliquescent. (Nilson.)

**Iron (ferrous) chloroplatinate**, FePtCl<sub>6</sub> + 6H<sub>2</sub>O.

Deliquescent. (Topsoe.)

**Iron (ferric) chloroplatinate**, FeCl<sub>3</sub>, PtCl<sub>4</sub> + 10½H<sub>2</sub>O.

Deliquescent. (Nilson.)

**Lanthanum chloroplatinate**, LaCl<sub>3</sub>, PtCl<sub>4</sub> + 13H<sub>2</sub>O.

Deliquescent; extremely sol. in H<sub>2</sub>O (Cleve.)

**Lead chloroplatinate**, PbPtCl<sub>6</sub> + 3H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O and alcohol (Topsoe), with decomp. (Birnbbaum, Zeit. Ch. 1867. 520.)

**Lead monochloroplatinate**, [PtCl(OH)<sub>2</sub>]<sub>2</sub>Pb, Pb(OH)<sub>2</sub>.

Ppt. (Bellucci, Chem. Soc. 1902, 82, II. 155.)

**Lead pentachloroplatinate**, basic, PtCl<sub>4</sub>(OH)Pb, Pb(OH)<sub>2</sub>.

(Miolati, Chem. Soc. 1900, 78. (2) 732.)

**Lithium chloroplatinate**, Li<sub>2</sub>PtCl<sub>6</sub> + 6H<sub>2</sub>O.

Extremely deliquescent (Jørgensen); efflorescent. Easily sol. in H<sub>2</sub>O, alcohol, or ether-alcohol; insol. in ether. (Scheibler.)

**Lithium pentachloroplatinate**, OH PtCl<sub>5</sub>Li<sub>2</sub>.

Very hygroscopic (Miolati, Chem. Soc. 1900, 78 (2) 732.)

**Magnesium chloroplatinate,  $MgPtCl_6 \cdot 6H_2O$ .**

Sol in  $H_2O$  and abs alcohol  
+  $12H_2O$ . Sol. in  $H_2O$ .

**Manganese chloroplatinate,  $MnPtCl_6 \cdot 6H_2O$**

Not deliquescent, sol. in  $H_2O$ .  
+  $12H_2O$  Sl efflorescent.

**Nickel chloroplatinate,  $NiPtCl_6 \cdot 6H_2O$ .**

Sol. in  $H_2O$ .

**Potassium chloroplatinate,  $K_2PtCl_6$ .**

100 pts.  $H_2O$  dissolve at:

0° 10° 20° 30° 40° 50°  
0.74 0.90 1.12 1.41 1.76 2.17 pts  $K_2PtCl_6$ ,  
60° 70° 80° 90° 100°  
2.64 3.19 3.79 4.45 5.18 pts.  $K_2PtCl_6$ .

(Bunsen, Pogg. 113. 337.)

100 pts.  $H_2O$  dissolve 0.926 pt at 15°, and  
5.26 pts. at 100°. (Crookes, C. N. 9. 205.)

100 g  $H_2O$  dissolve at:

2° 16° 25° 35° 48°  
0.4812 0.6718 0.8641 1.132 1.745 g  $K_2PtCl_6$ ,  
59° 68° 78° 92°  
2.396 2.913 3.589 4.484 g.  $K_2PtCl_6$ .

(Archibald, J. Am. Chem. Soc. 1908, 30. 752.)

Not attacked by cold conc.  $H_2SO_4$ . (Lassaigne.)

Sl. sol. in cold, more easily in hot dil. acids.  
Less sol in  $KCl$ +Aq than in  $H_2O$ , and nearly  
insol. in sat  $KCl$ +Aq. (Schrötter, W. A. B.  
50, 2. 268.)

**Solubility in  $KCl$ +Aq at 20°.**

(Archibald, J. Am. Chem. Soc. 1908, 30. 757.)

Sol. in  $KOH$ +Aq. Insol. in cold or hot  
alkali carbonates or bicarbonates+ $Aq$ . (Rose.)  
Easily sol. in warm  $Na_2S_2O_3$ + $Aq$ . (Himly.)  
Sol. in  $NH_4Cl$ + $Aq$ . (Biett.)

Sol. in  $NH_4$  succinate+ $Aq$ . (Dopping.)  
At 15-20°, sol in 12,083 pts. absolute alcohol,  
alcohol, in 3775 pts. 76% absolute alcohol, and  
in 1053 pts. 55% absolute alcohol. (Fresenius.)

Sol. in 1835 pts. 70% alcohol containing  
 $HCl$  at 15-20°. (Fresenius.)

Nearly absolutely insol. in alcohol con-  
taining ether.

Sol in 42,600 pts absolute alcohol (Precht,  
Z anal. 18. 509.)

1 l. methyl alcohol dissolves 0.072 g. at 20°.  
(Peligot, Mont. Sci. 1892, (4) 6. I, 873.)

(Archibald, J. Am. Chem. Soc. 1908, 30. 755.)

**Potassium pentachlorohydroplatinate**,  $K_2(PtCl_5OH)$   
Easily sol. in  $H_2O$ . (Ruff, B 1913, 46, 925.)

**Praseodymium chloroplatinate**,  $PtCl_3$ ,  $PtCl_4 + 12H_2O$

Very sol. in  $H_2O$  Sol. in conc HCl. (von Schiele, Z anorg 1898, 18, 353.)

**Rubidium chloroplatinate**,  $Rb_2PtCl_6$

100 pts.  $H_2O$  dissolve at:

0°	10°	20°
0.184	0.154	0.141 pts. $Rb_2PtCl_6$ ,

90°	100°	
0.521	0.634	pts. $Rb_2PtCl_6$ .

(Bunsen, Pogg 113, 337.)

Sol. in 740 pts.  $H_2O$  at 15°, and 157 pts. at 100°. (Crookes, C. N. 9, 205.)  
Insol. in alcohol.

**Samarium chloroplatinate**,  $SmCl_3$ ,  $PtCl_4 + 10\frac{1}{2}H_2O$ .

Deliquescent Very sol. in  $H_2O$ . (Cleve, Bull. Soc. (2) 43, 165.)

**Silver chloroplatinate**,  $Ag_2PtCl_6$ .

Ppt. Gradually decomp. by  $H_2O$  into  $AgCl$  and  $PtCl_4$  (Jørgensen, J. pr (2) 16, 345.)  
 $Ag_2PtCl_4(OH)_2$ . Ppt.

**Silver monochloroplatinate**,  $[PtCl(OH)_3]Ag_2$

Ppt. (Bellucci, Chem. Soc 1902, 82, (2), 155.)

**Silver pentachloroplatinate**,  $(OH)PtCl_5Ag_3$

Ppt.; stable in boiling  $H_2O$  (Miolati, Chem. Soc. 1900, 78 (2), 732.)

**Silver chloroplatinate ammonia**,  $Ag_3PtCl_6 \cdot 2NH_3$ .

Insol. in  $H_2O$ . (Birnbbaum.)

**Sodium chloroplatinate**,  $Na_2PtCl_6 \cdot 6H_2O$ .

Easily sol. in  $H_2O$  Sat solution at 15° contains 39.77 g  $Na_2PtCl_6$  and has sp gr. of 1.368. Sol. in  $NaCl + Aq$  More sol. in absolute alcohol than in 95% alcohol Sat solution in abs. alcohol contains 11.90%; 95% alcohol, 6.34%. Mixture of equal parts of alcohol and ether dissolve 2.43% Insol in ether. (Precht, Z. anal 18, 502.)

**Sodium pentachloroplatinate**,  $(OH)PtCl_5Na_2$ .

Exists only in solution. (Miolati, l.c.)

**Strontium chloroplatinate**,  $SrPtCl_6 \cdot 8H_2O$ .

Very sol. in  $H_2O$ .

**Strontium monochloroplatinate**,  $PtCl(OH)_2Sr + H_2O$

Insol. in  $H_2O$  and org solvents (Bellucci, C C 1903, I, 131)

**Thallium chloroplatinate**,  $Tl_2PtCl_6$

Very sl. sol. in  $H_2O$  Sol. in 15,585 pts.  $H_2O$  at 15°, and 1948 pts at 100° (Crookes.)

**Thallium monochloroplatinate**,  $[PtCl(OH)_3]Tl$ .

Ppt (Bellucci, Chem. Soc. 1902, 82, (2), 155.)

**Thallium pentachloroplatinate**,  $(OH)PtCl_5Tl_2$ .

(Miolati, Chem Soc. 1900, 78 (2) 732)

**Thorium chloroplatinate**,  $ThCl_4$ ,  $PtCl_4 + 12H_2O$ .

Very deliquescent. (Cleve, Bull Soc (2), 21, 118)

**Tin (stannic) chloroplatinate**,  $SnCl_4$ ,  $PtCl_4 + 12H_2O$ .

(Nilson, B. 9, 1142.)

**Ytterbium chloroplatinate**,  $2YbCl_3$ ,  $PtCl_4 + 22H_2O$ , and  $+35H_2O$ .

Ppt. (Cleve, Z. anorg. 1902, 32, 137)

**Vanadyl chloroplatinate**,  $(VO)PtCl_4 + 10\frac{1}{2}H_2O$ .

Sol in  $H_2O$ ; cryst from  $PtCl_4 + Aq$  (Brauner, M. 3, 58.)

**Yttrium chloroplatinate**,  $4YCl_3$ ,  $5PtCl_4 + 52H_2O$ .

Very deliquescent. (Cleve)  
 $2YCl_3$ ,  $3PtCl_4 + 30H_2O$ . (Nilson, B. 9, 1059.)

$2YCl_3$ ,  $PtCl_4 + 21H_2O$ . (Nilson)

**Zinc chloroplatinate**,  $ZnPtCl_6 \cdot 6H_2O$

Deliquescent; sol. in  $H_2O$  and alcohol.

**Zinc tetrachloroplatinate**,  $ZnPt(OH)_2Cl_4 + 5H_2O$

Extremely sol in  $H_2O$  and alcohol (Miolati, Z. anorg. 1900, 22, 458.)

**Zirconyl chloroplatinate**,  $(ZrO)PtCl_6 \cdot 12H_2O$ . (Nilson.)

**Chloroplatinooanhydriphosphoric**

Not deliquescent. Sol. in  $H_2O$  (Schutzenberger, Bull. Soc. (2) 18, 154.)

**Chloroplatinocyanhydric acid**,  $H_2Pt(CN)_4Cl_2$

See Perchloroplatinocyanhydric acid.

**Potassium chloroplatinoeyanide**,  $5K_2Pt(CN)_4 \cdot K_2Pt(CN)_4Cl_2 + 21H_2O$ .

Sol. in  $H_2O$ ; insol. in alcohol.

**Silver chloroplatinoeyanide**,

$Ag_2(PtCl_2(CN)_4)_2$ .

Ppt. (Miolata, C. C. 1901, I, 500.)

**Chloroplatinophosphoric acid**,  
 $Cl_2PtP(OH)_2$ .

Very deliquescent, and sol. in  $H_2O$  (Schützenberger, Bull. Soc. (2) 17. 493.)

**Lead chloroplatinophosphate**,  $Pb_2(Cl_2PtPO_4)_2 + 8H_2O$ .

Ppt.

$Pb_2(Cl_2PtPO_4)_2 \cdot 2PbO + 4H_2O$  Ppt (Schützenberger, Bull. Soc. (2) 17. 494.)

**Silver chloroplatinophosphate**,  $Ag_2HPO_4 \cdot PtCl_2$ .

Ppt. (Schützenberger, Bull. Soc. (2) 17. 494.)

**Chloroplatinodiphosphoric acid**,  $PtCl_2 \cdot P_2(OH)_6$ .

Very deliquescent, and easily sol. in  $H_2O$ . (Schützenberger, Bull. Soc. (2) 18. 153.)

**Chloroplatinomorphosphoric acid**,

Less deliquescent than chloroplatinodiphosphoric acid.

**Chloroplatinous acid**,  $H_2PtCl_4$ .

Known only in solution

**Aluminum chloroplatinite**,  $AlPtCl_4 \cdot 10\frac{1}{2}H_2O$ .

Very deliquescent, sol. in  $H_2O$ . (Nilson, J. pr. (2) 16. 260.)

**Ammonium chloroplatinite**,  $(NH_4)_2PtCl_4$ .

Sl. sol. in cold, easily in hot  $H_2O$ . Insol. in alcohol. (Peyrone, A. 55. 206.)

**Barium chloroplatinite**,  $BaPtCl_4 \cdot 3H_2O$ .

Not deliquescent, sol. in  $H_2O$ . Very sl. sol. in 93% alcohol.

**Cadmium chloroplatinite ammonia**,  $CdPtCl_4 \cdot 4NH_3$ .

Insol. in  $H_2O$  or  $NH_4OH + Aq$ . Sol. in  $HCl + Aq$  (Thomsen, B. 2. 668.)

**Cæsium chloroplatinite**,  $Cs_2PtCl_4$ .

Sl. sol. in cold, easily in hot  $H_2O$ .

100 pts.  $H_2O$  dissolve 3.4 pts. salt at 20°

" " 6.73 " " 40°

" " 8.68 " " 60°

" " 10.92 " " 80°

" " 12.10 " " 100°

(Godeffroy, A. 181. 176.)

$Cs_2PtCl_4$  Ppt. Very sensitive to sunlight. Decomp. by  $H_2O$  into the higher and lower chlorides. (Wohler, B. 1909, 42. 4104.)

**Calcium chloroplatinite**,  $CaPtCl_4 \cdot 8H_2O$ .

Deliquescent; sol. in  $H_2O$ .

**Cerium chloroplatinite**,  $CeCl_3 \cdot 2PtCl_2 + 10\frac{1}{2}H_2O$ .

Deliquescent, easily sol. in  $H_2O$  (Nilson, B. 9. 1847.)

**Chromium chloroplatinite**,  $Cr_2Pt_2Cl_{12} + 18H_2O$ .

Deliquescent.

**Cobalt chloroplatinite**,  $CoPtCl_4 \cdot 6H_2O$ .

Sl. deliquescent in moist, efflorescent in dry air.

**Copper chloroplatinite**,  $CuPtCl_4 \cdot 6H_2O$ .

Extremely deliquescent (Topsøe.)

**Copper chloroplatinite ammonia** (cuprammonium chloroplatinite),  
 $Cu(NH_3)_4PtCl_4$ .

Insol. in  $H_2O$  or  $NH_4OH + Aq$ ; easily sol. in  $H_2SO_4 + Aq$  (Milon and Commaile, C. R. 57. 822.)

**Dydium chloroplatinite**,  $DiCl_3 \cdot 2PtCl_2 + 10H_2O$ .

Deliquescent; very sol. in  $H_2O$ . (Nilson.)  
 $2DiCl_3 \cdot 3PtCl_2 + 18H_2O$ . As above. (Nilson.)

**Erbium chloroplatinite**,  $ErPtCl_4 \cdot 13\frac{1}{2}H_2O$ .

Deliquescent  
 $Er_2Pt_2Cl_{12} + 24H_2O$  Deliquescent in moist air

**Glucinum chloroplatinite**,  $GHPtCl_4 \cdot 5H_2O$ .

Deliquescent in moist air. Sol. in  $H_2O$  in all proportions

**Iron (ferrous) chloroplatinite**,  $FePtCl_4 \cdot 7H_2O$ .

Deliquescent. Rather sl. sol. in cold, very sol. in hot  $H_2O$  (Nilson.)

**Lanthanum chloroplatinite**,  $La_3Pt_3Cl_{12} + 18$ ,  
and  $37H_2O$ .

Deliquescent.

**Lead chloroplatinite**,  $PbPtCl_4$ .

Insol. in cold  $H_2O$ .

**Lithium chloroplatinite**,  $Li_2PtCl_4 \cdot 6H_2O$ .

Sol. in  $H_2O$

**Magnesium chloroplatinite**,  $MgPtCl_4 \cdot 6H_2O$ .

Not very deliquescent; very sol. in  $H_2O$ .

**Manganese chloroplatinite**,  $\text{MnPtCl}_4 \cdot 6\text{H}_2\text{O}$   
As the Mg salt.

**Mercurous chloroplatinite**.  
Ppt.

**Nickel chloroplatinite**,  $\text{NiPtCl}_4 \cdot 6\text{H}_2\text{O}$ .  
As the Co salt

**Potassium chloroplatinite**,  $\text{K}_2\text{PtCl}_4$ .  
Moderately sol. in  $\text{H}_2\text{O}$ , insol. in alcohol

**Rubidium chloroplatinite**,  $\text{Rb}_2\text{PtCl}_4$   
Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ .

**Silver chloroplatinite**,  $\text{Ag}_2\text{PtCl}_4$   
Insol. in  $\text{H}_2\text{O}$   $\text{NH}_4\text{OH} + \text{Aq}$  dissolves out  $\text{AgCl}$ . (Lang)  
 $\text{AgCl}$ ,  $\text{PtCl}_2$ (?) As above (Commaille, Bull. Soc. (2) 6, 262.)

**Silver chloroplatinite ammonia**,  $\text{Ag}_2\text{PtCl}_4 \cdot 4\text{NH}_3$   
(Thomsen.)

**Sodium chloroplatinite**,  $\text{Na}_2\text{PtCl}_4 \cdot 4\text{H}_2\text{O}$ .  
Deliquescent; very sol. in  $\text{H}_2\text{O}$

**Strontium chloroplatinite**,  $\text{SrPtCl}_4 \cdot 6\text{H}_2\text{O}$ .  
Deliquescent. Very sol. in  $\text{H}_2\text{O}$ .

**Thallium chloroplatinite**,  $\text{Tl}_2\text{PtCl}_4$   
Very sl. sol. even in boiling  $\text{H}_2\text{O}$ .

**Thorium chloroplatinite**,  $\text{Th}_2\text{Pt}_2\text{Cl}_{14} \cdot 24\text{H}_2\text{O}$ .  
Very deliquescent.

**Yttrium chloroplatinite**,  $\text{Y}_2\text{Pt}_2\text{Cl}_{12} \cdot 24\text{H}_2\text{O}$ .  
Deliquescent.

**Zinc chloroplatinite**,  $\text{ZnPtCl}_4 \cdot 6\text{H}_2\text{O}$   
Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ ; insol. in alcohol.

**Zinc chloroplatinite ammonia**,  $\text{ZnPtCl}_4 \cdot 4\text{NH}_3$   
Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl} + \text{Aq}$ , insol. in alcohol (Thomsen, J. B. 1868, 278.)

**Zirconyl chloroplatinite**,  $(\text{ZrO})\text{PtCl}_4 \cdot 8\text{H}_2\text{O}$ .  
(Nilson)

**Trichloroplatinous acid**,  $\text{H}_2\text{Pt}(\text{OH})\text{Cl}_3$ .  
Sol. in  $\text{H}_2\text{O}$ . (Miolati, Z. anorg. 1902, 33, 265.)  
 $+ \text{H}_2\text{O}$ . (Nilson, J. pr. (2) 15, 260)

**Lead trichloroplatinite**,  $\text{PbPt}(\text{OH})\text{Cl}_3$ .  
Ppt (Miolati.)

**Silver trichloroplatinite**,  $\text{Ag}_3\text{Pt}(\text{OH})\text{Cl}_3$ .  
Ppt (Miolati.)

### Chloroplatosulphurous acid.

**Ammonium chloroplatosulphite, acid**,  
 $\text{NH}_4\text{PtClSO}_3 \cdot \text{H}_2\text{SO}_3 + 4\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  (Birnbbaum, A. 152, 149.)

**Ammonium chloroplatosulphite chloride sulphite**,  $\text{NH}_4\text{PtClSO}_3 \cdot (\text{NH}_4)_2\text{SO}_3 \cdot \text{NH}_4\text{Cl}$   
Very deliquescent (Birnbbaum)

**Ammonium chloroplatosulphite sulphite**,  
 $\text{NH}_4\text{PtClSO}_3 \cdot (\text{NH}_4)_2\text{SO}_3 + 3\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Birnbbaum.)

**Barium chloroplatosulphite chloride ammonium chloride**,  $\text{Ba}(\text{ClPtSO}_3)_2 \cdot \text{Ba}(\text{PtClSO}_3)\text{Cl} \cdot 6\text{NH}_4\text{Cl} + 3\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Birnbbaum.)

**Potassium chloroplatosulphite ammonium chloride**,  $\text{KPtClSO}_3 \cdot 2\text{NH}_4\text{Cl}$ .  
Very deliquescent (Birnbbaum, A. 152, 142.)

**Potassium chloroplatosulphite chloride**,  
 $\text{KPtClSO}_3 \cdot 2\text{KCl}$ .  
Deliquescent; sol. in  $\text{H}_2\text{O}$ . (Birnbbaum, A. 152, 145)

**Potassium chloroplatosulphite ammonium potassium sulphite**,  $\text{KPtClSO}_3 \cdot (\text{NH}_4)\text{KSO}_3 + 3\text{H}_2\text{O}$ .  
Very deliquescent. (Birnbbaum, A. 150, 120.)

**Sodium chloroplatosulphite ammonium chloride**,  $\text{NaPtClSO}_3 \cdot 2\text{NH}_4\text{Cl}$ .  
Very deliquescent. (Birnbbaum, A. 150, 117.)

**Chloroplumbic acid**,  $\text{H}_2\text{PbCl}_2$   
Decomp. in solution on standing. (Guthier, J. pr. 1914, (2) 90, 497.)

**Ammonium chloroplumbate**,  $(\text{NH}_4)_2\text{PbCl}_4$ .  
Ppt. Difficultly sol. in a small amount of  $\text{H}_2\text{O}$  Solution decomp. slowly when cold, more rapidly when warmed.  
Decomp. by a large amount of  $\text{H}_2\text{O}$ . Sol. without decomp. in 20%  $\text{HCl}$ . Decomp. by dil acids and alkalis. (Elbs, Z. Elektrochem. 1903, 9, 778.)  
Difficultly sol. in small amount of  $\text{H}_2\text{O}$  and solution decomp. slowly in the cold, more rapidly when warmed. Decomp. by a large amount of  $\text{H}_2\text{O}$ . (Guthier, J. pr. 1914, (2) 90, 498.)  
Sol. in cold  $\text{HNO}_3$  without decomp. (Friedrich, M. 1893, 14, 511.)  
Insol. in conc.  $\text{NH}_4\text{Cl} + \text{Aq}$  (Nikoljukin, B. 18, 370 R)  
 $5\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2$ . Not hygroscopic. Decomp. by  $\text{H}_2\text{O}$  with pptn. of  $\text{PbO}_2$ . Sol. in  $\text{HCl} + \text{Aq}$  and in cold  $\text{HNO}_3 + \text{Aq}$  without

decomp. (Classen and Zahorski, Z anorg. 4. 100.)

Composition is  $2\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_4$ . (Friedrich, W. A. B. 102, 2b. 527.)

Cesium chloroplumbate,  $\text{Cs}_2\text{PbCl}_6$ .

Nearly absolutely insol. in conc.  $\text{CsCl} + \text{Aq}$  in presence of  $\text{Cl}_2$  (Wells, Z anorg. 4. 335.)

1 ccm. conc  $\text{HCl} + \text{Aq}$  containing  $\text{PbCl}_4$  dissolves 0.000049 g  $\text{Cs}_2\text{PbCl}_6$ . (Wells, Z anorg. 4. 341.)

Reacts with  $\text{H}_2\text{O}$  as the corresponding ammonium salt (Gutbier, J pr 1914, (2) 90. 500.)

Potassium chloroplumbate,  $\text{K}_2\text{PbCl}_6$ .

Decomp. by  $\text{H}_2\text{O}$ , sol. in  $\text{KCl} + \text{Aq}$ . (Wells, Z anorg. 4. 335.)

Readily decomp in the air (Gutbier, J. pr. 1914, (2) 90. 499.)

Rubidium chloroplumbate,  $\text{Rb}_2\text{PbCl}_6$ .

Decomp. by  $\text{H}_2\text{O}$ , sl sol. in conc.  $\text{RbCl} + \text{Aq}$  (Wells, Z anorg. 4. 335.)

1 ccm. conc  $\text{HCl} + \text{Aq}$  containing  $\text{PbCl}_4$  dissolves 0.003 g  $\text{Rb}_2\text{PbCl}_6$  (Wells, Z anorg. 4. 341.)

Reacts with  $\text{H}_2\text{O}$  as the corresponding ammonium salt (Gutbier, J. pr. 1914, (2) 90. 499.)

Decomp. by conc  $\text{H}_2\text{SO}_4$ . Insol. in 90% alcohol. (Erdmann, A. 1896, 294 76.)

**Chloropurpureochromium bromide,**

$\text{CrCl}(\text{NH}_3)_5\text{Br}_2$ .

Somewhat more easily sol. in  $\text{H}_2\text{O}$  than the chloride. (Jørgensen, J pr (2) 20. 105.)

— **chloride**,  $\text{CrCl}(\text{NH}_3)_5\text{Cl}_2$ .

Difficultly sol in cold, and decomp. by hot  $\text{H}_2\text{O}$ .

1 pt. dissolves in 154 pts  $\text{H}_2\text{O}$  at  $16^\circ$  insol. in conc  $\text{HCl} + \text{Aq}$ . More sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  than in  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  without decomp (Jørgensen, J. pr. (2) 20. 105.)

— **mercuric chloride**,  $\text{CrCl}(\text{NH}_3)_5\text{Cl}_2$ ,  $3\text{HgCl}_2$ .

Very difficultly sol. in  $\text{H}_2\text{O}$ . (Jørgensen.)

— **chloroplatinate**,  $\text{CrCl}(\text{NH}_3)_5(\text{PtCl}_6)$ .

Extremely difficultly sol. in  $\text{H}_2\text{O}$ . (Jørgensen.)

— **chromate**,  $\text{CrCl}(\text{NH}_3)_5(\text{CrO}_4)$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; sl more sol. than chloropurpureocobalt chromate. (Jørgensen.)

— **dithionate**,  $\text{CrCl}(\text{NH}_3)_5(\text{S}_2\text{O}_8)$ .

Very sl. sol. in cold, but much more easily in hot  $\text{H}_2\text{O}$ . (Jørgensen.)

**Chloropurpureochromium ferrocyanide,**  
 $[\text{CrCl}(\text{NH}_3)_5]_2\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$

Very difficultly sol. in cold  $\text{H}_2\text{O}$  (Jørgensen.)

— **fluosilicate**,  $\text{CrCl}(\text{NH}_3)_5(\text{SiF}_6)$ .

Very difficultly sol in  $\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{SiF}_6 + \text{Aq}$  (Jørgensen, J. pr. (2) 20. 105.)

— **mercuric iodide**,  $\text{CrCl}(\text{NH}_3)_5\text{I}_2$ ,  $2\text{HgI}_2$ .

Decomp. by  $\text{H}_2\text{O}$ ; sol in alcohol and warm  $\text{KCN} + \text{Aq}$ .

$\text{CrCl}(\text{NH}_3)_5\text{I}_2$ ,  $\text{HgI}_2$ . Very difficultly sol in cold  $\text{H}_2\text{O}$ ; easily sol in  $\text{KCN} + \text{Aq}$ . (Jørgensen, l.c.)

— **nitrate**,  $\text{CrCl}(\text{NH}_3)_5(\text{NO}_3)_2$ .

Sol. in 71 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$  Insol. in  $\text{HNO}_3 + \text{Aq}$ . (Jørgensen.)

— **oxalate**,  $\text{CrCl}(\text{NH}_3)_5\text{C}_2\text{O}_4$ .

Very sl sol. in cold  $\text{H}_2\text{O}$ . (Jørgensen, l.c.)

— **sulphate**,  $\text{CrCl}(\text{NH}_3)_5\text{SO}_4 + 2\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ ; precipitated by alcohol (Jørgensen.)

— **sulphate, acid**,  $[\text{CrCl}(\text{NH}_3)_5]\text{SO}_4(\text{HSO}_4)$ .

Quite sol. in  $\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 20. 185.)

— **pentasulphide**,  $\text{CrCl}(\text{NH}_3)_5\text{S}_5$ .

Very sl sol. in cold, easily sol. in warm  $\text{H}_2\text{O}$ . Decomp. by dil  $\text{HCl} + \text{Aq}$ . Insol. in alcohol. (Jørgensen.)

**Chloropurpureocobaltic bromide,**

$\text{CoCl}(\text{NH}_3)_5\text{Br}_2$ .

Properties resemble the chloride very closely. Sol. in 214 pts.  $\text{H}_2\text{O}$  at  $14.3^\circ$  (Jørgensen, J. pr. (2) 18. 205.)

— **mercuric bromide**,

$4\text{CoCl}(\text{NH}_3)_5\text{Br}_2$ ,  $6\text{HgBr}_2$

Ppt (J.)

— **bromoplatinate**,  $\text{CoCl}(\text{NH}_3)_5\text{Br}_2$ ,  $\text{PtBr}_4$ .

Very sl sol in  $\text{H}_2\text{O}$ . (J.)

— **carbonate**,  $\text{CoCl}(\text{NH}_3)_5\text{CO}_3 + 4\frac{1}{2}\text{H}_2\text{O}$ .

Efflorescent; very easily sol. in  $\text{H}_2\text{O}$ . (J.)

— **chloride**,  $\text{CoCl}(\text{NH}_3)_5\text{Cl}_2$ .

Very sl sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Sol. in 244 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$ . (Claudet, Phil Mag J. (4) 2. 253.) In 287 pts.  $\text{H}_2\text{O}$  at  $10.2^\circ$  and 255 pts. at  $11.5^\circ$ . (Rose, Pogg. 20. 152.) 100 pts.  $\text{H}_2\text{O}$  dissolve 0.232 pt  $\text{CoCl}_2$ ,  $5\text{NH}_3$ , at  $0^\circ$ , and 1.031 pts. at  $46.6^\circ$ . (Kurnakoff, J. Russ. Soc. 24. 629.)

Sl. decomp. by cold, completely by boiling  $\text{H}_2\text{O}$ ; decomp. prevented by a little  $\text{HCl}$ . Pptd. from aqueous solution by alcohol,  $\text{HCl}$ ,

or sat. KCl or NaCl + Aq. not decomp. by boiling HCl + Aq. (Chaudet, *loc.*) Nearly insol in cold, but sol in hot  $H_2O$ , to which a few drops of HCl have been added. Less sol. in dil HCl + Aq than luteocobaltic chloride (Ropojak, A. ch. (3) 41. 447.)

Insol in alcohol (Gibbs and Genth.)

**Chloropurplecobaltic antimony chloride,**  
 $2CoCl(NH_3)_2Cl_3, SbCl_3$ .

Ppt. Decomp by  $H_2O$ . (Gibbs.)

— **bismuth chloride.**

Insol. in conc. HCl. Easily decomp by  $H_2O$ . (Gibbs.)

— **mercuric chloride,  $CoCl(NH_3)_2Cl_2, 3HgCl_2$ .**

Insol in cold, less sol. in hot  $H_2O$  than chloropurplecobaltic chloride. Insol in cold fuming HCl + Aq. sl. sol in hot HCl + Aq. separating on cooling; sl sol in hot aqua regia, moderately sol. in hot  $HNO_3$  + Aq; partly sol in cold conc.  $H_2SO_4$ , wholly on warming. Easily sol. in warm  $H_2C_2O_4$  + Aq. Insol in  $HgCl_2$  + Aq.

Moderately sol. in  $NH_4OH$  + Aq or  $(NH_4)_2CO_3$  + Aq. (Carstangen.)

$CoCl(NH_3)_2Cl_3, 2HgCl_2$ . Sl. sol in cold, but much more easily in hot  $H_2O$  (Gibbs, Proc Am Acad. 10. 33.)

— **chloropalladite,  $CoCl(NH_3)_2Cl_3, PdCl_2$**

Sl. sol in cold, moderately sol in hot  $H_2O$ . (Carstangen.)

— **chloroplatinate,  $CoCl(NH_3)_2Cl_3, PtCl_4$**

Nearly insol in cold. Very sl. sol in hot  $H_2O$ . (Gibbs and Genth, Silf. Am. J (2) 23. 319.)

— **chromate,  $CoCl(NH_3)_2CrO_4$ .**

Very sl sol in  $H_2O$  (J)

— **dichromate,  $CoCl(NH_3)_2Cr_2O_7$ .**

Much more easily sol. in  $H_2O$  than the neutral salt. (J.)

— **dithionate,  $CoCl(NH_3)_2S_2O_4$**

Very sl sol in cold, more easily in hot  $H_2O$  (J)

— **manganic fluoride**

Ppt. Sl. sol. in dil HF + Aq. (Christensen, J. pr (2) 35. 161)

— **fluosilicate,  $CoCl(NH_3)_2SiF_6$**

Very sl. sol. in HF + Aq.

— **iodide,  $CoCl(NH_3)_2I_3$**

Much more sol. in  $H_2O$  than bromide or chloride. Sol in 54.5 pts.  $H_2O$  at 15.6°, and 50 pts at 19.3°. (J.)

**Chloropurplecobaltic mercuric iodide,**  
 $CoCl(NH_3)_2I_3, 2HgI_2$ .

Sl. sol in  $H_2O$  (J.)

$CoCl(NH_3)_2I_3, HgI_2$ . Very sl sol in cold  $H_2O$  (J)

— **nitrate,  $CoCl(NH_3)_2(NO_3)_3$ .**

Sol. in 80 pts  $H_2O$  at 15°. Rather easily sol. in hot  $H_2O$  (Jorgensen, J pr (2) 18. 209)

— **oxalate,  $CoCl(NH_3)_2C_2O_4$ .**

Sl sol in  $H_2O$ . (J)

— **pyrophosphate,  $CoCl(NH_3)_2(H_2P_2O_7)$**

Sl and very slowly sol. in cold, much more easily in warm  $H_2O$ . (J)

$[CoCl(NH_3)_2]_3P_2O_7 + 2H_2O$ . Quite easily sol. in  $H_2O$

— **diphosphopentamolybdate,**

$[CoCl(NH_3)_2]_2(5MoO_3, 2HPO_4)$ .

Ppt. Nearly insol in pure  $H_2O$ ; more sol. in dil  $H_2SO_4$  + Aq without decomp. (J.)

$[CoCl(NH_3)_2]_2(5MoO_3, 2NH_4PO_4)$ . Ppt. As above

— **sulphate,  $CoCl(NH_3)_2SO_4$ .**

*Anhydrous*. Slowly sol in 128–131.9 pts  $H_2O$  at 16°

+  $2H_2O$ . Sol in 133.4 pts.  $H_2O$  at 17.3°  
Rather easily sol in hot  $H_2O$ , and much more rapidly than the anhydrous salt (J)

$[CoCl(NH_3)_2]_2SO_4(SO_4H)_6$ . Decomp. by  $H_2O$  into neutral sulphate. Sol in  $H_2SO_4$

— **tartrate,  $CoCl(NH_3)_2(C_4H_4O_6)_2 + 2\frac{1}{2}H_2O$ .**

Moderately sol. in  $H_2O$ ; insol in alcohol

— **thiosulphate,  $CoCl(NH_3)_2S_2O_3$ .**

Nearly insol. in cold  $H_2O$ , very sl. sol. in boiling  $H_2O$  with partial decomp. (J)

**Chloropurpleoiridium comps.**

See *Iridopentamine* comps.

**Chloropurpleorhodium carbonate,**

$ClRh(NH_3)_2CO_3 + H_2O$ .

Easily sol. in  $H_2O$ . (Jorgensen)

— **chloride,  $ClRh(NH_3)_2Cl_3$**

Sol in 179 pts.  $H_2O$  at 17°, and more easily in hot  $H_2O$ . Sol in conc.  $H_2SO_4$  or boiling NaOH + Aq without decomp. Very sl. sol. in cold dil HCl + Aq (1 : 1). Sl. sol in hot HCl + Aq. Insol. in alcohol. (Jorgensen, J. pr. (2) 27. 433; 34. 394)

— **rhodium chloride,**

$3ClRh(NH_3)_2Cl_3, 2RhCl_3$ .

Ppt (Jorgensen, Z anorg 5. 75.)

**Chloropurpleorhodium chloroplatinate,**Insol. in cold  $\text{H}_2\text{O}$ . (J.)**— fluosilicate,  $\text{ClRh}(\text{NH}_3)_5\text{SiF}_6$ .**Very sl. sol. in cold  $\text{H}_2\text{O}$ . Sol. in  $\text{NaOH}$  + Aq as roseo salt. (J.)**— hydroxide,  $\text{ClRh}(\text{NH}_3)_5(\text{OH})_2$ .**

Known only in solution. (J.)

**— nitrate,  $\text{ClRh}(\text{NH}_3)_5(\text{NO}_3)_2$ .**Sl. sol. in cold  $\text{H}_2\text{O}$ , but more easily than the chloride. Sol. in boiling  $\text{NaOH}$  + Aq as roseo salt. (J.)**— sulphate,  $\text{ClRh}(\text{NH}_3)_5\text{SO}_4 + 2\text{H}_2\text{O}$ .**Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . (J.)  
 $4\text{ClRh}(\text{NH}_3)_5\text{SO}_4 \cdot 3\text{H}_2\text{SO}_4$ . Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . (J.)**Chlororhodos acid.****Ammonium chlororhodite,  $(\text{NH}_4)_2\text{RhCl}_5 + \text{H}_2\text{O}$ .**(Gutbier, B. 1908, 41. 213.)  
Sol. in  $\text{H}_2\text{O}$ , insol. in alcohol. (Wollaston)  
Not obtainable. (Léidé, A. ch. (6) 17. 275.)  
 $(\text{NH}_4)_2\text{RhCl}_5 + 1\frac{1}{2}\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , but less easily than Na salt, insol. in alcohol. Sol. in dil.  $\text{NH}_4\text{Cl}$  + Aq. (Claus, J. B. 1856. 423.) (Gutbier, l. c.)**Ammonium chlororhodite nitrate,**Very sol. in  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{HNO}_3$  + Aq. (Léidé, C. R. 107. 234.)**Barium chlororhodite,  $\text{Ba}_2(\text{RhCl}_5)_2$ .**

Resembles the Na salt. (Bunsen, A. 146. 276.)

**Cæsium chlororhodite,  $\text{Cs}_2\text{RhCl}_5 + \text{H}_2\text{O}$ .**Difficulty sol. in  $\text{H}_2\text{O}$ . (Gutbier, B. 1908, 41. 214.)**Lead chlororhodite,  $\text{Pb}_2(\text{RhCl}_5)_2$ .**Ppt. Insol. in  $\text{H}_2\text{O}$ . (Claus.) Not obtainable. (Léidé.)**Mercurous chlororhodite,  $\text{Hg}_2\text{RhCl}_5$ .**Ppt. Insol. in  $\text{H}_2\text{O}$ . (Claus.) Not obtainable. (Léidé.)**Potassium chlororhodite,  $\text{K}_2\text{RhCl}_5 + \text{H}_2\text{O}$ .**Not efflorescent. Sl. sol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{KCl}$  + Aq., (Gibbs.) Insol. or sl. sol. in alcohol. (Berzelius.)

Salt is anhydrous. (Léidé.)

Contains  $1\text{H}_2\text{O}$ . (Seubert and Kobbé, B. 23. 2556.)Can be cryst. from  $\text{H}_2\text{O}$  containing a little  $\text{HCl}$ . (Gutbier, B. 1908, 41. 212.)  
 $\text{K}_2\text{RhCl}_5 + 3\text{H}_2\text{O}$ . Efflorescent. Sl. sol. in  $\text{H}_2\text{O}$ . Aqueous solution decomp. to above on standing. (Claus.)

Not obtainable. (Léidé.)

Also obtained by Seubert and Kobbé (B. 23. 2556.)

 $+1\frac{1}{2}\text{H}_2\text{O}$ . (Léidé, C. R. 111. 100.)**Rubidium chlororhodite,  $\text{Rb}_2\text{RhCl}_5 + \text{H}_2\text{O}$ .**Difficulty sol. in  $\text{H}_2\text{O}$ . (Gutbier, B. 1908, 41. 214.)**Silver chlororhodite,  $\text{Ag}_2\text{RhCl}_5$ .**Ppt. Insol. in  $\text{H}_2\text{O}$ . (Claus.)

Not obtainable. (Léidé.)

**Sodium chlororhodite,  $\text{Na}_6\text{Rh}_2\text{Cl}_{12} + 18\text{H}_2\text{O}$ .** $\text{Na}_2\text{RhCl}_5 + 9\text{H}_2\text{O}$   
Efflorescent. Sol. in 15 pts.  $\text{H}_2\text{O}$ . Melts in crystal  $\text{H}_2\text{O}$  at  $50^\circ$ . Insol. in alcohol. (Claus.) $+12\text{H}_2\text{O}$ . (Gutbier, B. 1908, 41. 213.)**Chlororuthenic acid.****Ammonium chlororuthenate,  $(\text{NH}_4)_2\text{RuCl}_6$ .**Easily sol. in  $\text{H}_2\text{O}$ . (Claus.)  
Formula is  $(\text{NH}_4)_2\text{Ru}(\text{NO})\text{Cl}_5$ . (Joly, C. R. 107. 994.)  
Sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in  $\text{HCl}$ . (Howe, J. Am. Chem. Soc. 1904, 26. 549.)**Ammonium aquochlororuthenate,**

Ppt. (Howe, J. Am. Chem. Soc. 1904, 26. 548.)

**Cæsium chlororuthenate,  $\text{Cs}_2\text{RuCl}_6$ .**Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in hot dil.  $\text{HCl}$  + Aq. (Howe, J. Am. Chem. Soc. 1901, 23. 784.)**Potassium chlororuthenate,  $\text{K}_2\text{RuCl}_6$ .**Very sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in conc.  $\text{NH}_4\text{Cl}$  + Aq. Insol. in 70% alcohol. (Claus.)  
Formula is  $\text{K}_2\text{Ru}(\text{NO})\text{Cl}_5$ . (Joly.)  
Very sl. sol. in cold  $\text{H}_2\text{O}$ . Insol. in presence of  $\text{KCl}$ .

Partially decomp. in hot aqueous solution. (Antony, Gazz. ch. it. 1899, 29. (2), 82.)

Easily sol. in  $\text{H}_2\text{O}$  with rapid decomp. Sol. in  $\text{HCl}$ . (Howe, J. Am. Chem. Soc. 1904, 26. 542.)**Potassium aquochlororuthenate,**Sol. in  $\text{H}_2\text{O}$ . (Howe, J. Am. Chem. Soc. 1904, 26. 547.)**Rubidium chlororuthenate,  $\text{Rb}_2\text{RuCl}_6$ .**Sl. sol. in  $\text{H}_2\text{O}$ , sol. in hot dil.  $\text{HCl}$  + Aq. (Howe, J. Am. Chem. Soc. 1901, 23. 784.)

**Chlororuthenious acid.**

**Ammonium chlororuthenite**,  $(\text{NH}_4)_4\text{Ru}_2\text{Cl}_8$ .  
Sl. sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  or alcohol. (Claus, J. pr. 80. 282.)

**Cæsium chlororuthenite**,  $\text{Cs}_2\text{RuCl}_6 + \text{H}_2\text{O}$ .  
Sl. sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . (Howe, J. Am. Chem. Soc. 1901, 23. 785.)

**Potassium chlororuthenite**,  $\text{K}_4\text{Ru}_2\text{Cl}_{12}$ .  
Moderately sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Decomp. easily by heating. Insol. in conc.  $\text{NH}_4\text{Cl} + \text{Aq}$ . Insol. in 80% alcohol.

**Rubidium chlororuthenite**,  $\text{Rb}_2\text{RuCl}_6 + \text{H}_2\text{O}$ .  
Sl. sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . (Howe, J. Am. Chem. Soc. 1901, 23. 786.)

**Sodium chlororuthenite**,  $\text{Na}_4\text{Ru}_2\text{Cl}_{12}$ .  
Deliquescent. Sol. in  $\text{H}_2\text{O}$  or alcohol.

**Trichlorosilicomercaptane.**  
*See* Silicon chlorohydrosulphide.

**Chlorosmic acid.**

**Ammonium chlorosmate**,  $(\text{NH}_4)_2\text{OsCl}_6$ .  
Sl. sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol and  $\text{H}_2\text{O}$  containing  $\text{HCl}$ .

**Potassium chlorosmate**,  $\text{K}_2\text{OsCl}_6$ .  
Properties as the  $\text{NH}_4$  salt.

**Potassium amino chlorosmate**,  
 $(\text{NH}_4)_2\text{OsCl}_5 \cdot 2\text{KCl}$ .  
Ppt. (Brizard, A. ch. 1900, (7) 21. 375.)

**Potassium amino chlorosmate hydrogen chloride**,  $(\text{NH}_4)_2\text{OsCl}_5 \cdot 2\text{KCl} \cdot \text{HCl}$ .  
Ppt. (Brizard, A. ch. 1900, (7) 21. 378.)

**Silver chlorosmate**,  $\text{Ag}_2\text{OsCl}_6$ .  
Insol. in  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$  (Claus and Jacoby.)

**Silver chlorosmate ammonia**,  $\text{Ag}_2\text{OsCl}_6 \cdot 2\text{NH}_3$ .  
Sol. in much  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{KOH} + \text{Aq}$ . Easily sol. in  $\text{KCN} + \text{Aq}$ . (C. and J.)

**Sodium chlorosmate**,  $\text{Na}_2\text{OsCl}_6 + 2\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$  or alcohol.

**Chlorosmious acid.**

**Ammonium chlorosmite**,  
 $(\text{NH}_4)_4\text{Os}_2\text{Cl}_{10} + 3\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$  and alcohol; insol. in ether. (Claus and Jacoby, J. pr. 90. 65.)

**Potassium chlorosmite**,  $\text{K}_4\text{Os}_2\text{Cl}_{12} + 6\text{H}_2\text{O}$ .  
Very easily sol. in  $\text{H}_2\text{O}$  or alcohol. Insol. in ether. (C. and J.)

**Chlorosmisulphurous acid.**

**Potassium hydrogen chlorosmisulphite**,  
 $\text{OsCl}_5(\text{SO}_2)_2 \cdot \text{K}_4\text{H}_2$ .  
Ppt. (Rosenheim, Z. anorg. 1900, 24. 422.)

**Sodium chlorosmisulphite**,  
 $\text{OsCl}_5(\text{SO}_2)_2 \cdot \text{Na}_6 + 10\text{H}_2\text{O}$ .  
Ppt. (Rosenheim, Z. anorg. 1900, 24. 420.)

**Chloropyroselenious acid.**

**Ammonium chloropyroselenite**,  $\text{NH}_4\text{Cl}$ ,  
 $2\text{SeO}_2 + 2\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Muthmann and Schafer, B. 26. 1008.)

**Potassium chloropyroselenite**,  $\text{KCl}$ ,  $2\text{SeO}_2 + \text{H}_2\text{O}$ .  
As  $\text{NH}_4$  salt (M. and S.)

**Rubidium chloropyroselenite**,  $\text{RbCl}$ ,  
 $2\text{SeO}_2 + 2\text{H}_2\text{O}$ .  
As  $\text{NH}_4$  salt. (M. and S.)

**Chlorostannic acid**,  $\text{SnO}(\text{OH})\text{Cl}$   
(Mallet, Chem. Soc. 35. 524.)  
 $\text{H}_2\text{SnCl}_6 + 6\text{H}_2\text{O}$ . Extremely deliquescent; sol. in  $\text{H}_2\text{O}$ . (Seubert, B. 20. 793.)

**Ammonium chlorostannate**,  $(\text{NH}_4)_2\text{SnCl}_6$   
(pink salt)  
Sol. in 3 pts.  $\text{H}_2\text{O}$  at  $14.5^\circ$ . Solution decomp. on boiling when dilute, but not when conc. (Boley.)

**Barium chlorostannate**,  $\text{BaSnCl}_6 + 5\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Lewy, A. ch. (3) 16. 308.)

**Cæsium chlorostannate**,  $\text{Cs}_2\text{SnCl}_6$ .  
Nearly insol. in conc.  $\text{HCl} + \text{Aq}$ . (Sharples, Sill. Am. J. (2) 47. 178.)

**Calcium chlorostannate**,  $\text{CaSnCl}_6 + 5\text{H}_2\text{O}$ .  
Very deliquescent. (Lewy, A. ch. (3) 16. 308.)

**Cerium chlorostannate**,  $\text{CeSnCl}_6 + 9\text{H}_2\text{O}$ .  
Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 31. 197.)

**Cobalt chlorostannate**,  $\text{CoSnCl}_6 + 6\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Jorgensen.)

**Didymium chlorostannate**,  $\text{DyCl}_3$ ,  $\text{SnCl}_4 + 10\frac{1}{2}\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Glucinum chlorostannate**,  $\text{GlSnCl}_6 + 8\text{H}_2\text{O}$ .  
Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Atterberg, Sv. V. A. Handl. 12. No. 4. 14.)

**Lanthanum chlorostannate**,  $4\text{LaCl}_3 \cdot 58\text{SnCl}_4 + 45\text{H}_2\text{O}$ .

Deliquescent. Sol in  $\text{H}_2\text{O}$ . (Cleve.)

**Lithium chlorostannate**,  $\text{Li}_2\text{SnCl}_6 \cdot 8\text{H}_2\text{O}$ .

Sol. in little  $\text{H}_2\text{O}$  without decomp., but decomp. by dilution (Chassevant, A. ch. (6) 30. 42.)

**Magnesium chlorostannate**,  $\text{MgSnCl}_4 \cdot 6\text{H}_2\text{O}$ .

Very deliquescent. (Lewy)

**Manganous chlorostannate**,  $\text{MnSnCl}_4 \cdot 6\text{H}_2\text{O}$ .

Deliquescent in moist, efflorescent in dry air. (Jorgensen)

**Nickel chlorostannate**,  $\text{NiSnCl}_4 \cdot 6\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ . (Jorgensen.)

**Potassium chlorostannate**,  $\text{K}_2\text{SnCl}_6$ .

Sol. in  $\text{H}_2\text{O}$

**Sodium chlorostannate**,  $\text{Na}_2\text{SnCl}_6 \cdot 6\text{H}_2\text{O}$ .

Easily sol in  $\text{H}_2\text{O}$ . (Topsoe, Gm K. Handb 6<sup>te</sup> auf III 149)

**Strontium chlorostannate**,  $\text{SrSnCl}_4 \cdot 8\text{H}_2\text{O}$ .

Sl. deliquescent, and easily sol. in  $\text{H}_2\text{O}$ . (Topsoe.)

**Yttrium chlorostannate**,  $\text{YCl}_3 \cdot \text{SnCl}_4 \cdot 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Cleve, Bull. Soc. (2) 31.197.)

**Zinc chlorostannate**,  $\text{ZnSnCl}_4 \cdot 6\text{H}_2\text{O}$ .

(Biron, C. C. 1904, II. 410.)

**Chlorosulphobismuthous acid**.

**Cuprous chlorosulphobismuthite**,

$2\text{Cu}_2\text{S} \cdot \text{Bi}_2\text{S}_3 \cdot 2\text{Bi}_2\text{S}_3\text{Cl}$ .

Stable in air and insol. in  $\text{H}_2\text{O}$  at ord. temp.

Decomp. by boiling  $\text{H}_2\text{O}$ .

Decomp. by mineral acids with evolution of  $\text{H}_2\text{S}$ . (Ducatte, C. R. 1902, 134. 1212.)

**Lead chlorosulphobismuthite**,  $\text{PbS} \cdot \text{Bi}_2\text{S}_3 \cdot 2\text{Bi}_2\text{S}_3\text{Cl}$ .

Stable in the air. Insol. in  $\text{H}_2\text{O}$ ; decomp. by boiling  $\text{H}_2\text{O}$ , sol. in dil. acids with decomp. and evolution of  $\text{H}_2\text{S}$ . (Ducatte.)

**Chlorosulphonic acid**,  $\text{HClSO}_3$ .

See Sulphuryl hydroxyl chloride.

**Chloropyrosulphonic acid**.

**Ammonium chloropyrosulphonate**,

$\text{ClS}_2\text{O}_6\text{NH}_4$ .

Fumes in the air.

Decomp. by  $\text{H}_2\text{O}$  and alcohol. (Traube, B. 1913, 46. 2519)

**Sodium chloropyrosulphonate**,  $\text{ClS}_2\text{O}_6\text{Na}$ .

Fumes in the air.

Decomp. by  $\text{H}_2\text{O}$  and alcohol (Traube.)

**Chlorosulphuric acid**,  $\text{HSO}_3\text{Cl}$ .

See Sulphuryl hydroxyl chloride.

$\text{SO}_2\text{Cl}_2$ . See Sulphuryl chloride.

**Aluminium chlorosulphate**,  $\text{Al}(\text{SO}_4)\text{Cl} \cdot 6\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Nearly insol. in abs. alcohol. (Recoura, Bull. Soc. 1902, (3) 27. 1155.)

**Chromium chlorosulphate**,  $\text{CrClSO}_4 \cdot 5\text{H}_2\text{O}$ .

Green (Weinland, Z. anorg. 1905, 48. 253.) (Recoura, C. R. 1902, 135. 164.)

Violet. (Weinland, Z. anorg. 1905, 48. 254.)

Very sol. in  $\text{H}_2\text{O}$  Insol. in a mixture of alcohol and acetone (Recoura, C. R. 1902, 135. 164.)

+  $8\text{H}_2\text{O}$ . Two isomeric modifications:

(a) *Green needles*. Easily sol. in  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1906, 48. 251.)

(b) *Violet plates*. Easily sol. in  $\text{H}_2\text{O}$ . (Weinland.)

**Chlorosulphurous acid**.

**Ammonium palladious trichlorosulphate**,

$(\text{NH}_4)_2\text{PdCl}_3\text{SO}_3 \cdot \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  (Rosenheim, Z. anorg. 1900, 23. 30.)

**Chlorotelluric acid**.

**Ammonium chlorotellurate**,  $(\text{NH}_4)_2\text{TeCl}_6$ .

Sol without decomp. in a small amt. of  $\text{H}_2\text{O}$ , but decomp. by much  $\text{H}_2\text{O}$  or alcohol.

**Cesium chlorotellurate**,  $\text{Cs}_2\text{TeCl}_6$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl} + \text{Aq}$ .

100 pts  $\text{HCl} + \text{Aq}$  (sp. gr. 1.2) dissolve 0.05 pt. at  $22^\circ$ .

100 pts.  $\text{HCl} + \text{Aq}$  (sp. gr. 1.05) dissolve 0.78 pt. at  $22^\circ$ .

Insol. in alcohol (Wheeler, Sill. Am. J. 145. 267)

**Potassium chlorotellurate**,  $\text{K}_2\text{TeCl}_6$ .

Deliquescent; decomp. by  $\text{H}_2\text{O}$  and absolute alcohol (Berzelius.)

The most sol. in  $\text{H}_2\text{O}$  of the chloro- or bromo-tellurates. Easily sol in dil  $\text{HCl} + \text{Aq}$ ; conc.  $\text{HCl} + \text{Aq}$  ppts.  $\text{KCl}$  (Wheeler, Sill. Am. J. 145. 267.)

**Rubidium chlorotellurate**,  $\text{Rb}_2\text{TeCl}_6$ .

Decomp. by  $\text{H}_2\text{O}$ . Much more sol. in dil.  $\text{HCl} + \text{Aq}$  than  $\text{Cs}_2\text{TeCl}_6$ .

100 pts.  $\text{HCl} + \text{Aq}$  (sp. gr. 1.2) dissolve 0.34 pt. at  $22^\circ$ .

100 pts.  $\text{HCl} + \text{Aq}$  (sp. gr. 1.05) dissolve, 13.99 pts. at  $22^\circ$ .

Sl. sol. in alcohol. (Wheeler.)

**Chlorotetramine chromium bromide,**

Very easily sol in  $\text{H}_2\text{O}$  (Cleve, 1861; Jørgensen, J. pr. (2) 42. 210.)

—chloride,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})_2\text{Cl}_2$

Sol. in  $\text{H}_2\text{O}$ , but decomp. by boiling. Sol. in  $\text{HCl} + \text{Aq.}$ , and this solution may be boiled without decomp. (Cleve)

Sol. in 15.7 pts  $\text{H}_2\text{O}$  at 15°. (Jørgensen, J. pr. 42. 208.)

—chromate,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})_2\text{CrO}_4$ .

Preprecipitate. (Cleve)

—fluosilicate,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})_2\text{SiF}_6$

Sl. sol. in  $\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 42. 218.)

—hydroxide,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})_2$ .

Known only in solution. (Cleve)

—iodide,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})_2\text{I}_2$

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

—nitrate,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})_2(\text{NO}_3)_2$ .

Very easily sol. in  $\text{H}_2\text{O}$  (Cleve), (Jørgensen, J. pr. (2) 42. 209.)

—sulphate,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})_2\text{SO}_4$ .

Very difficulty sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . (Cleve.)

**Chlorotetramine cobaltic bromide,**

More sol. in  $\text{H}_2\text{O}$  than chloride. Nearly insol. in  $\text{HBr} + \text{Aq}$  (1.1). (Jørgensen, J. pr. (2) 42. 215.)

—chloride,  $\text{ClCo}(\text{NH}_3)_4(\text{OH})_2\text{Cl}_2$

Sol. in about 40 pts.  $\text{H}_2\text{O}$ , and is identical with octamine cobaltic purpureochloride of Vortmann (Jørgensen, J. pr. (2) 42. 211.)

—chloroplatinate,  $\text{ClCo}(\text{NH}_3)_4(\text{OH})_2\text{PtCl}_6 + 2\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Jørgensen.)

—chromate,  $\text{ClCo}(\text{NH}_3)_4(\text{OH})_2\text{CrO}_4$ .

Easily sol. in cold  $\text{H}_2\text{O}$  (Jørgensen, J. pr. (2) 42. 216.)

—fluosilicate,  $\text{ClCo}(\text{NH}_3)_4(\text{OH})_2\text{SiF}_6$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{SiF}_6 + \text{Aq.}$  (Jørgensen, J. pr. (2) 42. 219.)

—sulphate,  $\text{ClCo}(\text{NH}_3)_4(\text{OH})_2\text{SO}_4$

Sol. in  $\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 42. 214.)

**Chlorotitanic acid,  $\text{TiCl}_4 \cdot 2\text{HCl} = \text{H}_2\text{TiCl}_6$ .**

Known only in solution (Kowalewsky, Z. anorg. 1900, 25. 192.)

**Chlorous acid,  $\text{HClO}_2$** 

Known only in aqueous solution. 100 g  $\text{H}_2\text{O}$  at 8.5° and 753 mm pressure dissolve 4.7 g  $\text{ClO}_2$ . Hydrate with 50.07–67.43%  $\text{H}_2\text{O}$ , perhaps  $\text{HClO}_2 \cdot \text{H}_2\text{O}$ , separates out at 0°. (Brandan, A. 151. 340.)

Pure  $\text{HClO}_2$  is not known even in solution. (Garzaroni-Thurnlakh, A. 209. 184.)

**Chlorites.**

All chlorites are easily sol. in  $\text{H}_2\text{O}$  and alcohol, with gradual decomp.

**Ammonium chlorite.**

Known only in aqueous solution, which decomposes on evaporation or long standing.

**Barium chlorite,  $\text{Ba}(\text{ClO}_2)_2$** 

Deliquescent; easily sol. in  $\text{H}_2\text{O}$ . Solution decomp. on evaporation. Easily sol. in alcohol. (Millon, A. ch. (3) 7. 298.)

**Lead chlorite,  $\text{Pb}(\text{ClO}_2)_2$** 

Nearly insol. in cold  $\text{H}_2\text{O}$ , and only sl. sol. in hot  $\text{H}_2\text{O}$ . Sol. in  $\text{KOH} + \text{Aq.}$  (Garzaroni and Hayn, A. 209. 203.)

**Lead chlorite chloride,  $6\text{Pb}(\text{ClO}_2)_2 \cdot 4\text{PbCl}_2$ ,  $\text{PbO}$ .**

Rather difficulty sol. in  $\text{H}_2\text{O}$ . (Schmel, A. 109. 317.)

**Potassium chlorite,  $\text{KClO}_2$** 

Very deliquescent and sol. in  $\text{H}_2\text{O}$ . Sol. in alcohol of 38°. (Millon, A. ch. (3) 7. 323.) Sol. in  $\text{HClO}_2 + \text{Aq.}$

**Silver chlorite,  $\text{AgClO}_2$ .**

Sol. in hot, less in cold  $\text{H}_2\text{O}$ . Easily decomp. by heating above 100°. Decomp. by weakest acids. (Millon, A. ch. (3) 7. 329.)

**Sodium chlorite,  $\text{NaClO}_2$ .**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ .

**Strontium chlorite,  $\text{Sr}(\text{ClO}_2)_2$** 

Deliquescent and sol. in  $\text{H}_2\text{O}$ . Decomp. by slow evaporation. (Millon, A. ch. (3) 7. 327.)

**Chloroxyfulminoplatinum,**

Insol. in  $\text{H}_2\text{O}$ , sol. in  $\text{HCl} + \text{Aq.}$  (v. Meyer, J. pr. (2) 18. 305.)

**Chloruronic acid,  $\text{H}_2\text{UO}_2\text{Cl} + 2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol (Myhus, B. 1901, 34. 2776.)

**Chromacichloride,  $\text{CrO}_2\text{Cl}_2$ .**

See Chromyl chloride.

**Chromatiodic acid.**

See Chromoiodic acid.

**Chromic acid,  $H_2CrO_4$** 

Very sol in  $H_2O$ . (Moissan, C. R. 98, 1851.)

Does not exist except in solution. (Field, Chem. Soc. 61, 405.)

The composition of the hydrates formed by  $H_2CrO_4$  at different dilutions is calculated from determinations of the lowering of the fr-pt produced by  $H_2CrO_4$  and of the conductivity and sp. gr. of  $H_2CrO_4 + Aq$  (Jones, Am. Ch. J. 1905, 34, 333.)

See also **Chromium trioxide**.

**Chromates.**

Chromates of the alkali metals and of  $Cu$ ,  $Mg$ , and  $Sr$  are sol. in  $H_2O$ ; the others are generally insol. or sl. sol in  $H_2O$ , but sol in  $HNO_3 + Aq$ .

**Aluminum chromate, basic,  $Al_2O_3, CrO_3 + 7H_2O$ .**

Easily sol. in  $NH_4OH + Aq$ , alum, or acetic acid +  $Aq$ . Insol. in  $NH_4Cl + Aq$ . (Farne, Chem. Soc. 4, 300.)

Insol. as such as  $H_2O$ , but easily decomp. into  $H_2CrO_4$  and a basic insol. comp. Sol. in alkaline solutions and acids. Decomp. by many salts. (Eliot and Storer, Proc. Am. Acad. 5, 214.)

**Aluminum sodium chromate silicate,  $4Al_2O_3, 5Na_2O, CrO_3, 7SiO_2$ .**

(Weyberg, C. B. Minn., 1904, 727.)

**Ammonium chromate, basic,  $5(NH_4)_2O, 4CrO_3(?)$** 

Easily sol. in cold  $H_2O$  (Pohl, W. A. B. 6, 592.)

**Ammonium chromate,  $(NH_4)_2CrO_4$ .**

Very sol. in  $H_2O$ , pptd. from aqueous solution by alcohol. (Malaguti and Sarzeau.)

100 g.  $H_2O$  dissolve 40.46 g. at  $30^\circ$ . (Schreinemakers, Chem. Weekbl. 1905, 1, 395.)

Sol. in  $H_2O$  without decomp. (Schreinemakers, C. C. 1905, II 1087.)

Sp. gr. of  $(NH_4)_2CrO_4 + Aq$  at  $t^\circ/4^\circ$ .

$t^\circ$	13°	13 7°	19.6°
% $(NH_4)_2CrO_4$	10.52	19.75	28.04
Sp. gr.	1.0633	1.1197	1.1727

(Slotte, W. Ann. 1881, 14, 18.)

Sl. sol. in liquid  $NH_3$  (Franklin, Am. Ch. J. 1898, 20, 826.)

Difficulty sol. in acetone (Naumann, B. 1904, 37, 4328.)

**Ammonium dichromate,  $(NH_4)_2Cr_2O_7$ .**

Less sol. in  $H_2O$  than  $(NH_4)_2CrO_4$  (Mosser.)

100 g.  $H_2O$  dissolve 47.17 g. at  $30^\circ$ .

(Schreinemakers, Chem. Weekbl. 1905, 1, 395.)

Sp. gr. of  $(NH_4)_2Cr_2O_7 + Aq$  at  $t^\circ/4^\circ$ .

$t^\circ$	12°	10 5°	12°
% $(NH_4)_2Cr_2O_7$	6.85	13.00	19.93
Sp. gr.	1.0393	1.0782	1.1258

(Slotte, W. Ann. 1881, 14, 18.)

Sol. in alcohol (Ranitzer, Zeit. angew. ch. 1913, 26, 456.)

Insol. in benzonitrile. (Naumann, B. 1914, 47, 1370.)

Insol. in acetone (Naumann, B. 1904, 37, 4328.)

**Ammonium trichromate,  $(NH_4)_3Cr_3O_{10}$** 

Not deliquescent, but very sol. in  $H_2O$  (Siewert.)

Decomp. by  $H_2O$  into chromic acid and dichromate (Jäger and Kruss, B. 22, 2036.)

Sol. in acetone (Naumann, B. 1904, 37, 4328.)

**Ammonium tetrachromate,  $(NH_4)_4Cr_4O_{18}$** 

Deliquescent. Decomp. by  $H_2O$ . (Jäger and Kruss, B. 22, 2037.)

**Ammonium hexachromate,  $(NH_4)_6Cr_6O_{30} + 10H_2O(?)$** 

Very efflorescent. (Rammelsberg, Pogg. 94, 516.)

**Ammonium barium chromate,**

$BaCrO_4, (NH_4)_2CrO_4$ .

Ppt. Decomp. by  $H_2O$ . (Gröger, Z. anorg. 1908, 58, 414.)

**Ammonium cadmium chromate,  $(NH_4)_2O, 4CdO, 4CrO_3 + 3H_2O$** 

Ppt. Decomp. by boiling  $H_2O$ . (Gröger, M. 1904, 25, 533.)

**Ammonium cadmium chromate ammonia,  $(NH_4)_2CrO_4, CdCrO_4, 1/2 NH_3 + 1/2 H_2O$** 

Decomp. by  $H_2O$ . (Gröger, Z. anorg. 1908, 58, 418.)

$(NH_4)_2Cd(CrO_4)_2, 2NH_3$ . Insol. in cold, decomp. by hot  $H_2O$ .

Sol. in dil. acids or in  $NH_4OH + Aq$ . (Biggs, Chem. Soc. 1903, 83, 395.)

**Ammonium chromous chromate(?),**

$(NH_4)_2CrO_4, CrCrO_4 = (NH_4)_2Cr(CrO_4)_2$ .

Difficultly sol. in  $H_2O$ . Insol. in alcohol, ether, chloroform, or glacial acetic acid. Easily sol. in conc. acids, from which it is separated on dilution. Decomp. by  $NaOH + Aq$ . (Heintze, J. pr. (2) 4, 220.)

**Ammonium chromyl chromate,  $3(NH_4)_2O, 2CrO_3, 3CrO_3$ .**

Nearly insol. in  $H_2O$ . (Pascal, C. R. 1909, 148, 1465.)

**Ammonium cobaltous chromate.**

Ppt. Easily decomp (Briggs, Z. anorg. 1907, 56, 247.)

$(\text{NH}_4)_2\text{O}$ ,  $4\text{CoO}$ ,  $4\text{CrO}_3 + 3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in cold dil  $\text{H}_2\text{SO}_4$ . (Groger, Z. anorg. 1906, 48, 202.)

**Ammonium cobaltous dichromate,**

Sl. hygroscopic; sol. in  $\text{H}_2\text{O}$ , insol. in alcohol. (Kruss, Z. anorg. 1895, 8, 454.)

**Ammonium cobaltous chromate ammonia,**

Ppt.; decomp by  $\text{H}_2\text{O}$  (Gröger, Z. anorg. 1908, 58, 422.)

**Ammonium cupric dichromate,**

Sol in  $\text{H}_2\text{O}$  (Kruss, Z. anorg. 1895, 8, 455.)

**Ammonium cupric chromate ammonia,**

Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, 58, 420.)

Insol in cold, decomp by hot  $\text{H}_2\text{O}$ . Sol in dil. acids or in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Briggs, Chem. Soc. 1903, 83, 394.)

**Ammonium iron (ferric) chromate,**

More easily decomp. by  $\text{H}_2\text{O}$  than  $\text{K}_2\text{CrO}_4$ ,  $\text{Fe}_2(\text{CrO}_4)_3 + 4\text{H}_2\text{O}$ . (Hensgen, B. 12, 1300.)  $6\text{CrO}_3$ ,  $5\text{Fe}_2\text{O}_3$ ,  $8(\text{NH}_4)_2\text{O}$ , and  $4\text{CrO}_3$ ,  $\text{Fe}_2\text{O}_3, (\text{NH}_4)_2\text{O} + 4\text{H}_2\text{O}$ . Ppts. (Lepierre, C. R. 1894, 119, 1217.)

**Ammonium lithium chromate,  $\text{NH}_4\text{LiCrO}_4 + 2\text{H}_2\text{O}$ .**

Not deliquescent. (Rammelsberg.)

**Ammonium lead chromate,  $(\text{NH}_4)_2\text{CrO}_4$ ,  $\text{PbCrO}_4$ .**

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, 58, 424.)

**Ammonium magnesium chromate,**

Much more sol. in  $\text{H}_2\text{O}$  than the corresponding sulphate. (v. Hauer.)

Sol. in  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, 58, 416.)

**Ammonium manganous chromate,**

Sol. in  $\text{H}_2\text{O}$ . (Hensgen, R t c. 3, 433.)

**Ammonium nickel chromate,  $(\text{NH}_4)_2\text{CrO}_4$ ,  $\text{NiCrO}_4 + 6\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1906, 51, 353.)

Can be cryst from  $\text{H}_2\text{O}$  under  $40^\circ$ . (Briggs, Chem. Soc. 1903, 83, 392.)

**Ammonium nickel chromate ammonia,**

Decomp. by  $\text{H}_2\text{O}$ . (Groger, Z. anorg. 1906, 51, 354.)

$(\text{NH}_4)_2\text{Ni}(\text{CrO}_4)_2, 2\text{NH}_3$ . Insol. in cold  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . Sol in dil. acids or in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Briggs, Chem. Soc. 1903, 83, 393.)

+  $6\text{H}_2\text{O}$ . (Briggs, Proc. Chem. Soc. 1902, 18, 254.)

**Ammonium potassium chromate,  $\text{NH}_4\text{KCrO}_4$ .**

Sol. in  $\text{H}_2\text{O}$ . (E. Kopp, C. N. 11, 16.) +  $\text{H}_2\text{O}$ . (Etard, C. R. 85, 443.)

$2(\text{NH}_4)_2\text{CrO}_4, 3\text{K}_2\text{CrO}_4$ . Very sol. in  $\text{H}_2\text{O}$ . (Zehenter, M. 1897, 18, 51.)

**Ammonium silver chromate,  $(\text{NH}_4)_2\text{CrO}_4$ ,  $3\text{Ag}_2\text{CrO}_4$ .**

Decomp by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, 58, 423.)

**Ammonium sodium chromate,  $\text{NH}_4\text{NaCrO}_4 + 2\text{H}_2\text{O}$** 

Very sol in  $\text{H}_2\text{O}$ . (Zehenter, M. 1897, 18, 54.)

**Ammonium strontium chromate,  $(\text{NH}_4)_2\text{CrO}_4$ ,  $\text{SrCrO}_4$ .**

Ppt. Decomp by  $\text{H}_2\text{O}$ . (Groger, Z. anorg. 1908, 58, 415.)

**Ammonium uranyl chromate,  $(\text{NH}_4)_2\text{CrO}_4$ ,  $2(\text{UO}_2)\text{CrO}_4 + 6\text{H}_2\text{O}$ .**

Decomp. by boiling with  $\text{H}_2\text{O}$ . Sol in acidulated  $\text{H}_2\text{O}$ . (Formánek, A. 257, 106.) +  $3\text{H}_2\text{O}$ . (Formánek.)

**Ammonium zinc chromate,  $(\text{NH}_4)_2\text{O}$ ,  $2\text{ZnO}$ ,  $2\text{CrO}_3 + \text{H}_2\text{O}$ .**

Decomp. by hot  $\text{H}_2\text{O}$ . (Groger, M. 1904, 25, 520.)

**Ammonium zinc chromate ammonia,**

Insol. in cold, decomp by hot  $\text{H}_2\text{O}$ . Sol. in dil acids or in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Briggs, Chem. Soc. 1903, 83, 394.)

$4\text{ZnCrO}_4, 2(\text{NH}_4)_2\text{CrO}_4, 3\text{NH}_3 + 3\text{H}_2\text{O}$ . Ppt. Decomp by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, 58, 416.)

**Ammonium dichromate chloride mercuric chloride,  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7, 2\text{NH}_4\text{Cl}, 4\text{HgCl}_2 + 2\text{H}_2\text{O}$ .**

Ppt. Sol. in cold, more sol. in warm  $\text{H}_2\text{O}$ . (Strömholm, Z. anorg. 1912, 75, 280.)

**Ammonium dichromate chloride mercuric cyanide,  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7, 4\text{NH}_4\text{Cl}$ ,  $6\text{Hg}(\text{CN})_2 + 4\text{H}_2\text{O}$ .**

(Strömholm, Z. anorg. 1913, 80, 157.)

**Ammonium chromate chromyl fluoride,**  
 $(\text{NH}_4)_2\text{CrO}_4 \cdot \text{CrO}_2\text{F}_2$ .

Sol in  $\text{H}_2\text{O}$  (Varenne, C. R. 91. 939.)

**Ammonium chromate iodate.**

See Chromoiodate, ammonium.

**Ammonium dichromate mercuric chloride,**  
 $(\text{NH}_4)_2\text{Cr}_2\text{O}_7 \cdot \text{HgCl}_2$ .

Cannot be recryst. from  $\text{H}_2\text{O}$  or  $\text{HgCl}_2 + \text{Aq}$ , but from  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7 + \text{Aq}$  (Jäger and Krüss, B. 22. 2044.)

+  $\text{H}_2\text{O}$ . (Richmond and Abel, Chem. Soc. Q. J. 3. 199.)

Cannot be made to crystallize with  $\text{H}_2\text{O}$  (Jäger and Krüss.)

$3(\text{NH}_4)_2\text{Cr}_2\text{O}_7 \cdot \text{HgCl}_2$ . Decomp by  $\text{H}_2\text{O}$ . (J. and K.)

$4(\text{NH}_4)_2\text{Cr}_2\text{O}_7 \cdot \text{HgCl}_2$ . Decomp by  $\text{H}_2\text{O}$ . (J. and K.)

$(\text{NH}_4)_2\text{Cr}_2\text{O}_7 \cdot 3\text{HgCl}_2$ . (J. and K.)

$(\text{NH}_4)_2\text{Cr}_2\text{O}_7 \cdot 4\text{HgCl}_2$ . (J. and K.)

**Ammonium chromate phosphate.**

See Phosphochromate, ammonium.

**Ammonium chromate tellurate.**

See Chromotellurate, ammonium.

**Barium chromate,  $\text{BaCrO}_4$ .**

Extremely sl. sol. in  $\text{H}_2\text{O}$ .

Calculated from electrical conductivity of  $\text{BaCrO}_4 + \text{Aq}$ , 1 l  $\text{H}_2\text{O}$  dissolves 3.8 mg.  $\text{BaCrO}_4$  at  $18^\circ$ . (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

When not ignited,  $\text{BaCrO}_4$  is sol. in 86,957 pts.  $\text{H}_2\text{O}$ ; 22,988 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (0.5%  $\text{NH}_4\text{Cl}$ ); 3670 pts.  $\text{HCl} + \text{H}_2\text{O}_2 + \text{Aq}$  (5%  $\text{HCl} + \text{H}_2\text{O}_2$ ); 1986 pts.  $\text{HCl} + \text{H}_2\text{O}_2 + \text{Aq}$  (10%  $\text{HCl} + \text{H}_2\text{O}_2$ ); 1813 pts.  $\text{H}_2\text{CrO}_4 + \text{Aq}$  (10%  $\text{CrO}_3$ ). When ignited, 160,000 pts.  $\text{H}_2\text{O}$  are necessary for solution. (Schweitzer, by Frensius, Z. anal. 29. 414.)

Sol in 23,000 pts. boiling  $\text{H}_2\text{O}$ . (Mescherzski, Z. anal. 21. 399.)

3.5 mg.  $\text{BaCrO}_4$  are dissolved in 1 l. of sat. solution at  $18^\circ$  (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Easily sol. in  $\text{HNO}_3$ ,  $\text{HCl}$ , or chromic acid +  $\text{Aq}$ , from which it is precipitated by  $\text{NH}_4\text{OH}$ , or by dilution with  $\text{H}_2\text{O}$ . (Bahr.)

Insol. in  $\text{K}_2\text{Cr}_2\text{O}_7 + \text{Aq}$ . (Schweitzer.)

Sol. in 49,381 pts.  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$  (0.75% salt) at  $15^\circ$ ; in 23,355 pts.  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$  (1.5% salt) at  $15^\circ$ ; in 45,162 pts.  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (0.5% salt) at  $15^\circ$ . (Frensius, Z. anal. 29. 418.)

Easily sol. in alkali tartrates, or citrates +  $\text{Aq}$ . (Fleischer, J. pr. (2) 5. 326.)

$0.22 \times 10^{-4}$  g equiv.  $\text{BaCrO}_4$  are dissolved in 1 l of 45% alcohol at ord. temp (Guerzini, Dissert. 1912.)

Insol. in acetic acid and in  $\text{M}_2\text{Cr}_2\text{O}_7 + \text{Aq}$ .

Partly sol in a mixture of the two, except

in presence of  $\text{MC}_2\text{H}_3\text{O}_2$ . (Caron and Raquet, Bull. Soc. 1906, (3) 35. 1064.)

Not completely insol in acetic acid. (Baubigny, Bull. Soc. 1907, (4) 1. 53.)

Insol. in acetone (Naumann, B. 1904, 37. 4329.)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790.)

**Barium dichromate,  $\text{BaCr}_2\text{O}_7 \cdot 2\text{H}_2\text{O}$**

Decomp. by  $\text{H}_2\text{O}$  with separation of  $\text{BaCrO}_4$ . Sol in  $\text{H}_2\text{CrO}_4 + \text{Aq}$  (Bahr, J. B. 1853. 358.)

Sol in cold  $\text{H}_2\text{O}$  with formation of  $\text{BaCrO}_4$  and  $\text{CrO}_3$ .

Insol in glacial acetic acid. (Mayer, B. 1903, 36. 1742.)

**Barium calcium chromate,  $\text{BaCa}(\text{CrO}_4)_2$**

(Bougeois Bull. Soc. Min. 1879, 2. 124.)

**Barium potassium chromate,  $\text{BaK}_2(\text{CrO}_4)_2$**

Decomp. by  $\text{H}_2\text{O}$ . (Göger, Z. anorg. 1907, 64. 186.)

Decomp. by  $\text{H}_2\text{O}$  Stable in  $\text{K}_2\text{CrO}_4 + \text{Aq}$ , containing.

2.181	pts.	$\text{K}_2\text{CrO}_4$	per 100 pts.	$\text{H}_2\text{O}$	at	$11.5^\circ$
3.395	"	"	"	"	"	$27.5^\circ$
5.120	"	"	"	"	"	$50.0^\circ$
7.119	"	"	"	"	"	$78.0^\circ$
9.036	"	"	"	"	"	$100.0^\circ$

(Barre, C. R. 1914, 158. 497.)

**Barium potassium trichromate,**

$\text{Ba}_2\text{K}_2(\text{Cr}_2\text{O}_7)_3 \cdot 3\text{H}_2\text{O}$ .

Extremely deliquescent. (Bahr.)

**Bismuth chromates, basic.**

These comps. are insol in  $\text{H}_2\text{O}$  even in presence of  $\text{H}_2\text{CrO}_4$ ; sol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$  (Löwe, J. pr. 67. 288.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.00008 pt "bismuth chromate"; 100 pts. acetic acid dissolve 0.00021 pt "bismuth chromate"; 100 pts.  $\text{HNO}_3 + \text{Aq}$  (sp. gr. = 1.038) dissolve 0.00024 pt "bismuth chromate"; 100 pts.  $\text{KOH} + \text{Aq}$  (sp. gr. = 1.33) dissolve 0.00016 pt. "bismuth chromate." (Pearson, Phil. Mag. (4) 11. 206.)

Not insol in dil.  $\text{HNO}_3 + \text{Aq}$  unless  $\text{K}_2\text{CrO}_4$  is present. Less sol. in hot  $\text{NaOH} + \text{Aq}$  than  $\text{PhCrO}_4$ . (Storer.)

"Bismuth chromate" is insol in acetone. (Naumann, B. 1904, 37. 4329.)

$3\text{Bi}_2\text{O}_3 \cdot 2\text{CrO}_3 = 2(\text{BiO})_2\text{CrO}_4 \cdot \text{Bi}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$ .

$\text{Bi}_2\text{O}_3 \cdot \text{CrO}_3 = (\text{BiO})_2\text{CrO}_4$ . Insol. in  $\text{H}_2\text{O}$ , easily sol. in dil.  $\text{HCl} + \text{Aq}$ , less in dil.  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Murr.)

$\text{Bi}_2\text{O}_3 \cdot 2\text{CrO}_3 = (\text{BiO})_2\text{Cr}_2\text{O}_7$ . Insol. in  $\text{H}_2\text{O}$ .

+  $\text{H}_2\text{O}$ .

$5\text{Bi}_2\text{O}_3 \cdot 11\text{CrO}_3 + 6\text{H}_2\text{O}$ . (Murr, Chem. Soc. 31. 24.)

$3\text{Bi}_2\text{O}_3, 7\text{Cr}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ ; easily sol in mineral acids, especially  $\text{HCl} + \text{Aq}$  Partly sol. in  $\text{KOH} + \text{Aq}$

**Bismuth chromate, acid,  $\text{Bi}_2\text{O}_3, 4\text{Cr}_2\text{O}_3 + \text{H}_2\text{O}$**

Insol. in hot or cold  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$  (Murr, Chem Soc 30. 17)

**Bismuth potassium chromate,  $\text{Bi}_2(\text{CrO}_4)_3, \text{K}_2\text{CrO}_4$**

Insol. in  $\text{H}_2\text{O}$ . Decomp. with hot  $\text{H}_2\text{O}$   $\text{Bi}_2\text{O}_3, \text{K}_2\text{O}, 6\text{CrO}_3 + \text{H}_2\text{O}$  (Preis and Raymann, J. B 1880. 336.)

**Bromomolybdenum chromate.**

(Atterberg)

**Cadmium chromate, basic,  $2\text{CdO}, \text{Cr}_2\text{O}_3 + \text{H}_2\text{O}$**

Very sl sol in  $\text{H}_2\text{O}$ , very slowly sol in  $\text{NH}_4\text{OH} + \text{Aq}$  with combination. (Malaguti and Sarzeau, A. ch. (3) 9. 431)

Composition as above. (Freese, B 2. 478)

**Cadmium chromate,  $\text{CdCrO}_4$ .**

Insol. in  $\text{H}_2\text{O}$ , sol in acids, decomp. by heating with  $\text{H}_2\text{O}$  (Schulz, Z. anorg 1895, 10. 153.)

Sol in hot conc  $\text{CdSO}_4 + \text{Aq}$  (Briggs, Z. anorg 1907, 56. 253)

+  $2\text{H}_2\text{O}$  Decomp. by boiling  $\text{H}_2\text{O}$  (Schulz, Z. anorg. 1895, 10. 153)

**Cadmium dichromate,  $\text{CdO}, 2\text{CrO}_3 + \text{H}_2\text{O}$**

Easily sol in  $\text{H}_2\text{O}$  without decomp; hygroscopic (Schulz, Z. anorg. 1895, 10. 152.)

Easily sol in  $\text{H}_2\text{O}$  but decomp. on evaporation (Gröger, Z. anorg. 1910, 66. 11)

**Cadmium trichromate,  $\text{CdCr}_2\text{O}_7 + \text{H}_2\text{O}$ .**

Deliquescent. (Gröger, Z. anorg 1910, 66. 12.)

**Cadmium chromate ammonia,  $\text{CdCrO}_4, 4\text{NH}_3 + 3\text{H}_2\text{O}$**

Efflorescent. Decomp. by  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , insol in alcohol and ether (Malaguti and Sarzeau)

**Cadmium potassium chromate,  $\text{CdK}_2(\text{CrO}_4)_2 + 2\text{H}_2\text{O}$**

Ppt. Decomp. by  $\text{H}_2\text{O}$  (Gröger, Z. anorg 1907, 54. 189.)

$3\text{CdO}, \text{K}_2\text{O}, 3\text{CrO}_3 + 3\text{H}_2\text{O}$  Ppt. (Preis and Raymann, Sitzungsber. böhm. Gesell 1880.)

$4\text{CdO}, \text{K}_2\text{O}, 4\text{CrO}_3 + 3\text{H}_2\text{O}$  Ppt. Slowly decomp. by  $\text{H}_2\text{O}$  (Grosjean, M 1904, 25. 533)

**Cadmium potassium dichromate,**

$\text{CdCr}_2\text{O}_7, \text{K}_2\text{Cr}_2\text{O}_7 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ ; sl. hygroscopic (Kruss, Z. anorg. 1895, 8. 454.)

**Cadmium dichromate mercuric cyanide,**  
 $\text{CdCr}_2\text{O}_7, 2\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  without decomp (Kruss, Z. anorg 1895, 8. 460)

**Cæsium chromate,  $\text{Cs}_2\text{CrO}_4$**

(Chabré, C. R 1901, 132. 680)

Aq solution sat. at  $30^\circ$  contains 47%. (Schrenemakers, C. C. 1909, I 11)

**Cæsium dichromate,  $\text{Cs}_2\text{Cr}_2\text{O}_7$ .**

(Chabré, C. R 1901, 132. 680)

Much more sol in hot  $\text{H}_2\text{O}$ , than in cold. (Fraprie, Am J. Sci 1906, (4) 21. 309.)

Aq solution sat. at  $30^\circ$  contains 5.2%. (Schrenemakers, C. C. 1909, I 11)

**Cæsium trichromate,  $\text{Cs}_2\text{Cr}_3\text{O}_{16}$ .**

Decomp. by  $\text{H}_2\text{O}$  (Schrenemakers, Chem. Weekbl. 1908, 5. 811.)

Sol in  $\text{H}_2\text{O}$ . (Fraprie, Am J. Sci. 1906, (4) 21. 315)

**Cæsium tetrachromate,  $\text{Cs}_2\text{Cr}_4\text{O}_{13}$ .**

Sol in  $\text{H}_2\text{O}$  with decomp. (Schrenemakers, Chem Weekbl 1908, 5. 811.)

**Cæsium cobaltous chromate,**

$\text{Cs}_2\text{Co}(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$ .

(Briggs, Z. anorg. 1907, 56. 248)

**Cæsium magnesium chromate,**

$\text{Cs}_2\text{Mg}(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$ .

(Briggs, Chem. Soc. 1904, 85. 680.)

**Cæsium nickel chromate,  $\text{Cs}_2\text{Ni}(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$ .**

Sol. in cold  $\text{H}_2\text{O}$  without much change, but decomp. by warm  $\text{H}_2\text{O}$  (Briggs, Chem. Soc. 1904, 85. 679.)

**Calcium chromate basic,  $\text{Ca}_2\text{CrO}_5 + 3\text{H}_2\text{O}$ .**

Sol. in 230 pts  $\text{H}_2\text{O}$  without decomp. (Mylius and Wrochem, Gm. K. 3. I, 1385)

**Calcium chromate,  $\text{CaCrO}_4$**

*Anhydrous* Very sl. sol. in  $\text{H}_2\text{O}$  (Sievert, J. B. 1882. 148)

Aq. solution sat. at  $18^\circ$  contains 2.3%  $\text{CaCrO}_4$ ; sp. gr. = 1.023 (Mylius and Wrochem, B 1900, 33. 3688.)

Insol. in acetone (Naumann, B. 1904, 37. 4329.)

+  $\frac{1}{2}\text{H}_2\text{O}$  Aq. solution sat. at  $18^\circ$  contains 4.4%  $\text{CaCrO}_4$ , sp. gr. = 1.044. (Mylius and Wrochem, B 1900, 33. 3688.)

+  $\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	$0^\circ$	$8^\circ$	$13^\circ$	$18^\circ$	$25^\circ$
% $\text{CaCrO}_4$	11.5	10.8	10.3	9.6	9.1

$t^\circ$	$40^\circ$	$60^\circ$	$75^\circ$	$90^\circ$	$100^\circ$
% $\text{CaCrO}_4$	7.8	5.7	4.6	3.6	3.1

(Mylius and Wrochem, Gm.-K 3. I, 1386.)

Sp. gr. of solution containing 9.6% by wt  $\text{CaCrO}_4$  at  $18^\circ = 1.096$ . (Mylius and Wrochem, B 1900, 33, 3688.)  
 $+2\text{H}_2\text{O}$ . Sol in 241.3 pts  $\text{H}_2\text{O}$  at  $14^\circ$  (Siewert.)  
 Sol in 34 pts  $\text{H}_2\text{O}$  (Schwarz, Dtingl. 198. 159.)

Solubility of two modifications in  $\text{H}_2\text{O}$  at  $t^\circ$

$\alpha$  modification

$t^\circ$	$0^\circ$	$20^\circ$	$30^\circ$	$45^\circ$
% $\text{CaCrO}_4$	14.75	14.22	13.89	12.53

$\beta$  modification.

$t^\circ$	$0^\circ$	$14^\circ$	$18^\circ$	$19.5^\circ$	$30^\circ$	$40^\circ$
% $\text{CaCrO}_4$	9.8	10	10.3	10.4	10.4	10.4

(Mylius and Wrochem, Gm.-K. 3. I, 1387.)

$\alpha$  modification Sp. gr. of the solution containing 14.3% by wt  $\text{CaCrO}_4$  at  $18^\circ = 1.149$  (Mylius and Wrochem, B 1900, 33, 3688.)

$\beta$  modification Sp. gr. of the solution containing 10.3% by wt.  $\text{CaCrO}_4$  at  $18^\circ = 1.105$  (Mylius and Wrochem, B 1900, 33, 3688.)

Easily sol in  $\text{H}_2\text{O}$  containing  $\text{CrO}_3$

Insol. in absolute alcohol.

50 cc. of alcohol (29%) dissolve 0.608 g  $\text{CaCrO}_4$ , 50 cc. of alcohol (53%) dissolve 0.44 g  $\text{CaCrO}_4$ . (Fresenius, Z. anal. 30. 672.)

Sol. in acids and in dilute alcohol (Caron and Raquet, Bull. Soc. 1906, (3) 35. 1064.)

Calcium dichromate,  $\text{CaCr}_2\text{O}_7 \cdot 3\text{H}_2\text{O}$

Very deliquescent (Bahr, J. pr. 60. 60.)

In sat. solution at  $18^\circ$ , 61%  $\text{CaCr}_2\text{O}_7$  is present. (Mylius and Wrochem, Gm.-K. 3. I, 1387.)

Sol in acetone (Naumann, B. 1904, 37. 4328.)

Calcium potassium chromate,  $\text{CaCrO}_4$ ,

$\text{K}_2\text{CrO}_4$ ,

(Barre, C. R. 1914, 158. 495.)

$+ \text{H}_2\text{O}$  Easily sol. in  $\text{H}_2\text{O}$  (Duncan.)

Insol in  $\text{H}_2\text{O}$  when ignited

$+ 2\text{H}_2\text{O}$  Easily sol. in  $\text{H}_2\text{O}$ , even after ignition. Insol in alcohol (Duncan, J. B. 1860. 313.)

Formed below  $45^\circ$ . (Bancroft, C. R. 1914, 158. 495.)

Sol. in cold  $\text{H}_2\text{O}$ . Sl. sol in sat.  $\text{K}_2\text{CrO}_4 + \text{Aq.}$  (Grögen, Z. anorg. 1907, 54. 187.)

Two modifications Solubility of a modification is somewhat less than that of the  $\beta$  modification (Wyrouboff, Bull. Soc. Min. 1891, 14. 255.)

Solubility of two modifications in  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	$0^\circ$	$15^\circ$
Solubility of $\alpha$	23.06	25.06
" $\beta$	23.01	24.45

(Rakowski, C. C. 1909, I 133.)

$4\text{CaCrO}_4$ ,  $\text{K}_2\text{CrO}_4$ .

$5\text{CaCrO}_4$ ,  $\text{K}_2\text{CrO}_4$ . Sol in much  $\text{H}_2\text{O}$  (Bahr.)

Calcium chromate potassium sulphate,

$\text{CaCrO}_4$ ,  $\text{K}_2\text{SO}_4 + \text{H}_2\text{O}$ .

Decomp by  $\text{H}_2\text{O}$  (Hannay, Chem. Soc. 32. 399.)

$\text{CaCrO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{K}_2\text{CrO}_4$  As above (H.)

Cerous chromate.

Insol. in  $\text{H}_2\text{O}$ .

Calcium strontium chromate,  $\text{CaSr}(\text{CrO}_4)_2$ .

(Bourgeois, Bull. Soc. Min. 1879, 2. 123.)

Ceric dichromate,  $\text{CeO}_2$ ,  $2\text{CrO}_3 + 2\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ ; sol. in acids; decomp. completely by boiling  $\text{H}_2\text{O}$ . (Bancroft, C. R. 1894. 116. 145.)

Chromic chromate,  $\text{Cr}_2\text{O}_3 = \text{Cr}_2\text{O}_3$ ,  $\text{CrO}_3$ .

Insol. as such in  $\text{H}_2\text{O}$ , but decomp. thereby into  $\text{CrO}_3$  and  $\text{Cr}_2\text{O}_3$ ; decomp. by alkalis and many saline solutions. Easily sol. in dil. acids if recently pptd., but with difficulty if dried at a high temp. (Ehret and Stoier, Proc. Am. Acad. 5. 207.)

$\text{Cr}_2\text{O}_3 = \text{Cr}_2\text{O}_3$ ,  $3\text{CrO}_3$ . Sol. in  $\text{HCl} + \text{Aq.}$  Very slowly sol. in  $\text{HNO}_3 + \text{Aq.}$  Slowly decomp. by  $\text{H}_2\text{SO}_4$  or  $\text{NH}_4\text{OH} + \text{Aq.}$  Easily decomp. by  $\text{KOH} + \text{Aq.}$

Does not exist (Ehret and Storer, l.c.)  
 $\text{Cr}_2\text{O}_3 = 3\text{Cr}_2\text{O}_3$ ,  $2\text{CrO}_3$ . Easily sol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq.}$  difficultly sol. in acetic acid. Easily sol. in  $\text{KOH} + \text{Aq.}$  (Traube, A. 66. 108.)

Existence doubtful.

$\text{Cr}_2\text{O}_3 = 2\text{Cr}_2\text{O}_3$ ,  $\text{CrO}_3$ . Insol. in all acids, even aqua regia; slowly attacked by a boiling conc. solution of alkali hydroxides. (Geuther and Merz, A. 118. 62.)  $\text{Cr}_2\text{O}_3$  according to Wohler

Chromic cupric chromate,  $\text{CuCr}_2\text{O}_6$ ,  $\text{Cr}_2\text{O}_3 + 12\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4$ . Sol in  $\text{HCl}$  and  $\text{HNO}_3$ . (Rosenfeld, B. 1879, 12. 957.)

$6\text{CuO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $\text{CrO}_3 + 9\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$ . Sol in acids (Rosenfeld, B. 1879, 12. 958.)

Chromic potassium chromate,  $\text{Cr}_2\text{H}_2(\text{CrO}_4)_2$ ,  $\text{K}_2\text{CrO}_4(?)$ .

Insol. in  $\text{H}_2\text{O}$ , alcohol, or acetic acid. Not attacked by cold  $\text{HNO}_3 + \text{Aq.}$ ; sl. oxidized when hot. Insol in cold, easily sol. in hot  $\text{H}_2\text{SO}_4$ . Sl. sol. in  $\text{SO}_2 + \text{Aq.}$ . Sol. in conc.  $\text{HCl} + \text{Aq.}$  (Tommasi, Bull. Soc. (2) 17. 396.)

Chromous potassium chromate,

$\text{K}_2\text{CrO}_4(\text{CrO}_4)_2 = \text{K}_2\text{Cr}(\text{CrO}_4)_2(?)$ .

Sat. cold solution in  $\text{H}_2\text{O}$  contains 9% of the salt. Insol in alcohol and ether (Heintze, J. pr. (2) 4. 212.)

**Cobaltous chromate, basic,  $3\text{CoO}$ ,  $\text{CrO}_3 + 4\text{H}_2\text{O}$**

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Malaguti and Sarzeau, A. ch. (3) 9. 431.)

True formula is  $2\text{CoO}$ ,  $\text{CrO}_3 + 2\text{H}_2\text{O}$  (Froese, Pogg. 140. 252.)

$4\text{CoO}$ ,  $3\text{CrO}_3 + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  (Groger, Z. anorg. 1906, 49. 203.)

**Cobaltous chromate,  $\text{CoCrO}_4$**

Much more sol. in  $\text{H}_2\text{O}$  than  $\text{NiCrO}_4$ . Easily sol. in hot dil.  $\text{HNO}_3 + \text{Aq.}$  (Briggs, Z. anorg. 1909, 63. 327.)

+  $2\text{H}_2\text{O}$ . Ppt. (Briggs, Z. anorg. 1909, 63. 328.)

**Cobaltous dichromate,  $\text{CoCr}_2\text{O}_7 + \text{H}_2\text{O}$**

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . (Briggs, Z. anorg. 1907, 56. 247.)

**Cobaltous potassium chromate, basic.**

$\text{K}_2\text{O}$ ,  $4\text{CoO}$ ,  $4\text{CrO}_3 + 3\text{H}_2\text{O}$ .

Sol. in cold dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Groger, Z. anorg. 1906, 49. 199.)

**Cobaltous potassium chromate,  $\text{K}_2\text{Co}(\text{CrO}_4)_2 + 2\text{H}_2\text{O}$**

Decomp. by  $\text{H}_2\text{O}$  (Groger, Z. anorg. 1906, 49. 200.)

**Cupric chromate, basic,  $3\text{CuO}$ ,  $\text{CrO}_3 + 2\text{H}_2\text{O}$**

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil.  $\text{HNO}_3 + \text{Aq.}$  and in  $\text{NH}_4\text{OH} + \text{Aq.}$  Decomp. by  $\text{KOH} + \text{Aq.}$  (Malaguti and Sarzeau, A. ch. (3) 9. 434.)

$7\text{CuO}$ ,  $2\text{CrO}_3 + 5\text{H}_2\text{O}$ . Ppt. (Rosenfeld, B. 13. 1469.)

$7\text{CuO}$ ,  $\text{CrO}_3 + 5\text{H}_2\text{O}$ . Ppt. (R.)

**Cobaltous dichromate mercuric cyanide,  $\text{CoCr}_2\text{O}_7$ ,  $2\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$**

Very stable. Sol. in  $\text{H}_2\text{O}$ . (Kruss, Z. anorg. 1895, 8. 458.)

**Cupric chromate,  $\text{CuCrO}_4$**

Insol. in  $\text{H}_2\text{O}$ ; very sol. in chromic acid and in other acids, decomp. by boiling with  $\text{H}_2\text{O}$ . (Schulz, Z. anorg. 1895, 10. 152.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)

**Cupric dichromate, basic,  $\text{CuCr}_2\text{O}_7$ ,  $2\text{CuO}$**   
(Stanley, C. N. 54. 194.)

**Cupric dichromate,  $\text{CuCr}_2\text{O}_7 + 2\text{H}_2\text{O}$**

Deliquescent. Very easily sol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq.}$  and alcohol (Dröge, A. 101. 39.)

Aqueous solution is decomp. by boiling. (Malaguti and Sarzeau, A. ch. (3) 9. 456.)

Very hygroscopic. Very sol. in  $\text{H}_2\text{O}$  without decomp. (Schulz, Z. anorg. 1895, 10. 150.)

**Cupric tetrachromate,  $\text{CuCr}_4\text{O}_{12} + 2\text{H}_2\text{O}$**

Deliquescent. Decomp. when its solution in  $\text{H}_2\text{O}$  is concentrated. (Grüger, Z. anorg. 1910, 66. 15.)

**Cupric lead chromate,  $2(\text{PbCrO}_4, \text{PbO})$ ,  $(2\text{CuCrO}_4, \text{CuO})$**

Min. *Vauquelinite*. Sol. in acids.

**Cupric potassium chromate, basic,**

$\text{KCu}_2(\text{OH})(\text{CrO}_4)_2 + \text{H}_2\text{O}$ .

Ppt. (Grüger, M. 1903, 24. 485.)

$3\text{CuO}$ ,  $\text{K}_2\text{O}$ ,  $3\text{CrO}_3 + 2\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  (Knop, A. 70. 52.)

Does not exist. (Rosenfeld, B. 13. 1472.)

$4\text{CuO}$ ,  $\text{K}_2\text{O}$ ,  $4\text{CrO}_3 + \text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . (Gerhardt.)

+  $3\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . (Groger, Dissert. 1880.)

**Cupric potassium chromate ammonia,**

$\text{K}_2\text{Cu}(\text{CrO}_4)_2, 2\text{NH}_3$ .

Very sol. in dil.  $\text{NH}_3 + \text{Aq.}$ ; decomp. by  $\text{H}_2\text{O}$ . (Briggs, Chem. Soc. 1904, 65. 672.)

**Cupric chromate ammonia,  $\text{CuCrO}_4, 4\text{NH}_3$**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq.}$  (Parravano and Pasta, Gazz. ch. it. 1907, 37. (2). 255.)

$4\text{CuCrO}_4, 8\text{NH}_3 + 5\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$  and  $\text{NH}_4\text{OH} + \text{Aq.}$ ; insol. in organic solvents; easily sol. in  $\text{AgNO}_3 + \text{Aq.}$  (Schuyten, C. C. 1900, I. 399.)

$2\text{CuCrO}_4, 7\text{NH}_3 + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . Very sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq.}$  (Briggs, Chem. Soc. 1904, 65. 673.)

$3\text{CuO}$ ,  $2\text{CrO}_3$ ,  $10\text{NH}_3 + 2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ ; sl. sol. or insol. in alcohol, ether, or  $\text{NH}_4\text{OH} + \text{Aq.}$  (Malaguti and Sarzeau.)

Decomp. by hot  $\text{H}_2\text{O}$ ; insol. in alcohol (Böttger.)

**Cupric dichromate ammonia,  $\text{CuCr}_2\text{O}_7, 4\text{NH}_3 + 2\text{H}_2\text{O}$**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq.}$  (Parravano and Pasta, Gazz. ch. it. 1907, 37. (2). 255.)

**Cupric dichromate mercuric cyanide,**

$\text{CuCr}_2\text{O}_7, \text{Hg}(\text{CN})_2 + 5\text{H}_2\text{O}$ .

Not hygroscopic. Sol. in  $\text{H}_2\text{O}$ . (Kruss, Z. anorg. 1895, 8. 461.)

**Didymium chromate,  $\text{D}_{12}(\text{CrO}_4)_3$**

Sl. sol. in  $\text{H}_2\text{O}$ , easily in dil. acids (Friedrichs and Smith, A. 191. 353.)

+  $7\text{H}_2\text{O}$ . (Cleve.)

**Didymium potassium chromate,**

$\text{D}_{12}(\text{CrO}_4)_3, \text{K}_2\text{CrO}_4$ .

Precipitate. Decomp. by  $\text{H}_2\text{O}$ . (Cleve.)

Dysprosium chromate,  $Dy_2(CrO_4)_3$   
+  $10H_2O$ .

Very sl sol in  $H_2O$ . 1.0002 pt is sol in 100 pts  $H_2O$  at  $25^\circ$  (Jantsch, B. 1911, 44, 1276.)

Glucinum chromate, basic,  $GhCrO_4 \cdot 13GhO + 23H_2O$

Ppt. Insol. in  $H_2O$ . (Creuzberg, Dingl. 183. 449.)

$GhCrO_4 \cdot 6Gh(OH)_2$ . Ppt. Insol. in  $H_2O$  (Glassmann, B. 1907, 40, 2603)

Glucinum chromate,  $GhCrO_4 \cdot H_2O$ .

Decomp. by  $H_2O$  with separation of the basic chromate. (Glassmann, B. 1907, 40, 2603)

Gold (auric) chromate,  $Au_2(CrO_4)_3 \cdot CrO_3$ .

Ppt. (Orloff, Ch Z 1907, 31, 1182.)

Indium chromate.

Ppt (Meyer)

Indium dichromate.

Very sol in  $H_2O$ . Known only in solution.

Iron (ferric) chromate, basic.

Decomp. by  $H_2O$  (Maus.)

$Fe_2O_3 \cdot CrO_3$ . Insol. in  $H_2O$ , but decomp. thereby, or by saline solutions; easily sol. in acids. Sol. in  $H_2CrO_4 + Aq$ . (Ehott and Storei, Proc. Am. Acad. 5, 216)

Iron (ferric) dichromate.

Sol. in  $H_2O$  and alcohol. (Maus, Pogg 9, 132.)

Iron (ferric) potassium chromate, basic,

$2CrO_3 \cdot 6Fe_2O_3 \cdot 3K_2O$ .

$4CrO_3 \cdot 3Fe_2O_3 \cdot 4K_2O$ .

$10CrO_3 \cdot 8Fe_2O_3 \cdot 7K_2O$ .

$11CrO_3 \cdot 8Fe_2O_3 \cdot 4K_2O + 9H_2O$ .

$9CrO_3 \cdot 2Fe_2O_3 \cdot 6K_2O + 6H_2O$ .

$9CrO_3 \cdot 2Fe_2O_3 \cdot 6K_2O + 10H_2O$ .

$10CrO_3 \cdot 3Fe_2O_3 \cdot 6K_2O + 5H_2O$ .

$7CrO_3 \cdot 2Fe_2O_3 \cdot 2K_2O + 7H_2O$ .

$4CrO_3 \cdot Fe_2O_3 \cdot K_2O + 4H_2O$ .

$6CrO_3 \cdot 2Fe_2O_3 \cdot 3K_2O$ .

$16CrO_3 \cdot 4Fe_2O_3 \cdot 5K_2O + 8H_2O$ .

Above compounds are ppts., insol. in  $H_2O$ , alcohol and ether. (Lepierre, C. R. 1894, 119, 1215-18.)

Iron (ferric) potassium chromate,

$Fe_2(CrO_4)_3 \cdot K_2CrO_4 + 4H_2O$ .

Decomp. by much  $H_2O$ , conc.  $HCl$ , or  $NH_4OH + Aq$ . Not decomp. by alcohol. (Hensgen, B. 12, 1300)

Iron (ferric) sodium chromate, basic,

$5CrO_3 \cdot 7Fe_2O_3 \cdot 4Na_2O$ .

Ppt (Lepierre, C. R. 1894, 119, 1217.)

Lanthanum chromate,  $La_2(CrO_4)_3$ .

Sl sol. in cold, more easily in hot  $H_2O$ ; easily sol. in acids. (Frerichs and Smith, A. 191, 355)

+  $8H_2O$  Ppt (Cleve)

Lanthanum potassium chromate.

(Cleve)

Lead chromate, basic,  $2PbO \cdot CrO_3$  (chromic red)

Insol. in  $H_2O$ , acetic acid dissolves out  $\frac{1}{2}$  the  $PbO$ . Sol. in  $KOH + Aq$  (Badams, Pogg 3, 221)

Insol. in acetone. (Naumann, B 1904, 37, 4329.)

$3PbO \cdot CrO_3$ . (Hermann, Pogg 28, 162.) +  $H_2O$ . Ppt (Strömholm, Z anorg. 1904, 38, 443.)

Min *Melanochroite*, *Phanicrosite* Sol. in acids.

$PbO$ ,  $PbCrO_4$ . Ppt (S)

Lead chromate,  $PbCrO_4$ .

Insol. in  $H_2O$ . Pptd. from  $Pb(NO_3)_2$  in presence of 70,000 pts.  $H_2O$ . (Huang.)

Calculated from electrical conductivity of  $PbCrO_4 + Aq$ , 1 l  $H_2O$  dissolves 0.2 mg.  $PbCrO_4$  at  $18^\circ$  (Kohlrausch and Rose, Z. phys. Ch. 12, 241.)

1 l.  $H_2O$  dissolves  $1.2 \times 10^{-6}$  g  $PbCrO_4$  at  $25^\circ$ . (Hevesy, Z. anorg 1913, 82, 328.)

Sol. in dil.  $H_2SO_4 + Aq$  (Storer), sl sol. in dil.  $HNO_3 + Aq$

Sol. in 500 pts.  $HNO_3 + Aq$  of 1.12 sp. gr.; in 150 pts.  $HNO_3 + Aq$  of 1.225 sp. gr.; in 130 pts.  $HNO_3 + Aq$  of 1.265 sp. gr.; in 80 pts  $HNO_3 + Aq$  of 1.395 sp gr (Storei's Dict.)

Solubility of  $PbCrO_4$  in  $HNO_3 + Aq$  at  $18^\circ$ .

(Millimols. per l.)

0.1N	0.2N	0.3N	0.4N
0.506	0.844	1.13	1.44

(Beck and Stegmüller, l. c.)

Easily decomp. by hot  $HCl + Aq$  (Fresenius.)

Solubility of  $PbCrO_4$  in  $HCl + Aq$ .

(Millimols. per l.)

$t^\circ$	0.1N	0.2N	0.3N	0.4N	0.5N	0.6N
18	0.186	0.393	0.654	1.07	1.56	2.25
25	0.239	0.485	0.839	1.32	4.06	2.95
37	0.357	0.744	1.31	2.10	3.28	4.69

(Beck and Stegmüller, Arb. K. Gesund. Amt. 1910, 34, 446.)

Insol. in  $HC_2H_3O_2 + Aq$ .

Easily sol. in  $KOH$ , or  $NaOH + Aq$ . 1 l.  $KOH + Aq$  ( $\frac{1}{2}$  normal) dissolves 11.9 g.  $PbCrO_4$  at  $15^\circ$ ; 16.2 g. at  $60^\circ$ ; 26.1 g. at  $80^\circ$ ;

38.5 g. at 102°. (Lachaud and Lepierre, Bull. Soc. (3) 6, 230.)

Insol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Brett, 1837.)

Sol. in  $\text{K}_2\text{Cr}_2\text{O}_7 + \text{Aq.}$ ; almost completely insol. in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq.}$

Not pptd. in presence of  $\text{Na citrate.}$  (Spil-let.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 828.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329.)

Min. *Crocoite* Sol. in hot  $\text{HCl} + \text{Aq.}$ ; difficultly sol in  $\text{HNO}_3 + \text{Aq.}$ ; sol in  $\text{KOH} + \text{Aq.}$

**Lead dichromate,  $\text{PbCr}_2\text{O}_7$ .**

Decomp. by  $\text{H}_2\text{O}$

+  $2\text{H}_2\text{O}$  As above (Preis and Raymann, B. 13, 340.)

**Lead lithium chromate,  $\text{PbCrO}_4, \text{Li}_2\text{CrO}_4$**

(Lachaud and Lepierre, C. R. 110, 1035.)

**Lead potassium chromate,  $\text{PbCrO}_4, \text{K}_2\text{CrO}_4$ .**

Insol. in hot or cold  $\text{H}_2\text{O}$  or in alcohol Dil acids dissolve out  $\text{K}_2\text{CrO}_4$ . (Lachaud and Lepierre, C. R. 110, 1035.)

Decomp. by  $\text{H}_2\text{O}$ . Stable in contact with solutions containing.

	$\text{K}_2\text{CrO}_4$ per 100 pts. $\text{H}_2\text{O}$ at	10°
8.950 pts.	" " " "	10°
3.077 " "	" " " "	27.5°
7.629 " "	" " " "	37.5°
7.150 " "	" " " "	50.0°
6.145 " "	" " " "	76.0°
4.940 " "	" " " "	100.0°

(Barre, C. R. 1914, 158, 497)

**Lead sodium chromate,  $\text{PbCrO}_4, \text{NaCrO}_4$ .**

Sol. in  $\text{H}_2\text{O} (?)$ . (Lachaud and Lepierre)  
 $\text{PbCrO}_4, 2\text{PbO}, \text{Na}_2\text{CrO}_4$  (L and L)

**Lithium chromate,  $\text{Li}_2\text{CrO}_4$ .**

100 cc of solution sat. at 18° contain 85 g anhydrous salt (Kohlrausch, B. A. B. 1897, 90.)

99.94 pts. are sol. in 100 pts  $\text{H}_2\text{O}$  at 30° (Schreinemakers, C. C. 1905, II, 1486.)

+  $2\text{H}_2\text{O}$ . Very easily sol. in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 128, 323.)

100 g.  $\text{H}_2\text{O}$  dissolve 111 g. salt at 20°. (Von Weimarn, C. C. 1911, II, 1300.)

Sp. gr. of solution sat. at 18° = 1.574, and contains 52.6%  $\text{LiCrO}_4$  (Mylus and Wrochem, B. 1897, 30, 1718.)

**Lithium dichromate,  $\text{Li}_2\text{Cr}_2\text{O}_7$ .**

130.4 pts. are sol in 100 pts.  $\text{H}_2\text{O}$  at 30° (Schreinemakers, C. C. 1905, II, 1486.)

+  $2\text{H}_2\text{O}$ . Deliquescent Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)

**Lithium potassium chromate,  $\text{K}_2\text{CrO}_4$ ,**

$\text{Li}_2\text{CrO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .

Hydroscopic. (Zehenter, M. 1897, 18, 54.)

**Magnesium chromate,  $\text{MgCrO}_4$ .**

Sol in  $\text{H}_2\text{SO}_4$ , and  $\text{HCl}$ , insol. in  $\text{HNO}_3$ . (Dufau, C. R. 1896, 123, 888)

Sp gr of  $\text{MgCrO}_4 + \text{Aq}$  sat at t°/4°

t°	13.6°	14.5°	13.6°
% $\text{MgCrO}_4$	12.31	21.86	27.71
Sp. gr.	1.0886	1.1641	1.2170

(Slotte, W. Ann. 1881, 14, 19.)

Sol. in acetone. (Naumann, B. 1904, 37, 4328)

+  $7\text{H}_2\text{O}$ . Easily sol in  $\text{H}_2\text{O}$  (Vanquehn.)

100 cm. of solution sat. at 18° contain 60 g.  $\text{MgCrO}_4$ . (Kohlrausch, B. A. B. 1897, 90.)

Sp. gr. of solution sat. at 18° = 1.422, and contains 42%  $\text{MgCrO}_4$ . (Mylus and Wrochem, B. 1897, 30, 1718)

+  $5\text{H}_2\text{O}$ . Very sol in  $\text{H}_2\text{O}$ . (Wyrouboff, Bull. Soc. Min. 12, 60)

**Magnesium dichromate,  $\text{Mg}_2\text{Cr}_2\text{O}_7$ .**

Sol. in  $\text{H}_2\text{O}$

Sl. sol in alcohol. (Reintzer, Zeit. angew. 1913, 26, 456.)

**Magnesium potassium chromate,  $\text{MgCrO}_4$ ,  $\text{K}_2\text{CrO}_4 + 2\text{H}_2\text{O}$ .**

100 pts  $\text{H}_2\text{O}$  dissolve 28.2 pts at 20°; 34.3 pts. at 60°. (Schweitzer)

Sol. in  $\text{H}_2\text{O}$ . Sl. sol in sat  $\text{K}_2\text{CrO}_4 + \text{Aq.}$  (Grogger, Z. anorg. 1907, 54, 188)

Insol. in alcohol

+  $6\text{H}_2\text{O}$ . Efflorescent. (Briggs, Chem. Soc. 1904, 85, 679.)

**Magnesium rubidium chromate,**

$\text{MgRb}_2(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$ .

(Briggs, Chem. Soc. 1904, 85, 679.) (Barker, Chem. Soc. 1911, 99, 1327.)

**Magnesium sodium chromate.**

(Stanley, C. N. 54, 194.)

**Manganous chromate,  $2\text{MnO}, \text{CrO}_3 + \text{H}_2\text{O}$ .**

Ppt. Sol. in dil  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3 + \text{Aq.}$  (Warrington and Reinsch, Schw J. 3, 378.)

**Manganous potassium chromate,  $\text{MnCrO}_4$ ,  $\text{K}_2\text{CrO}_4 + 2\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol in dil.  $\text{H}_2\text{SO}_4$ . (Grogger, Z. anorg. 1905, 44, 459)

$2\text{MnCrO}_4, \text{K}_2\text{CrO}_4 + 4\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Hengen, R. t. c. 3, 433.)

**Mercurous chromate, basic,  $4\text{Hg}_2\text{O}, 3\text{CrO}_3$ .**

Very sl. sol in cold, more in boiling  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{HNO}_3 + \text{Aq.}$  Decomp. by  $\text{HCl} + \text{Aq.}$  Sl. sol in  $\text{NH}_4\text{Cl} + \text{Aq.}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  (Brett.)

Does not exist. (Richter, B. 15, 1489.)

$3\text{Hg}_2\text{O}, \text{CrO}_3$ . Sol in  $\text{HNO}_3 + \text{Aq.}$  (Richter.)

$3\text{Hg}_2\text{O}$ ,  $2\text{CrO}_3$ . Ppt (Fichter, Z anorg. 1912, 76. 350.)

**Mercurous chromate,  $\text{Hg}_2\text{CrO}_4$ \***

Very sl. sol in cold, more readily in hot  $\text{H}_2\text{O}$ . Sl sol in dil  $\text{HNO}_3 + \text{Aq}$ ; sol in conc  $\text{HNO}_3$ ; sol in  $\text{KCN} + \text{Aq}$ ; insol. in  $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$ . (Rose, Pogg 53. 124.)

Less sol in  $\text{K}_2\text{CrO}_4 + \text{Aq}$  than in  $\text{H}_2\text{O}$  (Fichter, Z. anorg 1912, 76. 349.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

**Mercuric chromate, basic,  $2\text{HgO}$ ,  $\text{CrO}_3$ .**

Sol. in  $\text{HCl}$  and in  $\text{HNO}_3 + \text{Aq}$ . (Geuther.)  $3\text{HgO}$ ,  $\text{CrO}_3$ . Sl. sol in  $\text{H}_2\text{O}$  (Millon.)

The only true compound. All others are mixtures of  $\text{HgO}$  or  $\text{HgCrO}_4$  with this compound. (Cox, Z. anorg. 1904, 40. 155.)

$4\text{HgO}$ ,  $\text{CrO}_3$ . Sl sol in  $\text{H}_2\text{O}$ . (Millon, A. ch. (3) 18. 365.)

$7\text{HgO}$ ,  $2\text{CrO}_3$ . Easily sol in warm  $\text{HNO}_3$ , when freshly precipitated. Easily sol in  $\text{HCl} + \text{Aq}$  (Geuther, A. 106. 247.)

Does not exist. (Freese, B. 2. 477.)

$5\text{HgO}$ ,  $\text{CrO}_3$ . Easily sol. in  $\text{HCl} + \text{Aq}$  Very sl. sol. in  $\text{HNO}_3 + \text{Aq}$ . Decomp. by  $\text{H}_2\text{O}$  into—

$6\text{HgO}$ ,  $\text{CrO}_3$ . Insol in  $\text{H}_2\text{O}$  (Jager and Krüss, B. 22. 2049.)

**Mercuric chromate,  $\text{HgCrO}_4$**

Decomp. by  $\text{H}_2\text{O}$  and acids into basic salt. (Geuther.)

Sol. in acids Sol in warm  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  Sol. in  $\text{Hg}(\text{NO}_3)_2$  or  $\text{HgCl}_2 + \text{Aq}$ .

Insol in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol in acetone. (Naumann, B. 1904, 37. 4329.)

**Mercuric dichromate,  $\text{HgCr}_2\text{O}_7$ .**

Ppt. (Gawalowski, C. C 1906. II, 1307.)

**Mercurous potassium chromate,**

$\text{Hg}_2\text{K}_2(\text{CrO}_4)_2$ .

Ppt., decomp. by  $\text{H}_2\text{O}$  (Gröger, Z anorg 1907, 54. 191.)

**Mercuric chromate, basic, ammonia,  $12\text{HgO}$ ,  $3\text{CrO}_3$ ,  $2\text{NH}_3 + 3\text{H}_2\text{O}$**

(Gröger, Z. anorg. 1908, 58. 420.)

**Mercuric chromate ammonia,  $\text{HgCrO}_4$ ,  $2\text{NH}_3 + \text{H}_2\text{O}$**

(Gröger, Z. anorg 1908, 58. 419.)

**Mercuric chromate sulphide,  $2\text{HgCrO}_4$ ,  $\text{HgS}$ .**

Not attacked by weak acids (Palm, C. C. 1863. 121.)

**Nickel chromate, basic,  $4\text{NiO}$ ,  $\text{CrO}_3 + 6\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ ; easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Malaguti and Sarzeau, A. ch (3) 9. 451.)

$3\text{NiO}$ ,  $\text{CrO}_3 + 6\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Freese, J. B. 1869. 271.)

$2\text{NiO}$ ,  $\text{CrO}_3 + 6\text{H}_2\text{O}$ . As above (Schmidt, A. 156. 19.)

$5\text{NiO}$ ,  $2\text{CrO}_3 + 12\text{H}_2\text{O}$ . As above (Schmidt.)

**Nickel chromate,  $\text{NiCrO}_4$ .**

Not attacked by boiling  $\text{H}_2\text{O}$

Nealy insol. in hot dil  $\text{HNO}_3$ . Slowly sol. in conc.  $\text{HNO}_3$  and aqua regia.

Somewhat sol in  $\text{NH}_3 + \text{Aq}$ . (Briggs, Z. anorg 1909, 63. 326.)

**Nickel dichromate,  $2\text{NiCr}_2\text{O}_7 + 3\text{H}_2\text{O}$ .**

Slowly sol in cold, rapidly sol in hot  $\text{H}_2\text{O}$ . Deliquescent (Briggs, Z. anorg 1907, 56. 246.)

**Nickel potassium chromate,  $\text{NiCrO}_4$ ,  $\text{K}_2\text{CrO}_4 + 2\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  (Grogei, Z anorg. 1906, 51. 353.)

$+ 6\text{H}_2\text{O}$ . Efflorescent (Briggs, Chem. Soc. 1904, 85. 678.)

**Nickel rubidium chromate,  $\text{NiRb}(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$**

Sl. efflorescent at ord. temp. (Briggs, Chem Soc 1904, 85. 678.)

**Nickel chromate ammonia,  $\text{NiCrO}_4$ ,  $6\text{NH}_3 + 4\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . Quite easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  of 0.96 sp. gr. (Schmidt.) Insol in alcohol or ether.

**Potassium chromate,  $\text{K}_2\text{CrO}_4$ ,  $\text{K}_2\text{Cr}_2\text{O}_7$ , etc.**

System.  $\text{K}_2\text{O}$ ,  $\text{CrO}_3$ ,  $\text{H}_2\text{O}$  at  $0^\circ$

$24^\circ$	6.94	6.55	$50^\circ$	18.94	18.77
$30^\circ$	9.08	8.70	$60^\circ$	28.1	27.3

(Stortenbeker, C. C. 1907, II 1588)

**Rubidium dichromate chloride mercuric chloride,  $Rb_2Cr_2O_7, 2RbCl, 4HgCl_2 + 2H_2O$ .**Sol. in  $H_2O$ .Solution sat. at  $20.5^\circ$  contains 5.35% salt. (Strömholm, Z. anorg. 1912, 75. 284.)**Silver (argentous) chromate,  $Ag_2CrO_4$ .**

Sol. in dil. acids. (Wöhler and Rautenberg.)

Existence very doubtful.

**Silver chromate,  $Ag_2CrO_4$ .**Absolutely insol. in  $H_2O$ . Sol. in acids, ammonia, and alkali chromates + Aq. (Warrington, A. 27. 12.)Appreciably sol in cold, and still more in hot  $H_2O$ . (Meineke, A. 261. 341.)100 cc.  $H_2O$  dissolve 0.064 grain  $Ag_2CrO_4$  at  $100^\circ$ ; 100 cc.  $H_2O$  containing 50 grains

of the following salts dissolve the given amts. of  $\text{Ag}_2\text{CrO}_4$  at  $100^\circ$ :  $\text{NaNO}_3$ , 0.064 gram;  $\text{KNO}_3$ , 0.192 gram;  $\text{NH}_4\text{NO}_3$ , 0.320 gram;  $\text{Mg}(\text{NO}_3)_2$ , 0.256 grain (Carpenter, J. S. C. I. 5. 280)

According to electrical conductivity of  $\text{Ag}_2\text{CrO}_4 + \text{Aq}$ , 1 l  $\text{H}_2\text{O}$  dissolves 28 mg  $\text{Ag}_2\text{CrO}_4$  at  $18^\circ$  (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

1 l  $\text{H}_2\text{O}$  dissolves 25 mg  $\text{Ag}_2\text{CrO}_4$  at  $18^\circ$  (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

25 mg. are contained in 1 l. of sat. solution at  $18^\circ$ . Solubility increases unusually rapidly with temp. (Kohlrausch, Z. phys. Ch. 1906, 64. 168.)

Sol. in 26,378 pts. cold  $\text{H}_2\text{O}$  and 9116 pts.  $\text{H}_2\text{O}$  at  $100^\circ$  (Koninck and Nihoul, Zett. angew. Ch. 1891, 5. 295.)

1 l  $\text{H}_2\text{O}$  dissolves  $1.2 \times 10^{-4}$  gram atoms of silver at  $25^\circ$  (Abegg and Cox, Z. phys. Ch. 1903, 48. 11.)

1 l  $\text{H}_2\text{O}$  dissolves 0.029 g.  $\text{Ag}_2\text{CrO}_4$  at  $25^\circ$  (Schafer, Z. anorg. 1905, 46. 310.)

1 l  $\text{H}_2\text{O}$  dissolves 0.0256 g.  $\text{Ag}_2\text{CrO}_4$  at  $15^\circ$ ; 0.0341 g. at  $27^\circ$ ; 0.0534 g. at  $50^\circ$ . (Whitby, Z. anorg. 1910, 67. 108.)

Sol. in hot  $\text{NH}_4\text{OH} + \text{Aq}$  of sp. gr. 0.94 (15.63%  $\text{NH}_3$ ); sl. sol. in cold  $\text{NH}_4\text{OH} + \text{Aq}$  of sp. gr. 0.91 (24.99%  $\text{NH}_3$ ). (Margosches, Z. anorg. 1904, 41. 73.)

Solubility of  $\text{Ag}_2\text{CrO}_4$  in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$

0.14	3.948	25.63	"

(Sherrill and Russ, J. Am. Chem. Soc. 1907, 29. 1663.)

Insol. in liquid  $\text{NH}_3$  (Gore, Am. Ch. J. 1898, 20. 829.)

11.65% alcohol dissolves 0.0129 g.  $\text{Ag}_2\text{CrO}_4$  at ord. temp. (Guerini, Dissert. 1912.)

Insol. in  $\text{H}_2\text{O}$  containing acetic acid in presence of large excess of  $\text{AgNO}_3$  (Gooch and Weed, Am. J. Sci. 1908, (4) 26. 85.)

Practically insol. in glacial acetic acid but somewhat sol. in dil. acetic acid. It behaves in a similar manner toward propionic, lactic and other organic acids. The red modification is more sol. than the greenish-black. (Margosches, Z. anorg. 1906, 51. 233.)

Silver dichromate,  $\text{Ag}_2\text{Cr}_2\text{O}_7$

Sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HNO}_3$ , or  $\text{NH}_4\text{OH} + \text{Aq}$  (Warrington.)

Decomp. by boiling with  $\text{H}_2\text{O}$  into  $\text{CrO}_3$  and  $\text{Ag}_2\text{CrO}_4$ . (Jäger and Krüss, B. 22. 2050.)

Decomp. by cold  $\text{H}_2\text{O}$ . (Autenrieth, B. 1902, 35. 2061.)

1 pt is sol. in 12,000 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Mayer, B. 1903, 36. 1741.)

Solubility in  $\text{H}_2\text{O}$  at  $25^\circ = 7.3 \times 10^{-3}$  atoms  $\text{Ag}$  per l. Decomp. by  $\text{HNO}_3 + \text{Aq}$  (less than 0.06 N) with separation of  $\text{Ag}_2\text{CrO}_4$ . (Sherrill and Russ, J. Am. Chem. Soc. 1907, 29. 1674.)

Solubility of  $\text{Ag}_2\text{Cr}_2\text{O}_7$  in  $\text{HNO}_3 + \text{Aq}$  at  $25^\circ$

Mols $\text{HNO}_3$ per l	Milliat. per l		Solid Phase

(Sherrill and Russ, J. Am. Chem. Soc. 1907, 29. 1664.)

Silver uranyl chromate,  $2\text{Ag}_2\text{CrO}_4 \cdot \text{UO}_2\text{CrO}_4$

Ppt. (Formánek, A. 257. 110.)

Silver chromate ammonia,  $\text{Ag}_2\text{CrO}_4 \cdot 4\text{NH}_3$

Decomp. by  $\text{H}_2\text{O}$ . Sol. in warm conc.  $\text{NH}_4\text{OH} + \text{Aq}$  (Mitscherlich, Pogg. 12. 141.)

Silver dichromate mercuric cyanide,

$\text{Ag}_2\text{Cr}_2\text{O}_7 \cdot \text{Hg}(\text{CN})_2$

Sol. in cold  $\text{H}_2\text{O}$ ; very sol. in hot  $\text{H}_2\text{O}$  without decomp. (Krüss, Z. anorg. 1895, 8. 456.)

$\text{Ag}_2\text{Cr}_2\text{O}_7 \cdot 2\text{Hg}(\text{CN})_2$  Scarcely sol. in cold, more readily in hot  $\text{H}_2\text{O}$ . Sol. in hot  $\text{HNO}_3 + \text{Aq}$ , separating on cooling. (Darby, Chem. Soc. L. 24.)

Sodium chromate, basic,  $\text{Na}_4\text{Cr}_2\text{O}_7 \cdot 13\text{H}_2\text{O}$

Sol. without decomp. in  $\text{H}_2\text{O}$ .

Sat. solution at  $30^\circ$  contains 41.3%

$\text{Na}_2\text{Cr}_2\text{O}_7$  (Schreinemakers, Z. phys. Ch. 1906, 55. 93.)

Deliquescent.  
Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	0°	10°	20.5°

(Mylius and Funk, Gm.-K. 3. I, 1380)

100 g. H<sub>2</sub>O at 30° dissolve 197.6 g Na<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub>, or sat. solution at 30° contains 66.4% Na<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub> (Schreinemakers, Z. phys. Ch 1900, 55. 97.)

100 ccm. of a solution of sodium dichromate in alcohol contain 5.133 g Na<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub> + 2H<sub>2</sub>O at 19.4°. The solution decomp. rapidly. (Reimtsma, Zeit. angew. Ch 1913, 26. 456)

The composition of the hydrates formed by Na<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub> at different dilutions is calculated from determinations of the lowering of the fr = pt. produced by Na<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub> and of the conductivity and sp. gr. of Na<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub> + Aq. (Jones, Am. ch. J. 1905, 34. 317)

#### Sodium trichromate, NaCr<sub>2</sub>O<sub>10</sub>

Deliquescent Very sol. in H<sub>2</sub>O (Stanley, C N 54. 194.)  
+H<sub>2</sub>O Sat. solution at 30° contains 80% Na<sub>2</sub>Cr<sub>2</sub>O<sub>10</sub>. (Schreinemakers, Z. phys. Ch 1906, 55. 94.)

Solubility in H<sub>2</sub>O at t°.

t°	0°	15°	55°	99°
% Na <sub>2</sub> Cr <sub>2</sub> O <sub>10</sub>	80.03	80.44	82.68	85.78

(Mylius and Funk, Gm.-K. 3. I, 1380.)

Sp. gr. of sat. solution containing 80.6% Na<sub>2</sub>Cr<sub>2</sub>O<sub>10</sub> at 18° = 2.059 (Mylius and Funk, B. 1900, 33. 3688)

#### Sodium tetrachromate, Na<sub>2</sub>Cr<sub>4</sub>O<sub>13</sub> + 4H<sub>2</sub>O.

Solubility in H<sub>2</sub>O at t°

t°	0°	16°	22°
% Na <sub>2</sub> Cr <sub>4</sub> O <sub>13</sub>	72.19	74.19	76.01

(Mylius and Funk, Gm.-K. 3. I, 1380.)

Deliquescent.

Sat. solution at 18° contains 74.6% Na<sub>2</sub>Cr<sub>4</sub>O<sub>13</sub> and has sp. gr. = 1.926 (Mylius and Funk, B. 1900, 33. 3688)

#### Sodium uranyl chromate, Na<sub>2</sub>CrO<sub>4</sub>.

2(UO<sub>2</sub>)CrO<sub>4</sub> + 10H<sub>2</sub>O  
Easily sol in H<sub>2</sub>O (Fornáček, A 257 108.)

100 pts of the solution in H<sub>2</sub>O contain 52.52 pts of the anhydrous salt at 20° (Rimbach, B. 1901, 37. 482)

#### Sodium chromate silicate, Na<sub>2</sub>O, Cr<sub>2</sub>O<sub>3</sub>, 2SiO<sub>2</sub> + 14H<sub>2</sub>O.

Not decomp. by HCl + Aq (Singer, Dissert 1910.)

2Na<sub>2</sub>O, 3Cr<sub>2</sub>O<sub>3</sub>, 6SiO<sub>2</sub>. Not decomp by boiling conc. acids except HF (Weyberg, C B Miner, 1908. 519.)

5Na<sub>2</sub>O, 2Cr<sub>2</sub>O<sub>3</sub>, 11SiO<sub>2</sub>. (Weyberg)  
3Na<sub>2</sub>O, 2Cr<sub>2</sub>O<sub>3</sub>, 9.5SiO<sub>2</sub>. (Weyberg)

#### Strontium chromate, SrCrO<sub>4</sub>

Somewhat sol. in H<sub>2</sub>O. Sol in 840 pts. H<sub>2</sub>O (Meschevski, Z. anal. 21. 399); sol. in 831.8 pts H<sub>2</sub>O at 15° (Fresenius, Z. anal. 29. 419)

100 cc H<sub>2</sub>O dissolve 0.4651% at 10°, 1% at 20°; 2.417% at 50°, 3% at 100° (Reichard, Ch. Z. 1903, 27. 877)

Easily sol in HCl, HNO<sub>3</sub>, or H<sub>2</sub>CrO<sub>4</sub> + Aq  
Sol. in 512 pts 0.5% NH<sub>4</sub>Cl + Aq at 15°  
Sol. in 637 pts. 1% HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq at 15°  
Sol. in 348.8 pts. solution containing 0.75% NH<sub>4</sub>C<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, 4 drops HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, and 6 drops (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq (Fresenius)

100 ccm NH<sub>4</sub>Cl + Aq sat at bpt. dissolve 1 g SrCrO<sub>4</sub> (Dumesnil, A. ch 1900, (7) 20. 125.)

50 ccm alcohol (29%) dissolve 0.0066 g SrCrO<sub>4</sub>.

50 ccm alcohol (53%) dissolve 0.001 g SrCrO<sub>4</sub>. (Fresenius, Z. anal 30. 672)

#### Strontium dichromate, SrCr<sub>2</sub>O<sub>7</sub>

Easily sol. in H<sub>2</sub>O.

#### Strontium trichromate, SrCr<sub>3</sub>O<sub>10</sub> + 3H<sub>2</sub>O

Very deliquescent, and sol in H<sub>2</sub>O. (Preis and Raymann, B. 13. 340.)

#### Strontium chromate mercuric hydrogen chloride, SrCrO<sub>4</sub> 2HgCl<sub>2</sub>, HCl.

According to Strömholm is SrCl<sub>2</sub>, SrCr<sub>2</sub>O<sub>7</sub>, 4HgCl<sub>2</sub> + H<sub>2</sub>O

Recryst from H<sub>2</sub>O. (Imbert and Belugon, Bull. Soc., 1897, (3) 17. 471)

2SrCrO<sub>4</sub>, 6HgCl<sub>2</sub>, HCl. (Imbert and Belugon.)

#### Thalious chromate, TiCrO<sub>4</sub>

100 pts. H<sub>2</sub>O dissolve 0.03 pt at 60°. (Rupp and Zimmer, Z. anorg. 1902, 33. 157)

Ppt. Insol. in cold moderately conc. HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq, or in very dil. HNO<sub>3</sub> + Aq, and very sl. sol on boiling therewith. Dil. NH<sub>4</sub>OH, and Na<sub>2</sub>CO<sub>3</sub> + Aq have the same action. Attacked by very dil. HCl + Aq  
Sol. in hot conc. HCl + Aq. Decomp by dil. H<sub>2</sub>SO<sub>4</sub> + Aq (Carstanjen)

11 KOH + Aq (112 g per l) dissolves about 3.5 g  $\text{Ti}_2\text{CrO}_4$  on boiling, which separates out on cooling

Boiling conc. KOH + Aq (31% KOH) dissolves 18 g.  $\text{Ti}_2\text{CrO}_4$  per litre. (Lepetit and Lachaud, C R 113. 196)

**Thalious dichromate,  $\text{Ti}_2\text{Cr}_2\text{O}_7$**

Insol. in  $\text{H}_2\text{O}$ , etc Has the same properties as  $\text{Ti}_2\text{CrO}_4$

**Thalious trichromate,  $\text{Ti}_2\text{Cr}_3\text{O}_{10}$**

Sol. in 2814 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 438 7 pts. at  $100^\circ$  (Crookes.)

**Thallic chromate.**

Ppt.

**Thorium chromate, basic,  $\text{Th}(\text{OH})_2\text{CrO}_4$**

Ppt., unstable in solution (Palmer, Am Ch. J. 1895, 17. 278.)

**Thorium chromate,  $\text{Th}(\text{CrO}_4)_2 + \text{H}_2\text{O}$**

Ppt. Sol. in HCl and  $\text{NH}_4\text{Cl} + \text{Aq}$ . 1 pt. is sol. in 284 pts.  $\text{H}_2\text{O}$  at  $22^\circ$  (Palmer, Am Ch. J. 1895, 17. 375 and 378)

+  $3\text{H}_2\text{O}$  Ppt (Haber, M. 1897, 18. 689.)

+  $8\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  (Chydenius, Pogg 119. 54)

**Tin (stannous) chromate.**

Ppt Sol. in dil. acids (Berzelius)

**Tin (stannic) chromate.**

Ppt (Leykauf, J. pr 19. 127.)

**Uranyl chromate, basic,  $\text{UO}_3 \cdot 2(\text{UO}_3)_2\text{CrO}_4 + 8\text{H}_2\text{O}$**

Ppt (Orloff, Ch. Z 1907, 31. 375)

$\text{UO}_3 \cdot (\text{UO}_3)_2\text{CrO}_4 + 6\text{H}_2\text{O}$  (Orloff.)

**Uranyl chromate,  $(\text{UO}_2)_2\text{CrO}_4 + 3\text{H}_2\text{O}$**

1 pt. is sol in 13 3 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ ; slowly sol. in alcohol to give a solution which is decomp on boiling (Orloff, Ch. Z. 1907, 31. 375.)

+  $11\text{H}_2\text{O}$  Very sol. in  $\text{H}_2\text{O}$  (Formánek, A. 257. 108)

**Yttrium chromate.**

Deliquescent Easily sol. in  $\text{H}_2\text{O}$  (Berlin.)

**Zinc chromate, basic,  $4\text{ZnO} \cdot \text{CrO}_3 + 3\text{H}_2\text{O}$**

(Gröger, Z. anorg 1911, 70. 135)

+  $5\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ ; sol. in hot  $\text{H}_2\text{CrO}_4 + \text{Aq}$ , slowly sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Malaguti and Sarzeau, A. ch. (3) 9. 431.)

$3\text{ZnO} \cdot \text{CrO}_3 + 2\text{H}_2\text{O}$  (Gröger)

$2\text{ZnO} \cdot \text{CrO}_3 + \text{H}_2\text{O}$ . (Briggs, Z. anorg. 1907, 56. 254.)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . Ppt. Insol. in  $\text{H}_2\text{O}$  Sol. in hot  $\text{H}_2\text{CrO}_4 + \text{Aq}$ . (Prussen and Philippon, A 149. 92.)

+  $2\text{H}_2\text{O}$ . Ppt. Not wholly insol. in  $\text{H}_2\text{O}$ . (Prussen and Philippon.)

$3\text{ZnO} \cdot 2\text{CrO}_3 + \text{H}_2\text{O}$  (Gröger)

**Zinc chromate,  $\text{ZnCrO}_4$**

Insol in  $\text{H}_2\text{O}$ ; very sol. in acids; decomp. by boiling with  $\text{H}_2\text{O}$ . (Schulze, Z anorg. 1895, 10. 154.)

Insol in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J 1898, 20. 830.)

Insol. in acetone. (Naumann, B 1904, 27. 4329.)

+  $\text{H}_2\text{O}$  (Gröger, Z. anorg 1911, 70. 135.)

**Zinc dichromate,  $\text{ZnCr}_2\text{O}_7 + 3\text{H}_2\text{O}$**

Hygroscopic.

Very sol. in  $\text{H}_2\text{O}$  and sl. decomp. by boiling. (Schulze, Z anorg. 1895, 10. 153)

**Zinc trichromate,  $\text{ZnCr}_3\text{O}_{10} + 3\text{H}_2\text{O}$**

Deliquescent, very sol. in  $\text{H}_2\text{O}$ . (Gröger, Z. anorg 1910, 66. 10.)

**Zinc chromate ammonia,  $\text{ZnCrO}_4 \cdot \text{NH}_3 + \text{H}_2\text{O}$**

Decomp by  $\text{H}_2\text{O}$ . (Gröger, Z anorg. 1908, 58. 417.)

$\text{ZnCrO}_4 \cdot 4\text{NH}_3 + 5\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in alcohol and ether (Malaguti and Sarzeau, A ch (3) 9. 431.)

+  $3\text{H}_2\text{O}$ . Efflorescent. Decomp by  $\text{H}_2\text{O}$ . Easily sol in dil. acids and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Bieler, A 151. 223)

$2\text{ZnO} \cdot 3\text{CrO}_3 \cdot 10\text{NH}_3 + 10\text{H}_2\text{O}$  Ppt. (Malaguti and Sarzeau.)

**Zinc dichromate mercuric cyanide,  $\text{ZnCr}_2\text{O}_7 \cdot 2\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$**

Very sol. in  $\text{H}_2\text{O}$ . Stable in aqueous solution at  $100^\circ$ . (Krus, Z. anorg 1895, 8. 460.)

**Perchromic acid**

See Perchromic acid.

**Chromicomolybdic acid,  $\text{Cr}_2\text{O}_3 \cdot 12\text{MoO}_3 + 28\text{H}_2\text{O}$**

Slowly sol in  $\text{H}_2\text{O}$  (Hall, J. Am. Chem. Soc 1907, 29. 708.)

**Ammonium chromicomolybdate,  $3(\text{NH}_4)_2\text{O} \cdot \text{Cr}_2\text{O}_3 \cdot 12\text{MoO}_3 + 20\text{H}_2\text{O}$**

Sol. in  $\text{H}_2\text{O}$ . (Struve, J. pr 61. 457; Hall, J. Am. Chem. Soc. 1907, 29. 695.)

+  $26\text{H}_2\text{O}$ . (Marckwald, Dissert, 1895.)

**Ammonium barium chromicomolybdate,  $(\text{NH}_4)_2\text{O} \cdot 22\text{BaO} \cdot \text{Cr}_2\text{O}_3 \cdot 12\text{MoO}_3 + 20\text{H}_2\text{O}$**

(Hall, J. Am Chem. Soc 1907, 29. 707.)

**Barium chromicomolybdate**,  $4\text{BaO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 15\text{H}_2\text{O}$ ,  $4\text{BaO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 18\text{H}_2\text{O}$ ;  $5\text{BaO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 16\text{H}_2\text{O}$ .

Ppts. (Hall, J. Am. Chem. Soc. 1907, 29, 705.)

**Lead chromicomolybdate**,  $4\text{PbO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 22\text{H}_2\text{O}$ , and  $+24\text{H}_2\text{O}$ .

Ppts. (Hall, J. Am. Chem. Soc. 1907, 29, 708.)

**Mercurous chromicomolybdate**,  $8\text{Hg}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 16\text{H}_2\text{O}$ .

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29, 707.)

**Potassium chromicomolybdate**,  $\text{K}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $3\text{MoO}_3$ .

Sol. in  $\text{HCl} + \text{Aq}$  with evolution of  $\text{Cl}$ . (Bradbury, Z. anorg. 1894, 7, 46.)

$3\text{K}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 20\text{H}_2\text{O}$  Sol. in 38.51 pts  $\text{H}_2\text{O}$  at  $17^\circ$ . (Strüve; Hall)  $+24\text{H}_2\text{O}$ . (Hall)

$4\text{K}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 15\text{H}_2\text{O}$ . (Hall, J. Am. Chem. Soc. 1907, 29, 709)

$7\text{K}_2\text{O}$ ,  $2\text{Cr}_2\text{O}_3$ ,  $24\text{MoO}_3 + 32\text{H}_2\text{O}$  (Hall.)

**Silver chromicomolybdate**,  $5\text{Ag}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 17\text{H}_2\text{O}$ .

Ppt. (Hall.)

**Sodium chromicomolybdate**,  $3\text{Na}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 21\text{H}_2\text{O}$

Efflorescent Easily sol in  $\text{H}_2\text{O}$  (Struve.)

**Chromic sulphuric acid.**

See Sulphochromic acid.

**Chromicyanhydric acid,**

$\text{H}_2\text{Cr}(\text{CN})_6(?)$

Insol. in  $\text{H}_2\text{O}$ . (Kaiser, A. Suppl. 3, 163.)

**Ammonium chromicyanide**,  $(\text{NH}_4)_2\text{Cr}(\text{CN})_6$

Easily sol. in  $\text{H}_2\text{O}$  (Kaiser, A. Suppl. 3, 163.)

**Cupric chromicyanide**,  $\text{Cu}_2[\text{Cr}(\text{CN})_6]$ .

Ppt. Insol. in dil. or conc. acids, except on heating. Insol. in  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . (Kaiser.)

**Lead chromicyanide, basic**,  $3\text{Pb}(\text{CN})_2$ ,  $2\text{Cr}(\text{CN})_6$ ,  $\text{Pb}(\text{OH})_2$ .

Ppt. Sol. in  $\text{HNO}_3$ ,  $\text{NaOH} + \text{Aq}$ , or  $\text{Pb}$  salts  $+ \text{Aq}$ . (Kaiser.)

**Potassium chromicyanide**,  $\text{K}_2\text{Cr}(\text{CN})_6$ .

Very sol in  $\text{H}_2\text{O}$ .

100 pts. cold  $\text{H}_2\text{O}$  dissolve 30.9 pts. salt. Insol. in absolute alcohol, but somewhat sol. in dil. alcohol.

Sol. in conc.  $\text{H}_2\text{SO}_4$  without decomp. (Kaiser, A. Suppl. 3, 170.)

**Silver chromicyanide**,  $\text{Ag}_2\text{Cr}(\text{CN})_6$ .

Insol. in all solvents, excepting  $\text{KCN} + \text{Aq}$ . (Kaiser.)

Sol. in large excess of  $\text{HCl} + \text{Aq}$ . Sl. sol. in cold, easily sol. in hot conc.  $\text{HNO}_3$ . Very sol. in conc.  $\text{H}_2\text{SO}_4$ . Insol. in hot or cold acetic acid. (Cruser, Dissert. 1896.)

**Chromisulphocyanhydric acid.**

$\text{H}_2\text{Cr}(\text{SCN})_6$

Known only in aqueous solution.

**Ammonium chromisulphocyanide,**

$(\text{NH}_4)_2\text{Cr}(\text{SCN})_6 + 4\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Rossler, A. 141, 185.)

**Barium chromisulphocyanide**,  $\text{Ba}_4[\text{Cr}(\text{SCN})_6]_3 + 16\text{H}_2\text{O}$ .

Deliquescent, and sol. in  $\text{H}_2\text{O}$ . (R.)

**Lead chromisulphocyanide**,  $\text{Pb}_4[\text{Cr}(\text{SCN})_6]_3$ ,  $4\text{PbO}$ ,  $\text{H}_2\text{S} + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. thereby into— $\text{Pb}_2[\text{Cr}(\text{SCN})_6]_3$ ,  $4\text{PbO}$ ,  $\text{H}_2\text{S} + 5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ .

**Potassium chromisulphocyanide**,  $\text{K}_2\text{Cr}(\text{SCN})_6 + 4\text{H}_2\text{O}$

Sol. in 0.72 pt  $\text{H}_2\text{O}$ . and 0.91 pt. alcohol.

**Silver chromisulphocyanide**,  $\text{Ag}_2\text{Cr}(\text{SCN})_6$ .

Insol. in  $\text{H}_2\text{O}$  or conc.  $\text{HNO}_3 + \text{Aq}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol. in  $\text{KCN} + \text{Aq}$ .

**Sodium chromisulphocyanide**,  $\text{Na}_6\text{Cr}(\text{SCN})_6 + 7\text{H}_2\text{O}$

Deliquescent, sol. in  $\text{H}_2\text{O}$

**Chromium,**

*Two modifications*—(a) Not attacked by  $\text{H}_2\text{O}$ . Easily sol. in cold  $\text{HCl} + \text{Aq}$ . Sl. sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Deville.) Easily sol. in a hot mixture of 1 pt  $\text{H}_2\text{SO}_4$  and 20 pts.  $\text{H}_2\text{O}$ . (Regnault, A. ch. 62, 357.) Easily sol. in warm conc.  $\text{H}_2\text{SO}_4$ . (Gmelin.) Very slowly sol. in hot  $\text{HNO}_3 + \text{Aq}$ . (Vauquelin.) Insol. in dil. or conc.  $\text{HNO}_3 + \text{Aq}$ . (Deville.) Very slowly (Richter), not at all (Berzelius) sol. in hot aqua regia. Easily sol. in  $\text{HF} + \text{Aq}$ . (b) Insol. in all acids, even aqua regia (Fremy), probably contains Si.

Pure Cr is sol. in conc.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  and dil.  $\text{HNO}_3$  sol. in  $\text{HgCl}_2 + \text{Aq}$ . Insol. in fuming  $\text{HNO}_3$  and aqua regia. (Moissan, C. R. 1894, 119, 187.)

Cr prepared by aluminothermic method is sol. in haloid acids to form chromic and chromous salts, even in absence of air. (Doring, J. pr 1902, (2) 66, 65; 1908, (2) 73, 393.)

*Aluminothermic* Cr is active in contact

with HCl, HBr, HI, HF,  $H_2SO_4$ ,  $H_2C_2O_4$ , i. e., sol in cold conc. or warm dil. acids. Is inactive in contact with conc  $HNO_3$ ,  $H_2C_2O_4$ ,  $HClO_3$ ,  $HClO_4$ ,  $H_3PO_4$ , KOH, citric, formic, acetic and tartaric acids. Cause attributed to a different electric state (Hittorf, Z. phys. Ch. 1898, 26. 729.)

#### Chromium arsenide, $CrAs$ .

Insol. in mineral acids (Dieckmann, Z. anorg. 1914, 86. 294.)

$Cr_3As_2$  Insol in mineral acids (Dieckmann.)

#### Chromium azoimide, $CrN_3$ .

Pptd. by addition of alcohol and ether  
Insol. in  $H_2O$  (Curtius, J. pr. 1900, (2) 61. 410.)

#### Chromium boride, $CrB$ .

Insol in HCl, dil  $H_2SO_4$ , HF, HF+ $HNO_3$   
Sl sol. in  $HNO_3$  and in aqua regia. (Wedekind, B 1907, 40. 299.)

Sol in cold dil or conc. HCl, HF, and  $H_2SO_4$ . (Jassonneix, C. R. 1906, 143. 1151)  
 $Cr_2B_3$ . Sol. in conc or dil. HF, HCl,  $H_2SO_4$ ; insol in  $HNO_3$  or alkalis+Ag. (Jassonneix.)

#### Chromous bromide, $CrBr_2$ .

Sol. in  $H_2O$ . Not deliquescent in dry air (Moissan, C. R. 92. 1051.)

#### Chromic bromide, $CrBr_3$ .

Anhydrous Insol in  $H_2O$ , but dissolves at once in presence of the least trace of  $CrBr_2$  (Bauck, A. 111. 382.)

+ $6H_2O$ . Deliquescent. Very sol in  $H_2O$ .  $H_2O$  dissolves more than 2 pts. crystals at ord. temp. Very sol. in alcohol Insol in ether. (Recoura, C. R. 110. 1029.)

Blue modification. Insol in alcohol. (Recoura, C. R. 110. 1193.)

Very hygroscopic. Easily sol. in alcohol and acetone. Insol in ether (Werner, A. 1902, 322. 343.)

+ $8H_2O$ . Sol. in  $H_2O$ . (Varenne, C. R. 93. 727.)

#### Chromium molybdenyl bromide,

$CrMo_3O_3Br_4$ .

Apparently wholly insol. in dil acids. Sol. in hot conc. HCl+Ag with decomp. Insol in  $M_2CrO_4$ +Ag (Atterberg.)

+ $2H_2O$ . Apparently wholly insol. in dil acids

Sol. in hot conc. HCl+Ag with decomp. Insol. in  $M_2CrO_4$ +Ag (Atterberg.)

#### Chromic rubidium bromide, $CrBr_3 \cdot 2RbBr + H_2O$

Sol. in  $H_2O$  with decomp. (Werner, A. 1902, 322. 345.)

#### Chromic bromide ammonia.

See Bromotetramine chromium bromide.

#### Chromous bromide hydrazine,

$CrBr_2 \cdot 2N_2H_4$ .

Insol in  $H_2O$ . Sol in acids. Insol. in alcohol, ether and similar solvents. (Traube, B. 1913, 46. 1507.)

#### Chromium carbide, $Cr_3C_2$ .

(Moissan, C. R. 1894, 118. 187.)

$Cr_3C_2$  Does not decomp.  $H_2O$  at ordinary temp or at  $100^\circ$ ; insol. in conc. HCl,  $HNO_3$  and aqua regia; sol in dil HCl (slowly); insol. in fused KOH; sol in fused  $KNO_3$ . (Moissan, Bull. Soc. 1894, (3) 117. 1016.)

#### Chromium iron carbide, $3Fe_3C, 2Cr_3C_2$

Decomp by  $H_2O$ ; sol. in gaseous hydrocarbons; insol. in  $HNO_3$  and aqua regia (Williams, C. R. 1898, 127. 484.)

#### Chromium tungsten carbide, $CW_3, 3Cr_3C_2$ .

Not attacked by acids

Slowly attacked by fused KOH or alkali carbonates. Rapidly decomp. by fused alkali nitrates or  $KClO_4$ . (Moissan, C. R. 1903, 137. 294.)

#### Chromous chloride, $CrCl_2$ .

Deliquescent. Very sol. in  $H_2O$  with evolution of much heat. (Moberg, J. pr. 29. 175.)

Practically insol in other Moderately sol in absolute alcohol, methyl alcohol, and acetaldehyde. (Rohland, Z. anorg. 1899, 21, 39.)

+1½H<sub>2</sub>O. (Moussan, A. ch. (5) 25, 40.)  
+2H<sub>2</sub>O (Knight and Rich, Chem. Soc. 1911, 99, 89.)  
+3H<sub>2</sub>O. (Knight and Rich.)

Chromous hydrogen chloride, 3CrCl<sub>2</sub>·2HCl+13H<sub>2</sub>O

Decomp by H<sub>2</sub>O. (Recura, C. R. 100, 1227.)

Sl. sol in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20, 827.)

Chromic chloride, CrCl<sub>3</sub>.

*Anhydrous.*—*Peach-blossom-colored modification.* Insol. in pure H<sub>2</sub>O (Peligot), but by long continued boiling of the finely divided salt with H<sub>2</sub>O, traces are dissolved with decomp. Not decomp. by boiling conc H<sub>2</sub>SO<sub>4</sub>, or other acids, even aqua regia.

Easily sol. with evolution of heat in H<sub>2</sub>O containing only 1/10,000 pt CrCl<sub>3</sub> (Peligot, J. pr. 36, 150). Also sol in presence of traces of SnCl<sub>2</sub> (5 mg SnCl<sub>2</sub> cause 1 g CrCl<sub>3</sub> to dissolve), FeCl<sub>3</sub>, Cu<sub>2</sub>Cl<sub>2</sub>, Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>, and other reducing substances; chlorides without reducing properties have no effect. (Pelouze, A. ch. (3) 14, 251). TiCl<sub>4</sub> and SO<sub>2</sub> have similar solvent action (Ebelmen, A. ch. (3) 20, 390); also Zn+dil. acids (Moberg.)

Insol in dil. alkalis+aq; very slowly decomp. by boiling conc alkalis or alkali carbonates+aq (Fellenberg, Pogg 50, 76.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

Insol. in CS<sub>2</sub>. (Aretowski, Z. anorg. 1894, 6, 257.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014.)

Practically insol in absolute ethyl alcohol, methyl alcohol, acetaldehyde and ether. (Rohland, Z. anorg. 1899, 21, 39.)

*Yellow* Sl. sol. in benzonitrile (Naumann, B. 1914, 47, 1369.)

*Violet modification.* Very sol in H<sub>2</sub>O to form a green solution (Moberg, J. pr. 44, 325.)

The violet mod. is almost insol. in H<sub>2</sub>O but if 1/10,000 pt. chromous chloride is present, it is readily sol. (Rohland, Z. anorg. 1899, 21, 39.)

+4H<sub>2</sub>O Sl. deliquescent. Very sol. in H<sub>2</sub>O, alcohol, and ethyl acetate (Godefroy, Bull. Soc. (2) 43, 229.)

+6H<sub>2</sub>O Deliquescent. Sol in H<sub>2</sub>O, but probably decomp. to CrOCl<sub>2</sub>.

Practically insol. in ether. Moderately sol. in absolute ethyl alcohol, methyl alcohol and acetaldehyde. (Rohland, Z. anorg. 1899, 21, 39.)

"Monochlorochromic chloride" is sol. in ether and fuming HCl(1.1). (Bjerrum, B. 1906, 39, 1599.)

*Green modification.*

Solubility in H<sub>2</sub>O at 25°.

25 g. green CrCl<sub>3</sub>+6H<sub>2</sub>O and 10 g. H<sub>2</sub>O

Time	Total solubility in %	Composition of the solution	
		% violet salt	% green salt
¼ hr.	58.36	8.30	91.70
½ hr		12.57	87.43
4 hrs	63.27	24.80	75.20
1 day	68.50	37.64	62.36
2 days		40.90	59.10

48 <sup>h</sup>	69.42	42.17	57.83	"
72 <sup>h</sup>	68.69	43.80	56.20	"

(Ohe, Z. anorg. 1907, 53. 275.)

The composition of the hydrates formed by CrCl<sub>3</sub> at different dilutions is calculated from determinations of the lowering of the fr. pt produced by CrCl<sub>3</sub> and of the conductivity and sp. gr of CrCl<sub>3</sub>·Δq. (Jones, Am. Ch. J. 1905, 34. 310.)

**Chromic glucinum chloride, CrCl<sub>3</sub>, GICl<sub>2</sub> + H<sub>2</sub>O**

Sol. in H<sub>2</sub>O with decomp (Neumann, A. 244. 329.)

**Chromic lithium chloride, CrCl<sub>3</sub>, 2LiCl + 4H<sub>2</sub>O.**

Very hygroscopic. Sol in ice water but solution soon decomp.

Easily sol in alcohol. (Werner, B. 1901, 34. 1603.)

[Cr(OH<sub>2</sub>)Cl<sub>2</sub>Li<sub>2</sub> + 4H<sub>2</sub>O.

Very hygroscopic. Sol in ice cold H<sub>2</sub>O and in alcohol. (Werner, B. 1901, 34. 1604.)

**Chromic magnesium chloride, CrCl<sub>3</sub>, MgCl<sub>2</sub> + H<sub>2</sub>O.**

Decomp. by H<sub>2</sub>O. (Neumann)

**Chromic phosphoric chloride, CrCl<sub>3</sub>, PCl<sub>3</sub>.**

Decomp. by H<sub>2</sub>O. (Cronander)

**Chromium platinum chloride.**

See chloroplatinate, chromium.

**Chromic potassium chloride, CrCl<sub>3</sub>, KCl.**

Decomp. by H<sub>2</sub>O.

CrCl<sub>3</sub>, 2KCl + H<sub>2</sub>O. (Neumann, A. 244. 329.)

CrCl<sub>3</sub>, 3KCl. Easily sol. in H<sub>2</sub>O with decomp. (Fremy, A. ch. (3) 12. 361.)

**Chromic rubidium chloride**,  $\text{CrCl}_3 \cdot 2\text{RbCl} + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  (Neumann, A. 244. 329.)

Slowly sol. in cold, rapidly sol. in hot  $\text{H}_2\text{O}$  with decomp. (Werner, B. 1901, 34. 1603.)  
 $\text{CrCl}_3 \cdot 3\text{RbCl} + 8\text{H}_2\text{O}$ . Unstable. Decomp. by alcohol. (Werner, B. 1906, 39. 1830.)

**Chromic sodium chloride**,  $\text{CrCl}_3 \cdot \text{NaCl}$ .

Sol. in  $\text{H}_2\text{O}$  (Berzelius.)

$\text{CrCl}_3 \cdot 3\text{NaCl}$ . Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Chromic thallium chloride**,  $\text{CrCl}_3 \cdot 3\text{TlCl}$

Sol. with decomp. in  $\text{H}_2\text{O}$ . (Neumann, A. 244. 329.)

**Chromic chloride ammonia.**

See Chlorotetramine chromium chloride.

**Chromous chloride hydrazine**,  $\text{CrCl}_2 \cdot 2\text{N}_2\text{H}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. Insol. in alcohol, ether and similar solvents. (Traube, B. 1913, 46. 1506.)

**Chromic chloride ferric oxide.**

$\text{Fe}_2\text{O}_3$  is easily sol. in dil., difficultly sol. in conc.  $\text{CrCl}_3 + \text{Aq}$  (Béchamp, A. ch. (3) 57. 311.)

**Chromous fluoride**,  $\text{CrF}_2$

Sl. sol. in  $\text{H}_2\text{O}$ , hot  $\text{H}_2\text{SO}_4$  or dil.  $\text{HNO}_3$ . Sol. in boiling  $\text{HCl}$ . Insol. in alcohol. (Poulenc, C. R. 1893, 116. 254.)

**Chromic fluoride**,  $\text{CrF}_3$ .

Perfectly sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)

Insol. in methyl acetate. (Naumann) B. 1909, 42. 3790; ethyl acetate. (Naumann, B. 1910, 43. 314.)

+  $3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Werner and Costachescu, B. 1908, 41. 4243.)

+  $3\frac{1}{2}\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Poulenc, C. R. 1893, 116. 255.)

+  $6\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Werner and Costachescu, B. 1908, 41. 4242.)

+  $9\text{H}_2\text{O}$ . Violet modification. Very sl. sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. Sol. in  $\text{HCl}$  and  $\text{KOH} + \text{Aq}$ . (Fabris, Gazz. ch. it. 20. 582.)

**Chromium hexafluoride**,  $\text{CrF}_6$ .

Decomp. by  $\text{H}_2\text{O}$  with evolution of heat. (Berzelius.)

Correct composition is  $\text{CrO}_2\text{F}_2$ . (Olivieri, Gazz. ch. it. 16. 218.)

**Chromic cobaltous fluoride**,  $\text{CrF}_3 \cdot \text{CoF}_2 + 7\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 60.)

**Chromic cupric fluoride**,  $\text{CrCuF}_5 + 5\text{H}_2\text{O}$ .

Can be cryst. from  $\text{HF} + \text{Aq}$ . (Higley, J. Am. Chem. Soc. 1904, 26. 630.)

**Chromic nickel fluoride**,  $\text{CrF}_3 \cdot \text{NiF}_2 + 7\text{H}_2\text{O}$ .

Somewhat more sol. in  $\text{H}_2\text{O}$  than  $\text{CrF}_3$ ,  $\text{CoF}_2 + 7\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 61.)

**Chromic potassium fluoride**,  $\text{CrF}_3 \cdot 3\text{KF}$ .

Nearly insol. in  $\text{H}_2\text{O}$ . (Christensen, J. pr. (2) 36. 161.)

$\text{CrF}_3 \cdot 2\text{KF} + \text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{HCl} + \text{Aq}$ . (Christensen.)

**Chromic sodium fluoride**,  $\text{CrF}_3 \cdot 2\text{NaF} + \text{H}_2\text{O}$ .

(Wagner, B. 19. 896.)

**Chromic thallous fluoride**,  $3\text{CrF}_3 \cdot 3\text{TlF}$ .

Sol. in hot  $\text{H}_2\text{O}$ , less sol. in cold. Sl. sol. in  $\text{HF}$  (Ephraim, Z. anorg. 1909, 61. 242.)

**Chromic zinc fluoride**,  $\text{CrF}_3 \cdot \text{ZnF}_2 + 7\text{H}_2\text{O}$ .

Can be cryst. from  $\text{HF} + \text{Aq}$ . (Higley, J. Am. Chem. Soc. 1904, 26. 630.)

Colloidal solution is perfectly clear. (Biltz, B. 1902, 35. 4433.)

**Chromous hydroxide**,  $\text{Cr}_2\text{O}_3\text{H}_2$ .

Decomp. by  $\text{H}_2\text{O}$ , especially if hot. (Pellet, A. ch. (3) 12. 539.)

Slowly sol. in cold conc acids, even aqua regia, almost insol. in dil. acids. (Moberg, J. pr. 43. 119.)

**Chromic hydroxide**,  $\text{Cr}_2\text{O}_3 \cdot n\text{H}_2\text{O}$ , probably  $\text{Cr}_2\text{O}_3\text{H}_6$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids. Easily sol. in cold  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ ; much less sol. in cold  $\text{NH}_4\text{OH} + \text{Aq}$ ; the presence of  $\text{NH}_4\text{Cl}$  has no influence upon solubility in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Fresenius.) Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$  if it has been thoroughly washed.

Insol. in  $\text{KCN} + \text{Aq}$ , but sl. sol. in  $\text{KCN} + \text{HCN} + \text{Aq}$ . (Rodgers, 1834.)

Gradually sol. in dil.  $\text{FeCl}_3 + \text{Aq}$ ; after three months, 2 mols.  $\text{Cr}_2\text{O}_3\text{H}_6$  are dissolved by 1 mol.  $\text{FeCl}_3$  without pptn. of  $\text{Fe}_2\text{O}_3\text{H}_6$ . (Béchamp, A. ch. (3) 57. 296.)

Also sol. in  $\text{CrCl}_3 + \text{Aq}$ ; in four months,  $1\frac{1}{2}$  mols.  $\text{Cr}_2\text{O}_3\text{H}_6$  are dissolved by 1 mol.  $\text{CrCl}_3$ . (Béchamp.)

Sol. in  $\text{Cr}(\text{NO}_3)_3 + \text{Aq}$ , and clear solution formed as long as 3 mols.  $\text{HNO}_3$  are present for 8 mols.  $\text{Cr}_2\text{O}_3$ . (Ordway, Sil. Am. J. (2) 27. 197.)

Chromic hydroxide, pptd. by alkalis is easily sol. in excess of the reagent; after being dried in a vacuum, however, it is insol. in alkalis. (Herz, Z. anorg. 1901, 28. 344.)

Freshly pptd. it is sol. in aq. alkali, but it is readily changed into a modification which is insol. (Herz, Z. anorg. 1902, 31. 352.)

The solubility of chromic hydroxide in an

aqueous solution of red chromic chloride is not directly proportional to the concentration of the latter—a basic chloride is probably formed. (Fischer, Z. anorg. 1901, 40. 43.)  
Not pptd. in presence of Na citrate. (Spiller.)

Insol in amylumme + Aq; not pptd in presence of alkali tartrates, sugar, etc.

$\text{Cr}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Difficultly sol in acids.

$\text{Cr}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Extremely hygroscopic. Exists in a soluble modification, obtained by dialysis; solution can be diluted with pure  $\text{H}_2\text{O}$ , but gelatinizes with traces of salts (Graham, Roy. Soc. Trans. 1861. 183.)

$\text{Cr}_2\text{O}_3(\text{OH})_2$ . Insol in boiling dil  $\text{HCl}$  + Aq.

$\text{Cr}_2\text{O}(\text{OH})_4$  (Guignet's green). Scarcely sol. in boiling  $\text{HCl}$  + Aq (Salvétat, C. R. 48. 295.)

Guignet gave formula as  $2\text{Cr}_2\text{O}_3 + 3\text{H}_2\text{O}$ .

#### Chromo-chromic hydroxide, $\text{Cr}_2\text{O}_4 \cdot \text{H}_2\text{O}$ (?).

Slightly attacked by acids (Peligot, A. ch. (3) 12. 539.)

#### Chromous iodide, $\text{CrI}_2$ .

Easily sol in  $\text{H}_2\text{O}$  (Moissan, A. ch. (5) 25. 401.)

#### Chromic iodide, $\text{CrI}_3$ (?).

Insol. in cold, sol. in hot  $\text{H}_2\text{O}$ , but no separation occurs on cooling. (Berlin.)

+  $9\text{H}_2\text{O}$ . Hygroscopic. Sol in alcohol and acetone. Insol. in  $\text{CHCl}_3$ . (Higley, J. Am. Chem. Soc. 1904, 26. 628.)

#### Chromous iodide hydrazine, $\text{CrI}_2 \cdot 2\text{N}_2\text{H}_4$ (Traube, B. 1913, 46. 1507.)

#### Chromium nitride, $\text{CrN}$ .

Insol. in dil. acids and alkalis, conc.  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{HF}$  + Aq, even on heating. Slowly sol. in hot aqua regia or cold  $\text{H}_2\text{SO}_4$ . Sol. in cold solutions of alkali hypochlorites (Ufer, A. 112. 281.)

Insol. in  $\text{HCl}$ ,  $\text{HNO}_3$  and aqua regia. (Féree, Bull. Soc. 1901, (3) 25. 618.)

Unacted upon by acids at ordinary temperatures. (Smits, Chem. Soc. 1897, 72. (2) 33.)

$\text{Cr}_2\text{N}_2$ . Slowly attacked by conc.  $\text{HNO}_3$  and by  $\text{HNO}_3$  +  $\text{HCl}$ . All other reagents are without action. (Henderson and Galletly, J. Soc. Chem. Ind. 1908, 27. 387.)

$\text{CrN}_2$ . See Chromium azonide.

#### Chromous oxide, $\text{CrO}$ .

Insol. in  $\text{HNO}_3$  and dil.  $\text{H}_2\text{SO}_4$  + Aq  
Sol. in  $\text{HCl}$ . (Féree, Bull. Soc. 1901, (3) 25. 619.)

#### Chromic oxide, $\text{Cr}_2\text{O}_3$ .

When ignited is nearly insol. in acids, but dissolves in  $\text{H}_2\text{SO}_4$  by long boiling. Insol in liquid  $\text{HCl}$ . (Gore.)

Insol in acetone (Fidmann, C. C. 1899. II, 1014.)

Solubility in (calcium sacrate + sugar) + Aq.

1 l. solution containing 418 g. sugar and 34.3 g.  $\text{CaO}$  dissolves 1.07 g.  $\text{Cr}_2\text{O}_3$ , 1 l. solution containing 296.5 g. sugar and 24.2 g.  $\text{CaO}$  dissolves 0.56 g.  $\text{Cr}_2\text{O}_3$ ; 1 l. solution containing 174.4 g. sugar and 14.1 g.  $\text{CaO}$  dissolves 0.20 g.  $\text{Cr}_2\text{O}_3$ . (Bodenbender, J. B. 1885. 600.)

See also Chromic hydroxide.

+  $\text{H}_2\text{O}$ . The compound to which Bunsen gave the formula  $\text{Cr}_2\text{O}_4$ . Insol. in acids, but easily attacked by  $\text{HNO}_3$ . (Féree, Bull. Soc. 1901, (3) 25. 620.)

#### Chromo-chromic oxide, $\text{Cr}_2\text{O}_4 = \text{CrO}, \text{Cr}_2\text{O}_3$ .

Known only in form of hydroxide, which see.

+  $3\text{H}_2\text{O}$ . Stable in dry air. Decomp. in moist air. (Baugé, C. R. 1898, 127. 552.)

$\text{Cr}_2\text{O}_4$ , or  $\text{Cr}_2\text{O}_5$ (?). Insol. in acids or in aqua regia (Bunsen, Pogg. 91. 622.)

Not obtainable. (Geuther, A. 118. 66.)

Formula is  $\text{Cr}_2\text{O}_3 + \text{H}_2\text{O}$  (Féree.)

#### Chromium trioxide, $\text{CrO}_3$ .

Deliquescent, and very sol in  $\text{H}_2\text{O}$ , to form solution of  $\text{H}_2\text{CrO}_4$  or  $\text{H}_2\text{Cr}_2\text{O}_7$ .

Solubility in  $\text{H}_2\text{O}$  at t°.

t°	0°	15°	50°	90°
% $\text{CrO}_3$	62.08	62.38	64.55	67.30

30	1.268	1.258	60		1.656

B-pt. of  $CrO_3$  + Aq at ord. pressure.

B-pt.	G. $CrO_3$ in 100 g. of the solution
102°	10.81
101	24.08
107	36.47
110 5	45.15
116	54.50
120	61.54
127	71.24 sat. solution

(Koppel and Blumenthal, Z. anorg. 1907, 53, 254.)

Sol. in  $H_2SO_4$ ; the solubility is least when the acid contains 66%  $H_2SO_4$  (Schrotter), 84.5%  $H_2SO_4$  (Bolley).

Very sol. in  $H_2SO_4$  of 1.85 sp. gr. Sl. sol. in cold  $KHSO_4$  + Aq (Fritzsche.)

The statement that  $CrO_3$  is insol. in acids is incorrect. 2.85 g. (ignited) are sol. in  $HNO_3$  to the extent of 2.58 g. 0.81 g. (ignited) are sol. in  $HNO_3$  to the extent of 0.77 g. (Jovitschitsch, M. 1909, 30. 48.)

Practically insol. in  $POCl_3$  (Walden, Z. anorg. 1910, 68. 312.)

Sl. sol. in liquid  $NH_3$  (Franklin, Am. Ch. J. 1898, 20. 327.)

Sol. in alcohol with decomp.

Sol. in anhydrous ether.

Sol. in acetic anhydride. (Fry, J. Am. Chem. Soc. 1911, 33. 702.)

Sol. in acetone. (Naumann, B. 1904, 4328.)

Sol. in benzonitrile (Naumann, B. 1914, 47, 1369.)

Sol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

Difficultly sol. in ethyl acetate (Naumann, B. 1910, 43. 314.)

Chromium oxide,  $Cr_2O_3 = 2Cr_2O_3$ ,  $CrO_3$ .

$Cr_2O_{11} = 3Cr_2O_3$ ,  $2CrO_3$ .

$CrO_3 = Cr_2O_3$ ,  $CrO_3$ .

$Cr_2O_{11} = Cr_2O_3$ ,  $3CrO_3$ .

$CrO_{11} = Cr_2O_3$ ,  $4CrO_3$ .

See Chromate, chromium.

Chromium peroxide,  $Cr_2O_7(?)$

More sol. in ether than in  $H_2O$ . Ether solution is somewhat more stable than aqueous solution. (Aschoff, J. pr. 61. 401.)

Formula is  $CrO_3$ ,  $H_2O_2$  (Moissan, C. R. 97. 96.)

Chromium peroxide ammonia,  $CrO_4$ ,  $3NH_3$ .

Sol. in  $H_2O$  with partial decomp.

Sl. sol. in  $NH_4OH$  + Aq.

Sol. with decomp. in 20% acetic acid. (Hofmann, B. 1905, 38. 3060.)

Chromium *tebo* oxide potassium cyanide,

$CrO_4$ ,  $3KCN$ .

Sol. in  $H_2O$ . Insol. in other ordinary solvents (Wiede, B. 1899, 32, 381.)

**Chromic oxychloride.**

From  $\text{Cr}_2\text{O}_3$ . Sol. in  $\text{H}_2\text{O}$  as long as 1 mol.  $\text{CrCl}_3$  is present for  $2\frac{1}{2}$  mols  $\text{Cr}_2\text{O}_3\text{H}_2$  (Ordway, *Sill. Am. J.* (2) 27, 197.)

$\text{Cr}_2\text{O}_3$ ,  $2\text{CrCl}_3$ . Sol. in  $\text{H}_2\text{O}$ . (Kletziusky, *Zett. Ch.* 1866, 277.)

$\text{Cr}_2\text{O}_3$ ,  $\text{CrCl}_3 = \text{CrOCl}$ . *Anhydrous*. Only partly sol. in  $\text{H}_2\text{O}$ .

+  $3\text{H}_2\text{O}$ . Very deliquescent, and sol in  $\text{H}_2\text{O}$ . (Peligot.)

$\text{Cr}_2\text{O}_3$ ,  $4\text{CrCl}_3 + 6\text{H}_2\text{O} = \text{Cr}_2\text{OCl}_2 + 2\text{H}_2\text{O}$  (Peligot, *J. pr.* 37, 38.)

+  $9\text{H}_2\text{O} = \text{Cr}_2\text{OCl}_2 + 3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Moberg); =  $\text{Cr}_2(\text{OH})_2\text{Cl}_4 + 2\text{H}_2\text{O}$  (Schiff, *A.* 124, 157.)

$\text{Cr}_2\text{O}_3$ ,  $7\text{CrCl}_3 = \text{Cr}_2\text{OCl}_2$ . Very sol. in  $\text{H}_2\text{O}$  with decomp. (Besson and Fourmei, *C. R.* 1900, 148, 1194.)

$\text{Cr}_2\text{O}_3$ ,  $8\text{CrCl}_3 + 24\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Moberg); =  $\text{Cr}_2(\text{OH})_2\text{Cl}_4 + 4\text{H}_2\text{O}$ . (Schiff, *l. c.*)

$(\text{Cr}_2\text{O})_2\text{Cl}_2$ . (Pascal, *C. R.* 1900, 148, 1464.)

$\text{Cr}_2\text{O}_3\text{Cl}_2$ . Insol. in  $\text{H}_2\text{O}$  (Pascal, *C. R.* 1900, 148, 1464.)

From  $\text{CrO}_3$

See **Chromyl chloride**.

**Chromic oxychloride potassium chloride,  $\text{CrOCl}_2$ ,  $2\text{KCl}$ .**

Decomp. in the air.  
Sol. in conc.  $\text{HCl}$  without decomp. (Weinland, *B.* 1906, 39, 4043.)

**Chromic oxychloride rubidium chloride,  $\text{CrOCl}_2$ ,  $2\text{RbCl}$ .**

Decomp. in the air.  
Sol. in conc.  $\text{HCl}$  without decomp. (Weinland, *B.* 1906, 39, 4045.)

**Chromium oxyfluoride,  $\text{Cr}_2\text{O}_2\text{F}_2$ .**

See **Chromyl fluoride**.

**Chromium phosphide,  $\text{CrP}$ .**

Insol. in acids, but a trace dissolves in aqua regia. Insol. in  $\text{HF} + \text{Aq}$ . (Berzelius.)  
Not attacked by acids or by aqua regia. (Granger, *C. N.* 1898, 77, 228.)

Insol. in all acids except a mixture of  $\text{HNO}_3$  and  $\text{HF}$ . (Maronneau, *C. R.* 1900, 130, 658.)

Insol. in mineral acids. (Dieckmann, *Z. anorg.* 1914, 86, 295.)

Insol. in aqua regia (Granger, *C. R.* 1897, 124, 191.)

$\text{Cr}_2\text{P}_2$ . Insol. in mineral acids. (Dieckmann, *Z. anorg.* 1914, 86, 295.)

**Chromous selenide,  $\text{CrSe}$ .**

(Moissan, *C. R.* 90, 817.)

**Chromic selenide,  $\text{Cr}_2\text{Se}_3$ .**

Insol. in  $\text{H}_2\text{O}$ . (Moissan, *C. R.* 90, 817.)

**Chromic potassium selenide,  $\text{K}_2\text{Cr}_2\text{Se}_4$ .**

Insol. in  $\text{HCl}$ . Easily sol. in conc.  $\text{HNO}_3$ . (Milbauer, *Z. anorg.* 1904, 42, 451.)

**Chromium silicide,  $\text{Cr}_2\text{Si}$** 

Sol. in fused  $\text{KNO}_3$ ; insol. in cold  $\text{HCl}$  and aqua regia.

Insol. in  $\text{HF} + \text{Aq}$ . (Moissan, *C. R.* 1895, 121, 625.)

$\text{Cr}_2\text{Si}_2$ . Sol. in  $\text{HF}$ . Insol. in  $\text{HCl}$  and aqua regia (Chalmot, *Am. Ch. J.* 1897, 19, 69.)

$\text{Cr}_2\text{Si}_2$ . Insol. in dil.  $\text{HCl}$ , sol. in warm conc.  $\text{HCl}$  and in  $\text{HF}$ , insol. in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . (Lebeau, *C. R.* 1903, 136, 1330.)

$\text{Cr}_2\text{Si}$ . Sol. in  $\text{HF}$ ; insol. in other acids, sol. in fused  $\text{KOH}$  and fused alkali nitrates and carbonates. (Zettl, *C. R.* 1898, 126, 834.)

**Chromous sulphide,  $\text{CrS}$** 

Insol. in  $\text{H}_2\text{O}$  or  $\text{K}_2\text{S} + \text{Aq}$ . (Peligot.)

Easily sol. in acids. (Moissan, *C. R.* 90, 817.)

Sol. in cold conc. acids.

Sol. in molten alkalies (Mourlot, *C. R.* 1895, 121, 944.)

Min *Daubretille*

**Chromic sulphide,  $\text{Cr}_2\text{S}_3$** 

Insol. in  $\text{H}_2\text{O}$  or alkali sulphides +  $\text{Aq}$ . Sl. attacked by  $\text{HCl} + \text{Aq}$ . (W. Müller, *Pogg.* 127, 404.)

$\text{HNO}_3 + \text{Aq}$  decomposes or not according to method of preparation. Easily decomp. by aqua regia.

Insol. in caustic alkalies +  $\text{Aq}$ .

Insol. in  $\text{K}_2\text{S} + \text{Aq}$ . (Berzelius.)

**Chromochromic sulphide,  $\text{Cr}_2\text{S}_4 = \text{CrS}$ ,  $\text{Cr}_2\text{S}_3$ .**

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ , or dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Easily sol. in  $\text{HNO}_3 + \text{Aq}$ . (Grogger, *W. A. B.* 81, (2) 531.)

**Chromic zinc sulphide,  $\text{Cr}_2\text{ZnS}_4$ .**

(Gröger, *W. A. B.* 1880, 81, 534.)

**Chromicyanhydric acid.****Cadmium chromicyanide,  $\text{Cd}_2[\text{Cr}(\text{CN})_6]$ .**

Readily sol. in an excess of  $\text{KCN}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by conc.  $\text{HCl}$ ,  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Slowly decomp. by cold, rapidly by hot dil.  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4$ . Quickly dissolved by aqua regia. Decomp. by boiling with  $\text{Na}_2\text{O}_2$ , by  $\text{NaOH} + \text{Aq}$  and by  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . Slowly decomp. by boiling acetic acid. (Cruser and Miller, *J. Am. Chem. Soc.* 1906, 28, 1136.)

**Cobaltous chromicyanide,  $\text{Co}_2[\text{Cr}(\text{CN})_6]$ .**

Sol. in cold, readily sol. in hot conc.  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . Sl. sol. even in boiling conc.

**HNO<sub>2</sub>** Slowly sol. in cold dil. H<sub>2</sub>SO<sub>4</sub>, HCl or HNO<sub>3</sub>. Readily sol. in boiling dil. HCl or H<sub>2</sub>SO<sub>4</sub>. Decomp. but not entirely dissolved by aqua regia. Readily sol. in an excess of KCN. Decomp. by NH<sub>4</sub>OH, NaOH or Na<sub>2</sub>CO<sub>3</sub>+Aq. Decomp. by boiling with Na<sub>2</sub>O<sub>2</sub>. Insol. in cold or boiling acetic acid (Cruser and Miller.)

**Cuprous chromocyanide, Cu<sub>2</sub>Cr(CN)<sub>6</sub>**

Sol. in KCN, cold conc. or boiling dil. HNO<sub>3</sub>+Aq. Slowly sol. in cold conc. H<sub>2</sub>SO<sub>4</sub>, still more slowly sol. in dil. H<sub>2</sub>SO<sub>4</sub>, but rapidly sol. in hot dil. and conc. H<sub>2</sub>SO<sub>4</sub>. Readily decomp. by aqua regia. Decomp. by dil. or conc. HCl, slowly going into solution in the cold, but quickly on boiling. (Cruser and Miller.)

**Cupric chromocyanide, Cu<sub>2</sub>Cr(CN)<sub>6</sub>**

Slowly sol. in cold dil. HCl, HNO<sub>3</sub> or H<sub>2</sub>SO<sub>4</sub>; on boiling the first two readily dissolve it, but the H<sub>2</sub>SO<sub>4</sub> dissolves it only slowly. Sol. in aqua regia or cold conc. H<sub>2</sub>SO<sub>4</sub>. Readily sol. in cold or hot conc. HCl. Decomp. by cold, dissolved by boiling HNO<sub>3</sub>. Decomp. by boiling Na<sub>2</sub>O<sub>2</sub>+Aq. Decomp. by NH<sub>4</sub>OH, NaOH or Na<sub>2</sub>CO<sub>3</sub>+Aq. Readily sol. in an excess of KCN+Aq. Insol. in cold acetic acid (Cruser and Miller.)

**Nickel chromocyanide, Ni<sub>2</sub>Cr(CN)<sub>6</sub>**

Slowly sol. in cold, readily sol. in hot dil. HCl, HNO<sub>3</sub> or H<sub>2</sub>SO<sub>4</sub>. Slowly sol. in cold, readily sol. in hot conc. H<sub>2</sub>SO<sub>4</sub>, HCl or HNO<sub>3</sub>. Slowly decomp. by cold, rapidly by boiling aqua regia. Readily sol. in excess of KCN. Sol. in NH<sub>4</sub>OH+Aq. Decomp. by NaOH, Na<sub>2</sub>CO<sub>3</sub>+Aq. or Na<sub>2</sub>O<sub>2</sub>+Aq. Insol. in cold, sl. sol. in boiling acetic acid. (Cruser and Miller.)

**Potassium thallous chromocyanide,**

(Fischer and Benzian, Ch. Z. 1902, 26. 50)

**Thallous chromocyanide, Tl<sub>2</sub>Cr(CN)<sub>6</sub>**

Easily sol. in H<sub>2</sub>O (Fischer and Benzian, Ch. Z. 1902, 26. 50)

**Zinc chromocyanide, Zn<sub>2</sub>Cr(CN)<sub>6</sub>**

Insol. in H<sub>2</sub>O. Sol. in excess of NH<sub>4</sub>OH, NaOH and KCN+Aq. Decomp. by Na<sub>2</sub>CO<sub>3</sub>+Aq. Sol. in cold dil. HCl. Slowly sol. in dil. H<sub>2</sub>SO<sub>4</sub> and in dil. HNO<sub>3</sub>. By boiling with dil. acids a clear solution is quickly obtained. (Cruser, Dissert 1906.)

**Chromisulphocyanhydric acid.**

**Cæsium chromisulphocyanide,**

Less sol. in H<sub>2</sub>O than K salt (Osann, Dissert. 1907.)

**Lithium chromisulphocyanide,**

Extremely deliquescent. (Osann.)

**Rubidium chromisulphocyanide,**

Appreciably less sol. in H<sub>2</sub>O and alcohol than the K salt. (Osann.)

**Chromocyanidric acid, H<sub>2</sub>Cr(CN)<sub>6</sub>**

Decomp. rapidly on air. Sol. in H<sub>2</sub>O (Moussan, A. ch. (6) 4. 141)

**Potassium chromocyanide, K<sub>2</sub>Cr(CN)<sub>6</sub>**

Very sol. in H<sub>2</sub>O; 100 pts. H<sub>2</sub>O dissolve 32.33 pts. at 20°. Much more sol. in hot H<sub>2</sub>O. Insol. in alcohol, ether, benzene, or chloroform. (Moussan, A. ch. (6) 4. 136.)

Above salt was K<sub>2</sub>Cr(CN)<sub>6</sub> (Christensen.) +3H<sub>2</sub>O (Christensen, J. pr. (2) 31. 166.)

**Chromiodic acid, CrO<sub>3</sub>, HIO<sub>3</sub>+2H<sub>2</sub>O.**

Deliquescent (Berg, C. R. 104. 1514.)

**Ammonium chromiodate, CrO<sub>3</sub>, NH<sub>4</sub>IO<sub>3</sub>+H<sub>2</sub>O.**

Moderately sol. in H<sub>2</sub>O. (Berg.)

**Lithium chromiodate, CrO<sub>3</sub>, LiIO<sub>3</sub>+H<sub>2</sub>O.**

Very sol. in H<sub>2</sub>O. (Berg.)

**Magnesium chromiodate.**

Sol. in H<sub>2</sub>O. (Berg.)

**Potassium chromiodate, CrO<sub>3</sub>, KIO<sub>3</sub>.**

Sol. in H<sub>2</sub>O. (Berg.)

+H<sub>2</sub>O=KCrIH<sub>2</sub>O<sub>7</sub>. Sl. decomp. by H<sub>2</sub>O. (Blomstrand, J. pr. (2) 40. 331.)

**Silver chromiodate, CrO<sub>3</sub>, AgIO<sub>3</sub>**

Sl. attacked by cold, rapidly decomp. by hot H<sub>2</sub>O. (Berg, C. R. 111. 42.)

**Sodium chromiodate, CrO<sub>3</sub>, NaIO<sub>3</sub>+H<sub>2</sub>O.**

Very sol. in H<sub>2</sub>O. (Berg.)

**Chromosulphocyanhydric acid.**

**Sodium chromosulphocyanide,**

Unstable.

Decomp. by H<sub>2</sub>O (Koppel, Z. anorg. 1905, 45. 360.)

**Chromosulphuric acid, H<sub>2</sub>Cr<sub>2</sub>(SO<sub>4</sub>)<sub>4</sub>.**

Sol. in H<sub>2</sub>O in all proportions, but solution is easily decomp. on standing or boiling. (Recoura, Bull. Soc. (3) 9. 586.)

H<sub>2</sub>Cr<sub>2</sub>(SO<sub>4</sub>)<sub>4</sub>. As above.

H<sub>2</sub>Cr<sub>2</sub>(SO<sub>4</sub>)<sub>4</sub>. As above.

- Ammonium chromosulphate**,  $(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4 \cdot 5\text{H}_2\text{O}$ .  
Sol in  $\text{H}_2\text{O}$  after a few minutes. (Recoura.)
- Chromium potassium chromosulphate**,  $[\text{Cr}_2(\text{SO}_4)_2\text{CrO}_4]_2\text{K}_2$ ,  $[\text{Cr}_2(\text{SO}_4)_2(\text{CrO}_4)_2]\text{K}_4$ , and  $[\text{Cr}_2(\text{SO}_4)_2(\text{CrO}_4)_3]\text{K}_6$ .  
Sol. in  $\text{H}_2\text{O}$ . (Recoura, Bull. Soc. 1897, (3) 17. 934.)
- Potassium chromosulphate**,  $\text{K}_2\text{Cr}_2(\text{SO}_4)_4 \cdot 4\text{H}_2\text{O}$ .  
Sol in  $\text{H}_2\text{O}$  in a few minutes. (Recoura, Bull. Soc. (3) 9. 590.)
- Sodium chromosulphate**,  $\text{Na}_2\text{Cr}_2(\text{SO}_4)_4 \cdot 10\text{H}_2\text{O}$ .  
As K salt. (Recoura.)
- Chromotelluric acid**.
- Ammonium chromotellurate**,  $2(\text{NH}_4)_2\text{O} \cdot 4\text{CrO}_3 \cdot \text{TeO}_3$ .  
Sol in  $\text{H}_2\text{O}$ . (Berg, C. R. 1911, 152. 1588.)
- Potassium chromotellurate**,  $2\text{K}_2\text{O} \cdot 4\text{CrO}_3 \cdot \text{TeO}_3$ .  
Sl. sol. in cold  $\text{H}_2\text{O}$  without decomp.  
Sol in boiling  $\text{H}_2\text{O}$ . (Berg, Bull. Soc. 1911, (4) 9. 583.)
- Chromous acid**,  $\text{H}_2\text{Cr}_2\text{O}_4 = \text{Cr}_2\text{O}_3 \cdot \text{H}_2\text{O}$ .  
Chromic hydride shows slightly acid properties, and salts corresponding to the above acid are known.
- Aluminum ferrous magnesium chromite** (chrome iron ore),  $(\text{Fe}, \text{Mg})\text{O} \cdot (\text{Cr}_2, \text{Al}_2)\text{O}_3$ .  
Insol. in  $\text{H}_2\text{O}$  or acids, even a mixture of  $\text{H}_2\text{SO}_4$  and  $\text{HF}$  (Ebelmen.)
- Barium chromite**,  $\text{BaCr}_2\text{O}_4$ .  
Insol. in  $\text{H}_2\text{O}$ . (Gerber, Bull. Soc. (2) 27. 436.)
- Barium tetrachromite**,  $\text{BaO} \cdot 4\text{Cr}_2\text{O}_3$ .  
Undecomp. by steam at red heat; insol in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , sol in fused  $\text{KOH} + \text{KNO}_3$ ; decomp. in the air. (Dufau, C. R. 1896, 122. 1126.)
- Cadmium chromite**,  $\text{CdCr}_2\text{O}_4$ .  
Not attacked by acids. (Viard, C. R. 109. 142.)
- Calcium chromite**,  $\text{CaCr}_2\text{O}_4$ .  
Insol. in  $\text{H}_2\text{O}$ . (Gerber, Bull. Soc. (2) 27. 436.)  
Insol. in  $\text{HCl}$ ,  $\text{HF}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ ; sol. in gaseous  $\text{HCl}$  and  $\text{HF}$  at red heat; sol. in fused  $\text{KOH}$ ,  $\text{KNO}_3$ ,  $\text{KClO}_4$ ,  $\text{K}_2\text{CO}_3$ . (Dufau, C. R. 1895, 121. 690.)
- $2\text{CaO} \cdot \text{Cr}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ ,  $\text{KOH}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ , slowly decomp. by  $\text{H}_2\text{CO}_3$ , or  $\text{MgCO}_3 + \text{Aq}$ ; insol. in sugar solution (Pelouze, A. ch. (3) 33. 9.)  
 $4\text{CaO} \cdot \text{Cr}_2\text{O}_3$ . Attacked by  $\text{H}_2\text{O}$ . (Moissan, C. R. 1894, 119. 188.)
- Cobaltous chromite**,  $\text{CoCr}_2\text{O}_4$ .  
(Elliot, Dissert, Göttingen, 1862.)
- Cuprous chromite**,  $\text{Cu}_2\text{O} \cdot \text{Cr}_2\text{O}_3$ .  
Insol. in  $\text{HNO}_3 + \text{Aq}$  (sp. gr 1.4). (Wöhler, Z. phys. Ch. 1903, 62. 445.)
- Cupric chromite basic**,  $5\text{CuO} \cdot 4\text{Cr}_2\text{O}_3$ .  
(Wöhler, Z. phys. Ch. 1908, 62. 445.)
- Cupric chromite**,  $\text{CuCr}_2\text{O}_4$ .  
Not attacked by  $\text{HNO}_3 + \text{Aq}$  (Persoz, A. ch. (3) 25. 283.)  
Not attacked by conc.  $\text{HCl}$ .  
Insol. in dil. acids. (Wöhler, Z. phys. Ch. 1908, 62. 446.)  
 $\text{CuO} \cdot 3\text{Cr}_2\text{O}_3$ . (Rosenfeld, B. 1879, 12. 958.)
- Glucinum chromite**,  $\text{GlCr}_2\text{O}_4$ .  
Insol. in  $\text{H}_2\text{O}$ . (Mallard, C. R. 105. 1260.)
- Iron (ferrous) chromite** (chrome iron ore).  
See Chromite, aluminum ferrous magnesium.
- Iron (ferroferrie) chromite**,  $\text{FeO} \cdot \text{Fe}_2\text{O}_3 \cdot \text{Cr}_2\text{O}_3$ .  
Not attacked by  $\text{HCl} + \text{Aq}$ . (Ebelmen.)
- Iron (ferrous) magnesium chromite**.  
Insol. in  $\text{HCl} + \text{Aq}$ . Scarcely attacked by  $\text{H}_2\text{SO}_4$ .
- Lead chromite**,  $\text{PbCr}_2\text{O}_4$ .  
Ppt. Insol. in  $\text{KOH} + \text{Aq}$  (Chancel, C. R. 42. 927.)
- Lithium chromite**,  $\text{Li}_2\text{Cr}_2\text{O}_4$ .  
Very sl. sol. in acids (Weyberg, C. C. 1906, II. 1659.)
- Magnesium chromite**,  $\text{MgO} \cdot 2\text{Cr}_2\text{O}_3$ .  
Insol. in  $\text{H}_2\text{O}$ . (Nichols, Sil. Am. J. (2) 47. 16.)  
 $\text{MgCr}_2\text{O}_4$ . Insol. in acids or alkalis, except boiling  $\text{H}_2\text{SO}_4$ . (Schweitzer, J. pr. 39. 259.)  
Could not be obtained. (Viard, Bull. Soc. (3) 6. 934.)  
Easily attacked by boiling  $\text{H}_2\text{SO}_4 + \text{Aq}$ .  
Less easily by  $\text{HCl}$  or  $\text{HF} + \text{Aq}$  not attacked by boiling  $\text{HNO}_3$ . (Dufau, C. R. 1896, 123. 886.)  
 $2\text{MgO} \cdot \text{Cr}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$  or acids. (Nichols.)  
 $5\text{MgO} \cdot 4\text{Cr}_2\text{O}_3$ . Insol. in acids. (Viard, C. R. 112. 1003.)  
 $3\text{MgO} \cdot 2\text{Cr}_2\text{O}_3$ . As above. (V.)

**Manganese chromite,  $MnCr_2O_4$ .**

Entirely insol. in acids. (Ebelmen, A. ch. (3) 33. 44)

**Zinc chromite,  $ZnCr_2O_4$ .**

Insol. in acids and alkalies (Viard, C. R. 109. 142)

+  $H_2O$ . (Chance, C. R. 43. 927.)  
 $3ZnO, 2Cr_2O_3$  As above. (Viard, C. R. 112. 1003.)

$6ZnO, 5Cr_2O_3$ . As above. (V.)

$8ZnO, 3Cr_2O_3$ . (Gröger, M. 1904, 25, 520.)

**Chromovanadic acid.**

Ammonium chromovanadate,  $2(NH_4)_2O, 2CrO_3, V_2O_5 + 7H_2O$ .

Sol. in  $H_2O$  (Ditte, C. R. 102. 1105.)

**Chromyl amide,  $CrO_2(NH_2)_2$ .**

Sol. in  $H_2O$  (Ohly, C. N. 1899, 80. 134.)

**Chromyl subchloride,  $(CrO_2)_3Cl_3$ .**

Deliquescent, sol. in  $H_2O$  with decomp., insol. in dry ether (Pascal, C. R. 1909, 148, 1463.)

**Chromyl chloride (chlorochromic acid),  $CrO_2Cl_2$ .**

Decomp. by  $H_2O$  with evolution of much heat. Sol. in glacial acetic acid without decomposition.

Sol. in  $CCl_4, C_2H_6$  (mol. wt. det.). (Oddo, Gazz. ch. it. 1899, 29 (2) 318; Chem. Soc. 1900, 78. (2) 75.)

**Trichromyl chloride,  $Cr_3O_6Cl_3$ .**

Deliquescent. Sol. in  $H_2O$  with gradual decomposition. Sol. in conc  $HCl + Aq$ . (Thorpe, Chem. Soc. (2) 8. 31.)

Scarcely sol. in  $CS_2$ .

Sol. in alcohol and ether (Rawson, C. N. 1889, 59. 185)

**Chromyl chlorides.**

From  $Cr_2O_3$ .

See Chromium oxychlorides.

**Chromyl chloride nitrogen tetroxide,**

$Cr_2Cl_2O_7, 2NO_2$ .

Sol. in  $H_2O$  with decomp. (Thomas, C. R. 1899, 129. 828.)

**Chromyl fluoride,  $CrO_2F_2$ .**

Decomp. by  $H_2O$  with evolution of heat. (Oliver, Gazz. ch. it. 18. 218.)

**Clay.**

See Silicate, aluminum,  $Al_2O_3, SiO_2 + 2H_2O$ .

**Cobalt, Co.**

Not attacked by  $H_2O$

Sol in dil.  $HCl$ , or  $H_2SO_4$ , or  $HNO_3 + Aq$ . Conc. hot  $H_2SO_4$  and  $HNO_3$  decomp. with evolution of  $SO_2$  or  $NO$  gas.

Exists also in passive state. See Iron. (Nickles, J. pr. 61. 186.)

Sol. in conc.  $KOH + Aq$  when in finely divided state. (Winkler, J. pr. 91. 211.)

Sol. in  $NH_4OH + Aq$  in presence of air. (Hodgkinson and Bellars, C. N. 1895, 71. 73)

**Cobalt ammonia compounds.**

Xanthocobaltic compounds,

$(\text{NO})_2\text{Co}(\text{NH}_3)_2\text{X}_2$ .

Cobalt arsenide,  $\text{CoAs}_2$ .

As  $\text{Co}_3\text{As}_2$ . (Ducelliez, C. R. 1908, 147. 425.)

$\text{CoAs}_2$ . As  $\text{Co}_3\text{As}_2$ . (Ducelliez, C. R. 1908, 147. 425.)

$\text{Co}_3\text{As}_2$ . As  $\text{Co}_3\text{As}_2$ . (Ducelliez, C. R. 1908, 147. 425.)

$\text{Co}_3\text{As}_2$ . Very sl. attacked by hot conc.  $\text{HCl}$ , less by  $\text{H}_2\text{SO}_4$ . Easily sol. in  $\text{HNO}_3$  and aqua regia. Sl. attacked by fused alkalis and alkali carbonates. (Ducelliez, C. R. 1908, 147. 425.)

$\text{CoAs}_2$ . Min. *Skutterudite*. Sol in  $\text{HNO}_3$  + Aq, with separation of  $\text{As}_2\text{O}_3$ .

Cobalt arsenide sulphide,  $\text{CoAs}_2\text{S}_2$ ,  $\text{CoS}_2$ .

Min. *Cobaltite*. Sol. in  $\text{HNO}_3$  + Aq, with separation of S and  $\text{As}_2\text{O}_3$ .

*Glaucodote*. Completely sol. in  $\text{HNO}_3$  + Aq.

Cobalt azoimide, basic,  $\text{Co}(\text{OH})\text{N}_3$ .

Insol. in  $\text{H}_2\text{O}$ .

Sol. in  $\text{HN}_3$  + Aq. (Curtius, J. pr. 1898, (2) 58. 300.)

Cobalt potassium azoimide,  $\text{KN}_3$ ,  $\text{Co}(\text{N}_3)_2$ .

Sol. in  $\text{H}_2\text{O}$ . Aq solution decomp. on boiling. (Curtius, J. pr. 1898, (2) 58. 301.)

Cobalt boride,  $\text{Co}_2\text{B}$ .

Attacked by  $\text{HNO}_3$ . (Jassonneux, C. R. 1907, 145. 240.)

$\text{Co}_2\text{B}$ . Decomp. by moist air and by alkali nitrates, chlorates, hydroxides and carbonates; decomp. by steam at red heat and by acids. (Moissan, C. R. 1890, 122. 425.)

Not attacked by  $\text{HCl}$ ; rapidly attacked by  $\text{HNO}_3$ . Not attacked by dil. but decomp. by conc.  $\text{H}_2\text{SO}_4$ . Rapidly attacked by aqua regia. (Moissan, A. ch. 1896, (7) 9. 272.)

$\text{Co}_2\text{B}$ . (Jassonneux, C. R. 1907, 145. 241.)

Cobaltous bromide,  $\text{CoBr}_2$ .

Deliquescent. Sol in  $\text{H}_2\text{O}$ , alcohol, and ether.

Sat.  $\text{CoBr}_2$  + Aq contains at:

59° 75° 97°  
66.7 66.8 68.1%  $\text{CoBr}_2$ .  
(Étard, A. ch. 1894, (7) 2. 542.)

Nearly insol in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29. 374.)

Sol. in  $\text{SO}_2\text{Cl}(\text{OH})$ . (Walden.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

1g.  $\text{CoBr}_2$  is sol. in 9.74g. methyl acetate at 18°. Sp. gr. 18°/4° of sat. solution = 1.013. (Naumann, B. 1909, 42. 3792.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sol in acetone (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

Mol. weight determined in pyridine (Werner, Z. anorg. 1897, 15. 24.)

+2, and 6 $\text{H}_2\text{O}$  (Hartley, Chem Soc (2) 12. 214.)

Cobaltous hydrazine bromide hydrazine,  $2\text{CoBr}_2 \cdot 4\text{N}_2\text{H}_4 \cdot \text{HBr}$ ,  $\text{N}_2\text{H}_4$ (?).

Sol. in  $\text{H}_2\text{O}$  with decomp. (Ferradini, C. A. 1912. 1613.)

Cobaltous mercuric bromide, basic,

$\text{CoBr}_2 \cdot \text{HgBr}_2 \cdot 6\text{CoO} + 20\text{H}_2\text{O}$ .

(Mailhe, A. ch. 1902, (7) 27. 369.)

Cobalt stannic bromide.

See Bromostannate, cobalt.

Cobaltous bromide ammonia,  $\text{CoBr}_2 \cdot 6\text{NH}_3$ .

Sol in  $\text{H}_2\text{O}$  with residue of cobalt hydroxide. (Rammelsberg, Pogg. 55. 245.)

Cobaltous bromide hydrazine,  $\text{CoBr}_2 \cdot 2\text{N}_2\text{H}_4$ .

Decomp. by boiling with  $\text{H}_2\text{O}$  (Franzen, Z. anorg. 1908, 60. 270.)

Cobalt carbonyl,  $\text{Co}(\text{CO})_4$ .

Insol. in  $\text{H}_2\text{O}$ . More or less sol. in  $\text{CS}_2$ , ether, alcohol and  $\text{Ni}(\text{CO})_4$ . Relatively stable with non-oxidizing acids. Quickly decomp. by oxidizing acids (Mond, Hirtz and Cowap, C. N. 1908, 98. 165.)

Cobaltous chloride,  $\text{CoCl}_2$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$  with evolution of heat. 100 pts.  $\text{H}_2\text{O}$  dissolve 43.3 pts  $\text{CoCl}_2$  at 0° (Engel, A. ch. (6) 17. 355.)

100 pts sat  $\text{CoCl}_2$  + Aq at t° contain pts.  $\text{CoCl}_2$ .

t°	Pts $\text{CoCl}_2$	t°	Pts $\text{CoCl}_2$	t°	Pts $\text{CoCl}_2$

(Engel, A. ch. (6) 17, 355.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 827.)

Sol. in alcohol

Sat. solution in alcohol (0.792 sp. gr.) contains 23.66 %  $\text{CoCl}_2$  and has sp. gr. = 1.0107. (Winkler, J. pr. 91, 209.)

Very sol. in ether.

100 pts. absolute ether dissolve only 0.021 g.  $\text{CoCl}_2$ . (Böttker, Z. phys. Ch. 1897, 22, 511.)

100 g. formic acid (95%) dissolve 6.2 g.  $\text{CoCl}_2$  at  $20^\circ$ . (Aschan, Ch. Z. 1913, 37, 1117.)

1g.  $\text{CoCl}_2$  is sol. in 271g. methyl acetate at  $18^\circ$ . Sp. gr.  $18^\circ/1^\circ$  of sat. solution = 0.938. (Naumann, B. 1909, 42, 3791.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

100 pts. acetone dissolve 8.62 pts. anhydrous  $\text{CoCl}_2$ . (Krug and McElroy, J. Anal. Ch. 6, 184.)

0.08 pts sol in 100 pts. ethyl acetate at $14^\circ$ .
0.26 " " " 100 " " " 79°.

(Pearce and Moore, Am. Ch. J. 1913, 50, 226.)

Mol. weight determined in piperidine, and pyridine. (Werner Z. anorg 1897, 15, 18 and 23.)

Sol. in urethane (Castoro, Z. anorg 1899, 20, 61.)  
 +  $\text{H}_2\text{O}$ .

+2H<sub>2</sub>O. Very deliquescent (Bersoh, J. B. 1867. 291.)  
 17.16 pts. sol. in 100 pts. acetone at 0°  
 17.06 " " 100 " " 25°  
 (Laszczynski, B. 1894, 27. 2287.)  
 +4H<sub>2</sub>O. Deliquescent. (Bersoh.)  
 +6H<sub>2</sub>O. Not deliquescent. Easily sol. in H<sub>2</sub>O.

Solubility of CoCl<sub>2</sub>+6H<sub>2</sub>O in ethyl alcohol +Aq at 11.5° under addition of increasing amounts of CoCl<sub>2</sub>.

P = Percent of alcohol by volume

G = Grams of CoCl<sub>2</sub> added.

C<sub>c</sub> = Grams of CoCl<sub>2</sub> in 5 cc. of the solution.

C<sub>w</sub> = Grams of water in 5 cc. of the solution, calculated from

- (1) the water content of the alcohol.
- (2) the water of crystallization which had gone into solution.
- (3) the water held mechanically in CoCl<sub>2</sub>+6H<sub>2</sub>O

"	0.650	0.500	2.186

(Bodtker, Z. phys. Ch 1897, 22. 508)

Easily soluble in absolute ethyl alcohol. 100 pts absolute alcohol dissolve at room temperature 56.20 pts. CoCl<sub>2</sub>. Water precipitates CoCl<sub>2</sub>+6H<sub>2</sub>O from a solution of CoCl<sub>2</sub> in absolute alcohol. (Bodtker.)

100 pts. absolute ether dissolve 0.291g. CoCl<sub>2</sub>+6H<sub>2</sub>O (Bodtker, Z. phys. Ch 1897, 22. 511.)

Anhydrous ethylene glycol dissolves 10.6% CoCl<sub>2</sub>+6H<sub>2</sub>O at 16.4°. (de Coninck, Chem. Soc 1904, 86, (2) 741)

**Cobaltous hydrazine chloride,**  
 CoCl<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>.HCl+2½H<sub>2</sub>O

Sol. in H<sub>2</sub>O (Ferrattini, C. A. 1912. 1613.)

**Cobaltous iodine chloride, CoCl<sub>2</sub>, 2ICl<sub>3</sub>+8H<sub>2</sub>O.**

Hygroscopic. Decomp. by H<sub>2</sub>O. CCl<sub>4</sub> separates ICl<sub>3</sub> (Weinland and Schlegelmilch, Z. anorg. 1902, 30. 137.)

**Cobalt lithium chloride, CoCl<sub>2</sub>, LiCl+3H<sub>2</sub>O.**

Very deliquescent. Sol. in H<sub>2</sub>O with decomp. Sol. in LiCl+Aq without decomp. Sol. in alcohol without decomp. (Chassevant, A. ch. (6) 30. 27)

**Cobaltous mercuric chloride basic, CoCl<sub>2</sub>, HgCl<sub>2</sub>, 6CoO+20H<sub>2</sub>O.**

(Mailhe, A. ch 1902, (7) 27. 369.)

**Cobaltous mercuric chloride, CoCl<sub>2</sub>, HgCl<sub>2</sub>.**  
 Very deliquescent. (v. Bonsdorff.)

**Cobaltous thallic chloride, 2TlCl<sub>3</sub>, CoCl<sub>2</sub>+8H<sub>2</sub>O.**

Hygroscopic; can be cryst. from H<sub>2</sub>O. (Gewecke, A. 1909, 366. 222.)

**Cobaltous tin (stannic) chloride, CoCl<sub>2</sub>, SnCl<sub>4</sub>+6H<sub>2</sub>O**

See Chlorostannate, cobaltous.

**Cobaltous chloride ammonia, CoCl<sub>2</sub>, 2NH<sub>3</sub>.**

Decomp. by H<sub>2</sub>O. (F. Rose.)

CoCl<sub>2</sub>, 4NH<sub>3</sub> Decomp. by H<sub>2</sub>O (H. Rose)

CoCl<sub>2</sub>, 6NH<sub>3</sub> Decomp. by H<sub>2</sub>O. Sol. in dil. NH<sub>4</sub>OH+Aq with ease, but difficultly in conc. NH<sub>4</sub>OH+Aq. Insol. in absolute alcohol (Fremy.)

**Cobaltous chloride hydrazine, CoCl<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>.**

Insol. in cold H<sub>2</sub>O.

Slowly decomp. by cold, rapidly by hot H<sub>2</sub>O.

Easily sol. in dil. acids and NH<sub>4</sub>OH+Aq. (Franzen, Z. anorg 1908, 80. 270.)

**Cobaltous chloride hydroxylamine,**  
 CoCl<sub>2</sub>, 2NH<sub>2</sub>OH.

Decomp. in the air; sol in H<sub>2</sub>O (Feldt, B. 1894, 27. 403.)

**Cobaltic chloride hydroxylamine,**  
 CoCl<sub>3</sub>, 6NH<sub>2</sub>OH.

Insol in alcohol.

Sol. in acidified H<sub>2</sub>O without decomp.; sol in conc. H<sub>2</sub>SO<sub>4</sub> without decomp (Feldt, B. 1894, 27. 404.)

**Cobaltous fluoride, CoF<sub>2</sub>**

Sl. sol. in H<sub>2</sub>O; insol. in alcohol and ether, slowly attacked by cold HCl, H<sub>2</sub>SO<sub>4</sub>, or HNO<sub>3</sub>+Aq. (Poulenc, C. R. 114. 1429.)

Insol in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 29. 827.)

+2H<sub>2</sub>O. Sol. in a little H<sub>2</sub>O without decomp. Decomp. into oxyfluoride by boiling with much H<sub>2</sub>O. Sol. in HF+Aq. (Berzelius.)

+4H<sub>2</sub>O. Two modifications.

Solubility of α mod. at 7° = 2.2328 %

" " β " " " = 2.3203 %

(Costachescu, Ann. Sci. Univ. Jassy, 1912, 7, 1, 10.)

**Cobaltic fluoride, CoF<sub>3</sub>.**

Sol. in conc. H<sub>2</sub>SO<sub>4</sub>. (Barbieri, Chem. Soc. 1905, 88, (2) 393.)

Cobaltous hydrogen fluoride,  $\text{CoF}_2 \cdot 5\text{HF} + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  and dil. acids  
Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  with decomp. (Bohm, Z. anorg. 1905, 43. 330.)

Cobalt columbium fluoride.

See Fluocolumbate, cobalt.

Cobaltous iron (ferrie) fluoride,  
 $\text{CoF}_2 \cdot \text{FeF}_2 + 7\text{H}_2\text{O}$ .

Sol. in dil.  $\text{HF} + \text{Aq}$  (Weinland, Z. anorg. 1899, 22. 269.)

Cobaltous manganic fluoride,  $2\text{CoF}_2 \cdot \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$ .

(Christensen, J. pr. (2) 34. 41.)

Cobalt molybdenyl fluoride.

See Fluoxymolybdate, cobalt.

Cobaltous potassium fluoride,  $\text{CoF}_2 \cdot \text{KF}$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; less in ethyl or methyl alcohol, insol. in amyl alcohol or benzene  
Decomp. by hot  $\text{H}_2\text{SO}_4$ . (Poulenc, C. R. 114. 747.)

+  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Wagner, B. 19. 896.)

$\text{CoF}_2 \cdot 2\text{KF}$

Cobaltous sodium fluoride,  $\text{CoF}_2 \cdot \text{NaF} + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wagner, B. 19. 896.)

Cobaltous stannic fluoride.

See Fluostannate, cobaltous.

Cobalt vanadium fluoride.

See Fluovanadate, cobalt.

Cobaltous hydroxide,  $\text{CoO} \cdot \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. Insol. in  $\text{KOH} + \text{Aq}$ . Sol. in ammonium sulphate, chloride, nitrate, or succinate +  $\text{Aq}$ . (Brett)

Sol. in warm acetic acid; insol. in  $\text{NH}_4\text{OH} + \text{Aq}$  and cold  $\text{NH}_4\text{Cl} + \text{Aq}$ , but sol. in warm  $\text{NH}_4\text{Cl} + \text{Aq}$ . (de Schulten, C. R. 109. 266)

Insol. in  $\text{H}_2\text{O}$  and dil.  $\text{KOH} + \text{Aq}$ , somewhat sol. in conc.  $\text{KOH} + \text{Aq}$ ; easily sol. in  $\text{NH}_4$  salts +  $\text{Aq}$ . (Fresenius.)

Easily sol. in  $\text{KCN} + \text{Aq}$  (Rodgers, 1834.)

Sol. in conc.  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Gmelin.)

Not pptd. by  $\text{KOH} + \text{Aq}$  in presence of  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$  or  $\text{NH}_4$  citrate. (Spiller.)

Sol. in large amt. in boiling  $\text{NH}_4\text{SCN} + \text{Aq}$ . (Grossmann, Z. anorg. 1908, 68. 209.)

Insol. in methyl, or amyl amine +  $\text{Aq}$ . (Wurtz.)

Many non-volatile organic substances prevent its pptn.

Cobaltic hydroxide,  $3\text{CoO} \cdot \text{O}_2 \cdot 2\text{H}_2\text{O}$ .

(Mills, Phil. Mag. (4) 35. 257.)

$\text{Co}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$  Decomp. by  $\text{HCl} + \text{Aq}$ ;

gives brown solutions with cold  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ , which soon decomp. (Wernicke, Pogg. 141. 120.)

$\text{Co}_2\text{O}_3 \cdot \text{H}_2\text{O} = \text{Co}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$  Sol. in warm  $\text{HCl}$ ,  $\text{HNO}_3$ , and  $\text{H}_2\text{SO}_4$  with decomp. (Proust.)

Sol. in cold  $\text{H}_4\text{PO}_4$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ , but decomp. on standing or warming (Winkblech.)

Sol. in racemic, tartaric, oxalic, or citric acid as cobaltous salt

Sol. in conc. acetic acid without immediate decomp. (Remele.)

Solution is not decomp. by boiling Sol. in warm sat.  $(\text{NH}_4)_2\text{C}_2\text{O}_4 + \text{Aq}$  with decomp.

Not attacked by cold or hot  $\text{NH}_4\text{OH} + \text{Aq}$

Insol. in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$ .

Sol. when freshly pptd. in  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ . (Geuther, A. 128. 157.)

Cobaltocobaltic hydroxide,  $\text{Co}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$ . Sol. in oxalic acid; solution decomp. by heat Sol. in  $\text{HCl} + \text{Aq}$  with evolution of  $\text{Cl}$ . (Gibbs and Genth, Sill. Am. J. (2) 23. 257.)

$\text{Co}_2\text{O}_3 \cdot 7\text{H}_2\text{O}$  Sol. in weak acids, especially  $\text{HCl} + \text{H}_2\text{O}_2$  without decomp. (Fremy.)

$\text{Co}_2\text{O}_3 \cdot 6\text{H}_2\text{O}$  Min. *Heterogeneous*. Sol. in dil.  $\text{HCl} + \text{Aq}$  with evolution of  $\text{Cl}$ .

Cobaltous iodide,  $\text{CoI}_2$ .

Deliquescent, and very sol. in  $\text{H}_2\text{O}$ .

100 pts. sat.  $\text{CoI}_2 + \text{Aq}$  at  $t^\circ$  contain  
pts.  $\text{CoI}_2$ .

$t^\circ$	Pts. $\text{CoI}_2$	$t^\circ$	Pts. $\text{CoI}_2$	$t^\circ$	Pts. $\text{CoI}_2$
-22	52.4	14	61.6	60	79.2
-8	56.7	25	66.4	82	80.7
-2	58.7	34	73.0	111	80.9
+9	61.4	40	79.0	156	83.1

(Étard, C. R. 113. 699)

Sol. in  $\text{SO}_2(\text{OCH}_3)_2$ . (Walden, Z. anorg. 1902, 29. 338.)

Sol. in  $\text{SOCl}_2$ . (Walden, Z. anorg. 1900, 25. 216.)

Sol. in  $\text{POCl}_2$ . (Walden, Z. anorg. 1900, 25. 212.)

Sol. in  $\text{S}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 25. 217.)

Nearly insol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29. 374.)

Sol. in  $\text{AsCl}_3$ . (Walden, Z. anorg. 1900, 25. 214.)

Easily sol. in alcohol.

Sol. in acetone. (Eidmann, C. C. 1899, 11. 1014.) (Naumann, B. 1904, 37. 4328.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 61. 236.)

Sol. in methylacetate. (Naumann, B. 1909, 42. 3790.)

+  $2\text{H}_2\text{O}$ .

+  $4\text{H}_2\text{O}$ . Very deliquescent. (Étard.)

+6H<sub>2</sub>O. (Hartley, Chem. Soc. (2) 12. 214.)  
 +9H<sub>2</sub>O Very hygroscopic (Bolschakoff, C. C. 1898, II. 660.)

Cobaltous lead iodide, 2 CoI<sub>2</sub>, PbI<sub>2</sub>+3H<sub>2</sub>O  
 Decomp. by H<sub>2</sub>O. (Mosnier, A. ch. 1897, (7) 12. 412.)

Cobaltous mercuric iodide, CoI<sub>2</sub>, HgI<sub>2</sub>+6H<sub>2</sub>O.

Partially decomp. by H<sub>2</sub>O.  
 Sol. in alcohol and acetone. (Dobroserdoff, C. C. 1901, II. 332.)  
 CoI<sub>2</sub>, 2HgI<sub>2</sub>+6H<sub>2</sub>O. Decomp. by H<sub>2</sub>O; sol. in alcohol and acetone. (Dobroserdoff, C. C. 1901, II. 332.)

Cobaltous iodide ammonia, CoI<sub>2</sub>, 4NH<sub>3</sub>.  
 Decomp. by H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH+Ag. (Rammelsberg, Pogg. 48. 155.)  
 CoI<sub>2</sub>, 6NH<sub>3</sub>. Insol. in NH<sub>4</sub>OH+Ag. (Rammelsberg.)

Cobaltous iodide hydrazine, CoI<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>.  
 Sl. sol. in H<sub>2</sub>O. Easily sol. in acids (Franzen, Z. anorg. 1911, 70. 147.)

Cobaltic octamine compounds.  
*See* Octamine cobaltic compounds.

Cobaltous oxide, CoO  
 Insol. in H<sub>2</sub>O. Easily sol. in dil. or conc. HCl or HNO<sub>3</sub>+Aq. Slowly sol. in cold, but easily in hot dil. H<sub>2</sub>SO<sub>4</sub>+Aq. acetic, or tartaric acid +Aq. Insol. in NH<sub>4</sub>OH+Ag. Sol. in hot NH<sub>4</sub>Cl+Ag, KOH, or NaOH+Ag (Rose)  
 Insol. in NH<sub>4</sub>Cl or NH<sub>4</sub>NO<sub>3</sub>+Aq. (Brett, 1834.)

Insol. in K<sub>2</sub>CO<sub>3</sub>+Aq. Sol. in boiling Ce and Ni nitrates +Aq. with pptn. of the oxides. (Persoz.)

Easily sol. in dil. acids, even tartaric, acetic, and oxalic acids. Not attacked by NH<sub>4</sub>OH+Ag. Sol. in 13% NH<sub>4</sub>Cl+Ag with evolution of NH<sub>3</sub>; also in NH<sub>4</sub>SCN+Ag. Sol. in warm conc. NaOH, and KOH+Ag (Zimmerman, A. 232. 324.)

Solubility in (calcium sucrate+sugar)+Aq.  
 1 l. solution containing 418.6 g. sugar and 34.3 g. CaO dissolves 1.56 g. CoO; 1 l. solution containing 296.5 g. sugar and 24.2 g. CaO dissolves 0.29 g. CoO. (Bodenbender, J. B. 1865. 600.)

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 827.)  
*See also* Cobaltous hydroxide.

Cobaltic oxide, Co<sub>2</sub>O<sub>3</sub>.

Decomp. by most acids, even in the cold, with formation of cobaltous salts. Sol. in acetic acid without immediate decomp.  
*See also* Cobaltic hydroxide.

Cobaltocobaltic oxide, Co<sub>2</sub>O<sub>3</sub>=CoO, Co<sub>2</sub>O<sub>3</sub>.  
 Insol. in boiling conc. HCl, HNO<sub>3</sub>, or aqua regia. Sol. by long standing with H<sub>2</sub>SO<sub>4</sub>. (Gibbs and Genth, Sil. Am. J. (2) 23. 267.)  
*See also* Cobaltocobaltic hydroxide.

Co<sub>2</sub>O<sub>3</sub>=2CoO, Co<sub>2</sub>O<sub>3</sub>.  
 Co<sub>2</sub>O<sub>7</sub>=4CoO, Co<sub>2</sub>O<sub>3</sub>. Not attacked by boiling dil. HNO<sub>3</sub> or H<sub>2</sub>SO<sub>4</sub>+Aq. (Beetz.)  
 Co<sub>2</sub>O<sub>3</sub>=6CoO, Co<sub>2</sub>O<sub>3</sub>+20H<sub>2</sub>O. Sol. in dil. acids, with residue of Co<sub>2</sub>O<sub>3</sub>, which dissolves on warming. (Gentile, J. pr. 69. 131.)  
 +8H<sub>2</sub>O As above. (Gentile.)

Cobaltous oxychloride, CoCl<sub>2</sub>, 3CoO+3 $\frac{1}{2}$ H<sub>2</sub>O.  
 Ppt. Very sl. sol. in H<sub>2</sub>O. (Habermann, M. 5. 432.)

Cobaltous oxychloride hydroxylamine, CoOCl, 2NH<sub>2</sub>OH.  
 Insol. in H<sub>2</sub>O; unstable; insol. in alcohol. (Feldt, B. 1894, 27. 404.)

Cobaltous oxyfluoride, CoO, CoF<sub>2</sub>+H<sub>2</sub>O.  
 Ppt. (Berzelius, Pogg. 1. 26.)

Cobaltous oxyiodide, CoO, CoI<sub>2</sub>.  
 Insol. in H<sub>2</sub>O. (Rammelsberg.)

Cobaltous oxysulphide, CoO, CoS.  
 Cold HCl+Ag dissolves out CoO; hot HCl+Ag decomp. with evolution of H<sub>2</sub>S. (Arfvedson, Pogg. 1. 64.)

Cobalt phosphide, Co<sub>2</sub>P  
 Sol. in conc. HNO<sub>3</sub>. Slowly attacked by HCl and H<sub>2</sub>SO<sub>4</sub>. (Maronneau, C. R. 1900, 130. 358.)  
 Sol. in HNO<sub>3</sub>, aqua regia, and in fused alkalis. (Granger, Bull. Soc. 1896, (3) 15. 1089.)

Co<sub>2</sub>P<sub>2</sub>. Insol. in HNO<sub>3</sub> and aqua regia; stable in the air even when heated (Granger, Bull. Soc. 1896, (3) 15. 1087)

Co<sub>2</sub>P<sub>3</sub>. Insol. in conc. HCl+Ag. Sol. in HNO<sub>3</sub>+Aq. (Rose, Pogg. 24. 332.)

Cobalt subselenide, Co<sub>2</sub>Se.  
 Sol. in bromine water.  
 Only sl. attacked by boiling fuming HCl. (Fonze-Diacon, C. R. 1900, 131. 704.)

Cobalt monoselenide, CoSe  
 (Little, A. 112. 211.)

Cobalt diselenide CoSe<sub>2</sub>.  
 Sol. in Br<sub>2</sub>+Aq.  
 Only sl. attacked by boiling fuming HCl. (Fonze-Diacon, C. R. 1900, 131. 705.)

**Cobalt sesquiselenide,  $\text{Co}_2\text{Se}_3$ .**Sol. in  $\text{Br}_2 + \text{Aq}$ .Only sl. attacked by boiling fuming  $\text{HCl}$ . (Fonzes-Diacon, C. R. 1900, 131. 704.)**Cobalt selenide,  $\text{Co}_2\text{Se}_3$ .**Sol. in  $\text{Br}_2 + \text{Aq}$ .Only sl. attacked by boiling fuming  $\text{HCl}$ . (Fonzes-Diacon, C. R. 190, 131. 704.)**Cobalt silicide,  $\text{Co}_3\text{Si}$ .**Sol. in  $\text{HF}$  and aqua regia. Insol. in cold  $\text{H}_2\text{O}$ . Decomp. by steam at red heat. Sol. in fused alkali carbonates. (Vigououx, C. R. 1895, 121. 687.)CoSi. Insol. in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . Sol. in aqua regia and  $\text{HCl}$ , and in fused KOH. (Lebeau, C. R. 1901, 132. 557.)Not attacked by dil. or conc.  $\text{HNO}_3$ , or conc.  $\text{H}_2\text{SO}_4$ . Sol. in aqua regia and in conc.  $\text{HCl}$ .Not attacked by dil. alkali hydroxides +  $\text{Aq}$ .; attacked by fused alkali. (Lebau, Bull. Soc. 1901, (3), 26. 540.)CoSi<sub>2</sub>. Sl. sol. in hot conc.  $\text{HCl}$  and hot conc. alkali +  $\text{Aq}$ . Sol. in  $\text{HF}$ ; insol. in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . (Lebeau, C. R. 1902, 135. 476.)**Cobaltous sulphide,  $\text{CoS}$ .**Anhydrous. Easily sol. in acids, even  $\text{HCl}$ , but only slowly in the latter case. (Erdtshil, C. R. 66. 75.)Not attacked by cold dil.  $\text{HCl} + \text{Aq}$ . (Ebelmen, A. ch. (3) 25. 94.)Min. Seypoorte +  $2\text{H}_2\text{O}$ . 1 l.  $\text{H}_2\text{O}$  dissolve  $41.02 + 10^{-6}$  moles  $\text{CoS}$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Sol. in conc. mineral acids; very sl. sol. in cold dil. acids; scarcely sol. in acetic acid. (Wackenroder.)

Sol. when still moist in  $\text{SO}_2 + \text{Aq}$  (Berthier.)Easily sol. in  $\text{HNO}_3$ , but only very sl. sol. in  $\text{HCl} + \text{Aq}$ . Not pptd. from very dil. acid solutions by  $\text{H}_2\text{S}$ .Insol. in  $\text{H}_2\text{O}$ , alkalies, and alkali carbonates, or sulphides +  $\text{Aq}$ . (Fresenius.)Insol. in  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Brett.)When pptd. by  $(\text{NH}_4)_2\text{S} + \text{Aq}$ , shows a brown colour in presence of 200,000 pts  $\text{H}_2\text{O}$  (Pfaff.)Tartaric acid, etc. does not hinder the pptn. by  $(\text{NH}_4)_2\text{S} + \text{Aq}$ . (Rose.)Sol. in potassium thiocarbonate +  $\text{Aq}$  (Rosenblatt, Z. anal. 26. 15.)Sol. in  $\text{Na}_2\text{S}_2$  or  $\text{K}_2\text{S}_2 + \text{Aq}$ . (de Kounek, Zeit. angew. Ch. 1891. 202.)**Cobaltic sulphide,  $\text{Co}_2\text{S}_3$ .**Partially decomp. by  $\text{HCl} + \text{Aq}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$  with decomposition.Sl. attacked by  $\text{HCl} + \text{Aq}$ ; and slowly even by aqua regia. (Schneider, J. pr. (2) 9. 200.)**Min. Cobalt pyrite**+  $1\text{H}_2\text{O}$ . Insol. in  $\text{KCN} + \text{Aq}$  (Fleck, J. pr. 97. 303.) More sol. in  $\text{HCl} + \text{Aq}$  than  $\text{CoS}_2$ . (Dugler, Beiz, J. B. 10. 139.)**Cobalto-cobaltic sulphide,  $\text{Co}_2\text{S}_4$ .**Min. Lannette. Sol. in warm  $\text{HNO}_3 + \text{Aq}$ , with residue of  $\text{S}$ .**Cobalt disulphide,  $\text{CoS}_2$ .**Not attacked by alkalis or acids except  $\text{HNO}_3$  and aqua regia. (Setterberg, Pogg. 7. 40.)**Cobalt sulphide,  $\text{Co}_2\text{S}_3$ .**Easily sol. in hot  $\text{HCl}$  with evolution of  $\text{H}_2\text{S}$  (and  $\text{H}_2\text{S}^*$ ) (Pioust.)**Cobalt potassium sulphide,  $\text{K}_2\text{Co}_{11}\text{S}_{10}$ .**Slowly sol. in cold  $\text{HCl}$  and aqua regia. Quickly sol. in warm aqua regia.Sol. in  $\text{HF}$  and  $\text{H}_2\text{SO}_4$ , only on warming.Insol. in  $(\text{NH}_4)_2\text{S}$ , organic acids, alkalies, 12%  $\text{HCl} + \text{Aq}$  and  $\text{KCN} + \text{Aq}$  (Milbauer, Z. anorg. 1904, 42. 447.)**Cobalt telluride,  $\text{CoTe}$ .**

(Fabre, C. R. 105. 673.)

**Cobalt decamine sulphurous acid.**

Sec Decamine cobaltisulphurous acid.

**Cobaltic acid.**Potassium cobaltate,  $\text{K}_2\text{Co}_2\text{O}_{11} + 2\text{H}_2\text{O}$ , or  $3\text{H}_2\text{O}$ .Insol. in  $\text{H}_2\text{O}$  (Pebal, A. 100. 262), but decomp. by long boiling. Sol. in conc. acids. $\text{K}_2\text{O}$ ,  $1\text{CoO}_2$ . Sol. in  $\text{H}_2\text{O}$  (Winkler, J. pr. 91. 351.)

Does not exist (Donath, W. A. B. 102, 2b. 71.)

**Cobalticyanhydric acid,  $\text{H}_2\text{Co}(\text{CN})_6 + \frac{1}{2}\text{H}_2\text{O}$ .**Deliquescent. Very sol. in  $\text{H}_2\text{O}$  and only sl. decomp. on boiling.Sol. in  $\text{HCl} + \text{Aq}$  without decomp. even on boiling. Sl. sol. in conc. more sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . Not decomp. by boiling conc.  $\text{HNO}_3 + \text{Aq}$  or aqua regia. Insol. in conc. sl. sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Sol. in alcohol. Insol. in ether. (Zweuger, A. 162. 157.)**Ammonium cobaltcyanide,  $(\text{NH}_4)_2\text{Co}(\text{CN})_6 + \frac{1}{2}\text{H}_2\text{O}$ .**Very sol. in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol.**Ammonium barium cobaltcyanide,** $\text{NH}_4\text{BaCo}(\text{CN})_6 + \text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ . (Weselsky.)**Ammonium calcium cobaltcyanide,** $\text{NH}_4\text{CaCo}(\text{CN})_6 + 10\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ .

**Ammonium lead cobalticyanide,**  
 $\text{NH}_4\text{PbCo(CN)}_6 + 3\text{H}_2\text{O}$ .Sol. in 8-31 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ , and sl. sol. in 93% alcohol. (Schuler.)**Ammonium mercuric cobalticyanide,**  
 $(\text{NH}_4)_2\text{HgCo(CN)}_6 + \text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$  with decomp.

Insol. in alcohol (Soenderop, Dissert. 1899.)

**Ammonium sodium cobalticyanide,**  
 $\text{NH}_4\text{Na}_2\text{Co(CN)}_6$ .Only sl sol. in  $\text{H}_2\text{O}$  (Weselsky, B. 2. 508)**Ammonium strontium cobalticyanide,**  
 $\text{NH}_4\text{SrCo(CN)}_6 + 9\text{H}_2\text{O}$ Sol. in  $\text{H}_2\text{O}$ . (W)**Barium cobalticyanide, basic,**  $\text{Ba}_2[\text{Co(CN)}_6]_2 + \text{BaO}_2\text{H}_2$ .

Not very stable. Cannot be recryst. without partial decomp. (W)

**Barium cobalticyanide,**  $\text{Ba}_2[\text{Co(CN)}_6]_2 + 10\text{H}_2\text{O}$ Sl efflorescent. Very sol in  $\text{H}_2\text{O}$  Insol. in alcohol.**Barium cobalticyanide chloride,**  
 $\text{Ba}_2[\text{Co(CN)}_6]_2 + \text{BaCl}_2 + 16\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$  without decomp. (W.)**Barium lithium cobalticyanide,**  $\text{BaLiCo(CN)}_6 + 15\text{H}_2\text{O}$ .

The most sol. of the double cobalticyanides. (Weselsky)

**Barium potassium cobalticyanide,**  
 $\text{BaKCo(CN)}_6 + 11\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ . (W.)**Bismuth cobalticyanide**  $\text{BiCo(CN)}_6$ 

Ppt (Mathews, J. Am Chem Soc. 1900, 22. 275.)

+  $5\text{H}_2\text{O}$ . Moderately stable with dil. min. acids; more stable with conc. acids than Cd or Zn comp.Decomp. by  $\text{NH}_3$  and alkalis. (Fischer and Cuntze, Ch. Z. 1902, 26. 872.)**Cadmium cobalticyanide,**  $\text{Cd}_2[\text{Co(CN)}_6]_2 + 7\frac{1}{2}\text{H}_2\text{O}$ Attacked by strong min. acids only when hot. Behaves as Zn salt, toward conc.  $\text{H}_2\text{SO}_4$  and dil. and conc.  $\text{HCl}$ .Insol. in  $\text{K}_2\text{Co(CN)}_6 + \text{Aq}$  Sol. in  $\text{NH}_4\text{OH}$  and  $\text{NH}_4\text{Cl} + \text{Aq}$  (Fischer and Cuntze, Ch. Z. 1902, 26. 873)**Cadmium potassium cobalticyanide,**  
 $\text{KCdCo(CN)}_6$ .Not attacked by  $\text{H}_2\text{O}$ . (Fischer and Cuntze, Ch. Z. 1902, 26. 873)**Cadmium sodium cobalticyanide,**  
 $\text{NaCdCo(CN)}_6$ .

(Fischer and Cuntze, Ch. Z. 1902, 26. 873.)

**Cadmium cobalticyanide ammonia,**  
 $\text{Cd}_2[\text{Co(CN)}_6]_2 + 4\text{NH}_3 + 2\text{H}_2\text{O}$ .

(Fischer and Cuntze, Ch. Z. 1902, 26. 873.)

**Cadmium cobalticyanide ammonia,**  
 $\text{Cd}_2[\text{Co(CN)}_6]_2 + 5\text{NH}_3 + 3\text{H}_2\text{O}$ . (Fischer and Cuntze, Ch. Z. 1902, 26. 873.) $\text{Cd}_2[\text{Co(CN)}_6]_2 + 7\text{NH}_3$  (Fischer and Cuntze, Ch. Z. 1902, 26. 873)**Cadmium cobalticyanide ammonia,**  
 $\text{Cd}_2[\text{Co(CN)}_6]_2 + 9\text{NH}_3 + 2\text{H}_2\text{O}$ . (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)**Calcium potassium cobalticyanide,**  
 $\text{CaKCo(CN)}_6 + 9\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$  (W)**Cobaltous cobalticyanide,**  $\text{Co}_2[\text{Co(CN)}_6]_2 + 14\text{H}_2\text{O}$ Insol. in  $\text{H}_2\text{O}$  and acids. Sl sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  Decomp. by  $\text{KOH} + \text{Aq}$ **Cupric cobalticyanide,**  $\text{Cu}_2[\text{Co(CN)}_6]_2 + 7\text{H}_2\text{O}$ Insol. in  $\text{H}_2\text{O}$  and acids. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .**Cupric cobalticyanide ammonia,**  
 $\text{Cu}_2[\text{Co(CN)}_6]_2 + 4\text{NH}_3 + 7\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$  (Zwenger.)**Lead cobalticyanide, basic,**  $\text{Pb}_2[\text{Co(CN)}_6]_2 + 3\text{PbO} + 11\text{H}_2\text{O}$ .Insol. in  $\text{H}_2\text{O}$  or alcohol; somewhat sol. in hot  $\text{Pb(C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ . (Schuler.)**Lead cobalticyanide,**  $\text{Pb}_2[\text{Co(CN)}_6]_2 + 4\text{H}_2\text{O}$ Very sol. in  $\text{H}_2\text{O}$  Insol. in alcohol(Zwenger)  
+  $7\text{H}_2\text{O}$ . Sol. in 1.77 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ , and 1.63 pts. at  $19^\circ$  Insol. in absolute alcohol. Sl. sol. in 93% alcohol. (Schuler, W. A. B. 79. 302.)**Lead potassium cobalticyanide,**  $\text{PbKCo(CN)}_6 + 3\text{H}_2\text{O}$ .Sol. in 6.74 pts  $\text{H}_2\text{O}$  at  $18^\circ$  and much more easily in hot  $\text{H}_2\text{O}$ . Insol. in absolute, sl sol. in 93% alcohol. (Schuler)**Lead cobalticyanide nitrate,**  $\text{Pb}_2[\text{Co(CN)}_6]_2 + \text{Pb(NO}_3)_2 + 12\text{H}_2\text{O}$ .Sol. in 16.91 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ , 16.79 pts at  $19^\circ$ , and much less hot  $\text{H}_2\text{O}$ .

Nearly insol. in 93% alcohol. (Schuler.)

**Mercurous cobalticyanide,**  $\text{Hg}_2\text{Co(CN)}_6$ .Ppt. Decomp. by  $\text{HCl}$  Not attacked by cold, but by hot conc.  $\text{H}_2\text{SO}_4$ . Not attacked by  $\text{HNO}_3$ , acetic or oxalic acid. Decomp. by alkalis +  $\text{Aq}$ . (Miller and Mathews, J. Am Chem Soc 1900, 22. 64.)

Mercuric cobalticyanide,  $\text{Hg}_2[\text{Co}(\text{CN})_6]$ .  
Sl. sol. in  $\text{H}_2\text{O}$ , decomp. by boiling.  
Insol. in alcohol and ether. Not attacked  
by  $\text{HCl}$  (Soenderop, Dissert, 1899.)

Mercuric potassium cobalticyanide,  
 $\text{K}_2\text{HgCo}_2(\text{CN})_{14}$ .  
Sol. in  $\text{H}_2\text{O}$  with decomp. Insol. in al-  
cohol. Sl. sol. in ether. (Soenderop, Dissert,  
1899.)  
 $\text{K}_2\text{Hg}_2\text{Co}_4(\text{CN})_{24}$  (Soenderop, Dissert.  
1899.)

Mercuric sodium cobalticyanide,  
 $\text{Na}_2\text{Hg}_2\text{Co}_4(\text{CN})_{24} + 4\text{H}_2\text{O}$ .  
Extremely deliquescent (Soenderop,  
Dissert, 1899.)

Nickel cobalticyanide,  $\text{Ni}_2[\text{Co}(\text{CN})_6]_2 +$   
 $12\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$  and acids. Not attacked by  
boiling  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
Decomp. by  $\text{KOH} + \text{Aq}$ .

Nickel cobalticyanide ammonia,  
 $\text{Ni}_2[\text{Co}(\text{CN})_6]_2, 4\text{NH}_3 + 7\text{H}_2\text{O}$   
Insol. in  $\text{H}_2\text{O}$ .

Potassium cobalticyanide,  $\text{K}_3\text{Co}(\text{CN})_6$ .  
Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol

Potassium strontium cobalticyanide,  
 $\text{K}_2\text{SrCo}(\text{CN})_6 + 9\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Weselsky.)

Potassium thallium cobalticyanide,  
 $\text{K}_4\text{Tl}_2[\text{Co}(\text{CN})_6]_2$ .  
More sol. in  $\text{H}_2\text{O}$  than corresponding  
 $\text{K}$  salt. (Fischer and Benzan, Ch. Z. 1902,  
26, 49.)

Potassium zinc cobalticyanide,  
 $\text{KZnCo}(\text{CN})_6 + 3\text{H}_2\text{O}$ .  
(Fischer and Cuntze, Ch. Z. 1902, 26, 873.)

Potassium cobalticyanide mercuric chloride,  
 $2\text{K}_3\text{Co}(\text{CN})_6, 3\text{HgCl}_2$ .  
(Soenderop, Dissert. 1899.)

Potassium cobalticyanide mercuric iodide,  
 $4\text{K}_3\text{Co}(\text{CN})_6, \text{HgI}_2$ .  
Sol. in  $\text{H}_2\text{O}$  with subsequent decomp.  
Sol. in alcohol and ether with decomp.  
(Soenderop, Dissert, 1899.)

Silver cobalticyanide,  $\text{Ag}_3\text{Co}(\text{CN})_6$ .  
Insol. in  $\text{H}_2\text{O}$  and acids. Sol. in  $\text{NH}_4\text{OH} +$   
 $\text{Aq}$ .

Silver cobalticyanide ammonia,  $\text{Ag}_3\text{Co}(\text{CN})_6$ ,  
 $\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$   
Insol. in  $\text{H}_2\text{O}$ . (Zwenger.)

Sodium cobalticyanide,  $\text{Na}_3\text{Co}(\text{CN})_6 + 2\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol.

Sodium zinc cobalticyanide,  $\text{NaZnCo}(\text{CN})_6$   
 $+ \text{H}_2\text{O}$ .  
(Fischer and Cuntze, Ch. Z. 1902, 26, 873.)

Strontium cobalticyanide,  $\text{Sr}_3[\text{Co}(\text{CN})_6]_2 +$   
 $10\text{H}_2\text{O}$ .  
Very sol. in  $\text{H}_2\text{O}$ . (Weselsky.)

Thallium cobalticyanide,  $\text{Tl}_3\text{Co}(\text{CN})_6$ .  
100 pts.  $\text{H}_2\text{O}$  dissolve 3.0 pts. at  $0^\circ$ , 5.86 pts.  
at  $9.5^\circ$ , 10.04 pts. at  $19.5^\circ$ . (Fronmuller, B.  
11, 91.)

Yttrium cobalticyanide,  $\text{YCo}(\text{CN})_6 + 2\text{H}_2\text{O}$   
Nearly insol. in  $\text{H}_2\text{O}$ . (Cleve)

Zinc cobalticyanide,  $\text{Zn}_3[\text{Co}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$ .  
Sol. in  $\text{HCl} + \text{Aq}$  and salt is pptd. by dilu-  
tion with  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{SO}_4$ . Insol  
in  $\text{K}_4\text{Co}(\text{CN})_6 + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH}$  and  
 $\text{NH}_4\text{Cl} + \text{Aq}$ . (Fischer and Cuntze, Ch. Z.  
1902, 26, 873.)

Zinc cobalticyanide ammonia,  
 $\text{Zn}_3[\text{Co}(\text{CN})_6]_2, 5\text{NH}_3$ .  
Decomp. by  $\text{H}_2\text{O}$  and acids. (Fischer and  
Cuntze, Ch. Z. 1902, 26, 873.)  
 $\text{Zn}_4[\text{Co}(\text{CN})_6]_3, 8\text{NH}_3$ . (Fischer and  
Cuntze)  
 $+ 3\text{H}_2\text{O}$ . (Fischer and Cuntze)  
 $\text{Zn}_6[\text{Co}(\text{CN})_6]_3, 10\text{NH}_3 + 9\text{H}_2\text{O}$ . Decomp  
by  $\text{H}_2\text{O}$ . (Fischer and Cuntze.)

#### Cobaltimolybdic acid.

Ammonium barium cobaltous cobaltimolyb-  
date,  $\frac{1}{2}(\text{NH}_4)_2\text{O}, 1\frac{1}{2}\text{BaO}, \text{CoO}, \text{CoO}_2$ ,  
 $10\text{MoO}_3 + 18\frac{1}{2}\text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$  (Friedheim and  
Keller, B. 1906, 39, 4306)

Ammonium cobaltous cobaltimolybdate,  
 $2(\text{NH}_4)_2\text{O}, \text{CoO}, \text{CoO}_2, 10\text{MoO}_3 + 12\text{H}_2\text{O}$ .

Much more sol. in  $\text{H}_2\text{O}$  than  $3(\text{NH}_4)_2\text{O}$ ,  
 $\text{CoO}, \text{CoO}_2, 12\text{MoO}_3 + 20\text{H}_2\text{O}$ . Sp. gr. of  
cold sat. solution = 1.006 (Friedheim and  
Keller.)

$3(\text{NH}_4)_2\text{O}, \text{CoO}, \text{CoO}_2, 12\text{MoO}_3 + 20\text{H}_2\text{O}$ .  
100 cc. cold sat. aqueous solution contain  
3 g. of the salt. Sp. gr. of the solution = 1.0234  
Sol. in conc.  $\text{HCl}$ .

Decomp. by conc.  $\text{H}_2\text{SO}_4$  by  $\text{KOH} + \text{Aq}$   
and by  $\text{NaOH} + \text{Aq}$ . (Friedheim and Keller.)

Barium cobaltous cobaltimolybdate,  
 $3\text{BaO}, \text{CoO}, \text{CoO}_2, 9\text{MoO}_3 + 25\text{H}_2\text{O}$   
Sl. sol. in  $\text{H}_2\text{O}$ . (Friedheim and Keller.)

**Cobaltous potassium cobaltimolybdate,**  
 $\text{CoO}, 3\text{K}_2\text{O}, \text{CoO}_2, 10\text{MoO}_3 + 10\text{H}_2\text{O}$   
 (Kurnakoff, Ch. Z. 1890, 14. 113.)

+11H<sub>2</sub>O. Sol. in conc. HCl. Decomp. by KOH+ $\text{Aq}$  and by NaOH+ $\text{Aq}$ . (Friedheim and Keller.)

$3\text{K}_2\text{O}, \text{CoO}, \text{CoO}_2, 12\text{MoO}_3 + 15\text{H}_2\text{O}$  Sl. sol. in H<sub>2</sub>O. Sol. in conc. HCl. Decomp. by KOH+ $\text{Aq}$  and by NaOH+ $\text{Aq}$ . (Friedheim and Keller.)  
 +20H<sub>2</sub>O. (Kurnakoff, Ch. Z. 1890, 14. 113.)

**Potassium cobaltimolybdate,**  
 $3\text{K}_2\text{O}, \text{CoO}_2, 9\text{MoO}_3 + 6\frac{1}{2}\text{H}_2\text{O}$

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29. 703)

**Cobaltinitrocyanhydric acid.**

**Potassium cobaltinitrocyanide,**  
 $\text{K}_4\text{Co}_2(\text{CN})_2\text{NO}_2 + 3\text{H}_2\text{O}$

Very sol. in H<sub>2</sub>O but quickly decomp. Insol. in alcohol (Rosenheim and Koppel, Z. anorg. 1898, 17. 68)

**Silver cobaltinitrocyanide,**  
 $\text{Co}_2\text{Ag}_3\text{NO}_2(\text{CN})_{10} + 6\text{H}_2\text{O}$ , and +21H<sub>2</sub>O  
 (Rosenheim and Koppel.)

**Sodium cobaltinitrocyanide,**  
 $\text{Na}_2\text{Co}_2(\text{NO}_2)(\text{CN})_{10} + 11\text{H}_2\text{O}$ .

Very deliquescent. Sol. in H<sub>2</sub>O (Rosenheim and Koppel)

**Cobaltisulphurous acid, H<sub>2</sub>Co<sub>2</sub>(SO<sub>2</sub>)<sub>2</sub>**  
 Not obtained in a solid state. (Berglund, Acta Lund. 1872.)

**Cobaltisulphites.**

The cobaltisulphites are insol. or at least very sl. sol. in H<sub>2</sub>O. (Berglund, Acta Lund. 1872. 23.)

**Ammonium cobaltous cobaltisulphite,**  
 $(\text{NH}_4)_2\text{SO}_3, 2\text{CoSO}_3, \text{Co}_2(\text{SO}_3)_2 + 14\text{H}_2\text{O} =$   
 $(\text{NH}_4)_2\text{Co}_2\text{Co}_2(\text{SO}_3)_6 + 14\text{H}_2\text{O}$

Scarcely sol. in H<sub>2</sub>O, but decomp. thereby. Easily sol. in acids, when finely divided, also in H<sub>2</sub>SO<sub>3</sub>+ $\text{Aq}$  (Berglund)

$2(\text{NH}_4)_2\text{SO}_3, \text{CoSO}_3, \text{Co}_2(\text{SO}_3)_2 + 8\text{H}_2\text{O} =$   
 $(\text{NH}_4)_4\text{CoCo}_2(\text{SO}_3)_6 + 8\text{H}_2\text{O}$  As above. (Berglund.)

**Barium cobaltisulphite, 3BaSO<sub>3</sub>, Co<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub> + 12H<sub>2</sub>O = Ba<sub>3</sub>Co<sub>2</sub>(SO<sub>3</sub>)<sub>6</sub> + 12H<sub>2</sub>O.**

Ppt. Insol. in H<sub>2</sub>O. Not attacked by cold acids even H<sub>2</sub>SO<sub>4</sub>, but is decomp. by boiling therewith. (Berglund, Acta Lund. 1872.)

**Bismuth cobaltisulphite, Bi<sub>2</sub>Co<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub>.**

Insol. in H<sub>2</sub>O, dil. HNO<sub>3</sub>, or HCl+ $\text{Aq}$ . (Berglund, Acta Lund. 1872. 31.)

**Calcium cobaltisulphite, Ca<sub>2</sub>Co<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub>.**

Ppt. Insol. in H<sub>2</sub>O or HCl+ $\text{Aq}$ . (Berglund, Acta Lund. 1872. 30)

**Cobaltous cobaltisulphite, Co<sub>2</sub>Co<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub> = 3CoSO<sub>3</sub>, Co<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub>.**

Ppt. (Berglund, B. 7. 470.)

**Cobaltous potassium cobaltisulphite,**  
 $\text{CoK}_4\text{Co}_2(\text{SO}_3)_6$ .

Insol. in H<sub>2</sub>O. (Berglund.)

**Silver cobaltisulphite, Co<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub>, 3Ag<sub>2</sub>SO<sub>3</sub>.**

Properties as the following comp. (Berglund)

**Silver cobaltous cobaltisulphite, CoSO<sub>3</sub>, Co<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub>, 2Ag<sub>2</sub>SO<sub>3</sub>+9H<sub>2</sub>O.**

Insol. in H<sub>2</sub>O. Insol. in HNO<sub>3</sub>+ $\text{Aq}$ . Decomp. by HCl or H<sub>2</sub>S+ $\text{Aq}$ . (Berglund.)

**Sodium cobaltous cobaltisulphite.**

Decomp. by H<sub>2</sub>O, so that it has not been obtained pure (Berglund, Acta Lund 1872, 29.)

**Cobaltoctamine sulphurous acid.**

See Octamine cobaltisulphurous acid.

**Cobaltocobalticyanhydric acid,**

$\text{H}_2\text{Co}_2(\text{CN})_{11}$ .

Unstable. (Jackson and Comey, Am. Ch. J. 1897. 19, 277.)

**Barium cobaltocobalticyanide,**

$\text{BaHCo}_2(\text{CN})_{11} + 1\frac{1}{2}\text{H}_2\text{O}$ .

Somewhat sol. in H<sub>2</sub>O when pure.

The crude salt is insol. even in hot H<sub>2</sub>O. (Jackson and Comey.)

**Cupric cobaltocobalticyanide, Cu<sub>2</sub>Co<sub>2</sub>(CN)<sub>22</sub> + 4H<sub>2</sub>O.**

Ppt. (Jackson and Comey)

**Potassium hydrogen cobaltocobalticyanide,**  
 $\text{K}_2\text{HCo}_2(\text{CN})_{11} + 2\text{H}_2\text{O}$

Sl. sol. in cold, easily sol. in hot H<sub>2</sub>O.

Insol. in alcohol (Jackson and Comey.)

$\text{KH}_4\text{Co}_2(\text{CN})_{11} + \text{H}_2\text{O}$ . Insol. in cold or hot H<sub>2</sub>O when impure

The pure salt is slowly sol. in cold H<sub>2</sub>O.

More sol. in warm H<sub>2</sub>O. (Jackson and Comey)

**Silver cobaltocobalticyanide, Ag<sub>2</sub>Co<sub>2</sub>(CN)<sub>11</sub> + H<sub>2</sub>O.**

Ppt. (Jackson and Comey, B. 1896, 29. 1021.)

**Zinc cobaltocobalticyanide, ZnHCo<sub>2</sub>(CN)<sub>11</sub> + 3H<sub>2</sub>O.**

Ppt. (Jackson and Comey.)

**Cobaltocyanhydric acid,  $\text{H}_2\text{Co}(\text{CN})_6$ .**

Very unstable. Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol.

**Cuprous potassium cobaltocyanide,  $\text{K}_2\text{CuCo}(\text{CN})_6$ .**

(Straus, Z. anorg. 1895, 9, 17)

**Potassium cobaltocyanide,  $\text{K}_3\text{Co}(\text{CN})_6$ .**

Decomp. on air. Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol and ether. (Descamps, Zeit. Ch. 1868, 952.)

**Cobaltous acid.****Barium cobaltite,  $\text{BaCoO}_3$ .**

Insol. in  $\text{H}_2\text{O}$  or dil  $\text{HCl}$ .  $\text{H}_2\text{O}_2 + \text{Aq}$ . Sol. in  $\text{HCl} + \text{Aq}$ . (Rousseau, C. R. 109, 64.)  $\text{BaCo}_2\text{O}_4$ . As above. (Rousseau.)

**Cobaltous potassium cobaltite,  $3\text{CoO}_3, \text{CoO}, \text{K}_2\text{O}$ .**

Rapidly hydrolysed by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{HCl}$ . (Bellucci, Chem. Soc. 1907, 92, (2) 354)

**Magnesium cobaltite,  $\text{MgCoO}_3$ .**

Insol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Easily sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ , from which it is pptd by  $\text{KOH} + \text{Aq}$  (Berzelius, Pogg. 33, 126.)

Sol. in  $\text{HF}$ ,  $\text{HCl}$ ,  $\text{HNO}_3 + \text{H}_2\text{SO}_4$ ; decomp. and partially dissolved by  $\text{NH}_4\text{OH} + \text{Aq}$ ; quite stable when heated. (Dufau, C. R. 1896, 123, 240.)

**Potassium cobaltite.**

According to Bellucci and Dominici the compounds formerly described are more or less decomp. by hydrolysis. (C. C. 1907, I, 1530.)

**Sodium cobaltite.**

Sol. in  $\text{NaOH} + \text{Aq}$ , but pptd. by diluting the solution.

**Columbic acid (Niobic acid),  $3\text{Cb}_2\text{O}_5, 4\text{H}_2\text{O}$ , or  $3\text{Cb}_2\text{O}_5, 7\text{H}_2\text{O}$ .**

Easily sol. in  $\text{HF}$ ; very sl. sol. in  $\text{HCl} + \text{Aq}$ , but is sol. in  $\text{H}_2\text{O}$  after being treated with  $\text{HCl} + \text{Aq}$ . Sol. in conc.  $\text{H}_2\text{SO}_4$ . Sol. in  $\text{KOH} + \text{Aq}$ . Insol. in  $\text{NaOH} + \text{Aq}$ , but becomes sol. in  $\text{H}_2\text{O}$  by being treated with  $\text{NaOH} + \text{Aq}$ . Sol. in boiling  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . (Rose, Pogg. 113, 109.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 830.)

$\text{Cb}_2\text{O}_5, 4\text{H}_2\text{O}$ .

$\text{Cb}_2\text{O}_5, 7\text{H}_2\text{O}$ . (Santesson, Bull. Soc. (2) 24, 52.)

**Aluminum columbate,  $\text{Al}_2\text{O}_3, 3\text{Cb}_2\text{O}_5 + 12\text{H}_2\text{O}$ .**

Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30, 1652.)

**Barium columbate,  $7\text{BaO}, 6\text{Cb}_2\text{O}_5 + 18\text{H}_2\text{O}$ .**  
Ppt. (Bedford, J. Am. Chem. Soc. 1905, 27, 1218.)**Cadmium columbate,  $\text{CdO}, \text{Cb}_2\text{O}_5$ .**

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{HKSO}_4$  at red heat. (Larsson, Z. anorg. 1896, 12, 190.)  
 $+ 3\frac{1}{2}\text{H}_2\text{O}$ . Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30, 1652.)

**Cæsium columbate,  $4\text{Cs}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 14\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . (E. F. Smith, J. Am. Chem. Soc. 1908, 30, 1654.)  
 $7\text{Cs}_2\text{O}, 6\text{Cb}_2\text{O}_5 + 30\text{H}_2\text{O}$ . Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30, 1655.)

**Calcium columbate,  $2\text{CaO}, \text{Cb}_2\text{O}_5$ .**

Insol. in  $\text{H}_2\text{O}$  (Joly, C. R. 81, 266.)  
 $\text{CaO}, \text{Cb}_2\text{O}_5$ . Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{HKSO}_4$  at red heat. (Larsson, Z. anorg. 1896, 12, 195.)

**Cobalt columbate,  $\text{CoO}, \text{Cb}_2\text{O}_5$ .**

Sol. in conc. boiling  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{HKSO}_4$  at red heat. (Larsson.)

**Copper columbate,  $\text{CuO}, \text{Cb}_2\text{O}_5$ .**

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{HKSO}_4$  at red heat. (Larsson.)  
 $+ 3\frac{1}{2}\text{H}_2\text{O}$ . Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30, 1652.)

**Iron (ferrous) columbate,  $\text{Fe}(\text{CbO})_2$ .**

Min. *Columbite*. Insol. in acids.

**Iron (ferrous)-columbate tantalate,  $x\text{Fe}(\text{TaO})_2, y\text{Fe}(\text{CbO})_2$ .**

Min. *Tantalite*. Not attacked by acids.  
 $\text{Fe}(\text{CbO})_2, 4\text{Fe}(\text{TaO})_2$ . Min. *Tapiachite*.

**Lithium columbate,  $7\text{Li}_2\text{O}, 6\text{Cb}_2\text{O}_5 + 26\text{H}_2\text{O}$ .**

Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30, 1655.)

**Magnesium columbate,  $\text{MgO}, \text{Cb}_2\text{O}_5$ .**

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{KHSO}_4$  at red heat. (Larsson, Z. anorg. 1896, 12, 196.)  
 $+ 4\text{H}_2\text{O}$ . Precipitate. (Rammelsberg)  
 $+ 7\text{H}_2\text{O}$ . Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30, 1651.)

$4\text{MgO}, \text{Cb}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$  (Joly, C. R. 81, 266.)

$3\text{MgO}, \text{Cb}_2\text{O}_5$ . As above.

**Manganous columbate.**

Insol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 81, 266.)  
 $3\text{MnO}, 5\text{Cb}_2\text{O}_5$ . Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{HKSO}_4$  at red heat. (Larsson, Z. anorg., 1896, 12, 201.)

**Potassium columbate,  $\text{KCbO}_3$ .**

Sol. in  $\text{H}_2\text{O}$ . (Joly, in Fremy's Encyc. Ch.)  
 $\text{K}_2\text{Cb}_2\text{O}_7 + 5\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  (Santesson.)

$\text{K}_2\text{Cb}_2\text{O}_{10} + 5\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ .  
 $\text{K}_2\text{Cb}_2\text{O}_7 + 11\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Santesson, Bull. Soc. (2) 24. 53.)

$\text{K}_2\text{Cb}_2\text{O}_{12} + 11\text{H}_2\text{O}$ . (Santesson.)  
 $\text{K}_2\text{Cb}_2\text{O}_{13} + 13\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .  
 $\text{K}_2\text{Cb}_2\text{O}_{10} + 10\text{H}_2\text{O}$ . Efflorescent Sol. in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (4) 8. 20)

Very sol. in  $\text{H}_2\text{O}$ . (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1652.)

$\text{K}_2\text{Cb}_2\text{O}_{17} + 27\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (E. F. Smith)

$\text{K}_2\text{Cb}_2\text{O}_{15} + 32\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

**Potassium sodium columbate,  $3\text{K}_2\text{O}, \text{Na}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 9\text{H}_2\text{O}$ .**

Very slightly sol. in  $\text{H}_2\text{O}$ . Insol. in alkalis. (Marignac.)

**Rubidium columbate,  $3\text{Rb}_2\text{O}, 4\text{Cb}_2\text{O}_5 + 9\frac{1}{2}\text{H}_2\text{O}$ .**

(E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1655.)

$4\text{Rb}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 14\text{H}_2\text{O}$ . Very sol in  $\text{H}_2\text{O}$ . (E. F. Smith.)

**Silver columbate,  $\text{Ag}_2\text{O}, \text{Cb}_2\text{O}_5 + 2\text{H}_2\text{O}$** 

Ppt. (E. F. Smith.)

$7\text{Ag}_2\text{O}, 6\text{Cb}_2\text{O}_5 + 5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Bedford, J. Am. Chem. Soc. 1905, 27. 1218.)

**Sodium columbate,  $\text{NaCbO}_3 + 3\frac{1}{2}\text{H}_2\text{O}$ .**

Completely sol. in  $\text{H}_2\text{O}$ . (Rose.)

Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1651.)

$+ 2\frac{1}{2}\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . Insol. in  $\text{NaOH} + \text{Ag}$ . (Santesson.)

$2\text{Na}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 9\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  or  $\text{NaOH} + \text{Ag}$ . (Santesson.)

$8\text{Na}_2\text{O}, 7\text{Cb}_2\text{O}_5$ . 1 pt. is sol. in 195–200 pts.  $\text{H}_2\text{O}$  at  $14-20^\circ$ ; in ether 75–80 pts. or in 103 pts. boiling water. (Rose.)

$7\text{Na}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 32\text{H}_2\text{O}$ . Very stable. Sol. in  $\text{H}_2\text{O}$ . (Bedford, J. Am. Chem. Soc. 1905, 27. 1217.)

**Thorium columbate,  $5\text{Th}_2\text{O}_3, 16\text{Cb}_2\text{O}_5$ .**

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{H}_2\text{SO}_4$  at red heat. (Larsen, Z. anorg. 1896, 12. 202.)

**Yttrium columbate,  $\text{Y}_2\text{O}_3, \text{Cb}_2\text{O}_5$ .**

Insol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 81. 1261.)

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{H}_2\text{SO}_4$  at red heat. (Larsen)

**Zinc columbate,  $\text{ZnO}, \text{Cb}_2\text{O}_5$ .**

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{H}_2\text{SO}_4$  at red heat. (Larsen.)

$7\text{ZnO}, 6\text{Cb}_2\text{O}_5 + 25\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ . (Bedford, J. Am. Chem. Soc. 1905, 27. 1218.)

**Zirconium columbate,  $\text{ZrO}_2, 5\text{Cb}_2\text{O}_5$ .**

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{H}_2\text{SO}_4$  at red heat (Larsen.)

**Percolumbic acid.**

See Percolumbic acid.

**Columbium (Niobium),  $\text{Cb}$ .**

Slightly attacked by  $\text{HCl}$ ,  $\text{HNO}_3$ , or aqua regia. Conc.  $\text{H}_2\text{SO}_4$  dissolves easily on warming.

Sol. in fused oxidizing agents; sol. in hot conc.  $\text{H}_2\text{SO}_4$  and in  $\text{HF}$ ; also in  $\text{HF} + \text{HNO}_3$ ; insol. in other acids. (Moissan, C. R. 1901, 133. 24.)

**Columbium pentabromide,  $\text{CbBr}_5$ .**

(Rose, Pogg. 104. 422.)

**Columbium carbide nitride,  $3\text{CbC}, 2\text{CbN}$ .**

(Joly, Bull. Soc. (2) 25. 506)

**Columbium trichloride,  $\text{CbCl}_3$ .**

Not deliquescent; not attacked by  $\text{H}_2\text{O}$ , but easily oxidised by  $\text{HNO}_3 + \text{Ag}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Ag}$ . (Rose, C. N. 37. 25)

**Columbium pentachloride,  $\text{CbCl}_5$ .**

Decomp. by  $\text{H}_2\text{O}$  with separation of a hydrate of  $\text{Cb}_2\text{O}_5$ . Sol. in cold  $\text{HCl} + \text{Ag}$ , forming a solution which soon gelatinises, and separates out  $\text{Cb}_2\text{O}_5$  by heat or dilution, with hot  $\text{HCl} + \text{Ag}$ , forms a cloudy solution which does not gelatinise. Sol. in  $\text{H}_2\text{SO}_4$  to form a clear liquid which gelatinises on heating. Sol. in  $\text{KOH} + \text{Ag}$ . Sol. in alcohol with slight residue (Rose, Pogg. 104. 432.)

**Columbium pentafluoride,  $\text{CbF}_5$ .**

Very hygroscopic; sol. in  $\text{H}_2\text{O}$  without separation of columbic acid. (Ruff, B. 1906, 42. 492.)

**Columbium fluoride with MF.**

See Fluocolumbate, M.

**Columbium hydride,  $\text{CbH}(\text{?})$** 

Insol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , and dil.  $\text{H}_2\text{SO}_4 + \text{Ag}$ , even on boiling. Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ , and in fused  $\text{KHSO}_4$ . Sol. in cold  $\text{HF} + \text{Ag}$  if not too dilute. Also attacked by  $\text{KOH} + \text{Ag}$ . (Marignac, N. Arch. Phys. Nat. 31. 89.) Not attacked by boiling  $\text{H}_2\text{O}$ , or boiling  $\text{HCl}$ .

Oxidized by hot  $\text{H}_2\text{SO}_4$ . Insol. in boiling  $\text{HNO}_3$ . (Muthmann, A. 1907, 355. 90.)

**Columbium hydroxide  $\text{Cb}_2\text{O}_5, z\text{H}_2\text{O}$ .**

See Columbic acid.

**Columbium nitride.**

Not attacked by boiling nitric acid or aqua regia, but sol. in a cold mixture of  $\text{HNO}_3$  and  $\text{HF}$  (Rose, Pogg. 111. 420.)

$\text{Cb}_3\text{N}_4$ . Not attacked by boiling  $\text{H}_2\text{O}$  or  $\text{HCl}$ . Insol. in conc.  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ .

Decomp. by fused  $\text{KOH}$ . Not attacked by boiling with  $\text{KOH} + \text{Aq}$  (Muthmann, A. 1907, 365. 94)

**Columbium dioxide,  $\text{Cb}_2\text{O}_3$ .**

Sol. when still moist in boiling dil.  $\text{HCl} + \text{Aq}$ . Insol. in hot  $\text{HNO}_3$ , less sol. in aqua regia than in  $\text{HCl} + \text{Aq}$ . Sol. in conc.  $\text{H}_2\text{SO}_4$  after long heating. (Rose.)

Insol. in  $\text{H}_2\text{O}$ ,  $\text{KOH}$ , or conc. acids, even when boiling. (Delafontaine.)

**Columbium trioxide,  $\text{Cb}_2\text{O}_3$ .**

Insol. in acids except  $\text{HF}$ . (Smith, Z. anorg. 1894, 7. 28)

**Columbium tetroxide,  $\text{Cb}_2\text{O}_4$ .**

Not attacked by cold or hot  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or aqua regia. Slightly attacked by boiling  $\text{KOH} + \text{Aq}$ . (Delafontaine.)

**Columbium pentoxide,  $\text{Cb}_2\text{O}_5$ .**

When ignited insol. in hot conc.  $\text{H}_2\text{SO}_4$ . When it has not been ignited it forms a clear solution with  $\text{H}_2\text{SO}_4$ , which can be diluted without forming any precipitate (Rose, Pogg. 112. 549.)

Sol. in fused  $\text{KHSO}_4$ , which can be diluted with  $\text{H}_2\text{O}$  without causing pptn. Insol. in  $\text{HF}$ .

**Columbium oxybromide,  $\text{CbOBr}_3$ .**

Decomp. by  $\text{H}_2\text{O}$  into  $\text{Cb}_2\text{O}_3$  and  $\text{HBr}$ . Sol. in hot  $\text{H}_2\text{SO}_4$  and conc.  $\text{HCl} + \text{Aq}$ . (Rose, Pogg. 104. 442.)

$3\text{H}_2\text{O}$ ,  $\text{Cb}_2\text{O}_4$ ,  $\text{HBr}(\text{?})$ . Easily sublimed. (Smith, Z. anorg. 1894, 7. 97.)

**Columbium oxybromide rubidium bromide,  $\text{CbOBr}_3, 2\text{RbBr}$** 

Unstable in moist air. Decomp. by  $\text{H}_2\text{O}$  (Weinland, B. 1905, 39. 3059.)

**Columbium oxychloride,  $\text{CbOCl}_3$ .**

Attracts  $\text{H}_2\text{O}$  from air without deliquescent and decomposed. Decomp. with  $\text{H}_2\text{O}$  with evolution of heat. Insol. in hot or cold  $\text{HCl} + \text{Aq}$ . Sol. by long contact with  $\text{H}_2\text{SO}_4$  to a cloudy liquid, which clears up on warming, but soon separates out  $\text{Cb}_2\text{O}_3$ . Sol. in cold  $\text{KOH} + \text{Aq}$  and hot  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Rose.)

Sol. in alcohol, from which it is precipitated by ether. (Blomstrand.)

$3\text{H}_2\text{O}$ ,  $\text{Cb}_2\text{O}_4$ ,  $\text{HCl}$ . Sublimate. (Smith, Z. anorg. 1894, 7. 97)

**Columbium oxychloride rubidium chloride,  $\text{CbOCl}_3, 2\text{RbCl}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Weinland, B. 1906, 39. 3057)

**Columbium oxyfluoride,  $\text{CbOF}_3$ .**

(Joly, C. R. 81. 1266)

**Columbium oxyfluoride with MF.**

See Fluoxycolumbate, and Fluoxyhypocolumbate, M.

**Columbium oxysulphide,  $\text{Cb}_2\text{OS}_2$ .**

Insol. in boiling  $\text{HCl} + \text{Aq}$ . Slowly decomp. into  $\text{Cb}_2\text{O}_3$  by boiling with  $\text{HNO}_3$  or aqua regia. Insol. in boiling dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Converted into columbic sulphate, sol. in  $\text{H}_2\text{O}$ , by boiling conc.  $\text{H}_2\text{SO}_4$ . Sl. sol. in hot  $\text{HF}$ . Insol. in boiling  $\text{K}_2\text{S} + \text{Aq}$ . (Rose, Pogg. 111. 193.)

**Copper, Cu**

Copper is not attacked by distilled  $\text{H}_2\text{O}$ , or by  $\text{NH}_4\text{NO}_3$ ,  $\text{KNO}_3$ , or  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ , or by a mixture of those salts in solution. (Muir, cited by Carnelly, Chem. Soc. 30. 1.)

Distilled  $\text{H}_2\text{O}$  has slight action on Cu. 100 ccm.  $\text{H}_2\text{O}$  dissolved from 2 sq. dem. Cu from 0.035 mg. Cu in one hour up to 0.280 mg. in 72 hours. 100 ccm.  $\text{H}_2\text{O}$  dissolved 0.44 mg. from 6 sq. dem. in 48 hours. Presence of solder diminishes solubility about one-half. At 90–100° the amount dissolved is about one-half that at ord. temp. (Carnelly, Chem. Soc. 30. 1.)

100 ccm. distilled  $\text{H}_2\text{O}$  dissolved only 1 mg. Cu from 11.8 sq. cm. during a week, while air free from  $\text{CO}_2$  was conducted through the solution. When the air contained  $\text{CO}_2$ , 3 mg. were dissolved. (Wagner, Dingl. 221. 259)

100 l. sea water dissolved 12.96 g. Cu from 1 sq. m. (Calvert and Johnson, C. N. 11. 171)

**Solubility in  $\text{H}_2\text{SO}_4$ .**

Not attacked by dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Vogel, Schw. J. 32. 301.)

Action of  $\text{H}_2\text{SO}_4$  at ordinary temp. is very slight even after a long time. (Barruel, J. Pharm. 20. 13 [1834].)

$\text{H}_2\text{SO}_4$  has no action below 130°. (Calvert and Johnson, Chem. Soc. 19. 438.)

$\text{H}_2\text{SO}_4$  acts slightly even at 20°.

16.3 g.  $\text{H}_2\text{SO}_4$  (1.843 sp. gr.) dissolved the following amts. from 3 g. Cu, having a surface of 65 sq. cm. at the given temp.

Temp	Time	% Cu dissolved
19°	14 days	About 6
60	120 min.	2 5
80	30 "	1 5
100	30 "	3 1
124	30 "	22 7
130	30 "	32 6
137	30 "	35 0
150	30 "	69 2
170	10 "	51 92
195	2 "	53 5
220	½ "	70 57
270	few seconds	nearly 100

With dilute acid the action was much less violent, as is seen in the following table—

Temp	Time *	Acid	Sp. gr.	% Cu dissolved
100°	30 min.	H <sub>2</sub> SO <sub>4</sub>	1.843	2.380
100	30 "	2H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1.8295	0.585
100	30 "	H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1.780	0
100	30 "	H <sub>2</sub> SCl <sub>4</sub> , 2H <sub>2</sub> O	1.620	0
130	30 "	H <sub>2</sub> SO <sub>4</sub>	1.843	32.6
130	30 "	H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1.780	1.18
130	30 "	H <sub>2</sub> SO <sub>4</sub> , 2H <sub>2</sub> O	1.620	0
165	15 "	H <sub>2</sub> SO <sub>4</sub>	1.843	70
165	30 "	H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1.780	16.5
165	30 "	H <sub>2</sub> SO <sub>4</sub> , 2H <sub>2</sub> O	1.620	2.7

(Pickering, Chem. Soc. 33, 112.)

Cu is very sl. attacked by cold HCl + Aq. of 1.12 sp. gr., but somewhat more on warming. Even less sol. in dil. HCl + Aq. (Lowe, Z. anal. 4, 361.)

Sol. in warm conc. HI + Aq. (Rose.)

Slowly attacked by H<sub>2</sub>SO<sub>4</sub> + Aq. (Causse, Bull. Soc. (2) 45, 3.)

More or less sol. in all dil. mineral acids and also in organic acids, as acetic, tartaric, etc., when supply of air is afforded; but absolutely insol. in the latter acids when air is wholly excluded. The importance of this fact in the use of Cu cooking utensils is manifest.

Easily attacked by ord. HNO<sub>3</sub> + Aq.

With very conc. HNO<sub>3</sub> + Aq. (sp. gr. 1.52) it becomes passive, as in the case of Fe.

Pure dil. HNO<sub>3</sub> + Aq. of 1.07 sp. gr. or less does not attack Cu at 20°, but if NO<sub>2</sub> or KNO<sub>3</sub> is added the action begins at once. If HNO<sub>3</sub> + Aq. is more conc. the Cu is attacked. HNO<sub>3</sub> + Aq. of 1.108 sp. gr. begins to act at -2°, and of 1.217 sp. gr. at -10°.

HNO<sub>3</sub> + Aq. of 1.512 sp. gr. attacks Cu violently at 20°, but action soon ceases on account of formation of a crust of Cu(NO<sub>3</sub>)<sub>2</sub>, insol. in pure HNO<sub>3</sub>. (Millon, A. ch. (3) 6, 95.)

Easily sol. in 2N-HClO<sub>4</sub> + Aq. at 50°. (Hendrixson, J. Am. Chem. Soc. 1904, 26, 756.)

Not appreciably sol. in anhydrous HF. (Poulenc, A. ch. 1894, (7) 2, 12.)

When in contact with the air, Cu is soon oxidised by acids, alkalis (especially NH<sub>4</sub>OH + Aq.), and many fatty bodies.

Sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq. (Traube, B. 18, 1887.)

Slowly sol. in NH<sub>4</sub>OH + Aq. (Schönbein, B. A. B. 1856, 580.)

Sol. in KI + Aq. when warm and conc. (Rose.)

When finely divided, Cu is easily sol. in hot FeCl<sub>3</sub> + Aq.

Action of dilute solutions of salts on solubility of Cu in H<sub>2</sub>O.

100 ccm. solution of the following salts dissolve the amts. of Cu given below, from a surface of 1 sq. decm. in 48 hours.

Salts	G salt dissolved in 100 ccm. H <sub>2</sub> O	Mg. Cu dissolved
H <sub>2</sub> O		0.11
KNO <sub>3</sub>	{ 0.01 0.05 5.00	{ 0.07 0.13 0.16
NaNO <sub>3</sub>	{ 0.05 5.00	{ 0.18 0.19
CaSO <sub>4</sub>	0.05	0.11
K <sub>2</sub> SO <sub>4</sub>	{ 0.05 5.00	{ 0.12 0.28
MgSO <sub>4</sub>	{ 0.05 5.00	{ 0.16 0.34
Na <sub>2</sub> CO <sub>3</sub>	{ 0.01 0.05 5.00	{ 0.05 0.11 2.80
K <sub>2</sub> CO <sub>3</sub>	{ 0.05 5.00	{ 0.14 2.35
NaCl	{ 0.01 0.05 5.00	{ 0.05 0.13 7.50
KCl	5.00	8.17
(NH <sub>4</sub> ) <sub>2</sub> SO <sub>4</sub>	{ 0.05 5.00	{ 0.66 28.50
NH <sub>4</sub> NO <sub>3</sub>	{ 0.01 0.05 5.00	{ 0.17 0.66 60.00
NH <sub>4</sub> Cl	{ 0.05 5.00	{ 0.92 158.75

At 100° the action of KNO<sub>3</sub>, K<sub>2</sub>SO<sub>4</sub>, and NH<sub>4</sub>NO<sub>3</sub> is diminished, while that of (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>, Na<sub>2</sub>CO<sub>3</sub>, and NaCl is increased.

Tables are also given for mixtures of the above salts. (Carnelley, Chem. Soc. 30, 1.)

Solubility of Cu in dilute salt solutions. 11.8 sq. cm. Cu were used, and the action continued one week, while air with or without CO<sub>2</sub> was passed through the solution continually.

100 ccm. solution of the following salts dissolved the given amts. Cu

Salt	G salt dissolved in 100 ccm. H <sub>2</sub> O	Mg Cu dissolved without CO <sub>2</sub>	Mg Cu dissolved with CO <sub>2</sub>
NaCl	0 50	4	115
KCl	0 50	4	115
MgCl <sub>2</sub>	0 83	5	112
NH <sub>4</sub> Cl	1 00	904	138
K <sub>2</sub> SO <sub>4</sub>	1 00	0	4
KNO <sub>3</sub>	1 00	0	3
Na <sub>2</sub> CO <sub>3</sub>	1 00	0	
NaOH	0.923	0	
CaO <sub>2</sub> H <sub>2</sub>	sat.	0	

(Wagner, Dingl. 221. 260)

Distilled H<sub>2</sub>O dissolved no Cu from 420 sq. mm in 150 hours at ord temp

NH<sub>4</sub>NO<sub>3</sub>+Aq with less than 0.4 g. per litre showed the same result.

KNO<sub>3</sub>+Aq or (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>+Aq containing 0.1 to 0.2 g. per litre dissolved no Cu.

H<sub>2</sub>O containing carbonates+nitrates, carbonates+sulphates, or chlorides+nitrates also dissolved no Cu.

NH<sub>4</sub>NO<sub>3</sub>+Aq containing 0.4 g. per litre dissolved 3 mg. per litre after 150 hours contact.

From a surface of 2100 sq. m. of Cu, H<sub>2</sub>O charged with CO<sub>2</sub> at ord. pressure, and containing the following salts in solution, dissolved the given amts Cu. in 120 hours

Salt	G salt dissolved in 1 l. H <sub>2</sub> O	Mg Cu dissolved
H <sub>2</sub> O	.	1 0
K <sub>2</sub> CO <sub>3</sub>	0 2	0.2
CaCl <sub>2</sub>	0 2	1 80
NH <sub>4</sub> NO <sub>3</sub>	0 02	1.40
NH <sub>4</sub> NO <sub>2</sub>	0 04	1.40
K <sub>2</sub> CO <sub>3</sub> + NH <sub>4</sub> NO <sub>3</sub> + K <sub>2</sub> CO <sub>3</sub> + NH <sub>4</sub> NO <sub>3</sub> + NH <sub>4</sub> NO <sub>2</sub> + CaCl <sub>2</sub>	0 1 0 02 0 2 0 04 0 2 0 2	1.00 0.1 3 6

From a surface of 2100 sq. m., H<sub>2</sub>O charged with CO<sub>2</sub> at pressure of 6 atmos. dissolved 0.6 mg in 48 hours.

H<sub>2</sub>O when charged with CO<sub>2</sub> at 6 atmos. and containing:

18 mg. NH<sub>4</sub>NO<sub>3</sub> per litre, dissolved 0.8 mg. in 48 hours.

80 mg. NH<sub>4</sub>NO<sub>3</sub> per litre, dissolved 1.4 mg. in 48 hours.

40 mg K<sub>2</sub>CO<sub>3</sub> per litre, dissolved 1.2 mg in 48 hours. (Muir, Proc. Soc. Manchester, 15. 31.)

Sol. in KCN+Aq. (Goyder, C. N. 1894, 69. 262.)

A solution of (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub> containing 0.829 g.

in 110 cc. dissolves 0.2050-0.2279 g. Cu. (Turrentine, J. phys Chem 1907, 11. 625.)  
Sol. attacked by liquid NH<sub>3</sub> (Franklin, Am. Ch. J. 1898, 20. 827.)

Amts. Cu dissolved by action of various oils on 8 sq. in Cu by 10 days' exposure and subsequent 67 days—

	Am. Cu dissolved in 10 days	Am. Cu dissolved in subsequent 67 days
Linseed oil	0.3000 grain	0 2435 grain
Olive oil	0 2200 "	0 0200 "
Colza oil	0 0170 "	0 1230 "
Almond oil	0 1030 "	0 1170 "
Seal oil	0.0485 "	0 0315 "
Sperm oil	0.0030 "	0 0575 "
Castor oil	0.0065 "	0 0035 "
Nestsfoot oil	0 1100 "	
Sesame oil	0 1700 "	0.0015 "
Paraffine oil	0.0015 "	

(Watson, C. N. 36. 200.)

Qualitative results of the action of various oils on Cu are also given by Thompson. (C. N. 34. 176, 200, 219.)

$\frac{1}{2}$  ccm. oleic acid dissolves 0.0157 g Cu in 6 days. (Gates, J. phys Chem. 1911, 15. 143)

Sol in an alkaline solution of gelatine (3.54 %) copper gauze dissolved in 48 hours (Lidoff, C. C. 1899, II 471)

#### Cuprous acetylide, Cu<sub>2</sub>C<sub>2</sub>.

Decomp. by heating with H<sub>2</sub>O or KCN+Aq. Decomp. by HNO<sub>3</sub>. (Keiser, Am. Ch. J. 1892, 14. 289)

Not decomp. by H<sub>2</sub>SO<sub>4</sub>, NH<sub>4</sub>OH, KOH + Aq or acetic acid, even on warming. The dry salt is sol. in very dil. HCl+Aq without evolution of gas. Sol. in conc. KCN+Aq (Böttger, A. 1859, 109. 356.)

#### Cupric acetylide, CuC<sub>2</sub>.

Easily sol. in HCl. Turns brown in the air, and becomes insol. in acids. (Phillips, Z. anorg. 1894, 6. 241.)

3Cu<sub>2</sub>C<sub>2</sub>O+2H<sub>2</sub>O. Solubility as that of Cu<sub>2</sub>C<sub>2</sub>H<sub>2</sub>O<sub>4</sub>. (Söderbaum, B. 1897, 30. 764.)  
Cu<sub>2</sub>C<sub>2</sub>H<sub>2</sub>O<sub>4</sub>. Insol in H<sub>2</sub>O.

When dry is violently decomp. by conc. H<sub>2</sub>SO<sub>4</sub> or not too dil. HNO<sub>3</sub>. Rapidly decomp. by warming with dil. acids, especially HCl.

Insol. in NH<sub>4</sub>OH+Aq in absence of air, partially sol. in presence of air.

Insol. in organic solvents. (Söderbaum, B. 1897, 30. 762.)

#### Cuprous acetylide iodide, Cu<sub>2</sub>C<sub>2</sub>I, CuI.

Ppt. (Berthelot and Delépine, A. ch. 1900, (7) 19. 54.)

**Cupric arsenide,  $\text{Cu}_2\text{As}_2$ .**

(Rensch, J. pr. 24. 244.)

 $\text{Cu}_4\text{As}_2$ . (Gehlen.) $\text{Cu}_2\text{As}_2$  Ppt. Decomp. by acids. (Kane, Pogg. 44. 471) $\text{Cu}_4\text{As}$  Min. *Domeykite*. Insol in HCl+Aq; sol in  $\text{HNO}_3$  $\text{Cu}_4\text{As}$  Min *Algodonite*. $\text{Cu}_6\text{As}$  Min *Darwinite***Cuprous azoumide,  $\text{CuN}_3$ .**Insol. in  $\text{H}_2\text{O}$ . (Curtius)

Sensitive to sunlight. (Wohler, B. 1913, 46. 2053)

**Cupric azoumide, basic,  $\text{CuO}$ ,  $\text{CuN}_3$** Insol. in  $\text{H}_2\text{O}$ . (Wohler, B. 1913, 46. 2055.)**Cupric azoumide,  $\text{CuN}_3$ .**

Very explosive

Very sl sol in  $\text{H}_2\text{O}$ . Decomp by boiling with  $\text{H}_2\text{O}$ . (Curtius, J. pr 1898, (2) 58. 296.)**Copper azoumide ammonia,  $\text{CuN}_3$ ,  $2\text{NH}_3$ .**Ppt. Insol in  $\text{H}_2\text{O}$  Easily sol in dil acids. (Deems, J Am Chem. Soc 1907. 29, 19)**Copper boride,  $\text{Cu}_3\text{B}_2$ .**

(Marsden, J. B., 1880. 330.)

**Cuprous bromide,  $\text{Cu}_2\text{Br}_2$** 1 l.  $\text{H}_2\text{O}$  dissolves at  $18^\circ\text{--}20^\circ$ .

0.4320 millimols bromine.

0.3157 " cupric copper.

0.1061 " cuprous copper.

(Bodländer, Z. anorg. 1902, 31. 460.)

Sol. in  $\text{HBr}$ ,  $\text{HCl}$  without decomp., or  $\text{HNO}_3$ +Aq with decomp., also in  $\text{NH}_4\text{OH}$ +Aq. Insol. in boiling conc.  $\text{H}_2\text{SO}_4$  or  $\text{HCl}$ + $\text{H}_2\text{O}_2$ +Aq (Berthelot, A. ch. 44. 385.)Sol. in  $\text{H}_2\text{SO}_4$ +Aq. (Lean and Whatmough, Chem Soc 1898, 73. 161.)Sol. in  $\text{NaCl}$  and  $\text{Na}_2\text{S}_2\text{O}_3$ +Aq (Re-nault, C. R. 69. 319)Solubility of  $\text{Cu}_2\text{Br}_2$  in  $\text{KBr}$ +Aq.

All values recorded in millimols per litre.

KBr	Total copper	Cupric copper	Cuprous copper
25	0.119	0.012	0.107
40	0.200	0.013	0.187
60	0.310	0.025	0.285
80	0.423	0.012	0.411
100	0.5836	.	0.5836
120	0.6934	.	0.6934
500	8.719	.	8.719

(Bodländer and Storbeck, Z. anorg 1902, 31. 469)

Difficultly sol. in methyl acetate (Naumann, B. 1909, 42. 3790)

Sol in ethyl acetate. (Naumann, B. 1910, 43. 314)

Insol in acetone (Naumann, B. 1904, 37. 4329, Eidmann, C. C. 1897, II. 1014.)

100 g. acetamide dissolve 3.86 g.  $\text{Cu}_2\text{Br}_2$  at  $18^\circ$ . (Naumann and Schier, B. 1914, 47. 249)

Sol. in pyridine. (Naumann, B. 1904, 37. 4609)

Mol. weight determined in pyridine, methyl and ethyl sulphides (Werner, Z. anorg 1897, 16. 19, 26, and 28)

**Cupric bromide,  $\text{CuBr}_2$ .**Deliquescent. Very sol in  $\text{H}_2\text{O}$ . Insol in benzene. (Franchmont, B. 16. 387.)Very sl attacked by cold or even hot  $\text{H}_2\text{SO}_4$ . (Viard, C. R. 1902, 135. 169.)Moderately sol in liquid  $\text{NH}_3$ . (Horn, Am Ch. J. 1908, 39. 219)100 g. 95% formic acid dissolve 0.16 g at  $21^\circ$ . (Aschan, Ch. Z. 1913, 37. 1117)100 g acetamide dissolve 24.43 g.  $\text{CuBr}_2$  at  $18^\circ$ . (Naumann and Schier, B. 1914, 47. 249)

Sol in benzonitrile. (Naumann, B. 1914, 47. 1369)

Sol in methyl acetate. (Naumann, B. 1909, 42. 3790)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Sol. in acetone with a brown color. (Eidmann, C. C. 1899, II. 1014.)

+ $2\text{H}_2\text{O}$ ? (Berthelot, A. ch. 1830, 44. 385)+ $\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  (Sabatier, Bull Soc 1894, (3) 11. 677.)**Cupric hydrogen bromide,  $\text{CuBr}_2$ ,  $\text{HBr}$ + $2\text{H}_2\text{O}$** Decomp. by  $\text{H}_2\text{O}$  (Sabatier, Bull. Soc. 1894, (3) 11. 681)+ $10\text{H}_2\text{O}$ . (Weinland and Knoll, Z. anorg. 1905, 44. 116.)**Cupric lithium bromide,  $\text{CuBr}_2$ ,  $2\text{LiBr}$ + $6\text{H}_2\text{O}$ .**

Very hygroscopic. (Sementschenko, Z. anorg. 1899, 19. 336)

Very hygroscopic; decomp. by  $\text{H}_2\text{O}$ . (Kurnakoff, C. C. 1899, I. 16.)**Cupric potassium bromide,  $\text{CuBr}_2$ ,  $\text{KBr}$ .**Decomp. by  $\text{H}_2\text{O}$ . (Sabatier, Bull. Soc. 1894, (3) 11. 683.)**Cuprous bromide ammonia,  $\text{Cu}_2\text{Br}_2$ ,  $2\text{NH}_3$ .**

Stable when dry.

Easily sol in  $\text{HNO}_3$  and  $\text{NH}_4\text{OH}$ +Aq.Other mineral acids and acetic acid separate  $\text{Cu}_2\text{Br}_2$ . (Richards, Z. anorg. 1898, 17. 245.) $\text{Cu}_2\text{Br}_2$ ,  $8\text{NH}_3$ . (Lloyd.) $\text{Cu}_2\text{Br}_2$ ,  $3\text{NH}_3$ . (Lloyd, J. phys. Chem. 1902, 19. 300)

Cupric bromide ammonia,  $\text{CuBr}_2 \cdot 2\text{NH}_3$

Sol in  $\text{NH}_4\text{Br} + \text{Aq}$  without decomp (Richards, B. 23. 3790.)

$3\text{CuBr}_2 \cdot 10\text{NH}_3$ . Decomp by  $\text{H}_2\text{O}$  (Richards, Am. Ch. J. 15. 651)

$\text{CuBr}_2 \cdot 3\text{NH}_3$ . Completely sol. in a little  $\text{H}_2\text{O}$ , but is decomp. by dilution. Insol. in alcohol (Rammelsberg, Pogg. 55. 246.)

$\text{CuBr}_2 \cdot 4\text{NH}_3 + \text{H}_2\text{O}$ . 100 pts  $\text{H}_2\text{O}$  dissolve 69.03 pts.  $\text{CuBr}_2 \cdot 4\text{NH}_3$  at  $25^\circ$  (Pudschies, Dissert.)

$\text{CuBr}_2 \cdot 5\text{NH}_3$ . As above. (Rammelsberg.)

$\text{CuBr}_2 \cdot 6\text{NH}_3$ . Sol. in small amts. of  $\text{H}_2\text{O}$ , but decomp. on dilution. (Richards.)

Cupric bromide nitric oxide,  $\text{CuBr}_2 \cdot \text{NO}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Manhot, B. 1914, 47. 1607.)

Cuprous chloride,  $\text{Cu}_2\text{Cl}_2$

1.53 g.  $\text{Cu}_2\text{Cl}_2$  dissolve in 100 g  $\text{H}_2\text{O}$  at  $21.5^\circ$ ; 1.55 g. at  $26.5^\circ$ . (Kremann and Noss, M. 1912, 33. 1206)

Solubility of  $\text{Cu}_2\text{Cl}_2$  in  $\text{H}_2\text{O}$  in an atmosphere of hydrogen.

Solubility is recorded in mg-atoms per l.

$t^\circ$	Total Cu	$\text{Cu}_2\text{Cl}_2$ by analysis	Cl	$\text{Cu}_2\text{Cl}_2$ calc.	$\text{Cu}_2\text{Cl}_2$ by analysis

(Étard, A. ch. 1894, (7) 2, 565)

See also under  $\text{CuCl}_2 + 2\text{H}_2\text{O}$ .1 g.  $\text{CuCl}_2$  is sol. in 181 g. methyl acetate at  $18^\circ$ . Sp. gr.  $18^\circ/4^\circ$  of the sat. solution = 0.939. (Naumann, B. 1909, 42, 3793.)1 g.  $\text{CuCl}_2$  is sol. in 249 g. ethyl acetate at  $18^\circ$ . Sp. gr. of sat. solution  $18^\circ/4^\circ$  = 0.9055. (Naumann, B. 1904, 37, 3603.)

Difficultly sol. in ethyl acetate (Naumann, B. 1910, 43, 314.)

1 pt. sol. in 249.3 pts. ethyl acetate at 10°.  
(Alexander, Dissert. 1899.)

Solubility in acetone.

34.7 g. acetone dissolve 1 g.  $\text{CuCl}_2$  at 18°.  
Sp. gr. of sat. solution  $18^\circ/4^\circ = 0.8154$  (Naumann, B. 1904, 37, 4329.)

1.40 pts. are sol. in 100 pts. acetone at 50°.  
(Laszczyński, B. 1894, 27, 2287.)

Sol. in acetone and methylal. 1 gram dissolves in 34.08 grams of acetone at 18°.  
(Eidmann, C. C. 1899, II, 1014.)

100 pts. absolute ether dissolve 0.043 g.  $\text{CuCl}_2$ . (Böttker, Z. phys. Ch. 1897, 22, 511.)

Mol weight determined in pyridine and methyl sulphide (Werner, Z. anorg. 1897, 15, 20 and 25.)

100 g. sat. solution in acetonitrile contains 1.57 g.  $\text{CuCl}_2$ . (Naumann and Schies, B. 1914, 47, 249.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47, 1369.)

Sol. in boiling dipropylamine. (Werner, Z. anorg. 1897, 15, 34.)

Sol. in urethane. (Ley, Z. phys. Ch. 1897, 22, 81); (Castoro Z. anorg. 1899, 20, 61.)

+ $\text{H}_2\text{O}$ . (Ditte, A. ch. (5) 22, 551.)

Sol. in  $\text{H}_2\text{O}$  with slight decomp. (Sabatier, Bull. Soc. 1895, (3) 13, 601.)

+ $2\text{H}_2\text{O}$ . Deliquescent. 100 g.  $\text{H}_2\text{O}$  dissolve 121.4 g.  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  at 16.1°. (Rudorff.)

Aq. sol. at 35° contains 9.689 Mol. %  $\text{CuCl}_2$ .  
" 15° " 8.934 " % "

(Schreinemakers, C. C. 1911, II, 349.)

$\text{CuCl}_2 + 2\text{H}_2\text{O} + \text{Aq}$ . sat. at 30° contains 43.95%  $\text{CuCl}_2$ . (Meerburg, C. C. 1904, II, 1362.)

43.95 g. anhydrous  $\text{CuCl}_2$  are dissolved in 100 g.  $\text{CuCl}_2 + \text{Aq}$  at 30°. (Schreinemakers, Arch. near Sc. 1910 [2], 15, 117.)

44.47% by weight anhydrous  $\text{CuCl}_2$  is dissolved in  $\text{H}_2\text{O}$  at 35°. (Schreinemakers and Thonius, Verh. k. Akad. Wet. Amst. 1912, 21, 333.)

Solubility of  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  in ethyl alcohol  
+ Aq at 11.5°.

Percent of ethyl alcohol by volume	Grams $\text{CuCl}_2$ dissolved in 5 cc.
99.3	1.175

96.3	1.097
95.3	1.070
94.3	1.059

Anhydrous salt dissolves readily in absolute ethyl alcohol;  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  is precipitated by  $\text{H}_2\text{O}$

Solubility of  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  in ethyl alcohol + Aq at 11.5° C. under addition of increasing amounts of  $\text{CuCl}_2$

P = Percent of ethyl alcohol by volume.

G = Grams of  $\text{CuCl}_2$  added.

C<sub>a</sub> = Grams of  $\text{CuCl}_2$  in 5 cc. of the solution.

C<sub>w</sub> = Grams of water in 5 cc. of the solution, calculated from

- (1) the water content of the alcohol.
- (2) the water of crystallization which had gone into solution.
- (3) the water held mechanically in  $\text{CuCl}_2 + 2\text{H}_2\text{O}$ .

(de Connecq, C. R. 1900, 131. 59.)

## Solubility in organic solvents.

Sol. in propyl alcohol, hot glycol, hot glycerine, hot paraldehyde, hot crys. acetic acid, pure acetone, 30% methylamine+Aq, pure pyridine, pure α-picoline, acetonitrile; sl sol in isobutyl and amyl alcohols, crystallizable formic acid, ethyl acetate; insol. in cold glycol, cold glycerine, cold paraldehyde, benzaldehyde, cold crystallizable acetic acid, ord. ether, abs. ether, hot and cold CS<sub>2</sub>, cold aniline, cold orthotoluidine, methylene chloride, ethyl iodide, propyl iodide, ethylene bromide, benzene, toluene, xylene, ligroin, nitrobenzene, cold piperidine and essence of terebenthine. (de Connecq, C. R. 1900, 131. 59.)

+5H<sub>2</sub>O.Aq. sol. at 35° contains 2.921 Mol. % CuCl<sub>2</sub>.  
15° " 1 11

(Schreinemakers, C. C. 1911, II. 349.)

Cuprous hydrogen chloride, CuCl<sub>2</sub>HCl.Sol. in H<sub>2</sub>O. (Neumann, M. 1894, 15. 493.)Cupric hydrogen chloride, CuCl<sub>2</sub>, HCl+3H<sub>2</sub>ODecomp. by H<sub>2</sub>O. Sol. in HCl+Aq below 0° (Engel, C. R. 106. 273.)CuCl<sub>2</sub>, 2HCl Deliquescent Very sol in H<sub>2</sub>O (Alexander, Dissert 1899.)+5H<sub>2</sub>O. Properties as above. (Sabbatier, C. R. 106. 1724.)CuCl<sub>2</sub>, 3HCl. Sol in H<sub>2</sub>O. (Neumann M. 1894, 15. 493.)Cupric gold (auric) chloride, CuCl<sub>2</sub>, 2AuCl<sub>3</sub>+6H<sub>2</sub>O.10% is sol. in H<sub>2</sub>O at 18° (Mylius, Z. anorg 1911, 70. 210.)Cupric lithium chloride, CuCl<sub>2</sub>, LiCl+2½H<sub>2</sub>O.Decomp on air. Decomp. by dissolving in H<sub>2</sub>O. Sol. in conc LiCl+Aq without decomp. Decomp. by alcohol. (Chassevant, A. ch. (6) 30. 33.)+2H<sub>2</sub>O. (Meyerhoffer, W. A. B. 100, 2b. 621.)

## Cupric mercuric chloride.

Easily sol in H<sub>2</sub>O. (v Bonsdorff.)Cupric mercuric potassium chloride, CuCl<sub>2</sub>, 3HgCl<sub>2</sub>, 6KCl+2H<sub>2</sub>ODeliquescent in moist air. Sol. in boiling H<sub>2</sub>O without decomp, and recrystallises if cooled slowly. Insol. in absolute alcohol. (v. Bonsdorff, Pogg. 33. 81)Cuprous nitrosyl chloride, Cu<sub>2</sub>Cl<sub>2</sub>, 2NOCl.Very deliquescent and sol. in H<sub>2</sub>O with immediate decomp. (Sudborough, Chem. Soc. 59. 658.)Cuprous potassium chloride, Cu<sub>2</sub>Cl<sub>2</sub>, 4KCl.Sol. in H<sub>2</sub>O (Mitscherlich, A. ch. 73. 384.)For solubility data, see Cu<sub>2</sub>Cl<sub>2</sub>+KCl under cuprous chloride.

## Cupric potassium chloride.

CuCl<sub>2</sub>, KCl. (Meyerhoffer, Z. phys. Ch. 3. 336.)Sol. in H<sub>2</sub>O; only sl sol in conc. HCl+Aq. (Groger, Z. anorg. 1899, 19. 330)CuCl<sub>2</sub>, 2KCl+2H<sub>2</sub>O. Sol. in H<sub>2</sub>O and alcohol (Berzelius, Pogg. 13. 458.)

The composition of the hydrates formed by this salt at different dilutions is calculated from determinations of the lowering of the fr pt. produced by the salt and of the conductivity and sp. gr. of its aqueous solutions. (Jones, Am. Ch. J. 1905, 34. 322.)

For solubility data, see CuCl<sub>2</sub>+KCl under cupric chlorideCupric rubidium chloride, CuCl<sub>2</sub>, 2RbCl.Easily sol. in H<sub>2</sub>O and HCl+Aq. (Godefroy, B. 8. 9)+2H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Wyrouboff, J. B. 1887. 538.)

## Cuprous sodium chloride.

Very sol. in H<sub>2</sub>O.

**Cupric sodium chloride.**

Easily sol in conc NaCl+Aq. Sol. in alcohol of 0.837 sp. gr.

No double salt exists. (Schreinemakers and de Baat, Z phys Ch 1909, 66. 586)

**Cupric thallic chloride,  $\text{CuCl}_2 \cdot 2\text{TiCl}_3$** 

Sol. in  $\text{H}_2\text{O}$ . (Willm, A. ch (4) 5. 55.)

+ $6\text{H}_2\text{O}$ . Can be cryst. from  $\text{H}_2\text{O}$ . (Gewecke, A 1909, 366. 225)

**Cuprous chloride ammonia,  $\text{Cu}_2\text{Cl}_2 \cdot \text{NH}_3$ .**

(Lloyd, J. phys. Chem. 1908, 12. 399.)

$\text{Cu}_2\text{Cl}_2 \cdot 2\text{NH}_3$  Decomp by  $\text{H}_2\text{O}$  or acids, not by alcohol (Ritthausen, J pr 59 369)

$\text{Cu}_2\text{Cl}_2 \cdot 3\text{NH}_3$  (Lloyd, J. phys. Chem. 1908, 12. 399.)

$\text{Cu}_2\text{Cl}_2 \cdot 6\text{NH}_3$ . (Lloyd, J phys Chem. 1908. 12. 399)

**Cupric chloride ammonia,  $\text{CuCl}_2 \cdot 2\text{NH}_3$ .**

Decomp by  $\text{H}_2\text{O}$ . (Kane, A. ch. 72. 273)

$\text{CuCl}_2 \cdot 4\text{NH}_3$ . Sol. in  $\text{H}_2\text{O}$ . (Bouzat, C. R 1902, 135. 294)

+ $\text{H}_2\text{O}$  (*Cuprammonium chloride*) Sol. in  $\text{H}_2\text{O}$  and hot  $\text{NH}_4\text{OH}$ +Aq

+ $2\text{H}_2\text{O}$ . Sol. in small amt. of  $\text{H}_2\text{O}$ .

$\text{Cu}(\text{OH})_2$  is pptd by dilution. (Bouzat, A ch. 1903, (7) 29. 350)

$\text{CuCl}_2 \cdot 5\text{NH}_3$ . (Bouzat, A ch. 1903, (7) 29. 350.)

+ $1\frac{1}{2}\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . On dilution  $\text{Cu}(\text{OH})_2$  is pptd Sol in  $\text{NH}_4\text{OH}$ +Aq,

solubility decreases as  $\text{NH}_3$  concentration increases. (Bouzat, A. ch. 1903, (7) 29. 350.)

$\text{CuCl}_2 \cdot 6\text{NH}_3$ . Completely sol in  $\text{H}_2\text{O}$ . (Rose, Pogg. 20. 55.)

Sol. in  $\text{H}_2\text{O}$  but decomp. by great dilution with pptn. of  $\text{Cu}(\text{OH})_2$

Sol in liquid  $\text{NH}_3$  (Bouzat, A ch. 1903, (7) 29. 350.)

**Cuprocupric chloride ammonia,  $\text{Cu}_2\text{Cl}_2 \cdot \text{CuCl}_2 \cdot 4\text{NH}_3 + \text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  or alcohol. Abundantly sol. in  $\text{NH}_4\text{Cl}$ +Aq, but with partial decomposition (Ritthausen.)

**Cupric chloride ammonia platinous chloride,  $\text{CuCl}_2 \cdot 4\text{NH}_3 \cdot \text{PtCl}_2$ .**

See Platodiamine cupric chloride.

**Cuprous chloride carbon monoxide,**

$\text{Cu}_2\text{Cl}_2 \cdot 2\text{CO} + 4\text{H}_2\text{O}$ .

Very sol. in HCl (sp. gr. 1.19) with evolution of CO. Sol. in  $\text{NH}_4\text{OH}$ +Aq. (Manchot and Friend, A. 1908, 359. 110)

$2\text{Cu}_2\text{Cl}_2 \cdot \text{CO} + 2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  (Berthelot, A. ch. 1856, (3) 46. 488.)

$4\text{Cu}_2\text{Cl}_2 \cdot 3\text{CO} + 7\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , but decomp. therewith very quickly. Sol. in  $\text{Cu}_2\text{Cl}_2 + \text{HCl}$ .

**Cupric chloride hydrazine,  $\text{CuCl}_2 \cdot 2\text{N}_2\text{H}_4$ .**

Easily decomp (Hofmann and Marburg, A. 1899, 305. 222)

**Cuprous chloride mercuric sulphide,  $\text{Cu}_2\text{Cl}_2 \cdot 2\text{HgS}$** 

Insol. in  $\text{H}_2\text{O}$ , sol in conc. hot  $\text{HCl}$ +Aq, not decomp by boiling dil  $\text{H}_2\text{SO}_4$ +Aq, but decomp. by conc.  $\text{H}_2\text{SO}_4$ . (Heumann, B. 7. 1390.)

**Cuprous fluoride,  $\text{Cu}_2\text{F}_2$ .**

Insol. in  $\text{H}_2\text{O}$  or HF Sol in conc.  $\text{HCl}$ +Aq, from which it is precipitated by  $\text{H}_2\text{O}$ .

Insol in alcohol (Berzelius, Pogg. 1. 28.)

Decomp. by  $\text{H}_2\text{O}$  into sol  $\text{CuF}_2$  Sol in boiling  $\text{HCl}$ +Aq and in  $\text{HNO}_3$ +Aq. Only sl attacked by warm  $\text{H}_2\text{SO}_4$  (Poulenc, C. R 116. 1447.)

**Cupric fluoride,  $\text{CuF}_2$** 

Easily takes up  $\text{H}_2\text{O}$  to form  $\text{CuF}_2 \cdot 2\text{H}_2\text{O}$ .

Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , or HF+Aq. (Poulenc, C R. 116. 1448)

**Solubility at 25° in HF+Aq**

Normality of HF+Aq	g atoms Cu in 1000 c c of solution
0.12	0.0307
0.28	0.1164
0.57	0.2494
1.08	0.358
2.28	0.463

Solubility is decreased by presence of KF (Jaeger, Z. anorg. 1901, 27. 29.)

Insol. in liquid  $\text{NH}_3$  (Gore, Am. Ch. J. 1898, 20. 827.)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790), ethyl acetate. (Naumann, B 1910, 43. 314.)

Insol in acetone (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

+ $2\text{H}_2\text{O}$ . Sl sol in cold, decomp. by hot  $\text{H}_2\text{O}$ . (Berzelius.)

**Cupric hydrogen fluoride,  $\text{CuF}_2 \cdot 5\text{HF} + 5\text{H}_2\text{O}$ .**

Deliquescent.

Easily sol. in  $\text{H}_2\text{O}$  and dil acids.

Sol in  $\text{NH}_4\text{OH}$ +Aq with decomp (Bohm, Z. anorg. 1905, 43. 329)

**Cupric potassium fluoride,  $\text{CuF}_2 \cdot 2\text{KF}$ .**

Easily sol in  $\text{H}_2\text{O}$ .

$\text{CuF}_2 \cdot \text{KF}$ . Very sl. sol in  $\text{H}_2\text{O}$ ; sl. sol. in dil. acids (Helmholtz, Z. anorg. 3. 115.)

**Cupric rubidium fluoride,  $\text{CuF}_2 \cdot \text{RbF}$ .**

As the K salt. (Helmholtz.)

**Cupric silicon fluoride.**

See Fluosilicate, cupric.

Copper stannic fluoride.  
See Fluostannate, copper.

Copper tantalum fluoride.  
See Fluotantalate, copper.

Copper titanium fluoride.  
See Fluotitanate, copper.

Copper tungstyl fluoride.  
See Fluoxytungstate, copper.

Copper zirconium fluoride.  
See Fluozirconate, copper.

Cupric fluoride ammonia,  $\text{CuF}_2 \cdot 4\text{NH}_3 + 5\text{H}_2\text{O}$ .

Decomp. rapidly in the air.

Easily sol. in  $\text{H}_2\text{O}$

Decomp. by boiling with  $\text{H}_2\text{O}$  with evolution of  $\text{NH}_3$ .

Easily sol. in dil. acids. (Bohm, Z. anorg. 1905, 43, 333.)

Cuprous hydride,  $\text{CuH}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . (Wurtz, C. R. 18, 102.)

Sol. in warm conc.  $\text{HCl}$  with decomp. (Bartlett, Am. Ch. J. 1895, 17, 187.)

Cupric hydride,  $\text{CuH}_2$ .

Sol. in  $\text{HCl}$  with decomp. (Bartlett, Am. Ch. J. 1895, 17, 187.)

Copper hydrosulphide,  $7\text{CuS} \cdot \text{H}_2\text{S}$ .

(Lander and Picton, Chem. Soc. 1892, 61, 120.)

$9\text{CuS} \cdot \text{H}_2\text{S}$ . (Lander and Picton.)

$22\text{CuS} \cdot \text{H}_2\text{S}$ . (Lander and Picton.)

Cuprous hydroxide,  $\text{Cu}_2\text{O} \cdot x\text{H}_2\text{O}$ .

Sol. in acids as cupric salt. Insol. in  $\text{NaOH}$ , or  $\text{KOH} + \text{Aq}$ .

Sol. in  $\text{NH}_4\text{OH}$ , and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ ; sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ .

Cuprocupric hydroxide,  $\text{CuOH} \cdot 3\text{Cu}(\text{OH})_2 + 3\text{H}_2\text{O}$ .

Sol. in acids. (Francke, Dissert. 1907.)

Cupric hydroxide,  $3\text{CuO} \cdot \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or dil. alkalis. Easily sol. in warm  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose.)

Much more difficultly sol. than  $\text{CuO} \cdot \text{H}_2\text{O}$  in  $\text{KOH} + \text{Aq}$ . (Chodnew, J. pr. 28, 220.)

True composition is  $6\text{CuO} \cdot \text{H}_2\text{O}$ .

See also Cupric oxide.

$\text{CuO} \cdot \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , but decomp. into  $-\text{CuO}$ ,  $\text{H}_2\text{O}$  by being boiled therewith.

Extremely easily sol. in acids.

Sol. in  $\text{NH}_4\text{OH}$ , and  $\text{NH}_4$  salts +  $\text{Aq}$

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ .

0.320	2.13	0.067

The non-agreement of the results is due to the presence of different modifications of  $\text{CuO} \cdot \text{H}_2\text{O}$ .

(Bonsdorff, Z. anorg. 1904, 41, 182.)

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $18^\circ$ .

$\text{NH}_3$ mols per l	Cu g atoms per l
0.20	0.00054
0.50	0.0033
1.0	0.0109
1.5	0.0204
2.0	0.0314
2.5	0.0442
3.0	0.0548
4.0	0.0784
5.0	0.1041
6.0	0.1254
8.0	0.1599
9.96	0.1787

(Dawson, Z. phys. Ch. 1909, 69, 111.)

Sol. in cold  $\text{NaOH}$ , or  $\text{KOH} + \text{Aq}$  (Proust); but  $\text{CuO}$  is pptd. on boiling (Berthollet); is not pptd. (Chodnew, J. pr. 28, 220.)

Insol. in  $\text{NaOH}$  or  $\text{KOH} + \text{Aq}$  unless they contain organic matter (Berzelius). This is contradicted by Volcker (A. 59, 34).

Entirely sol. in conc.  $\text{KOH} + \text{Aq}$ , but solution is decomp. by heating (Fremy, A. ch. (3) 12, 510.)

Sol. in  $\text{NaOH} + \text{Aq}$  (70%  $\text{NaOH}$ ). (Lew, Z. anal. 9, 463.)

The solubility in  $\text{NaOH}$  of  $\text{CuO} \cdot \text{H}_2\text{O}$ , prepared either from  $\text{CuSO}_4$  or  $\text{Cu}(\text{NO}_3)_2$ , decreases with decrease in concentration of the base. The solubility of  $\text{CuO} \cdot \text{H}_2\text{O}$  in  $\text{NaOH}$  is only very slightly affected by the addition of sodium or potassium carbonate. (Fischer, Z. anorg. 1904, 40, 41.)

(Dawson, Chem. Soc. 1909, 95. 373.)

Sl. sol. in alkali carbonates + Aq, especially  $\text{KHCO}_3$  and  $\text{NaHCO}_3$ . (Berzelius.)

Sol. in cold  $\text{Na}_2\text{S}_2\text{O}_3$  + Aq, but pptd. on warming. (Field, Chem. Soc. (2) 1. 28.)

Partially sol. when freshly pptd. in  $\text{KCN}$  + Aq. (Rodgers, 1834.)

Sol. in  $(\text{NH}_4)_2\text{S}_2\text{O}_8$  + Aq. (Moreau, Apoth. Ztg. 1901, 16. 383.)

Sol. in  $\text{MSCN}$  + Aq; more difficultly sol. in  $\text{NH}_4\text{SCN}$  + Aq than  $\text{ZnO}_2\text{H}_2$ . (Grossmann, Z. anorg. 1906, 58. 269.)

Very sol. in hydroxylamine. (Jannasch and Cohen, J. pr. 1905, (2), 72. 14.)

Insol. in acetone. (Edmann, C. C. 1899, II. 1014.)

Sol. in large amt. in  $\text{NaC}_2\text{H}_3\text{O}_2$  + Aq. (Mercer, 1844.)

Not pptd. in presence of  $\text{Na citrate}$ . (Spiller.)

Insol. in cane sugar + Aq, unless an alkali or alkaline earth is present. (Peschier.)

Recently pptd.  $\text{CuO}_2\text{H}_2$  is easily sol. in cane sugar with  $\text{NaOH}$ ,  $\text{KOH}$ , or  $\text{CaO}_2\text{H}_2$  + Aq; less sol. in presence of  $\text{SrO}_2\text{H}_2$  or  $\text{BaO}_2\text{H}_2$ . (Bequerel.)

Not pptd. by  $\text{KOH}$  + Aq in solutions containing tartaric acid, cane sugar, and many other non-volatile organic substances.

Sol. in  $\text{Ca}$ ,  $\text{Ba}$ ,  $\text{Sr}$ ,  $\text{K}$  or  $\text{Na}$  succrates + Aq, and ppts. of double succrates form when solutions of the first three bases are heated, but no

ppt forms in the last two cases even at 100°.  
(Hunton)

Insol. in simple Ca, Ba, or K succates + Aq, but immediately sol. when an excess of cane sugar + Aq is present. (Pelouze)

Moderately sol. in amyl amine, easily sol. in methyl, less in ethyl amine (Wurtz.)

Sol. in sorbine + Aq. (Pelouze)

Not pptd. in presence of aromatic oxyacids or phenols of the ortho series. Thus in presence of salicylic acid, pyrocatechin, gallic acid, pyrogallie acid, etc., NaOH + Aq does not ppt.  $\text{CuO}_2\text{H}_2$  from Cu solutions, but pptn. is not prevented by benzoic acid, resorcin, hydroquinone, etc. (Weith, B. 9. 342.)

Sol. in solutions of alkali salts of "spaltungsprodukte" of albumen. (Kalle and Co. Pat 1901.)

Sol. in starch emulsion which has become thin liquid in an alternating magnetic field (Rosenthal, C. C. 1908, 1 593.)

$\text{CuO}$ ,  $2\text{H}_2\text{O}$ . (Rubénovitch, C. R. 1899, 129. 336)

$\text{CuO}$ ,  $3\text{H}_2\text{O}$ . (Kosmann, Z. anorg. 1893, 3. 373.)

$2\text{CuO}$ ,  $3\text{H}_2\text{O}$ . (Cross, Gm.—K 5. 1, 753.)

$4\text{CuO}$ ,  $\text{H}_2\text{O}$ . Insol. in  $\text{NH}_4\text{OH}$  + Aq. (Mailhe, A. ch. 1902, (7) 27. 393.)

Cupric hydroxide ammonia,  $\text{CuO}_2\text{H}_2$ ,  $4\text{NH}_3$ .

Present in ammoniacal solution of  $\text{CuO}_2\text{H}_2$ . (Dawson, Z. phys. Ch. 1909, 69. 110.)

Cuprous imide,  $\text{Cu}_2\text{NH}$ .

Decomp. at 160° forming  $\text{Cu}_2\text{N}$ .

Readily hydrolysed by  $\text{H}_2\text{O}$ .

Sol. in liquid  $\text{NH}_3$  solutions of  $\text{NH}_4\text{NO}_3$ . (Franklin, J. Am. Chem. Soc. 1912, 34. 1502.)

Cuprous iodide,  $\text{Cu}_2\text{I}_2$ .

Insol. in  $\text{H}_2\text{O}$ , or dil. acids.

Calculated from electrical conductivity of  $\text{Cu}_2\text{I}_2$  + Aq, 1 l.  $\text{H}_2\text{O}$  dissolves about 8 mg.  $\text{Cu}_2\text{I}_2$  at 18° (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Vitali, Gm.—K 5. 1, 947)

Sol. with difficulty in conc.  $\text{HCl}$  + Aq.

Decomp. by conc.  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4$ . Insol. in  $\text{NaCl}$ ,  $\text{KNO}_3$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{KBr}$ , or  $\text{NH}_4\text{Cl}$  + Aq. Sol. in  $\text{NH}_4\text{OH}$ ,  $\text{Na}_2\text{S}_2\text{O}_3$ ,  $\text{KCN}$ , or  $\text{KI}$  + Aq. (Renault, C. R. 59. 558.)

Appreciably sol. in  $\text{N}/10$   $\text{HCl}$ . Practically insol. in  $\text{N}/10$   $\text{H}_2\text{SO}_4$ . (Moser, Z. anal. 1904, 43. 604.)

Results of experiments on solubility of  $\text{Cu}_2\text{I}_2$  in  $\text{I}_2$  + Aq in presence of acids and salts are given by Bray and MacKay.

$\text{Cu}_2\text{I}_2$  was found to be sl. sol. in  $\text{H}_2\text{O}$  but a considerable amt. dissolves in presence of  $\text{I}_2$ , owing to formation of  $\text{CuI}_2$  and  $\text{CuI}_3$ . (J. Am. Chem. Soc. 1910, 32. 1207.)

### Solubility of $\text{Cu}_2\text{I}_2$ in $\text{I}_2$ + Aq at 20°.

\* at 0°. \*\* at 40°.

(Fedotieff, Z. anorg. 1911, 69. 26)

### Solubility in $\text{NH}_4\text{Br}$ + Aq at 20°

$\text{NH}_4\text{Br}$ + Aq	$\mu$ $\text{Cu}_2\text{I}_2$ in 1 l. of the solution
2-N	1.9068
3-N	3.6540
4-N	6.0588

(Kohn and Klein, Z. anorg. 1912, 77. 254)

Sol. in  $\text{FeCl}_3$  + Aq. (Fleischer, C. N. 1869, 19. 206)

### Solubility in $\text{KBr}$ + Aq at t°.

t°	$\text{KBr}$ + Aq.	$\mu$ $\text{Cu}_2\text{I}_2$ in 1 l. of the solution
19.5	2-N	1.4666
24.0	2-N	1.5576
19.5	3-N	3.4004
23.0	3-N	3.5949
22.0	4-N	7.1263
22.0	4-N	6.9768

The solutions undergo change in the course of a few days, iodine being set free; the solubility of the cuprous iodide is not markedly affected thereby.

(Kohn, Z. anorg. 1909, 63. 337.)

1 l. of a 0.2N solution of  $\text{KI}$  dissolves 0.000157 g. mol.  $\text{Cu}_2\text{I}_2$ . (Bodlander, Z. anorg. 1902, 31. 475)

Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in  $\text{CS}_2$ . (Arctowski, Z anorg. 1894, 6. 257.)

Practically insol. in methylene iodide. (Retgers, Z anorg 1893, 3. 347.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in acetone (Naumann, B. 1904, 37. 4329); (Eidmann, C. C. 1899, II. 1014.)

100 g. acetonitrile dissolve 3.52 g.  $\text{CuI}_2$  at  $18^\circ$  (Naumann and Schier, B. 1914, 47. 249.)

Min. *Marshite*. (Gm.—K 5. 1, 945.)

**Cupric iodide,  $\text{CuI}_2$ .**

Exists only in very dil aqueous solution. (Traube, B. 17. 1064.)

**Copper periodide,  $\text{CuI}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Walker and Dover, Chem. Soc. 1905, 87. 1588.)

**Copper ammonium iodide ammonia.**

See Cupriammonium iodide ammonia.

**Cuprous mercuric iodide,  $\text{Cu}_2\text{I}_2, \text{HgI}_2$ .**

$\text{KI} + \text{Aq}$  dissolves out  $\text{HgI}_2$ .

**Cuprous mercuric iodide ammonia,  $\text{CuI}_2, 2\text{HgI}_2, 4\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$  or acids. Sol. in a mixture of acetic acid and alcohol.

$\text{CuI}_2, \text{HgI}_2, 4\text{NH}_3$ . As above. (Jørgensen, J. pr. (2) 2. 347.)

**Cupric nitrogen iodide,  $\text{CuI}_2, \text{N}_2\text{H}_4\text{I}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ ; or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Guyard, C. R. 97. 526.)

**Cupric thallic iodide ammonia,  $\text{CuI}_2, 2\text{TI}_3, 4\text{NH}_3$ .**

Decomp. slowly by  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  with decomp. Sol in alcohol.

**Cuprous iodide ammonia,  $\text{Cu}_2\text{I}_2, \text{NH}_3$ .**

Ppt. (Anderline, Gazz. ch. it. 1912, 42. I, 321.)

$+ 4\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$ . Very sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Silberrad, Chem. Soc. 1905, 87. 67.)

$\text{Cu}_2\text{I}_2, 3\text{NH}_3$ . (Lloyd, J. phys. Chem. 1908, 12. 399.)

$\text{Cu}_2\text{I}_2, 4\text{NH}_3$ . (Levol, J. Pharm 4. 328.)

$+ \text{H}_2\text{O}$ . (Saglier, C. R. 104. 1440.)

$\text{Cu}_2\text{I}_2, 6\text{NH}_3$ . (Lloyd)

**Cupric iodide ammonia,  $\text{CuI}_2, 4\text{NH}_3 + \text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  without decomp. Not attacked by cold

alcohol or ether. (Berthelmont, J. Pharm. 15. 445.) (Pozza-Escot, C. R. 1900, 130. 90.)

$\text{CuI}_2, 6\text{NH}_3$ . Sol. in liquid  $\text{NH}_3$ . (Horn, Am. Ch. J. 1908, 39. 205.)

$3\text{CuI}_2, 10\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$ . (Richards, Am. Ch. J. 1895, 17. 302.)

Sol. in liq.  $\text{NH}_3$ . (Horn, Am. Ch. J. 1908, 39. 204.)

**Cupriammonium iodide ammonia,**

$3\text{Cu}(\text{NH}_3)_2\text{I}_2, 4\text{NH}_3$ .

Decomp. by air and by  $\text{H}_2\text{O}$ . (Richards, Am. Ch. J. 1895, 17. 302.)

**Copper periodide ammonia,  $2\text{CuI}, \text{I}_2, 5\text{NH}_3 + \text{H}_2\text{O}$ .**

Because of its insolubility it cannot be recryst. from any solvent. (Silberrad, Chem. Soc. 1905, 87. 66.)

**Copper tetraiodide, ammonia,  $\text{CuI}_4, 4\text{NH}_3$ .**

(Jørgensen, J. pr. (2) 2. 353.)

**Copper hexaiodide ammonia,  $\text{CuI}_6, 4\text{NH}_3$ .**

Not decomp. in  $\text{H}_2\text{O}$  in closed vessels. (Jørgensen.)

**Copper mercuric iodide ammonia,**

$\text{CuHgI}_4, 5\text{NH}_3$ .

$\text{CuHgI}_2, 2\text{NH}_3$ . Ppt. Decomp. by  $\text{H}_2\text{O}$  and by alcohol.

$\text{CuHgI}_2, 3\text{NH}_3$ . Ppt. Decomp. by long washing with  $\text{H}_2\text{O}$ .

$\text{CuHgI}_2, 4\text{NH}_3$ . Ppt. Decomp. by  $\text{H}_2\text{O}$ . Sl. attacked by abs. alcohol.

$\text{CuI}_2, \text{HgI}_2, 4\text{NH}_3$ . Ppt. (Anderline, Gazz. ch. it. 1912, 42, (1) 321; C. C. 1912, II. 95.)

**Copper nitride,  $\text{Cu}_3\text{N}_2$ .**

Decomp. by dil or conc. acids.

Easily decomp. by  $\text{H}_2\text{O}$  when finely powdered. (Rossel, C. R. 1895, 121. 942.)

**Copper suboxide,  $\text{Cu}_2\text{O}$ .**

Not attacked by  $\text{H}_2\text{O}$ . Decomp. by dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  into  $\text{Cu}$  and  $\text{CuSO}_4$ ; dil.  $\text{HCl} + \text{Aq}$  has similar action. Not attacked by  $\text{NH}_4\text{OH} + \text{Aq}$  or  $\text{NH}_4\text{OH} + (\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Rose, Pogg. 120. 1.)

$\text{Cu}_2\text{O}$ . Not attacked by dil. or conc. min. acids, even aqua regia. Slowly sol. in  $\text{HF} + \text{Aq}$ . (Bailey and Hopkins, Chem. Soc. 1890, 57. 272.)

Is a solution of oxide in  $\text{Cu}$ . (Jordis, Zest. angew. Ch. 1908, 21. 51.)

**Cuprous oxide,  $\text{Cu}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{SO}_4 + \text{Aq}$ ,  $\text{H}_3\text{PO}_4 + \text{Aq}$ , or cold very dil.  $\text{HNO}_3 + \text{Aq}$  into a cuprio salt and  $\text{Cu}$ . Converted by  $\text{HCl} + \text{Aq}$  into cuprous chloride.

Solubility of  $\text{Cu}_2\text{O}$  in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ 

Conc. of total Cu		Conc. of total $\text{NH}_3$

(Donnan and Thomas, Chem. Soc. 1911, 99, 1791.)

Sol. in boiling  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Rose)  
 Sol. in excess of  $\text{KOH} + \text{Aq.}$  (Chodnew.)  
 Sol. in conc.  $\text{MgCl}_2$  and  $\text{FeCl}_3 + \text{Aq.}$  (Hunt, C. R. 69, 1357.)  
 Sol. attacked by liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 827.)  
 Min. *Cuprite*. Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , and  $\text{NH}_4\text{OH} + \text{Aq.}$

Cupric oxide,  $\text{CuO}$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids. Sol. in  $\text{H}_2\text{SO}_4 + \text{Aq.}$  Insol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  but dissolves on addition of a few drops of acid or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  Insol. in dil., but sol in warm conc.  $\text{NaOH}$ , and  $\text{KOH} + \text{Aq.}$  (Low, Z. anal. 9, 463.)

$\text{CuO}$  prepared at a low temp. is easily sol in dil. acids, but when ignited is slowly sol in boiling conc. acids, but moderately rapidly in a cold mixture of  $\text{NH}_4\text{I} + \text{HCl}$ . (Joannis, C. R. 1886, 102, 1161.)

Solubility in  $\text{N-HNO}_3$ . 1 l. of the solution contains 0.4802 g. atoms Cu at  $25^\circ$ . (Jaeger, Z. anorg. 1901, 27, 33.)

Solubility of  $\text{CuO}$  in  $\text{HF} + \text{Aq}$  at  $25^\circ$ .

	Time	G. $\text{CuO}$ in 10 ccm. of the solution

(Deussen, Z. anorg. 1905, 44, 421.)

Solubility of  $\text{CuO}$  in  $\text{HF}$  at  $25^\circ$ .

$\text{Cu} = \text{g-atoms Cu}$  in 1 l. of the solution.

HF normality	Cu
0.12	0.0307
0.28	0.1164
0.57	0.2494
1.08	0.388
2.28	0.463

(Jaeger, Z. anorg. 1901, 27, 29.)

Solubility of  $\text{CuO}$  in  $\text{HF} + \text{KF}$  at  $25^\circ$ .

$\text{Cu} = \text{g-atoms Cu}$  in 1 l. of the solution.

HF normality	Cu
0.12	0.0356
0.28	0.06437
0.57	0.1442
1.11(1.08)	0.2451
2.17(2.28)	0.2517

(Jaeger, l. c.)

Sol. in large excess of  $\text{KOH} + \text{Aq.}$  (de Coninck, C. C. 1904, II, 65.)

Slowly sol in boiling  $\text{NH}_4\text{Cl} + \text{Aq.}$  and less easily in  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  (Rose)

Sol. in boiling  $\text{H}_2\text{O}$  solutions of  $\text{Al}_2$ ,  $\text{Gl}$ ,  $\text{U}$ ,  $\text{Cr}_2$ ,  $\text{Fe}_2$ , or  $\text{Bi}$  nitrates and chlorides,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{Hg}_2(\text{NO}_3)_2$ ,  $\text{SbCl}_3$ ,  $\text{SnCl}_4$ , and  $\text{SnCl}_2$ , with pptn. of oxides of the bases of those salts. Unacted upon by boiling  $\text{H}_2\text{O}$  solutions of  $\text{Mn}$ ,  $\text{Mg}$ ,  $\text{Ni}$ ,  $\text{Co}$ ,  $\text{Zn}$ ,  $\text{Ce}$ , or

Fe nitrates or chlorides,  $\text{AgNO}_3$ ,  $\text{Pb(NO}_3)_2$ ,  $\text{Cd(NO}_3)_2$ , and  $\text{HgCl}_2$ . (Peisoz.)

Pure  $\text{CuO}$  is very sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  but the solution is greatly increased by the addition of  $\text{NH}_4$  salts (Muthmann, C. C. 1904, II, 410.)

Sol. in hot  $(\text{NH}_4)_2\text{SO}_4$  or  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  (Juman, Electrochem. Ind. 1908, 6, 258.)

15% dissolves in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  in 24 hrs. (Schmahl, Z. B. H. Sal. 1880, 28, 282.)

Sl. attacked by liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 827.)

Solubility in N-acetic acid. 1 l. of the solution contains 0.1677 g-atoms Cu at 25° (Jaeger, Z. anorg. 1902, 27, 33.)

Insol in acetone. (Naumann, B. 1904, 37, 4329; Erdmann, C. C. 1899, II, 1014.)

Sl. sol in benzamide (Dessaignes, A. ch. 1852, (3), 34, 146.)

Insol. in piperidine (Cahours, C. R. 1852, 34, 481.)

Sol in acid ammes as asparagin. (Pina, A. ch. 1848, (3), 22, 160.)

Sol. in amines alone or mixed with  $\text{NH}_3$ . (Lancet, Dissert. 1905.)

Slowly sol in Ca or any other alkali saccharate + Aq, but not in cane sugar + Aq. (Tuntun.)

Solubility in (calcium saccharate + sugar) + Aq  
1 l. solution containing 418.6 g. sugar and 34.3 g.  $\text{CuO}$  dissolves 10.26 g.  $\text{CuO}$ .

1 l. solution containing 296.5 g. sugar and 24.2 g.  $\text{CaO}$  dissolves 5.68 g.  $\text{CuO}$

1 l. solution containing 174.4 g. sugar and 14.1 g.  $\text{CaO}$  dissolves 3.47 g.  $\text{CuO}$ . (Bodenbender, J. B. 1885, 600.)

Polypeptides in aqueous solution dissolve  $\text{CuO}$  by short boiling (Fischer, B. 1906, 39, 576.)

$+1/2\text{H}_2\text{O} = 6\text{CuO} + \text{H}_2\text{O}$ . Insol. in dil., but sol. in conc.  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$ .

Sol. in volatile oils.

See also Cupric hydroxide.

Min. *Melaconite*. Sol. in  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$

Cuprocupric oxide,  $\text{Cu}_2\text{O}_3 = 2\text{Cu}_2\text{O}$ ,  $\text{CuO}$ .

(Favre and Maumené.)

$\text{Cu}_2\text{O}_3 + \text{H}_2\text{O} = \text{Cu}_2\text{O}$ ,  $\text{CuO} + \text{H}_2\text{O}$ . When freshly pptd., sol in  $\text{HCl} + \text{Aq}$ , but insol after drying (Siewert, J. B. 1866, 257.)

$\text{Cu}_2\text{O}_3 = \text{Cu}_2\text{O}$ ,  $2\text{CuO}$ . (Siewert.)

All oxides of Cu except  $\text{Cu}_2\text{O}$ ,  $\text{Cu}_2\text{O}_3$ ,  $\text{CuO}$ , and  $\text{Cu}_2\text{O}_2$  are mixtures (Osborne, Sil. Am. J. (3) 32, 33; Debray, C. R. 99, 583.)

Copper dioxide,  $\text{CuO}_2 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by acids with formation of cupric salt and  $\text{H}_2\text{O}_2$ . (Weltzien, A. 140, 207.)

Cuprous oxide ammonia (cuprosammonium oxide).

Known only in solution. (Wagner, C. C. 1863, 239.)

Cupric oxide ammonia (cuprammonium hydroxide),  $3\text{CuO}$ ,  $4\text{NH}_3 + 6\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ . (Kane, A. ch. 72, 283.)

$\text{CuO}$ ,  $4\text{NH}_3 + 4\text{H}_2\text{O}$ . Very deliquescent. Decomp. in the air and by  $\text{H}_2\text{O}$ . (Malaguti and Sarzeau, A. ch. (3) 9, 438.)

Cuprous oxybromide,  $\text{Cu}_2\text{Br}_2$ ,  $\text{CuO} + \text{H}_2\text{O}$ .

(Spring and Lucion, Bull. Ac. Belg. (3) 24, 21.)

Cupric oxybromide,  $\text{CuBr}_2$ ,  $3\text{CuO} + 3\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ . Easily sol in dil. acids or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Bium, C. R. 109, 66.)

Insol. in  $\text{H}_2\text{O}$  but decomp. by continued boiling. Sol in conc. acetic acid, sl. sol in conc.  $\text{CuBr}_2 + \text{Aq}$ . Insol. in dil.  $\text{KBr} + \text{Aq}$ . (Richards, Proc. Am. Acad. 1890, 25, 215.)

Cupric oxybromide ammonia,  $2\text{CuO}$ ,  $\text{CuBr}_2$ ,  $2\text{NH}_3 + 3\text{H}_2\text{O}$ .

(Kohlschlatter and Pudsches, B. 1904, 37, 1159.)

Cuprous oxychloride,  $\text{Cu}_2\text{Cl}_2$ ,  $\text{CuO} + 3\text{H}_2\text{O}$ .

(Spring and Lucion, Bull. Ac. Belg. (3) 24, 21.)

Cupric oxychloride,  $\text{CuO}$ ,  $\text{CuCl}_2 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Rousseau, C. R. 1890, 110, 1203.)

$2\text{CuO}$ ,  $\text{CuCl}_2$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ , from which it is reprecipitated by dilution with  $\text{H}_2\text{O}$

$+ \text{H}_2\text{O}$  (Kane, A. ch. 72, 277.)

$+ 4\text{H}_2\text{O}$  (Gladstone, Chem. Soc. 8, 211.)

$3\text{CuO}$ ,  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  (Miller and Kendrick, Trans. Roy. Soc. Can. 1901, (2) 8, III 35.)

$+ 3\text{H}_2\text{O}$ . (Dupont and Jansen, Bull. Soc. 1893, (3), 9, 193.)

$+ 3 1/2\text{H}_2\text{O}$ . Insol. in cold  $\text{H}_2\text{O}$ , sl. decomp. by boiling. (Reindel, J. pr. 108, 378.)

Insol. in boiling  $\text{H}_2\text{O}$ . (Habermann, W. A. B. 90, 2, 268.)

$+ 4\text{H}_2\text{O}$ . Sol. in alkaline solution of  $\text{KNa}$  tartrate. (Groger, Z. anorg. 1902, 31, 327.)

(Brunswick green). Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids.

Min. *Atacamite*. Sol. in acids, and  $\text{NH}_4\text{OH} + \text{Aq}$ .

Sol. in cold sat. citric acid + Aq. (Bolton, B. 1880, 13, 732.)

$4\text{CuO}$ ,  $\text{CuCl}_2 + 6\text{H}_2\text{O}$  (Kane, Gm.—K. 5, 1, 919.)

$+ 8\text{H}_2\text{O}$ . Min. *Talkingite* (Church, Gm.—K. 5, 1, 919.)

$5\text{Cu(OH)}_2$ ,  $\text{Cu}_2\text{Cl}_2\text{Cl(OH)}$ . Insol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . (Kuhling, B. 1901, 34, 2852.)

$7\text{CuO}$ ,  $2\text{CuCl}_2 + 9\text{H}_2\text{O}$ . (Reindel.)

$6\text{CuO}$ ,  $\text{CuCl}_2 + 9\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in acetic acid. (Neumann, Repert. 37, 304.)

$8\text{CuO}$ ,  $\text{CuCl}_2 + 12\text{H}_2\text{O}$ . Min. *Footite*. (König, Zeit. Kryst. 1891, 19, 601.)

Cupric zinc oxychloride,  $\text{ZnO}$ ,  $2\text{ZnCl}_2$ ,  $5\text{CuO}$  +  $6\text{H}_2\text{O}$ .

(André, C. R. 1888, 106. 855.) -

Cupric oxychloride ammonia,  $2\text{CuO}$ ,  $\text{CuCl}_2$ ,  $2\text{NH}_3$  +  $3\text{H}_2\text{O}$ .

(Dehéran, Gm.—K. 5. 1, 932.)

Cupric oxyfluoride,  $\text{CuO}$ ,  $\text{CuF}_2$  +  $\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  (Berzelius) (Balbiano, Gazz. ch. it. 14. 74)

Cupric oxyfluoride ammonia (cuprammonium oxyfluoride),  $\text{Cu}(\text{OH})\text{F}$ ,  $2\text{NH}_3$

(Balbiano, Gazz. ch. it. 14. 74.)

$3\text{CuO}$ ,  $\text{CuI}_2$  +  $x\text{H}_2\text{O}$ . (Tschirwinski, Gm.—K. 5. 1, 1584)

Cuprous oxyiodide,  $\text{Cu}_2\text{I}_2$ ,  $\text{CuO}$  +  $\text{H}_2\text{O}$ .

(Spring and Lucion, Bull. Ac. Belg. (3) 24. 21.)

Cupric oxyiodide,  $2\text{CuI}_2$ ,  $\text{CuO}$  +  $4\text{H}_2\text{O}$ .

Easily decomp. by  $\text{H}_2\text{O}$ . (Carnegie, Watts' Dict. II, 257.)

Copper oxysulphide,  $2\text{Cu}_2\text{S}$ ,  $\text{CuO}$ .

Insol. in  $\text{H}_2\text{O}$ . (Maumené, A. ch. (3) 18. 311.)

$5\text{CuS}$ ,  $\text{CuO}$ . Ppt. (Pelouze)

$2\text{CuS}$ ,  $\text{CuO}$ . Insol. in  $\text{H}_2\text{O}$ .

$\text{CuS}$ ,  $\text{CuO}$ . Insol. in  $\text{H}_2\text{O}$ .

Above comps. do not exist. (Pickering, Chem. Soc. 33. 136.)

Copper phosphide,  $\text{Cu}_3\text{P}_2$ .

Easily sol. in  $\text{HNO}_3$  or aqua regia; insol. in  $\text{HCl}$  + Aq. (Rose, Pogg. 6. 209.)

Sol. in  $\text{HNO}_3$  and  $\text{Br}_2$  + Aq. Decomp. by hot conc.  $\text{H}_2\text{SO}_4$ . (Rubénovitch, C. R. 1899, 128. 1399.)

$\text{Cu}_3\text{P}$ . Sol. in  $\text{HNO}_3$  + Aq. (Granger, A. ch. 1898, (7), 14. 64)

Crystallised. Completely sol. in hot  $\text{HNO}_3$ , aqua regia and  $\text{HF}$  +  $\text{HNO}_3$ . Slowly sol. in hot  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . Not attacked by hot or cold  $\text{HF}$  or acetic acid (Maronneau, C. R. 1899, 128. 939.)

$\text{Cu}_2\text{P}_2$ . Easily sol. in  $\text{HNO}_3$ . Sol. in hot conc.  $\text{H}_2\text{SO}_4$ . Sol. in conc.  $\text{HCl}$  + Aq. before the phosphide has been heated. (Rose, Pogg. 4. 110.)

$\text{Cu}_2\text{P}_2$ . Easily sol. in  $\text{HNO}_3$  or  $\text{HCl}$  + Aq. Sol. in  $\text{NH}_4\text{OH}$  + Aq. (Granger, Bull. Soc. (3) 9. 661.)

$\text{CuP}_2$ . Decomp. by  $\text{HNO}_3$ ; not readily sol. in  $\text{HCl}$ . Easily attacked by  $\text{Cl}_2$  or  $\text{Br}_2$  + Aq. (Granger, C. R. 1895, 120. 924.)

$\text{Cu}_2\text{P}_2$ . (Granger, C. R. N 1898, 77. 220.)

Very sol. in  $\text{HNO}_3$  and  $\text{Br}_2$  + Aq. Decomp. by hot conc.  $\text{H}_2\text{SO}_4$ . (Rubénovitch, C. R. 1899, 129. 338.)

Cupric zinc phosphide,  $10\text{Cu}_2\text{P}_2$ ,  $\text{Zn}_3\text{P}_2$  +  $\text{H}_2\text{O}$ . (Hvoslef, A. 100. 90.)

Copper phosphoselenide,  $\text{Cu}_2\text{Se}$ ,  $\text{P}_2\text{Se}_3$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl}$  + Aq, sol. in  $\text{HNO}_3$  + Aq. Insol. in cold alkalis, but decomp. slowly when heated therewith (Hahn, J. p. 93. 436)

$2\text{CuSe}$ ,  $\text{P}_2\text{Se}_2$ . Attacked only by fuming  $\text{HNO}_3$ . (Hahn.)

$2\text{CuSe}$ ,  $\text{P}_2\text{Se}_2$ . Sol. only in  $\text{HNO}_3$  + Aq. (Hahn.)

Copper phosphosulphide,  $2\text{Cu}_2\text{S}$ ,  $\text{P}_2\text{S}_5$ .

$\text{Cu}_2\text{S}$ ,  $\text{P}_2\text{S}_5$ . (Berzelius)

$2\text{Cu}_2\text{S}$ ,  $\text{P}_2\text{S}_5$ . (Berzelius)

$\text{CuS}$ ,  $\text{P}_2\text{S}_5$ . Insol. in  $\text{H}_2\text{O}$  and dil.  $\text{HCl}$  + Aq. Sol. in conc.  $\text{HCl}$  + Aq, from which it is precipitated by  $\text{H}_2\text{O}$ . (Berzelius, A. 46. 252.)

$8\text{CuS}$ ,  $\text{P}_2\text{S}_5$ . (Berzelius.)

$\text{Cu}_2\text{P}_2\text{S}_5$ . Sol. in conc.  $\text{HNO}_3$  and in aqua regia. Insol. in  $\text{HCl}$ . Not attacked by hot  $\text{H}_2\text{SO}_4$  or conc.  $\text{NaOH}$  + Aq. (Ferland, A. ch. 1899, (7), 17. 407)

Cuprous selenide,  $\text{Cu}_2\text{Se}$ .

Ppt. Sol. in  $\text{HCl}$  and in  $\text{H}_2\text{SO}_4$ .

Decomp. by  $\text{HNO}_3$ . Sol. in  $\text{NH}_4\text{OH}$  + Aq. (Fonzes-Diacon, C. R. 1900, 131. 1207.)

Sol. in  $\text{KCN}$  + Aq. (Heyn and Bauer, Metall 1903, 3. 84)

Mun. Berzelianite

Cupric selenide,  $\text{CuSe}$ .

(Little, A. 112. 211.)

Ppt. Sol. in  $\text{HCl}$  and in  $\text{H}_2\text{SO}_4$ . Decomp. by  $\text{HNO}_3$ . (Fonzes-Diacon, C. R. 1900, 131. 1207.)

Cuprocupric selenide,  $\text{Cu}_2\text{Se}_2$ .

Mun. Umangite. Sol. in  $\text{HNO}_3$ . (Klockmann, Zeit. Kryst. 1891. 19, 270)

Cuprous lead selenide,  $3\text{Cu}_2\text{Se}$ ,  $\text{PbSe}$ .

Mun. Zogite. Sol. in cold conc.  $\text{HNO}_3$  + Aq. with separation of Se.

Cupric lead selenide,  $\text{CuSe}$ ,  $\text{PbSe}$ .

Sol. in cold conc.  $\text{HNO}_3$  with separation of Se. (Karsten.)

$\text{CuSe}$ ,  $2\text{PbSe}$ . As above.

$\text{CuSe}$ ,  $4\text{PbSe}$ . As above.

Cuprous silver selenide,  $\text{Cu}_2\text{Se}$ ,  $\text{Ag}_2\text{Se}$

Mun. Eucaimite. Sol. in hot  $\text{HNO}_3$  with decomp. (Berzelius.)

Cuprous silicide,  $\text{Cu}_2\text{Si}$ .

Sol. in warm dil. or conc.  $\text{HNO}_3$ . Only sl. sol. in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HF}$ . Sol. in a mixture of  $\text{HNO}_3$  and  $\text{HF}$ . Not attacked by solutions of alkalis (Vigouroux, C. R. 1906, 142. 88.)

$\text{Cu}_2\text{Si}_2$ . Sol. in aqua regia and fused sodium potassium carbonate. (de Chalmot, Am. Ch. J. 1896, 18, 95.)

$\text{Cu}_2\text{Si}$  Decomp. by water and moist air, and by acids and fused alkali. (Vigouroux, C. R. 1898, 122, 319.)

Cuprous sulphide,  $\text{Cu}_2\text{S}$ .

More sol. in  $\text{H}_2\text{O}$  than  $\text{Ag}_2\text{S}$ , but much less than  $\text{PbS}$  (Bodlander, Z. phys. Ch. 1898, 27, 64.)

1 l  $\text{H}_2\text{O}$  dissolves  $3.1 \times 10^{-6}$  moles  $\text{Cu}_2\text{S}$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58, 294.)

Very slowly decomp. by dil  $\text{H}_2\text{SO}_4$  in presence of oxygen. (Thompson, Electrochem. Ind. 1904, 2, 225.)

Decomp. by conc  $\text{H}_2\text{SO}_4$ . (Picketing, C. N. 1878, 37, 37.)

Cold  $\text{HNO}_3 + \text{Aq}$  dissolves out Cu and leaves  $\text{CuS}$ , hot  $\text{HNO}_3$  dissolves with separation of S. Sl. sol. in boiling conc.  $\text{HCl} + \text{Aq}$ . Insol. in  $(\text{NH}_4)_2\text{S} + \text{Aq}$ .

5N- $\text{HCl}$  dissolves  $\text{Cu}_2\text{S}$  very slightly (0.0038 g Cu in  $7\frac{1}{2}$  hrs) but it is more sol. in presence of Cl, when 0.672 g. are dissolved in  $7\frac{1}{2}$  hours. (Egh, Z. anorg. 1902, 30, 46.)

Sol with exclusion of air in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Malzac, Pat. 1904.)

Insol. in acetone (Naumann, B. 1904, 37, 4329, Eidmann, C. C. 1899, II, 1014.)

Min *Chalcocite*. Completely sol. in warm  $\text{HNO}_3$  with separation of S.

Cupric sulphide,  $\text{CuS}$ .

Almost absolutely insol in  $\text{H}_2\text{O}$ , sol. in 950,000 pts  $\text{H}_2\text{O}$ . When exposed to the air, dissolves in  $\text{H}_2\text{O}$  as  $\text{CuSO}_4$ . Easily sol. in boiling  $\text{HNO}_3$  with separation of S. Difficultly sol. in hot conc.  $\text{HCl} + \text{Aq}$ . Insol in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  (1.6). (Hoffmann, A. 115, 288.)

Pptd. by  $\text{H}_2\text{S}$  or  $(\text{NH}_4)_2\text{S} + \text{Aq}$  in presence of 100,000 pts  $\text{H}_2\text{O}$  (Pfaff), 200,000 pts.  $\text{H}_2\text{O}$  (Lassaigne), 15,000 pts.  $\text{H}_2\text{O}$  and 7500 pts  $\text{HCl}$ , but with 40,000 pts  $\text{H}_2\text{O}$  and 20,000 pts.  $\text{HCl}$  no colour is visible (Reinsch).

1 l  $\text{H}_2\text{O}$  dissolves  $3.51 \times 10^{-6}$  moles  $\text{CuS}$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58, 294.) Insol in  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Guerout, C. R. 1872, 75, 1276.)

Decomp. by conc.  $\text{H}_2\text{SO}_4$ . (Kliche, J. B. 1890, 593.)

Sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Berzelius) Sol in alkali bicarbonates +  $\text{Aq}$ .

Insol in  $\text{NH}_4\text{NO}_3$  or  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Bött) Insol. in acidified conc. alkali chlorides +  $\text{Aq}$ . (Cushman, Am. Ch. J. 1896, 17, 382.)

Sol. in  $\text{FeCl}_3 + \text{Aq}$  with separation of S. (Cumenge and Wimmer, Dingl. 1883, 260, 123.)

Decomp. by boiling  $\text{CuCl}_2 + \text{Aq}$  in presence of  $\text{HCl}$  or  $\text{NaCl}$ . (Raschig, Gm.-K. 6, 1, 819.)

Sol in  $\text{Fe}_2(\text{SO}_4)_3 + \text{Aq}$  in presence of large excess of air. (Thompson, Electrochem. Ind. 1904, 2, 228.)

Insol in  $\text{KOH}$ , or  $\text{K}_2\text{S} + \text{Aq}$ , especially if boiling, appreciably sol in colourless and even more readily in hot yellow  $(\text{NH}_4)_2\text{S} + \text{Aq}$ . Sl sol in  $\text{Na}_2\text{S} + \text{Aq}$ , more easily in  $\text{NaSH} + \text{Aq}$  (Becker, Sill. Am. J. (3) 33, 199.)

100 cc sat.  $\text{Na}_2\text{S} + \text{Aq}$  (sp gr = 1.225) dissolve 0.0032 g  $\text{CuS}$ . (Holland, Ann. Chem. Anal. 1897, 2, 243.)

Sol. in K polysulphides (3-64%). (Prost, Bull. Soc. Belg Chim 1897, 103.)

Appreciably sol in alkali polysulphides +  $\text{Aq}$ . (Rossing, Z. anal. 1902, 41, 1.)

Sol. in considerable quantity in alkali sulpharsenates, sulphantimonates, and sulphostannates +  $\text{Aq}$ . Therefore when a mixed ppt. of  $\text{CuS}$  and  $\text{As}_2\text{S}_3$ ,  $\text{Sb}_2\text{S}_3$ , or  $\text{SnS}$  is treated with  $\text{K}_2\text{S}$ , a portion of the  $\text{CuS}$  is dissolved. (Wöhler, A. 34, 236.)

Sol in alkali sulphovanadates, or sulphotungstates +  $\text{Aq}$  (Storch, B. 16, 2015.)

Sol. in alkali sulphomolybdates +  $\text{Aq}$  (Debray, C. R. 96, 1618.)

Insol in K thiocarbonate +  $\text{Aq}$ . (Rosenblatt, Z. anal. 26, 15.)

Sol. in  $\text{KCN} + \text{Aq}$ .

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 827.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790); ethyl acetate (Naumann, B. 1910, 43, 314.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329, Eidmann, C. C. 1899, II, 1014.)

Insol. in Na xanthogenate (Ragg, Ch. Z. 1908, 32, 677.)

Solubility of  $\text{CuS}$  in sugar +  $\text{Aq}$  at  $t^\circ$   
g  $\text{CuS}$  per l. of solution

$t^\circ$	10% sugar	30% sugar	50% sugar
17.5	0.5672	0.8632	0.9076
45	0.3659	0.7220	1.0589
75	1.1345	1.2033	1.2809

(Stolle, Z. Ver. Zuckerind. 1900, 50, 331.)

Min. *Covellite*.

*Colloidal*. Aqueous solution is stable when it contains 5 g.  $\text{CuS}$  in a litre; when it contains 4 or 5 times that amount it is decomposed in an hour.

Solutions of salts of the following concentration cause a precipitate in the above solution. Salts of univalent elements—

Salts of univalent elements—

$\text{K}_2\text{Fe}(\text{CN})_6$	1 : 62
$\text{K}_2\text{Fe}(\text{CN})_6$	1 : 127

(Spring and de Boeck, Bull. Soc. (2) 58. 165.)

Copper polysulphide,  $\text{Cu}_2\text{S}_x$ .*Amorphous.* Ppt. Decomp. by boiling alcohol. (Rössing, Z. anorg. 1900, 25. 413.) $\text{Cu}_2\text{S}_x$  *Amorphous.* Ppt. can be boiled with  $\text{H}_2\text{O}$  without decomposition. (Rössing, Z. anorg. 1900, 25. 4, 11.) $\text{Cu}_2\text{S}_x$ . Ppt; insol in alkali sulphides; decomp. by conc.  $\text{HNO}_3$ . (Bodroux, C. R. 1900, 130. 1398.)

Could not be obtained. (Rössing, Z. anorg. 1900, 25. 414.)

 $\text{Cu}_2\text{S}_x$ . Ppt. Decomp. by  $\text{H}_2\text{O}$ . Sol. in alkali and barium polysulphides + Aq. Decomp. by colorless alkali sulphides + Aq. (Rössing, Z. anorg. 1900, 25. 407.)Cuprous iron (ferric) sulphide,  $\text{Cu}_2\text{S}$ ,  $\text{Fe}_2\text{S}_3$ .Decomp. by conc.  $\text{HCl}$  + Aq. Sol. in boiling  $\text{HNO}_3$  + Aq. of 1.2 sp. gr. (Schnneider, J. pr. (2) 38. 569.)Min. *Chalcocopyrite*. Insol. in  $\text{HCl}$  + Aq. When heated in a sealed tube with  $\text{H}_2\text{S}$  + Aq, a portion of it dissolves with difficulty and subsequent deposition of S. (Senarmont, A. ch. (3) 32. 168.)Cuprocupric iron (ferric) sulphide,  $\text{Cu}_2\text{S}$ ,  $\text{CuS}$ ,  $\text{FeS}$ .Min. *Bohmite*. Sol. in  $\text{HCl}$  + Aq with a residue of S.Cupric iron (ferric) sulphide,  $\text{CuS}$ ,  $\text{Fe}_2\text{S}_3$ .Min. *Cubanite*.Copper iron potassium sulphide,  $\text{K}_2\text{FeCu}_2\text{S}_4$ .Sl. attacked by cold dil.  $\text{HCl}$  + Aq. Decomp. by warming. (Schnneider, Pogg. 138. 318.)Copper iron sodium sulphide,  $\text{Na}_2\text{FeCu}_2\text{S}_4$ .Sl. attacked by cold dil., easily decomp. by hot  $\text{HCl}$  + Aq. (Schnneider, Pogg. 138. 318.)Cuprous lead sulphide,  $9\text{Cu}_2\text{S}$ ,  $2\text{PbS}$ . $3\text{Cu}_2\text{S}$ ,  $2\text{PbS}$ . $2\text{Cu}_2\text{S}$ ,  $2\text{PbS}$ . Min. *Cuproplumbite*.

## Copper phosphorus sulphide.

See Copper phosphosulphide.

## Cupric platinum sulphide.

See Sulphoplatinate, cupric.

Cuprous potassium sulphide,  $4\text{Cu}_2\text{S}$ ,  $\text{K}_2\text{S}$ .

(Ditte, C. R. 98. 1429.)

Cuprocupric potassium sulphide,  $3\text{Cu}_2\text{S}$ ,  $2\text{CuS}$ ,  $\text{K}_2\text{S}$ .Not decomp. by very dil.  $\text{HCl}$  + Aq, but easily by conc.  $\text{HCl}$  + Aq on warming. (Schnneider, Pogg. 138. 311.)Copper potassium polysulphide,  $\text{KCuS}_x$ .Sl. sol. in cold  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . Decomp. by conc. and dil.  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , and  $\text{HNO}_3$ . Sl. sol. in alcohol. (Biltz and Herms, B. 1907, 40. 977.) $2\text{CuS}_x$ ,  $\text{K}_2\text{S}$ . Decomp. by  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4\text{SH}$  + Aq. (Priwoznik, B. 5. 1291.) $\text{K}_2\text{Cu}_2\text{S}_{10}$ . Easily sol. in  $\text{H}_2\text{O}$ . 1 g is sol. in less than 5 ccm.  $\text{H}_2\text{O}$ . Rapidly decomp. by dil. acids, slowly by conc. acids. Sl. sol. in alcohol. (Biltz and Herms, B. 1907, 40. 983.)Cupric rubidium polysulphide,  $\text{RbCuS}_x$ .

As K salt. (Biltz and Herms, B. 1907, 40. 978.)

 $\text{Rb}_2\text{Cu}_2\text{S}_{10}$ . Easily sol. in  $\text{H}_2\text{O}$ . Decomp. by acids. Sl. sol. in alcohol (Biltz and Herms, B. 1907, 40. 985.)Cuprous silver sulphide,  $\text{Cu}_2\text{S}$ ,  $\text{Ag}_2\text{S}$ .Min. *Stromeyerite*. Sol. in  $\text{HNO}_3$  + Aq with separation of S. $\text{Cu}_2\text{S}$ ,  $3\text{Ag}_2\text{S}$ . Min. *Jalpaite*. As above.Cuprous sodium sulphide,  $\text{Na}_2\text{S}$ ,  $\text{Cu}_2\text{S}$ .

(Bodländer, Z. Elektrochem. 1905, 11. 181.)

 $\text{Na}_2\text{S}$ ,  $2\text{Cu}_2\text{S}$ . (Bodländer, Z. Elektrochem. 1905, 11. 181.)

Cuprocupric sodium sulphide,  $\text{Cu}_2\text{S}$ ,  $\text{CuS}$ ,  $\text{Na}_2\text{S}$ .

Scarcely decomp. by cold dil.  $\text{HCl} + \text{Aq}$ ; conc.  $\text{HCl} + \text{Aq}$  decomp. easily on warming, without, however, dissolving all the  $\text{Cu}_2\text{S}$ . Completely decomp. by warm  $\text{HNO}_3 + \text{Aq}$  (Schneider, Pogg. 138. 315.)

Copper zinc sulphide,  $\text{CuS}$ ,  $3\text{ZnS}$ .

Copper sulphophosphide.

See Copper phosphosulphide.

Cupric telluride,  $\text{CuTe}$ .

$\text{Cu}_2\text{Te}_3$ . Insol. in  $\text{H}_2\text{O}$ . (Parkmann, Sill. Am. J. (2) 3. 335.)

$\text{Cu}_2\text{Te}$ . (Brauner, M. 1889. 423.)

Croceocobaltic bromide,

$\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Br}$ .

Very sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$  (Gibbs, Proc. Am. Acad. 10. 1.)

— chloraurate,  $2\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$ ,  $\text{AuCl}_3$ .  
Difficultly sol. in  $\text{H}_2\text{O}$ .

— chloride,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$ .

Very sl. sol. in cold easily in hot  $\text{H}_2\text{O}$ , but more sol. than the sulphate. (Gibbs.)

— chloroplatinate,  $2\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$ ,  $\text{PtCl}_4$ .

Can be recrystallised without decomp. with difficulty. (Gibbs and Genth, Sill. Am. J. (2) 24. 91.)

— chromate,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]\text{CrO}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

— dichromate,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]\text{Cr}_2\text{O}_7$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

— periodide,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{I}$ ,  $\text{I}_2$ .

Difficultly sol. in cold  $\text{H}_2\text{O}$  and alcohol. Decomp. by hot  $\text{H}_2\text{O}$ . (Gibbs.)

— nitrate,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{NO}_3$ .

Sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$  or dil. acids. Much more sol. than the sulphate. (Gibbs.)

Sol. in about 400 pts. cold  $\text{H}_2\text{O}$ . (Jørgensen, Z. anorg. 5. 163.)

— nitrite cobaltic nitrite,  $3\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2$ ,  $\text{Co}(\text{NO}_2)_3$ .

Somewhat sol. in  $\text{H}_2\text{O}$ . (Jørgensen, Z. anorg. 5. 178.)

— nitrite diamine cobaltic nitrite,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2$ ,  $(\text{NO}_2)_2(\text{NH}_3)_2\text{Co}(\text{NO}_2)_2$ .

Nearly insol. in cold, very sl. sol. in boiling  $\text{H}_2\text{O}$ . (Jørgensen.)

Croceocobaltic phosphomolybdate,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{O}$ ,  $24\text{MoO}_3$ ,  $\text{P}_2\text{O}_5$ .

Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 3. 317.)

— sulphate,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{SO}_4$ .

Very sl. sol. in cold or hot  $\text{H}_2\text{O}$ , more easily in hot dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

Cuprammonium compounds.

See Copper compounds, ammonia.

Cupro(eti) ammonium tetraiodide.

See Cupric tetraiodide ammonia.

Cupric acid.

Known only in solution (Kruger, Pogg. 62. 445.)

Calcium cuprate.

Decomp. by  $\text{H}_2\text{O}$  with evolution of oxygen. (Kruger and Crum, A. 55. 213.)

Cyanhydric acid,  $\text{HCN}$ .

Miscible with  $\text{H}_2\text{O}$ , alcohol, and ether with absorption of heat

Sp. gr. of  $\text{HCN} + \text{Aq}$ .

% HCN	Sp. gr.	% HCN	Sp. gr.
1.60	0.9979	4.0	0.9940
1.68	0.9978	4.6	0.9930
1.77	0.9975	5.0	0.9923
2.0	0.9974	5.3	0.9914
2.1	0.9973	5.8	0.9900
2.3	0.9970	6.4	0.9890
2.5	0.9967	7.3	0.9870
2.7	0.9964	8.0	0.9840
3.0	0.9958	9.1	0.9815
3.2	0.9952	10.6	0.9788
3.6	0.9945	16.0	0.9570

(Ure, Quar. J. Sci. 13. 321.)

$2\text{HCN}$  mixed with  $3\text{H}_2\text{O}$  causes a diminution of temp. of  $9.75^\circ$ . (Bussy and Bugnet, A. ch. (4) 3. 231.)

Miscible with volatile oils and other organic compounds.

Cyanhydric iodhydric acid,  $\text{HI}$ ,  $\text{HCN}$ .

Easily sol. in  $\text{H}_2\text{O}$  or alcohol, with rapid decomp. Sl. sol. in ether. (Gal, A. 138. 38.)

Cyanides.

The alkali cyanides are easily sol. in  $\text{H}_2\text{O}$ ; those of the alkali-carths are less sol., while all others are insol. with the exception of  $\text{Hg}(\text{CN})_2$ . All cyanides are sol. in  $\text{KCN} + \text{Aq}$ .

Ammonium cyanide,  $\text{NH}_4\text{CN}$ .

Unstable; easily sol. in  $\text{H}_2\text{O}$  and alcohol.

**Ammonium cobaltic mercuric cyanide.***See* Cobalticyanide, ammonium mercuric.**Ammonium cuprous cyanide,  $\text{NH}_4\text{CN}$ ,  $\text{Cu}_2(\text{CN})_2$** 

Ppt. Decomp. by acids

+ $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , less sol. in alcohol. Decomp. by acids and alkalis. (Treadwell and Giese, *Z. anorg. 1904*, 39, 90.)  
 $2\text{NH}_4\text{CN}$ ,  $\text{Cu}_2(\text{CN})_2$ . Sl. sol. in  $\text{H}_2\text{O}$ , but decomp. by long boiling therewith. Sol. in  $\text{HCN}$ +Aq. (Dufau, *A. 88*, 278.)

**Ammonium cuprous cyanide ammonia,  $\text{NH}_4\text{CN}$ ,  $2\text{Cu}_2(\text{CN})_2$ ,  $\text{NH}_3$** Easily decomp. (Treadwell and Giese, *Z. anorg. 1904*, 39, 90.)

+ $2\text{H}_2\text{O}$ . Insol. in cold, decomp. by boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$ +Aq. (Fleurent, *C. R.* 1893, 116, 191.)

$\text{NH}_4\text{CN}$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $3\text{NH}_3$ . Insol. in cold, sl. sol. in boiling  $\text{H}_2\text{O}$  without decomp. Sol. in  $\text{NH}_4\text{OH}$ +Aq. (Fleurent, *C. R.* 1891, 113, 1046.)

$\text{NH}_4\text{CN}$ ,  $2\text{Cu}_2(\text{CN})_2$ ,  $2\text{NH}_3$ + $2\text{H}_2\text{O}$ . (Fleurent, *B.* 25, 498R.)

**Ammonium gold (aurous) cyanide  $\text{NH}_4\text{CN}$ ,  $\text{AuCN}$ .**Easily sol. in cold or warm  $\text{H}_2\text{O}$  or in alcohol. Insol. in ether.**Ammonium gold (auric) mercuric cyanide, basic,  $3\text{NH}_4\text{CN}$ ,  $2\text{Au}_2\text{O}$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgO}$ . (Schmidt, *Ch. Z.* 1896, 20, 633.)****Ammonium mercuric silver cyanide, basic,  $\text{NH}_4\text{CN}$ ,  $2\text{Ag}_2\text{O}$ ,  $3\text{AgCN}$ ,  $4\text{Hg}(\text{OH})\text{CN}$ + $\frac{1}{2}\text{H}_2\text{O}$  (Schmidt, *Z. anorg.* 1895, 9, 431.)****Ammonium nickel cyanide,  $2\text{NH}_4\text{CN}$ ,  $\text{Ni}(\text{CN})_2$ .**

Easily decomposed.

**Ammonium tungsten cyanide.***See* Tungstocyanide, ammonium.**Ammonium zinc cyanide,  $2\text{NH}_4\text{CN}$ ,  $\text{Zn}(\text{CN})_2$ . Sol. in  $\text{H}_2\text{O}$ .****Ammonium cyanide mercuric nitrate silver cyanide basic,  $2\text{Hg}(\text{OH})\text{NO}_2$ ,  $3\text{NH}_4\text{CN}$ ,  $4\text{AgCN}$ . (Schmidt, *Z. anorg.* 1895, 9, 431.)****Arsenic tricyanide,  $\text{As}(\text{CN})_3$ .**Decomp. by  $\text{H}_2\text{O}$ . Not attacked by cold conc.  $\text{H}_2\text{SO}_4$ . Decomp. on heating. (Guenez, *C. R.* 1892, 114, 1188.)**Barium cyanide,  $\text{Ba}(\text{CN})_2$** Rather sl. sol. in  $\text{H}_2\text{O}$ , more easily in  $\text{KCN}$ +Aq. (Schulz, *J. pr.* 68, 257.)

10 pts.  $\text{H}_2\text{O}$  dissolve 8 pts., and 10 pts. 70% alcohol dissolve 18 pts.  $\text{Ba}(\text{CN})_2$  at 14° (Joannis, *A. ch.* (5) 26, 489.)

Insol. in methyl acetate. (Naumann, *B.* 1900, 42, 3790.)

+ $2\text{H}_2\text{O}$ . Very deliquescent  
 $\text{Ba}(\text{CN})_2$ ,  $\text{BaO}$  (Drechsel, *J. pr.* (2) 21, 84.)

**Barium cadmium cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Cd}(\text{CN})_2$ + $\text{H}_2\text{O}$ .**Easily sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH}$ +Aq.Sl. sol. in alcohol (Loeb, *Dissert.* 1902.)

$2\text{Ba}(\text{CN})_2$ ,  $3\text{Cd}(\text{CN})_2$ + $10\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Weselsky, *B.* 2, 590.)

**Barium cobaltous cobaltic cyanide.***See* Cobaltocobalticyanide, barium.**Barium cuprous cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ .**Sol. in  $\text{H}_2\text{O}$  without decomp. (Traube, *Z. anorg.* 1894, 8, 21.)

+ $\text{H}_2\text{O}$ . (Weselsky, *B.* 2, 590.)

Could not be obtained (Grossmann, *Z. anorg.* 1905, 43, 101.)

+ $4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Grossmann, *Z. anorg.* 1905, 43, 101.)

$2\text{Ba}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ + $6\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Grossmann, *Z. anorg.* 1905, 43, 105.)

**Barium gold (aurous) cyanide,  $\text{Ba}(\text{CN})_2$ ,  $2\text{AuCN}$ + $2\text{H}_2\text{O}$ .**Sl. sol. in cold but easily sol. in hot  $\text{H}_2\text{O}$ .Sl. sol. in alcohol. (Lundbom, *Lund Univ. Arsk.* 12, No.6.)**Barium iridium cyanide.***See* Iridicyanide, barium.**Barium manganous cyanide,  $\text{Ba}(\text{CN})_2$ ,  $2\text{Mn}(\text{CN})_2$ .**

Ppt. (Descamps.)

*See also* Manganocyanide and Manganicyanide, barium.**Barium mercuric cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Hg}(\text{CN})_2$ + $3\text{H}_2\text{O}$ .**Very hygroscopic. Very sol. in  $\text{H}_2\text{O}$  (Grossmann, *B.* 1904, 37, 4112.)**Barium mercuric cyanide iodide,  $\text{Ba}(\text{CN})_2$ ,  $\text{HgI}_2$ + $6\text{H}_2\text{O}$ .**(Varet, *C. R.* 1895, 121, 499.)**Barium palladium cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Pd}(\text{CN})_2$ + $4\text{H}_2\text{O}$ .***See* Palladocyanide, barium.**Barium nickel cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Ni}(\text{CN})_2$ + $3\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ , decomp. by acids with pptn. of  $\text{Ni}(\text{CN})_2$ . (Weselsky, *B.* 2, 590.)

- Barium silver cyanide,  $\text{Ba(CN)}_2$ ,  $2\text{AgCN} + \text{H}_2\text{O}$   
Sol. in  $\text{H}_2\text{O}$ . (Weselsky, B. 2. 589)
- Barium zinc cyanide,  $\text{Ba(CN)}_2$ ,  $\text{Zn(CN)}_2 + 2\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ .
- Cadmium cyanide, basic,  $\text{CdO}_2\text{H}_2$ ,  $2\text{Cd(CN)}_2 + 4\text{H}_2\text{O}$   
Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol (Loebe, Dissert, 1902.)
- Cadmium cyanide,  $\text{Cd(CN)}_2$ .  
Sl. sol. in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 17 pts  $\text{Cd(CN)}_2$  at  $15^\circ$ . (Joannis)  
Easily sol. in acids; sol. in  $\text{KCN} + \text{Aq}$ . Sol. in warm  $\text{NH}_4\text{OH} + \text{Aq}$ , but insol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Wittstein.)  
Insol. in benzonitrile (Naumann, B. 1914, 47. 1370.)
- Cadmium calcium cyanide,  $\text{Cd(CN)}_2$ ,  $4\text{Ca(CN)}_2 + 20\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Loebe, Dissert, 1902.)
- Cadmium chromic cyanide.  
See Chromicyanide, cadmium.
- Cadmium cobaltic cyanide.  
See Cobalticyanide, cadmium.
- Cadmium cuprous cyanide,  $2\text{Cd(CN)}_2$ ,  $\text{Cu}_2(\text{CN})_2$ .  
Permanent. Insol. in  $\text{H}_2\text{O}$ . Sl. sol in cold, easily in warm  $\text{HCl} + \text{Aq}$  without decomp., except by long boiling. Insol. in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_3$  salts +  $\text{Aq}$ . (Schüler)
- Cadmium cupric cyanide,  $\text{Cd(CN)}_2$ ,  $\text{Cu(CN)}_2$ .  
Very unstable.
- Cadmium gold (aurous) cyanide,  $\text{Cd(CN)}_2$ ,  $2\text{AuCN}$   
Nearly insol in cold  $\text{H}_2\text{O}$ . Sl. sol. in boiling  $\text{H}_2\text{O}$ . Insol in alcohol (Landbom)
- Cadmium mercuric cyanide,  $2\text{Cd(CN)}_2$ ,  $3\text{Hg(CN)}_2$ .  
Permanent. Readily sol. in cold  $\text{H}_2\text{O}$ . (Schüler.)
- Cadmium mercuric cyanide mercuric iodide,  $\text{Cd(CN)}_2$ ,  $\text{Hg(CN)}_2$ ,  $\text{HgI}_2 + 8\text{H}_2\text{O}$ .  
Very sol. in  $\text{H}_2\text{O}$ . (Varet, Bull. Soc. (3) 5. S.)  
 $+ 7\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet, C. R. 1890, 111. 679.)
- Cadmium mercuric cyanide mercuric iodide,  $\text{Cd(CN)}_2$ ,  $\text{Hg(CN)}_2$ ,  $\text{HgI}_2 + 8\text{H}_2\text{O}$ .  
Very sol. in  $\text{H}_2\text{O}$ . (Varet, Bull. Soc. (3) 5. S.)
- +  $7\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet, C. R. 1890, 111. 679.)
- Cadmium mercuric cyanide mercuric iodide ammonia,  $\text{Cd(CN)}_2$ ,  $\text{Hg(CN)}_2$ ,  $\text{HgI}_2$ ,  $4\text{NH}_3$ .  
Very easily decomp. (Varet, Bull. Soc. (3) 6. 22.)
- Cadmium molybdenum cyanide.  
See Molybdocyanide, cadmium.
- Cadmium potassium cyanide,  $\text{Cd(CN)}_2$ ,  $2\text{KCN}$ .  
Sol. in 3 pts. cold, and 1 pt. boiling  $\text{H}_2\text{O}$ . Insol. in absolute alcohol. (Rammelsberg.)
- Cadmium sodium cyanide,  $\text{Na}_2\text{Cd}_2(\text{CN})_2$ ,  $+ 3\text{H}_2\text{O}$   
Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Loebe, Dissert, 1902.)
- Cadmium strontium cyanide,  $\text{Cd(CN)}_2$ ,  $2\text{Sr(CN)}_2 + 3\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Loebe, Dissert. 1902.)
- Cadmium tungsten cyanide,  $\text{Cd}_2\text{W(CN)}_2 + 8\text{H}_2\text{O}$ .  
Nearly insol. in  $\text{H}_2\text{O}$ .  
Sl. sol in dil  $\text{HCl}$  Sol. in conc  $\text{NH}_4\text{OH} + \text{Aq}$ .  
Insol. in organic solvents. (Olsson, Z. anorg. 1914, 88. 68)
- Cadmium cyanide dihydrazine,  $\text{Cd(CN)}_2$ ,  $(\text{N}_2\text{H}_4)_2$ .  
Easily sol in dil. acids. (Franzen, Z. anorg. 1911, 70. 152.)
- Cæsium cuprous cyanide,  $\text{CsCN}$ ,  $\text{CuCN} + 1\frac{1}{2}\text{H}_2\text{O}$ .  
 $\text{H}_2\text{O}$  separates  $\text{CuCN}$ . (Grossmann, Z. anorg 1905, 43. 98.)  
 $2\text{CsCN}$ ,  $\text{CuCN} + \text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg 1905, 43. 98.)  
 $2\text{CsCN}$ ,  $3\text{CuCN}$ . Insol. in, and not decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg 1905, 43. 98)
- Cæsium tungsten cyanide.  
See Tungstocyanide, cæsium.
- Calcium cyanide,  $\text{Ca(CN)}_2$ .  
Sol. in  $\text{H}_2\text{O}$ , but the solution is very unstable. (Schulz.)  
 $\text{Ca(CN)}_2$ ,  $3\text{CaO} + 15\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Joannis, A. ch. (5) 26. 496.)
- Calcium cuprous cyanide,  $\text{Ca(CN)}_2$ ,  $\text{CuCN} + 4\text{H}_2\text{O}$ .  
Easily decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1905, 43. 106.)  
 $\text{Ca(CN)}_2$ ,  $3\text{CuCN} + 8\text{H}_2\text{O}$ . Immediately

decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1905, 43. 96.)

Calcium gold (aurous) cyanide,  $\text{Ca}(\text{CN})_2$ ,  $2\text{AuCN} + 3\text{H}_2\text{O}$ .

Easily sol. in hot or cold  $\text{H}_2\text{O}$  or in alcohol. (Lindbom)

Calcium manganous cyanide,  $\text{Ca}(\text{CN})_2$ ,  $2\text{Mn}(\text{CN})_2$ .

Ppt. (Descamps)

See also Manganocyanide, calcium.

Calcium mercuric cyanide,  $\text{Ca}(\text{CN})_2$ ,  $2\text{Hg}(\text{CN})_2 + 8\text{H}_2\text{O}$ .

Very deliquescent (Grossmann, B. 1904, 37. 4143.)  
 $2\text{Ca}(\text{CN})_2$ ,  $3\text{Hg}(\text{CN})_2 + 6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Grossmann, B. 1904, 37. 4143.)

Calcium mercuric cyanide iodide,  $\text{Ca}(\text{CN})_2$ ,  $\text{HgI}_2$ ,  $\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$ .

(Varet, C. R. 1895, 121. 499)

Calcium nickel cyanide,  $\text{Ca}(\text{CN})_2$ ,  $\text{Ni}(\text{CN})_2 + 7\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ .

Calcium tungsten cyanide.

See Tungstocyanide, calcium.

Calcium zinc cyanide,  $(\text{Ca}(\text{CN})_2)_2$ ,  $\text{Zn}(\text{CN})_2 + 3\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and in alcohol (Loebe, Dissert. 1902.)

Cerous cyanide (?).

Ppt. Very easily decomp. (Behringer, A. 42. 139.)

Chromic cyanide, with  $\text{MCN}$ .

See Chromicyanide, M.

Chromous potassium cyanide.

See Chromocyanide, potassium.

Cobaltous cyanide,  $\text{Co}(\text{CN})_2 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . and  $\text{KCN} + \text{Aq}$ ; also in  $(\text{NH}_4)_2\text{CO}_3$  or  $\text{NH}_4$  succinate +  $\text{Aq}$ ; insol. in  $\text{NH}_4\text{NO}_3$  or  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Wittstein.)

Cobaltous cyanide with  $4\text{MCN}$ .

See Cobaltocyanide, M.

Cobaltic cyanide with  $3\text{MCN}$ .

See Cobaltocyanide, M.

Cobalt gold (aurous) cyanide,  $\text{Co}(\text{CN})_2$ ,  $2\text{AuCN}$ .

Insol. in  $\text{H}_2\text{O}$  or cold  $\text{HCl} + \text{Aq}$ .

Cobalt hydrazine cyanide,  $(\text{N}_2\text{H}_4)_2\text{Co}(\text{CN})_2$ .  
Deliquescent (Franzen, Z. anorg. 1911, 70. 155.)

Cobaltous cyanide ammonia,  $\text{Co}(\text{CN})_2$ ,  $2\text{NH}_3$ .

Unstable. (Peters, B. 1908, 41. 3178.)

Cuprous cyanide,  $\text{Cu}_2(\text{CN})_2$ .

Insol. in  $\text{H}_2\text{O}$  and dil. acids. Sol. in  $\text{NH}_4\text{OH}$ ,  $(\text{NH}_4)_2\text{SO}_4$  or  $\text{NH}_4$  succinate +  $\text{Aq}$ . and in hot  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . Sol. in conc.  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{KCN} + \text{Aq}$ .

Easily sol. in conc.  $\text{NH}_4\text{SCN}$  or  $\text{KSCN} + \text{Aq}$ . Sl. sol. in  $\text{NaSCN} + \text{Aq}$ . (Grossmann, Z. anorg. 1903, 37. 408.)

Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Very sl. sol. in pyridine. (Schroeder, Dissert. 1902.)

Mol weight determined in pyridine. (Werner, Z. anorg. 1897, 15. 20.)

Cupric cyanide,  $\text{Cu}(\text{CN})_2$ .

Easily decomp. Insol. in  $\text{H}_2\text{O}$

Sol. in pyridine. (Schroeder, Dissert. 1901.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Cuprocupric cyanide,  $\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2 + 5\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. by boiling. Sol. in cold conc.  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . and in hot  $\text{NH}_4$  salts +  $\text{Aq}$ .

Easily sol. in  $\text{KCN} + \text{Aq}$ . +  $\text{H}_2\text{O}$ . Ppt. (Dufau.)  
+  $\text{Cu}(\text{CN})_2$ ,  $2\text{Cu}_2(\text{CN})_2 + \text{H}_2\text{O}$ . Ppt.

Cuprous hydrazine cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{N}_2\text{H}_4\text{CN}$ .

Insol. in alcohol and  $\text{H}_2\text{O}$ . (Ferrattini, C. C. 1912, I. 1281.)

Cupric iridium cyanide.

See Iridicyanide, cupric.

Cuprous lithium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{LiCN} + \text{H}_2\text{O}$ .

Gradually decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1905, 43. 97.)

Cuprous magnesium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{Mg}(\text{CN})_2 + 11\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1905, 43. 103.)

Cuprous mercuric cyanide bromide,  $\text{Cu}(\text{CN})_2$ ,  $2\text{Hg}(\text{CN})_2$ ,  $\text{HgBr}_2$ .

Sol. in  $\text{H}_2\text{O}$ . (Varet, C. R. 1890, 110. 148.)

Cupric molybdenum cyanide ammonia.

See Molybdocyanide ammonia, cupric.

**Cuprous potassium cyanide,  $\text{Cu}_2(\text{CN})_2$ , 2KCN**

Sl sol in  $\text{H}_2\text{O}$ , with partial decomp. Decomp. by acids, but not by alkalis.

Decomp. by boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Fleurent, C. R. 1893, 116, 191.)

Sol. without decomp. in conc.  $\text{KSCN}$ . (Grossmann, Z. anorg. 1903, 37, 407.)

Sol. without decomp. in  $\text{KCN} + \text{Aq}$ . (Treadwell and Girsfeld, Z. anorg. 1904, 38, 94.)

$\text{Cu}_2(\text{CN})_2$ ,  $\text{KCN} + \text{H}_2\text{O}$ . Almost insol. in cold  $\text{H}_2\text{O}$ . 100 cc  $\text{H}_2\text{O}$  dissolve 0.0591 g. at  $15^\circ$ . Decomp. by much hot  $\text{H}_2\text{O}$  with separation of  $\text{Cu}_2(\text{CN})_2$ . Sol. in  $\text{KCN} + \text{Aq}$  or in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Treadwell and Girsfeld, Z. anorg. 1904, 38, 93.)

$3\text{Cu}_2(\text{CN})_2$ ,  $4\text{KCN}$ . Sol. in  $\text{H}_2\text{O}$ .

$\text{Cu}_2(\text{CN})_2$ ,  $6\text{KCN}$ . Sol. in  $\text{H}_2\text{O}$ .

**Cuprous potassium cyanide ammonia,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{KCN}$ ,  $\text{NH}_3$** 

(Treadwell and Girsfeld, Z. anorg. 1904, 39, 88.)

**Cuprous potassium cyanide potassium sulphocyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $4\text{KCN}$ ,  $2\text{KSCN}$ ,  $\text{H}_2\text{O}$** 

Easily sol. in cold  $\text{H}_2\text{O}$ . (Itzig, B. 1902, 35, 108.)

**Cupric potassium cyanide,  $\text{Cu}(\text{CN})_2$ ,  $2\text{KCN}$** 

Sol. in  $\frac{3}{4}$  pt.  $\text{H}_2\text{O}$  at  $16^\circ$  and  $\frac{1}{2}$  pt. at  $100^\circ$ . (Baiguet, J. Pharm. 1859, (3), 36, 168.)

**Cuprocupric potassium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{Cu}(\text{CN})_2$ ,  $2\text{KCN}$** 

(Straus, Z. anorg. 1895, 9, 15.)

**Cuprous rubidium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{RbCN}$** 

Sl. sol. in  $\text{H}_2\text{O}$ . Pure  $\text{H}_2\text{O}$  separates  $\text{CuCN}$ . (Grossmann, Z. anorg. 1905, 43, 100.)

$3\text{Cu}_2(\text{CN})_2$ ,  $4\text{RbCN}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Pure  $\text{H}_2\text{O}$  separates  $\text{CuCN}$ . (Grossmann, Z. anorg. 1905, 43, 98.)

**Cuprous silver cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{AgCN}$** 

Ppt.  $\text{Cu}_2(\text{CN})_2$ ,  $6\text{AgCN}$ . Sol. in excess of  $\text{Cu}_2(\text{CN})_2$ ,  $\text{KCN} + \text{Aq}$ . (Rammelsberg.)

**Cuprous sodium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{NaCN}$** 

(Traube, Z. anorg. 1894, 8, 21.)  
+  $4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in excess of  $\text{NaCN} + \text{Aq}$ . (Grossmann, Z. anorg. 1905, 43, 96.)

$\text{Cu}_2(\text{CN})_2$ ,  $\text{NaCN} + 2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1905, 43, 96.)

$\text{Cu}_2(\text{CN})_2$ ,  $4\text{NaCN} + 6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  without decomp. (Grossmann, Z. anorg. 1905, 43, 96.)

$\text{Cu}_2(\text{CN})_2$ ,  $6\text{NaCN} + 6\text{H}_2\text{O}$ . Very sol. in

$\text{H}_2\text{O}$  without decomp. (Grossmann, Z. anorg. 1905, 43, 96.)

**Cuprous strontium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{Sr}(\text{CN})_2 + 8\text{H}_2\text{O}$** 

$\text{H}_2\text{O}$  separates  $\text{Cu}_2(\text{CN})_2$ . (Grossmann, Z. anorg. 1905, 43, 103.)

**Cuprous cyanide ammonia,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{NH}_3$** 

Nearly insol. in cold  $\text{H}_2\text{O}$ . Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  in absence of oxygen. Insol. in alcohol and ether. Decomp. by hot  $\text{H}_2\text{O}$  and acids. (Treadwell and Girsfeld, Z. anorg. 1904, 39, 87.)

**Cuprocupric cyanide ammonia,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{Cu}(\text{CN})_2$ ,  $2\text{NH}_3$** 

(Malmberg, Arch. Pharm. 1898, 236, 256.)  
+  $\text{H}_2\text{O}$ . Sl. sol. in cold, decomp. by boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Dufau, A. 88, 278.)

$\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $3\text{NH}_3$ . (Mills, Z. Ch. 1867, 545.)

Sl. decomp. by boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  and can be recryst. therefrom. Insol. in alcohol and ether. Decomp. by alkalis and acids. (Treadwell and Girsfeld, Z. anorg. 1904, 39, 96.)

$\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $4\text{NH}_3$ . Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Treadwell and Girsfeld, Z. anorg. 1904, 39, 92.)

$2\text{Cu}_2(\text{CN})_2$ ,  $\text{Cu}(\text{CN})_2$ ,  $2\text{NH}_3$ . Insol. in  $\text{H}_2\text{O}$ , alcohol and ether. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by boiling acids and alkalis. (Treadwell and Girsfeld, Z. anorg. 1904, 39, 92.)

+  $\text{H}_2\text{O}$ . (Menthner, J. Pharm. 11, 257.)

$\text{Cu}(\text{CN})_2$ ,  $2\text{Cu}_2(\text{CN})_2$ ,  $4\text{NH}_3$ . (Hüllenkamp, A. 97, 218.)

$\text{Cu}(\text{CN})_2$ ,  $2\text{Cu}_2(\text{CN})_2$ ,  $6\text{NH}_3$ . (Schiff and Becchi, A. 134, 33.)

$2\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{NH}_3 + 3\text{H}_2\text{O}$ .

(Fleurent, C. R. 114, 1060.)

$2\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $4\text{NH}_3 + \text{H}_2\text{O}$ . Correct formula for  $\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $4\text{NH}_3$ . (Bouvcault, Bull. Soc. (3) 4, 641.)

**Cuprous cyanide ammonium sulphocyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $3\text{NH}_4\text{SCN}$** 

Decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1903, 37, 409.)

**Cupric cyanide hydrazine,  $\text{Cu}(\text{CN})_2(\text{N}_2\text{H}_4)$** 

Insol. in  $\text{H}_2\text{O}$  and cold dil. acids.

Sol. in warm dil. acids. (Franzen, Z. anorg. 1911, 70, 154.)

**Cuprous cyanide mercuric iodide,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{HgI}_2$** 

Sol. in  $\text{H}_2\text{O}$ . (Varet, Bull. Soc. (3) 4, 484.)

Cuprous cyanide potassium sulphocyanide,  
 $\text{Cu}_2(\text{CN})_2, 3\text{KSCN}$

Decomp by  $\text{H}_2\text{O}$ . (Grossmann, Z anorg  
 1903, 37. 409.)

Gold (aurous) cyanide,  $\text{AuCN}$ .

Insol in  $\text{H}_2\text{O}$ , alcohol, or ether. Not at-  
 tacked by dil., or conc. acids, even boiling  
 aqua regia

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , also in soluble cy-  
 anides +  $\text{Aq}$

Slowly decomp. by boiling  $\text{KOH} + \text{Aq}$ , also  
 by  $(\text{NH}_4)_2\text{S} + \text{Aq}$

Sol. in  $\text{K}_4\text{Fe}(\text{CN})_6 + \text{Aq}$  (Bentel, Z.  
 anorg. 1912, 78. 152.)

Gold (auric) cyanide with  $\text{MCN}$ .

See Auricyanide, M.

Gold (auroauric) mercuric cyanide auric  
 mercuric chloride,  $4\text{AuCN}$ ,  $\text{Au}(\text{CN})_3$ ,  
 $5\text{Hg}(\text{CN})_2$ ,  $7\text{AuCl}_3$ ,  $5\text{HgCl}_2$ .

(Schmidt, Ch. Z 1896, 20. 633.)

Gold (aurous) potassium cyanide,  $\text{AuCN}$ ,  
 $\text{KCN}$ .

Sol in 7 pts cold, and less than 0.5 pt. boil-  
 ing  $\text{H}_2\text{O}$ . Sl. sol in cold, and somewhat more  
 sol in boiling alcohol Insol. in ether  
 (Hinley, A 42. 160)

Decomp by warm acids, even tartaric, and  
 acetic acids.

Gold (aurous) sodium cyanide,  $\text{AuCN}$ ,  $\text{NaCN}$ .

Sl. sol in cold, more easily in hot  $\text{H}_2\text{O}$ .  
 Sl. sol. in alcohol. (Lindbom)

Gold (aurous) strontium cyanide,  $2\text{AuCN}$ ,  
 $\text{Sr}(\text{CN})_2 + 3\text{H}_2\text{O}$ .

As the Na salt.

Gold (aurous) zinc cyanide,  $2\text{AuCN}$ ,  $\text{Zn}(\text{CN})_2$ .

Nearly insol. in hot or cold  $\text{H}_2\text{O}$

Insol in cold  $\text{HCl} + \text{Aq}$ .

Gold (auric) cyanide auric mercuric chloride,  
 $\text{Au}(\text{CN})_3$ ,  $\text{AuCl}_3$ ,  $2\text{HgCl}_2$

(Schmidt, Ch. Z. 1896, 20. 633)

Gold (auroauric) cyanide aurous mercuric  
 chloride,  $12\text{AuCN}$ ,  $3\text{Au}(\text{CN})_3$ ,  $4\text{AuCl}_3$ ,  
 $2\text{HgCl}_2$ .

(Schmidt, Ch. Z 1896, 20. 633.)

Gold (auroauric) cyanide mercuric chloride.  
 $15\text{AuCN}$ ,  $2\text{Au}(\text{CN})_3$ ,  $5\text{HgCl}_2$ .

(Schmidt, Ch. Z. 1896, 20. 633.)

Iridium cyanide,  $\text{Ir}(\text{CN})_3$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCN} + \text{Aq}$ .

Iridium cyanide with  $\text{MCN}$ .

See Indicyanide, M

Lanthanum cyanide,  $\text{La}(\text{CN})_3$ .

Ppt. (Friedrichs and Smith, B. 11. 910,  
 1151.)

Lead cyanide,  $\text{Pb}(\text{CN})_2$ .

Sl. sol in cold, more in hot  $\text{H}_2\text{O}$ . Sol. in  
 $\text{HNO}_3 + \text{Aq}$ , and  $\text{KCN} + \text{Aq}$  Partially sol. in  
 $\text{NH}_4\text{OH} + \text{Aq}$ , and  $\text{NH}_4$  salts +  $\text{Aq}$ . Not  
 pptd in presence of Na citrate

Above compound is  $2\text{PbO}$ ,  $\text{Pb}(\text{CN})_2 +$   
 $\text{H}_2\text{O}$  (Joannis, A. ch. (5) 26. 201.)

$2\text{PbO}$ ,  $\text{Pb}(\text{CN})_2 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ .

Lead tungsten cyanide.

See Tungstocyanide, lead.

Lead zinc cyanide,  $\text{Pb}(\text{CN})_2$ ,  $2\text{Zn}(\text{CN})_2$ .

Ppt. (Rammelsberg)

Lead cyanide chloride,  $2\text{Pb}(\text{CN})_2$ ,  $\text{PbCl}_2$ .

Insol. in  $\text{H}_2\text{O}$ . (Grissom and Thorp, Am.  
 Ch J 10. 229)

Lithium mercuric cyanide mercuric iodide,  
 $2\text{Li}(\text{CN})_2$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgI}_2 + 7\text{H}_2\text{O}$

Deliquescent; sol. in  $\text{H}_2\text{O}$ . (Varet, C. R.  
 111. 526.)

Magnesium cyanide,  $\text{Mg}(\text{CN})_2$

Known only in aqueous solution which de-  
 composes on evaporation. (Schulz)

Magnesium mercuric cyanide,  $2\text{Mg}(\text{CN})_2$ ,  
 $3\text{Hg}(\text{CN})_2 + 5\text{H}_2\text{O}$

(Grossmann, B 1904, 37. 4143)

Magnesium mercuric cyanide mercuric  
 bromide,  $\text{Mg}(\text{CN})_2$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgBr}_2 +$   
 $8\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ . (Varet, Bull. Soc. (3)  
 7. 170.)

Magnesium mercuric cyanide mercuric  
 iodide,  $\text{Mg}(\text{CN})_2$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgI}_2 +$   
 $8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Varet, Bull. Soc. (3) 7. 170.)

Magnesium platinum cyanide.

See Platnocyamide, magnesium.

Magnesium tungsten cyanide.

See Tungstocyanide, magnesium.

Manganous and manganic cyanides.

See Manganocyanhydric, and Mangani-  
 cyanhydric acids.

Manganous strontium cyanide,  $2\text{Mn}(\text{CN})_2$ ,  
 $\text{Sr}(\text{CN})_2$ .

Ppt. (Descamps)

See also Manganocyanide, strontium.

**Manganous tungsten cyanide.***See Tungstocyanide, manganous.***Manganic cyanide, with MCN.***See Manganicyanide, M.***Manganous cyanide with MCN.***See Manganocyanide, M.***Mercuric cyanide, basic,  $\text{Hg}(\text{CN})_2 \cdot \text{HgO}$** Sl sol. in cold, moderately sol. in hot  $\text{H}_2\text{O}$ . Sol. with decomp. in  $\text{KOH}$ ,  $\text{KCN}$ , or  $\text{KCl} + \text{Aq.}$  (Johnston.)Decomp. by  $\text{H}_2\text{O}$  over  $80^\circ$  (Holdermann, Arch. Pharm. 1903, 244, 135.)Cold  $\text{H}_2\text{O}$  dissolves about 1%, boiling  $\text{H}_2\text{O}$  about 5% (Borelli, Gazz. ch. it. 1908, 38, (1), 361.)1.1% dissolves in  $\text{H}_2\text{O}$  at ord. temp. (Richard, J. Chim. Phys. (6) 18, 555.)At  $0^\circ$  1/100 mol dissolve in 1 l  $\text{H}_2\text{O}$ .At  $25^\circ$  1/32 " " " " "At  $90^\circ$  1/10 " " " " "

(Borelli, Gazz. ch. it. 1908, 38, (1), 361.)

1000 cc. cold  $\text{H}_2\text{O}$  dissolve 1.35g (Holdermann, Arch. Pharm. 1903, 244, 135.)Less sol. in cold  $\text{H}_2\text{O}$  than  $\text{Hg}(\text{CN})_2$ . (Pieverling, J. B. 1899, 783.)

Somewhat sol. in dil. alcohol.

Practically insol. in alcohol, ether,  $\text{C}_2\text{H}_5$  and all organic solvents. (Borelli, Gazz. ch. it. 1908, 38, (1), 361.)Sol. in 110 pt alcohol of  $90^\circ$  B $\acute{e}$ . (Richard, J. Chim. Phys. (6), 18, 555.) $3\text{Hg}(\text{CN})_2 \cdot \text{HgO}$ . (Joannus, A. ch. (5) 26, 469.)Moderately sol. in  $\text{H}_2\text{O}$ . (Barthe, J. Pharm. 1896, (6), 8, 186.)Very sol. in hot, less sol. in cold  $\text{H}_2\text{O}$  (Holdermann, Arch. Pharm. 1904, 242, 32.)Easily sol. in  $\text{HCl}$ . (Joannus, A. ch. 1882, (5) 26, 511.) $\text{Hg}(\text{CN})_2 \cdot 3\text{HgO}$  More sol. in  $\text{H}_2\text{O}$  than  $\text{Hg}(\text{CN})_2 \cdot \text{HgO}$ .**Mercuric cyanide,  $\text{Hg}(\text{CN})_2$** Moderately sol. in  $\text{H}_2\text{O}$ .100 pts.  $\text{Hg}(\text{CN})_2 + \text{Aq}$  sat at  $101.1^\circ$  contain 35 pts.  $\text{Hg}(\text{CN})_2$ , or 100 pts.  $\text{H}_2\text{O}$  dissolve 53.85 pts  $\text{Hg}(\text{CN})_2$  at  $101.1^\circ$ . (Griffiths.)Sol. in 8 pts  $\text{H}_2\text{O}$  at  $15^\circ$ . (Abl.)Sol. in 11 pts cold, and 2.5 pts. boiling  $\text{H}_2\text{O}$ . (Wittstein.)8 g. are sol. in 100 g.  $\text{H}_2\text{O}$  at  $-0.45^\circ$  (Guthrie, Phil. Mag. 1878, (5) 6, 40.)100 g.  $\text{H}_2\text{O}$  dissolve 9.3 g at  $13.5^\circ$  (Timofeev, Dissert. 1894.)100 cc sat solution contain 9.3 g at  $20^\circ$  (Konowalow, J. russ. Soc. 1898, (4) 30, 367.)Solubility in  $\text{H}_2\text{O}$  at  $25^\circ = 0.44$  mol. l. (Sherrill, Z. phys. Ch. 1903, 43, 735.)1 l  $\text{H}_2\text{O}$  dissolves 0.3956 mol (Hofmann and Wagner, Z. Elektrochem. 1909, 15, 444.)100 g.  $\text{H}_2\text{O}$  dissolve 12.5 g. at  $15^\circ$  (Marsh and Struthers, Chem. Soc. 1905, 87, 1879.)100 g.  $\text{H}_2\text{O}$  dissolve 11.27 g. at  $25^\circ$  Sp. gr. of solution = 1.0813 (Herz and Anders, Z. anorg. 1907, 52, 164.) $\text{Hg}(\text{CN})_2 + \text{Aq}$  containing 7.23%  $\text{Hg}(\text{CN})_2$  has sp. gr.  $20^\circ/20^\circ = 1.0572$ . $\text{Hg}(\text{CN})_2 + \text{Aq}$  containing 9.07%  $\text{Hg}(\text{CN})_2$  has sp. gr.  $20^\circ/20^\circ = 1.0743$ .

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19, 282.)

Sp. gr. at  $16^\circ/4^\circ$  of  $\text{Hg}(\text{CN})_2 + \text{Aq}$  containing 7.8921%  $\text{Hg}(\text{CN})_2 = 1.06376$ ; containing 5.4037% = 1.04246; containing 7.5009% = 1.06049. (Schäferrock, Z. phys. Ch. 1893, 11, 770.)Not decomp. by acids except hot conc.  $\text{H}_2\text{SO}_4$ .Sol without decomp. in  $\text{HNO}_3 + \text{Aq}$ . (Berzelius.)1 l.  $\text{NH}_4\text{OH} + \text{Aq}$  (5.2%  $\text{NH}_3$ ) dissolves 204.3 g at about  $25^\circ$ . (Konowalow.)

Solubility in bases.

1 l.  $\text{H}_2\text{O}$  containing 0.3286 mols  $\text{KOH}$  dissolves 0.5179 mols  $\text{Hg}(\text{CN})_2$ .1 l.  $\text{H}_2\text{O}$  containing 0.2350 mols.  $\text{NaOH}$  dissolves 0.4840 mols  $\text{Hg}(\text{CN})_2$ .1 l.  $\text{H}_2\text{O}$  containing 0.4775 mols.  $\text{NaOH}$  dissolves 0.5977 mols.  $\text{Hg}(\text{CN})_2$ .1 l.  $\text{H}_2\text{O}$  containing 0.9475 mols.  $\text{NaOH}$  dissolves 0.79603 mols.  $\text{Hg}(\text{CN})_2$ .1 l.  $\text{H}_2\text{O}$  containing 0.970 mols.  $\text{LiOH}$  dissolves 0.6743 mols.  $\text{Hg}(\text{CN})_2$ .1 l.  $\text{H}_2\text{O}$  containing 0.480 mols.  $\text{LiOH}$  dissolves 0.5500 mols.  $\text{Hg}(\text{CN})_2$ .1 l.  $\text{H}_2\text{O}$  containing 0.243 mols  $\text{LiOH}$  dissolves 0.4840 mols.  $\text{Hg}(\text{CN})_2$ .

(Hofmann and Wagner, Z. Elektrochem. 1909, 15, 444.)

**Solubility in  $\text{KCN} + \text{Aq}$  at  $25^\circ$ .**

Concentration of $\text{KCN}$ Mols per litre	Solubility of $\text{Hg}(\text{CN})_2$ Mols. per litre
0.0493	0.4855
0.0985	0.5350
0.1970	0.627.

(Sherrill, Z. phys. Ch. 1903, 43, 719.)

**Solubility in  $\text{Na}_2\text{CO}_3 + \text{Aq}$ .**1 l.  $\text{H}_2\text{O}$  containing 0.4923 mols.  $\text{Na}_2\text{CO}_3$  dissolves 0.4956 mols.  $\text{Hg}(\text{CN})_2$ .1 l.  $\text{H}_2\text{O}$  containing 0.2443 mols.  $\text{Na}_2\text{CO}_3$  dissolves 0.4464 mols.  $\text{Hg}(\text{CN})_2$ .1 l.  $\text{H}_2\text{O}$  containing 0.1250 mols.  $\text{Na}_2\text{CO}_3$  dissolves 0.4147 mols.  $\text{Hg}(\text{CN})_2$ .1 l.  $\text{H}_2\text{O}$  containing 0.0000 mols.  $\text{Na}_2\text{CO}_3$  dissolves 0.3952 mols  $\text{Hg}(\text{CN})_2$ .

(Hofmann and Wagner, Z. Elektrochem. 1909, 15, 444.)

Solubility in  $\text{KNO}_3 + \text{Aq}$  at  $25^\circ$ .

1 l  $\text{H}_2\text{O}$  containing 0.9574 mols.  $\text{KNO}_3$  dissolves 0.5383 mols.  $\text{Hg}(\text{CN})_2$   
 1.1.  $\text{H}_2\text{O}$  containing 0.4614 mols.  $\text{KNO}_3$  dissolves 0.4619 mols.  $\text{Hg}(\text{CN})_2$ .  
 1 l.  $\text{H}_2\text{O}$  containing 0.0000 mols.  $\text{KNO}_3$  dissolves 0.3956 mols.  $\text{Hg}(\text{CN})_2$   
 (Hofmann and Wagner, Z. Elektrochem. 1909, 15. 444.)

Insol. in liquid  $\text{CO}_2$  (Büchner, Z. phys. Ch. 1906, 54. 674.)

Very easily sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Solubility of  $\text{Hg}(\text{CN})_2$  in ethyl alcohol at  $t^\circ$

(Schönrock, Z. phys. Ch. 1893, 11. 771)

1 l. ether dissolves 0.01 mol at 25° (Sherill, Z. phys. Ch. 1903, 43. 735.)

Easily sol. in acetone. (Krug and McElroy, J. Anal. Ch. 6. 84.)

100 g. glycerol dissolve 27 g.  $\text{Hg}(\text{CN})_2$  at 15.5°. (Ossendowski, Pharm. J. 1907, 79. 575.)

Nearly insol. in  $\text{C}_6\text{H}_6$ . (Sherill, Z. phys. Ch. 1903, 43. 735.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

100 g. boiling methyl acetate dissolve 3.2 g. (Steiner, Dissert. 1906.)

Solubility of  $\text{Hg}(\text{CN})_2$  in ethyl acetate + Aq at 25°.

P = g. ethyl acetate in 100 g. ethyl acetate + Aq.

$\text{Hg}(\text{CN})_2$  = millimols  $\text{Hg}(\text{CN})_2$  in 10 cc. of the solution.

P	$\text{Hg}(\text{CN})_2$	Sp. gr.
0	4.34	1.0810
4.39	4.295	1.0797
96.76	1.056	1.0374
100	0.714	0.09097

(Herz and Anders, Z. anorg. 1907, 52. 165.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Solubility in organic solvents at 18-20°

100 g. tetrachloromethane dissolve 0.001 g.  $\text{Hg}(\text{CN})_2$

100 g. bromoform dissolve 0.005 g.  $\text{Hg}(\text{CN})_2$ .

100 g. ethyl bromide dissolve 0.013 g.  $\text{Hg}(\text{CN})_2$

100 g. ethylene dibromide dissolve 0.001 g.  $\text{Hg}(\text{CN})_2$ .

(Sule, Z. anorg. 1900, 25. 401.)

100 g. acetonitrile dissolve 9.58 g.  $\text{Hg}(\text{CN})_2$  at 18°. (Naumann and Schier, B. 1914, 47. 249.)

Solubility in benzonitrile at 18° = 1.093 g. in 100 g. (Naumann, B. 1914, 47. 1370.)

Sl. sol. in ethyl amine (Shunn, J. phys. Chem. 1907, 11. 538.)

Very sol. in liquid methyl amine (Gibbs, J. Am. Chem. Soc. 1906, 28. 1410.)

Sol. in puratoluidine. (Weiner, Z. anorg. 1897, 15. 7.)

Mol. weight determined in pyridine and benzonitrile. (Werner, Z. anorg. 1897, 15. 30 and 32.)

100 g. pyridine dissolve 64.8 g.  $\text{Hg}(\text{CN})_2$  at 18°. (Schroeder, Z. anorg. 1905, 44. 6.)

Solubility in pyridine.

Mols per 100 $\text{Hg}(\text{CN})_2$	Temp of Solidification	Mols per 100 $\text{Hg}(\text{CN})_2$	Temp of Solidification

Mercuric nickel cyanide ammonia,  $2\text{Hg}(\text{CN})_2$ ,  $4\text{Ni}(\text{CN})_2$ ,  $5\text{NH}_3 + 2\text{H}_2\text{O}$ .

(Papiermeister, Dissert. 1898.)

$5\text{Hg}(\text{CN})_2$ ,  $18\text{Ni}(\text{CN})_2$ ,  $8\text{NH}_3 + 15\text{H}_2\text{O}$ . (Papiermeister, Dissert. 1898.)

- Mercuric potassium cyanide**,  $\text{Hg}(\text{CN})_2$ ,  $2\text{KCN}$ .  
Sol. in 4.4 pts cold  $\text{H}_2\text{O}$ ; sl sol. in alcohol; decomp. by acids.  
100 g.  $\text{H}_2\text{O}$  dissolve 22.7 g. (Fronmüller, B. 1878, 11. 92.)  
Abundantly sol. in liquid  $\text{NH}_3$ . (Franklin, Z. phys. Ch. 1909, 69. 295.)
- Mercuric silver cyanide**, basic,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgO}$ ,  $7\text{AgCN}$ .  
Ppt. (Bloxam, B. 16. 2669.)
- Mercuric silver cyanide mercuric sulphate**,  $\text{Hg}(\text{CN})_2$ ,  $2\text{AgCN}$ ,  $\text{HgSO}_4 + \text{H}_2\text{O}$ .
- Mercuric sodium cyanide**,  $\text{Hg}(\text{CN})_2$ ,  $\text{NaCN} + 1\frac{1}{2}\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  (Grossmann, B. 1904, 37. 4141)
- Mercuric strontium cyanide**,  $\text{Hg}(\text{CN})_2$ ,  $\text{Sr}(\text{CN})_2 + 5\text{H}_2\text{O}$ .  
Very hygroscopic. Sol in  $\text{H}_2\text{O}$ . (Grossmann, B. 1904, 37. 4142)
- Mercuric strontium cyanide iodide**,  $\text{Sr}(\text{CN})_2$ ,  $\text{HgI}_2$ ,  $\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$ .  
(Varet, C. R. 1895, 121. 499)
- Mercuric thallium cyanide**,  $\text{Hg}(\text{CN})_2$ ,  $2\text{TlCN}$ .  
Easily sol. in  $\text{H}_2\text{O}$ . 100 pts  $\text{H}_2\text{O}$  dissolve 7.9 pts at  $1^\circ$ , and 10.3 pts. at  $10^\circ$ . (Fronmüller, B. 11. 92)
- Mercuric zinc cyanide**,  $4\text{Zn}(\text{CN})_2$ ,  $\text{Hg}(\text{CN})_2$ .  
Insol. in  $\text{H}_2\text{O}$ . (Dunstan, Chem Soc. 6. 666)
- Mercuric zinc cyanide mercuric bromide ammonia**,  $\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{CN})_2$ ,  $\text{HgBr}_2$ ,  $4\text{NH}_3$ .  
Decomp by  $\text{H}_2\text{O}$  Sl sol. in cold  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet, C. R. 1889, 109. 810.)
- Mercuric cyanide ammonia**,  $\text{Hg}(\text{CN})_2$ ,  $\text{NH}_3$ .  
Very sol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ , and alcohol. (Varet, C. R. 1889, 109. 903)  
Sl. sol. in  $\text{H}_2\text{O}$  (Schmidt, B. 1894, 27. 232)  
 $8\text{Hg}(\text{CN})_2$ ,  $2\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$  Easily decomp. (Varet, Bull Soc (3) 6. 221)
- Mercuric cyanide bromide**,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgBr}_2$ .  
Very sl. sol. even in boiling  $\text{H}_2\text{O}$ . (Prussas, Gazz. ch. it. 1898, 28, (2), 114)
- Mercuric cyanide barium bromide**,  $2\text{Hg}(\text{CN})_2$ ,  $\text{BaBr}_2 + 6\text{H}_2\text{O}$ .  
Easily sol. especially in hot  $\text{H}_2\text{O}$  and alcohol. (Varet, C. R. 1895, 121. 398.)
- Mercuric cyanide cadmium bromide**,  $\text{Hg}(\text{CN})_2$ ,  $\text{CdBr}_2 + 3\text{H}_2\text{O}$ .  
Sol in  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet, Bull. Soc. (3) 5. 8)  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CdBr}_2 + 4.5 \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet, C. R. 1890, 111. 680.)
- Mercuric cyanide cadmium bromide ammonia**,  $2\text{Hg}(\text{CN})_2$ ,  $\text{CdBr}_2$ ,  $4\text{NH}_3 + 2\text{H}_2\text{O}$ .  
Decomp by  $\text{H}_2\text{O}$ .  
Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Varet, C. R. 1891, 112. 535.)
- Mercuric cyanide calcium bromide**,  $2\text{Hg}(\text{CN})_2$ ,  $\text{CaBr}_2 + 5\text{H}_2\text{O}$ .  
Sol in 1 pt. cold, and 0.25 pt. boiling  $\text{H}_2\text{O}$ ; also in 2 pts. cold, and 1 pt boiling 90% alcohol (Custer.)  
 $+ 7\text{H}_2\text{O}$ . (Varet, C. R. 1895, 121. 399.)
- Mercuric cyanide cupric bromide ammonia**,  $2\text{Hg}(\text{CN})_2$ ,  $\text{CuBr}_2$ ,  $4\text{NH}_3$ .  
Decomp. by  $\text{H}_2\text{O}$ ; sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet, Bull Soc. (3) 6. 221)
- Mercuric cyanide lithium bromide**,  $2\text{Hg}(\text{CN})_2$ ,  $2\text{LiBr} + 7\text{H}_2\text{O}$ .  
Deliquescent. (Varet, C. R. 111. 526.)
- Mercuric cyanide magnesium bromide**.  
See Magnesium mercuric cyanide mercuric bromide.  
 $\text{Hg}(\text{CN})_2$ ,  $2\text{KBr}$  Very sol. in  $\text{H}_2\text{O}$ . (Harth, Z anorg 1897, 14. 351)
- Mercuric cyanide potassium bromide**,  $\text{Hg}(\text{CN})_2$ ,  $\text{KBr} + 2\text{H}_2\text{O}$ .  
Sol. in 13.34 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ , and less than 1 pt boiling  $\text{H}_2\text{O}$ . (Brett)  
Sol without decomp. in hot dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ . (Brett.)  
Contains  $1\frac{1}{2}\text{H}_2\text{O}$  (Berthelot, A. ch. (5) 29. 226.)
- Mercuric cyanide sodium bromide**,  $\text{Hg}(\text{CN})_2$ ,  $\text{NaBr} + 1\frac{1}{2}\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and alcohol.
- Mercuric cyanide strontium bromide**,  $2\text{Hg}(\text{CN})_2$ ,  $\text{SrBr}_2 + 6\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Varet, C. R. 1895, 121. 399.)
- Mercuric cyanide zinc bromide**,  $\text{HgBr}_2$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{CN})_2 + 8\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet, Bull Soc. (3) 5. 8.)
- Mercuric cyanide zinc bromide ammonia**,  $\text{HgBr}_2$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{CN})_2$ ,  $4\text{NH}_3$ .  
As the corresponding chloride. (Varet.)

**Mercuric cyanide chloride**,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgCl}_2$

Sol. in  $\text{H}_2\text{O}$ . Decomp. by alcohol, which dissolves out  $\text{HgCl}_2$ .

**Mercuric cyanide ammonium chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NH}_4\text{Cl}$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Poggiale)  
 $\text{Hg}(\text{CN})_2$ ,  $4\text{NH}_4\text{Cl}$ .

**Mercuric cyanide barium chloride**,  $2\text{Hg}(\text{CN})_2$ ,  
 $\text{BaCl}_2 + 4\text{H}_2\text{O}$ .

Efflorescent. Easily sol. in  $\text{H}_2\text{O}$  and alcohol  
 $+ 6\text{H}_2\text{O}$ . (Dexter.)

**Mercuric cyanide barium chloride ammonia**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{BaCl}_2$ ,  $4\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
(Varet, Bull. Soc. (3) 6. 221.)

**Mercuric cyanide cadmium chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{CdCl}_2 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet,  
Bull. Soc. (3) 5. 8.)

**Mercuric cyanide calcium chloride**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CaCl}_2 + 6\text{H}_2\text{O}$ .

Efflorescent. Very sol. in  $\text{H}_2\text{O}$ . (Varet,  
C. R. 1895, 121. 349.)

**Mercuric cyanide cerium chloride**,  $3\text{Hg}(\text{CN})_2$ ,  
 $\text{CeCl}_3 + 8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Ahlén, Bull. Soc. (2)  
27. 365.)

**Mercuric cyanide cobaltous chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $2\text{CoCl}_2 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Poggiale.)  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CoCl}_2 + 7\text{H}_2\text{O}$ . (Dexter.)

**Mercuric cyanide cupric chloride**,  $\text{Hg}(\text{CN})_2$ ,  
 $\text{CuCl}_2 + 6\text{H}_2\text{O}$ .

Efflorescent.  
Sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet,  
C. R. 1888, 107. 1002.)

$2\text{Hg}(\text{CN})_2$ ,  $\text{CuCl}_2 + 6\text{H}_2\text{O}$ . Efflorescent  
Very sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ .

(Varet, C. R. 1888, 107. 1002.)

**Mercuric cyanide cupric chloride ammonia**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CuCl}_2$ ,  $4\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{NH}_4\text{OH}$   
 $+ \text{Aq}$ . (Varet, Bull. Soc. (3) 6. 221.)

**Mercuric cyanide didymium chloride**,  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{DyCl}_3 + 8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Ahlén.)

**Mercuric cyanide erbium chloride**,  $3\text{Hg}(\text{CN})_2$ ,  
 $\text{ErCl}_3 + 8\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Ahlén.)

**Mercuric cyanide hydrazine chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{N}_2\text{H}_4$ ,  $\text{HCl}$ .

Very sol. in  $\text{H}_2\text{O}$ .

Nearly insol. in alcohol and ether. (Fer-  
ratum, Gazz. ch. it 1912, 42. (1), 154.)

**Mercuric cyanide ferric chloride**,  $2\text{Hg}(\text{CN})_2$ ,  
 $\text{FeCl}_3 + 3\frac{1}{2}\text{H}_2\text{O}$ .

(Dexter.)

**Mercuric cyanide lanthanum chloride**,  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{LaCl}_3 + 8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Ahlén.)

**Mercuric cyanide magnesium chloride**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{MgCl}_2 + 2\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  and dil. alcohol. (Pog-  
giale.)

**Mercuric cyanide manganous chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{MnCl}_2 + 3\text{H}_2\text{O}$ .

Efflorescent. Very sol. in  $\text{H}_2\text{O}$ . (Poggiale.)

**Mercuric cyanide nickel chloride**,  $\text{Hg}(\text{CN})_2$ ,  
 $\text{NiCl}_2 + 6\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Poggiale.)  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{NiCl}_2 + 7\text{H}_2\text{O}$ . (Dexter.)

**Mercuric cyanide chloride nickel chloride**  
**oxychloride**,  $11\text{Hg}(\text{CN})_2$ ,  $8\text{HgCl}_2$ ,  $2\text{NiCl}_2$ ,  
 $8\text{Ni}(\text{OH})\text{Cl} + 76\text{H}_2\text{O}$ .

(Papiermeister, Dissert. 1898.)

**Mercuric cyanide potassium chloride**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{KCl} + \text{H}_2\text{O}$ .

Sol. in 6.75 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Brett.)  
Sol. in alcohol.

**Mercuric cyanide sodium chloride**,  $\text{Hg}(\text{CN})_2$ ,  
 $\text{NaCl}$ .

Easily sol. especially in hot  $\text{H}_2\text{O}$ ; insol. in  
alcohol. (Poggiale.)

**Mercuric cyanide strontium chloride**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{SrCl}_2 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  and dil. alcohol. (Varet,  
C. R. 1895, 121. 349.)

**Mercuric cyanide yttrium chloride**,  $3\text{Hg}(\text{CN})_2$ ,  
 $\text{YCl}_3 + 8\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Ahlén, Bull. Soc. (2)  
27. 365.)

**Mercuric cyanide zinc chloride**,  $2\text{Hg}(\text{CN})_2$ ,  
 $\text{ZnCl}_2 + 6\text{H}_2\text{O}$ .

Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Kane.)  
 $\text{HgCl}_2$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{CN})_2 + 7\text{H}_2\text{O}$ . Ef-  
florescent. Very sol. in  $\text{H}_2\text{O}$ . (Varet, Bull.  
Soc. (3) 5. 8.)

**Mercuric cyanide zinc chloride ammonia**,  
 $\text{HgCl}_2$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{ZnCl}_2$ ,  $4\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
(Varet, Bull. Soc. (3) 6. 221.)  
 $\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{CN})_2$ ,  $\text{HgCl}_2$ ,  $6\text{NH}_3$ . (Varet,  
C. R. 106. 1080.)

Mercuric cyanide potassium chromate.

See Chromate mercuric cyanide, potassium.

Mercuric cyanide potassium ferrocyanide,  
 $3\text{Hg}(\text{CN})_2, \text{K}_4\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .

Readily sol. in  $\text{H}_2\text{O}$ .

Mercuric cyanide hydrazine,  $\text{Hg}(\text{CN})_2, \text{N}_2\text{H}_4$ .

Very sol. in  $\text{H}_2\text{O}$  with partial decomp. (Hofmann and Marburg, A. 1899, 305, 215.)  
 $\text{Hg}(\text{CN})_2, \text{N}_2\text{H}_4$  Ppt. (Franzen, Z. anorg. 1911, 70, 154.)

Mercuric cyanide potassium hydroxide,  
 $\text{Hg}(\text{CN})_2, \text{KOH}$ .

(Hofmann and Wagner, B. 1908, 41, 321.)  
 $+1\frac{1}{2}\text{H}_2\text{O}$ . (Hofmann and Wagner, B. 1908, 41, 1630.)

$2\text{Hg}(\text{CN})_2, \text{KOH} + \text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Hofmann and Wagner, B. 1908, 41, 320.)

Mercuric cyanide sodium hydroxide,  
 $\text{Hg}(\text{CN})_2, \text{NaOH} + 1\frac{1}{2}\text{H}_2\text{O}$  or  $\text{H}_2\text{O}$ .

(Hofmann and Wagner, B. 1908, 41, 1631.)

Mercuric cyanide barium iodide,  $2\text{Hg}(\text{CN})_2, \text{BaI}_2 + 4\text{H}_2\text{O}$ .

Slowly deliquescent. Sol. in 16.5 pts cold, and 0.4 pt. boiling  $\text{H}_2\text{O}$ . Sol. in 22.5 pts. cold, and 1.6 pts. hot 90% alcohol. Solution is decomp. on boiling. (Custer.)

Mercuric cyanide cadmium iodide,  $\text{Hg}(\text{CN})_2, \text{Cd}(\text{CN})_2, \text{HgI}_2 + 8\text{H}_2\text{O}$ .

See Cadmium mercuric cyanide mercuric iodide.

Mercuric cyanide caesium iodide,  $\text{Hg}(\text{CN})_2, \text{CsI}$ .

Recryst. from  $\text{H}_2\text{O}$  without decomp. Decomp. by acids. (Mathewson and Wells, Am. Ch. J. 1903, 30, 433.)

Mercuric cyanide calcium iodide,  $2\text{Hg}(\text{CN})_2, \text{CaI}_2 + 6\text{H}_2\text{O}$ .

Sl efflorescent. More sol. in  $\text{H}_2\text{O}$  than corresponding Sr. comp. (Custer.)

Mercuric cyanide lithium iodide,  $\text{Hg}(\text{CN})_2, 2\text{Li}(\text{CN})_2, \text{HgI}_2 + 7\text{H}_2\text{O}$ .

See Cyanide, lithium mercuric mercuric iodide.

Mercuric cyanide magnesium iodide,  
 $\text{Hg}(\text{CN})_2, \text{Mg}(\text{CN})_2, \text{HgI}_2 + 8\text{H}_2\text{O}$ .

See Cyanide, magnesium mercuric mercuric iodide.

Mercuric cyanide potassium iodide,  $\text{Hg}(\text{CN})_2, \text{KI}$ .

Sol. in 16 pts. cold, and less hot  $\text{H}_2\text{O}$ . Sol. in 96 pts. cold alcohol of 34° Baumé. (Caillet.) Sl sol. in ether. Decomp. by acids.

$3\text{Hg}(\text{CN})_2, 2\text{KI} + \frac{1}{2}\text{H}_2\text{O}$ . (Barthelot.)

Mercuric cyanide sodium iodide,  $\text{Hg}(\text{CN})_2, \text{NaI} + 2\text{H}_2\text{O}$ .

Sol. in  $4\frac{1}{2}$  pts.  $\text{H}_2\text{O}$  at 18°, and  $\frac{1}{2}$  pt. boiling  $\text{H}_2\text{O}$ .

Sol. in 2 pts. boiling, and  $6\frac{1}{2}$  pts. cold 90% alcohol (Custer.)

Mercuric cyanide strontium iodide,  
 $2\text{Hg}(\text{CN})_2, \text{SrI}_2 + 6\text{H}_2\text{O}$ .

Sol. in 7 pts.  $\text{H}_2\text{O}$  at 18°, and  $\frac{1}{2}$  pt. at b.-pt. Sol. in 4 pts. 90% alcohol at 18°, and  $\frac{1}{2}$  pt. at b.-pt. (Custer.)

Mercuric cyanide zinc iodide,  $2\text{Hg}(\text{CN})_2, \text{ZnI}_2 + 6\text{H}_2\text{O}$ .

Efflorescent; sol. in  $\text{H}_2\text{O}$ .

Mercuric cyanide iodide potassium cyanide,  
 $\text{HgI}_2, \text{Hg}(\text{CN})_2, 2\text{KCN}$

Easily decomp. by dil. acids. (Rupp. Apoth. Ztg., 23, 374.)

Mercuric cyanide cadmium nitrate,  
 $2\text{Hg}(\text{CN})_2, \text{Cd}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$

Decomp. by  $\text{H}_2\text{O}$ , not by alcohol (Nylander, J. B. 1859, 271.)

Mercuric cyanide cobalt nitrate,  $2\text{Hg}(\text{CN})_2, \text{Co}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$

Decomp. by  $\text{H}_2\text{O}$ , not by alcohol (Nylander.)

Mercuric cyanide copper nitrate,  $\text{Hg}(\text{CN})_2, \text{Cu}(\text{NO}_3)_2 + 5\text{H}_2\text{O}$

Decomp. by  $\text{H}_2\text{O}$ , not by alcohol. (Nylander.)

Mercuric cyanide ferrous nitrate,  $2\text{Hg}(\text{CN})_2, \text{Fe}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$

Decomp. by  $\text{H}_2\text{O}$ , not by alcohol (Nylander.)

Mercuric cyanide manganous nitrate,  
 $\text{Hg}(\text{CN})_2, \text{Mn}(\text{NO}_3)_2 + 5\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ , not by alcohol. (Nylander.)

$2\text{Hg}(\text{CN})_2, \text{Mn}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$  As above.

Mercuric cyanide nickel nitrate,  $2\text{Hg}(\text{CN})_2, \text{Ni}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ , not by alcohol. (Nylander.)

Mercuric cyanide silver nitrate,  $2\text{Hg}(\text{CN})_2, \text{AgNO}_3 + 2\text{H}_2\text{O}$ .

Sl sol. in cold, more readily in hot  $\text{H}_2\text{O}$ . Sol. with decomp. in  $\text{HNO}_3 + \text{Aq}$ .

As sol. in alcohol as in  $\text{H}_2\text{O}$

Mercuric cyanide zinc nitrate,  $2\text{Hg}(\text{CN})_2, \text{Zn}(\text{NO}_3)_2 + 7\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. Not decomp. by alcohol. (Nylander, J. B. 1859, 271.)

**Mercuric cyanide nitrate silver cyanide, basic,**  
 $\text{Hg}(\text{NO}_3)_2\text{CN}$ ,  $10\text{AgCN}$ ,  $\text{Hg}(\text{OH})\text{NO}_2$ .  
 (Schmidt, Z. anorg. 1895, 9. 431)

**Mercuric cyanide potassium selenocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{KSeCN}$ .

Sl. sol. in cold, much more easily sol. in hot  $\text{H}_2\text{O}$  or alcohol. Traces dissolve in ether.  
 (Cameron and Davy, C. N. 44. 63)

**Mercuric cyanide nickel sulphate,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NiSO}_4 \cdot 9\text{H}_2\text{O}$ .  
 (Papiermeister, Dissert. 1898.)

**Mercuric cyanide ammonium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NH}_4\text{SCN}$ .

Easily sol. in hot  $\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 23. 71)

**Mercuric cyanide barium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Ba}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .  
 Permanent. Sol. in hot  $\text{H}_2\text{O}$ . (Cleve)

**Mercuric cyanide cadmium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Cd}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .  
 Permanent. Sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)

**Mercuric cyanide calcium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Ca}(\text{SCN})_2 \cdot 8\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Mercuric cyanide cerium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Ce}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$ .  
 Easily sol. in hot  $\text{H}_2\text{O}$ . (John)

**Mercuric cyanide didymium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Dy}(\text{SCN})_3 \cdot 6\text{H}_2\text{O}$ .  
 Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Cleve.)

**Mercuric cyanide erbium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $2\text{Er}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$ .  
 Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Cleve)

**Mercuric cyanide lanthanum sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{La}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Mercuric cyanide magnesium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Mg}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .  
 Permanent. Easily sol. in hot  $\text{H}_2\text{O}$ .  
 (Cleve.)

**Mercuric cyanide potassium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{KSCN}$ .  
 Permanent. Easily sol. in hot  $\text{H}_2\text{O}$ .  
 (Cleve)  
 $+2\text{H}_2\text{O}$ . (Phillip, Z. Ch. 1867. 552.)

**Mercuric cyanide rubidium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{Rb}(\text{SCN})$ .  
 Sol. in hot  $\text{H}_2\text{O}$  without decomp. (Grossmann, B. 1904, 37. 1259.)

**Mercuric cyanide samarium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Sm}(\text{SCN})_2 \cdot 12\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Mercuric cyanide sodium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NaSCN} \cdot 2\text{H}_2\text{O}$ .  
 Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 23. 71)

**Mercuric cyanide strontium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Sr}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .  
 Efflorescent. (Cleve)

**Mercuric cyanide yttrium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Y}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$ .  
 Sl. sol. in warm, much less in cold  $\text{H}_2\text{O}$ .  
 (Cleve)

**Mercuric cyanide zinc sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Mercuric cyanide zinc sulphocyanide ammoniac,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{SCN})_2$ ,  $3\text{NH}_3$ .  
 Not efflorescent. Decomp. by  $\text{H}_2\text{O}$ .

**Mercuric cyanide potassium thiosulphate,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{K}_2\text{S}_2\text{O}_3$ .  
 Permanent. Sol. in  $\text{H}_2\text{O}$ . (Kessler.)  
 $+ \text{H}_2\text{O}$ . (Fock and Kluss, B. 24. 1355)

**Molybdenum hydroxyl potassium cyanide,**  
 $\text{K}_3\text{Mo}(\text{OH})_2(\text{CN})_6$ .  
 (Rosenheim and Koss, Z. anorg. 1906, 49. 155)  
 $\text{K}_2\text{Mo}(\text{OH})_2(\text{CN})_6$ . Very sol. in  $\text{H}_2\text{O}$ .  
 (Rosenheim and Koss.)

**Molybdenum cyanide with MCN.**  
 See Molybdocyanide M.

**Molybdenyl potassium cyanide,**  
 $\text{MoO}_2(\text{CN})_2$ ,  $2\text{KCN}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . Aqueous solution is stable in presence of alkalis.  
 Insol. in alcohol (Péchar, C. R. 1894, 118. 805.)  
 $\text{MoO}_3(\text{CN})_2$ ,  $3\text{KCN}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Hofmann, Z. anorg. 1896, 12. 287.)  
 $+ \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Hofmann)  
 $+ 4\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Hofmann.)

**Nickel cyanide,**  $\text{Ni}(\text{CN})_2 \cdot x\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ . Insol. in conc.  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3 + \text{Aq}$ , but decomp. by heating there-with. Sol. in  $\text{NH}_4\text{OH}$ , warm  $(\text{NH}_4)_2\text{SO}_4$ , or  $\text{NH}_4$  succinate +  $\text{Aq}$ ; also in  $\text{KCN} + \text{Aq}$ . Sl. sol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Wittstein.)  
 Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

- +3H<sub>2</sub>O, +3½H<sub>2</sub>O, +3¼ H<sub>2</sub>O, +4¼H<sub>2</sub>O, and +5½H<sub>2</sub>O. (Papiermeister, Dissert. 1898.)  
 +4H<sub>2</sub>O. (Hofmann and Hochtlen, B. 1903, 36, 1149.)
- Nickel potassium cyanide, Ni(CN)<sub>2</sub>, 2KCN + H<sub>2</sub>O.**  
 Sol. in H<sub>2</sub>O. Decomp. by acids with residue of insol. Ni(CN)<sub>2</sub>.  
 +½H<sub>2</sub>O. (Rammelsberg.)
- Nickel sodium cyanide, Ni(CN)<sub>2</sub>, 2NaCN + 3H<sub>2</sub>O.**  
 Sol. in H<sub>2</sub>O; decomp. by acids with residue of Ni(CN)<sub>2</sub>.
- Nickel strontium cyanide, Ni(CN)<sub>2</sub>, Sr(CN)<sub>2</sub> + 7H<sub>2</sub>O.**  
 Sol. in H<sub>2</sub>O. (Handl, J. B. 1859, 273)
- Nickel cyanide ammonia, Ni(CN)<sub>2</sub>, NH<sub>3</sub> + ½H<sub>2</sub>O.**  
 Scarcely attacked by H<sub>2</sub>O or dil. acids.  
 Sol. in conc. H<sub>2</sub>SO<sub>4</sub>. Sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq, conc. NH<sub>4</sub>OH + Aq, (NH<sub>4</sub>)<sub>2</sub>C<sub>2</sub>O<sub>4</sub> + Aq, (NH<sub>4</sub>)<sub>2</sub>S + Aq, and KCN + Aq. Decomp. by boiling with NaOH or KOH. (Bernoulli and Grether, Ch. Z. 1901, 25, 436)
- Nickel cyanide trihydrazine, Ni(CN)<sub>2</sub>, (N<sub>2</sub>H<sub>4</sub>)<sub>3</sub>.**  
 Ppt. (Fianzen, Z. anorg. 1911, 70, 155.)
- Osmium cyanide, Os(CN)<sub>2</sub>(?).**  
 Insol. in H<sub>2</sub>O; not attacked by acids.  
*See also Osmocyanhydric acid.*
- Osmium potassium cyanide.**  
*See Osmocyanide, potassium.*
- Palladous cyanide, Pd(CN)<sub>2</sub>.**  
 Insol. in H<sub>2</sub>O. Insol. in dil. acids. Sol. in KCN or NH<sub>4</sub>OH + Aq, also in conc. HCN + Aq.
- Platinous cyanide, Pt(CN)<sub>2</sub>.**  
 Insol. in H<sub>2</sub>O, alkalis, or acids. Sol. in KCN + Aq. When freshly pptd., sol. in NH<sub>4</sub>OH + Aq.
- Platinous cyanide with MCN.**  
*See Platinocyanide, M.*
- Potassium cyanide, KCN.**  
 Deliquescent. Very sol. in H<sub>2</sub>O.  
 100 pts. KCN + Aq, sat. at b.-pt. 103.3°, contain 55 pts. KCN, i. e. 100 pts. H<sub>2</sub>O dissolve 122.2 pts. KCN at 103.3°. (Griffiths)  
 KCN + Aq containing 3.25% KCN has -sp. gr. = 1.0514; 6.5% KCN, 1.0316. (Kohlrausch, W. Ann. 1879, 1)  
 KCN + Aq containing 9.64% KCN has sp. gr. 20°/20° = 1.0514.
- KCN + Aq containing 14.42% KCN has sp. gr. 20°/20° = 1.0768 (Le Blanc and Rohland, Z. phys. ch. 1896, 19, 278)  
 Moderately sol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20, 829.)  
 Almost insol. in absolute alcohol  
 Sol. in 80 pts. 95% alcohol when boiling, and easily sol. in 35% alcohol. (Geiger, A. I. 50)  
 100 pts. absolute methyl alcohol dissolve 4.91 pts. at 19.5°; 100 pts. absolute ethyl alcohol dissolve 0.87 pt. at 19.5°. (de Bruyn, Z. phys. Ch. 10, 783.)  
 Insol. in methyl acetate (Naumann, B. 1909, 42, 3790), ethyl acetate. (Naumann, B. 1904, 37, 3901.)  
 100 g. glycerol dissolve 32 g. KCN at 15.5°. (Ossendowski, Pharm. J. 1907, 79, 575)  
 Sol. in CS<sub>2</sub> when pure (Loughlin, J. B. 1875, 234)  
 Wholly insol. in CS<sub>2</sub>. (Moldenhauer, Z. anal. 16, 199.)  
 Sl. sol. in benzonitrile. (Naumann, B. 1914, 47, 1309.)
- Potassium chromium tetroxide pentacyanide, K<sub>2</sub>(CrO<sub>4</sub>)(CN)<sub>5</sub> + 5H<sub>2</sub>O.**  
 Very hygroscopic.  
 Sol. in H<sub>2</sub>O. (Riesenfeld, B. 1908, 41, 3548)
- Potassium chromium tetroxide dicyanide ammonia, K<sub>2</sub>(CrO<sub>4</sub>)(CN)<sub>2</sub>NH<sub>3</sub> + 5H<sub>2</sub>O.**  
 Hygroscopic in the air.  
 Easily sol. in H<sub>2</sub>O and in NH<sub>4</sub>OH + Aq. (Riesenfeld, B. 1908, 41, 3545.)
- Potassium rhodium cyanide.**  
*See Rhodocyanide, potassium.*
- Potassium ruthenium cyanide.**  
*See Ruthenocyanide, potassium.*
- Potassium silver cyanide, KCN, AgCN.**  
 Sol. in 4.7 pts. H<sub>2</sub>O at 15°, 4 pts. at 20°, and in much less at higher temp. Sol. in 25 pts. 85% alcohol. (Baup, A. ch. (3) 53, 464.)
- Potassium silver sodium cyanide, 2KCN, NaCN, 3AgCN.**  
 Sol. in 4.4 pts. H<sub>2</sub>O at 15°, and 22 pts. 85% alcohol at 17°. (Baup.)
- Potassium tungsten cyanide.**  
*See Tungstocyanide, potassium.*
- Potassium uranyl cyanide, (UO<sub>2</sub>)(CN)<sub>2</sub>, 2KCN.**  
 Ppt. Sol. in H<sub>2</sub>O. Sl. sol. in presence of large excess of KCN (Aloy, A. ch. 1901, (7) 24, 417.)
- Potassium vanadium cyanide, K<sub>3</sub>V(CN)<sub>4</sub>.**  
 Readily sol. in H<sub>2</sub>O; decomp. slowly in neutral aq. solution, rapidly in acid aq. solution;

insol. in alcohol (Locke, Am. Ch. J. 1898, 20. 601.)

$K_4V(CN)_6 \cdot 3H_2O$ . Sol. in  $H_2O$ .

Insol. in alcohol and ether. (Petersen, Z. anorg. 1904, 38. 345.)

Potassium zinc cyanide,  $2KCN, Zn(CN)_2$ .

100 pts.  $H_2O$  dissolve 11 pts at  $20^\circ$ . (Sharwood, Eng. Min. J. 1904, 77. 845.)

Potassium cyanide molybdenum dioxide,  $4KCN, MoO_3 \cdot 5H_2O$ .

Sol. in  $H_2O$ . Insol. in alcohol. (Hofmann, Z. anorg. 1896, 12. 287)

$+6H_2O$  "Potassium dioxotetracyanomolybdate"

Very sol in  $H_2O$ . (Winkler, Dissert. 1909.)

$+8H_2O$ . (Roseuhelm, Kohn and Garfunkel, Z. anorg. 1910, 65. 174)

$+10H_2O$ . Decomp. by conc.  $HCl, HNO_3$  and  $H_2SO_4$ .

Not acted upon by cold dil. acids (v. der Heide and Hofmann, Z. anorg. 1896, 12. 285)

$5KCN, MoO_3 \cdot 8H_2O$ . Sol. in  $H_2O$  Insol. in alcohol (Kalischer, Dissert. 1902.)

Potassium cyanide molybdenum dioxide hydroxylamine,  $4KCN, MoO_3, NH_4OH + H_2O$

Sol. in  $H_2O$ .  
Decomp. by dil. acids. (v. der Heide and Hofmann, Z. anorg. 1896, 12. 282)

Potassium cyanide molybdenum sulphide,  $6KCN, MoS_2 \cdot 5H_2O$ .

Easily sol in  $H_2O$ . Decomp. by dil. acids (Hofmann, Z. anorg. 1896, 12. 289)

Very sol in  $H_2O$  Slowly decomp. in the cold by dil. mineral acids. (v. der Heide and Hofmann, Z. anorg. 1896, 12. 289.)

Potassium cyanide molybdenum sulphocyanide,  $2KCN, MoS_2(CN)_2$ .

(Péchar, C. R. 1894, 118. 806.)

$5KCN, Mo_3S_2(CN)_3 \cdot 7H_2O$  Sol. in  $H_2O$ . Stable toward dil. acids and alkalis. (Hofmann, Z. anorg. 1896, 12. 289)

Potassium cyanide molybdenum sulphocyanide,  $4KCN, Mo_3SO(CN)_3 \cdot 4H_2O$ .

Sol in  $H_2O$  Stable toward dil. acids. (Hofmann, Z. anorg. 1896, 12. 289)

Potassium cyanide nitrite,  $KCN, KNO_2 + \frac{1}{2}H_2O$ .

Sol. in  $H_2O$ ; decomp. slowly by  $H_2O$ ; explosive. (Hofmann, Z. anorg. 1895, 10. 260-261.)

Potassium cyanide sulphur dioxide,  $KCN, SO_2 + H_2O$ .

Much more sol. in hot than cold  $H_2O$ . (Étard, C. R. 88. 649.)

$KCN, HCN, 2SO_2 + 3H_2O$ . Very sl. sol. in cold  $H_2O$ ; decomp. by hot  $H_2O$ . (Étard.)

Rubidium tungsten cyanide.

See Tungstocyanide, rubidium.

Rhodium cyanide,  $Rh(CN)_3$ .

Ppt. Not decomp. by acids Sol. in  $KCN + Aq$  (Martius, A. 117. 361.)

Rhodium cyanide with  $3KCN$ .

See Rhodicyanide, potassium.

Ruthenium cyanide with  $4MCN$ .

See Ruthenocyanide, M.

Silver cyanide,  $AgCN$ .

Sl. sol in  $H_2O$ .

$2.2 + 10^{-4}$  g sol in 1 liter of  $H_2O$  at  $19.96^\circ$ . (Böttger, Z. phys. ch. 1903, 46. 603.)

1 l. solution in  $H_2O$  contains 0.000043 g.  $AgCN$  at  $17.5^\circ$  (Abegg and Cox, Z. phys. Ch. 1903, 46. 11)

Solubility in  $H_2O$  at  $25^\circ = 2.22 + 10^{-4}$  mol. per l (Lucas, Z. anorg. 1904, 41. 198.)

Insol. in dil. acids Decomp. by conc. acids. Not sol to any extent in  $HCN + Aq$ .

Freshly pptd  $AgCN$  is not dissolved by cold dil.  $HNO_3$ , but is attacked by very dil.  $HNO_3$  on boiling From dry  $AgCN$  is dissolved 5% by boiling 1 hour with 1%  $HNO_3$ .

$+Aq$ . Conc  $HNO_3$  dissolves more (Brunck, B. 1901, 34. 1605.)

Sol. in  $NH_4OH + Aq$  Sol in boiling  $KCl, NaCl, CaCl_2, BaCl_2$ , or  $MgCl_2 + Aq$ , but very slowly sol, therein at ord. temp. Sol in  $Na_2S_2O_3, K_2Fe(CN)_6, (NH_4)_2CO_3, (NH_4)_2SO_4, NH_4NO_3$ , and  $NH_4$  succinate  $+Aq$ , and in large amt. of hot  $NH_4Cl + Aq$  (Wittstein.)

Sol in  $KCN, NaCN, Ba(CN)_2, Ca(CN)_2$ , or  $Sr(CN)_2 + Aq$ . Insol. in  $KOH$ , or  $NaOH + Aq$ . Sol. in conc. boiling  $AgNO_3 + Aq$  (Wöhler.)

Sol. in 431.7 pts. 5%  $NH_4OH + Aq$  (sp. gr. 0.998) at  $12^\circ$ ; in 184.5 pts. 10%  $NH_4OH + Aq$  (sp. gr. 0.96) at  $18^\circ$ . (Longi, Gazz. ch. it. 13. 87)

Sl. sol. in Na citrate  $+Aq$

Sol. in  $Hg(NO_2)_2 + Aq$ .

1 l. of a 3-N solution of  $AgNO_3$  dissolves 1.216 g  $AgCN$  at  $25^\circ$ . (Hellwig, Z. anorg. 1900, 25. 177)

Very sol. in  $(NH_4)_2S_2O_3 + Aq$ . (Roseuhelm and Steinhäuser, Z. anorg. 1900, 25. 105)

Moderately sol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Sl. sol. in liquid  $HF$  (Franklin, Z. anorg. 1905, 46. 2.)

Abundantly sol. in quinoline at  $60^\circ$ . (Varet, C. R. 1893, 116. 60.)

Sl. sol. in ethyl amine. (Shinn, J. phys. Chem. 1907, 11. 538.)

Insol. in methyl acetate. (Bezold, Dissert. 1906; Naumann, B. 1909, 42. 3790); ethyl

acetate (Hamers, Dissert. 1906; Naumann, B. 1910, 43. 314.)

Silver hydrogen cyanide,  $\text{AgCN}$ ,  $\text{HCN}$ .  
(Euler, B. 1903, 36. 1859.)

Silver sodium cyanide,  $\text{AgCN}$ ,  $\text{NaCN}$ .

Sol. in 5 pts.  $\text{H}_2\text{O}$  at  $20^\circ$  and in much less hot  $\text{H}_2\text{O}$ . Sol. in 24 pts. 85% alcohol at  $20^\circ$ . (Baup, A. ch. (3) 53. 468.)

Silver thallous cyanide,  $\text{AgCN}$ ,  $\text{TlCN}$ .

Easily sol. in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 4.7 pts. at  $0^\circ$ , and 7.4 pts. at  $16^\circ$ . (Fronmüller, B. 11. 92.)

Silver tungsten cyanide.

See Tungstocyanide, silver.

Silver cyanide ammonia,  $\text{AgCN}$ ,  $\text{NH}_3$ .

Efflorescent. Decomp. on air.  
Very sol. in ammonia at  $-10^\circ$ . (Joannis, C. R. 1894, 118. 1151.)

Silver cyanide hydrazine,  $\text{AgCN}$ ,  $\text{N}_2\text{H}_4$ .

Decomp. in the air  
Decomp. by  $\text{H}_2\text{O}$ . (Franzen, Z. anorg. 1911, 70. 153.)

Silver cyanide nitrate,  $2\text{AgCN}$ ,  $\text{AgNO}_3$ .

Decomp. by  $\text{H}_2\text{O}$ .

Sodium cyanide,  $\text{NaCN}$ .

Sol. in  $\text{H}_2\text{O}$  and 75% alcohol.  
 $+\frac{1}{2}\text{H}_2\text{O}$ , and  $2\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ ; al. sol. in alcohol. (Joannis, A. ch. (5) 26. 484.)

Sodium tungsten cyanide.

See Tungstocyanide, sodium.

Sodium zinc cyanide,  $\text{NaCN}$ ,  $\text{Zn}(\text{CN})_2 + 2\frac{1}{2}\text{H}_2\text{O}$ .

Much more sol. in  $\text{H}_2\text{O}$  than the corresponding K Zn salt. (Rammelsberg.)  
 $+8\text{H}_2\text{O}$ . (Loebe, Dissert. 1902.)

Sodium cyanide molybdenum dioxide,  $4\text{NaCN}$ ,  $\text{MoO}_2 + 6\text{H}_2\text{O}$ .

(Winkler, Dissert. 1909.)  
 $+14\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Rosenheim, Garfunkel and Kohn, Z. anorg. 1910, 65. 174.)

Sodium cyanide molybdenum dioxide hydroxylamine,  $4\text{NaCN}$ ,  $\text{MoO}_2$ ,  $\text{NH}_2\text{OH} + \text{H}_2\text{O}$ .

As K comp. (Winkler, Dissert. 1909.)

Strontium cyanide,  $\text{Sr}(\text{CN})_2 + 4\text{H}_2\text{O}$ .

Very unstable; very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Joannis, A. ch. (5) 26. 498.)

Strontium tungsten cyanide.

See Tungstocyanide, strontium.

Strontium zinc cyanide,  $2\text{Sr}(\text{CN})_2$ ,  $3\text{Zn}(\text{CN})_2 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Loebe, Dissert. 1902.)

Thallous cyanide,  $\text{TlCN}$

100 pts.  $\text{H}_2\text{O}$  dissolve 16.8 pts. at  $28.5^\circ$ . (Fronmüller, B. 6. 1178.)

Thallothallic cyanide,  $\text{Th}(\text{CN})_4 = \text{TlCN}$ ,  $\text{Th}(\text{CN})_3$ .

Easily sol. in  $\text{H}_2\text{O}$ .  
100 pts.  $\text{H}_2\text{O}$  dissolve 27.3 pts. at  $30^\circ$ , 15.3 pts. at  $12^\circ$ , 9.7 pts. at  $0^\circ$ . (Fronmüller, B. 11. 92.)

Thallous tungsten cyanide.

See Tungstocyanide, thallous.

Thallous zinc cyanide,  $2\text{TlCN}$ ,  $\text{Zn}(\text{CN})_2$ .

Easily sol. in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 8.7 pts. at  $0^\circ$ ; 15.3 pts. at  $14^\circ$ ; and 29.6 pts. at  $31^\circ$ . (Fronmüller, B. 11. 92.)

Tungsten cyanide with  $\text{MCN}$ .

See Tungstocyanide, M.

Zinc cyanide,  $\text{Zn}(\text{CN})_2$ .

Insol. in  $\text{H}_2\text{O}$  and alcohol. Sol. in alkalis.  
Easily sol. in  $\text{KCN} + \text{Aq}$ . Sol. in hot  $\text{NH}_3$  salts +  $\text{Aq}$  (Wittstein.)

Easily sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Gore.)  
Sol. in  $\text{KOH} + \text{Aq}$ . Solution is stable when less than 1 mol  $\text{Zn}(\text{CN})_2$  to 2 mols.  $\text{KOH}$  is present. When proportion is 1:1,  $\text{ZnO}_2\text{H}_2$  soon separates.

Sol. in dil.  $\text{KCN} + \text{Aq}$ . (Sharwood, J. Am. Chem. Soc. 1903, 25. 587.)

Sl. sol. in conc.  $\text{Zn}$  salts +  $\text{Aq}$ . 1 l. conc.  $\text{Zn}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$  dissolves 4 g., and 1 l. conc.  $\text{ZnSO}_4 + \text{Aq}$  dissolves 2 g.  $\text{Zn}(\text{CN})_2$ . Insol. in  $\text{HCN} + \text{Aq}$ . Easily sol. in dil. acids. (Joannis.)

Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Zinc cyanide ammonia,  $\text{Zn}(\text{CN})_2$ ,  $2\text{NH}_3$ .

Decomp. on air. (Varet, C. R. 105. 1070)  
 $+ \text{H}_2\text{O}$ . Decomp. on air. Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet.)

Zinc cyanide dihydrazine,  $\text{Zn}(\text{CN})_2$ ,  $2\text{N}_2\text{H}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . (Franzen, Z. anorg. 1911, 70. 153.)

Cyanogen,  $\text{CN}$ .

$\text{H}_2\text{O}$  absorbs  $4\frac{1}{2}$  vols.  $\text{CN}$  gas at  $20^\circ$ . Alcohol absorbs 23 vols., and ether 5 vols. at the same temperature. (Gay-Lussac.)

The solution gradually decomposes, but this is prevented by traces of acids.

0.221 mol. litre are dissolved in  $H_2O$  at  $0^\circ$ . (Naumann, *Z. Electrochem.* 1910, **16**, 177.)

Oil of turpentine absorbs 5 vols. (Gay-Lussac.) Absorbed by many essential oils. Very sol. in  $CuCl_2 + Aq$ .

Absorbed with decomp. by  $NH_4OH + Aq$  and other alkaline liquids.

Absorbed by aniline. (Jacquemann, *C. R.* 100, 1006.)

### Cyclotriborene, $B_3H_3$ .

Insol. in  $H_2O$ . (Ramsay and Hatfield, *Proc. Chem. Soc.* 1901, 17, 152.)

### Decamine cobaltic sulphite,

Sol. in  $H_2O$ . (Vortmann and Magdeburg, *B.* 22, 2636.)

### Decamine cobaltisulphurous acid.

### Cobaltic decamine cobaltisulphite,

Ppt. (Vortmann and Magdeburg, *B.* 22, 2635.)

### Sodium decamine cobaltisulphite,

Sol. in  $H_2O$ . (Vortmann and Magdeburg, *B.* 22, 2635.)

### Diamide, $N_2H_4$ .

See Hydrazine.

### Diamine chromium sulphocyanhydric acid, $Cr(NH_3)_{12}(SCN)_3, HSCN + H_2O$ .

Sol. in  $H_2O$ . (Nordenskiöld, *Z. anorg.* 1, 130.)

### Diamine chromium diaquo sulphocyanide, $Cr(NH_3)_2(SCN)_3 + 2H_2O$

Sol. in  $H_2O$ , from which it is pptd. by con.  $HCl + Aq$ . (Nordenskiöld, *Z. anorg.* 1, 137.)

### Ammonium diamine chromium sulphocyanide, $Cr(NH_3)_2(SCN)_3, NH_4SCN$ .

(Reinecke's salt.) Quite easily sol. in  $H_2O$ , less in alcohol, and insol. in benzene. Slowly decomp. by boiling  $H_2O$  or dil. acids. (Nordenskiöld, *Z. anorg.* 1, 130.)

+  $H_2O$ . Insol. in absolute ether. (Christensen, *J. pr.* (2) 45, 218.)

### Ammonium diamine chromium sulphocyanide iodide, $Cr(NH_3)_2(SCN)_3, NH_4SCN, I$ .

### Barium ———, $[Cr(NH_3)_2(SCN)_3]_2, Ba(SCN)_2$ .

Sol. in  $H_2O$  and alcohol (N.)

### Cadmium diamine chromium sulphocyanide, $Cd(SCN)_2, [Cr(NH_3)_2(SCN)_3]_2 + H_2O$

Nearly insol. in cold, sl. sol. in hot  $H_2O$ . Sl. sol. in boiling alcohol. (Christensen, *J. pr.* (2) 45, 371.)

### Cupric ———, $Cu(SCN)_2$ ,

Insol. in  $H_2O$  or dil. acids. (Reinecke, *A.* 126, 116.)

### Ferric ———, $[Cr(NH_3)_2(SCN)_3]_3, Fe(SCN)_3$ . (N.)

### Luteocobaltic ———,

As good as insol. in cold  $H_2O$ . Sl. sol. in hot  $H_2O$  and alcohol. (Christensen, *J. pr.* (2) 45, 370.)

### Mercuric ———, $[Cr(NH_3)_2(SCN)_3]_2, Hg(SCN)_2$ .

Insol. in  $H_2O$ . (N.)

Insol. in  $H_2O$  and dil. acids. (Reinecke.)

### Potassium ———, $Cr(NH_3)_2(SCN)_3, KSCN$ .

Properties as the  $NH_4$  salt. (N.)  $Cr(NH_3)_2(SCN)_3, KSCN, I$ . As the  $NH_4$  salt. (N.)

### Sodium ———, $NaSCN$ ,

Sol. in  $H_2O$ , alcohol, and ether. (Reinecke.)

### Diamine cobaltic nitrite ammonium nitrite, $Co(NH_3)_2(NO_2)_3, NH_4NO_2$ .

Sol. in  $H_2O$ . (Erdmann.)

### — nitrite lead nitrite,

Sol. in hot  $H_2O$  with partial decomp.

### — nitrite mercurous nitrite,

Ppt. Not sol. in hot  $H_2O$  without decomp.

### — nitrite potassium nitrite,

Sol. in  $H_2O$ . (Erdmann, *J. pr.* 97, 385.)

### — nitrite silver nitrite,

Ppt. Crystallises out of hot  $H_2O$ . (Erdmann.)

### — nitrite thallium nitrite,

Crystallises out of hot  $H_2O$  without decomp.

Dichrocoaltic carbonate,  
 $\text{Co}(\text{NH}_3)_2(\text{OH})\text{CO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Vortmann, B. 15. 1901)

Dichrocoaltic chloride,  $\text{Co}(\text{NH}_3)_2\text{Cl}_2 + \text{H}_2\text{O}$ .  
 Quite sol. in cold  $\text{H}_2\text{O}$ , dil. acids, conc.  $\text{H}_2\text{SO}_4$ , or dil. alcohol

From solution in conc.  $\text{H}_2\text{SO}_4$ , the salt is precipitated by much  $\text{HCl} + \text{Ag}$ . Composition is  $\text{Co}(\text{NH}_3)_2(\text{OH}_2)\text{Cl}_2$ . (Jorgensen, Z. anorg. 5. 189.)

— nitrate,  $\text{Co}(\text{NH}_3)_2(\text{NO}_3)_2 + 4\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . More sol. in dil.  $\text{HNO}_3 + \text{Aq}$  than praseoecaltic nitrate (Vortmann, B. 15. 1897)

Anhydrous. Insol. in  $\text{H}_2\text{O}$  as such, but converted into above salt thereby. (Jorgensen, Z. anorg. 5. 186)

— nitrite,  $\text{Co}(\text{NH}_3)_2(\text{NO}_2)_2$ .

Difficultly sol. in cold, but rather easily sol. in hot  $\text{H}_2\text{O}$ .

— sulphate,  $[\text{Co}(\text{NH}_3)_2]_2(\text{SO}_4)_3 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Vortmann, B. 15. 1900.)

— sulphite,  $[\text{Co}(\text{NH}_3)_2]_2(\text{SO}_3)_3 + \text{H}_2\text{O}$ .

Nearly insol. in cold, slowly decomp. by hot  $\text{H}_2\text{O}$ . Decomp. by acids or  $\text{KOH} + \text{Aq}$ . Insol. in cold, sol. in warm  $\text{NH}_4\text{OH} + \text{Aq}$ . (Kunzel, J. pr. (1) 72. 209) According to Geuther (A. 128. 157), is a double salt—

$[\text{Co}(\text{NH}_3)_2]_2(\text{SO}_3)_3, \text{Co}_2(\text{SO}_3)_3 + 2\text{H}_2\text{O}$

Didymium,  $\text{D}_2$ .

Slowly decomp. by  $\text{H}_2\text{O}$ . Insol. in cold conc.  $\text{H}_2\text{SO}_4$ . Sol. in dil. acids.

Compound of two elements, neodmium and praseodymium. (v. Welsbach, W. A. B. 92. 317.)

Didymium bromide,  $\text{DiBr}_2 + 6\text{H}_2\text{O}$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Cleve.)

Didymium nickel bromide,  $2\text{DiBr}_2, 3\text{NiBr}_2 + 18\text{H}_2\text{O}$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . (Fierichs and Smith, A. 191. 342.)

Didymium zinc bromide,  $\text{DiBr}_2, 3\text{ZnBr}_2 + 12\text{H}_2\text{O}$ .

Extremely deliquescent. (Cleve, Bull. Soc. (3) 43. 361.)

$2\text{DiBr}_2, 3\text{ZnBr}_2 + 36\text{H}_2\text{O}$ . (F. and S.)

Didymium chloride,  $\text{DiCl}_2$ .

Anhydrous. Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (Marignac.)

$+ 6\text{H}_2\text{O}$ . Deliquescent. Easily sol. in  $\text{H}_2\text{O}$  and alcohol. (Marignac.)

Didymium mercuric chloride,  $2\text{DiCl}_2, 9\text{HgCl}_2 + 24\text{H}_2\text{O}$ .

More sol. in  $\text{H}_2\text{O}$  than the corresponding La salt. (Marignac.)

$\text{DiCl}_2, 4\text{HgCl}_2 + 11\text{H}_2\text{O}$ . Not deliquescent. Easily sol. in  $\text{H}_2\text{O}$ .

Didymium stannic chloride.

See Chlorostannate, didymium.

Didymium fluoride,  $\text{DiF}_2 + \frac{1}{2}\text{H}_2\text{O}$

Precipitate. (Cleve.)

Didymium hydrogen fluoride,  $2\text{DiF}_2, 3\text{HF}$ .

Precipitate (Smith.)

Does not exist. (Cleve.)

Didymium potassium fluoride,  $\text{DiF}_2, \text{KF} + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Brauner, B. 15. 114.)

$+ \frac{1}{2}\text{H}_2\text{O}$  As above (B)

$2\text{DiF}_2, 3\text{KF} + \text{H}_2\text{O}$ . As above. (B.)

Didymium hydroxide,  $\text{Di}_2\text{O}_2\text{H}_4$ .

Insol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ , but is al. sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose.)

See also  $\text{Di}_2\text{O}_2$ .

Didymium pentahydroxide,  $\text{DiO}_2\text{H}_3 = \text{Di}_2\text{O}_5, 3\text{H}_2\text{O}$ .

Precipitate (Brauner, B. 15. 113.)

Didymium zinc iodide,  $2\text{DiI}_2, 3\text{ZnI}_2 + 24\text{H}_2\text{O}$ .

Very deliquescent. (Fierichs and Smith)

Didymium oxide,  $\text{Di}_2\text{O}_3$ .

With  $\text{H}_2\text{O}$  slowly forms  $\text{Di}_2\text{O}_2\text{H}_4$ .

Sol. in conc., or dil. mineral acids (Marignac), and in acetic acid (Hermann). Sol. in ammonium salts +  $\text{Aq}$ .

Slightly more slowly sol. in conc.  $\text{NH}_4\text{NO}_3 + \text{Aq}$  than  $\text{La}_2\text{O}_3$ . (Damour and Deville.)

A solution of  $\text{NH}_4\text{NO}_3$  in  $\text{H}_2\text{O}$  that can dissolve 2.9 mols  $\text{La}_2\text{O}_3$  dissolves 1 mol.  $\text{Di}_2\text{O}_3$ . (Brauner, B. 15. 114.)

Insol. in acetone (Naumann, B. 1904, 37. 4329.)

Didymium peroxide,  $\text{Di}_2\text{O}_5$ .

Sol. in acids with decomp. (Fierichs, B. 7. 799)

Not obtained by Cleve. (B. 11. 910)

The contradictory statements concerning the composition of  $\text{Di}$  peroxide are owing to the fact that praseodymium is the only one of the constituents of  $\text{Di}$  which easily forms a peroxide (v. Welsbach.)

Didymium pentoxide,  $\text{Di}_2\text{O}_5$ .

Sol. in dil.  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  in the cold without evolution of gas, but gas is evolved if treated with conc. acids. Insol. in  $\text{HF} + \text{Aq}$ . Sl. sol. in cold  $\text{NH}_4\text{NO}_3 + \text{Aq}$ .  $= \text{Di}_2\text{O}_5$ . (Cleve.)

**Didymium oxybromide,  $D_2OBr$ .**

(Frensch and Smith.)

**Didymium oxychloride,  $D_2OCl$ .**

*Anhydrous.* Insol. in  $H_2O$ . (Smith.)  
 +  $3H_2O$ . Sol. in cold dil.  $HNO_3$  + Aq.  
 (Marignac) Sl. sol. in  $HCl$  + Aq. (Heimann.)

**Didymium oxysulphide,  $D_2O_2S$ .**

Insol. in  $H_2O$ . Sol. in  $HCl$  + Aq without residue. (Marignac)

**Didymium sulphide,  $Di_2S_2$** 

Insol. in  $H_2O$ . Decomp. by dil acids.  
 (Marignac, A. ch. (3) 98. 159.)  
 Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

**Disulphuric acid,  $H_2S_2O_7$ .***See Disulphuric acid.***Dithionic acid (Hyposulphuric acid),  $H_2S_2O_6$ .**

Known only in aqueous solution, which is stable only when dil. Can be evaporated in vacuo until sp gr = 1.347, but decomp. upon further evaporation. (Welter and Gay-Lussac, A. ch. 10. 312.)

**Dithionates.**All dithionates are sol. in  $H_2O$ .**Aluminum dithionate,  $Al_2(S_2O_6)_3 + 18H_2O$ .**

Extremely deliquescent. Easily sol in  $H_2O$  or absolute alcohol. (Kluss, A. 246. 218.)

**Aluminum ammonium dithionate,  $Al_2(S_2O_6)_3, (NH_4)_2S_2O_6 + 27H_2O$ .**

Sl. deliquescent. Sol. in  $H_2O$ . (Kluss, A. 246. 303.)

**Ammonium dithionate,  $(NH_4)_2S_2O_6$ .**

Very sol. in  $H_2O$ . Sol. in 0.79 pt.  $H_2O$  at  $10^\circ$ , with reduction of temp. Not decomp. on boiling. Insol. in absolute alcohol. (Heeren, Pogg. 7. 172.)

Contains  $\frac{1}{2}H_2O$ . Sol. in 0.56 pt.  $H_2O$  at  $10^\circ$ . (Kluss, A. 246. 194.)

**Ammonium cadmium dithionate,**

Sol. in  $H_2O$ . (Kluss, A. 246. 298.)

**Ammonium cobalt dithionate,  $9(NH_4)_2S_2O_6, 2CoS_2O_6 + 16\frac{1}{2}H_2O$ .**

Sol. in  $H_2O$ . (Kluss.)

**Ammonium cupric dithionate,  $(NH_4)_2S_2O_6, 2CuS_2O_6 + 8H_2O$ .**

Sol. in  $H_2O$ .

**Ammonium ferrous dithionate,  $3(NH_4)_2S_2O_6, FeS_2O_6 + 6H_2O$ .**

Sol. in  $H_2O$ . (Kluss, A. 246. 300.)

 **$9(NH_4)_2S_2O_6, 2Fe_2S_2O_6 + 16\frac{1}{2}H_2O$ . Sol. in  $H_2O$ . (Kluss.)****Ammonium manganous dithionate,  $9(NH_4)_2S_2O_6, 2MnS_2O_6$ .**

Sol. in  $H_2O$ . (Kluss, A. 246. 301.)

**Ammonium nickel dithionate,  $9(NH_4)_2S_2O_6, 2NiS_2O_6 + 16\frac{1}{2}H_2O$ .**

Sol. in  $H_2O$ . (Kluss.)

**Ammonium zinc dithionate,  $5(NH_4)_2S_2O_6, ZnS_2O_6 + 9H_2O$ .**

Easily sol. in  $H_2O$ . (Kluss, A. 246. 296.)

 **$9(NH_4)_2S_2O_6, 2ZnS_2O_6 + 16\frac{1}{2}H_2O$ . Easily sol in  $H_2O$ . (Kluss.)****Ammonium dithionate chloride,  $(NH_4)_2S_2O_6, NH_4Cl$** 

Sol. in  $H_2O$ . (Fock and Kluss, B. 24. 3017.)

**Barium dithionate,  $BaS_2O_6 + 2H_2O$ .**

Not efflorescent. Sol. in 7.17 pts.  $H_2O$  at  $8^\circ$ , 4.04 pts. at  $18^\circ$ , and 1.1 pts.  $H_2O$  at  $100^\circ$ . Insol. in alcohol. (Gay-Lussac, Heeren.)

Sol. in 0.994 pt.  $H_2O$  at  $102^\circ$ , the boiling-point of the sat. solution. (Baker, Bull. Soc. (2) 44. 166.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+  $4H_2O$ . Very efflorescent. (Heeren.)

**Barium magnesium dithionate,  $BaMg(S_2O_6)_2 + 4H_2O$ .**

Sol. in  $H_2O$ . (Schiff, A. 118. 97.)

**Barium rubidium dithionate,  $BaRb_4(S_2O_6)_2 + H_2O$ .**

Sol. in  $H_2O$ . Solubility is diminished by presence of excess of  $Rb_2SO_4$ , but increased by  $BaS_2O_6$ . (Bodlander, Chem. Ztg. 14. 1140.)

**Barium sodium dithionate,  $BaNa_4(S_2O_6)_2 + 4H_2O$** 

Sol. in  $H_2O$ . Decomp. by recrystallisation. (Kraut, A. 118. 95.)

+  $6H_2O$ . (Schiff.)

**Barium dithionate chloride,  $BaS_2O_6, BaCl_2 + 4H_2O$ .**

(Fock and Kluss, B. 23. 3001.)

**Bismuth dithionate, basic,  $Bi_2O_3, S_2O_6 + 5H_2O$ .**

Efflorescent. Insol. in  $H_2O$ , but decomp. thereby into the following salt. Easily sol. in dil. acids, especially  $HCl$  + Aq. (Kluss, A. 246. 183.)

$4Bi_2O_3, 3S_2O_6 + 5H_2O$ . Insol. in  $H_2O$ . Sol. in dil. acids. (Kluss.)

**Cadmium dithionate.**

Deliquescent in moist air; very sol. in  $\text{H}_2\text{O}$ . (Heeren, Pogg. 7. 183.)

**Cadmium dithionate ammonia,  $\text{CdS}_2\text{O}_6, 4\text{NH}_3$ .**

Decomp. by alcohol; sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  but decomp. on heating. (Rammelsberg, Pogg. 58. 298.)

**Cæsium dithionate,  $\text{Cs}_2\text{S}_2\text{O}_6$ .**

Easily sol. in  $\text{H}_2\text{O}$  (Chabré, C. R. 1901, 133. 297.)

**Calcium dithionate,  $\text{CaS}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

Sol. in 246 pts.  $\text{H}_2\text{O}$  at  $19^\circ$ ; 0.8 pt. at  $100^\circ$ . Insol. in alcohol. (Heeren, Pogg. 7. 178.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

**Cerous dithionate,  $\text{Ce}_2(\text{S}_2\text{O}_6)_3 + 24\text{H}_2\text{O}$** 

Very sol. in  $\text{H}_2\text{O}$ . (Jolin.)  
+3, and  $5\text{H}_2\text{O}$ . (Wyrouboff.)

**Chromic dithionate,  $\text{Cr}_2(\text{S}_2\text{O}_6)_3 + 18\text{H}_2\text{O}$** 

Sol. in  $\text{H}_2\text{O}$  and alcohol (Kluss, A. 246. 189.)

$3\text{Cr}_2\text{O}_3, 4\text{S}_2\text{O}_3 + 24\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$  or alcohol. Insol. in ether (Kluss.)

**Cobaltous dithionate,  $\text{CoS}_2\text{O}_6 + 6\text{H}_2\text{O}$ .**

Not deliquescent. Very sol. in  $\text{H}_2\text{O}$  (Heeren.)

+ $8\text{H}_2\text{O}$ . Sol. in 0.49 pt.  $\text{H}_2\text{O}$  at  $19^\circ$ . Sol. in absolute alcohol. (Kluss, A. 246. 203.)

**Cupric dithionate basic,  $4\text{CuO}, \text{S}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

Very sl. sol. in  $\text{H}_2\text{O}$ . (Heeren, Pogg. 7. 18.)

Insol. in  $\text{H}_2\text{O}$ ; easily sol. in dil. acids. (Kluss, A. 246. 208.)

+ $3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  and  $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq.}$ ; sol. in traces in conc.  $\text{CuS}_2\text{O}_6 + \text{Aq.}$ . Easily sol. in dil. acids, even  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{H}_2\text{S}_2\text{O}_6 + \text{Aq.}$  (Kluss.)

**Cupric dithionate,  $\text{CuS}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

Not efflorescent. Very sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Heeren.)

+ $5\text{H}_2\text{O}$ . Efflorescent. Sol. in 0.64 pt.  $\text{H}_2\text{O}$  at  $18.5^\circ$  (Kluss, A. 246. 204.)

**Cupric dithionate ammonia,  $\text{CuS}_2\text{O}_6, 4\text{NH}_3$ .**

Difficultly sol. in cold  $\text{H}_2\text{O}$ , moderately sol. in  $\text{H}_2\text{O}$  at  $40^\circ$ . Decomp. by much  $\text{H}_2\text{O}$  or by heating the solution above  $60^\circ$ . Decomp. by  $\text{HCl} + \text{Aq.}$  (Heeren.)

Can be recryst. from  $\text{NH}_4\text{OH} + \text{Aq.}$

Sol. in liquid  $\text{NH}_3$  (Horn, Am. Ch. J. 1908, 39. 213.)

-  $\text{CuS}_2\text{O}_6, 9\text{NH}_3$ . Decomp. at ord. temp. in the air.

Insol. in liquid  $\text{NH}_3$ . (Horn, Am. Ch. J. 1908, 39. 213.)

**Didymium dithionate,  $\text{Dy}_2(\text{S}_2\text{O}_6)_3 + 24\text{H}_2\text{O}$ .**

Extremely sol. in  $\text{H}_2\text{O}$  (Cleve.)

**Erbium dithionate,  $\text{Er}_2(\text{S}_2\text{O}_6)_3 + 18\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$  or alcohol, insol. in ether. (Huglund.)

**Glucinum dithionate, basic,  $5\text{GfO}, 2\text{S}_2\text{O}_6 + 14\text{H}_2\text{O}$** 

Easily sol. in  $\text{H}_2\text{O}$  and absolute alcohol. (Kluss, A. 246. 196.)

**Iron (ferrous) dithionate,  $\text{FeS}_2\text{O}_6 + 5\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. Decomp. in aqueous solution into  $\text{FeSO}_4$  by boiling (Heeren, Pogg. 7. 181.)

+ $7\text{H}_2\text{O}$ . Sol. in 0.59 pt.  $\text{H}_2\text{O}$  at  $18.5^\circ$ . (Kluss, A. 246. 198.)

**Iron (ferric) dithionate, basic,  $8\text{Fe}_2\text{O}_3, \text{S}_2\text{O}_6 + 20\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  or alcohol. Very sl. sol. in  $\text{H}_2\text{S}_2\text{O}_6 + \text{Aq.}$ ; easily sol. in  $\text{HCl} + \text{Aq}$  (Heeren.)

Contains  $14\text{H}_2\text{O}$ . (Kluss, A. 246. 200.)

$3\text{Fe}_2\text{O}_3, \text{S}_2\text{O}_6 + 8\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ .

Easily sol. in acids. (Kluss, A. 246. 201.)

**Lanthanum dithionate,  $\text{La}_2(\text{S}_2\text{O}_6)_3 + 16\text{H}_2\text{O}$ , and  $24\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Lead dithionate, basic,  $2\text{PbO}, \text{S}_2\text{O}_6 + 2\text{H}_2\text{O}$ .**

Very difficultly sol. in  $\text{H}_2\text{O}$ . (Heeren, Pogg. 7. 171.)

$10\text{PbO}, \text{S}_2\text{O}_6 + 2\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Heeren.)

**Lead dithionate,  $\text{PbS}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Heeren.)

Sol. in 0.869 pt.  $\text{H}_2\text{O}$  at  $20.5^\circ$ . (Baker, C. N. 36. 203.)

**Lead strontium dithionate,  $(\text{Pb}, \text{Sr})\text{S}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

(Rammelsberg.)

**Lithium dithionate,  $\text{Li}_2\text{S}_2\text{O}_6 + 2\text{H}_2\text{O}$ .**

Sl. deliquescent, and easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Rammelsberg.)

**Magnesium dithionate,  $\text{MgS}_2\text{O}_6 + 6\text{H}_2\text{O}$ .**

Sol. in 0.85 pt.  $\text{H}_2\text{O}$  at  $13^\circ$ . Solution can be boiled without decomp. (Heeren, Pogg. 7. 179.)

Sol. in 0.692 pt.  $\text{H}_2\text{O}$  at  $17^\circ$ . (Baker, C. N. 36. 203.)

**Manganous dithionate,  $\text{MnS}_2\text{O}_6 + 3\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  (Kraut, A. 118. 93.)

+ $6\text{H}_2\text{O}$ . Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Margnag, J. B. 1855. 380.)

**Mercurous dithionate,  $\text{Hg}_2\text{S}_2\text{O}_8$ .**

Sl. sol in cold, decomp. by hot  $\text{H}_2\text{O}$ :  
(Rammelsberg)

**Mercuric dithionate, basic,  $5\text{HgO}$ ,  $2\text{S}_2\text{O}_8$ .**

Sl. sol. in cold, decomp. by hot  $\text{H}_2\text{O}$ .  
Easily sol in  $\text{HNO}_3$  + Aq. (Rammelsberg,  
Pogg. 59. 472)

**Mercuric dithionate,  $\text{HgS}_2\text{O}_6 + 6\text{H}_2\text{O}$** 

Decomp. by  $\text{H}_2\text{O}$  or on standing. (Kluss,  
A. 246. 216.)

**Nickel dithionate,  $\text{NiS}_2\text{O}_6 + 6\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  (Topsee.)  
Sol. in 0.897 pt.  $\text{H}_2\text{O}$  at  $12^\circ$ . (Baker, C. N.  
36. 203.)

**Nickel dithionate ammonia,  $\text{NiS}_2\text{O}_6$ ,  $6\text{NH}_3$** 

Can be recryst. from warm  $\text{NH}_4\text{OH}$  + Aq  
Decomp. by  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg  
58. 295.)

**Nickel dithionate hydrazine,  $\text{NiS}_2\text{O}_6$ ,  
 $3\text{N}_2\text{H}_4$ .**

Unstable  
Sol in  $\text{NH}_4\text{OH}$  + Aq (Fauzen, Z anorg  
1908, 60. 267)

**Potassium dithionate,  $\text{K}_2\text{S}_2\text{O}_8$ .**

Not deliquescent Sol. in 16.5 pts.  $\text{H}_2\text{O}$  at  
 $16^\circ$ , and 1.58 pts at  $100^\circ$ . Insol. in alcohol.  
(Heeren.)

Sol in 2.65 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ . (Dumas)  
Sol in 16.5 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ ; in 1.58 pts.  
boiling  $\text{H}_2\text{O}$ .

Insol. in alcohol (Heeren, Pogg 1826, 7.  
72.)

**Praseodymium dithionate,  $\text{Pr}_2(\text{S}_2\text{O}_8)_3 + 12\text{H}_2\text{O}$** 

Deliquescent; very sol in  $\text{H}_2\text{O}$ . (von  
Schule, Z. anorg 1898, 18. 361)

**Rubidium dithionate,  $\text{Rb}_2\text{S}_2\text{O}_8$ .**

Sol. in  $\text{H}_2\text{O}$ . (Topsee and Christiansen)

**Ruthenium dithionate,  $\text{RuS}_2\text{O}_6$ .**

Ppt. from aq. sol. by alcohol. (Antony,  
Gazz. ch. it. 1898, 28. 139-142.)

**Silver dithionate,  $\text{Ag}_2\text{S}_2\text{O}_8 + 2\text{H}_2\text{O}$ .**

Sol. in 2 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ . Sol. in  $\text{NH}_4\text{OH}$  +  
Aq. (Heeren, Pogg. 7. 191.)

**Silver sodium dithionate,  $\text{AgS}_2\text{O}_6$ ,  $\text{Na}_2\text{S}_2\text{O}_6$   
 $+ 4\text{H}_2\text{O}$** 

Sol. in  $\text{H}_2\text{O}$ . (Kraut, A. 118. 96.)

**Silver dithionate ammonia,  $\text{AgS}_2\text{O}_6$ ,  $4\text{NH}_3$** 

Sol. in  $\text{H}_2\text{O}$  without decomp. (Rammels-  
berg, Pogg. 58. 298.)

**Sodium dithionate,  $\text{Na}_2\text{S}_2\text{O}_8 + 2\text{H}_2\text{O}$** 

Sol in 2.1 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ , and in 1.1 pts.  
boiling  $\text{H}_2\text{O}$ . Insol. in alcohol.

Fuming  $\text{HCl}$  + Aq precipitates the salt  
from aqueous solution. (Heeren, Pogg. 7.  
76)  
 $+ 6\text{H}_2\text{O}$ . (Kraut, A. 117. 97.)

**Strontium dithionate,  $\text{SrS}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

Sol. in 4.5 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ , 1.5 pts boiling  
 $\text{H}_2\text{O}$  Insol. in alcohol (Heeren, Pogg 7.  
177)

**Thallous dithionate,  $\text{Tl}_2\text{S}_2\text{O}_6$ .**

Very easily sol in  $\text{H}_2\text{O}$ . (Weather)

**Thallous dithionate sulphate,  $3\text{Tl}_2\text{S}_2\text{O}_6$ ,  
 $\text{Ti}_2\text{SO}_4$ .**

Sol in  $\text{H}_2\text{O}$ . (Wyrouboff, Ann Phys.  
Bibl. 8. 802.)

**Thorium dithionate,  $\text{Th}(\text{S}_2\text{O}_6)_2 + 4\text{H}_2\text{O}$  (?)**

Very unstable. (Kluss, A. 246. 188.)

**Tin (stannous) dithionate,  $\text{SnS}_2\text{O}_6$ .**

Known only in solution.

$8\text{SnO}$ ,  $\text{S}_2\text{O}_8 + 9\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ . Sol.  
in dil. acids, even dithionic acid + Aq. (Kluss,  
A. 246. 186.)

**Uranous dithionate,  $6\text{UO}_2$ ,  $\text{S}_2\text{O}_8 + 10\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in warm  $\text{HCl}$  + Aq.  
(Kluss, A. 246. 191)

$7\text{UO}_2$ ,  $\text{S}_2\text{O}_8 + 8\text{H}_2\text{O}$ . As above.  
 $8\text{UO}_2$ ,  $\text{S}_2\text{O}_8 + 21\text{H}_2\text{O}$ . As above.

**Divanadyl dithionate,  $(\text{VO}_2)_2\text{S}_2\text{O}_6$** 

Sol. in  $\text{H}_2\text{O}$ . (Bevan, C. N. 38. 294.)

**Yttrium dithionate,  $\text{Y}_2(\text{S}_2\text{O}_6)_3 + 18\text{H}_2\text{O}$ .**

Not deliquescent. Easily sol. in  $\text{H}_2\text{O}$ , but  
difficultly sol. in alcohol. Insol. in ether.  
(Cleve, Bull. Soc. (2) 21. 344.)

**Zinc dithionate,  $\text{ZnS}_2\text{O}_6 + 6\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ ; decomp. on boiling.  
(Heeren, Pogg. 7. 183.)

**Zinc dithionate ammonia,  $\text{ZnS}_2\text{O}_6$ ,  $4\text{NH}_3$ .**

Decomp. with  $\text{H}_2\text{O}$ ; sol. in warm, less sol.  
in cold  $\text{NH}_4\text{OH}$  + Aq. (Rammelsberg, Pogg.  
58. 297.)

$+ \text{H}_2\text{O}$ . Ppt. (Ephraim, B. 1915, 48.  
640.)

**Dysprosium, Dy.**

(Lecoq de Boisbaudran, C. R. 102. 1005.)

**Dysprosium chloride,  $\text{DyCl}_3 + 6\text{H}_2\text{O}$ .**

Deliquescent, sol. in  $\text{H}_2\text{O}$ . (Urbain, C. R.  
1908, 146. 120)

**Europium.**

Europium chloride,  $\text{EuCl}_3$ .

Sol. in  $\text{H}_2\text{O}$ . Stable in very dil. aqueous solution, but decomp. when the solution is concentrated at  $100^\circ$ . (Urban, C. R. 1911, 153. 1157.)

**Erbium, Er**

Decomposes  $\text{H}_2\text{O}$  (Höglund)

The so-called element "erbium" can be further decomp. into simple substances. (Krüss, Z. anorg. 3. 353.)

Erbium bromide,  $\text{ErBr}_3 + 9\text{H}_2\text{O}$ .

Very deliquescent.

Erbium chloride,  $\text{ErCl}_3 + 6\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol (Höglund)

Erbium mercuric chloride,  $\text{ErCl}_3, 5\text{HgCl}_2 + 7\text{H}_2\text{O}$ .

Deliquescent. (Clevs.)

Erbium fluoride,  $\text{ErF}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{HF} + \text{Aq}$ . (Höglund, Bull. Soc. (2) 18. 193.)

Erbium hydroxide,  $\text{Er}_2\text{O}(\text{OH})_4$ .

Insol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ .

Easily sol. in acids. Decomp. ammonium salts by boiling therewith.

Erbium iodide,  $\text{ErI}_3$ .

Very deliquescent. Very sol. in  $\text{H}_2\text{O}$  and alcohol. Insol. in ether. (Höglund.)

Erbium oxide,  $\text{Er}_2\text{O}_3$ .

Difficultly but completely sol. in warm  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HCl} + \text{Aq}$ . Decomp.  $\text{NH}_4$  salts by boiling therewith.

Erbium peroxide,  $\text{Er}_2\text{O}_5$ .

Precipitate. (Cleve, Bull. Soc. (2) 43. 53)

Erbium sulphide.

Decomp. in moist air and with acids.

Erythrochromium bromide,

Very easily sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{HBr} + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Jörgensen, J. pr. (2) 25. 398)

— bromide, basic,  $\text{HOCr}_2(\text{NH}_4)_{10}(\text{OH})\text{Br}_4 + \text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ . (Jörgensen)

— chloroiodide,  $\text{HOCr}_2(\text{NH}_4)_{10}\text{ClI}_4 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Jörgensen.)

Erythrochromium chloroplatinate,  
 $[\text{HOCr}_2(\text{NH}_4)_{10}]_2(\text{PtCl}_6)_5 + 10\text{H}_2\text{O}$ .  
 Nearly insol. in  $\text{H}_2\text{O}$ . (Jörgensen.)

— dithionate, basic,

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in very dil.  $\text{HNO}_3$ ,  $\text{HBr}$ ,  $\text{HCl} + \text{Aq}$ . Sol. in conc.  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Jörgensen.)

— nitrate,  $\text{HOCr}_2(\text{NH}_4)_{10}(\text{NO}_3)_5 + \text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in dil.  $\text{HNO}_3 + \text{Aq}$ . Sol. in conc.  $\text{HNO}_3$  with decomp. Very sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in alcohol. (Jörgensen)

— nitrate, basic,  $\text{HOCr}_2(\text{NH}_4)_{10}(\text{NO}_3)_4(\text{OH}) + 3\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in cold  $\text{H}_2\text{O}$  (Jörgensen.)

— sulphate,  $[\text{HOCr}_2(\text{NH}_4)_{10}]_2(\text{SO}_4)_5$ .

Nearly insol. in  $\text{H}_2\text{O}$ . (Jörgensen)

Tetraferriammonium,  $\text{Fe}_4\text{N}$ .

See Iron nitride.

**Ferric acid.**

Barium ferrate,  $\text{BaFeO}_4 + \text{H}_2\text{O}$ .

Ppt. Can be boiled for some time with  $\text{H}_2\text{O}$  without decomp. Decomp. by mineral acids. Sol. in dil. acetic acid. (Fremy, A. ch. (3) 12. 373)

Insol. in  $\text{H}_2\text{O}$ , not readily acted upon by acids when dry. (Rosen, J. Am. Chem. Soc. 1895, 17. 766)

Ppt. Easily decomp. by acids (Moeser, Arch. Pharm. 1895, 233. 526.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Calcium ferrate,  $\text{CaFeO}_4$

Sol. in  $\text{H}_2\text{O}$ . (Rosell, J. Am. Chem. Soc. 1895, 17. 760-69.)

Potassium ferrate,  $\text{K}_2\text{FeO}_4$ .

Very deliquescent. Easily sol. in cold  $\text{H}_2\text{O}$  with evolution of much heat. Decomp. by standing or warming. Decomp. by acids or alkalis (Fremy, A. ch. (3) 12. 369.)

Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Moeser, Arch. Pharm. 1895, 233. 524)

Quickly decomp. by potassium tartrate or racemate, sugar, or albumen without separation of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ , by alcohol with separation of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Potassium oxalate, acetate, formate, and benzoate, also citrate decomp. much more slowly. Insol. in conc.  $\text{KOH} + \text{Aq}$ . (Wackenroder, A. 33. 41.)

Sodium ferrate,  $\text{Na}_2\text{FeO}_4$ .

Sol. in  $\text{H}_2\text{O}$  and in conc.  $\text{NaOH} + \text{Aq}$ . (Fremy, l. c.)

**Strontium ferrate,  $\text{SrFeO}_4$ .**

Sl. sol. in  $\text{H}_2\text{O}$  by which it is decomp.  
Decomp. by acids  
Sol. in aqueous solutions of Na and K salts with partial decomp.  
Insol. in sat.  $\text{SrBr}_2 + \text{Aq.}$ , alcohol and ether. (Eidmann, B. 1903, 36, 2290)

**Ferricomolybdic acid.**

**Ammonium ferricomolybdate,  $3(\text{NH}_4)_2\text{O}$ ,  $\text{Fe}_2\text{O}_3$ ,  $12\text{MoO}_3 + 19\text{H}_2\text{O}$ .**

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29, 697.)

**Ferricyanhydric acid,**

$\text{H}_3\text{Fe}(\text{CN})_3$  (or  $\text{H}_2\text{Fe}_2(\text{CN})_{12}$ ).

Easily sol. in  $\text{H}_2\text{O}$  or alcohol. Solution decomposes slowly by standing, more rapidly by heating. Insol. in ether.

**Ferricyanides.**

The alkali, and alkaline-earth ferricyanides are sol. in  $\text{H}_2\text{O}$ ; the others are insol. The ferricyanides of metals, the oxides of which are sol. in  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq.}$ , are themselves sol. in those reagents

**Ammonium ferricyanide,  $(\text{NH}_4)_3\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$**

Permanent. Readily sol. in  $\text{H}_2\text{O}$  (and alcohol?).

**Ammonium ferrous ferricyanide,  $\text{NH}_4\text{Fe}(\text{CN})_6 + 1\frac{1}{2}\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  and not pptd. by alcohol from aqueous solution. More stable than the corresponding K salt.

**Ammonium lead ferricyanide,  $\text{NH}_4\text{PbFe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .**

**Ammonium potassium ferricyanide,  $(\text{NH}_4)_2\text{KFe}(\text{CN})_6$ .**

Sol. in  $\text{H}_2\text{O}$ . (Schaller, Bull. Soc. (2) 1, 275.)

**Barium ferricyanide,  $\text{Ba}_3[\text{Fe}(\text{CN})_6]_2 + 20\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Schuler, W. A. B. 77, 692.)

**Barium potassium ferricyanide,  $\text{BaKFe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .**

Permanent. Easily sol. in  $\text{H}_2\text{O}$ , less in alcohol.

**Barium ferricyanide bromide,  $\text{Ba}_4[\text{Fe}(\text{CN})_6]_3, 2\text{BaBr}_2 + 20\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Boiling alcohol does not dissolve out  $\text{BaBr}_2$ . (Rammelsberg, J. pr. (2) 39, 463.)

**Bismuth ferricyanide,  $\text{Bi}_3[\text{Fe}(\text{CN})_6]_3$ .**

Insol. in  $\text{H}_2\text{O}$ , but decomp. by boiling therewith. (Muir, Chem. Soc. 32, 40)

**Cadmium ferricyanide ammonia,  $\text{Cd}_3[\text{Fe}(\text{CN})_6]_2, 6\text{NH}_3 + 3\text{H}_2\text{O}$ .**

Effloresces to form—  
 $\text{Cd}_3[\text{Fe}(\text{CN})_6]_3, 4\text{NH}_3 + 2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Wyrouboff, A. ch. (5) 10, 413.)

**Calcium ferricyanide,  $\text{Ca}_3[\text{Fe}(\text{CN})_6]_2 + 10$ , or  $12\text{H}_2\text{O}$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and dil. alcohol.

**Calcium potassium ferricyanide,  $\text{CaKFe}(\text{CN})_6$ .**

Sol. in  $\text{H}_2\text{O}$ .

**Cerous ferricyanide,  $\text{CeFe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ , easily decomp. (John.)

**Chromic ferricyanide (?)**.

Ppt.

**Cobaltous ferricyanide,  $\text{Co}_3[\text{Fe}(\text{CN})_6]_2$ .**

Insol. in  $\text{H}_2\text{O}$  and  $\text{HCl} + \text{Aq.}$  Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$

**Cobaltous ferricyanide ammonia,  $\text{Co}_3[\text{Fe}(\text{CN})_6]_2, 4\text{NH}_3 + 6\text{H}_2\text{O}$ .**

**Cobaltic ferricyanide ammonia.**

See Luteo-, purpureo-, etc. cobaltic ferricyanide.

**Cuprous ferricyanide,  $(\text{Cu}_2)[\text{Fe}(\text{CN})_6]_2$ .**

Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$ ; insol. in  $\text{NH}_4$  salts +  $\text{Aq.}$  (Wittstein)

**Cupric ferricyanide,  $\text{Cu}_2[\text{Fe}(\text{CN})_6]_2$ .**

Insol. in  $\text{H}_2\text{O}$  or  $\text{NH}_4$  salts +  $\text{Aq.}$  Sol. in  $\text{NH}_4\text{OH}$ , and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  (Wittstein.)  
Insol. in  $\text{HCl} + \text{Aq.}$

**Iron (ferrous) ferricyanide,  $\text{Fe}_3[\text{Fe}(\text{CN})_6]_2 + x\text{H}_2\text{O}$ .**

(Turnbull's blue) Properties as ferric ferrocyanide (Prussian blue), with which it is perhaps identical. (Gintl, Z. anal. 21, 110.)

**Iron (ferrosoferric) ferricyanide,**

$\text{Fe}_{12}(\text{CN})_{24} = \text{Fe}^{II}_4\text{Fe}^{III}_8[\text{Fe}(\text{CN})_6]_6$ .

(Prussian green) Insol. in  $\text{H}_2\text{O}$  or conc.  $\text{HCl} + \text{Aq.}$ , but slowly decomp. by boiling therewith

$\text{Fe}_2(\text{CN})_6 + 4\text{H}_2\text{O} = \text{Fe}^{II}_4\text{Fe}^{III}_8[\text{Fe}(\text{CN})_6]_4 + 12\text{H}_2\text{O}$  Properties as above. (Reynolds, Chem. Soc. 54, 767.)

**Iron (ferrous) potassium ferricyanide,**

$\text{KFe}(\text{CN})_6 = \text{KFe}(\text{CN})_6 + 4$ , or  $3\text{H}_2\text{O}$ .

(Soluble Prussian blue) Sol. in  $\text{H}_2\text{O}$ , but insol. in salts +  $\text{Aq.}$  or alcohol.

Salt of the same composition, called "Wilhamson's blue," is insol. in  $H_2O$ .

Lead ferricyanide, basic,  $Pb_2[Fe(CN)_6]_2 \cdot 3PbO \cdot H_2 + 11H_2O$ .  
(Schuler.)

Lead ferricyanide,  $Pb_2[Fe(CN)_6]_2 + 16H_2O$   
Sl. sol. in  $H_2O$ ; more sol. in hot, than cold  $H_2O$ , but decomp. on boiling. (Gmelin.)  
 $+4H_2O$ . Easily sol. in  $H_2O$ ; sl. sol. in alcohol. (Schuler, W. A. B. 77. 692.)

Lead potassium ferricyanide,  $PbKFe(CN)_6 + 3H_2O$ .

Sol. in 4.75 pts.  $H_2O$  at  $16^\circ$ , and the solution decomp. on standing. (Schuler.)  
 $+1\frac{1}{2}H_2O$ . Efflorescent. Much more sol. in  $H_2O$  than the Pb salt. Insol. in alcohol (Wyruboff.)

Lead ferricyanide nitrate,  $Pb_2[Fe(CN)_6]_2 \cdot Pb(NO_3)_2 + 12H_2O$ .

Sol. in 13.31 pts.  $H_2O$  at  $16^\circ$ . (Schuler.)  
 $+11H_2O$ . (Joannis, A. ch. (5) 26. 528.)

Magnesium ferricyanide,  $Mg_2[Fe(CN)_6]_2$ .  
Sol. in  $H_2O$ .

Magnesium potassium ferricyanide,  $MgKFe(CN)_6$ .  
(Reindel, J. pr. 103. 166.)

Manganous ferricyanide,  $Mn_2[Fe(CN)_6]_2$ .  
Insol. in  $H_2O$ , acids,  $NH_4OH$ , or  $NH_4$  salts + Aq.

Mercurous ferricyanide,  $Hg_2Fe(CN)_6$ .  
Ppt. (Fernekes, J. Am. Chem. Soc. 1906, 28. 604.)

Mercuric ferricyanide,  $Hg_2[Fe(CN)_6]_2$ .  
Very sol. in  $H_2O$ . Solution quickly decomp. (Fernekes, J. Am. Chem. Soc. 1906, 28. 603.)

Nickel ferricyanide ammonia,  $Ni_2[Fe(CN)_6]_2 \cdot 4NH_3 + H_2O$ .

Sol. in  $NH_4OH$  + Aq. (Reynoso, A. ch. (3) 30. 254.)

Nickel ferricyanide,  $Ni_2[Fe(CN)_6]_2(?)$ .  
Ppt. Insol. in  $HCl$  + Aq.

Potassium ferricyanide,  $K_3Fe(CN)_6$ , (or  $K_4Fe_2(CN)_{12}$ ).

Permanent. Easily sol. in  $H_2O$ .

100 pts.  $H_2O$  dissolve pts.  $K_3Fe(CN)_6$  at  $t^\circ$ .

$t^\circ$	Pts salt	$t^\circ$	Pts salt	$t^\circ$	Pts salt
4 4	33 0	15.6	40 8	100	77 5
10	36 6	37.8	58 8	104.4	82 6

(Wallace, Chem. Soc. 7. 80.)

100 pts.  $H_2O$  at  $13^\circ$  dissolve 38 pts., and the solution has sp. gr. = 1.1630. (Schiff, A. 113. 350.)

1 l sat. solution in  $H_2O$  at  $25^\circ$  contains 385.5 g.  $K_3Fe(CN)_6$ . (Grube, Z. Electrochem. 1914, 20. 342.)

Sp. gr. of  $K_3Fe(CN)_6$  + Aq at  $13^\circ$

$t^\circ$ salt	Sp. gr.	$t^\circ$ salt	Sp. gr.	$t^\circ$ salt	Sp. gr.
1	1.0051	11	1.0595	21	1.1202
2	1.0103	12	1.0653	22	1.1266
3	1.0155	13	1.0712	23	1.1331
4	1.0208	14	1.0771	24	1.1396
5	1.0261	15	1.0831	25	1.1462
6	1.0315	16	1.0891	26	1.1529
7	1.0370	17	1.0952	27	1.1596
8	1.0426	18	1.1014	28	1.1664
9	1.0482	19	1.1076	29	1.1732
10	1.0538	20	1.1039	30	1.1802

(Schiff)

Sp. gr. of  $K_4Fe(CN)_6$  + Aq at  $25^\circ$ .

Concentration of $K_4Fe(CN)_6$ + Aq	Sp. gr.
1—normal	1.0574
$\frac{1}{2}$ —	1.0289
$\frac{1}{4}$ —	1.0143
$\frac{1}{8}$ —	1.0092

(Wagner, Z. phys. Ch. 1890, 5. 37.)

Sat.  $K_3Fe(CN)_6$  + Aq boils at  $104.4^\circ$ . (Wallace)

1 l sat. solution at  $25^\circ$  of  $K_3Fe(CN)_6$  +  $K_4Fe(CN)_6$  contains 338.1 g.  $K_3Fe(CN)_6$  and 79.02 g.  $K_4Fe(CN)_6$  (Grube)

Solubility of  $K_3Fe(CN)_6$  +  $K_4Fe(CN)_6$  in  $KOH$  + Aq at  $25^\circ$

KOH Normality	g. per l	
	$K_3Fe(CN)_6$	$K_4Fe(CN)_6$
0.4687	309	66.64
0.9028	275.3	55.19
1.949	200.8	35.95

(Grube.)

Solubility in  $KOH$  + Aq at  $25^\circ$ .

KOH Normality	g. $K_4Fe(CN)_6$ per l.
0.4687	342.7
0.9028	302.3
1.949	215.1

(Grube, Z. Electrochem. 1914, 20. 342.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in absolute alcohol, and only sl. sol. in dil. alcohol.

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

Insol. in benzonitrile (Naumann, B. 1914, 47. 1370.)

**Potassium sodium ferricyanide,**  
 $\text{KNa}_2\text{Fe}(\text{CN})_6$ .

Sol in  $\text{H}_2\text{O}$ .

$\text{K}_2\text{NaFe}(\text{CN})_6$ . Sol in  $\text{H}_2\text{O}$

$\text{K}_2\text{Na}_2[\text{Fe}(\text{CN})_6]$ . Sol in  $\text{H}_2\text{O}$ .  
 $+3\text{H}_2\text{O}$ .

**Potassium ferricyanide iodide,**  $\text{K}_3\text{Fe}(\text{CN})_6$ ,  
 KI.

Very unstable.

**Silver ferricyanide,**  $\text{Ag}_3\text{Fe}(\text{CN})_6$

1 l  $\text{H}_2\text{O}$  dissolves 0.0066 g  $\text{Ag}_3\text{Fe}(\text{CN})_6$  at  $20^\circ$ . (Whitby, Z anorg 1910, 67. 108.)

Sol. in  $\text{NH}_4\text{OH}$ , and hot  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , but insol. in  $\text{NH}_4$  salts +  $\text{Aq}$ .

Insol. in  $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$ . (Wackenroder, A. 41. 317.)

**Silver ferricyanide ammonia,**  $2\text{Ag}_3\text{Fe}(\text{CN})_6$ ,  
 $3\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Gintl.)

$2\text{Ag}_3\text{Fe}(\text{CN})_6$ ,  $5\text{NH}_3$ . (Carlo, Gazz. ch. it. 1910, 40. (2) 477.)

**Sodium ferricyanide,**  $\text{Na}_3\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$

Deliquescent. Sol. in 5.3 pts. cold, and 1.5 pts. boiling  $\text{H}_2\text{O}$ . Insol. in alcohol, but not pptd. thereby from aqueous solution. (Bette)

**Ferrinitrososulphydric acid.**

See Ferroheptanitrososulphydric acid.

**Ferrocyanhydric acid,**  $\text{H}_4\text{Fe}(\text{CN})_6$ .

Sol in  $\text{H}_2\text{O}$  and alcohol.

100 pts.  $\text{H}_2\text{O}$  dissolve 15 pts. acid at  $14^\circ$ . (Joannis, A. ch. (5) 26. 514.)

Insol. in ether, and much less sol. in ether-alcohol than in alcohol. Insol. in conc.  $\text{HCl} + \text{Aq}$ .

**Ferrocyanides.**

The ferrocyanides of the alkali and alkaline-earth metals are sol. in  $\text{H}_2\text{O}$ ; the others are insol., but sol. in alkalies +  $\text{Aq}$  in case the base is sol. therein.

**Aluminum ferrocyanide,**  $\text{Al}_4[\text{Fe}(\text{CN})_6]_3 + 17\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$

Sl. sol. in  $\text{HCl} + \text{Aq}$  with partial decomp. (Wyruboff, A. ch. (5) 8. 446.)

**Ammonium ferrocyanide,**  $(\text{NH}_4)_4\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol.

$+ \text{H}_2\text{O}$ . (Berzelius.)

**Ammonium cadmium ferrocyanide ammonia,**  
 $(\text{NH}_4)_2\text{Cd}_2[\text{Fe}(\text{CN})_6]_2 \cdot 2\text{NH}_3 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wyruboff, A. ch. (5) 10. 413.)

**Ammonium calcium ferrocyanide,**  
 $(\text{NH}_4)_2\text{CaFe}(\text{CN})_6$ .

Sl. sol. in  $\text{H}_2\text{O}$  (Kunheim and Zimmermann, Dingl. 252. 478.)

100 g. sat. solution in  $\text{H}_2\text{O}$  contain 0.258 g at  $16^\circ$ . (Brown, J. phys. Ch. 1898, 2. 51.)

**Ammonium cuprous ferro cyanide,**  
 $(\text{NH}_4)_2\text{Cu}_2\text{Fe}(\text{CN})_6$ .

Insol. in  $\text{H}_2\text{O}$  and alcohol.

Decomp. in the air. (Messner, Z. anorg. 1895, 8. 382.)

**Ammonium cupric ferrocyanide,**  
 $(\text{NH}_4)_2\text{CuFe}(\text{CN})_6$ .

Ppt.

$+ x\text{H}_2\text{O}$  Very unstable Insol. in  $\text{H}_2\text{O}$ ; decomp. by boiling  $\text{H}_2\text{O}$  (Messner, Z. anorg. 1895, 8. 384.)

**Ammonium lithium ferrocyanide,**  
 $(\text{NH}_4)_2\text{Li}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Wyruboff, A. ch. (4) 21. 270.)

**Ammonium magnesium ferrocyanide,**  
 $(\text{NH}_4)_2\text{MgFe}(\text{CN})_6$ .

1 l sat. solution at  $17^\circ$  contains 2.48 g  $(\text{NH}_4)_2\text{MgFe}(\text{CN})_6$  (Robinson, Chem. Soc 1909, 96. 1353.)

**Ammonium manganous ferrocyanide,**  
 $(\text{NH}_4)_2\text{MnFe}(\text{CN})_6$ .

Ppt. (Blum, Z. anal. 30. 284.)

**Ammonium potassium ferrocyanide,**  
 $\text{NH}_4\text{K}_3\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .

Easily sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Insol. in alcohol.

$(\text{NH}_4)_2\text{K}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

**Ammonium potassium ferrocyanide ammonium chloride,**  $(\text{NH}_4)_2\text{KFe}(\text{CN})_6$ ,  
 $2\text{NH}_4\text{Cl}$

Sol in  $\text{H}_2\text{O}$ . (Étard, J. pr. (2) 31. 430.)

**Ammonium ferrocyanide bromide,**  
 $(\text{NH}_4)_4\text{Fe}(\text{CN})_6 \cdot 2\text{NH}_4\text{Br}$ .

Permanent. Very sol. in  $\text{H}_2\text{O}$ .

**Ammonium ferrocyanide chloride,**  
 $(\text{NH}_4)_4\text{Fe}(\text{CN})_6 \cdot 2\text{NH}_4\text{Cl} + 3\text{H}_2\text{O}$ .

Permanent. Very sol. in  $\text{H}_2\text{O}$ , but less so than  $\text{NH}_4\text{Cl}$ . (Bunsen.)

**Antimony ferrocyanide**,  $\text{Sb}_4[\text{Fe}(\text{CN})_6]_3 + 25\text{H}_2\text{O}$ .

Ppt. (Atterberg.)

**Barium ferrocyanide**,  $\text{Ba}_2\text{Fe}(\text{CN})_6 + 6\text{H}_2\text{O}$ .

Permanent. Sl sol in  $\text{H}_2\text{O}$ .

Sol. in 584 pts. cold, and 116 pts. boiling  $\text{H}_2\text{O}$  (Duflos, 1832); sol. in 1800 pts. cold  $\text{H}_2\text{O}$  (Porrett, 1814); sol. in 1920 pts. cold, and about 100 pts. boiling  $\text{H}_2\text{O}$  (Thomson); sol. in 2000 pts. cold, and 100 pts. boiling  $\text{H}_2\text{O}$  (Ure's Dict.)

Sol. in 1000 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 100 pts. at  $75^\circ$ . (Wyruboff, A. ch. (4) 16. 292.)

Sol. in  $\text{HNO}_3$ ,  $\text{HCl}$ , or conc.  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

**Barium cupric ferrocyanide**,  $\text{BaCuFe}(\text{CN})_6$ .

Insol. in  $\text{H}_2\text{O}$ . (Messner, Z. anorg. 1895, 8. 389.)

**Barium potassium ferrocyanide**,  
 $\text{BaK}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .

Sol. in 38 pts. cold, and 9.5 pts. boiling  $\text{H}_2\text{O}$  (Duflos, 1832); in 36.4 pts.  $\text{H}_2\text{O}$  at  $14^\circ$ , and 11.9 pts. at b.-pt. (Mosander)

Not more sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  than in  $\text{H}_2\text{O}$ . Sol. in dil., insol. in conc.  $\text{HCl} + \text{Aq}$ . (Rose.)  $+ 5\text{H}_2\text{O}$ . Sol. in 300 pts.  $\text{H}_2\text{O}$  at ord. temp. (Wyruboff.)

**Bismuth ferrocyanide**,  $\text{Bi}_2\text{Fe}(\text{CN})_6 + 5\text{H}_2\text{O} (?)$

Sl sol. in pure  $\text{H}_2\text{O}$ . (Wyruboff.)

$\text{Bi}_4[\text{Fe}(\text{CN})_6]_3$ . Ppt. (Murr, Chem. Soc. 31 657.)

**Bismuth potassium ferrocyanide**,  
 $\text{BiKFe}(\text{CN})_6 + 7\text{H}_2\text{O}$ , or  $4\text{H}_2\text{O}$ .

Ppt.

**Cadmium potassium ferrocyanide**,  
 $\text{CdK}_2\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ .

Formula given by Wyruboff is  $\text{Cd}_2\text{K}_4[\text{Fe}(\text{CN})_6]_3 + 11\text{H}_2\text{O} (?)$ .

**Calcium ferrocyanide**,  $\text{Ca}_3\text{Fe}(\text{CN})_6 + 12\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Sol. in 0.66 pt.  $\text{H}_2\text{O}$  at  $90^\circ$  and not pptd. by cooling, and is apparently less sol. in warm than cold  $\text{H}_2\text{O}$ . (Wyruboff, A. ch. (4) 16. 280.)

**Calcium cuprous ferrocyanide**,

$\text{CaCu}_2\text{Fe}(\text{CN})_6$ . (Messner, Z. anorg. 1894, 8. 387.)

**Calcium cupric ferrocyanide**,  $\text{CaCuFe}(\text{CN})_6$ .

Insol. in  $\text{H}_2\text{O}$ . (Messner, Z. anorg. 1895 8. 388.)

**Calcium potassium ferrocyanide**,  
 $\text{CaK}_2\text{Fe}(\text{CN})_6$

Sl. sol. in  $\text{H}_2\text{O}$ . (Kunheim and Zimmerman, Dingl. 252. 478.)

$+ 3\text{H}_2\text{O}$ . Sol. in 795 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 145. pts. at b.-pt., with decomp. in the latter case.

Sol. in dil., insol. in conc.  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{HNO}_3$  of 1.2 sp. gr. (Mosander.)

Insol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ .

**Calcium sodium ferrocyanide**,

$\text{CaNa}_4[\text{Fe}(\text{CN})_6]_{12}$ .

Sol. in  $\text{H}_2\text{O}$ .

**Calcium strontium ferrocyanide**,

$\text{CaSrFe}(\text{CN})_6 + 10\text{H}_2\text{O}$ .

Efflorescent. Sol. in about 3 pts.  $\text{H}_2\text{O}$ . (Wyruboff, A. ch. (4) 21. 278.)

**Cerium ferrocyanide**,  $\text{Ce}_4[\text{Fe}(\text{CN})_6]_3 + 30\text{H}_2\text{O}$ .

Ppt. (Wyruboff.)

**Cerium potassium ferrocyanide**,

$\text{CeKFe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .

Ppt. (Jolin.)

$+ 4\text{H}_2\text{O}$ . (Wyruboff.)

**Chromic ferrocyanide**,  $\text{Cr}_2[\text{Fe}(\text{CN})_6]_3 + 20\text{H}_2\text{O}$ .

Ppt.

**Cobaltous ferrocyanide**,  $\text{Co}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$

Wholly insol. in  $\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{SO}_4$  with decomp. Insol. in  $\text{HCl} + \text{Aq}$ . Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Insol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . Sol. in  $\text{KCN} + \text{Aq}$ .

**Cobaltous ferrocyanide ammonia**,

$\text{Co}_2\text{Fe}(\text{CN})_6 \cdot 8\text{NH}_3 + 10\text{H}_2\text{O}$ .

Ppt. Decomp. on standing. (Curda, Z. Ch. 1869. 369.)

$\text{Co}_2\text{Fe}(\text{CN})_6 \cdot 12\text{NH}_3 + 9\text{H}_2\text{O}$ . As above. (Curda.)

**Cobaltous potassium ferrocyanide**,

$\text{CoK}_2\text{Fe}(\text{CN})_6$ .

Ppt. (Wyruboff.)

$\text{Co}_2\text{K}_4[\text{Fe}(\text{CN})_6]_3 (?)$ . Ppt. Insol. only in presence of an excess of  $\text{K}_4\text{Fe}(\text{CN})_6$ . (Wyruboff.)

**Columbium potassium ferrocyanide**,

$\text{Cb}_2\text{K}[\text{Fe}(\text{CN})_6]_2 + 67\text{H}_2\text{O} (?)$ .

Sol. in  $\text{H}_2\text{O}$ . (Wyruboff.)

$\text{Cb}_{11}\text{K}_2\text{Fe}(\text{CN})_6 + 39\text{H}_2\text{O} (?)$ . Sol. in  $\text{H}_2\text{O}$  (W.)

$(\text{CbO})_3\text{K}_9[\text{Fe}(\text{CN})_6]_6 + 10\text{H}_2\text{O} (?)$ . Ppt. (Atterberg.)

**Cuprous ferrocyanide**,  $\text{Cu}_2\text{Fe}(\text{CN})_6$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; insol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ .

**Cupric ferrocyanide, basic**,  $\text{CuFe}(\text{OH})_2(\text{CN})_4$   
Ppt. (Bong, Bull. Soc. 23. 231.)

**Cupric ferrocyanide**,  $\text{Cu}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or acids. Insol. in  $\text{NH}_4$  salts + Aq. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol in  $(\text{NH}_4)_2\text{C}_2\text{O}_4 + \text{Aq}$  and in  $\text{KCN} + \text{Aq}$ .

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)  
+  $10\text{H}_2\text{O}$ . Sol. in excess of  $\text{K}_4\text{Fe}(\text{CN})_6 + \text{Aq}$ , especially if hot. (Wyrouboff.)

**Cupric ferrocyanide ammonia (cuprammonium ferrocyanide)**,  $\text{Cu}_2\text{Fe}(\text{CN})_6 \cdot 4\text{NH}_3 + \text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$  or alcohol Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Bunsen)  
 $\text{Cu}_2\text{Fe}(\text{CN})_6 \cdot 8\text{NH}_3 + \text{H}_2\text{O}$ .

**Cuprous magnesium ferrocyanide**,  
 $\text{Cu}_2\text{MgFe}(\text{CN})_6$ .

Very unstable. Decomp. in air.  
Insol. in  $\text{H}_2\text{O}$  (Messner, Z. anorg. 1895, 8. 385)

**Cupric magnesium ferrocyanide**,  
 $\text{CuMgFe}(\text{CN})_6$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$   
Very unstable. (Messner, Z. anorg. 1895, 8. 387.)

**Cuprous potassium ferrocyanide**,  
 $\text{Cu}_2\text{K}_2\text{Fe}(\text{CN})_6$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ .  
Decomp. by acids Insol. in alcohol. (Messner, Z. anorg. 1895, 8. 378)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , alcohol, or ether.  
Decomp. by acids. Sol. in  $\text{KCN} + \text{Aq}$ .  
 $\text{K}_2\text{Cu}_2\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .  
+  $5\text{H}_2\text{O}$ . (Wonfor.)  
+  $6\text{H}_2\text{O}$ . (Wyrouboff.)

**Cupric potassium ferrocyanide**,  $\text{K}_2\text{CuFe}(\text{CN})_6 + \text{H}_2\text{O}$

Insol. in cold, sl. decomp. by boiling  $\text{H}_2\text{O}$   
 $\text{K}_2\text{Cu}_2[\text{Fe}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$ . Ppt.

**Cuprous sodium ferrocyanide**,  
 $\text{Cu}_2\text{Na}_2\text{Fe}(\text{CN})_6$ .

Decomp. by boiling  $\text{H}_2\text{O}$ ; insol. in alcohol,  
insol. in  $\text{H}_2\text{O}$ ; decomp. by acids. (Messner, Z. anorg. 1895, 8. 373)

**Cupric sodium ferrocyanide**,  
 $\text{CuNa}_2\text{Fe}(\text{CN})_6$ .

Insol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling  
 $\text{H}_2\text{O}$ . (Moissan, Z. anorg. 1895, 8. 376.)

**Cupric strontium ferrocyanide**,  
 $\text{CuSrFe}(\text{CN})_6$ .

Insol. in  $\text{H}_2\text{O}$ . (Messner, Z. anorg 1895, 8. 389.)

**Didymium potassium ferrocyanide**,  
 $\text{D}_2\text{KFe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .

Ppt. (Cleve)  
+  $2\text{H}_2\text{O}$ . (Wyrouboff.)

**Erbium potassium ferrocyanide**,  $\text{ErKFe}(\text{CN})_6 + \text{H}_2\text{O}$ .  
(Höglund.)

**Gallium ferrocyanide**.

Sol in boiling  $\text{HCl} + \text{Aq}$ . (de Boissaudran, C. R. 99. 526.)

**Glucinum ferrocyanide**,  $\text{Gl}_2\text{Fe}(\text{CN})_6 \cdot 4\text{GlO}_2\text{H}_2 + 7\text{H}_2\text{O}$  (?).  
Sol in  $\text{H}_2\text{O}$ . (Atteberg.)

**Iron (ferric) ferrocyanide**,  $\text{Fe}_4(\text{CN})_{12} = \text{Fe}_4[\text{Fe}(\text{CN})_6]_3 + x\text{H}_2\text{O}$ .

(*Prussian blue*) Insol. in  $\text{H}_2\text{O}$ , alcohol, ether, or oils Decomp. slowly by boiling  $\text{H}_2\text{O}$ . Insol. in dil. mineral acids. Sol. in conc.  $\text{HCl} + \text{Aq}$ , and conc.  $\text{H}_2\text{SO}_4$  without decomp Sol. in  $\text{H}_2\text{C}_2\text{O}_4$  or  $\text{NH}_4$  tartrate + Aq. Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$  Decomp. by  $\text{NaOH}$ , or  $\text{KOH} + \text{Aq}$ . Not pptd. in presence of tartrates or citrates

**Iron (ferrous) potassium ferrocyanide**,  
 $\text{FeK}_2\text{Fe}(\text{CN})_6$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. on air.

**Iron (ferric) potassium ferrocyanide**,  
 $\text{Fe}_3\text{KFe}(\text{CN})_6$ .

Is probably ferrous potassium ferrocyanide, which see.

**Iron (ferric) ferrocyanide ammonia**,  
 $\text{Fe}_4[\text{Fe}(\text{CN})_6]_3 \cdot 6\text{NH}_3 + 9\text{H}_2\text{O}$

Insol. in  $\text{NH}_4$  tartrate + Aq.

**Lanthanum potassium ferrocyanide**,  
 $\text{LaKFe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .

Ppt.

**Lead ferrocyanide**,  $\text{Pb}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , acids, or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Wyrouboff, A. ch. (5) 8. 480.)

Sl. sol. in conc.  $\text{H}_2\text{SO}_4$ , from which it is pptd by  $\text{H}_2\text{O}$ . (Berzelius.)

Sol. in hot  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4$  succinate + Aq; insol. in other  $\text{NH}_4$  salts + Aq (Wittstein.)

Insol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Brett.)

Not pptd. in presence of Na citrate. (Spiller.)

**Lithium ferrocyanide**,  $\text{Li}_2\text{Fe}(\text{CN})_6 + 9\text{H}_2\text{O}$ .  
Deliquescent. Very sol in  $\text{H}_2\text{O}$ .

**Lithium potassium ferrocyanide**,  
 $\text{Li}_2\text{K}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  Sol. in 1.5 pts  $\text{H}_2\text{O}$  at ord. temp. (Wyrouboff, A. ch. (4) 21. 274)

**Magnesium ferrocyanide**,  $Mg_2Fe(CN)_6 + 6H_2O$ .

Sol. in 3 pts. cold  $H_2O$ . (Bette, A. 22. 148.)

**Magnesium potassium ferrocyanide**,  $MgK_2Fe(CN)_6$ .

Sol. in 1575 pts  $H_2O$  at  $15^\circ$ , and 238 pts. at  $100^\circ$ . Solution is decomp. by boiling. (Storer's Dict.)

1 l sat. solution at  $17^\circ$  contains 1.95 g.  $MgK_2Fe(CN)_6$  (Robinson, Chem. Soc 1909, 75. 1353.)

**Manganous ferrocyanide**,  $Mn_2Fe(CN)_6 + 7H_2O$ .

Insol. in  $H_2O$ . Sol. in  $HCl + Aq$ . Insol. in  $NH_4Cl$ , or  $NH_4NO_3 + Aq$

**Manganic ferrocyanide**,  $Mn_2Fe_3(CN)_{12}$ .

Insol. in  $H_2O$ . Easily decomp. in the air. Sol. in  $HCl$  (Straus, Z. anorg. 1895, 9. 8.)

**Manganous potassium ferrocyanide**,  $MnK_2Fe(CN)_6$ .

Ppt. (Berzelius)  
 $5Mn_2Fe(CN)_6 + 4K_4Fe(CN)_6 + 4H_2O(?)$ .  
Ppt. Sol. in dil  $HCl + Aq$ . (Wyrouboff.)

**Mercuric potassium ferrocyanide**,  $K_2HgFe(CN)_6$ .

Insol. in  $H_2O$ . Appreciably sol. in  $K_4Fe(CN)_6 + Aq$  (Fernekes, J Am Chem. Soc 1906, 28. 87)

**Molybdenum ferrocyanide**,  $Mo_4Fe(CN)_6 + 20H_2O(?)$

Very sol. in  $NH_4OH + Aq$ . (Wyrouboff)  
 $Mo_2Fe(CN)_6 + 8H_2O(?)$ . (W.)  
 $+ 14H_2O(?)$ . Very sol. in  $H_2O$ ; insol. in alcohol. (W.)

**Molybdenum potassium ferrocyanide**,

$K_4Mo_2[Fe(CN)_6]_2 + 40H_2O(?)$ .  
(Wyrouboff)  
 $K_2(MoO_4)_2[Fe(CN)_6]_2 + 2MoO_3 + 20H_2O(?)$ .  
(Atterberg.)  
 $K_4Mo_2[Fe(CN)_6]_2 + 2MoO_3 + 12H_2O(?)$ .  
(Atterberg.)

**Nickel ferrocyanide**,  $Ni_2Fe(CN)_6 + 11H_2O$ , or  $14H_2O$ .

Ppt. Insol. in  $H_2O$  or  $HCl + Aq$ . Sol. in  $NH_4OH + Aq$ , insol. in  $NH_4$  salts +  $Aq$ . Sol. in  $KCN + Aq$ .

**Nickel ferrocyanide ammonia**,  $Ni_2Fe(CN)_6 + 4NH_3 + H_2O$ .

Completely insol. in  $H_2O$  and not attacked thereby, sol. in  $NH_4OH + Aq$  to form—  
 $Ni_2Fe(CN)_6 + 10NH_3 + 4H_2O$ . Decomp. by hot  $H_2O$  (Reynoso, A. ch. (3) 30. 252.)  
 $Ni_2Fe(CN)_6 + 2NH_3 + 4$ , and  $9H_2O$ . Hygro-

scopic. Easily decomp. (Gintl, J. B 1868. 304.)

$Ni_2Fe(CN)_6 + 8NH_3 + 4H_2O$ . Sol. in  $NH_4OH + Aq$  (G)  
 $Ni_2Fe(CN)_6 + 12NH_3 + 9H_2O$  Sol. in  $NH_4OH + Aq$ , but less so than the above compounds. (G.)

**Nickel potassium ferrocyanide**,  $NiK_2Fe(CN)_6 + 3H_2O$ .

Ppt (Wyrouboff)

**Osmium ferrocyanide**,  $Os_2Fe(CN)_6$ .

Ppt. (Marius, A 117. 368.)

**Potassium ferrocyanide**,  $K_4Fe(CN)_6$ .

Permanent. Easily sol. in cold, and more easily in hot  $H_2O$ .

Sol. in 4 23 pts  $H_2O$  at  $15^\circ$ , or 100 pts.  $H_2O$  dissolve 23.6 pts. salt at  $15^\circ$ . (Schiff, A. 113. 350.)

100 pts.  $H_2O$  dissolve 27.8 pts. at  $12^\circ$ ; 65.8 pts. at  $37.7^\circ$ ; 87.6 pts. at  $65.5^\circ$ , and 90.6 pts. at  $96.3^\circ$  (Thomson.)

Sol. in 4 pts cold, and 2 pts. boiling  $H_2O$ . (Wittstein)

100 pts  $H_2O$  dissolve 29.2 pts salt at  $15^\circ$ , and solution has sp. gr. = 1.441. (Michel and Knaft, A. ch. (3) 41. 478.)

Solubility of  $K_4Fe(CN)_6$  in  $H_2O$  at  $t^\circ$ .

$-2^\circ$	$+7^\circ$	$14^\circ$	$30^\circ$	$56^\circ$
10.8	15.4	17.9	23.0	31.7%
60°	75°	89°	98°	157°
34.0	39.1	41.9	42.6	46.8%

(Etard, A. ch. 1894, (7) 2. 546.)

$K_4Fe(CN)_6 + Aq$  sat. at  $8^\circ$  has sp. gr. = 1.13. (Anthon.)

Sp. gr. of  $K_4Fe(CN)_6 + Aq$  at  $15^\circ$ .

°C	hydrous salt	Sp gr	°C	hydrous salt	Sp gr
1	1.0038	8	1.0479	15	1.0932
2	1.0116	9	1.0542	16	1.0999
3	1.0175	10	1.0605	17	1.1067

7	1.0417	14	1.0866	..	...

(Schiff, A 113. 199.)

Sp gr of  $K_4Fe(CN)_6 + Aq$  at  $25^\circ$ .

Concentration of $K_4Fe(CN)_6 + Aq$	Sp gr
1—normal	1.0617
$1/2$ "	1.0300
$1/4$ "	1.0150
$1/8$ "	1.0074
$1/16$ "	1.0037

(Wagner, Z. phys. Ch. 1890, 5. 37.)

## Solubility in KOH + Aq at 25°.

KOH Normalty	g $K_4Fe(CN)_6 + 3H_2O$ per l.
0.00984	308.5
0.2496	283.5
0.4963	247.1
0.7036	217.4
0.9415	184.8
1.395	132.1
1.883	86.12

(Grube, Z. Electrochem., 1914, 20, 342.)

$K_4Fe(CN)_6 + NaCl + Aq$  sat. at 20° contains 26.6 g. NaCl and 17.8 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ ; sat. at 93° it contains 27.4 g. NaCl and 35.9 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$  (Conroy, J. Soc. Chem. Ind., 1898, 17, 105.)

$K_4Fe(CN)_6 + KCl + Aq$  sat. at 21° contains 27.2 g. KCl and 4.2 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ ; sat. at 99° it contains 39.6 g. KCl and 17.0 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ . (Conroy.)

$K_4Fe(CN)_6 + Na_2CO_3 + Aq$  sat. at 22° contains 29.9 g.  $Na_2CO_3$  and 26.7 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ ; sat. at 97° it contains 42.0 g.  $Na_2CO_3$  and 27.5 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ . (Conroy.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J., 1898, 20, 829.)

Insol. in alcohol even when dilute.

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37, 3601.)

Insol. in benzonitrile. (Naumann, B. 1914, 47, 1370.)

Sol. in acetone. (Naumann, B. 1904, 37, 4328.)

+3 $H_2O$ . 1 l. sat. solution in  $H_2O$  contains 319 g.  $K_4Fe(CN)_6 + 3H_2O$  (Grube, Electrochem. Z., 1911, 20, 342.)

Two modifications with different solubilities.

25.0 g. of  $\alpha$  modification are contained in 100 g. of solution at 20°.

24.6 g. of  $\beta$  modification are contained in 100 g. of solution at 20°. (Briggs, Chem. Soc. 1911, 99, 1024.)

32.0 g.  $K_4Fe(CN)_6$  (anhydrous) are dissolved in 100 g.  $H_2O$  at 25°. (Wagner, Z. phys. Ch., 1910, 71, 428.)

**Potassium samarium ferrocyanide,**  
 $KSmFe(CN)_6 + 5H_2O$ .

Precipitate. (Cleve.)

**Potassium sodium ferrocyanide,**  
 $KNa_3Fe(CN)_6 + 12H_2O$ .

Sol. in  $H_2O$ .

$K_2Na_2Fe(CN)_6 + 8H_2O$ . Easily sol. in  $H_2O$ .  
 $K_4NaFe(CN)_6 + 3H_2O$ . Permanent. Easily sol. in  $H_2O$ ; insol. in alcohol.

**Potassium sodium ferrocyanide nitrate,**  
 $K_2Na_2Fe(CN)_6 + 4KNO_3$ .

Sol. in  $H_2O$ . (Martius.)

**Potassium strontium ferrocyanide,**  
 $K_2SrFe(CN)_6 + 3H_2O$ .

Easily decomp. Sol. in  $H_2O$ ; sl. sol. in alcohol. (Wyrouboff, A. ch. (4) 21, 276.)

**Potassium stannic ferrocyanide,**  
 $KSn_3[Fe(CN)_6] + 68H_2O$  (?).

Ppt. (Wyrouboff.)

$K_4Sn_{18}[Fe(CN)_6]_{11} + 230H_2O$  (?). (Atterberg.)

**Potassium titanium ferrocyanide,**  
 $K_4Ti_3[Fe(CN)_6] + 11H_2O$  (?).

Ppt. Sol. in  $K_4Fe(CN)_6 + Aq$ . (Wyrouboff.)

$K_4Fe(CN)_6$ , 11 $Ti_3Fe(CN)_6 + 43H_2O$  (?). Ppt. (Wyrouboff.)

$K_2(TiO)_3[Fe(CN)_6] + 23H_2O$  (?) Ppt. (Atterberg.)

$K_2(TiO)_3[Fe(CN)_6] + 110H_2O$  (?). Ppt. (Atterberg.)

**Potassium tungsten ferrocyanide,**  
 $KW_3Fe(CN)_6 + 7H_2O$  (?).

Sol. in  $H_2O$ . (Wyrouboff.)

$K_2W_6Fe(CN)_6 + 20H_2O$  (?) Sol. in  $H_2O$ . (W.)

**Potassium uranium ferrocyanide,**  
 $K_2U_2[Fe(CN)_6] + 6H_2O$  (?).

Ppt. (Wyrouboff.)

$K_2(UO_2)_2[Fe(CN)_6] + 6H_2O$ . Ppt. (Atterberg.)

$K_2(UO_2)_2[Fe(CN)_6] + 12H_2O$ . Sol. in  $H_2O$ . (Atterberg.)

**Potassium vanadium ferrocyanide,**  
 $K_3V[Fe(CN)_6] + 39H_2O$  (?).

Ppt. Sl. sol. in  $H_2O$ . (Wyrouboff.)

$K_4(VO)_2[Fe(CN)_6] + 60H_2O$  (?). Ppt. (Atterberg.)

**Potassium ytterbium ferrocyanide,**  
 $KYbFe(CN)_6 + 3H_2O$ .

Ppt. Sol. in excess  $K_4Fe(CN)_6 + Aq$ . (Cleve, Z. anorg. 1902, 32, 140.)

**Potassium yttrium ferrocyanide,**  
 $KYFe(CN)_6 + 2H_2O$ .

Ppt. (Wyrouboff, A. ch. (5) 8, 444.)

**Potassium zinc ferrocyanide,**  
 $K_2Zn_4[Fe(CN)_6] + 12H_2O$ .

Absolutely insol. in  $H_2O$ . (Wyrouboff, A. ch. (5) 8, 485.)

**Potassium ferrocyanide carbonyl,**  
 $K_2Fe(CN)_6(CO) + 3\frac{1}{2}H_2O$ .

See Carbonyl ferrocyanide, potassium.

**Rubidium ferrocyanide,**  $Rb_4Fe(CN)_6 + 2H_2O$ .

Sol. in less than 1 pt.  $H_2O$  at ord. temp. with great absorption of heat. (Wyrouboff, A. ch. (4) 16, 307.)

**Silver ferrocyanide**,  $\text{Ag}_4\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or dil. acids. Insol. in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4$  salts + Aq. Sol. in  $\text{KCN}$  +  $\text{Al}_2$ .

Decomp. by warm  $\text{NH}_4\text{OH}$  + A-. (Weith, Z. Ch. (2) 5. 381.)

**Silver ferrocyanide ammonia**,

$\text{Ag}_4\text{Fe}(\text{CN})_6 \cdot 2\text{NH}_3 + \text{H}_2\text{O}$

(Wyrouboff.)

+  $6\text{H}_2\text{O}$ . (Gintl.)

**Sodium ferrocyanide**,  $\text{Na}_4\text{Fe}(\text{CN})_6 + 12\text{H}_2\text{O}$ .

Efflorescent. Less sol. in  $\text{H}_2\text{O}$  than  $\text{K}_4\text{Fe}(\text{CN})_6$ . Sol. in 4.5 pts.  $\text{H}_2\text{O}$  at  $12^\circ$  (John.)

100 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 22 pts. (Ure's Diet.)

100 pts.  $\text{H}_2\text{O}$  dissolve at:

$18^\circ$  20° 42° 53°  
16.7 17.875 30.2 37.1 pts.  $\text{Na}_4\text{Fe}(\text{CN})_6$

58° 60° 77° 80°

41.7 42.5 54.8 59.2 pts.  $\text{Na}_4\text{Fe}(\text{CN})_6$

90° 98° 98.5°

62.1 61.6 6.30 pts.  $\text{Na}_4\text{Fe}(\text{CN})_6$

(Conroy, J. Soc. Chem. Ind. 1898, 17. 104.)

+  $10\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve at:

$18^\circ$  20° 42°

29.45 31.85 58.5 pts.  $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$

53° 58° 60°

75.9 88.4 90.2 pts.  $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$

77° 80° 96°

129.5 146.0 157.0 pts.  $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$

98° 98.5°

156.5 161.0 pts.  $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$ .

(Conroy.)

**Strontium ferrocyanide**,  $\text{Sr}_2\text{Fe}(\text{CN})_6 + 15\text{H}_2\text{O}$ .

Efflorescent. Sol. in 2 pts. cold, and less than 1 pt. boiling  $\text{H}_2\text{O}$ . (Betta.)

Excessively sol. in  $\text{H}_2\text{O}$ . (Wyrouboff, A. ch. (4) 16. 280.)

+  $8\text{H}_2\text{O}$ . (Wyrouboff.)

**Thallous ferrocyanide**,  $\text{Tl}_4\text{Fe}(\text{CN})_6 + 2\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 0.37 pt. at  $18^\circ$ , and 3.93 pts. at  $101^\circ$ . (Lamy.)

Sol. in  $\text{KCN}$  + Aq. (Kühlmann.)

**Thorium ferrocyanide**,  $\text{ThFe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .

Ppt. (Cleve, Bull. Soc. (2) 24. 355.)

**Tin (stannous) ferrocyanide**,  $\text{Sn}_2\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or acids; sl. sol. in  $\text{NH}_4\text{OH}$  + Aq. (Wyrouboff.)

**Tin (stannic) ferrocyanide**,  $\text{Sn}_3\text{Fe}(\text{CN})_6 + 18\frac{1}{2}\text{H}_2\text{O}$  (?).

(Wyrouboff.)

**Titanium ferrocyanide**,  $\text{Ti}_2[\text{Fe}(\text{CN})_6]_2$  (?).

Ppt. (Wyrouboff.)

**Uranium ferrocyanide**,  $\text{UF}_6(\text{CN})_6 + 10\text{H}_2\text{O}$ .

Ppt. (Wyrouboff.)

**Vanadyl ferrocyanide**,  $(\text{VO})_2\text{Fe}(\text{CN})_6 + 11\text{H}_2\text{O}$

Ppt. (Atterberg.)

**Yttrium ferrocyanide**,  $\text{Y}_4[\text{Fe}(\text{CN})_6]_3$ .

Easily sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Popp, A. 131. 179.)

**Zinc ferrocyanide**,  $\text{Zn}_2\text{Fe}(\text{CN})_6 + 31\frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or acids.

Insol. in  $\text{HCl}$  + Aq. (Lea, Sil. Am. J. (2) 31. 191.)

Sol. in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4$  salts + Aq. (Wittstein.)

Insol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3$  + Aq. (Brett.)

Sl. sol. in boiling  $\text{K}_4\text{Fe}(\text{CN})_6$ , or  $\text{K}_2\text{Fe}(\text{CN})_6$  + Aq. (Gole.)

$\text{Na}_4\text{Fe}(\text{CN})_6 + \text{NaCl}$  + Aq. sat. at  $21^\circ$  contains 29.0 g.  $\text{NaCl}$  and 5.8 g.  $\text{Na}_4\text{Fe}(\text{CN})_6$  per 100 g.  $\text{H}_2\text{O}$ ; sat. at  $90^\circ$  it contains 24.7 g.  $\text{NaCl}$  and 21.3 g.  $\text{Na}_4\text{Fe}(\text{CN})_6$  per 100 g.  $\text{H}_2\text{O}$ .

(Conroy, J. Soc. Chem. Ind. 1898, 17. 105.)

$\text{Na}_4\text{Fe}(\text{CN})_6 + \text{Na}_2\text{CO}_3$  + Aq. sat. at  $22^\circ$  contains 22.6 g.  $\text{Na}_2\text{CO}_3$  and 6.5 g.  $\text{Na}_4\text{Fe}(\text{CN})_6$  per 100 g.  $\text{H}_2\text{O}$ , sat. at  $95^\circ$  it contains 29.8 g.  $\text{Na}_2\text{CO}_3$  and 36.8 g.  $\text{Na}_4\text{Fe}(\text{CN})_6$  per 100 g.  $\text{H}_2\text{O}$ . (Conroy.)

Very sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830.)

Insol. in alcohol

+  $4\text{H}_2\text{O}$ . Absolutely insol. in  $\text{H}_2\text{O}$ . (Wyrouboff, A. ch. (5) 8. 485.)

+  $8\text{H}_2\text{O}$ . (Weith, A. 147. 329.)

+  $10\text{H}_2\text{O}$ . (Pehnl, A. 233. 165.)

**Ferroletranitrososulphydic acid**,

$\text{H}_2\text{S}_2(\text{NO})_2\text{Fe}_2$ .

Insol. in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol; more easily in ether; very sol. in  $\text{CS}_2$  or  $\text{CHCl}_3$ .

Not obtained in a pure state (Pawel, B. 15. 2600.)

**Ethyl ferroletranitrososulphide**,

$(\text{C}_2\text{H}_5)_2\text{S}_2(\text{NO})_2\text{Fe}_2$ .

Insol. in  $\text{H}_2\text{O}$ , difficultly sol. in alcohol, more easily in ether, and very easily in  $\text{CS}_2$ ,  $\text{CHCl}_3$ ,  $\text{C}_2\text{H}_5\text{I}$ , or  $\text{C}_4\text{H}_6$ . (Pawel, B. 15. 2609.)

**Ferrous** —,  $\text{FeS}_2(\text{NO})_2\text{Fe}_2$ .

More difficultly sol. in  $\text{H}_2\text{O}$  and alcohol than the hepta salt.

Sol. in ether.

**Potassium** —,  $\text{K}_2\text{S}_2(\text{NO})_2\text{Fe}_2 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Easily sol. in alcohol; insol. in ether. (Pawel, B. 15. 2600.)

True composition of "nitrosulphide of

iron and potassium" of Roussin (A. ch. (3) 52. 297.) (Pawel, B. 13. 1949.)

Sodium ferrotetranitrososulphide,  
 $\text{Na}_2\text{S}_2(\text{NO})_4\text{Fe}_3 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ , easily sol. in alcohol; insol in ether. (Pawel.)

True composition of "nitrosulphide of iron and sodium" of Roussin. (Pawel)

Thallium —,  $\text{Tl}_2\text{S}_2(\text{NO})_4\text{Fe}_2$ .

Insol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Pawel)

Ferroheptanitrososulphydic acid,  
 $\text{HS}_3(\text{NO})_7\text{Fe}_4$ .

Insol in  $\text{H}_2\text{O}$ , alcohol, and ether Easily sol. in  $\text{CS}_2$  or  $\text{CHCl}_3$  (Pawel, B. 15. 2604.)

May be called Ferrinitrososulphydic acid.

Ammonium ferrotetranitrososulphide,  
 $\text{NH}_4\text{S}_2(\text{NO})_4\text{Fe}_4 + \text{H}_2\text{O}$ .

Less easily sol in  $\text{H}_2\text{O}$  than the K compound. (Pawel, B. 15. 2600.)

"Binitrosulphide of iron" of Roussin. Sol. in about 2 pts boiling  $\text{H}_2\text{O}$ ; very sl sol in cold  $\text{H}_2\text{O}$ . Very sol in alcohols, methyl, ethyl, or amyl, and in  $\text{HC}_2\text{H}_3\text{O}_2$ . Miscible with ether. Insol. in  $\text{CS}_2$  or  $\text{CHCl}_3$ .

Decomp by conc.  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4$ .

Not attacked by  $\text{H}_2\text{C}_2\text{O}_4$ , or  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Ag}$ .

Insol. in  $\text{NH}_4\text{OH}$ , and  $\text{KOH} + \text{Aq}$ . (Roussin, A. ch. (3) 52. 286.)

Sol in  $\text{H}_2\text{O}$  Insol in alcohol (Hofmann, Z. anorg. 1895, 9. 299)

Barium —.

Easily sol. in  $\text{H}_2\text{O}$ . (Pawel.)

Cæsium —,  $\text{Fe}_4(\text{NO})_7\text{S}_2\text{Cs} + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Difficultly sol. in alcohol and ether. (Pawel)

Sparingly sol in  $\text{H}_2\text{O}$ . (Hofmann, Z. anorg. 1895, 9. 298.)

Calcium —.

Easily sol. in  $\text{H}_2\text{O}$ . (Pawel.)

Ferrous —,  $\text{Fe}[\text{S}_3(\text{NO})_7\text{Fe}_4] + 8\text{H}_2\text{O}$ .

More easily sol. in  $\text{H}_2\text{O}$  than Na salt. (Pawel.)

Lead —.

Difficultly sol. in  $\text{H}_2\text{O}$ . (Pawel.)

Magnesium —.

Easily sol. in  $\text{H}_2\text{O}$ . (Pawel.)

Potassium —,  $\text{KS}_3(\text{NO})_7\text{Fe}_4$ .

Sol. in  $\text{H}_2\text{O}$ , alcohol, and very sol. in ether with slight decomp. (Pawel, B. 15. 2600.)

Rubidium ferrotetranitrososulphide,  
 $\text{RbS}_3(\text{NO})_7\text{Fe}_4$ .

Less soluble in  $\text{H}_2\text{O}$  than the  $\text{NH}_4$  salt. (Pawel.)

+  $\text{H}_2\text{O}$  Ppt. (Hofmann, Z. anorg. 1895, 9. 298.)

Sodium —,  $\text{NaS}_3(\text{NO})_7\text{Fe}_4 + 2\text{H}_2\text{O}$ .

More sol in  $\text{H}_2\text{O}$  than the potassium salt. (Pawel)

Thallium —,  $\text{TlS}_3(\text{NO})_7\text{Fe}_4 + \text{H}_2\text{O}$ .

Very difficultly sol in  $\text{H}_2\text{O}$ . More easily sol in alcohol. (Pawel) (Hofmann, Z. anorg. 1895, 9. 297.)

Ferrodinitrosothiosulphonic acid.

Ammonium ferrodinitrosothiosulphonate,  
 $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{NH}_4 + \text{H}_2\text{O}$ .

Can be cryst. from warm  $\text{H}_2\text{O}$  without decomp. (Hofmann, Z. anorg. 1895, 8. 321.)

Cæsium —,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{Cs}$ .

Sparingly sol in  $\text{H}_2\text{O}$ . (Hofmann.)

Potassium —,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{K} + \text{H}_2\text{O}$ .

Sl sol in  $\text{H}_2\text{O}$  without decomp at  $80^\circ$ .

Sol in 50% alcohol.

Sol. in  $\text{H}_2\text{SO}_4$  without decomp (Hofmann)

Rubidium —,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{Rb} + \text{H}_2\text{O}$ .

Less sol. in  $\text{H}_2\text{O}$  than the corresponding Na salt. (Hofmann.)

Sodium —,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_3\text{Na} + 2\text{H}_2\text{O}$ .

Closely resembles K salt, but is more sol. in  $\text{H}_2\text{O}$  and alcohol. (Hofmann.)

Ferrotungstic acid.

Sol. in  $\text{H}_2\text{O}$ . (Laurent, C. R. 31. 693)

Ammonium manganous ferrotungstate,  
 $12(\text{NH}_4)_2\text{O}$ ,  $6\text{MnO}$ ,  $2\text{Fe}_2\text{O}_3$ ,  $3\text{H}_2\text{O}$ ,  
 $45\text{WO}_3 + 81\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Laurent.)

Barium ferrotungstate,  $21\text{BaO}$ ,  $2\text{Fe}_2\text{O}_3$ ,  
 $45\text{WO}_3 + 27\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Laurent.)

Potassium ferrotungstate,  $9\text{K}_2\text{O}$ ,  $2\text{Fe}_2\text{O}_3$ ,  
 $12\text{H}_2\text{O}$ ,  $45\text{WO}_3 + 54\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Laurent.)

$18\text{K}_2\text{O}$ ,  $2\text{Fe}_2\text{O}_3$ ,  $3\text{H}_2\text{O}$ ,  $45\text{WO}_3 + 54\text{H}_2\text{O}$ . (Laurent.)

Ferrous acid.

Barium ferrite,  $\text{BaO}$ ,  $\text{Fe}_2\text{O}_3$ .

Ppt. (List, B. 11. 1512.)

**Calcium ferrite,  $4\text{CaO}, \text{Fe}_2\text{O}_3$ .**

Insol. in  $\text{H}_2\text{O}$ , or sugar +  $\text{H}_2\text{O}$ . Decomp. by the weakest acids, but not by boiling  $\text{KOH} + \text{Aq.}$  (Pelouze, A. ch. (3) 33. 5.)

$\text{CaO}, \text{Fe}_2\text{O}_3$  (List)

$3\text{CaO}, \text{Fe}_2\text{O}_3$ . Much less readily attacked by  $\text{H}_2\text{O}$  and acids than the silicates. (Hilpert, B. 1909, 42. 4581.)

$3\text{CaO}, 2\text{Fe}_2\text{O}_3$ . As above. (Hilpert, B. 1909, 42. 4581.)

**Calcium ferrite chloride,  $\text{CaO}, \text{Fe}_2\text{O}_3, \text{CaCl}_2$ .**

Not decomp. by  $\text{H}_2\text{O}$ . (Chatelier, C. R. 99. 276.)

**Cupric ferrite,  $\text{CuO}, \text{Fe}_2\text{O}_3$ .**

Ppt. (List.)

+  $5\text{H}_2\text{O}$ . (List.)

**Ferrous argentous ferrite,  $2\text{FeO}, \text{Ag}_2\text{O}, \text{Fe}_2\text{O}_3$  (?)**

Easily decomp. by  $\text{HCl} + \text{Aq.}$  Not completely sol. in dil.  $\text{HNO}_3 + \text{Aq.}$  Easily sol. in conc.  $\text{HNO}_3$ . Decomp. by acetic acid. (Rose, Pogg. 10. 323.)

**Magnesium ferrite,  $\text{MgO}, \text{Fe}_2\text{O}_3$ .**

Insol. in  $\text{H}_2\text{O}$ . Not attacked by boiling conc.  $\text{HNO}_3$ . (Dewille, C. R. 52. 1264.)

Min. *Magnesia ferrite*. Difficultly sol. in  $\text{HCl} + \text{Aq.}$  (Rammelsberg, Pogg. 107. 451.)

+  $4\text{H}_2\text{O}$  Ppt. (List, B. 11. 1512.)

$6\text{MgO}, \text{Fe}_2\text{O}_3 + 9\text{H}_2\text{O}$ . Ppt.

+  $15\text{H}_2\text{O}$  Min. *Pyrourite*.

**Manganous ferrite,  $\text{MnO}, \text{Fe}_2\text{O}_3$ .**

Ppt. (List.)

**Nickel ferrite,  $\text{NiO}, \text{Fe}_2\text{O}_3$ .**

Ppt. (List.)

**Potassium ferrite,  $3\text{K}_2\text{O}, 4\text{Fe}_2\text{O}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ ,  $\text{KOH} + \text{Aq.}$ ,  $\text{NaOH} + \text{Aq.}$ , etc., but only slowly by  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Salm-Horstmar, J. pr. 55. 349.)

$\text{K}_2\text{Fe}_2\text{O}_4$ . Decomp. by  $\text{H}_2\text{O}$ . (Rousseau and Bernheim, C. R. 107. 240.)

**Silver (argentous) ferrite,  $\text{Ag}_2\text{O}, \text{Fe}_2\text{O}_3$  (?)**

Decomp. by dil.  $\text{HNO}_3 + \text{Aq.}$  (Rose, Pogg. 10. 323.)

**Sodium ferrite,  $\text{Na}_2\text{O}, \text{Fe}_2\text{O}_3$ .**

$\text{Na}_2\text{O}$  is dissolved out by  $\text{H}_2\text{O}$ . Easily sol. in dil.  $\text{HCl} + \text{Aq.}$  Not easily decomp. by  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Salm-Horstmar.)

**Zinc ferrite,  $\text{ZnO}, \text{Fe}_2\text{O}_3$ .**

Sol. in boiling conc.  $\text{HCl} + \text{Aq.}$  (Ebelmen, A. ch. (3) 33. 47.)

Min. *Franklinite*.

**Flavocobaltic compounds.**

See also *Xanthocobaltic compounds*.

**Flavocobaltic chloraurate,  $(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4\text{AuCl}$ .**

More easily sol. than the chloroplatinate. Not wholly insol. in absolute alcohol. (Jørgensen, Z. anorg. 5. 159.)

— chloroplatinate,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{PtCl}_6$   
As the chloroplatinite. (Jørgensen.)

— chloroplatinite,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{PtCl}_4$ .  
Somewhat sol. in  $\text{H}_2\text{O}$ , and not insol. in 50% alcohol (Jørgensen.)

— chromate,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{Cr}_2\text{O}_7$   
Ppt. (Jørgensen.)

— nitrate,  $\text{Co}(\text{NO}_2)_2(\text{NH}_3)_4\text{NO}_3$ .

Sol. in about 33 pts. cold  $\text{H}_2\text{O}$ , insol. in  $\text{HNO}_3$ . (Jørgensen.)

$\text{Co}(\text{NO}_2)_2(\text{NH}_3)_4\text{NO}_3$ .  $\text{HNO}_3$ . Decomp. by  $\text{H}_2\text{O}$  or alcohol. (Jørgensen.)

— cobaltic nitrite,  $3(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4$ ,  
 $\text{Co}_2(\text{NO}_2)_6 + 2\text{H}_2\text{O}$

Sl. sol. in  $\text{H}_2\text{O}$ . (Jørgensen, Z. anorg. 5. 179.)

— diamine cobaltic nitrite,

$(\text{NO}_2)_2\text{Co}(\text{NH}_2)_4$

$(\text{NO}_2)_2(\text{NH}_2)_2\text{Co}(\text{NO}_2)_2$

Very sl. sol. in  $\text{H}_2\text{O}$ . (Jørgensen.)

— sulphate,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{SO}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$ , more easily in  $\text{HCl}_2\text{H}_2\text{O}_2 + \text{Aq.}$  (Jørgensen.)

**Fluoborhydric acid,  $\text{HBF}_4$ .**

Decomp. by  $\text{H}_2\text{O}$  very rapidly. (Landolph, C. R. 86. 603.)

**Aluminum fluoboride,  $2\text{AlF}_3, 3\text{BF}_3$ .**

Sol. in  $\text{H}_2\text{O}$  only when acidulated, sol. in acids. (Berzelius.)

**Ammonium fluoboride,  $\text{NH}_4\text{BF}_4$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Sol. in 4 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ , and 1 02-1.05 pts. boiling  $\text{H}_2\text{O}$ . (Stolba, Chem. techn. Cont. Anz. 7. 459.) Sl. sol. in alcohol.

**Barium fluoboride,  $\text{Ba}(\text{BF}_4)_2 + 2\text{H}_2\text{O}$ .**

Deliquescent; easily sol. in  $\text{H}_2\text{O}$ , decomp. by alcohol. (Berzelius.)

**Cesium fluoboride,  $\text{CsBF}_4$ .**

100 pts.  $\text{H}_2\text{O}$  dissolve 0.92 pt.  $\text{CsBF}_4$  at  $20^\circ$ , and 0.04 pt. at  $100^\circ$ . (Godeffroy, B. 9. 1367.)  
0.02 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ . (Erdmann, Arch. Pharm. 1894, 232. 21.)

**Calcium fluoboride,  $\text{Ca}(\text{BF}_4)_2$ .**

Decomp. by  $\text{H}_2\text{O}$ , with formation of a sol. acid salt and an insol. basic salt. (Berzelius.)

**Cupric fluoboride,  $\text{Cu}(\text{BF}_4)_2$ .**

Deliquescent, and very sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Lead fluoboride,  $\text{Pb}(\text{BF}_4)_2$ .**

Sol. in  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$  or alcohol into an acid soluble, and a basic insoluble salt. (Berzelius.)

**Lithium fluoboride,  $\text{LiBF}_4$ .**

Hygroscopic. Easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Magnesium fluoboride.**

Easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Potassium fluoboride,  $\text{KBF}_4$ .**

Sol. in 223 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ . (Stolba.)

Sol. in 70.4 pts. cold  $\text{H}_2\text{O}$ . (Berzelius.)

Sol. in 15.94 pts.  $\text{H}_2\text{O}$  at  $100^\circ$ . (Stolba.)

1.43 pts. are sol in 100 pts  $\text{H}_2\text{O}$  at  $20^\circ$ . (Erdmann, Arch. Pharm. 1894, 232, 21.)

Not more sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  than in  $\text{H}_2\text{O}$ ; sol. in hot  $\text{KOH}$ ,  $\text{NaOH}$ , or  $\text{M}_2\text{CO}_3 + \text{Aq}$ . (Berzelius.) More sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose, Pogg. 80, 276.) Insol. in 20%  $\text{KC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Stromeyer.) Insol. in cold, sl. sol. in boiling alcohol.

**Rubidium fluoboride,  $\text{RbBF}_4$ .**

100 pts.  $\text{H}_2\text{O}$  dissolve 0.55 pt. at  $20^\circ$ , and 1.0 pt. at  $100^\circ$ . (Godeffroy, B. 9, 1337.)

0.55 pts. are sol in 100 pts  $\text{H}_2\text{O}$  at  $20^\circ$ . (Erdmann, Arch. Pharm. 1894, 232, 21.)

**Sodium fluoboride,  $\text{NaBF}_4$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in alcohol. (Berzelius.)

**Yttrium fluoboride.**

Sol. in  $\text{H}_2\text{O}$  with excess of acid. (Berzelius.)

**Zinc fluoboride,  $\text{Zn}(\text{BF}_4)_2$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Fluoboric acid,  $\text{HBF}_4$ .**

See Fluoborhydric acid.

$\text{H}_4\text{B}_4\text{O}_7$ ,  $3\text{HF}$  and  $\text{H}_4\text{B}_2\text{O}_5$ ,  $2\text{HF}$  (?). Fume on air, and are decomp. with  $\text{H}_2\text{O}$ . (Landolph, B. 12, 1583.)

$\text{HBO}_2$ ,  $3\text{HF}$ . Decomp. by  $\text{H}_2\text{O}$ . (Berzelius, Pogg. 59, 644.)

Is either a mixture, or a solution of  $\text{HBO}_2$  in  $\text{HF}$ , and is decomp. by distillation, and the salts are decomp. by recrystallisation. (Basson, C. R. 73, 1696.)

**Potassium fluoborate,  $\text{K}_2\text{B}_2\text{O}_5\text{F}_2$  (?).**

Sl. deliquescent. Scarcely sol. in boiling alcohol. (Schiff, A. Suppl. 6, 175.)

See Boron trioxide potassium fluoride,  $\text{B}_2\text{O}_3$ ,  $2\text{KF}$ .

**Fluochromic acid.****Ammonium fluochromate,  $\text{NH}_4\text{CrO}_5\text{F}$** 

Sol. in  $\text{H}_2\text{O}$ . (Varenne, C. R. 91, 989r.)

**Potassium fluochromate,  $\text{KCrO}_5\text{F}$ .**

Efflorescent. Sol. in  $\text{H}_2\text{O}$ , with gradual decomp. (Streng, A. 129, 225.)

**Fluocolumbic acid.**

See also Fluoxycolumbic acid.

**Ammonium fluocolumbate fluoxycolumbate,  $(\text{NH}_4)_2\text{C}_6\text{F}_{11}$ ,  $2\text{C}_6\text{H}_5\text{F}_{11}$ ,  $\text{NH}_4\text{F}$ .****Cadmium fluocolumbate,  $\text{Cd}_2\text{H}_4\text{C}_6\text{F}_{11} + 2\text{SH}_2\text{O}$ .**

Insol. in, and decomp. by  $\text{H}_2\text{O}$ . (Streng.)

**Cobalt fluocolumbate,  $\text{Co}_2\text{H}_4\text{C}_6\text{F}_{11} + 2\text{SH}_2\text{O}$ .**

Insol. in, and decomp. by  $\text{H}_2\text{O}$ . (Streng.)

**Copper fluocolumbate,  $\text{Cu}_2\text{H}_4\text{C}_6\text{F}_{11} + 9\text{H}_2\text{O}$ .**

Insol. in, and decomp. by  $\text{H}_2\text{O}$ .

**Ferrous fluocolumbate,  $\text{Fe}_2\text{H}_4\text{C}_6\text{F}_{11} + 19\text{H}_2\text{O}$ .**

As above

**Manganous fluocolumbate,  $\text{Mn}_2\text{H}_4\text{C}_6\text{F}_{11} + 2\text{SH}_2\text{O}$ .****Mercuric fluocolumbate,  $\text{Hg}_2\text{C}_6\text{F}_{11} + 8\text{H}_2\text{O}$ .**

As above.

**Nickel fluocolumbate,  $\text{Ni}_2\text{H}_4\text{C}_6\text{F}_{11} + 19\text{H}_2\text{O}$ .**

As above.

**Potassium fluocolumbate,  $\text{K}_2\text{C}_6\text{F}_{11}$ .**

Decomp. by solution in  $\text{H}_2\text{O}$ . (Marignac A. ch. (4) 8, 34.)

**Rubidium fluocolumbate,  $\text{Rb}_2\text{C}_6\text{F}_{11}$ .**

Sol. in  $\text{H}_2\text{O}$  and  $\text{HF} + \text{Aq}$ . Insol. in alcohol (Pennington, J. Am. Chem. Soc. 1896, 18, 58.)

**Zinc fluocolumbate,  $\text{Zn}_2\text{H}_4\text{C}_6\text{F}_{11} + 2\text{SH}_2\text{O}$ .**

Insol. in cold  $\text{H}_2\text{O}$ ; decomp. by hot  $\text{H}_2\text{O}$ . (Santesson, Bull. Soc. (2) 24, 52.)

**Fluodithionic acid.****Cæsium monofluodithionate,**

$\text{S}_2\text{O}_4(\text{OH})\text{FCs}_2 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  with decomp.

Sol. in  $\text{HF}$ ; very unstable. (Weinland, Z. anorg. 1899, 21, 66.)

**Potassium difluodithionate,  $\text{S}_2\text{O}_4\text{F}_2\text{K}_2 + 3\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$  with decomp.

Sol. in  $\text{HF}$ ; very unstable. (Weinland.)

Rubidium difluodithionate,  $\text{S}_2\text{O}_6\text{F}_2\text{Rb}_2 + 3\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$  with decomp.  
Sol. in  $\text{HF}$ ; very unstable. (Weinland.)

Fluogermanic acid,  $\text{H}_2\text{GeF}_4$ .  
Known only in solution. (Winkler, J. pr. (2) 36. 177.)

Potassium fluogermanate,  $\text{K}_2\text{GeF}_6$ .  
Sol. in 173.98 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Winkler.)  
Sol. in 184.61 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Krüss and Nilson, B. 20. 1696.)  
Sol. in 34.07 pts.  $\text{H}_2\text{O}$  at  $100^\circ$ . (Winkler.)  
Sol. in 38.76 pts.  $\text{H}_2\text{O}$  at  $100^\circ$ . (Krüss and Nilson.)  
Insol. in alcohol.

Difluiodic acid.

Ammonium difluiodate,  $\text{NH}_4\text{IO}_3\text{F}_2$ .  
Like K salt  
Sol. in 40%  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg. 1899, 20. 30.)  
Sol. in  $\text{H}_2\text{O}$ . Easily decomp. (Weinland, B. 1897, 30. 868.)

Cæsium difluiodate,  $\text{CsIO}_3\text{F}_2$ .  
(Weinland, Z. anorg. 1899, 20. 36.)

Cæsium hydrogen difluiodate,  $\text{CsIO}_3\text{F}_2, \text{HIO}_3\text{F}_2 + 2\text{H}_2\text{O}$ .  
Efflorescent Sol. in  $\text{H}_2\text{O}$  with decomp. (Weinland, Z. anorg. 1899, 22. 257.)

Potassium difluiodate,  $\text{KIO}_3\text{F}_2$ .  
Sol. in  $\text{H}_2\text{O}$ . Decomp. in moist air. (Weinland, B. 1897, 30. 867.)  
Decomp. in air. Sol. in  $\text{H}_2\text{O}$  with decomp.  
Sol. without decomp. in 40%  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg. 1899, 20. 31.)

Rubidium difluiodate,  $\text{RbIO}_3\text{F}_2$ .  
Resembles K salt. Sol. in  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg. 1899, 20. 35.)

Rubidium hydrogen difluiodate,  $\text{RbIO}_3\text{F}_2, \text{HIO}_3\text{F}_2 + 2\text{H}_2\text{O}$ .  
Sol. in 40-60%  $\text{HF} + \text{Aq}$  (Weinland, Z. anorg. 1899, 22. 260.)

Sodium difluiodate,  $\text{NaIO}_3\text{F}_2$ .  
Decomp. by  $\text{H}_2\text{O}$ . (Weinland, B. 1897, 30. 868.)  
Sol. in  $\text{HF}$ . (Weinland, Z. anorg. 1899, 20. 37.)

Fluomanganic acid,  $\text{H}_2\text{MnF}_6$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol and ether in absence of  $\text{H}_2\text{O}$ . (Nickles, C. R. 65. 107.)

Ammonium fluomanganate,  $(\text{NH}_4)_2\text{MnF}_6$ .  
More sol. than the K salt. (Nickles, C. R. 65. 107.)  
True composition is  $(\text{NH}_4)_2\text{Mn}_2\text{F}_{10} = 4\text{NH}_4\text{F}, \text{Mn}_2\text{F}_6$ . (Christensen, J. pr. (2) 34. 41.)

Cobalt fluomanganate,  $2\text{CoF}_2, \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Christensen.)

Nickel fluomanganate,  $2\text{NiF}_2, \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Christensen.)

Potassium fluomanganate,  $\text{K}_2\text{MnF}_6$ .  
Difficultly sol. in  $\text{H}_2\text{O}$ . Decomp. by much  $\text{H}_2\text{O}$ . (Nickles, C. R. 65. 107.)  
Composition is  $\text{K}_2\text{Mn}_2\text{F}_{10} = 4\text{KF}, \text{Mn}_2\text{F}_6$ . Also with  $2\text{H}_2\text{O}$ . (Christensen, J. pr. (2) 34. 41.)  
Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}, \text{H}_2\text{SO}_4$  and  $\text{HNO}_3$  with decomp. Can be recryst. from 40%  $\text{HF} + \text{Aq}$ . Insol. in acetic acid. (Weinland and Lauenstein, Z. anorg. 1899, 20. 41.)

Rubidium fluomanganate,  $\text{Rb}_2\text{MnF}_6 + 2\text{H}_2\text{O}$ .  
As the K salt. (Weinland and Lauenstein, Z. anorg. 1899, 20. 44.)

Silver fluomanganate,  $\text{Ag}_2\text{Mn}_2\text{F}_{10} + 14\text{H}_2\text{O}$ .  
(Christensen, J. pr. (2) 34. 41.)

Sodium fluomanganate,  $4\text{NaF}, \text{Mn}_2\text{F}_6$ .  
Decomp. by much  $\text{H}_2\text{O}$ . (Christensen.)

Zinc fluomanganate,  $2\text{ZnF}_2, \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Christensen.)

Fluomolybdic acid.  
See Fluoxyhypomolybdic, and Fluoxymolybdic acids.

Fluopalladous acid.

Potassium fluopalladite,  
Sl. sol. in  $\text{H}_2\text{O}$ .

Sodium fluopalladite.  
Sl. sol. in  $\text{H}_2\text{O}$  (Berzelius.)

Fluoperboric acid.

Ammonium fluoperborate,  
 $\text{NH}_4\text{O}(\text{O}(\text{F})\text{O}(\text{O}(\text{F})\text{O})\text{NH}_4$ .  
Ppt. Insol. in ether. (Petrenko, C. C. 1902, I. 1191.)

Potassium fluoperborate,  $\text{K}_4\text{B}_4\text{F}_{10}\text{O}_{11} + \text{H}_2\text{O}$ .  
Dry salt is rather stable.  
Easily sol. in  $\text{H}_2\text{O}$ . Aqueous solution decomp. rapidly when warmed; at ordinary

temp. the decomp. proceeds slowly. Insol. in alcohol. (Mehkoff, B. 1899, 32, 3350.)  
 $\text{KOOb(F)OOb(F)OK} + 1\frac{1}{2}\text{H}_2\text{O}$  Ppt.  
 Insol. in ether. (Petrenko, C. C. 1902, I 1191; J. Russ. phys. chem. Soc 34, 37)

### Fluoperuranic acid.

Potassium fluoperuranate,  $\text{K}_4\text{U}_4\text{F}_8\text{O}_{18} + 4\text{H}_2\text{O} = 3\text{UO}_4\text{KF} + \text{UO}_4\text{K}_2 + \text{KF} + 4\text{H}_2\text{O}$ .  
 Ppt. (Lordkipanidse, C. C. 1900, II. 525)

Sodium fluoperuranate,  $\text{UO}_4\text{NaF} + 5\text{H}_2\text{O}$ .  
 Ppt. (Lordkipanidse, C. C. 1900, II. 525)

### Fluophosphamide, $\text{PF}_3(\text{NH}_2)_2$

Sol. in  $\text{H}_2\text{O}$  (Poulenc, A. ch. (6) 24. 566)

### Fluophosphoric acid.

Monocæsium monofluophosphate,  
 $\text{P}(\text{OH})_2(\text{OCs})\text{F}$ .

Like the K salt. (Weinland, Z anorg. 1899, 21. 48)

Monopotassium monofluophosphate,  
 $\text{P}(\text{OH})_2(\text{OK})\text{F}$ .

Sol. in 40% HF+Aq, decomp. in the air. (Weinland, Z anorg 1899, 21. 44)

Potassium monofluophosphate,  
 $\text{KHF} \cdot \text{PO}_3 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ ; unstable. (Weinland, B. 1898, 31. 124-125.)

Monorubidium monofluophosphate,  
 $\text{P}(\text{OH})_2(\text{ORb})\text{F}$ .

Sol. in 40% HF+Aq. (Weinland, Z. anorg. 1899, 21. 47)

Rubidium monofluophosphate,  
 $\text{RbHFPO}_3 + \text{H}_2\text{O}$

Decomp by  $\text{H}_2\text{O}$ . (Weinland, B. 1898, 31. 124.)

### Fluoplatinic acid.

Ammonium fluoplatinate.

Decomp. by  $\text{H}_2\text{O}$  to a sol. acid, and an insol. basic salt. Insol. in alcohol. (Berzelius.)

Potassium fluoplatinate.

Deliquescent. Insol. in alcohol. Decomp. by  $\text{H}_2\text{O}$ . (Berzelius.)

Sodium fluoplatinate.

Decomp. by  $\text{H}_2\text{O}$ . (Berzelius.)

### Fluor- and Fluoro-.

See Fluor-.

### Fluorhydric (Hydrofluoric) acid, HF or $\text{H}_2\text{F}_2$ .

Attracts  $\text{H}_2\text{O}$  from air with great avidity. Very sol. in  $\text{H}_2\text{O}$  with evolution of much heat. Sat. solution has sp. gr. 1.25. (H. Davy.)

On boiling the aqueous solution an acid of constant composition is obtained, which boils at  $120^\circ$ , has sp. gr. 1.15, and contains 35.37% HF (Bineau, A. ch. (3) 7. 257.) The residual acid after boiling contains 36 to 38% HF, and by standing over  $\text{CaO}$  gives off HF until an acid containing 32.5 to 32.7% HF is formed. Weaker acids increase their strength to 32.2 to 32.4% HF, while an acid containing 32.5% HF remains unchanged (Roscoe, A. 116. 218)

Does not attack gutta-percha. Sol. in  $\text{H}_2\text{SO}_4$ .

Sp. gr. of HF+Aq at  $15^\circ$ .

Sp. gr.	% HF	Sp. gr.	% HF	Sp. gr.	% HF

24.47	1.087
29.83	1.103

(Hull.)

Aq. solution of sp. gr. 1.138 at 18° contains 43.2% HF and has a constant bpt. of 111° at 750 mm (Denssen, Z. anorg. 1906, 49, 297.)

The strongest acid that can be obtained by distillation contains 48.17% HF and boils at 125–125.5° (Gore.)

**Fluorides.**

The alkali fluorides, also AgF and SnF<sub>2</sub>, are sol in H<sub>2</sub>O; the fluorides of Fe, Sr, and Cd are sl sol.; the others are insol. in H<sub>2</sub>O. Most fluorides are sol. in acids, especially HF + Aq.

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J 1898, 20, 822.)

See under each element.

**Fluorine, F<sub>2</sub>.**

Decomposes H<sub>2</sub>O and all organic solvent with great violence. (Moissan, C. R. 103, 202 and 256.)

Liquified at -185° to a yellowish liquid which does not dissolve glass nor ignite cooled Si, B, C, S, P, or Fe. (Moissan, C. R. 1897, 124, 1202–1204.)

**Fluomolybdic acid.**

**Ammonium fluomolybdate**, (NH<sub>4</sub>)MoF<sub>6</sub> + H<sub>2</sub>O.

Somewhat more sol in H<sub>2</sub>O than the K salt. Hydrolysed by H<sub>2</sub>O (Rosenheim, Z. anorg. 1905, 46, 321.)

(NH<sub>4</sub>)<sub>3</sub>Mo<sub>2</sub>F<sub>7</sub> + 2H<sub>2</sub>O. (Rosenheim.)

**Potassium fluomolybdate**, KMoF<sub>6</sub> + H<sub>2</sub>O.

Nearly insol. in H<sub>2</sub>O (Rosenheim.)

**Fluoselenic acid.**

**Ammonium monofluoselenate**,

SeO<sub>3</sub>(OH)F(NH<sub>4</sub>).

Not hygroscopic

Easily sol H<sub>2</sub>O with decomp.

Sol in HF (Weinland, Z. anorg. 1899, 21, 58.)

**Tripotassium difluodiselenate**, Se<sub>2</sub>O<sub>7</sub>F<sub>2</sub>K<sub>3</sub>H + H<sub>2</sub>O

Decomp. in the air; sol. in H<sub>2</sub>O with decomp.; sol. in HF. (Weinland.)

**Trrubidium difluodiselenate**, Se<sub>2</sub>O<sub>7</sub>F<sub>2</sub>Rb<sub>3</sub>H + H<sub>2</sub>O.

Decomp. in the air; sol. in H<sub>2</sub>O with decomp.; sol. in HF (Weinland, Z. anorg. 1899, 21, 57.)

**Fluosilicic acid,  $\text{H}_2\text{SiF}_6$ .**

Sp. gr. of  $\text{H}_2\text{SiF}_6 + \text{Aq}$  at  $17.5^\circ$  ( $\text{H}_2\text{O}$  at  $17.5^\circ = 1.000$ ).

% $\text{H}_2\text{SiF}_6$	Sp gr	% $\text{H}_2\text{SiF}_6$	Sp gr
2	1.0161	20	1.1748
4	1.0324	22	1.1941
6	1.0491	24	1.2136
8	1.0661	26	1.2335
10	1.0834	28	1.2537
12	1.1011	30	1.2742
14	1.1190	32	1.2951
16	1.1373	34	1.3162
18	1.1559		..

(Stolba, J. pr. 90. 193.)

+  $2\text{H}_2\text{O}$ . Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Kessler, C. R. 90. 1285.) Solution decomp. into  $\text{HF}$  and  $\text{SiF}_4$  on evaporation, when it becomes concentrated.

**Fluosilicates.**

Most of the fluosilicates are sol. in  $\text{H}_2\text{O}$ , but the alkali salts (especially K) and the Ba salt are only sl. sol. in  $\text{H}_2\text{O}$ .

**Aluminum fluosilicate,  $\text{Al}_3(\text{SiF}_6)_3$ .**

Easily sol. in  $\text{H}_2\text{O}$ . After evaporating to dryness, the residue is slowly but completely sol. in  $\text{H}_2\text{O}$ . (Deville, A. ch (3) 61. 327.)

Insol. in acetone. (Naumann, B. 1904, 37. 4328.)

**Aluminum fluosilicate silicate,  $\text{Al}_3\text{SiF}_6\text{Si}_2\text{O}_5$ .**

Min. Topaz. Insol in acids.

**Ammonium fluosilicate,  $(\text{NH}_4)_3\text{SiF}_6$ .**

Sol. in 5.38 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$  to form a solution of 1.0961 sp. gr.; sol in 18 pts. hot  $\text{H}_2\text{O}$ ; sol in 45.5 pts alcohol of 31% (Stolba, C. C. 1877. 418.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Erdmann, C. C. 1899, II. 1014.)

$3\text{NH}_4\text{F}, \text{SiF}_6 = (\text{NH}_4)_3\text{SiF}_6, \text{NH}_4\text{F}$ . Sol in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 221.)

**Barium fluosilicate,  $\text{BaSiF}_6$ .**

Sol. in 3802 pts. cold  $\text{H}_2\text{O}$ . (Fresenius, A. 59. 120.)

Sol. in 3731 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$ ; in 3315 pts. at  $21^\circ$ ; in 1175 pts. at  $100^\circ$  (Stolba, J. pr. 96. 22.)

Sol. in 640-733 pts.  $\text{H}_2\text{O}$  containing a little  $\text{HCl}$ . (Fresenius.)

488 pts  $\text{HCl} + \text{Aq}$  containing 4.25%  $\text{HCl}$  dissolve 1 pt. at  $22^\circ$ . (Stolba.)

More sol. in  $\text{HNO}_3 + \text{Aq}$  than in  $\text{H}_2\text{O}$ . (Fresenius.)

372 pts.  $\text{HNO}_3 + \text{Aq}$ , containing 8%  $\text{N}_2\text{O}_5$ , dissolve 1 pt. at  $22^\circ$ . (Stolba.)

1 pt.  $\text{BaSiF}_6$  dissolves in 428 pts. sat.  $\text{NH}_4\text{Cl} + \text{Aq}$ ; in 589 pts. sat.  $\text{NH}_4\text{Cl} + \text{Aq} + 2$  vols  $\text{H}_2\text{O}$ . (Mallet, Sill. Am. J. (2) 28. 48.)

1 pt.  $\text{BaSiF}_6$  dissolves in 306 pts. sat.  $\text{NH}_4\text{Cl} + \text{Aq}$  at  $22^\circ$ ; in 361 pts. 15% solution of  $\text{NH}_4\text{Cl}$ ; in 563 pts. sat. boiling  $\text{NaCl} + \text{Aq}$ ; in 349 pts. 10% solution of  $\text{NaCl}$  at boiling temp.; in 2185 pts. 10% solution of  $\text{NaCl}$  at  $20^\circ$ ; in 1140 pts. 5% solution of  $\text{NaCl}$  at  $20^\circ$ . (Stolba.)

Nearly absolutely insol. in alcohol. (Fresenius.)

Solubility in a mixture of  $\text{H}_2\text{O}$ , alcohol (96%),  $\text{HCl} + \text{Aq}$  (20%),  $\text{H}_2\text{SiF}_6 + \text{Aq}$  (3.7%).

1 pt  $\text{BaSiF}_6$  is sol. in pts. of solutions of given composition.

$\text{H}_2\text{O}$	Alcohol	$\text{HCl} + \text{Aq}$	$\text{H}_2\text{SiF}_6 + \text{Aq}$	$\text{BaSiF}_6$
50	50	0	0	37,219
74.1	25	0 9	0	5,263
70.8	25	4 2	0	2,860
77 95	20	0 9	1 15	39,061
73 0	25	0 9	1 1	70,679
97.09	0	1.25	1 66	3,247
75.0	25	0	0	16,914

(Fresenius, Z. anal. 29. 143.)

**Cadmium fluosilicate,  $\text{CdSiF}_6 + 6\text{H}_2\text{O}$ .**

Extremely sol. in  $\text{H}_2\text{O}$ . Easily sol. in 50% alcohol. (Engelskirchen, Dissert. 1903.)

**Cæsium fluosilicate,  $\text{Cs}_3\text{SiF}_6$ .**

Sol in 166 pts.  $\text{H}_2\text{O}$  at  $17^\circ$ , and much less hot  $\text{H}_2\text{O}$ . Insol. in alcohol (Press, J. pr 103. 410.)

**Calcium fluosilicate,  $\text{CaSiF}_6 + 2\text{H}_2\text{O}$ .**

Sl. sol. in, and partly decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HF}$  and  $\text{HCl} + \text{Aq}$ . Sol. in fluosilicic acid without decomp. Easily sol. in 60% alcohol. (Fleischer.)

**Cerium fluosilicate.**

Very difficultly sol. in  $\text{H}_2\text{O}$ , acetic, or fluosilicic acids. Insol. in alcohol. (Stolba, C. C. 1874. 130.)

**Chromium fluosilicate.**

Deliquescent. (Berzelius)  
Efflorescent. Sol. in  $\text{H}_2\text{O}$  (Berlin)

**Cobaltous fluosilicate,  $\text{CoSiF}_6 + 6\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Cuprous fluosilicate,  $\text{Cu}_2\text{SiF}_6$ .**

Insol. in  $\text{H}_2\text{O}$ . (Berzelius, Pogg. 1. 199.)

**Cupric fluosilicate,  $\text{CuSiF}_6 + 6\text{H}_2\text{O}$ .**

Deliquescent in moist, efflorescent in dry air.

Sol. in 0.428 pt.  $\text{H}_2\text{O}$  at  $17^\circ$ . Sp. gr. of solution sat. at  $17^\circ = 1.6241$

Sol. in 17 5 pts. alcohol of 62 vol % at  $20^\circ$ , in 150 pts. of 85% at  $20^\circ$ ; in 617 pts. of 92% at  $20^\circ$ . (Stolba, J. pr. 102. 7.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790)  
Contains  $6\frac{1}{2}\text{H}_2\text{O}$  (Stolba.)  
+  $5\frac{1}{2}\text{H}_2\text{O}$ . (Knop and Wolf)

**Cupric fluosilicate phosphate,  $\text{CuSiF}_6$ ,  $\text{Cu}_3(\text{PO}_4)_2$ .**

Insol. in  $\text{H}_2\text{O}$ , but easily sol. in dil.  $\text{HCl}$  + Aq (Thorpe and Rodger, Chem. Soc. 55, 320.)

**Glucinum fluosilicate.**

Known only in solution

**Iron (ferrous) fluosilicate,  $\text{FeSiF}_6 \cdot 6\text{H}_2\text{O}$ .**  
Easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Iron (ferric) fluosilicate,  $\text{Fe}_2(\text{SiF}_6)_3$ .**  
Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Lead fluosilicate,  $\text{PbSiF}_6 \cdot 2\text{H}_2\text{O}$ .**

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ .  
Insol. in acetone. (Naumann, B. 1904, 37, 4329.)  
+  $4\text{H}_2\text{O}$ . (Marignac)

**Lithium fluosilicate,  $\text{Li}_2\text{SiF}_6 \cdot 2\text{H}_2\text{O}$ .**

100 pts.  $\text{H}_2\text{O}$  at  $17^\circ$  dissolve 73 pts. crystalline salt. (Marignac.)

100 pts. cold  $\text{H}_2\text{O}$  dissolve 52 pts. crystals.  
Sol. in dil. alcohol. (Stolba, J. pr. 91, 456.)

100 pts alcohol of 46 vol. % dissolve about 4 pts., and 100 pts. alcohol of 79 vol. % dissolve about 0.4 pt. crystals (Stolba, Z. anal. 3, 311.)

Insol. in ether or benzene.  
Insol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37, 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790)

Insol. in ethyl acetate. (Naumann, B. 1904, 37, 3601)

**Magnesium fluosilicate,  $\text{MgSiF}_6 \cdot 6\text{H}_2\text{O}$ .**

Efflorescent. Sol in 1534 pts. cold  $\text{H}_2\text{O}$ , forming a solution of 1.235 sp. gr. at  $17.5^\circ$ . Separates out  $\text{SiO}_2$  on warming, which nearly all redissolves on cooling. (Stolba, C. C. 1877, 578)

**Magnesium fluosilicate silicate,  $\text{Mg}_2\text{Si}_2\text{F}_{10}$ ,  $x\text{Mg}_2\text{Si}_2\text{O}_6$ .**

Min *Humite*, *Chondrodite*. Gelatinises with  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4$  + Aq.

**Manganous fluosilicate,  $\text{MnSiF}_6 \cdot 6\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Marignac, J. pr. 83, 202.)  
100 pts. dissolve in 71.4 pts  $\text{H}_2\text{O}$  at  $17.5^\circ$ , and sp. gr. of solution = 1.44825. Much more sol. in hot  $\text{H}_2\text{O}$ , and less sol. in alcohol, the stronger the alcohol (Stolba, C. C. 1883, 292.)

**Mercurous fluosilicate,  $\text{Hg}_2\text{SiF}_6$ .**

Sl. sol. in  $\text{H}_2\text{O}$  without decomp (Lemaire, C. C. 1897, I, 1040.)

+  $2\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{O}$  More easily sol in acidified  $\text{H}_2\text{O}$ , but precipitated by  $\text{HCl}$  + Aq. (Berzelius)

**Mercuric fluosilicate, basic,  $\text{HgSiF}_6$ ,  $\text{HgO}$  +  $3\text{H}_2\text{O}$**

Decomp. by  $\text{H}_2\text{O}$ , but sol. in weakest acids. (Berzelius, Pogg. 1, 200.)

**Mercuric fluosilicate,  $\text{HgSiF}_6 \cdot 6\text{H}_2\text{O}$ .**

Deliquescent, and easily sol. in  $\text{H}_2\text{O}$ . (Finkener, Pogg. 111, 246.)

**Nickel fluosilicate,  $\text{NiSiF}_6 \cdot 6\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$  (Maignac, Ann. Min. (5) 15, 262.)

**Potassium fluosilicate,  $\text{K}_2\text{SiF}_6$ .**

Sol. in 833 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$ , and 104.8 pts. at  $100^\circ$ . (Stolba, J. pr. 103, 396.) Sol. in 3800 pts cold, and more easily sol. in hot  $\text{H}_2\text{O}$  (Fresenius.)

More sol. in  $\text{HCl}$  + Aq than in  $\text{H}_2\text{O}$ .

Sol. in 337 pts.  $\text{HCl}$  + Aq of 26.5% at  $14^\circ$ ; in 307 pts. of 25.7% at  $15^\circ$ ; in 340 pts. of 14.1% at  $14^\circ$ ; in 303 pts. of 13.8% at  $15^\circ$ ; in 327 pts. of 9.6% at  $14^\circ$ ; in 313 pts. of 9.2% at  $15^\circ$ ; in 376 pts. of 2.7% at  $14^\circ$ ; in 318 pts. of 2.4% at  $15^\circ$ ; in 400 pts. of 1.8% at  $14^\circ$ . (Stolba, l. c.)

Sol. in 428 pts. sat., and 580 pts. dil.  $\text{NH}_4\text{Cl}$  + Aq (Mallet)

Much less sol. in  $\text{K}_2\text{SO}_4$ ,  $\text{KNO}_3$ , or  $\text{KCl}$  + Aq, but more sol. in  $\text{NH}_4\text{Cl}$  + Aq than in  $\text{H}_2\text{O}$ . (Stolba.)

Sol in 24,066 pts.  $\text{K}_2\text{SO}_4$  + Aq containing 9.92%  $\text{K}_2\text{SO}_4$  at  $17^\circ$ , in 17,858 pts. containing 6% at  $18^\circ$ ; in 19,530 pts. containing 5% at  $17^\circ$ ; in 10,721 pts. containing 1% at  $17^\circ$

Sol in 125,000 pts.  $\text{KNO}_3$  + Aq containing 18.4%  $\text{KNO}_3$  at  $15^\circ$ , in 43,478 pts. containing 8.7% at  $15^\circ$ ; in 1735 pts. containing 8.8% at  $100^\circ$ ; in 35,814 pts. containing 4.3% at  $15^\circ$ ; in 10,203 pts. containing 1.00% at  $15^\circ$

Sol. in 40,070 pts  $\text{KCl}$  + Aq containing 25%  $\text{KCl}$  at  $17^\circ$ ; in 38,352 pts. containing 18.4% at  $17^\circ$ ; in 41,264 pts. containing 13.4% at  $14^\circ$ ; in 24,032 pts. containing 6.7% at  $12^\circ$ ; in 1200 pts. containing 0.65% at  $17^\circ$ ; in 1095 pts. containing 0.45% at  $18^\circ$

Sol. in 358 pts.  $\text{NH}_4\text{Cl}$  + Aq containing 26.3%  $\text{NH}_4\text{Cl}$  at  $17^\circ$ ; in 308 pts. containing 15% at  $15^\circ$ ; in 339 pts. containing 10% at  $15^\circ$ ; in 436 pts. containing 5% at  $15^\circ$ . (Stolba, J. pr. 103, 306)

Insol. in liquid  $\text{CO}_2$ . (Buchner, Z. phys. Ch. 1900, 54, 674.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. ch. J. 1898, 20, 829.)

Completely pptd. from aqueous solution by an equal vol. of alcohol.

Sl. sol in benzonitrile (Naumann, B 1914, 47. 1369.)  
 Insol in methyl acetate (Naumann, B. 1909, 42. 3790.)

#### Rubidium fluosilicate, $\text{Rb}_2\text{SiF}_6$ .

Sol. in 625 pts  $\text{H}_2\text{O}$  at  $20^\circ$ , and 73 05-74 5 pts at  $100^\circ$ . More sol in acidified water  
 Insol. in alcohol. (Stolba, J. pr 101. 1.)  
 Insol. in  $\text{H}_2\text{O}$ . (Eggeling, Z. anorg 1905, 46. 175.)  
 Less sol. in  $\text{H}_2\text{O}$  than  $\text{K}_2\text{SiF}_6$  (Gossner, Zeit. Kryst. 1904, 38. 149.)

#### Silver fluosilicate, $\text{Ag}_2\text{SiF}_6 + 4\text{H}_2\text{O}$

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 221.)

#### Sodium fluosilicate, $\text{Na}_2\text{SiF}_6$

Much more sol in  $\text{H}_2\text{O}$  than  $\text{K}_2\text{SiF}_6$ , especially in hot  $\text{H}_2\text{O}$ . Addition of acid does not increase solubility. (Berzelius)  
 Sol in 153.3 pts  $\text{H}_2\text{O}$  at  $17.5^\circ$ , and 40.66 pts. at  $100^\circ$ . Easily forms supersaturated solutions. (Stolba, Z. anal. 11. 199.)  
 Much less sol. in  $\text{NaCl} + \text{Aq}$  than in  $\text{H}_2\text{O}$ . (Stolba, J. pr. 1865 (1) 96. 26.)  
 Precipitated completely from aqueous solution by alcohol (Rose)  
 Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

#### Strontium fluosilicate, $\text{SrSiF}_6 + 2\text{H}_2\text{O}$

Sol. in cold  $\text{H}_2\text{O}$ , but decomp. somewhat on heating Sol in 31.06 pts  $\text{H}_2\text{O}$ . (Fresenius.)  
 Easily sol. in acidified  $\text{H}_2\text{O}$  without decomp. Sol. in alcohol

Solubility in a mixture of  $\text{H}_2\text{O}$ , alcohol (96%),  $\text{HCl} + \text{Aq}$  (20%),  $\text{H}_2\text{SiF}_6 + \text{Aq}$  (3.7%).  
 1 pt  $\text{SiSiF}_6$  is sol. in pts of solutions of given composition.

$\text{H}_2\text{O}$	Alcohol	$\text{HCl} + \text{Aq}$	$\text{H}_2\text{SiF}_6 + \text{Aq}$	$\text{SrSiF}_6$
50	50	0	0	15.29
74 1	25	0	0	82.93
70 8	25	4 2	0	50 9
77 95	20	0 9	1 15	55 0
73	25	0 9	1 1	82.97
75	25	0	0	147 4
95.24	0	2 04	2 72	7 3

(Fresenius, Z. anal. 29. 143.)

#### Thallous fluosilicate, $\text{Tl}_2\text{SiF}_6 + 2\text{H}_2\text{O}$ .

Very easily sol. in  $\text{H}_2\text{O}$ . (Kuhlmann.)

#### Thorium fluosilicate, $\text{Th}(\text{OH})_2\text{SiF}_6$ (?).

(Cleve)

#### Tin (stannic) fluosilicate, $\text{SnF}_4, \text{SiF}_4$ .

Very easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

#### Uranyl fluosilicate.

Very sl sol in acids. (Berzelius)  
 Sol in alcohol (Stolba, Z. anal. 3. 71.)

#### Vanadium fluosilicate.

Deliquescent Sol in  $\text{H}_2\text{O}$ . (Guyard, Bull. Soc. (2) 25. 352.)

#### Yttrium fluosilicate.

Insol in pure, sol. in acidified  $\text{H}_2\text{O}$ . (Berzelius)

#### Zinc fluosilicate, $\text{ZnSiF}_6 + 6\text{H}_2\text{O}$ .

Very easily sol. in  $\text{H}_2\text{O}$  (Berzelius.)

#### Zirconium fluosilicate.

Sol. in  $\text{H}_2\text{O}$ . Solution clouds up on boiling. (Berzelius.)

#### Fluostannic acid.

#### Ammonium fluostannate, $(\text{NH}_4)_2\text{SnF}_6$

Sol in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 224.)  
 $4\text{NH}_4\text{F}, \text{SnF}_4$  Sol. in  $\text{H}_2\text{O}$  (Marignac.)

#### Barium fluostannate, $\text{BaSnF}_6$

Slowly sol. in  $\text{H}_2\text{O}$ .  
 $+3\text{H}_2\text{O}$  Sol. in 18 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Marignac, Ann. Min. (5) 15. 246.)  
 Decomp. by warming with  $\text{H}_2\text{SO}_4$  with evolution of  $\text{HF}$ . (Ermich, M. 1904, 25. 1912.)

#### Calcium fluostannate, $\text{CaSnF}_6 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Marignac, Ann. Min. (5) 15. 250.)

#### Cadmium fluostannate, $\text{CdSnF}_6 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

#### Cobaltous fluostannate, $\text{CoSnF}_6 + 6\text{H}_2\text{O}$ .

(Gossner, Zeit. Kryst. 1907, 42. 482.)

#### Cupric fluostannate, $\text{CuSnF}_6 + 4\text{H}_2\text{O}$ .

Not deliquescent. (Marignac, Ann. Min. (5) 15. 291.)

#### Lithium fluostannate, $\text{Li}_2\text{SnF}_6 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 242.)

#### Magnesium fluostannate, $\text{MgSnF}_6 + 6\text{H}_2\text{O}$

Not deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 256.)

#### Manganous fluostannate, $\text{MnSnF}_6 + 6\text{H}_2\text{O}$ .

Slowly efflorescent. (Marignac.)

#### Nickel fluostannate, $\text{NiSnF}_6 + 6\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 262.)

Potassium fluostannate,  $K_2SnF_6 \cdot H_2O$ .

Two modifications—(a) *Thin plates*. Sol in 2.3 pts  $H_2O$  at  $100^\circ$ , and in 15–16 pts at  $18^\circ$ . (Marignac.)

(b) *Octahedra*. Sol in 3 pts.  $H_2O$  at  $100^\circ$ , and 27 pts at  $18^\circ$ . (Marignac.)

Sol. in hot  $H_2O$ . Can be cryst. from hot  $H_2O$ . With conc.  $H_2SO_4$ , HF is evolved. (Emich, M. 1904, 25. 911.)

Potassium hydrogen fluostannate,  $3KF, HF, SnF_6$ .

Sol. in  $H_2O$ . (Marignac.)

Silver fluostannate,  $Ag_2SnF_6 \cdot 4H_2O$ .

Sl. deliquescent. Easily sol. in  $H_2O$ . (Marignac.)

Sodium fluostannate,  $Na_2SnF_6$ .

Sol. in 13–19 pts.  $H_2O$  at  $20^\circ$ . (Marignac.)

Strontium fluostannate,  $SrSnF_6 \cdot 2H_2O$ .

Sol. in 5.5 pts.  $H_2O$  at  $18^\circ$ . (Marignac.)

Zinc fluostannate,  $ZnSnF_6 \cdot 6H_2O$ .

Sol. in  $H_2O$ . (Marignac.)

Fluosulphonic acid,  $HSO_3F$ .

See Sulphuryl hydroxyl fluoride.

Ammonium fluosulphonate,  $FSO_2NH_4$ .

Easily sol. in  $H_2O$  from which it can be cryst.

Sol. in ethyl alcohol, more sol. in methyl alcohol. Can be cryst. from abs. alcohol. (Traube, B. 1913, 46. 2528.)

Sodium fluosulphonate,  $FSO_2Na$

Hydrosopic.

Sol. in alcohol and acetone. (Traube.)

Fluosulphuric acid.

Tricassium difluodisulphate,  $S_2O_7F_2Cs_3H + H_2O$ .

As the K salt. (Weinland, Z. anorg. 1899, 21. 53.)

Tripotassium difluodisulphate,

$S_2O_7F_2K_3H + H_2O$ .

Sol. in HF; quite stable in air; sol. in  $H_2O$  with decomp. (Weinland, Z. anorg. 1899, 21. 51.)

Trirubidium difluodisulphate,  $S_2O_7R_2Tb_3H + H_2O$ .

Sol. in HF. (Weinland, Z. anorg. 1899, 21. 53.)

Fluotantallic acid.

Ammonium fluotantalate,  $(NH_4)_2TaF_7$ .

Very sol. in  $H_2O$ . (Marignac, A. ch. (4) 9. 272.)

$(NH_4)_2TaF_7$ . (Balke, J. Am. Chem. Soc. 1905, 27. 1151.)

Cæsium fluotantalate,  $CsTaF_7$ .

Can be recryst. from HF + Aq. (Balke.)  $Cs_2TaF_7$ . Can not be recryst. from  $H_2O$  as it tends to go into  $CsF, TaF_5$ . (Balke, J. Am. Chem. Soc. 1905, 27. 1151.)

$15CsF, TaF_5$ . Sl. sol. in  $H_2O$ . (Pennington, J. Am. Chem. Soc. 1896, 18. 59.)

Calcium fluotantalate.

Difficulty sol. in  $H_2O$ . (Berzelius.)

Cupric fluotantalate,  $CuTaF_7 \cdot 4H_2O$ .

Deliquescent. Easily sol. in  $H_2O$ . (Marignac, A. ch. (4) 9. 294.)

Lead fluotantalate.

Difficulty sol. in  $H_2O$ . (Berzelius.)

Lithium fluotantalate,  $LiF, TaF_5 \cdot 2H_2O$ .

Can be recryst. from conc. HF. (Balke, J. Am. Chem. Soc. 1905, 27. 1143.)

Potassium fluotantalate,  $K_2TaF_7$ .

Sl. sol. in cold, much more easily in hot  $H_2O$ . Decomposes, with formation of a white precipitate on boiling. (Berzelius.)

Much more sol. in HF + Aq. 1 pt. of the salt is sol. in 200 pts.  $H_2O$  containing a trace of HF, and in 150–160 pts. of  $H_2O$  containing a little more HF. (Marignac, A. ch. (4) 9. 267.)

Potassium hydrogen fluotantalate,  $KF, HF, TaF_5$  (?)

Sol. in  $H_2O$ . (Berzelius.)

Rubidium fluotantalate,  $Rb_2TaF_7$ .

Sol. in HF + Aq. (Pennington, J. Am. Ch. Soc. 1896, 18. 58.)

$3RbF, 2TaF_5$ . (Balke, J. Am. Chem. Soc. 1905, 27. 1151.)

Sodium fluotantalate,  $3NaF, TaF_5$ .

Easily sol. in  $H_2O$ .

$Na_2TaF_7 \cdot H_2O$ . Sol. in  $H_2O$ . (Marignac.)

Thallous fluotantalate,  $Tl_2TaF_7$ .

Sol. in  $H_2O$ . On boiling the aqueous solution tantalic acid separates.

Decomp. by conc.  $H_2SO_4$ . Difficulty sol. in cold, easily sol. in hot HF. (Ephraim, B. 1909, 42. 4461.)

Zinc fluotantalate,  $ZnTaF_7 \cdot 7H_2O$ .

Very deliquescent. Sol. in  $H_2O$ . (Marignac, A. ch. (4) 9. 249.)

Fluotelluric acid.

Ammonium fluotellurate,  $NH_4TeF_6 \cdot H_2O$ .

Decomp. by  $H_2O$ . (Hugbom, Bull. Soc. (2) 35. 60.)

**Barium fluotellurate**,  $\text{Ba}(\text{TeF}_6)_2 + \text{H}_2\text{O}$ .

As above.

**Potassium fluotellurate**,  $\text{KTeF}_6$ .

As above.

$\text{TeO}_5\text{F}_3\text{K}_2 + 3\text{H}_2\text{O}$ . Stable in dry air; only sl. sol. in  $\text{H}_2\text{O}$  with decomp.; sol. in HF (Weinland, Z. anorg. 1899, 21. 61.)

**Rubidium difluotellurate**,  $\text{TeO}_5\text{F}_2\text{Rb}_2 + 3\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in HF. (Weinland, Z. anorg. 1899, 21. 62.)

**Fluotitanic acid.**

Known only in solution as titanium hydrofluoric fluoride.

**Ammonium fluotitanate**,  $(\text{NH}_4)_2\text{TiF}_6$ .

Sol. in  $\text{H}_2\text{O}$  (Marignac.)

$3\text{NH}_4\text{F}$ ,  $\text{TiF}_4$ . Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

**Ammonium fluosquittitanate**,  $6\text{NH}_4\text{F}$ ,  $\text{Ti}_2\text{F}_8$ .

Easily sol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{NH}_4\text{F} + \text{Aq}$ . (Peterson, J. pr. (2) 40. 54.)

Insol. in  $\text{NH}_4\text{F} + \text{Aq}$ . (Piccini, C. R. 97. 1064.)

$4\text{NH}_4\text{F}$ ,  $\text{Ti}_2\text{F}_8$ . Properties as the corresponding K salt. (Piccini, B. 18. 257 R.)

**Barium fluotitanate**,  $\text{BaTiF}_6$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . More easily sol. in dil.  $\text{HNO}_3$  or  $\text{HCl}$ . (Engelskirchen, Dissert 1903.)

$+ \frac{1}{2}\text{H}_2\text{O}$ . (Emich, M. 1904, 25. 907.)

**Cadmium fluotitanate**,  $\text{CdTiF}_6 + 6\text{H}_2\text{O}$ .

Extremely sol. in  $\text{H}_2\text{O}$ . Easily sol. in 50% alcohol. (Engelskirchen, Dissert 1903.)

**Cæsium fluotitanate**,  $\text{Cs}_2\text{TiF}_6$ .

More sol. in hot than cold  $\text{H}_2\text{O}$  and much more sol. than the Rb comp. (Engelskirchen, Dissert. 1903.)

$4\text{CsF}$ ,  $\text{TiF}_4$ . More sol. in  $\text{H}_2\text{O}$  than  $\text{Cs}_{11}\text{TaF}_{20}$  and is not decomp. by pure  $\text{H}_2\text{O}$ . (Pennington, J. Am. Chem. Soc. 1896, 18. 60.)

**Calcium fluotitanate**,  $\text{CaTiF}_6 + 3\text{H}_2\text{O}$

Decomp. by pure  $\text{H}_2\text{O}$ . Sol. without decomp. in acidified  $\text{H}_2\text{O}$  (Berzelius)

Separates a precipitate with cold  $\text{H}_2\text{O}$ , which dissolves on heating. (Marignac, Ann. Min. (5) 15. 250.)

**Cupric fluotitanate**,  $\text{CuTiF}_6 + 4\text{H}_2\text{O}$ .

Sol. in pure  $\text{H}_2\text{O}$  with partial decomp.; easily and completely sol. in acidified  $\text{H}_2\text{O}$ . (Berzelius.)

**Cupric fluotitanate ammonium fluoride**,

$\text{CuTiF}_6$ ,  $\text{NH}_4\text{F} + 4\text{H}_2\text{O}$

Efflorescent. Easily sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 267.)

**Cupric fluotitanate potassium fluoride**,  $\text{CuTiF}_6$ ,  $\text{KF} + 4\text{H}_2\text{O}$ .

As the above salt (Marignac)

**Ferrous fluotitanate**,  $\text{FeTiF}_6 + 6\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Weber, Pogg. 120. 287.)

**Ferric fluotitanate.**

Decomp. by  $\text{H}_2\text{O}$ . (Berzelius)

**Lead fluotitanate.**

Easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Lithium fluotitanate**,  $\text{Li}_2\text{TiF}_6 + 2\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Engelskirchen, Dissert, 1903.)

**Magnesium fluotitanate**,  $\text{MgTiF}_6 + 6\text{H}_2\text{O}$ .

Easily sol. in cold  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 257.)

**Nickel fluotitanate**,  $\text{NiTiF}_6 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Weber, Pogg. 120. 282.)

**Potassium fluotitanate**,  $\text{K}_2\text{TiF}_6$ .

Difficultly sol. in cold, much more easily in hot  $\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve at:

0° 3° 6° 10° 14° 20°

0.550 0.667 0.775 0.909 1.042 1.28 pts.  $\text{K}_2\text{TiF}_6$ . (Marignac, A. ch. (4) 8. 65.)

Sol. in 78.6 pts  $\text{H}_2\text{O}$  at 21°. Sol. in acids. (Piccini, Gazz. ch. it. 1886, 18. 101.)

Sol. in 78 pts.  $\text{H}_2\text{O}$  at 20°; 9.4 pts at 100°. By addition of small amount of HF, the solubility is increased. (Weiss and Kaiser, Z. anorg. 1910, 65. 354.)

Sol. in HF. (Marchetti, Z. anorg. 1895, 10. 66.)

$+ \text{H}_2\text{O}$ . Much less sol. in  $\text{H}_2\text{O}$  in presence of KBr or KI. (Hall, J. Am. Chem. Soc. 1904, 26. 1246.)

Sol. in  $\text{H}_2\text{O}$  or HF with decomp. (Marchetti, Z. anorg. 1895, 10. 66.)

**Potassium fluosquittitanate**,  $4\text{KF}$ ,  $\text{Ti}_2\text{F}_8$ .

Scarcely sol. in  $\text{H}_2\text{O}$ , sol. in dil. acids. (Piccini, B. 18. 257 R.)

**Rubidium fluotitanate**,  $\text{Rb}_2\text{TiF}_6$ .

Very sl. sol. in cold, somewhat more sol. in hot  $\text{H}_2\text{O}$ . (Engelskirchen, Dissert. 1903.)

**Silver fluotitanate.**

Very deliquescent. (Marignac.)

**Sodium fluotitanate**,  $\text{Na}_2\text{TiF}_6$ .

Much more sol. in  $\text{H}_2\text{O}$  than the corresponding potassium salt. (Marignac, Ann. Min. (5) 15. 238.)

Sodium hydrogen fluotitanate,  $\text{Na}_2\text{TiF}_6$ ,  $\text{NaHF}_2$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

Strontium fluotitanate,  $\text{SrTiF}_6 + 2\text{H}_2\text{O}$ .

Sol. in cold  $\text{H}_2\text{O}$ . Solution clouds up on heating. (Marignac)

Zinc fluotitanate,  $\text{ZnTiF}_6 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (3) 60. 304)

### Fluovanadic acid.

Ammonium fluovanadate,  $3\text{NH}_4\text{F}$ ,  $\text{VF}_5$ .

Moderately sol. in  $\text{H}_2\text{O}$ . More easily sol. in dil. acids. Nearly insol. in alcohol or  $\text{MF} + \text{Aq.}$  (Petersen, J. pr. (2) 40. 52.)

$2\text{NH}_4\text{F}$ ,  $\text{VF}_5 + \text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . Sl. sol. in alcohol. (Petersen.)

$\text{NH}_4\text{F}$ ,  $\text{VF}_5 + 2\text{H}_2\text{O}$ . As above. (Petersen.)

Cadmium fluovanadate,  $\text{CdF}_2$ ,  $\text{VF}_5 + 7\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . (Piochini and Giorgis, Gazz. ch. it. 22, 1. 89.)

Cobalt fluovanadate,  $\text{CoF}_2$ ,  $\text{VF}_5 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  without decomp. (Petersen, l. c.)

Nickel fluovanadate,  $\text{NiF}_2$ ,  $\text{VF}_5 + 2\text{H}_2\text{O}$ .

As the Co salt. (Petersen.)

Potassium fluovanadate,  $2\text{KF}$ ,  $\text{VF}_5 + \text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in acids. Insol. in  $\text{KF} + \text{Aq.}$  (Petersen, J. pr. (2) 40. 51.)

Potassium fluovanadate fluoxyvanadate,

$4\text{KF}$ ,  $\text{VF}_5$ ,  $\text{VOF}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ , and still more easily in  $\text{HF} + \text{Aq.}$  Sl. sol. in  $\text{KF} + \text{Aq.}$  (Petersen, J. pr. (2) 40. 274.)

Sodium fluovanadate,  $5\text{NaF}$ ,  $2\text{VF}_5 + \text{H}_2\text{O}$ .

As the potassium salt. (Petersen.)

Thallous fluovanadate,  $\text{TlF}$ ,  $\text{VF}_5 + 2\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ .

Sol. with decomp. in conc.  $\text{H}_2\text{SO}_4$ , dil.  $\text{HNO}_3$ , or cold dil.  $\text{HCl}$ .

Insol. in  $\text{NaOH} + \text{Aq.}$  (Ephraim, B. 1909, 42. 4460)

$2\text{TlF}$ ,  $\text{VF}_5 + \text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ .

Sol. in conc.  $\text{H}_2\text{SO}_4$ , dil.  $\text{HNO}_3$ , or cold dil.  $\text{HCl}$  with decomp.

Insol. in cold or hot  $\text{NaOH} + \text{Aq.}$  (Ephraim, B. 1909, 42. 4461.)

Zinc fluovanadate,  $\text{ZnF}_2$ ,  $\text{VF}_5 + 7\text{H}_2\text{O}$ .

Sl. sol. in cold  $\text{H}_2\text{O}$ . Decomp. on heating. (Piochini and Giorgis.)

### Fluoxycolumbic acid.

Ammonium fluoxycolumbate,  $3\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$ .

Cubic salt. Sol. in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (4) 8. 38.)

$2\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$ . Lamellar salt. Much more sol. in  $\text{H}_2\text{O}$  than  $2\text{KF}$ ,  $\text{CbOF}_3$ . (M.)

$5\text{NH}_4\text{F}$ ,  $3\text{CbOF}_3 + \text{H}_2\text{O}$ . Hexagonal salt. (M.)

$\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$ . Rectangular salt. (M.)

Ammonium fluoxycolumbate columbium fluoride,  $3\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$ ,  $\text{CbF}_5$ .

(Marignac.)

Cupric fluoxycolumbate,  $\text{CuF}_2$ ,  $\text{CbOF}_3 + 4\text{H}_2\text{O}$ .

Sl. deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (4) 8. 42.)

Potassium fluoxycolumbate,  $2\text{KF}$ ,  $\text{CbOF}_3 + \text{H}_2\text{O}$ .

Sol. in 12.5-13 pts.  $\text{H}_2\text{O}$  at  $17-21^\circ$ . Much more sol. in hot  $\text{H}_2\text{O}$ , or  $\text{H}_2\text{O}$  containing  $\text{HF}$ . (Marignac.)

$3\text{KF}$ ,  $\text{CbOF}_3$ . Decomp. by  $\text{H}_2\text{O}$  into above salt. (M.)

$5\text{KF}$ ,  $3\text{CbOF}_3 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (M.)

$4\text{KF}$ ,  $3\text{CbOF}_3 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (M.)

$3\text{KF}$ ,  $2\text{Cb}_2\text{O}_7 + 5\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ .

(Petersen, J. pr. (2) 40. 287.)

$\text{KF}$ ,  $\text{Cb}_2\text{O}_7 + 3\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Petersen.)

$2\text{KF}$ ,  $3\text{Cb}_2\text{O}_7$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HF}$ . (Kruss and Nilson, B. 20. 1689.)

See also Fluoxypercolumbate, potassium.

Potassium hydrogen fluoxycolumbate,  $3\text{KF}$ ,  $\text{HF}$ ,  $\text{CbOF}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac)

Sodium fluoxycolumbate,  $2\text{NaF}$ ,  $\text{CbOF}_3 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

$\text{NaF}$ ,  $\text{CbOF}_3 + \text{H}_2\text{O}$ . (Marignac.)

Zinc fluoxycolumbate,  $\text{ZnF}_2$ ,  $\text{CbOF}_3 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (4) 8. 41.)

### Fluoxhypermolybdic acid.

Ammonium fluoxhypermolybdate,  $\text{MoOF}_3$ ,  $2\text{NH}_4\text{F}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Mauro, Gazz. ch. it. 19. 179.)

$3\text{MoOF}_3$ ,  $5\text{NH}_4\text{F} + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Mauro.)

Cupric fluoxhypermolybdate,  $\text{CuF}_2$ ,  $\text{MoOF}_3 + 4\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Mauro, Recl. Ac. Linc. 1892, 1. 194.)

**Potassium fluoxyhypomolybdate**,  $\text{MoOF}_3 \cdot 2\text{KF} + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp.

Sol. in  $\text{HF}$  or  $\text{HCl} + \text{Aq}$  (Mauro and Panabianco, Gazz. ch. it. 12. 80.)  
 $3\text{MoOF}_3 \cdot 5\text{KF} + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp. (Mauro, Gazz. ch. it. 19. 179.)

**Thallous fluoxyhypomolybdate**,  $2\text{TlF} \cdot \text{MoOF}_3$ .

(Mauro, B. 1894, 27R. 109.)

**Zinc fluoxyhypomolybdate**,  $\text{ZnF}_2 \cdot \text{MoOF}_3 + 6\text{H}_2\text{O}$ .

Rapidly deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Mauro, Real. Ac. Linc. 1892. 1. 194.)

**Fluoxyhypovanadic acid.**

See Fluoxyvanadic acid.

**Fluoxymanganic acid.**

**Ammonium fluoxymanganate**,  $(\text{NH}_4)_2\text{MnOF}_4$ .  
 Precipitate. (Nicklès.)

**Potassium fluoxymanganate**,  $\text{K}_2\text{MnOF}_4$ .  
 Precipitate. (Nicklès, C. R. 65. 107.)

**Sesquifluoxymanganic acid.**

**Potassium sesquifluoxymanganate**,  
 $\text{K}_4\text{Mn}_2\text{OF}_{12} = 4\text{KF} \cdot \text{Mn}_2\text{OF}_6$ .  
 Precipitate. (Nicklès.)

**Fluoxymolybdic acid.**

See also Fluoxyhypomolybdic, and fluoxypermolybdic acids.

**Ammonium fluoxymolybdate**,  $\text{NH}_4\text{F} \cdot \text{MoO}_3\text{F}_2$ .

Sol. in  $\text{H}_2\text{O}$ . (Mauro, Gazz. ch. it. 20. 109.)

$+ \text{H}_2\text{O}$ . More sol. in  $\text{H}_2\text{O}$  than  $2\text{NH}_4\text{F} \cdot \text{MoO}_3\text{F}_2$ . (Delafontaine, N. Arch. Sci. ph. nat. 30. 250)

Correct formula is  $3\text{NH}_4\text{F} \cdot \text{MoO}_3\text{F}_2$ . (Mauro, Gazz. ch. it. 18. 120)

$2\text{NH}_4\text{F} \cdot \text{MoO}_3\text{F}_2$ . Much more sol. than  $2\text{KF} \cdot \text{MoO}_3\text{F}_2$ . (Delafontaine.)

$3\text{NH}_4\text{F} \cdot \text{MoO}_3\text{F}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Mauro.)  
 $5\text{NH}_4\text{F} \cdot 3\text{MoO}_3\text{F}_2 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Mauro, Gazz. ch. it. 20. 109.)

**Ammonium fluoxymolybdate molybdate**,  
 $\text{MoO}_3\text{F}_2 \cdot 4\text{NH}_4\text{F} \cdot (\text{NH}_4)_2\text{MoO}_4$ .

Sol. in  $\text{H}_2\text{O}$ , but with decomp. (Mauro, Gazz. ch. it. 18. 120.)

**Cadmium fluoxymolybdate**,  $\text{CdF}_2 \cdot \text{MoO}_3\text{F}_2 + 6\text{H}_2\text{O}$ .

Sl. efflorescent. (Delafontaine, J. B. 1867. 236.)

**Cobaltous fluoxymolybdate**,  $\text{CoF}_2 \cdot \text{MoO}_3\text{F}_2 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Delafontaine, J. B. 1867. 236.)

**Cupric fluoxymolybdate**,  $\text{CuF}_2 \cdot \text{MoO}_3\text{F}_2 + 4\text{H}_2\text{O}$ .

Deliquescent. (Mauro, Real. Ac. Linc. 1892, 1. 194.)

**Nickel fluoxymolybdate**,  $\text{NiF}_2 \cdot \text{MoO}_3\text{F}_2 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Delafontaine, J. B. 1867. 236.)

**Potassium fluoxymolybdate**,  $2\text{KF} \cdot \text{MoO}_3\text{F}_2 + \text{H}_2\text{O}$ .

Easily sol. in boiling  $\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in  $\text{HF}$  (Marchetti, Z. anorg. 1895, 10. 68.)

$\text{KF} \cdot \text{MoO}_3\text{F}_2 + \text{H}_2\text{O}$ . Gradually efflorescent. (Delafontaine.)

**Rubidium fluoxymolybdate**,  $2\text{RbF} \cdot 2\text{MoO}_3\text{F}_2 + 2\text{H}_2\text{O}$ .

Sol. in cold, more sol. in hot  $\text{H}_2\text{O}$ . (Delafontaine.)

**Sodium fluoxymolybdate**,  $\text{NaF} \cdot \text{MoO}_3\text{F}_2 + \frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Delafontaine.)

**Thallous fluoxymolybdate**,  $2\text{TlF} \cdot \text{MoO}_3\text{F}_2 + \text{H}_2\text{O}$ .

Sol. in hot  $\text{H}_2\text{O}$ . (Delafontaine.)

**Zinc fluoxymolybdate**,  $\text{ZnF}_2 \cdot \text{MoO}_3\text{F}_2 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Delafontaine.)

**Fluoxypercolumbic acid.**

**Potassium fluoxypercolumbate**,  $2\text{KF} \cdot \text{Cbo}_3\text{F}_2 + \text{H}_2\text{O}$ .

(Piccini, Z. anorg. 2. 21.)

Sol. in  $\text{H}_2\text{O}$  with decomp.

Sol. in  $\text{HF}$ . (Marchetti, Z. anorg. 1895, 10. 67.)

**Fluoxypermolybdic acid.**

**Ammonium fluoxypermolybdate**,  $\text{MoO}_3\text{F}_2 \cdot 3\text{NH}_4\text{F}$ .

Sol. in  $\text{H}_2\text{O}$ . (Piccini, Z. anorg. 1. 51.)

**Cæsium fluoxypermolybdate**,  $\text{MoO}_3\text{F}_2 \cdot 2\text{CsF} + \text{H}_2\text{O}$ .

(Piccini)

**Potassium fluoxypermolybdate**,  $\text{MoO}_3\text{F}_2 \cdot 2\text{KF} + \text{H}_2\text{O}$ .

Not very sol. in  $\text{H}_2\text{O}$ ; more sol. in  $\text{HF} + \text{Aq}$  without decomp. (Piccini.)

Rubidium fluoxypermolybdate,  $\text{MoO}_3\text{F}_3$ ,  $2\text{RbF} + \text{H}_2\text{O}$ .

Somewhat more sol. in  $\text{H}_2\text{O}$  than K salt. Easily sol. in  $\text{HF} + \text{Aq.}$  (Piccini.)

#### Fluoxypertantalic acid.

Potassium fluoxypertantalate,  $2\text{KF}$ ,  $\text{TaO}_3\text{F}_3 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Piccini, Z. anorg. 2. 21.)

Fluoxypertitanic acid,  $\text{TiO}_2\text{F}_3$ ,  $\text{HF}$ .

Known only in solution. (Piccini, B. 18. 255 R.)

Ammonium fluoxypertitanate,  $\text{TiO}_2\text{F}_3$ ,  $2\text{NH}_4\text{F}$ .

Very unstable. (Piccini, Gazz. ch. it. 17. 479.)

$\text{TiO}_2\text{F}_3$ ,  $3\text{NH}_4\text{F}$ . Sol. in  $\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}_2$ . (Piccini, Z. anorg. 1895, 10 439.)

$2\text{TiO}_2\text{F}_3$ ,  $3\text{NH}_4\text{F}$ . Sol. in  $\text{H}_2\text{O}$ . (Piccini, B. 18. 698 R.)

Barium fluoxypertitanate,  $\text{TiO}_2\text{F}_3$ ,  $\text{BaF}_2$ .

Precipitate. Easily sol. in acids. (Piccini, B. 18. 698 R.)

$2\text{TiO}_2\text{F}_3$ ,  $3\text{BaF}_2$ . Insol in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Piccini, Gazz. ch. it. 17. 479.)

Potassium fluoxypertitanate,  $\text{TiO}_2\text{F}_3$ ,  $2\text{KF}$ .

Sol. in  $\text{H}_2\text{O}$ . (Piccini, B. 21. 1391.)

Sol. in  $\text{H}_2\text{O}_2$ . (Piccini, Z. anorg. 1895, 10. 438.)

#### Fluoxypertungstic acid.

Potassium fluoxypertungstate,  $2\text{KF}$ ,  $\text{WO}_3\text{F}_3 + \text{H}_2\text{O}$ .

(Piccini, Z. anorg. 2. 11.)

#### Fluoxytantallic acid.

See also Fluoxypertantallic acid.

Ammonium fluoxytantalate,  $3\text{NH}_4\text{F}$ ,  $\text{TaOF}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ . The solution clouds up by standing or on warming. (Joly, C. R. 81. 1266.)

#### Fluoxytitanic acid.

See also Fluoxypertitanic acid.

Barium fluoxytitanate,  $\text{TiOF}_3$ ,  $\text{BaF}_2$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Piccini, Gazz. ch. it. 17. 479.)

#### Fluoxytungstic acid.

Ammonium fluoxytungstate,  $2\text{NH}_4\text{F}$ ,  $\text{WO}_3\text{F}_3$ .

Very sol. in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (3) 69. 65.)

$\text{NH}_4\text{F}$ ,  $\text{WO}_3\text{F}_3 + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . Crystals unchanged from  $\text{H}_2\text{O}$  containing  $\text{HF}$ . (Marignac.)

#### Ammonium fluoxytungstate tungstate,

$4\text{NH}_4\text{F}$ ,  $\text{WO}_3\text{F}_3$ ,  $(\text{NH}_4)_2\text{WO}_4$ .

Incompletely sol. in  $\text{H}_2\text{O}$ . Residue dissolves in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Marignac.)

#### Cadmium fluoxytungstate.

Very sol. in  $\text{H}_2\text{O}$ . (Marignac.)

Cupric fluoxytungstate,  $\text{CuF}_2$ ,  $\text{WO}_3\text{F}_3 + 4\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Marignac, C. R. 55. 883.)

Cupric fluoxytungstate ammonium fluoride,

$\text{CuF}_2$ ,  $\text{WO}_3\text{F}_3$ ,  $\text{NH}_4\text{F} + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

#### Manganese fluoxytungstate.

Very sol. in  $\text{H}_2\text{O}$ . (Marignac.)

Nickel fluoxytungstate,  $\text{NiF}_2$ ,  $\text{WO}_3\text{F}_3 + 10\text{H}_2\text{O}$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . (Marignac.)

Potassium fluoxytungstate,  $\text{KF}$ ,  $\text{WO}_3\text{F}_3 + \text{H}_2\text{O}$ .

Can be recrystallised without decomp. only from  $\text{H}_2\text{O}$  containing  $\text{HF}$ . (Marignac, A. ch. (3) 69. 70.)

$2\text{KF}$ ,  $\text{WO}_3\text{F}_3 + \text{H}_2\text{O}$ . Difficultly sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . (Berzelius.)

Sol. in 17 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Marignac.)

Can be recrystallised without decomp. from  $\text{H}_2\text{O}$ , or  $\text{H}_2\text{O}$  containing  $\text{HF}$ . (Marignac.)

Sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in  $\text{HF}$ .

(Marchetti, Z. anorg. 1895, 10. 71.)

See also Fluoxypertungstate, potassium.

#### Silver fluoxytungstate.

Very easily sol. in  $\text{H}_2\text{O}$ . (Marignac.)

Sodium fluoxytungstate,  $2\text{NaF}$ ,  $\text{WO}_3\text{F}_3$ .

More sol. in  $\text{H}_2\text{O}$  than the corresponding K compound. (Berzelius.)

Thalious fluoxytungstate,  $\text{TlF}$ ,  $\text{WO}_3\text{F}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Ephraim and Heymann, B. 1909, 42. 4463.)

$2\text{TlF}$ ,  $\text{WO}_3\text{F}_3$ . Insol. in  $\text{H}_2\text{O}$  but decomp. thereby. (Ephraim and Heymann, B. 1909, 42. 4462.)

$3\text{TlF}$ ,  $2\text{WO}_3\text{F}_3$ . Insol. in  $\text{H}_2\text{O}$ . Decomp. by acids. (Ephraim and Heymann, B. 1909, 42. 4462.)

Zinc fluoxytungstate,  $\text{ZnF}_2$ ,  $\text{WO}_3\text{F}_3 + 10\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Marignac.)

**Fluoxxyuronic acid.**

Ammonium fluoxxyurate,  $3\text{NH}_4\text{F}$ ,  $\text{UO}_2\text{F}_2$

Easily sol. in  $\text{H}_2\text{O}$ , less in  $\text{HF}$ . Insol. in alcohol. (Bolton.)

100 g. solution sat. at  $27^\circ$  contain 10.11 g. salt.

100 g. solution sat. at  $81.3^\circ$  contain 20.71 g. salt.

(Burger, Dissert. 1904.)

Barium fluoxxyurate,  $3\text{BaF}_2$ ,  $2\text{UO}_2\text{F}_2 + 2\text{H}_2\text{O}$ .

Traces dissolve in hot  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Bolton.)

Potassium fluoxxyurate,  $3\text{KF}$ ,  $\text{UO}_2\text{F}_2$ .

Sol. in 8 pts  $\text{H}_2\text{O}$  at  $21^\circ$ . Insol. in alcohol and ether. (Bolton, J. pr. 99. 269.)

Does not exist. (Smithells, Chem. Soc. 43. 125.)

$4\text{KF}$ ,  $\text{UO}_2\text{F}_2$ . Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Ditte, C. R. 91. 115.)

$5\text{KF}$ ,  $2\text{UO}_2\text{F}_2$ . (Baker, Chem. Soc. 35. 760.)

$3\text{KF}$ ,  $2\text{UO}_2\text{F}_2 + 2\text{H}_2\text{O}$ . (Baker.)

Sodium fluoxxyurate,  $\text{NaF}$ ,  $\text{UO}_2\text{F}_2$ .

+  $2\text{H}_2\text{O}$ . Not efflorescent

+  $4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  and dil. acids. Sol. in conc.  $\text{HCl} + \text{Aq}$ . Sol. in conc.  $\text{H}_2\text{SO}_4$ .

(Bolton, J. B. 1866. 212.)

$4\text{NaF}$ ,  $\text{UO}_2\text{F}_2$ . (Ditte.)

Does not exist. (Smithells, Chem. Soc. 43. 125.)

**Fluoxxyvanadic acid.**

Ammonium fluoxxyvanadate,  $12\text{NH}_4\text{F}$ ,  $\text{V}_2\text{O}_5$ ,  $2\text{VOF}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ , and not attacked by cold conc.  $\text{H}_2\text{SO}_4$ . (Baker, Chem. Soc. 33. 388.)

Formula is  $3\text{NH}_4\text{F}$ ,  $\text{VO}_2\text{F}$ . (Petersen, J. pr. (2) 40. 289.)

$3\text{NH}_4\text{F}$ ,  $\text{VO}_2\text{F}$ . Sol. in  $\text{H}_2\text{O}$ . (Petersen, l. c.)

Much less sol. in  $\text{H}_2\text{O}$  in presence of  $\text{NH}_4\text{F}$ . (Piccini and Giorgis, Gazz. ch. it. 27. 1. 65.)

+  $\text{H}_2\text{O}$ . (Piccini and Giorgis, Gazz. ch. it. 1892. 22. 55.)

$3\text{NH}_4\text{F}$ ,  $\text{VOF}_3$ . "Hypovanadate" Quite sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{MF} + \text{Aq}$ . Less sol. in alcohol than in  $\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 195.)

$2\text{NH}_4\text{F}$ ,  $\text{VOF}_3$ . Sol. in  $\text{H}_2\text{O}$ . (Petersen.)

+  $\text{H}_2\text{O}$ . (Piccini and Giorgis.)

$7\text{NH}_4\text{F}$ ,  $4\text{VOF}_3 + 5\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Petersen.)

$3\text{NH}_4\text{F}$ ,  $2\text{VO}_2\text{F}$ . Sol. in  $\text{H}_2\text{O}$  without decomp. Sol. in conc.  $\text{HF} + \text{Aq}$ . (Piccini and Giorgis, Gazz. ch. it. 24. 1. 68.)

$3\text{NH}_4\text{F}$ ,  $2\text{VOF}_3 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp.

$\text{V}_2\text{O}_5$ ,  $2\text{NH}_4\text{F}$ . (Ditte, C. R. 106. 270.)

$\text{V}_2\text{O}_5$ ,  $8\text{NH}_4\text{F} + 4\text{H}_2\text{O}$ . As above.

$\text{V}_2\text{O}_5$ ,  $4\text{NH}_4\text{F} + 4\text{H}_2\text{O}$ . As above. Sol. in  $\text{H}_2\text{O}$ .

Ammonium hydrogen fluoxxyvanadate,  $7\text{NH}_4\text{F}$ ,  $\text{HF}$ ,  $4\text{VO}_2\text{F}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 284.)

Ammonium hydrogen trifluoxxyvanadate,  $3\text{HF}$ ,  $9\text{NH}_4\text{F}$ ,  $5\text{VOF}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{MF} + \text{Aq}$ . (Petersen, J. pr. (2) 40. 280.)

$3\text{NH}_4\text{F}$ ,  $3\text{HF}$ ,  $2\text{VOF}_3$ . Sol. in  $\text{H}_2\text{O}$ . (Baker, Chem. Soc. 33. 388.)

Identical with  $3\text{HF}$ ,  $9\text{NH}_4\text{F}$ ,  $5\text{VOF}_3$ . (Petersen.)

Barium fluoxxyvanadate,  $\text{BaF}_2$ ,  $\text{VO}_2\text{F}$ .

Ppt. (Ephraim, Z. anorg. 1903. 35. 79.)

Cadmium fluoxxyvanadate,  $\text{CdF}_2$ ,  $\text{VOF}_3 + 7\text{H}_2\text{O}$ .

"Hypovanadate." As the Co salt. (Piccini and Giorgis.)

Cobalt fluoxxyvanadate,  $\text{CoF}_2$ ,  $\text{VOF}_3 + 7\text{H}_2\text{O}$ .

"Hypovanadate." Sol. in  $\text{H}_2\text{O}$ . (Piccini and Giorgis.)

Nickel fluoxxyvanadate,  $\text{NiF}_2$ ,  $\text{VOF}_3 + 7\text{H}_2\text{O}$ .

"Hypovanadate." As the Co salt. (Piccini and Giorgis.)

Potassium fluoxxyvanadate,  $7\text{KF}$ ,  $3\text{VOF}_3$ .

Very sl. sol. in  $\text{H}_2\text{O}$  and  $\text{MF} + \text{Aq}$ . Easily sol. in dil. acids. (Petersen, J. pr. (2) 40. 199.)

$2\text{KF}$ ,  $\text{VOF}_3$ . As above. (Petersen.)

$2\text{KF}$ ,  $2\text{V}_2\text{O}_5 + 8\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4$ . (Ditte, C. R. 105. 1037.)

$2\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$ . As above.

$2\text{KF}$ ,  $4\text{V}_2\text{O}_5 + 8\text{H}_2\text{O}$ . As above.

$4\text{KF}$ ,  $\text{V}_2\text{O}_5$ . Less sol. than  $4\text{KF}$ ,  $3\text{V}_2\text{O}_5$ .

+  $2\text{H}_2\text{O}$ , and +  $3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

$4\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 4\text{H}_2\text{O}$ , and +  $6\text{H}_2\text{O}$ . Less sol. than  $2\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$ .

$8\text{KF}$ ,  $\text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$ , and +  $3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

Potassium trifluoxxyvanadate,  $2\text{KF}$ ,  $\text{VOF}_3$ .

Ppt. (Petersen, J. pr. (2) 40. 272.)

$6\text{KF}$ ,  $\text{V}_2\text{O}_5$ ,  $2\text{VOF}_3 + 2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in cold conc.  $\text{H}_2\text{SO}_4$ . (Baker, Chem. Soc. 33. 300.)

Formula is  $3\text{KF}$ ,  $2\text{VO}_2\text{F}$ . (Piccini and Giorgis.)

See also Fluovanadate fluoxxyvanadate, potassium.

Potassium fluoxxyvanadate,  $2\text{KF}$ ,  $\text{VO}_2\text{F}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 278.)

3KF, VO<sub>2</sub>F. As above. (Petersen.)  
3KF, 2VO<sub>2</sub>F. Sol. in H<sub>2</sub>O; scarcely attacked by H<sub>2</sub>SO<sub>4</sub>. (Piccini and Giorgis.)

Potassium hydrogen fluoxyvanadate, 3KF, HF, 2VOF<sub>2</sub>.  
Sol. in H<sub>2</sub>O. (Petersen.)

Sodium fluoxyvanadate, 8NaF, 3VOF<sub>2</sub>+2H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Petersen, J. pr. (2) 40, 200.)  
3NaF, VO<sub>2</sub>F, VOF<sub>2</sub> (?). Very easily decomp. (Piccini and Giorgis.)

2NaF, 2V<sub>2</sub>O<sub>5</sub>+10H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Ditte, C. R. 106, 270.)

4NaF, V<sub>2</sub>O<sub>5</sub>. As above.

4NaF, 3V<sub>2</sub>O<sub>5</sub>+18H<sub>2</sub>O. As above.

6NaF, V<sub>2</sub>O<sub>5</sub>+5H<sub>2</sub>O. As above

8NaF, V<sub>2</sub>O<sub>5</sub>+3H<sub>2</sub>O. (As above)

Thallos fluoxyvanadate, 2TiF, VOF<sub>2</sub>.

Somewhat sol. in cold H<sub>2</sub>O without decomp. Sol. in boiling H<sub>2</sub>O with exception of a black residue, which is easily sol. in dil H<sub>2</sub>SO<sub>4</sub>. (Ephraim, B. 1909, 42, 4460.)

3TiF, 2VO<sub>2</sub>F. Insol. in H<sub>2</sub>O. Sol. in H<sub>2</sub>O containing H<sub>2</sub>SO<sub>4</sub>. (Ephraim and Heymann, B. 1909, 42, 4459.)

Zinc fluoxyvanadate, ZnF<sub>2</sub>, ZnO, 2VOF<sub>2</sub>+14H<sub>2</sub>O.

Decomp. on air; sol. in H<sub>2</sub>O. (Baker, Chem. Soc. 33, 388.)

True composition is represented by the formula ZnF<sub>2</sub>, VO<sub>2</sub>F+7H<sub>2</sub>O. (Petersen.)

ZnF<sub>2</sub>, VO<sub>2</sub>F+7H<sub>2</sub>O. Very sol. in H<sub>2</sub>O. (Piccini and Giorgis.)

ZnF<sub>2</sub>, VOF<sub>2</sub>+7H<sub>2</sub>O. "Hypovanadate." Sol. in cold H<sub>2</sub>O, but decomp. by boiling; sol. in dil. HF+Aq. (Piccini and Giorgis.)

Fluozirconic acid.

Ammonium fluozirconate, (NH<sub>4</sub>)<sub>2</sub>ZrF<sub>6</sub>.

Sol. in H<sub>2</sub>O.

8NH<sub>4</sub>F, ZrF<sub>4</sub>. Sol. in H<sub>2</sub>O. (Marignac.)

Cadmium fluozirconate, 2CdF<sub>2</sub>, ZrF<sub>4</sub>+6H<sub>2</sub>O.

Sol. in H<sub>2</sub>O; can be recrystallized therefrom (Marignac, A. ch. (3) 60, 257.)

CdZrF<sub>6</sub>+6H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Marignac.)

Cesium fluozirconate, CsF, ZrF<sub>4</sub>+H<sub>2</sub>O

Sol. in H<sub>2</sub>O without decomp. (Wells, Z. anorg. 1895, 10, 434.)

2CsF, ZrF<sub>4</sub>. Sol. in H<sub>2</sub>O without decomp.

(Wells, Z. anorg. 1895, 10, 434.)

2CsF, 3ZrF<sub>4</sub>+2H<sub>2</sub>O. Only sl. sol. in H<sub>2</sub>O. (Wells, Z. anorg. 1895, 10, 434.)

Cupric fluozirconate, 2CuF<sub>2</sub>, ZrF<sub>4</sub>+12H<sub>2</sub>O.

Easily sol. in cold H<sub>2</sub>O. (Marignac, A. ch. (3) 60, 296.)

3CuF<sub>2</sub>, 2ZrF<sub>4</sub>+16H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Marignac.)

Lithium fluozirconate, 2LiF, ZrF<sub>4</sub>.

Ppt. (Wells, Am. J. Sci. 1897, (4) 3, 468.)

4LiF, ZrF<sub>4</sub>+11H<sub>2</sub>O. Sol. in H<sub>2</sub>O with decomp. (Wells, Am. J. Sci. 1897, (4) 3, 469.)

Magnesium fluozirconate, MgZrF<sub>6</sub>+5H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Marignac.)

Manganous fluozirconate, MnZrF<sub>6</sub>+5H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Marignac, J. pr. 83, 202.)

Nickel fluozirconate, 2NiF<sub>2</sub>, ZrF<sub>4</sub>+12H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Marignac, A. ch. (3) 60, 291.)

NiZrF<sub>6</sub>+6H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Marignac.)

Nickel potassium fluozirconate, K<sub>2</sub>ZrF<sub>6</sub>,

NiZrF<sub>6</sub>+8H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Marignac.)

Potassium fluozirconate, KF, ZrF<sub>4</sub>+H<sub>2</sub>O.

Much more sol. in hot, than cold H<sub>2</sub>O. (Marignac.)

2KF, ZrF<sub>4</sub>=K<sub>2</sub>ZrF<sub>6</sub>. 100 pts. H<sub>2</sub>O dissolve at 2°, 0.781 pt.; at 15°, 1.41 pts.; at 19°, 1.69 pts.; at 100°, 25.0 pts. K<sub>2</sub>ZrF<sub>6</sub>. (Marignac.)

Insol. in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20, 829.)

3KF, ZrF<sub>4</sub>.

Sodium fluozirconate, 5NaF, ZrF<sub>4</sub>.

100 pts. H<sub>2</sub>O dissolve 0.387 pt. at 18°, and 1.67 pts. at 100° (Marignac.)

2NaF, ZrF<sub>4</sub>. (Wells, Am. J. Sci. 1897, (4) 3, 469.)

5NaF, 2ZrF<sub>4</sub>. Sol. in H<sub>2</sub>O with decomp. (Wells.)

Tellurium fluozirconate, TeF, ZrF<sub>4</sub>.

Sol. in H<sub>2</sub>O without decomp. (Wells, Am. J. Sci. 1897, (4) 3, 470.)

+H<sub>2</sub>O. Sol. in H<sub>2</sub>O without decomp. (Wells.)

3TeF, ZrF<sub>4</sub>. Sol. in H<sub>2</sub>O without decomp. (Wells.)

5TeF, 3ZrF<sub>4</sub>. Sol. in H<sub>2</sub>O without decomp. (Wells.)

Zinc fluozirconate, ZnZrF<sub>6</sub>+6H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Marignac.)

2ZnF<sub>2</sub>, ZrF<sub>4</sub>+12H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Marignac, A. ch. (3) 60, 257.)

Fulminating gold.

See Auroamidoimide.

Fulminating platinum.

See Fulminoplatinum.

**Fluoxxyuramic acid.****Ammonium fluoxxyuranate**,  $3\text{NH}_4\text{F}$ ,  $\text{UO}_2\text{F}_2$ .Easily sol. in  $\text{H}_2\text{O}$ , less in  $\text{HF}$ . Insol. in alcohol. (Bolton.)100 g. solution sat. at  $27^\circ$  contain 10.11 g. salt.100 g. solution sat. at  $81.3^\circ$  contain 20.71 g. salt.

(Burger, Dissert. 1904.)

**Barium fluoxxyuranate**,  $3\text{BaF}_2$ ,  $2\text{UO}_2\text{F}_2 + 2\text{H}_2\text{O}$ .Traces dissolve in hot  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Bolton.)**Potassium fluoxxyuranate**,  $3\text{KF}$ ,  $\text{UO}_2\text{F}_2$ .Sol. in 8 pts.  $\text{H}_2\text{O}$  at  $21^\circ$ . Insol. in alcohol and ether. (Bolton, J. pr. 99. 269.)

Does not exist. (Smithells, Chem. Soc. 43. 125.)

 $4\text{KF}$ ,  $\text{UO}_2\text{F}_2$ . Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Ditte, C. R. 91. 115.) $5\text{KF}$ ,  $2\text{UO}_2\text{F}_2$ . (Baker, Chem. Soc. 35. 760.) $3\text{KF}$ ,  $2\text{UO}_2\text{F}_2 + 2\text{H}_2\text{O}$ . (Baker.)**Sodium fluoxxyuranate**,  $\text{NaF}$ ,  $\text{UO}_2\text{F}_2$ . $+2\text{H}_2\text{O}$ . Not efflorescent. $+4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  and dil. acids. Sl. sol. in conc.  $\text{HCl} + \text{Aq}$ . Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Bolton, J. B. 1866. 212.) $4\text{NaF}$ ,  $\text{UO}_2\text{F}_2$ . (Ditte.)

Does not exist. (Smithells, Chem. Soc. 43. 125.)

**Fluoxxyvanadic acid.****Ammonium fluoxxyvanadate**,  $12\text{NH}_4\text{F}$ ,  $\text{V}_2\text{O}_5$ ,  $2\text{VOF}_2$ .Easily sol. in  $\text{H}_2\text{O}$ , and not attacked by cold conc.  $\text{H}_2\text{SO}_4$ . (Baker, Chem. Soc. 33. 388.)Formula is  $3\text{NH}_4\text{F}$ ,  $\text{VO}_2\text{F}$ . (Petersen, J. pr. (2) 40. 289.) $3\text{NH}_4\text{F}$ ,  $\text{VO}_2\text{F}$ . Sol. in  $\text{H}_2\text{O}$ . (Petersen, l. c.)Much less sol. in  $\text{H}_2\text{O}$  in presence of  $\text{NH}_4\text{F}$  (Piccini and Giorgis, Gazz. ch. it. 27. 1. 65.) $+ \text{H}_2\text{O}$ . (Piccini and Giorgis, Gazz. ch. it. 1892. 22. 55.) $3\text{NH}_4\text{F}$ ,  $\text{VOF}_2$ . "Hypovanadate." Quite sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{MF} + \text{Aq}$ . Less sol. in alcohol than in  $\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 195.) $2\text{NH}_4\text{F}$ ,  $\text{VOF}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Petersen.) $+ \text{H}_2\text{O}$ . (Piccini and Giorgis.) $7\text{NH}_4\text{F}$ ,  $4\text{VOF}_2 + 5\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Petersen.) $3\text{NH}_4\text{F}$ ,  $2\text{VO}_2\text{F}$ . Sol. in  $\text{H}_2\text{O}$  without decomp. Sol. in conc.  $\text{HF} + \text{Aq}$ . (Piccini and Giorgis, Gazz. ch. it. 24. 1. 68.) $3\text{NH}_4\text{F}$ ,  $2\text{VOF}_2 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp. $\text{V}_2\text{O}_5$ ,  $2\text{NH}_4\text{F}$ . (Ditte, C. R. 106. 270.) $\text{V}_2\text{O}_5$ ,  $8\text{NH}_4\text{F} + 4\text{H}_2\text{O}$ . As above. $\text{V}_2\text{O}_5$ ,  $4\text{NH}_4\text{F} + 4\text{H}_2\text{O}$ . As above. Sol. in  $\text{H}_2\text{O}$ .**Ammonium hydrogen fluoioxyvanadate**,  $7\text{NH}_4\text{F}$ ,  $\text{HF}$ ,  $4\text{VO}_2\text{F}$ .Very sol. in  $\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 284.)**Ammonium hydrogen trifluoxxyvanadate**,  $3\text{HF}$ ,  $9\text{NH}_4\text{F}$ ,  $5\text{VOF}_2$ .Easily sol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{MF} + \text{Aq}$ . (Petersen, J. pr. (2) 40. 280.) $3\text{NH}_4\text{F}$ ,  $3\text{HF}$ ,  $2\text{VOF}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Baker, Chem. Soc. 33. 388.)Identical with  $3\text{HF}$ ,  $9\text{NH}_4\text{F}$ ,  $5\text{VOF}_2$ . (Petersen.)**Barium fluoxxyvanadate**,  $\text{BaF}_2$ ,  $\text{VO}_2\text{F}$ .

Ppt. (Ephraim, Z. anorg. 1903. 35. 79.)

**Cadmium fluoxxyvanadate**,  $\text{CdF}_2$ ,  $\text{VOF}_2 + 7\text{H}_2\text{O}$ .

"Hypovanadate." As the Co salt. (Piccini and Giorgis.)

**Cobalt fluoxxyvanadate**,  $\text{CoF}_2$ ,  $\text{VOF}_2 + 7\text{H}_2\text{O}$ ."Hypovanadate." Sol. in  $\text{H}_2\text{O}$ . (Piccini and Giorgis.)**Nickel fluoxxyvanadate**,  $\text{NiF}_2$ ,  $\text{VOF}_2 + 7\text{H}_2\text{O}$ .

"Hypovanadate." As the Co salt. (Piccini and Giorgis.)

**Potassium fluoxxyvanadate**,  $7\text{KF}$ ,  $3\text{VOF}_2$ .Very sl. sol. in  $\text{H}_2\text{O}$  and  $\text{MF} + \text{Aq}$ . Easily sol. in dil. acids. (Petersen, J. pr. (2) 40. 199.) $2\text{KF}$ ,  $\text{VOF}_2$ . As above. (Petersen.) $2\text{KF}$ ,  $2\text{V}_2\text{O}_5 + 8\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4$ . (Ditte, C. R. 105. 1067.) $2\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$ . As above. $2\text{KF}$ ,  $4\text{V}_2\text{O}_5 + 8\text{H}_2\text{O}$ . As above. $4\text{KF}$ ,  $\text{V}_2\text{O}_5$ . Less sol. than  $4\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$ , and  $+3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . $4\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 4\text{H}_2\text{O}$ , and  $+6\text{H}_2\text{O}$ . Less sol. than  $2\text{KF}$ ,  $3\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$ . $8\text{KF}$ ,  $\text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$ , and  $+3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .**Potassium trifluoxxyvanadate**,  $2\text{KF}$ ,  $\text{VOF}_2$ .

Ppt. (Petersen, J. pr. (2) 40. 272.)

 $6\text{KF}$ ,  $\text{V}_2\text{O}_5$ ,  $2\text{VOF}_2 + 2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in cold conc.  $\text{H}_2\text{SO}_4$ . (Baker, Chem. Soc. 33. 300.)Formula is  $3\text{KF}$ ,  $2\text{VO}_2\text{F}$ . (Piccini and Giorgis.)

See also Fluovanadate fluoxxyvanadate, potassium.

**Potassium fluoioxyvanadate**,  $2\text{KF}$ ,  $\text{VO}_2\text{F}$ .Easily sol. in  $\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 278.)

- 3KF, VO<sub>2</sub>F. As above. (Petersen.)  
 3KF, 2VO<sub>2</sub>F. Sol. in H<sub>2</sub>O; scarcely attacked by H<sub>2</sub>SO<sub>4</sub>. (Piccini and Giorgis.)
- Potassium hydrogen fluoxyvanadate**, 3KF, HF, 2VOF<sub>2</sub>.  
 Sol. in H<sub>2</sub>O. (Petersen.)
- Sodium fluoxyvanadate**, 8NaF, 3VOF<sub>2</sub>+2H<sub>2</sub>O.  
 Sol. in H<sub>2</sub>O. (Petersen, J. pr. (2) 40, 200.)  
 3NaF, VO<sub>2</sub>F, VOF<sub>2</sub> (?). Very easily decomp. (Piccini and Giorgis.)  
 2NaF, 2V<sub>2</sub>O<sub>5</sub>+10H<sub>2</sub>O Sol. in H<sub>2</sub>O. (Ditte, C. R. 106. 270.)  
 4NaF, V<sub>2</sub>O<sub>5</sub>. As above  
 4NaF, 3V<sub>2</sub>O<sub>5</sub>+18H<sub>2</sub>O. As above.  
 6NaF, V<sub>2</sub>O<sub>5</sub>+5H<sub>2</sub>O. As above.  
 8NaF, V<sub>2</sub>O<sub>5</sub>+3H<sub>2</sub>O. (As above.)
- Thalious fluoxyvanadate**, 2TiF, VOF<sub>2</sub>.  
 Somewhat sol. in cold H<sub>2</sub>O without decomp.  
 Sol. in boiling H<sub>2</sub>O with exception of a black residue, which is easily sol. in dil H<sub>2</sub>SO<sub>4</sub>. (Ephraim, B. 1909, 42. 4460.)  
 3TiF, 2VO<sub>2</sub>F. Insol. in H<sub>2</sub>O. Sol. in H<sub>2</sub>O containing H<sub>2</sub>SO<sub>4</sub>. (Ephraim and Heymann, B. 1909, 42. 4459.)
- Zinc fluoxyvanadate**, ZnF<sub>2</sub>, ZnO, 2VOF<sub>2</sub>+14H<sub>2</sub>O.  
 Decomp. on air; sol. in H<sub>2</sub>O. (Baker, Chem. Soc. 33. 388.)  
 True composition is represented by the formula ZnF<sub>2</sub>, VO<sub>2</sub>F+7H<sub>2</sub>O. (Petersen)  
 ZnF<sub>2</sub>, VO<sub>2</sub>F+7H<sub>2</sub>O. Very sol. in H<sub>2</sub>O. (Piccini and Giorgis.)  
 ZnF<sub>2</sub>, VOF<sub>2</sub>+7H<sub>2</sub>O "Hypovanadate."  
 Sol. in cold H<sub>2</sub>O, but decomp. by boiling; sol. in dil. HF+Aq. (Piccini and Giorgis.)
- Fluozirconic acid.**
- Ammonium fluozirconate**, (NH<sub>4</sub>)<sub>2</sub>ZrF<sub>6</sub>.  
 Sol. in H<sub>2</sub>O.  
 3NH<sub>4</sub>F, ZrF<sub>4</sub>. Sol. in H<sub>2</sub>O. (Marignac.)
- Cadmium fluozirconate**, 2CdF<sub>2</sub>, ZrF<sub>4</sub>+6H<sub>2</sub>O.  
 Sol. in H<sub>2</sub>O; can be recrystallised therefrom. (Marignac, A. ch. (3) 60. 257.)  
 CdZrF<sub>6</sub>+6H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Marignac.)
- Cæsium fluozirconate**, CsF, ZrF<sub>4</sub>+H<sub>2</sub>O.  
 Sol. in H<sub>2</sub>O without decomp. (Wells, Z. anorg. 1895, 10. 434.)  
 2CsF, ZrF<sub>4</sub>. Sol. in H<sub>2</sub>O without decomp. (Wells, Z. anorg. 1895, 10. 434.)  
 2CsF, 3ZrF<sub>4</sub>+2H<sub>2</sub>O. Only sl. sol. in H<sub>2</sub>O. (Wells, Z. anorg. 1895, 10. 434.)
- Cupric fluozirconate**, 2CuF<sub>2</sub>, ZrF<sub>4</sub>+12H<sub>2</sub>O.  
 Easily sol. in cold H<sub>2</sub>O. (Marignac, A. ch. (3) 60. 296.)  
 3CuF<sub>2</sub>, 2ZrF<sub>4</sub>+16H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Marignac.)
- Lithium fluozirconate**, 2LiF, ZrF<sub>4</sub>.  
 Ppt. (Wells, Am. J. Sci. 1897, (4) 3. 468.)  
 4LiF, ZrF<sub>4</sub>+ $\frac{1}{2}$ H<sub>2</sub>O. Sol. in H<sub>2</sub>O with decomp. (Wells, Am. J. Sci. 1897, (4) 3. 469.)
- Magnesium fluozirconate**, MgZrF<sub>6</sub>+5H<sub>2</sub>O.  
 Sol. in H<sub>2</sub>O. (Marignac.)
- Manganous fluozirconate**, MnZrF<sub>6</sub>+5H<sub>2</sub>O.  
 Sol. in H<sub>2</sub>O. (Marignac, J. pr. 83. 202.)
- Nickel fluozirconate**, 2NiF<sub>2</sub>, ZrF<sub>4</sub>+12H<sub>2</sub>O.  
 Sol. in H<sub>2</sub>O. (Marignac, A. ch. (3) 60. 291.)  
 NiZrF<sub>6</sub>+6H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Marignac.)
- Nickel potassium fluozirconate**, K<sub>2</sub>ZrF<sub>6</sub>, NiZrF<sub>6</sub>+8H<sub>2</sub>O.  
 Sol. in H<sub>2</sub>O. (Marignac.)
- Potassium fluozirconate**, KF, ZrF<sub>4</sub>+H<sub>2</sub>O.  
 Much more sol. in hot, than cold H<sub>2</sub>O. (Marignac.)  
 2KF, ZrF<sub>4</sub>=K<sub>2</sub>ZrF<sub>6</sub>. 100 pts. H<sub>2</sub>O dissolve at 2°, 0.781 pt.; at 15°, 1.41 pts.; at 19°, 1.69 pts.; at 100°, 25.0 pts. K<sub>2</sub>ZrF<sub>6</sub>. (Marignac.)  
 Insol. in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1895, 20. 829.)  
 3KF, ZrF<sub>4</sub>.
- Sodium fluozirconate**, 5NaF, ZrF<sub>4</sub>.  
 100 pts. H<sub>2</sub>O dissolve 0.387 pt. at 18°, and 1.67 pts. at 100°. (Marignac.)  
 2NaF, ZrF<sub>4</sub>. (Wells, Am. J. Sci. 1897, (4) 3. 469.)  
 5NaF, 2ZrF<sub>4</sub>. Sol. in H<sub>2</sub>O with decomp. (Wells)
- Tellurium fluozirconate**, TeF, ZrF<sub>4</sub>.  
 Sol. in H<sub>2</sub>O without decomp. (Wells, Am. J. Sci. 1897, (4) 3. 470.)  
 +H<sub>2</sub>O. Sol. in H<sub>2</sub>O without decomp. (Wells.)  
 3TeF, ZrF<sub>4</sub>. Sol. in H<sub>2</sub>O without decomp. (Wells.)  
 5TeF, 3ZrF<sub>4</sub>. Sol. in H<sub>2</sub>O without decomp. (Wells.)
- Zinc fluozirconate**, ZnZrF<sub>6</sub>+6H<sub>2</sub>O.  
 Sol. in H<sub>2</sub>O. (Marignac.)  
 2ZnF<sub>2</sub>, ZrF<sub>4</sub>+12H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Marignac, A. ch. (3) 60. 257.)

**Fusocobaltic chloride,  $\text{Co}(\text{NH}_3)_4(\text{OH})\text{Cl}_2 + \text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ , from which it is precipitated by  $\text{NH}_4\text{Cl} + \text{Aq}$ , decomp. by boiling  $\text{H}_2\text{O}$ ; pptd. from aqueous solution by alcohol. (Fremy, C. R. 32, 501.)

— nitrate,  $\text{Co}(\text{NH}_3)_4(\text{OH})(\text{NO}_3)_2 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Properties as the chloride. (Fremy)

— sulphate,  $\text{Co}(\text{NH}_3)_4(\text{OH})\text{SO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Fremy, C. R. 32, 501.)

Insol. in  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{HCl} + \text{Aq}$ , or  $\text{H}_2\text{SO}_4$ , from which it is precipitated by  $\text{H}_2\text{O}$  (Vortmann, N. 6, 412.)

**Fusible white precipitate.**

See Mercuridiammonium chloride.

**Gadolinium, Gd.**

(Marignac, C. R. 102, 92.)

**Gadolinium bromide,  $\text{GdBr}_3 + 6\text{H}_2\text{O}$ .**

Sol. in  $\text{HBr}$ . (Benedicks, Z. anorg. 1900, 22, 403.)

**Gadolinium chloride,  $\text{GdCl}_3 + 6\text{H}_2\text{O}$ .**

Somewhat deliquescent. Sol. in  $\text{H}_2\text{O}$  (Benedicks.)

**Gadolinium platinum chloride.**

See Chloroplatinate, gadolinium.

**Gadolinium fluoride,  $\text{GdF}_3$ .**

Insol. in  $\text{H}_2\text{O}$ ; sl. sol. in hot  $\text{HF}$ . (Popovici, B. 1908, 41, 635.)

**Gadolinium hydroxide,  $\text{Gd}(\text{OH})_3$ .**

Ppt. (Benedicks, Z. anorg. 1900, 22, 402.)

**Gadolinium oxide,  $\text{Gd}_2\text{O}_3$ .**

Sol. in acids. (de Boisbaudran, C. R. 111, 394.)

Somewhat hygroscopic; easily sol. in acids. (Benedicks.)

**Gallium, Ga.**

Not decomp. by  $\text{H}_2\text{O}$ ; easily sol. in cold  $\text{HCl} + \text{Aq}$ . Slowly sol. in warm dil.  $\text{HNO}_3 + \text{Aq}$ . Not attacked by conc.  $\text{HNO}_3$ , free from

$\text{N}_2\text{O}_5$  below  $40-50^\circ$ , and only slowly in presence of  $\text{N}_2\text{O}_3$ . (Dupré, C. R. 86, 720.)

Easily sol. in cold or warm  $\text{KOH} + \text{Aq}$ . (de Boisbaudran, A. ch. (5) 10, 100)

**Gallium bromide,  $\text{GaBr}_3$ .**

Deliquescent, and sol. in  $\text{H}_2\text{O}$ .

**Gallium dichloride,  $\text{GaCl}_2$ .**

Deliquescent, and decomp. by  $\text{H}_2\text{O}$ . (Nilsson and Petersen, C. R. 107, 527.)

**Gallium chloride,  $\text{GaCl}_3$ .**

Deliquescent, and very sol. in little  $\text{H}_2\text{O}$ . Decomp. by much  $\text{H}_2\text{O}$ , with formation of basic salt, which is slowly sol. in dil.  $\text{HCl} + \text{Aq}$

**Gallium hydroxide.**

Sol. in acids; sol. in  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$ , less easily in  $\text{NH}_4\text{OH} + \text{Aq}$ , even in presence of ammonium salts.

**Gallium iodide,  $\text{GaI}_3$ .**

Deliquescent, and sol. in  $\text{H}_2\text{O}$  (de Boisbaudran and Jungfleisch, C. R. 86, 578)

**Gallium suboxide,  $\text{Ga}_2\text{O}_3$  (?)**

Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Dupré)

Sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

**Gallium oxide,  $\text{Ga}_2\text{O}_3$ .**

Sol. in acids.

**Germanium, Ge.**

Insol. in  $\text{HCl} + \text{Aq}$ . Easily sol. in aqua regia. Decomp. by  $\text{HNO}_3 + \text{Aq}$  to oxide. Conc.  $\text{H}_2\text{SO}_4$  decomp. to sulphate. Insol. in boiling  $\text{KOH} + \text{Aq}$  (Winkler, J. pr. (2) 34, 177; 36, 177.)

**Germanium tetrabromide,  $\text{GeBr}_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Winkler.)

**Germanium dichloride,  $\text{GeCl}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Winkler.)

**Germanium tetrachloride,  $\text{GeCl}_4$ .**

Sinks in  $\text{H}_2\text{O}$ , and is gradually decomp. thereby. (Winkler, J. pr. 34, 177.)

Insol. in and not attacked by hot conc.  $\text{H}_2\text{SO}_4$ . (Friedrich, W. A. B. 102, 2b, 540.)

**Germanium chloroform,  $\text{GeHCl}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . (Winkler.)

**Germanium tetrafluoride,  $\text{GeF}_4$ .**

Deliquescent, and sol. in  $\text{H}_2\text{O}$ .  $+3\text{H}_2\text{O}$ . Deliquescent. Melts in its crystal  $\text{H}_2\text{O}$  when warmed. (Winkler.)

**Germanium potassium fluoride.***See* Fluogermanate, potassium.**Germanium hydride,  $\text{GeH}_4$ .**Sl. sol. in hot  $\text{HCl}$  Sol. in  $\text{NaOCl} + \text{Aq.}$   
(Vogelen, *Z. anorg.* 1902, 30. 327)**Germanium tetraiodide,  $\text{GeI}_4$** Deliquescent, and sol. in  $\text{H}_2\text{O}$  with decomp.  
(Winkler)**Germanium monoxide,  $\text{GeO}$ .**Not appreciably sol. in dil  $\text{H}_2\text{SO}_4 + \text{Aq.}$   
Easily sol. in  $\text{HCl} + \text{Aq.}$  Insol. in alkalis.  
(Winkler, *J. pr.* (2) 34. 177.)Somewhat sol. in  $\text{H}_2\text{O}$ ; insol. in  $\text{H}_2\text{SO}_4 + \text{Aq.}$   
even when hot and conc. (van Bemmelen, *R. t. c.* 6. 205.)**Germanium dioxide,  $\text{GeO}_2$ .**Not very difficultly sol. in  $\text{H}_2\text{O}$ .  
Sol. in 247.1 pts  $\text{H}_2\text{O}$  at  $20^\circ$ ; in 93.3 pts.  
at  $100^\circ$ . (Winkler.)Easily sol. in alkali carbonates or hydrates  
+  $\text{Aq.}$ ; sl. sol. in acids.**Germanium oxychloride,  $\text{GeOCl}_3$ .**Insol. in  $\text{H}_2\text{O}$ ; sol. in acids. (Winkler, *J. pr.* (2) 36. 177.)**Germanium monosulphide,  $\text{GeS}$** Sol. in 402.9 pts.  $\text{H}_2\text{O}$ . Sol. in conc. hot  
 $\text{HCl} + \text{Aq.}$  Sol. in  $\text{KOH} + \text{Aq.}$  Sol. in  
 $(\text{NH}_4)_2\text{S} + \text{Aq}$  when precipitated. Insol. in  
 $(\text{NH}_4)_2\text{S} + \text{Aq}$  if crystalline. Also exists in a  
colloidal state. (Winkler.)**Germanium disulphide,  $\text{GeS}_2$ .**Sol. in 221.9 pts.  $\text{H}_2\text{O}$ . Easily sol. in  
 $\text{KOH} + \text{Aq.}$  or  $\text{NH}_4\text{OH} + \text{Aq.}$  Insol. in acids.  
Exists also in a colloidal state. (Winkler.)**Glass.**

Numerous and extensive researches have been made on the action of  $\text{H}_2\text{O}$  and various solutions on glass. The older work has a certain historical interest, but only a brief statement of some of the more important results can be given here. For a very thorough résumé of the work before the year 1861, Storer's Dictionary, p. 555, should be consulted.

All glass is more or less attacked by  $\text{H}_2\text{O}$ , the more easily the greater the amount of alkali present, the finer it is powdered, and the higher the temperature.

Glass, as that of a flask, is decomposed to a considerable extent by several days' boiling with  $\text{H}_2\text{O}$ , a portion of the fixed alkali being dissolved, but when powdered glass is rubbed with distilled  $\text{H}_2\text{O}$  in a mortar, the  $\text{H}_2\text{O}$  remains pure and exhibits no alkalinity. (Schuele.)

Glass of aluminosilicates is partially dissolved by long boiling with  $\text{H}_2\text{O}$ . (Luvolser)

$\text{H}_2\text{O}$  extracts potash or soda from glass together with

a portion of the silicates, the decomposition taking place the more easily in proportion as the glass is richer in alkalis, more minutely divided, or the temperature of the water higher. (Beechhof, *Kunst. Arch.* 1. 143.)

Powdered crown glass and some varieties of window glass render cold  $\text{H}_2\text{O}$  alkaline when in contact therewith. (Dumas.)

100 pts. finely divided flint glass lose 7 pts. potash when boiled one week with  $\text{H}_2\text{O}$ . (Griffiths, *Q. J. Sci.* 20. 258.)

Retorts of ordinary or flint glass are partially dissolved by  $\text{H}_2\text{O}$  when it is evaporated therein. (Chevreul, 1811.)

Finely powdered plate glass (Faraday, *Pogg.* 18. 509), and Thüringian potash glass (Ludwig, *Arch. Pharm.* 91. 17) reddens moistened turmeric paper.

The alkaline reaction disappears by continued washing, but reappears when the glass is frantically rubbed. (Griffiths.)

Cold  $\text{H}_2\text{O}$  takes up  $\text{SiO}_2$  as well as alkali from glass powder. (Fuchs.)

Powdered lead glass gives up appreciable amounts of  $\text{PbO}$  to weakly acidified  $\text{H}_2\text{O}$ . (Pelouze.)

When powdered white glass, containing 12.4%  $\text{Na}_2\text{O}$ , 15.5%  $\text{CaO}$ , and 72.1%  $\text{SiO}_2$ , is treated repeatedly with  $\text{H}_2\text{O}$ , more than 3% of the glass is dissolved, and the undissolved part gives up 1.6%  $\text{CaO}$  to  $\text{HCl} + \text{Aq}$  with effervescence. A glass containing more alkali, 1.4, 6.16, 3%  $\text{Na}_2\text{O}$ , 6.4%  $\text{CaO}$ , 77.3%  $\text{SiO}_2$ , lost with the same treatment 18.2%, and the residue gave up 2%  $\text{CaO}$  to  $\text{HCl} + \text{Aq}$ . (Pelouze, *C. R.* 13. 117.)

In the above case the fineness of the glass has an influence as well as its composition. When the same sample of glass was boiled 1 hour with  $\text{H}_2\text{O}$ , amounts were dissolved in the proportion 1.4, 28, according as the glass was in form of a coarse, fine, or very fine powder. Glass of the composition of the above samples, as given by Pelouze, lost 10 and 32% respectively.

If powdered glass is boiled with  $\text{H}_2\text{O}$  and  $\text{CO}_2$  conducted into the solution, it is absorbed, if boiled with  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$  is dissolved. (Pelouze.)

Glass tubes are converted into a white crystalline mass by heating with  $\text{H}_2\text{O}$  several months to  $75-150^\circ$ , lead glass and Bohemian glass most easily, English crown glass least. A little  $\text{H}_2\text{O}$  attacks glass more than much  $\text{H}_2\text{O}$ .

The action of  $\text{H}_2\text{O}$  is greatly increased by finely pulverising the glass.

$\text{H}_2\text{O}$  dissolved 10% of a glass containing 12%  $\text{Na}_2\text{O}$ , 15.5%  $\text{CaO}$ , and 72.5%  $\text{SiO}_2$ , and 32% of another glass containing 16.3%  $\text{Na}_2\text{O}$ , 6.4%  $\text{CaO}$ , and 77.3%  $\text{SiO}_2$ . (Vogel, *B. A. Munchen*, 1867. 437.)

Action of  $\text{H}_2\text{O}$  on a glass containing 74%  $\text{SiO}_2$ , 8.6%  $\text{CaO}$ , 14%  $\text{Na}_2\text{O}$ , 0.6%  $\text{K}_2\text{O}$ , with traces of  $\text{Al}_2\text{O}_3$ ,  $\text{Fe}_2\text{O}_3$ ,  $\text{MnO}$ , and  $\text{MgO}$ .

By boiling with  $\text{H}_2\text{O}$  a decrease of 3.9 mg. was observed for the first hour, which soon became constant at 2.2 mg. per hour. The action was then proportional to the time, and also to the surface in contact with the liquid, but independent of the amount of liquid evaporating.

The action decreases rapidly with the temperature, so that at  $90-100^\circ$  only  $\frac{1}{4}$  as much glass is dissolved as by boiling  $\text{H}_2\text{O}$ . (Emmerling, *A.* 160. 257.)

When steam condenses in tubes of Na glass, they are so strongly attacked that the  $\text{H}_2\text{O}$  has an alkaline reaction, but tubes of hard or Bohemian K glass are not so strongly attacked. (Tollens, *B.* 9. 1540.)

The effect of  $\text{H}_2\text{O}$  is so great as to impart a distinctly alkaline reaction to water condensing in a tube of ordinary glass. By condensing water in long tubes of various kinds of glass the following results were obtained.

I. Easily fusible Thuringian glass. Surface exposed = 324 sq. cm.

After 2 hours, 62.0 mg. KOH were dissolved.

After 3 hours more, 36.0 mg. KOH were dissolved.

After 3 hours more, 33.2 mg. KOH were dissolved.

After 3 hours more, 20.8 mg. KOH were dissolved.

After 3 hours more, 20.8 mg. KOH were dissolved.

Or, in 14 hours, 172.8 mg. KOH were dissolved.

II. Less easily fusible Thuringian glass. Surface exposed = 490 sq. cm.

After 3 hours, 19.2 mg. KOH were dissolved.

After 3 hours more, 15.2 mg. KOH were dissolved.

After 3 hours more, 12.4 mg. KOH were dissolved.

After 3 hours more, 11.2 mg. KOH were dissolved.

Or, after 12 hours, 58.0 mg. KOH were dissolved.

III. Combustion tubing of very difficultly fusible Bohemian glass. Surface exposed = 1130 sq. cm.

After 3 hours 4.16 mg. KOH were dissolved.

After 3 hours more 4.16 mg. KOH were dissolved.

After 3 hours more 4.16 mg. KOH were dissolved.

After 3 hours more 4.16 mg. KOH were dissolved.

Or, after 12 hours, 16.64 mg. KOH were dissolved.

IV. Easily fusible Bohemian glass. Surface exposed = 1394 sq. cm.

After 3 hours, 7.88 mg. KOH were dissolved.

After 3 hours more, 8.56 mg. KOH were dissolved.

After 3 hours more, 1.97 mg. KOH were dissolved.

Or, after 9 hours, 24.32 mg. KOH were dissolved. (Kreusler and Henzold, B. 17. 34.)

From the above the following table has been calculated.

50 ccm. H<sub>2</sub>O dissolves from a surface of 1000 sq. m in 1 hour:—

96.0 mg. from easily fusible Thuringian glass.

12.8 mg. from less fusible Thuringian glass.

1.2 mg. from combustion tube of Bohemian glass.

2.0 mg. from harder tube of Bohemian glass.

(Kreusler and Henzold, B. 17. 34.)

100 ccm. H<sub>2</sub>O dissolves so much glass from a flask every 2 seconds when in contact therewith that 0.1 ccm.  $\frac{1}{2}$  normal oxalic acid is neutralised thereby (Bohlig, Z. anal. 23. 518.)

Action of H<sub>2</sub>O on various kinds of Na glass  
1 g of finely powdered glass was boiled 10–15 minutes in a silver dish with 100 ccm. H<sub>2</sub>O, and the per cent of Na<sub>2</sub>O (or K<sub>2</sub>O) in the solution was determined.

	%Na <sub>2</sub> O (K <sub>2</sub> O)
Orthoclase feldspar . . . . .	0 17
Glass of a Bohemian combustion tube . . . . .	0 56
“ flask (German manuf.) . . . . .	0 69
“ champagne bottle . . . . .	1 7
Natrolite . . . . .	1 32
Glass of a wine bottle (Hungarian) . . . . .	2 22
Glass which was attacked by H <sub>2</sub> O under pressure . . . . .	3 7
Lead glass . . . . .	3 8
Glass that broke easily . . . . .	4 8
Glass tubing that became rough when fused . . . . .	6 1
Glass tubing that became opaque by fusing . . . . .	14 35
Solid water glass . . . . .	28 97

(Wartha, Z. anal. 24. 220)

The relative ease by which various kinds of glass are attacked by H<sub>2</sub>O is shown by the following table. The glass was powdered and heated on a water bath with exclusion of atmospheric CO<sub>2</sub>.

Potassium water glass . . . . .	291
Sodium water glass . . . . .	196
Yellow glass rich in alkali . . . . .	34
Thuringian glass . . . . .	19
Ditto from Tittel and Co. . . . .	8
Window glass . . . . .	8
Lead glass from Jena . . . . .	6
Bohemian glass from Kavalier . . . . .	2 4
Lead crystal glass . . . . .	1 4
Thermometer glass, 16IV, from Jena . . . . .	1 0
Zinc glass, 362, from Jena . . . . .	0 8
Lead glass, 434, from Jena . . . . .	0 6
Lead glass, 433, from Jena . . . . .	0 2
Heaviest lead silicate, from Jena . . . . .	0 0

(Mylus, C. C. 1888. 1313.)

Solubility of various kinds of glass in H<sub>2</sub>O.

The amounts dissolved from various kinds of glass by heating 5 hours with H<sub>2</sub>O were as follows.

Yellow glass rich in alkali (13% K <sub>2</sub> O, 15% Na <sub>2</sub> O) . . . . .	249 mg.
Poor Thuringian glass (6.6% K <sub>2</sub> O, 16.5% Na <sub>2</sub> O) . . . . .	91.4 “
Glass from Tittel and Co. (7.1% K <sub>2</sub> O, 14.3% Na <sub>2</sub> O) . . . . .	30 4 “
Bottle glass from Schilling (4.2% K <sub>2</sub> O, 11.9% Na <sub>2</sub> O) . . . . .	13 0 “
Bohemian glass from Kavalier (13.3% K <sub>2</sub> O, 11.4% Na <sub>2</sub> O) . . . . .	10 1 “
Rhenish window glass (13.5% Na <sub>2</sub> O) . . . . .	8 4 “
Lead crystal glass from Ehrenfeld (12.1% K <sub>2</sub> O) . . . . .	8.5 “
Green bottle glass (1.3% K <sub>2</sub> O, 9.5% Na <sub>2</sub> O) . . . . .	6.5 “

Solubility of various kinds of glass in  $H_2O$ —  
*Continued.*

Thermometer glass 16III from	
• Jena (14.0% $Na_2O$ , 7% $ZnO$ )	6.4 mg.
Lead glass, No. 483, from Jena	
(47% $PbO$ , 7.3% $K_2O$ )	3.3 "
Lead silicate	0.6 "
(Mylius and Forster, B. 22, 1100)	

By calculation from the electrical conductivity of the solutions formed, various data were obtained by Kohlrausch (B. 24, 3565), which showed that different varieties of glass were attacked in very different degree by cold  $H_2O$ , and, moreover, the amount dissolved was proportionately much greater during the first few minutes of treatment with  $H_2O$  than afterwards, and, furthermore, the rate of decrease was much faster for good glass than poor. Increase of temperature increased the rate of solubility to a very great degree, the increase for  $1^\circ C$  being about 17%. In 7 hours at  $80^\circ$  half as much was dissolved as in 6 months at  $18^\circ$ . Extensive tables are given (Kohlrausch, B. 24, 3651.) See also Kohlrausch (W. Ann. 44, 577).

A very extensive research on the action of  $H_2O$  on glass, with a historical review of the work previously done on the subject, has been published by Mylius and Forster. (Z. anal. 31, 241.) The general results may be summed up as follows:—

1. The solution of glass in  $H_2O$  is caused by a decomposition, by which free alkali is formed.

2. The silicic acid of the glass is brought into solution by a secondary reaction of the free alkali in the solution.

3. The constituents of the solution change according to the conditions of the digestion.

4. The amount of alkali going into solution from a given surface under certain conditions is a measure for the resistance of a glass under those conditions.

5. The rate of attack of glass surfaces by cold  $H_2O$  decreases rapidly with the length of time of digestion, and finally approaches a constant value.

6. The solubility increases very rapidly with increase of temperature.

7. The ratio of the solubility of several kinds of glass is dependent on the temperature.

8. From glasses which show the same ease of attack unequal amounts of substance may be dissolved.

9. The solubility of a glass is influenced by the condition of the surface from "weathering" by prolonged exposure to the  $CO_2$  and  $H_2O$  of the air.

10. The poorer a glass is the less will its solubility decrease by prolonged treatment with  $H_2O$ .

11. A good glass is essentially less easily

attacked after having been previously treated with  $H_2O$ .

12. After treatment with  $H_2O$ , glass surfaces have the property of fixing alkali from the solutions formed, and giving it up again by a subsequent treatment with  $H_2O$ .

13. Potassium glass is much more sol. than sodium glass (contrary to previous researches), but the difference decreases as the glass becomes richer in  $CaO$ .

14. In glass flasks which are to be only slightly attacked by cold or hot  $H_2O$ , the  $CaO$ , alkalis, and  $SiO_2$  must stand in a fixed relation to each other.

15. Of the more common varieties of glass, lead flint glass is least sol. in  $H_2O$ , but its surface is corroded, and it is easily decomposed by acids.

(Mylius and Forster, Z. anal. 31, 241.)

Bottle glass containing much  $Al_2O_3$  is easily attacked by acids.

From powdered flint glass, boiling  $HCl + Aq$  extracts  $K$ , but no  $Pb$  (Griffiths).

Bottles of flint glass with  $(NH_4)_2CO_3 + Aq$  became so fragile that on shaking pieces of glass were detached (Griffiths).

All glass is decomposed by  $HF$ .

Conc.  $H_3PO_4$  also attacks all glass.

Glass containing small amounts of  $SiO_2$  are attacked by  $H_2SO_4$ ; poorer glass by boiling  $HCl$ ,  $HNO_3$ , and aqua regia. (Berzelius.)

Conc.  $HNO_3$  does not act on flint glass at  $145-150^\circ$ . (Sorby, C. R. 50, 990.)

Glass of ordinary chemical apparatus gives up traces of metals to  $HCl$  and  $HNO_3 + Aq$ , but hard Bohemian glass consisting of 75%  $SiO_2$ , 15%  $K_2O$ , 10%  $CaO$ , resists the action of warm conc. acids; also an easily fusible Na-K glass with 77%  $SiO_2$ , 7.7%  $K_2O$ , 5%  $Na_2O$ , 10.3%  $CaO$ , is not easily attacked. (Stas.)

$KOH$ , and  $NaOH + Aq$  dissolve  $SiO_2$  from glass the more easily the hotter and the more conc. the solutions are. (Müller.)  $NH_4OH$ , and  $(NH_4)_2CO_3 + Aq$  attack many kinds of glass, especially flint glass.  $CaO.H_2$  attacks glass appreciably at  $45^\circ$  and lower; still more strongly on boiling. (Lamy, A. ch. 5, 14, 155.)

The action of various solvents on the glass mentioned on page 359 in Emmerling's experiments is as follows.

The action of  $HCl + Aq$  containing 0.2 to 3%  $HCl$  is practically null, but is increased either by dilution or concentration. A very small quantity (0.02%)  $HCl$  added to  $H_2O$  almost wholly prevents its action on glass. With  $HCl + Aq$  (11%  $HCl$ ) a decrease of 4.2 mg. was noticed in the first hour, and only 3-4 mg. afterwards. The same is the case for  $HNO_3 + Aq$  in still greater degree, 0.008%  $HNO_3$  sufficing to nearly counteract the solvent action of  $H_2O$ .

$H_2SO_4 + Aq$  has about double the solvent effect possessed by  $H_2O$ .

Oxalic and acetic acids both diminish the solvent action of  $H_2O$ .

The addition of even traces (0.04%) of

$\text{Na}_2\text{CO}_3$  increases the solvent action, and this is further rapidly increased by an increase in the amount of  $\text{Na}_2\text{CO}_3$ .  $\text{Na}_2\text{CO}_3 + \text{Aq}$  containing 1%  $\text{Na}_2\text{CO}_3$  dissolves about 10 times as much as pure  $\text{H}_2\text{O}$ , i. e. about 35 mg. per hour.

The above is also the case with  $\text{KOH} + \text{Aq}$ , but in even greater degree  $\text{KOH} + \text{Aq}$  containing 0.025%  $\text{KOH}$  dissolved three times as much as pure  $\text{H}_2\text{O}$ .

$(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  has about the same action as  $\text{H}_2\text{O}$ .

With  $\text{NH}_4\text{OH} + \text{Aq}$  (9%  $\text{NH}_3$ ) 7 mg. decrease for the first hour, and 3 mg. afterwards was noticed. The concentration of the  $\text{NH}_4\text{OH} + \text{Aq}$  was apparently without effect.

The addition of  $\text{NH}_4\text{Cl}$  decreases the solvent action of  $\text{H}_2\text{O}$  proportionately to the amount added, but with new flasks large amounts are dissolved.

With  $\text{NH}_4\text{Cl} + \text{Aq}$  (7%  $\text{NH}_4\text{Cl}$ ) 4.2 mg. were dissolved in the first hour, and the amount dissolved gradually decreased to null after 24 hours on account of the liberation of  $\text{HCl}$  by the decomp. of  $\text{NH}_4\text{Cl}$ .

$\text{NaCl}$ ,  $\text{KCl}$ ,  $\text{KNO}_3$ , and  $\text{Na}_2\text{SO}_4$  show a similar behaviour to that of  $\text{NH}_4\text{Cl}$ .

$\text{Na}_2\text{HPO}_4 + \text{Aq}$  containing 0.4%  $\text{Na}_2\text{HPO}_4$

has six times the solvent action of pure  $\text{H}_2\text{O}$ , but the action is not increased by further concentration.

In general, those salts the acids of which form insol. Ca salts, as  $\text{Na}_2\text{CO}_3$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{C}_2\text{O}_4$ , increase the solvent action of  $\text{H}_2\text{O}$ , and this effect is greater the more concentrated the solution.  $\text{KCl}$ ,  $\text{KNO}_3$ ,  $\text{NH}_4\text{Cl}$ , and  $\text{CaCl}_2$  decrease the effect, and the stronger the solution the less is the action.

All Na glass with approximately the above composition has the same power of resistance against  $\text{H}_2\text{O}$ ; Bohemian K glass shows a greater resistance, especially against acids. (Emmerling, A. 160. 257.)

Action of various reagents on hard Bohemian glass. 100 ccm. substance dissolved mg. glass in 6 days at  $100^\circ$ .

$\text{H}_2\text{O}$	10.0
$\text{H}_2\text{S} + \text{Aq}$	8.7
Dil. $(\text{NH}_4)_2\text{S} + \text{Aq}$	52.5
Conc. $(\text{NH}_4)_2\text{S} + \text{Aq}$	47.2
Conc. $\text{NH}_4\text{OH} + \text{Aq}$	42.5
Dil. $\text{NH}_4\text{OH} + \text{Aq}$	7.7
$\text{NH}_4\text{SH} + \text{Aq}$	51.2

(Cowper, Chem. Soc. 41. 254.)

Action of various solutions on glass of different composition. (The figures denote decrease in weight in mg. of a 100 ccm. flask.)

	Time	1	2	3	4	5	6	7	8	9	10

Composition of above varieties of glass.

	1	2	3	4	5	6	7	8	9	10
$\text{SiO}_2$	76.22	74.09	76.39	68.58	74.48	74.69	66.75	74.12	77.07	74.40
$\text{Al}_2\text{O}_3$		0.40	0.50	1.85	0.50	0.45	1.31	0.50	0.30	0.70
$\text{CaO}$	4.27	5.85	5.50	7.60	7.15	7.85	13.37	8.55	8.10	8.85
$\text{K}_2\text{O}$		7.32	4.94	2.24	6.64	8.64	05.50	4.86	3.75	4.40
$\text{Na}_2\text{O}$	19.51	12.34	12.67	19.75	11.23	8.37	3.07	11.97	10.78	11.65

It is seen that glass which resists the attack of  $\text{H}_2\text{O}$  also resists acids and alkalis, and that the relative resistance of all varieties to any of the solutions is the same. Therefore the action of  $\text{H}_2\text{O}$  may be accepted as a criterion for judging of the resistance of a glass to all solvents. Glass No. 10, in which the molecular ratio of  $\text{SiO}_2:\text{CaO}:\text{K}_2\text{O}(\text{Na}_2\text{O})$  is 8:1:1.5, is recommended as best suited for chemical uses. (Weber and Sauer, B. 26. 70.)

Mylius and Förster (B. 25. 97) recommend a glass in which the molecular ratio of  $\text{SiO}_2:\text{CaO}:\text{K}_2\text{O}(\text{Na}_2\text{O})$  is 7.2:1:1.1 as the best suited for chemical apparatus.

In an exhaustive research on the action of aqueous solutions on glass, which cannot be given in full on account of its great length, the following conclusions are reached:—

1. Solutions of caustic alkalis act on glass much more strongly than  $\text{H}_2\text{O}$ , dissolving all the constituents of the glass—that is, the glass as such. Very dilute solutions form an exception.

2. Of the caustic alkalis,  $\text{NaOH} + \text{Aq}$  has the strongest action, then come  $\text{KOH}$ ,  $\text{NH}_4\text{OH}$ , and  $\text{BaO}_2\text{H}_2 + \text{Aq}$  in the order named.

3. Increase in temperature increases the

strength of the attack of alkalis very considerably.

4. At high temperatures, the ease with which glass is attacked increases at first rapidly with the concentration of the alkali, but afterwards more slowly.

5. At ordinary temperatures very concentrated alkali solutions have less action on glass than dil. solutions.

6. Solutions of pure alkalis, if not too conc., act less on glass than when contaminated with small amounts of  $\text{SiO}_2$ .

7. Alkali carbonates + Aq. attack glass much more than  $\text{H}_2\text{O}$ , even when they are very dilute. The action corresponds less to that of the caustic alkalis than to that of other salts. With equivalent concentration,  $\text{Na}_2\text{CO}_3$  + Aq. has a stronger action than  $\text{K}_2\text{CO}_3$  + Aq.

8. The action of salt solutions on glass is a compound one, depending both on the concentration and the kind of salt dissolved, and is made up of the action of the  $\text{H}_2\text{O}$  and the salt in solution.

9. Each kind of attack is differently influenced by the composition of the glass.

10. Solutions of those salts, the acids of which form insol. Ca salts, have a stronger action than  $\text{H}_2\text{O}$ , and the action increases with the concentration.

11. Solutions of those salts, the acids of which form sol. Ca salts, have less action than  $\text{H}_2\text{O}$ , and the action decreases with the concentration. (Förster, B. 25, 2494.)

Data on this subject published since the first edition of this work have not been considered.

### Glucinic acid.

#### Potassium glucinate, $\text{K}_2\text{GIO}_2$ .

Very deliquescent. Sol. in  $\text{H}_2\text{O}$  and acids. (Krüss and Morasht, B. 23, 733.)

#### Glucinum (Beryllium), Gl.

Not attacked by hot or cold  $\text{H}_2\text{O}$ . Sol. in cold dil.  $\text{HNO}_3$  + Aq. (Wöhler, Pogg. 13, 577.)

Sol. only in boiling conc.  $\text{HNO}_3$  + Aq. (Debray, A. ch. (3) 44, 5.)

Sol. in dil.  $\text{HCl}$  + Aq. dil. and conc.  $\text{H}_2\text{SO}_4$  + Aq. and  $\text{KOH}$  + Aq., but insol in  $\text{NH}_4\text{OH}$  + Aq. (Wöhler, Debray.)

Sol. in hot  $\text{HCl}$ , hot conc.  $\text{HNO}_3$ , and hot conc.  $\text{H}_2\text{SO}_4$ . (Lebeau, A. ch. 1899, (7), 16, 474.)

#### Glucinum azoimide, $\text{GIN}_2$ .

Decomp. by hot  $\text{H}_2\text{O}$ . (Curtius, J. pr. 1898, (2), 58, 292.)

#### Glucinum borocarbide, $3\text{Gl}_2\text{C}$ , $\text{B}_3\text{C}$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in mineral acids especially  $\text{HNO}_3$ . (Lebeau, A. ch. 1899, (7) 16, 481.)

#### $\text{C}_4\text{B}_3\text{Gl}_6$ . Stable in air.

Easily sol. in mineral acids, conc. and dil. (Lebeau, C. R. 1898, 126, 1349.)

#### Glucinum bromide, $\text{GlBr}_2$ .

Sol. in  $\text{H}_2\text{O}$  with evolution of much heat. (Wöhler.)

Sol. in abs. alcohol. (Lebeau, A. ch. 1899, (7) 16, 484.)

#### Glucinum carbide, $\text{Gl}_2\text{C}$ .

Decomp. by  $\text{H}_2\text{O}$ . Slowly attacked by cold or hot conc.  $\text{HCl}$  and  $\text{HNO}_3$ . Gradually but completely sol. in dil. acids. (Lebeau, A. ch. 1899, (7), 16, 476.)

$\text{GlC}_2$ . Not easily decomp. by strong acids. Easily sol. with decomp. in dil. acids. (Lebeau, C. R. 1895, 121, 497.)

#### Glucinum chloride, $\text{GlCl}_2$ .

Anhydrous. Fumes and deliquesces in air. Sol. in  $\text{H}_2\text{O}$  with hissing and evolution of much heat. Easily sol. in alcohol.

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 828.)

Sol. in alcohol and ether. Sl. sol. in  $\text{C}_2\text{H}_5$ ,  $\text{CHCl}_3$ ,  $\text{Cl}_4$  and  $\text{CS}_2$ . (Lebeau, A. ch. 1899, (7) 16, 493.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329.)

+  $4\text{H}_2\text{O}$ . Very hygroscopic.

Easily sol. in  $\text{H}_2\text{O}$  and in alcohol. (Mielitner, Z. anorg. 1913, 80, 73.)

#### Glucinum chloride ammonia, $\text{GlCl}_2 \cdot 4\text{NH}_3$ .

(Mielitner, Z. anorg. 1913, 80, 73.)

#### Glucinum chloride iodine trichloride, $2\text{GlCl}_2 \cdot \text{GlCl}_3 + 8\text{H}_2\text{O}$ .

Hygroscopic (Weinland, Z. anorg. 1902, 30, 140.)

#### Glucinum ferric chloride, $\text{GlCl}_2 \cdot \text{FeCl}_3 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Neumann, A. 244, 329.)

#### Glucinum mercuric chloride, $\text{GlCl}_2 \cdot 3\text{HgCl}_2 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Atterberg, B. 6, 1288.)

#### Glucinum thallic chloride, $3\text{GlCl}_2 \cdot 2\text{TlCl}_3$ .

Cryst. from  $\text{HCl}$  solution. (Neumann, A. 244, 348.)

#### Glucinum stannic chloride.

See Chlorostannate, glucinum.

**Glucinum fluoride, basic,  $2\text{GIO}$ ,  $5\text{GIOF}_2$** 

Sol. in  $\text{H}_2\text{O}$ . (Lebeau, A. ch. 1899, (7) 16. 484.)

**Glucinum fluoride,  $\text{GIOF}_2$** 

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . Insol. in anhydrous HF. Sol. in alcohol. (Lebeau, C. R. 1898, 126. 1421.)

Sol. in  $\text{H}_2\text{O}$  in all proportions. Somewhat sol. in abs. alcohol. Easily sol. in 90% alcohol, also in a mixture of alcohol and ether. Insol. in anhydrous HF. (Lebeau, A. ch. 1899, (7) 16. 484.)

**Glucinum potassium fluoride,  $\text{GIOF}_2$ , KF**

Sl. sol. in  $\text{H}_2\text{O}$ . (Awdejew.) Much more sol. in hot than cold  $\text{H}_2\text{O}$ . (Berzelius.)

$\text{GIOF}_2$ , 2KF. Sol. in about 50 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ , and 19 pts. boiling  $\text{H}_2\text{O}$ . (Maignac.)

**Glucinum sodium fluoride,  $\text{GIOF}_2$ ,  $2\text{NaF}$** 

Sol. in  $3\frac{1}{2}$  pts.  $\text{H}_2\text{O}$  at  $100^\circ$ , and 68 pts. at  $18^\circ$ . (Maignac.)

**Glucinum hydroxide,  $\text{GIO}_2\text{H}_2$** 

Easily sol. in acids. Sol. in  $\text{H}_2\text{SO}_4$ +Aq. Sol. in  $\text{CO}_2$ +Aq; 100 cem. sat.  $\text{CO}_2$ +Aq dissolve 0.0185 g. GIO. (Sestini, Gazz. ch. it. 20. 313.)

Also sol. in KOH, NaOH,  $\text{NH}_4\text{OH}$ , or  $(\text{NH}_4)_2\text{CO}_3$ +Aq, especially when freshly precipitated; also in  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3$ +Aq. (Debray.)

Insol. in  $\text{NH}_4\text{OH}$ +Aq containing  $\text{NH}_4\text{Cl}$ +Aq.

Very al. sol. in  $\text{Li}_2\text{CO}_3$ +Aq. (Gmelin.)

Sol. in  $\text{H}_2\text{SO}_4$ +Aq. (Berthier.)

Sol. in  $\text{BaO}_2\text{H}_2$ +Aq, from which it is pptd. by  $\text{NH}_4$  salts, but not by boiling. Sol. in boiling  $\text{NH}_4\text{Cl}$ +Aq when freshly pptd.

Sol. in  $\text{NH}_4\text{F}$ +Aq. (Helmholtz, Z. anorg. 8. 130.)

**Solubility of  $\text{GIO}_2\text{H}_2$  in NaOH+Aq.**

G Na in 20 cem.	G GI in 20 cem.
0.3358	0.0358
0.6717	0.0882
0.8725	0.1175
1.7346	0.2847

(Rubenbauer, Z. anorg. 1902, 30. 334.)

When glucinum hydroxide is treated with alkali, more dissolves at first than corresponds with the true equilibrium under the prevailing conditions, for such solutions spontaneously deposit more or less glucinum hydroxide according to the concentration. (Rubenbauer.)

**Solubility of freshly pptd.  $\text{GIO}_2\text{H}_2$  in NaOH+Aq at room temperature.**

millimols Na per l	G GIO dissolved in 1 l
649	3.6
540	2.92
540	2.53
483	1.69
383	1.61
388	1.53
386	1.45
390	1.24

In the first two cases the values were obtained by adding to  $\text{GIOCl}_2$ +Aq at  $0^\circ$ , ice cold  $\text{NH}_4\text{OH}$  and treating the ppt with NaOH+Aq. In the remaining cases by dissolving basic  $\text{GIOCO}_2$  in HCl and pouring into NaOH+Aq. (Haber, Z. anorg. 1904, 38. 386.)

**Solubility of  $\text{GIO}_2\text{H}_2$ , which is one week old, in NaOH+Aq at  $t^\circ$ .**

NaOH	$t^\circ$	G GIO in 1 l
$\frac{1}{2}$ -N	$20-23^\circ$	0.060

(Wood, Chem. Soc. 1910, 97. 884.)

Insol. in  $\text{NH}_4\text{OH}$ +Aq and in alkyl amines. (Renz, B. 1903, 36. 2753.)

Sol. in  $\text{GISO}_4$ +Aq. (Parsons, J. phys. Chem. 1907, 11. 658.)

A form insol. in acids and alkalis can be obtained by sufficiently long heating in boiling  $\text{H}_2\text{O}$ ,  $\text{Na}_2\text{CO}_3$ +Aq,  $\text{NH}_4\text{OH}$ +Aq, or solutions of NaOH or KOH so dil that the  $\text{GIO}_2\text{H}_2$  is either insol or very al. sol. therein. (van Oordt, C. C. 1906, I. 108.)

100 cem. of glycerine+Aq containing about 60% by vol. of glycerine dissolve 0.1 g. GIO. (Müller, Z. anorg. 1905, 43. 322.)

Contains  $\frac{1}{2}\text{H}_2\text{O}$  (Schaffgotsch);  $\frac{4}{3}\text{H}_2\text{O}$  (Atterberg).

Solubility of  $\text{GlO}_2\text{H}_2$ , which has been boiled with alkali, in various solvents.

Alkali used	Time	Solvent	Solubility

$\text{NH}_4\text{OH}$	5 hrs.	½-N NaOH	Very sl. sol.

(Haber.)

**Glucinum iodide,  $\text{GlI}_2$ .**Sol. in  $\text{H}_2\text{O}$  with evolution of much heat. (Wöhler.)Decomp. in moist air and by  $\text{H}_2\text{O}$ 

Sol. in abs. alcohol. Insol. in most neutral organic solvents, as benzene, toluene, etc. (Lebeau, C. R. 1898, 126, 1273.)

Insol. in  $\text{C}_2\text{H}_5$ ,  $\text{C}_2\text{H}_6$  and oil of turpentine. Easily sol. in  $\text{CS}_2$ . Sol. in anhydrous alcohols without evolution of heat. (Lebeau, A. ch. 1899, (7) 16, 490.)**Glucinum iodide ammonia,  $2\text{GlI}_2 \cdot 3\text{NH}_3$ .**

Ppt (Lebeau, A. ch. 1899, (7) 16, 492.)

**Glucinum oxide,  $\text{GlO}$ .***Crystalline.* Insol. in acids except conc.  $\text{H}_2\text{SO}_4$ . (Ebelmen, C. R. 32, 710.)*Amorphous.* Absolutely insol. in  $\text{H}_2\text{O}$ . The higher the temp. to which the substance has been heated the more insol. is it in acids. Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Insol. in conc.  $\text{NH}_4\text{Cl} + \text{Aq}$ , or  $\text{KOH}$ , and  $\text{NaOH} + \text{Aq}$ . (Rose.)When obtained by ignition of  $\text{GlSO}_4$ , it is very slowly but completely sol. in  $\text{HCl}$ , and  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Rose.)Insol. in hydrazids. Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Lebeau, C. R. 1896, 123, 819.)Insol. in liquid  $\text{NH}_3$ . (Gore, Am. ch. J. 1898, 20, 828.)**Glucinum peroxide basic,  $2\text{GlO}_2 \cdot 3\text{GlO}$ .** $+ 8\frac{1}{2}\text{H}_2\text{O}$ . (Komarovski, Chem. Soc. 1913, 104 (2) 707.)**Glucinum oxybromides.**Sol. in  $\text{H}_2\text{O}$  if three or less equivalents of base are present to one of acid; insol. if more of the base is present. (Ordway, Am. J. Sci. (2) 26, 207.)**Glucinum oxychloride,  $\text{Gl}_2\text{OCl}_2 = \text{GlO} \cdot \text{GlCl}_2$ .**Insol. in  $\text{H}_2\text{O}$ . $3\text{GlCl}_2 \cdot 2\text{GlO} + 2\text{H}_2\text{O}$  (?). Sol. in  $\text{H}_2\text{O}$ . (Atterberg.) $\text{GlCl}_2 \cdot 3\text{GlO} + 3\text{H}_2\text{O}$  (?). Sol. in  $\text{H}_2\text{O}$ , but solution soon becomes cloudy and deposits a fine ppt. By boiling the solution it is decomp. into above salt, and  $\text{GlCl}_2$ ,  $12\text{GlO}_2\text{H}_2 + 10\text{H}_2\text{O}$ , which is insol. in  $\text{H}_2\text{O}$ ; decomp. into  $\text{GlO}_2\text{H}_2$  by washing. Sol. in acids. (Atterberg.)**Glucinum oxyfluoride,  $5\text{GlF}_2 \cdot 2\text{GlO}$ .**Readily sol. in  $\text{H}_2\text{O}$ . (Lebeau, C. R. 1898, 126, 1419.)**Glucinum phosphide.**Decomp. by  $\text{H}_2\text{O}$ . (Wöhler.)**Glucinum selenide.**Sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Glucinum sulphide.**

Slowly sol without decomp. in  $H_2O$ , but easily decomp. by acids. (Wöhler.)

**Gold, Au.**

Gold which has been pptd. from  $AuCl_3 + Aq$  by  $FeSO_4$  is sl. sol. in  $HCl$ . (Awerkiow, Z. anorg. 1909, 61, 10.)

Not attacked by  $H_2O$ . Insol in  $HNO_3$  or  $HCl + Aq$ . Easily sol. in aqua regia or any mixture evolving  $Cl$  or  $Br$ . Sol. in selenic acid, or antimoniac acid +  $Aq$ ; less easily in arsenic acid +  $Aq$ . Sol. in mixtures of  $HCl$  and nitrates, or  $HNO_3$  and chlorides; also in  $(NaCl + KNO_3 + K_2Al_2(SO_4)_4 + Aq)$  (?). Insol in  $H_2SO_4$ , except in presence of  $KMnO_4$ ,  $HNO_3$ , or  $HIO_3$ . Sol. in a solution of  $I$  in ether in direct sunlight.

Sol. in solutions of ferric, and cupric salts.

Sol. in  $HCl + Aq$  containing  $H_2CrO_4$ ,  $H_2MnO_4$ ,  $H_2SeO_4$ ,  $H_2AsO_4$ , or  $FeCl_3$  (Wurtz).

Attacked by fuming  $HCl$  (sp. gr. 1.178) at ord. temp. in direct light, especially in the presence of a trace of  $MnCl_2$ , but not attacked in the dark even in the presence of this salt. (Berthelot, C. R. 1904, 138, 1298.)

100 cem. hot conc.  $HCl$  dissolve 0.008 g yellow Au powder in 4 hours. (Hanriot and Raoult, C. R. 1912, 155, 1086.)

Upon boiling 25 and 50 cc.  $HCl + Aq$  (sp. gr. 1.178), dil. to 125 cc. with 250 mg. sheet Au  $\frac{1}{2}$  in. square, 0.009 in. thick, weighing 250 mg. for several hours, there was no loss of weight of Au. (McCaughy, J. Am. Chem. Soc. 1900, 21, 1263.)

From 5 g. finely divided ordinary yellow gold; 100 cc.  $HNO_3$  of 22° B. dissolve 0.002 g. in 2 hrs.

100 cc.  $HNO_3$  of 32° B. dissolve 0.0119 g. in 2 hrs.

100 cc.  $HNO_3$  of 36° B. dissolve 0.028 g. in 2 hrs.

100 cc.  $HNO_3$  monohydrate dissolve 0.076 g. in 2 hrs. (Hanriot and Raoult, C. R. 1912, 155, 1085.)

From 5 g. brown gold:

100 cem.  $HNO_3$  of 22° Baume dissolve 0.006 g. in 2 hrs.

100 cem.  $HNO_3$  of 32° Baume dissolve 0.039 g. in 2 hrs.

100 cem.  $HNO_3$  of 36° Baume dissolve 0.078 g. in 2 hrs.

100 cem.  $HNO_3$  monohydrate dissolve 1.540 g. in 2 hrs. (Hanriot and Raoult.)

Sl. sol. in boiling  $HNO_3$  (sp. gr. = 1.42). The solution deposits Au by standing several days. (Dewey, J. Am. Chem. Soc. 1910, 32, 320.)

Best composition of aqua regia for dissolving Au is 200 cc.  $HCl$  (sp. gr. 1.1946) 45 cc.  $HNO_3$  (sp. gr. 1.4) and 245 cc.  $H_2O$ . 1 pt. Au is sol. in 4.3 pts. of such a mixture. (Przewoznik, C. C. 1910, II, 1743.)

Sol. in 1 pt.  $HNO_3 + 4$  pts.  $HCl$  as representing the most economical mixture. (Przewoznik, Chem. Soc. 1911, 100, (2), 484.)

Easily sol. in nitrosulphonic acid from sulphuric acid manufacture, when mixed with equal parts conc.  $HCl + Aq$  (Bornträger, Rep. anal. Ch. 1887, 741.)

Sol. in hot conc.  $H_2SO_4$  in the presence of  $MnO_2$ ,  $Mn_2O_3$ ,  $Mn_2O_4$ ,  $PbO_2$ ,  $Pb_2O_3$ ,  $Pb_3O_4$ ,  $CrO_3$ ,  $CrO_2$ , and  $Ni_2O_3$ . Solution also takes place slowly in the cold. Sol. in hot  $H_2SO_4 + KMnO_4$ . Slowly sol. in cold, more rapidly in hot  $H_2SO_4 + HNO_3$ . (Lenher, J. Am. Chem. Soc. 1904, 26, 550.)

Sol. in a hot solution of crystalline telluric acid in  $H_2SO_4$  or  $H_3PO_4$ .

Sol. in hot  $H_2PO_4$  in the presence of  $MnO_2$ ,  $Mn_2O_3$ ,  $Mn_2O_4$ , the higher oxides of lead,  $CrO_3$ , chromium tetroxide and nickel oxide. Solution takes place more slowly in the cold. Sol. in hot  $H_2PO_4$  in the presence of  $KMnO_4$ . Slowly sol. in a cold, more rapidly sol. in a hot mixture of  $H_2PO_4$  and  $HNO_3$ .

Sol. in hot arsenic acid in the presence of  $MnO_2$ ,  $Mn_2O_3$ , and  $Mn_2O_4$ . (Lenher, J. Am. Chem. Soc. 1904, 26, 550.)

Gold leaf is not attacked by cold conc.  $H_2SeO_4$ , when completely free from halogens, but is dissolved by conc.  $H_2SeO_4$  at 300°. (Lenher, J. Am. Chem. Soc. 1902, 24, 354.)

### Solubility of thin sheet Au in $HCl$ solution of non alum

Time, hours	Mg Au dissolved			
	1 g Fe 25 cc HCl	1 g Fe 50 cc HCl	2 g Fe 25 cc HCl	2 g Fe 50 cc HCl

Temp. 38–43°.

16	1.00	1.30	1.08	1.47

(Awerkw.)

Colloidal gold is sol. in dil. alkalis. (Paal, B 1902, 35. 2236.)

Rather quickly sol. in 10-15% solution I in KI+Aq.

Very slowly sol. in 5% solution of I in KI+Aq.

Scarcely sol. in more dil. solution of I in KI+Aq.

Easily sol. in 10% NH<sub>4</sub>I+I Less easily sol. in 5% NH<sub>4</sub>I+I (Döring.)Sol. in cold Na<sub>2</sub>S+Aq when Na<sub>2</sub>S is present in proportion of 843 pts. Na<sub>2</sub>S to 1 pt Au. (Becker, Silb. Am. J. (3) 33. 199.)In finely divided state Au is sol in boiling KCN+Aq. Not attacked by boiling HgCl<sub>2</sub>+Aq. (Vogel, J. pr. 20. 366.)

Solubility of Au (disks) in KCN+Aq with (A) oxygen passed through solution, and (B) agitated with oxygen.

% KCN	g Au dissolved in 24 hours	
	A	B
1	0.00845	0.0187
5	0.01355	0.0472
20	0.0115	0.0314
50	0.00505	0.108

(MacLaurin, Chem. Soc. 1893, 63. 729.)

The solution of Au in KCN+Aq is essentially hastened by sunlight. (Caldecott, Proc. Chem. Soc. 1904, 20. 199.)

The presence of oxygen is necessary for the solution of Au in KCN+Aq. The rate of solution of Au in KCN+Aq varies with the strength of the solution, being small for conc. solutions, increasing as the solution becomes more dilute, reaching a maximum at 0.25% KCN, and then again diminishing. (MacLaurin, Chem. Soc. 1885, 67. 211.)

Solubility of Au (strips) in dil. KCN + Aq

% KCN	Mg Au dissolved in 24 hours
0	0.010
0 0005	0 043-0 07
0 001	0 10-0.23
0 0016	0 16
0 002	0.44
0 00325	1 77
0 004	4 29
0 008	48 43
0 016	74 96
0 0325	150 54
0 065	168 12

(Christy, Elektrochem Z 1901, 7. 205.)

Finely divided metallic gold is completely sol. at the ord. temp. in solutions of potassium ferrocyanide. Solution takes place very slowly even when the potassium ferrocyanide solution is boiling. (Beutel, Z anorg 1912, 78. 158.)

Sol. in  $\text{RbCl}_4$ +Aq. (Erdmann, Arch. Pharm. 1894, 232. 30.)

Not attacked by  $\text{FeCl}_3$ +Aq when air is excluded but very energetically attacked in presence of HCl and oxygen. (McIlhenny, Am. J. Sci., 1896, (4), 2. 293.)

Not attacked by several days heating with  $\text{SOCl}_2$  at  $150^\circ$ . At  $200^\circ$  there is sl. action in 10 days. (North, J. Am. Chem. Soc 1912, 34. 892.)

$\text{SO}_2\text{Cl}_2$  in excess dissolves pulverulent Au by several hours heating at  $180^\circ$ . (North, Bull. Soc. (4), 9. 647.)

Sol. in  $\text{PCl}_5$ . (Baudrimont, A. ch. (4) 2. 418.)

Easily sol. in acid solutions of thiocarbamide especially in presence of suitable oxidizing compounds. (Moir, Chem. Soc 1906, 89. 1345.)

#### Gold arsenide, $\text{AuAs}$ .

$\text{H}_2\text{O}$  or alcohol slowly extracts As;  $\text{HNO}_3$ +Aq converts into Au and  $\text{H}_3\text{AsO}_4$ . Sol. in aqua regia. Not attacked by cold, decomp. by hot conc.  $\text{H}_2\text{SO}_4$ . (Tivoli, C. C. 1887. 778; J. B. 1887. 610.)

#### Gold bismuthide, $\text{Au}_2\text{Bi}$ .

Min. *Maldonite*. Sol. in aqua regia.

#### Aurous bromide, $\text{AuBr}$ .

Insol. in  $\text{H}_2\text{O}$ . (Thomsen, C. C. 1860. 606.)

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ .  
Sol. in  $\text{NH}_4\text{OH}$ +Aq. with decomp.  
Decomp. by HBr and  $\text{KBr}$ +Aq. Sol. in KCN+Aq without decomp. Slowly decomp. by alcohol, ether, acetone and moist  $\text{CHCl}_3$ . (Lengfeld, Am. Ch. J. 1901, 26. 325.)

#### Gold (auroauric) bromide, $\text{Au}_2\text{Br}_4$ .

Not deliquescent.  $\text{H}_2\text{O}$  or ether dissolves out  $\text{AuBr}_3$ . (Thomsen, C. C. 1860. 606.)

Does not exist. (Kruss, B. 20. 640.)  
Existence is maintained by Petersen. (J. pr. (2) 46. 334.)

#### Auric bromide, $\text{AuBr}_3$ .

Not deliquescent. Slowly sol. in  $\text{H}_2\text{O}$ , more readily in ether.

Can be recryst. from  $\text{AsBr}_3$ ,  $\text{SbBr}_3$ ,  $\text{TiBr}_3$  or  $\text{SnBr}_3$ . (Lindet, Bull. Soc. 1886, (2) 45. 149.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

#### Aurous phosphorus tribromide, $\text{AuBr}_2\text{PBr}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Lindet, J. pr. (2) 32. 494.)

#### Auric phosphorus pentabromide, $\text{AuBr}_3\text{PBr}_5$ .

Decomp. by  $\text{H}_2\text{O}$ . (Lindet.)

#### Aurous bromide phosphorus trichloride, $\text{AuBr}_2\text{PCl}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Lindet.)

#### Auric praseodymium bromide, $\text{PrBr}_3\text{AuBr}_3\cdot 10\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ ; sol. in conc HBr. (Von Schule, Z. anorg. 1898, 18. 355.)

#### Aurous bromide ammonia, $\text{AuBr}_2\cdot 2\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$  and dil. HCl.  
Sol. in aqua regia. (Meyer, C. R. 1906, 143. 281.)

#### Gold carbide, $\text{Au}_2\text{C}_2$ .

Ppt. Decomp. by boiling  $\text{H}_2\text{O}$  without evolution of  $\text{C}_2\text{H}_2$ . Decomp. by HCl with evolution of  $\text{C}_2\text{H}_2$ . (Mathews, J. Am. Chem. Soc. 1900, 22. 110.)

#### Aurous chloride, $\text{AuCl}$ .

Insol. in  $\text{H}_2\text{O}$ , but gradually decomp. thereby into Au and  $\text{AuCl}_3$ . (Thomsen, J. pr. (2) 13. 341.)

Insol. in  $\text{H}_2\text{O}$  and dil.  $\text{HNO}_3$ .  
Decomp. by conc.  $\text{HNO}_3$  to Au and  $\text{AuCl}_3$ .  
Sol. in HCl, HBr and in sol. of alkali chloride and bromides, with decomp.

Decomp. by alcohol, ether and acetone. (Lengfeld, Am. Ch. J. 1901, 26. 324.)

**Gold (auric) chloride,  $\text{AuCl}_3$ .**

Deliquescent. Very sol in  $\text{H}_2\text{O}$ . Sol. in 1.47 pts.  $\text{H}_2\text{O}$ . (Abl.) Sol. in conc.  $\text{HCl}$ , or  $\text{HNO}_3$  + Aq without decomp.

$\text{AsCl}_3$  dissolves about 22% at  $100^\circ$  and 2.5% at  $15^\circ$ . Solubility in  $\text{SnCl}_2$  is about the same. Much less sol. in  $\text{SnCl}_4$  or  $\text{TiCl}_4$ ,  $\text{SnCl}_4$  dissolving 4% at  $160^\circ$  and hardly a trace at  $0^\circ$ . Very sl. sol. in hot or cold  $\text{SiCl}_4$ . (Lindet, Bull. Soc. (2) 45. 149.)

Sl. sol. in liquid  $\text{NH}_3$ . (Franklin and Kraus, Am. Ch. J. 1893, 20. 829.)

Sol. in alcohol with gradual decomp. (Gmelin.) Sol. in ether with decomp. in light or on long standing. Ether extracts  $\text{AuCl}_3$  from  $\text{AuCl}_3$  + Aq (Proust) Sol in volatile oils with gradual decomp.

Sol. in ether. (Mylius, Z. anorg. 1911, 70. 207.)

Very sol. in ether. (Willstätter, B. 1903, 38. 1830.)

Completely sol. in ether. (Frank, C. C. 1913, II. 541.)

Insol. in or decomp. by alcohol, ether,  $\text{CS}_2$ ,  $\text{C}_6\text{H}_6$ , oil of turpentine, pentane, hexane,  $\text{CHCl}_3$ ,  $\text{CCl}_4$ , ethyl nitrate, nitrobenzol, ethyl acetate, ethyl propionate and pyridine. (Leuher, J. Am. Chem. Soc. 1903, 25. 1138.)

+  $2\text{H}_2\text{O}$ . (Thomsen.)

**Auroauric chloride,  $\text{Au}_2\text{Cl}_4$ .**

Decomp. by  $\text{H}_2\text{O}$  into  $\text{AuCl}_3$  and  $\text{AuCl}$  (Thomsen, J. pr. (2) 13. 357.)

Does not exist. (Krüss and Schmidt, J. pr. (2) 38. 77.)

Existence is maintained by Christensen (J. pr. (2) 46. 328.)

**Auric chloride with  $\text{MCl}$ .**

See Chloraurate, M.

**Auric nitrosyl chloride,  $\text{AuCl}_2\text{NOCl}$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp. (Sudborough, Chem. Soc. 59. 662.)

**Aurous phosphorus trichloride,  $\text{AuCl}_2\text{PCl}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in about 100 pts.  $\text{PCl}_3$  at  $15^\circ$ , and about 8 pts. at  $120^\circ$ . Sol. in  $\text{AsCl}_3$ . (Lindet, C. R. 101. 1492.)

**Auric phosphorus pentachloride,  $\text{AuCl}_3\text{PCl}_5$ .**

Decomp. by  $\text{H}_2\text{O}$ . Nearly insol. in  $\text{PCl}_3$ . Sol. in  $\text{AsCl}_3$ . (Lindet.)

**Aurous potassium chloride,  $\text{AuCl}_2\text{KCl}$ .**

Decomp. by  $\text{H}_2\text{O}$  or  $\text{HCl}$  + Aq into  $\text{KCl}$ ,  $\text{KAuCl}_4$ , and  $\text{Au}$ . (Berzelius.)

**Auric potassium chloride.**

See Chloraurate, potassium.

**Auric selenium chloride,  $\text{AuCl}_3\text{SeCl}_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{AsCl}_3$ . (Lindet, C. R. 101. 1492.)

**Gold (aurous) sodium chloride,  $\text{AuCl}$ ,  $\text{NaCl}$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in alcohol. (Meillet, J. Pharm. 3. 417.)

Formula is  $4\text{NaCl}$ ,  $\text{AuCl}$ ,  $\text{AuCl}_2$  (Jorgensen.)

**Auric sodium chloride.**

See Chloraurate, sodium.

**Auric sulphur chloride,  $\text{AuCl}_3\text{SCl}_4$ .**

Easily decomp. by  $\text{H}_2\text{O}$ . (Lindet, C. R. 101. 1492.)

**Aurous chloride ammonia,  $\text{AuCl}$ ,  $\text{NH}_3$ .**

Ppt. Unstable (Diemer, J. Am. Chem. Soc. 1913, 35. 554.)

$\text{AuCl}$ ,  $3\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$  and dil. acids.

Sol. in aqua regia. Sol. in conc.  $\text{H}_2\text{SO}_4$  with decomp. (Meyer, C. R. 1906, 143. 282.)

$\text{AuCl}$ ,  $12\text{NH}_3$ . (Meyer.)

**Auric fluoride,  $\text{AuF}_3$ .**

Very unstable

Is incapable of existence not only in presence of  $\text{H}_2\text{O}$  but under the ordinary conditions met with in the laboratory and in nature. (Lenher, J. Am. Chem. Soc. 1903, 25. 1138.)

**Auric hydroxide,  $\text{Au}_2\text{O}_3\text{H}_2$ .**

Nearly insol. in most acids. Easily sol. in very conc.  $\text{HNO}_3$  + Aq (Proust), from which all  $\text{Au}_2\text{O}_3\text{H}_2$  is separated by dilution (Fremy). Extremely sl. sol. in fuming  $\text{HNO}_3$ . Sol. in dil.  $\text{HNO}_3$  + Aq when pure (Krüss, A. 237. 281). Not attacked by  $\text{H}_3\text{PO}_4$ . Insol. in  $\text{HF}$ . Sol. in  $\text{HCl}$ , or  $\text{HBr}$  + Aq (Fremy).

Sol. in  $\text{H}_2\text{SeO}_4$  + Aq. (Mitscherlich.)

Sl. sol. in conc.  $\text{H}_2\text{SO}_4$ , somewhat sol. in  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$  + Aq. (Rose.)

Nearly insol. in cold  $\text{KOH}$  + Aq, but dissolved on boiling. Insol. in  $\text{NH}_4\text{OH}$  + Aq or alkali carbonates + Aq (Rose). Sl. sol. in boiling  $\text{CaCl}_2$  + Aq,  $\text{NaCl}$  + Aq,  $\text{BaCl}_2$  + Aq (Pelletier). Sol. in  $\text{NH}_4\text{CN}$ , and  $\text{KCN}$  + Aq (Himly).

Sl. sol. in  $\text{KCl}$ , or  $\text{NaCl}$  + Aq. (Pelletier.)

Sol. in  $\text{K}_4\text{Fe}(\text{CN})_6$  + Aq at ord. temp. rapidly on boiling. (Beutel, Z. anorg. 1912, 78. 154.)

$\text{AuO}$ ,  $\text{OH} = \text{Au}_2\text{O}_3$ ,  $\text{H}_2\text{O}$ . (Krüss.)

**Auroauric hydroxide,  $\text{Au}_2\text{O}_3(\text{OH})_2 = 3\text{Au}_2\text{O}_3 + 2\text{H}_2\text{O}$ .**

Insol. in boiling conc.  $\text{KOH}$  + Aq. Decomp. by conc.  $\text{HCl}$  or  $\text{HNO}_3$  + Aq into  $\text{Au}$  and  $\text{Au}_2\text{O}_3$ , which dissolves (Schüttlander, A. 217. 336.)

**Aurous iodide,  $\text{AuI}$ .**

Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ , or  $\text{HNO}_3$  + Aq, with separation of  $\text{Au}$ . Decomp. immediately by ether, more slowly by alcohol.

Partially sol. in KI,  $\text{FeI}_3$ , or  $\text{HI} + \text{Aq}$  (Pelletier). Sl. attacked by  $\text{NH}_4\text{OH}$ , or  $\text{NaCl} + \text{Aq}$  at  $35^\circ$  (Fordos). Instantly decomposed by  $\text{KOH} + \text{Aq}$ .

Gold (auric) iodide,  $\text{AuI}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in alkali iodides, and  $\text{HI} + \text{Aq}$ . Decomposed on air or by alkalis. (Johnston, Phil. Mag. J. 9, 266.)

Aurous iodide ammonia,  $\text{AuI}, \text{NH}_3$ .

Decomposed by  $\text{H}_2\text{O}$  or dil. acids. (Meyer, C. R. 1906, 143, 281.)

Sol. in aqua regia.  
 $\text{AuI}, 6\text{NH}_3$ . (Meyer.)

Aurous oxide,  $\text{Au}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or alcohol. Decomposed by boiling with  $\text{HCl} + \text{Aq}$  into Au and  $\text{AuCl}_3$ .  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  do not attack. Sol. in cold aqua regia. Sol. in  $\text{HI} + \text{Aq}$ . Sol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  when freshly precipitated (Berzelius.)

According to Krüss (A. 237, 281) all hitherto prepared  $\text{Au}_2\text{O}$  is impure. Pure  $\text{Au}_2\text{O}$  is sol. in cold  $\text{H}_2\text{O}$  when freshly precipitated, from which hydroxide is precipitated by boiling. Partly sol. in  $\text{HCl}$ , or  $\text{HBr} + \text{Aq}$ . Sol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  when freshly precipitated. Not affected by any other acid or solvent. (Krüss.)

The so-called solution of  $\text{Au}_2\text{O}$  in  $\text{H}_2\text{O}$  is in reality a colloidal suspension. (Vaino, B. 1905, 38, 462.)

Auric oxide,  $\text{Au}_2\text{O}_3$ .

See Auric hydroxide.

Auroauric oxide,  $\text{Au}_2\text{O}_3$ .

Sol. in cold  $\text{HCl} + \text{Aq}$ ; forms insol. compound with  $\text{HF}$ . (Prat, C. R. 70, 842.)

Obtained pure by Krüss (A. 237, 296.)

Gold phosphide,  $\text{Au}_3\text{P}_2$ .

Not attacked by  $\text{HCl} + \text{Aq}$ .  $\text{HNO}_3$  forms  $\text{H}_2\text{PO}_4$ , and leaves undissolved Au. (Schröter, J. B. 1849, 247.)

$\text{Au}_3\text{P}_2$ . Decomposed on air or with  $\text{H}_2\text{O}$ . (Cavazzi, Gazz. ch. it. 16, 40.)

$\text{Au}_3\text{P}_2$ . Readily attacked by aqua regia or  $\text{Cl}_2 + \text{Aq}$ . (Granger, C. R. 1897, 124, 498.)

Gold purple (mixture of Au and  $\text{SnO}_2$ ).

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in aqua regia.  $\text{HCl} + \text{Aq}$  dissolves all Sn and leaves Au. Boiling  $\text{HNO}_3 + \text{Aq}$  dissolves a little Sn.

Insol. in boiling  $\text{KOH} + \text{Aq}$  (Berzelius).  $\text{KOH} + \text{Aq}$  extracts excess of  $\text{SnO}_2$ , and the residue becomes sol. in  $\text{H}_2\text{O}$ , from which it is pptd. by  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Figuier, A. ch. (3) 11, 353.)

Sol., when still moist, in  $\text{NH}_4\text{OH} + \text{Aq}$ , but insol. if it has been dried.

Obtained in colloidal state in aqueous solution containing 0.58 g. Au. and 5.41 g.  $\text{SnO}_2$

in a litre. This solution may be concentrated without coagulation. The solution is coagulated by dil.  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ , more easily by dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ ; also by  $\text{KCl}$ ,  $\text{HgCl}_2$ ,  $\text{FeSO}_4 + \text{Aq}$ , and many other salts. Not coagulated by alcohol, but easily when ether is added to the alcohol (Schneider, Z. anorg. 5, 80.)

Gold (auric) selenide,  $\text{Au}_2\text{Se}_3$ .

$\text{HNO}_3 + \text{Aq}$  dissolves out Se. Sol. in aqua regia or alkali sulphides +  $\text{Aq}$ . (Uelsmann, J. B. 1860, 90.)

Aurous sulphide,  $\text{Au}_2\text{S}$ .

Easily sol. in  $\text{H}_2\text{O}$  when freshly prepared, but precipitated from aqueous solution by  $\text{HCl}$ ,  $\text{KCl}$ , or  $\text{NaCl} + \text{Aq}$ . When dried is insol. in  $\text{H}_2\text{O}$ .

Insol. in boiling dil. or conc.  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Easily sol. in aqua regia,  $\text{HCl} + \text{Aq}$  with  $\text{KClO}_3$ , etc. Slowly sol. in alkali monosulphides +  $\text{Aq}$ . Easily sol. in polysulphides +  $\text{Aq}$ .

Insol. in  $\text{KOH} + \text{Aq}$ . Sol. in  $\text{KCN} + \text{Aq}$ . (Krüss, B. 20, 2369.)

Known also in colloidal state in aqueous solution containing 1.74 g.  $\text{Au}_2\text{S}$  per l (Schneider, B. 24, 2241.)

Auric sulphide,  $\text{Au}_2\text{S}_3$ .

Insol. in  $\text{H}_2\text{O}$  and acids except aqua regia; sol. in alkali sulphides, or  $\text{KOH} + \text{Aq}$ . (Berzelius.)

Does not exist (Krüss, B. 22, 2369), but has since been made by Antony and Lucchesi (Gazz. ch. it. 20, 601). Insol. in  $\text{HCl}$ , or dil.  $\text{HNO}_3 + \text{Aq}$ . Decomposed by conc.  $\text{HNO}_3$ ,  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  with separation of Au. Sl. decomposed by  $\text{NH}_4\text{OH} + \text{Aq}$ . Easily sol. in  $\text{KCN} + \text{Aq}$ ; decomposed by  $(\text{NH}_4)_2\text{S} + \text{Aq}$ . Sol. in cold  $\text{Na}_2\text{S}$  or  $\text{K}_2\text{S} + \text{Aq}$ ; decomposed on boiling. (Antony and Lucchesi, Gazz. ch. it. 21, 2, 209.)

Insol. in ether. (Hofmann, B. 1904, 37, 246.)

Auroauric sulphide,  $\text{Au}_3\text{S}_2$ .

Insol. in  $\text{H}_2\text{O}$  or acids except aqua regia. Sl. sol. in cold alkali monosulphides +  $\text{Aq}$ , but easily sol. on warming. Sol. in cold polysulphides +  $\text{Aq}$ , but less in ammonium polysulphide than the other alkali polysulphides.

Not attacked by cold, but easily sol. in hot  $\text{KOH} + \text{Aq}$ . Sol. in  $\text{KCN} + \text{Aq}$ . (Hofmann and Krüss, B. 20, 2704.)

Obtained also in colloidal state in aqueous solution containing 0.8 g. per l. (Schneider.)

Insol. in  $\text{Na}_2\text{S} + \text{Aq}$ . sat. with S. (Ditte, A. ch. 1907, (8) 12, 273.)

Aurous potassium sulphide,  $\text{Au}_2\text{S}, 3\text{K}_2\text{S}$ .

(Antony and Lucchesi, Gazz. ch. it. 1896, 20, (2) 350.)

$\text{Au}_2\text{S}$ ,  $4\text{K}_2\text{S}+12\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 1895, 120. 322.)

Gold silver sulphide,  $\text{Ag}_3\text{AuS}_2$

Ppt. (Lucchesi, Gazz. ch. it 1896, 26. 350-53.)

Aureous sodium sulphide,  $\text{NaAuS}+4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Yorke, Chem. Soc. Q. J. 1. 236.)

$+5\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 1895, 120. 321.)

$\text{Na}_3\text{AuS}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Lucchesi, Gazz. ch. it 1896, 26. 350-53.)

$\text{Au}_2\text{S}$ ,  $2\text{Na}_2\text{S}+20\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  (Ditte, C. R. 1895, 120. 321.)

Gold telluride.

Ppt. (Berzelius, Pogg. 8. 178.)

Gold silver telluride,  $\text{Au}_2\text{Te}_2$ ,  $\text{Ag}_2\text{Te}$ .

Min. *Sylvanite*. Sol. in  $\text{HNO}_3+\text{Aq}$  with separation of Au, in aqua regia with separation of AgCl.

$3\text{Ag}_2\text{Te}$ ,  $\text{Au}_2\text{Te}$ . Min. *Petsite*.

Hartshorn, salts of.

See Carbonate carbamate, ammonium hydrogen.

Helium, He.

Coefficient of absorption for  $\text{H}_2\text{O}$  at  $18.2^\circ=0.0073$ . (Ramsay, Z. phys. Ch. 1906, 55. 347.)

Absorption of helium by  $\text{H}_2\text{O}$  at  $t^\circ$  and 760 mm. pressure.

$t^\circ$	Coefficient of absorption
0	0.01500

(Estreicher, Z. phys. Ch. 1899, 31. 184.)

Absorption by  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Coefficient of absorption
0	0.0134
10	0.0100
20	0.0138
30	0.0161
40	0.0191
50	0.0226

(Antropoff, Roy. Soc. Proc. 1910, 83. A. 480.)

Completely insol. in benzene and in alcohol (Ramsay, Chem. Soc. 1895, 67. 684.)

Hexamine chromium compounds.

See Luteochromium compounds.

Hexamine cobaltic compounds,

$\text{Co}_2(\text{NH}_3)_6\text{X}_4$

See Dichrochromic compounds.

$\text{Co}(\text{NH}_3)_6\text{X}_3$ .

See Luteochromic compounds.

Hexamine iridium chloride,  $\text{Ir}_2(\text{NH}_3)_4\text{Cl}_4$ .

See Iridotriamine chloride.

Hexathionic acid,  $\text{H}_2\text{S}_6\text{O}_4$ .

Known only in aqueous solution, which decomposes rapidly, even in presence of free sulphuric acid. (Debus, A. 244. 76.)

Potassium hexathionate,  $\text{K}_2\text{S}_6\text{O}_4$ .

Sol. in  $\text{H}_2\text{O}$ , with rapid decomp. Not obtained in pure state. (Debus, A. 244. 76.)

Holmium, Ho.

Holmium oxide,  $\text{Ho}_2\text{O}_3$ .

(Cleve, C. R. 89. 478; 91. 328.)

Consists of at least two elements. (Lecoq de Boisbaudran, C. R. 102. 1005.)

Consists of seven elements. (Kriess and Nilson.)

*Sesqui*hydraurylamine,  $(\text{AuOH})_2\text{N}$ ,  $\text{NH}_3=\text{Au}_2\text{N}_2+3\text{H}_2\text{O}$ .

Decomp. by boiling with  $\text{H}_2\text{O}$ . (Raschig, A. 235. 341.)

Hydrazidophosphoric acid.

Berium hydrazidophosphate,

$\text{OP}(\text{N}_2\text{H}_2)_2\text{O}_2\text{Ba}$ .

(Ephraim, B. 1911, 44. 3420.)

Lead hydrazidophosphate,  $\text{OP}(\text{N}_2\text{H}_2)_2\text{O}_2\text{Pb}$ .

Easily sol. in  $\text{HNO}_3$ . (Ephraim.)

Potassium hydrazidophosphate,

$\text{OP}(\text{N}_2\text{H}_2)(\text{OK})_2$ . (Ephraim.)

Sodium hydrazidophosphate,

$\text{OP}(\text{N}_2\text{H}_2)(\text{ONa})_2$ .

Can be cryst. from dil. alcohol. (Ephraim.)

Hydrazine,  $\text{N}_2\text{H}_4=\text{NH}_2-\text{NH}_2$ .

Very sol. in  $\text{H}_2\text{O}$ . (Curtius, B. 20. 1632.)

Very hygroscopic; decomp. by  $\text{H}_2\text{O}$ ; solvent for sulphur, KCl, KBr,  $\text{KNO}_3$ . (de Bruyn, R. t. c. 1894, 13. 433-40; Chem. Soc. 1895, 68 (2) 347.)

Mixes in all proportions with alcohols; al. sol. in organic solvents. (Lobry de Bruyn, Chem. Soc. 1897, 72 (2) 22.)

**Hydrazine amidosulphonate,**  
 $N_2H_4 \cdot HSO_3 \cdot NH_2$ .

Very sol. in  $H_2O$ . (Sabancjeff, Z. anorg. 1899, 20, 22.)

**Hydrazine azoimide,  $N_2H_4 \cdot HN_3$ .**

Deliquescent. Easily sol. in  $H_2O$ . Sl. sol. in alcohol, and can be crystallised therefrom. (Curtius, B. 24, 2344.)

**Hydrazine borate,  $(N_2H_4)_2(B_2O_3)_2$ .**

Sol. in  $H_2O$ . (Dschawachow, C. C. 1902, I, 1394.)

$(N_2H_4)_2(H_3B_2O_7)_2$  Sol. in  $H_2O$ . (Dschawachow, C. C. 1902, I, 1394.)

+5 $H_2O$ . Sol. in  $H_2O$ . (Dschawachow, C. C. 1902, I, 1394.)

+10 $H_2O$  Ppt. (Dschawachow, C. C. 1902, I, 1394.)

**Hydrazine cuprous bromide chloride,**

$N_2H_4Cl \cdot N_2H_4Br \cdot 3CuBr$ .  
 (Ranfaldi, Real. Ac. Linc. 1906 (5) 15, II, 95.)

**Hydrazine mercuric bromide,**

$HgBr_2 \cdot 2(N_2H_4 \cdot HBr) + H_2O$   
 Very sol. in  $H_2O$ , sol. in alcohol and acetone. Sl. sol. in acetic ether.  
 Insol. in ethyl ether. (Ferratini, C. A. 1912, 1612.)

**Hydrazine zinc bromide,  $2N_2H_4 \cdot HBr \cdot ZnBr_2 + H_2O$ .**

Very sol. in  $H_2O$ ; sol. in alcohol and acetone. (Ferratini, C. A. 1912, 1612.)

**Hydrazine carbonate.**

Very deliquescent, but only sl. sol. in  $H_2O$ . Sl. sol. in alcohol. (Curtius and Jay, J. pr. 1889, (2) 39, 41.)

**Hydrazine zinc carbonate hydrazine,**

$Zn(CO_3 \cdot NH_3 \cdot NH_4)_2 \cdot 2N_2H_4$ .  
 Easily sol. in  $H_2O$ . (Ebler and Schott, J. pr. 1909, (2) 79, 72.)

**Hydrazine chlorate,  $N_2H_4 \cdot HClO_3$ .**

Very sol. in  $H_2O$ ; sl. sol. in alcohol. Insol. in ether,  $CHCl_3$  and benzol. (Salvadori, Gazz. ch. it 1907, 87, (2) 32.)

**Hydrazine dichlorate,  $N_2H_4 \cdot 2HClO_3$ .**

Ppt. Decomp. in aq. solution. (Turrentine, J. Am. Chem. Soc. 1915, 37, 1123.)

**Hydrazine cupric chloride,  $N_2H_4Cl \cdot CuCl_2 + \frac{1}{2}H_2O$ .**

Decomp. by  $H_2O$ . (Ranfaldi, Real. Ac. Linc. 1906, (5) 15, II, 95.)

+2 $H_2O$ . Decomp. by  $H_2O$ . (Ranfaldi.)

**Hydrazine mercuric chloride,  $N_2H_4Cl \cdot HgCl_2$ .**  
 (Hoffmann and Maibung, A. 1899, 305, 221.)

**Hydrazine dithionate,  $N_2H_4 \cdot H_2S_2O_6$ .**

Sol. in  $H_2O$ , decomp. on standing in aq. solution. (Sabancjeff, Z. anorg. 1899, 20, 21.)

$2N_2H_4 \cdot H_2S_2O_6$  Sol. in  $H_2O$ . (Sabancjeff.)

**Hydrazine fluosulphate,  $N_2H_4 \cdot H_2SiF_6$ .**

Easily sol. in  $H_2O$ .  
 Difficultly sol. in ethyl and methyl alcohol. (Ebler, J. pr. 1910, (2) 81, 552.)

**Hydrazine fluotitanate,  $(N_2H_4)_2 \cdot H_2TiF_6 + 2H_2O$**

Ppt. Sol. in  $H_2O$ . (Ebler, J. pr. 1910, (2) 81, 555.)

**Hydrazine monohydrobromide,  $N_2H_4 \cdot HBr$ .**

Very easily sol. in  $H_2O$  or hot alcohol. (Curtius and Schultz, J. pr. (2) 42, 537.)

**Hydrazine dihydrobromide,  $N_2H_4 \cdot 2HBr$ .**

Easily sol. in  $H_2O$ . Sl. sol. in alcohol. (Curtius and Schulz, J. pr. (2) 42, 535.)

**Hydrazine monohydrochloride,  $N_2H_4 \cdot HCl$ .**

Extremely sol. in  $H_2O$ . Sl. sol. in boiling absolute alcohol. (Curtius and Jay, J. pr. (2) 39, 38.)

**Hydrazine dihydrochloride,  $N_2H_4 \cdot 2HCl$ .**

Easily sol. in cold  $H_2O$ , sl. sol. in hot alcohol. (Curtius, l. c.)

Sol. in 2.07 pts  $H_2O$  at 23° Sp. gr. of sat. solution at 20°/4° = 1.4226. (Schiff, Z. phys. Ch. 1896, 21, 292.)

Sp. gr. of aqueous solution at 20°.

% salt	Sp. gr.
25	1.1183
20	1.0923
15	1.0675
10	1.0436
5	1.0206

(Schiff, Z. phys. Ch. 1896, 21, 292.)

Nearly insol. in hot absolute alcohol. (Curtius and Jay, J. pr. (2) 39, 37.)

**Hydrazine dihydrofluoride,  $N_2H_4 \cdot 2HF$ .**

Easily sol. in  $H_2O$ . Nearly insol. in alcohol. (Curtius and Schulz, J. pr. (2) 42, 533.)

**Hydrazine monohydroiodide,  $N_2H_4 \cdot HI$ .**

Easily sol. in  $H_2O$ . (Curtius and Schulz.)

**Hydrazine dihydroiodide,  $N_2H_4 \cdot 2HI$ .**

(Very deliquescent. Easily sol. in  $H_2O$ . Sl. sol. in alcohol. (Curtius and Schulz, J. pr. (2) 42, 536.)

**Trihydrazine dihydroiodide,  $3N_2H_4 \cdot 2HI$** 

Easily sol. in  $H_2O$  and alcohol (Curtius and Schulz, J. pr. (2) 42. 540.)

**Hydrazine hydroxide,  $N_2H_4 \cdot H_2O$ .**

Miscible with  $H_2O$  or alcohol, but not with ether, chloroform, or benzene. (Curtius and Schulz, J. pr. (2) 42. 530.)

**Hydrazine hypophosphate,  $N_2H_4 \cdot H_2P_2O_6$ .**

Sl. sol. in  $H_2O$ . 1.5 pts. dissolve in 100 pts.  $H_2O$ . (Sabanejeff, Z. anorg. 1898, 17. 490.)

**Hydrazine hypophosphate ammonia,**

Sol. in  $H_2O$  (Sabanejeff, Z. anorg. 1899, 20. 23.)

**Hydrazine mercuric iodide,**

Very sol. in  $H_2O$ , alcohol, acetone, acetic ether

Insol. in ether. Excess of  $H_2O$  decomp. (Ferratin, Gazz. ch. it. 1912, 42. (1), 172.)

**Hydrazine zinc iodide,**

Very sol. in  $H_2O$ , sol. in alcohol and acetone. (Ferratin, C. A. 1912. 1612)

**Hydrazine nitrate,  $N_2H_4 \cdot HNO_3$ .**

Very sol. in  $H_2O$ , sl. sol. in abs. alcohol. (Sabanejeff, Z. anorg. 1899, 20. 24)

Solubility in  $H_2O$  at  $t^\circ$ .

$t^\circ$	g $N_2H_4 \cdot HNO_3$ per 100 g.	
	Sat. solution	$H_2O$
10	63.63	174.9
15	68.47	217.2
20	72.70	266.3
25	76.61	327.5
30	80.09	402.2
35	83.06	490.3
40	85.86	607.2
45	88.06	737.6
50	91.18	1034
55	93.58	1458.
60	95.51	2127

(Sommer, Z. anorg. 1914, 86. 85.)

 **$N_2H_4 \cdot 2HNO_3$ . Very unstable.**

Sol. in  $H_2O$  but solution cannot be concentrated beyond 30% without decomp.

Decomp. by abs. alcohol.

Very sol. in hydrazine hydroxide + Aq. (Sabanejeff, Z. anorg. 1898, 20. 25.)

**Hydrazine nitrite,  $N_2H_4 \cdot HNO_2$ .**

Very sol. in  $H_2O$ . Pptd. by ether from solution in alcohol; insol. in ether.

Very hygroscopic (Sommer, Z. anorg. 1913, 83. 125)

**Hydrazine perchlorate,  $N_2H_4 \cdot HClO_4 + 2H_2O$ .**

Sol. in 1 ts pts.  $H_2O$  at  $30^\circ$  and 34 pts. alcohol; crystallizes from boiling absolute alcohol. (Salvadori, Ch. Z. 31. 680.)

Solubility in  $H_2O$  at  $t^\circ$

$t^\circ$	g $N_2H_4 \cdot HClO_4$	Sp. gr
18	41.72	1.264
35	66.9	1.391

(Carlson, Dissert. 1910.)

**Hydrazine dperchlorate,  $N_2H_4 \cdot 2HClO_4 + 2H_2O$** 

Efflorescent.

Deliquescent.

102 pts. salt sol. in 100 pts.  $H_2O$  at  $29^\circ$ .

2.8 pts. salt sol. in 100 pts. alcohol.

1.0 pt. " " " 100 " ether.

(Turrentine, J. Am. Chem. Soc. 1915, 37. 1123.)

**Hydrazine phosphate,  $N_2H_4 \cdot H_2PO_4$ .**

Very sol. in  $H_2O$ . (Sabanejeff, Z. anorg. 1898, 17. 488)

$N_2H_4 \cdot 2H_2PO_4$ . Sol. in  $H_2O$ . (Sabanejeff.)

**Hydrazine phosphite,  $N_2H_4 \cdot H_2PO_3$ .**

Sol. in  $H_2O$ . (Sabanejeff, Z. anorg. 1898, 17. 468)

**Hydrazine hydrogen phosphite,**

Less sol. in  $H_2O$  than the normal salt. (Sabanejeff.)

**Hydrazine selenate,  $N_2H_4 \cdot H_2SeO_4$ .**

Sol. in  $H_2O$  with decomp. (Rimini, C. C. 1907, I. 86.)

**Hydrazine zinc selenate,**

Sl. sol. in  $H_2O$  but more sol. than Cu salt. (Rimini and Malagnini, Gazz. ch. it. 1907, 37. (1), 265.)

**Hydrazine sulphocyanide,  $N_2H_4 \cdot HSCN$ .**

Very deliquescent. Sol. in  $H_2O$  and alcohol. (Curtius and Herdenreich, J. pr. 1895, [2] 62. 488.)

**Hydrazine sulphate,  $N_2H_4 \cdot H_2SO_4$ .**

Sol. with difficulty in cold, easily in hot  $H_2O$ . Insol. in alcohol. (Curtius, l. c.)

100 pts.  $H_2O$  dissolve 3.055 pts. salt at  $22^\circ$ . (Curtius and Jay, J. pr. (2) 39. 39.)

$2N_2H_4 \cdot H_2SO_4$ . Very deliquescent, and

sol. in  $H_2O$  Insol. in alcohol. (Curtius, J. pr. (2) 44. 101.)

**Hydrazine sulphite**,  $(N_2H_4)_2H_2SO_3$ .  
(Sabanejeff, Z. anorg. 1899, 20, 24.)

**Hydrazine pyrosulphite**,  $2N_2H_4 \cdot H_2S_2O_5$ .  
Sol. in  $H_2O$  with decomp.; insol. in alcohol.  
(Sabanejeff, Z. anorg. 1899, 20, 23.)

**Hydrazine thiosulphate**,  $(N_2H_4)_2H_2S_2O_4$ .  
Ppt. (Not pure.) (Ferratini, Gazz. ch. it. 1912, 42, (1) 138.)

**Hydrazine lead thiosulphate**,  
 $PbS_2O_3 \cdot 2(N_2H_4) \cdot H_2S_2O_4 + H_2O$ .  
Insol. in  $H_2O$  and alcohol.  
Sol. in  $HCl + Aq$  and in  $HNO_3 + Aq$ .  
(Ferratini, C. A. 1912, 1612)

**Hydrazine silver thiosulphate**,  
 $Ag_2S_2O_3 \cdot (N_2H_4)_2H_2S_2O_4$ .  
Insol. in  $H_2O$ ; sol. in  $NH_4OH + Aq$  and in  $HNO_3$ . (Ferratini.)

**Hydrazine sulphinic acid**.

**Barium hydrazine disulphonate**,  
 $Ba_2N_2(SO_4)_2$ .  
Insol. in  $H_2O$ ; sol. in acids. (Ephraim, B. 1911, 44. 390.)

**Hydrazinesulphonic acid**,  $N_2H_5SO_3OH$ .  
Sol. in about 24 pts.  $H_2O$  at ord temp. Decomp. by mineral acids; nearly insol. in alcohol and other organic solvents. (Traube, B. 1914, 47. 941.)

**Ammonium hydrazinesulphonate**,  
 $(N_2H_5SO_3)NH_4$ .  
Deliquescent; decomp. by acids. (Traube.)

**Barium hydrazinesulphonate**,  
 $(N_2H_5SO_3)_2Ba + 2H_2O$ .  
Sol. in  $H_2O$ ; pptd. by alcohol; decomp. by acids. (Traube.)

**Calcium hydrazinesulphonate**,  
 $(N_2H_5SO_3)_2Ca + H_2O$ .  
Sol. in  $H_2O$ . Decomp. by acids Insol. in alcohol. (Traube.)

**Potassium hydrazinesulphonate**,  $N_2H_5SO_3K$ .  
Decomp. by acids. (Traube.)

**Silver hydrazinesulphonate**,  $N_2H_5SO_3Ag$ .  
(Traube.)

**Sodium hydrazinesulphonate**,  
 $N_2H_5SO_3Na + H_2O$ .  
Decomp. by acids. (Traube.)

**Strontium hydrazinesulphonate**,  
 $(N_2H_5SO_3)_2Sr + 2H_2O$ .

Sol. in  $H_2O$ . Decomp. by acids. Insol. in alcohol. (Traube.)

**Hydriodic acid**,  $HI$ .  
See Iodhydric acid.

**Hydrobromic acid**,  $HBr$ .  
See Bromhydric acid.

**Hydrochloric acid**,  $HCl$ .  
See Chlorhydric acid.

**Hydrofluorboric acid**,  $HBF_4$ .  
See Fluoborhydric acid.

**Hydrofluoric acid**,  $HF$ .  
See Fluorhydric acid.

**Hydrogen**,  $H_2$ .  
Sl. absorbed by  $H_2O$ .

Sol. in 130 pts.  $H_2O$ , 1 vol. Recently boiled  $H_2O$  absorbs 100 vols.  $H_2O$  at  $18^\circ$  absorb 1814)

1 vol.  $H_2O$  absorbs 0.0193 vol.  $H$  at 760 mm. and all temperatures between  $0^\circ$  and  $23.6^\circ$ . (Bunsen.)

Later work does not confirm the above statement.

Absorption of  $H$  by  $H_2O$  at  $t$  and 760 mm.  
 $\beta$  = coefficient of absorption;  $\beta_1$  = "solubility" (see under Oxygen)

(Just, Z. phys. Ch. 1901, 37, 359.)

Extended investigations have been made by Findlay and Shen. (Chem. Soc. 1912, 101, 1465) on the effect of colloids on solubility of  $H_2$  in  $H_2O$ . See original article.

**Hydrogen arsenide.**

See Arsenic hydride.

**Hydrogen peroxide,  $H_2O_2$ .**

Miscible with  $H_2O$ . Not stable in conc. solution. Aqueous solution gives up its  $H_2O_2$  to ether. Etheral solution is more stable than an aqueous solution of the same strength, and may be distilled without decomp. Miscible with alcohol.

Very stable in aq. solution of various conc. if perfectly free from impurity such as compds. of heavy metals, etc. (Woffenstein, B. 1894, 27, 3307.)

Coefficient of distribution between ether and  $H_2O$  determined at  $3^\circ$ ,  $7^\circ$ , and  $17.5^\circ$  with varying quantities (1.7-5%) of  $H_2O_2$ . (Ospoff, C. C. 1903, 11, 1265.)

As sol. in ether as in  $H_2O$ . A 50% solution in  $H_2O$  still contained about 25%  $H_2O_2$  after

being shaken 6 times with large quantities of fresh ether.

Insol. in petroleum ether. (Bühl, B. 1895, 28. 2855.)

+H<sub>2</sub>O, and +2H<sub>2</sub>O Does not solubilise at -20° (Wollenstein, B. 1891, 27. 3311)

**Hydrogen phosphide, gaseous (Phosphine), PH<sub>3</sub>**

Very slightly absorbed by H<sub>2</sub>O.

Statements as to solubility in H<sub>2</sub>O vary considerably.

(a) *Difficultly inflammable gas*—

1 vol. H<sub>2</sub>O absorbs 0.1123 vol PH<sub>3</sub>. (Dybowski, J. B. 1866. 735)

1 vol H<sub>2</sub>O absorbs 0.125 vol. PH<sub>3</sub>. (H. Davy.)

(b) *Easily inflammable gas*—

1 vol H<sub>2</sub>O absorbs 0.018 vol PH<sub>3</sub>. (Gengembre, Crell Ann. 1. 450)

1 vol. H<sub>2</sub>O absorbs 0.0214 vol. PH<sub>3</sub> (Henry.)

1 vol. H<sub>2</sub>O absorbs 0.025 vol. PH<sub>3</sub> (Davy.)

1 vol. H<sub>2</sub>O absorbs 0.125 vol. PH<sub>3</sub>. (Dalton, Ann. Phil. 11. 7)

1 vol. H<sub>2</sub>O absorbs 0.255 vol. PH<sub>3</sub>. (Raymond, Scher. J. 5. 389.)

1 vol. H<sub>2</sub>O dissolves 0.26 vols. PH<sub>3</sub> at 17°. (Stock, Böttger and Lenger, B. 1909, 42. 2855.)

Sol. in conc. H<sub>2</sub>SO<sub>4</sub> without immediate decomp. (Buff, Pogg. 16. 363.)

1 vol. 50% H<sub>2</sub>SO<sub>4</sub> dissolves 0.05 vol. PH<sub>3</sub>. (S. B. and L.)

Absorbed by CuSO<sub>4</sub>+Aq and by Br. (Berthelot.)

Absorbed rapidly by Cu<sub>2</sub>Cl<sub>2</sub>+Aq with formation of Cu<sub>3</sub>Cl<sub>2</sub>, 2PH<sub>3</sub>, and Cu<sub>2</sub>Cl<sub>2</sub>, 4PH<sub>3</sub>. (Ribon, C. R. 88. 581.)

1 vol. alcohol of 0.85 sp. gr. absorbs 0.5 vol ; 1 vol. ether absorbs 2 vols. (Graham.)

Sol in volatile oils; 1 vol oil of turpentine absorbs 3.25 vols. (Graham.)

Several varieties of blood absorb PH<sub>3</sub>.

**Hydrogen phosphide, liquid, P<sub>2</sub>H<sub>4</sub>**

Insol. in H<sub>2</sub>O. Apparently sol. in alcohol and oil of turpentine, but solution is very quickly decomp. (Thénard, A. ch. (3) 145.)

**Hydrogen phosphide, solid, P<sub>4</sub>H<sub>2</sub>**

Insol. in H<sub>2</sub>O and alcohol. (Leverrier, A. ch. 60. 174.)

Insol. in all liquids except liquid PH<sub>3</sub>. (Thénard, A. ch. (3) 14. 5.)

Instantly decomp. by HNO<sub>3</sub>, or H<sub>2</sub>SO<sub>4</sub>+Aq. Sol. with decomp. in alcoholic solution of KOH. (Thénard)

Somewhat sol. in liquid phosphorus. (Buck, Dissert. 1904.)

P<sub>2</sub>H<sub>4</sub>. Insol. in all solvents. (Stock, Böttger and Lenger, B. 1909, 42. 2851.)

P<sub>2</sub>H<sub>4</sub>. Sol. in liquid hydrogen phosphide and molten P. There are no other solvents which appreciably dissolve it. Insol. in liquid PH<sub>3</sub>. (S. B. and L.)

**Hydrogen selenide, H<sub>2</sub>Se.**

More sol. in H<sub>2</sub>O than hydrogen sulphide. (Berzelius.)

Solubility coefficient of H<sub>2</sub>Se at t°.

t°	Sol. Coeff.
4	3.77 vols.
9.65	3.43
13.2	3.31
22.5	2.70

(Forcrand and Fonze-Dineon, C. R. 1902, 134. 171.)

Sol in cold COCl<sub>2</sub>. (Besson, C. R. 1869, 122. 140)

**Hydrogen silicide.**

See Silicon hydride.

**Hydrogen sulphide, H<sub>2</sub>S.**

(a) *Liquid*. Dissolves S on warming, which separates on cooling.

(b) *Gas*

1 vol H<sub>2</sub>O absorbs 1.08 vols H<sub>2</sub>S at 10° (Henry, 1803)

1 vol H<sub>2</sub>O absorbs 2.53 vols H<sub>2</sub>S at 15° (de Saussure, Ann. Phil. 6. 340.)

1 vol H<sub>2</sub>O absorbs 3 vols H<sub>2</sub>S at 11°. (Gay-Lussac and Thénard)

1 vol H<sub>2</sub>O absorbs 3.66 vols H<sub>2</sub>S at ord. temp (Thompson)

1 vol H<sub>2</sub>O absorbs 2.5 vols H<sub>2</sub>S at ord temp (Dalton)

1 vol. H<sub>2</sub>O absorbs 4.3706-0.083687t+0.0005213t<sup>2</sup> vols H<sub>2</sub>S at temperatures between 2 and 43.3°. (Bunsen and Schönfeld, A. 93. 26.)

At 0° and about 820 mm. pressure, 1 cm. H<sub>2</sub>O absorbs 100 cm H<sub>2</sub>S, while only about 4 cm. are absorbed at ord. pressure. (de Forcrand and Villard, C. R. 106. 1402.)

1 vol. H<sub>2</sub>O at 760 mm. pressure and t° absorbs V vols. H<sub>2</sub>S, reduced to 0° and 760 mm.

t°	V	t°	V	t°	V

\* Carius.

(McLauchlan.)

Sol. in methyl acetate (Marchand), ether  
(Higgins).

Insol. in caoutchouc.

Sol. in glycerine in less amount than in  
 $H_2O$ . If a certain vol. of  $H_2O$  dissolves 100  
pts.  $H_2S$ , the same vol. of glycerine (1 pt.  
glycerine + 1 pt.  $H_2O$ ) dissolves only 60 pts.  
 $H_2S$ , but the solution is very stable. After  
standing a year there is no appreciable  
decomp. (Lapage, J. Pharm. (4) 5. 256.)

According to Lindo (C. N. 57. 173), the  
solution in glycerine is no more stable than  
that in  $H_2O$ .

Sol. in  $CS_2$ .

Solubility in organic substances + Aq.  
l = value of  $H_2S$  dissolved in organic sub-  
stance + Aq as determined by titration.

lo = value of  $H_2S$  dissolved in  $H_2O$  as de-  
termined by titration.

t° = 25°.

Solution	l/o
$N-NH_2C_2H_5O_2$	1.09
$N-C_2H_5O_4$	0.944
$3-N-C_2H_5O_4$	0.858
$N-(NH_2)_2CO$	1.02
pure $C_2H_5(OH)_2$	0.863

(McLauchlan, Z. phys. Ch. 1903, 44. 615.)

Solubility in acetic acid + Aq at 25°.

Molecules of $CH_3COOH$ in 100 molecules $CH_3COOH + H_2O$	Molecules of $H_2O$ in 100 molecules $CH_3COOH + H_2O$	l/o
0	100	1.00
8.85	91.15	0.98

81.0	19.0	1.83
98.68	1.32	3.81

(McLauchlan.)

Hydrogen persulphide,  $H_2S_2$  or  $H_2S_8$ .

Decomp. by contact with  $H_2O$ , in which it  
is apparently insol. Sol. in ether, with subse-  
quent decomp. Sol. in  $CS_2$  (Thénard, A.  
ch. 48. 79.)

$H_2S_2$ . Quickly decomp. by ether, acetic  
ether, ethyl, or amyl alcohol.  $H_2S$  has no  
action.

Conc.  $HCl$ , or  $H_2C_2O_4 + Aq$  have no ac-  
tion. Sol. in a solution of S in  $CS_2$ , and in  
liquid hydrocarbons.

Chloroform dissolves without decomp.

(Sabbatier, C. R. 100. 1346, 1585.)

Alkalies, and  $K_2S + Aq$  decomp. instantly.

Decomp. by  $H_2O$ , dil. and conc.  $HCl$ , conc.  
 $H_2SO_4$ , alkali and alcohol. Sol. in alcohol  
containing  $HCl$  but soon decomp. in this  
solution. Miscible in all proportions  
without decomp. with benzene, ether and  $CS_2$ .  
(Bloch, B. 1908, 41. 1977.)

Formula is  $H_2S_8$ . (Rebs, A. 246. 356.)

+7 $H_2O$ . Easily decomp. by heat, (de  
Forcrand and Villard, C. R. 106. 1402.)

Hydrogen trisulphide,  $H_2S_3$ .

Decomp. by  $H_2O$ , dil. and conc.  $HCl$ , conc.  
 $H_2SO_4$ , alkali and alcohol. Somewhat sol. in  
alcohol containing  $HCl$ , but slowly decomp.  
in this solution. Miscible with ether, ben-  
zene and  $CS_2$ , and these solutions are relatively  
stable. (Bloch, B. 1908, 41. 1974.)

**Hydrogen telluride,  $\text{H}_2\text{Te}$ .**

Sl. sol. in  $\text{H}_2\text{O}$  Decomp. in the air. (Ernyei, Z. anorg. 1900, 25. 313.)

**Hydrosulphuric acid,  $\text{H}_2\text{S}$ .**

See Hydrogen sulphide.

**Hydrosulphurous acid,  $\text{H}_2\text{SO}_2$ .**

See Hyposulphurous acid.

**Hydroxylamic acid.**
**Calcium hydroxylamate,  $\text{Ca}(\text{ONH}_2)_2$ .**

Very explosive, decomp. by  $\text{H}_2\text{O}$ . (Ebler and Schott, J. p. 1908, (2) 78. 323.)

**Zinc hydroxylamate  $\text{Zn}(\text{ONH}_2)_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Ebler and Schott.)

**Zinc hydroxylamate, hydroxylamine,**

Very unstable.

Insol. in abs. alcohol. (Ebler and Schott.)

**Hydroxylamine,  $\text{NH}_2\text{O} = \text{NH}_2(\text{OH})$ .**

Known only in solution.

Sol. in alcohol. (Lossen, J. pr. 96. 462.)

Prepared in free state by de Bruyn.

Very deliquescent, and sol. in  $\text{H}_2\text{O}$  and alcohol. Sl. sol. or insol. in  $\text{CHCl}_3$ ,  $\text{C}_6\text{H}_6$ , ether, or ethyl acetate

Methyl alcohol at 5° dissolves 35%; ethyl alcohol at 15°, 15%; boiling dry ether, 1 2%; boiling ethyl acetate, 1 6%. (de Bruyn, R. t. c. 11. 18.)

**Hydroxylamine arsenate,  $\text{AsO}_2\text{H}_2(\text{NH}_2\text{O})_2$ .**

Sl. sol. in cold  $\text{H}_2\text{O}$ ; sol. in hot  $\text{H}_2\text{O}$  from which it can be cryst. (Hofmann, A. 1899, 307. 331.)

**Hydroxylamine azolamide.**

See Azolamide, hydroxylamine.

**Hydroxylamine bromide,  $\text{NH}_2\text{OH}, \text{HBr}$ .**

Very sol. in  $\text{H}_2\text{O}$ ; insol. in ether by which it is pptd. from solution in alcohol. (Adams, Am. Ch. J. 1902, 28. 205.)

$2\text{NH}_2\text{OH}, \text{HBr}$ . Easily sol. in  $\text{H}_2\text{O}$ , insol. in ether and ligroin. Sl. sol. in alcohol. (Adams.)

**Hydroxylamine mercuric bromide hydroxylamine,  $2\text{NH}_2\text{OH}, 2\text{HBr}, \text{HgBr}_2, 2\text{NH}_2\text{OH}$ .**

Decomp. by  $\text{H}_2\text{O}$  and methyl alcohol.

Readily decomp. by alkalis. (Adams.)

**Hydroxylamine calcium,  $\text{HO.Ca.ONH}_2$ .**

Partially decomp. by  $\text{H}_2\text{O}$  at ordinary temp. (Hofmann, Z. anorg. 1898, 16. 464.)

**Hydroxylamine chloride, basic,  $\text{NH}_2(\text{OH})\text{Cl}, \text{NH}_2\text{OH}$ .**

Sol. in  $\text{H}_2\text{O}$ . Alcohol precipitates from aqueous solution. Insol. in ether. (Lossen.)  $2\text{NH}_2(\text{OH})\text{Cl}, \text{NH}_2\text{OH}$ . Deliquescent; very sol. in  $\text{H}_2\text{O}$ , less in alcohol, and insol. in ether. (Lossen.)

**Hydroxylamine chloride,  $\text{NH}_2(\text{OH})\text{Cl}$ .**

Not deliquescent Very sol. in  $\text{H}_2\text{O}$  and hot ordinary alcohol Sl. sol. in absolute alcohol. Insol. in ether (Lossen.)

Sol. in 1.2 pts  $\text{H}_2\text{O}$  at 17°. (Schiff, Z. phys. Ch. 1896, 21. 290.)

Sp. gr. of aqueous solution at 17°.

% salt	sp gr
40	1.1852
28	1.1260
20	1.0888
14	1.0616
10	1.0437
7	1.0303
5	1.0214
3 5	1.0147

(Schiff, Z. phys. Ch. 1896, 21. 290.)

100 pts absolute methyl alcohol dissolve 16.4 pts. at 19.75°; 100 pts. absolute ethyl alcohol dissolve 4.43 pts. at 19.75°. (de Bruyn, Z. phys. Ch. 10. 783.)

Somewhat sol. in alcohol. (Adams, Am. Ch. J. 1902, 28. 204.)

**Hydroxylamine mercuric chloride,  $\text{NH}_2\text{OH}, \text{HgCl}_2$ .**

Very sol. in  $\text{H}_2\text{O}$  and alcohol Less sol. in ether. (Adams, Am. Ch. J. 1902, 28. 213.)

$5(\text{NH}_2\text{OH})_2, \text{HCl}, 2\text{HgCl}_2$ . Sol. in cold  $\text{H}_2\text{O}$ , alcohol and ether. More easily sol. in methyl alcohol. Sol. in  $\text{HCl}$ . The slightest trace of alkali causes decomp. (Adams.)

**Hexahydroxylamine cobaltic bromide,**

(Werner, B. 1905, 38. 897.)

**Hexahydroxylamine cobaltic chloride,**

Very stable toward  $\text{HCl}$ . (Werner, B. 1905, 38. 895.)

**Hexahydroxylamine cobaltic nitrate,**

(Werner.)

**Hexahydroxylamine cobaltic sulphate,**

Easily sol. in  $\text{H}_2\text{O}$ . (Werner.)

**Hydroxylamine columbate,  $\text{CoO}_2\text{N}_2\text{H}_6$ .**

Explosive. Sl. sol. in  $\text{H}_2\text{O}$ . (Hofmann, Z. anorg. 1898, 16. 473.)

**Hydroxylamine dithionate,  $(\text{NH}_2\text{OH})_2\text{H}_2\text{S}_2\text{O}_6$ .**

Sol. in  $\text{H}_2\text{O}$ ; decomp. on heating the aq. solution. (Sabanejeff, Z. anorg. 1898, 17. 485.)

**Hydroxylamine fluosilicate,  $(\text{NH}_2\text{OH})_2\text{H}_2\text{SiF}_6 + 2\text{H}_2\text{O}$** 

Easily sol. in  $\text{H}_2\text{O}$ . Nearly insol in methyl and abs ethyl alcohol. (Ehler, J. pr. 1908, (2), 78. 338.)

**Hydroxylamine fluoritanate,  $(\text{NH}_2\text{OH})_2\text{H}_2\text{TiF}_6$** 

Sol. in  $\text{H}_2\text{O}$ . Sl sol in methyl alcohol. (Ehler, J. pr. 1908, (2) 78. 340.)

**Hydroxylamine hypophosphite,  $(\text{NH}_2\text{OH})_2\text{H}_2\text{P}_2\text{O}_4$ .**

Very sol. in  $\text{H}_2\text{O}$  (Sabanejeff, Z. anorg. 1898, 17. 483.)

Sol. in  $\text{H}_2\text{O}$  and absolute alcohol. Insol. in ether. (Hofmann and Kohlschütter, Z. anorg. 1898, 16. 469.)

**Hydroxylamine potassium hypophosphite,  $(\text{H}_2\text{PO}_2)_2(\text{NH}_2\text{OH})_2\text{K}_2$ .**

Easily sol. in  $\text{H}_2\text{O}$ , decomp on heating; sol in hot abs. alcohol. (Hofmann and Kohlschütter, Z. anorg. 1898, 16. 468.)

**Hydroxylamine hypophosphate,  $(\text{NH}_2\text{OH})_2\text{H}_2\text{P}_2\text{O}_6$ .**

Easily sol in  $\text{H}_2\text{O}$ . (Sabanejeff, Z. anorg 1898, 17. 489.)

**Hydroxylamine iodide,  $\text{NH}_2\text{OH}, \text{HI}$ .**

Hygroscopic, sol in methyl alcohol. Very explosive (Wolfenstein and Groll, B. 1901, 34. 2419.)

**Dihydroxylamine iodide,  $(\text{NH}_2\text{OH})_2, \text{HI}$ .**

Deliquescent. More sol. in  $\text{H}_2\text{O}$ , methyl and ethyl alcohol than the tri compound. Is decomp. when recryst. from these solvents. Insol. in ether. (Dunstan, Chem. Soc. 1896, 69. 841.)

**Trihydroxylamine iodide,  $(\text{NH}_2\text{OH})_3, \text{HI}$ .**

Deliquescent in moist air. Sol. in  $\text{H}_2\text{O}$ , methyl and ethyl alcohol. Insol. in ether. (Dunstan.)

**Hydroxylamine nitrate,  $\text{NH}_2(\text{OH})\text{NO}_3$ .**

Very sol. in  $\text{H}_2\text{O}$  and absolute alcohol. (Lossen.)

**Hydroxylamine orthophosphate,  $(\text{NH}_2\text{OH})_3\text{PO}_4$ .**

Sl. sol. in cold  $\text{H}_2\text{O}$ . (Lossen.)

Only sl. sol. in  $\text{H}_2\text{O}$ . (Hofmann, A. 1899, 307. 330.)

Moderately sol. in  $\text{H}_2\text{O}$ . (Ross, Chem. Soc. 1906, 90, (2) 19.)

**Solubility in  $\text{H}_2\text{O}$** 

1 g of aqueous solution contains at

0°	10°
0.012	0.015 g hydroxylamine phosphate,
20°	30°
0.019	0.027 g. hydroxylamine phosphate,
40°	50°

60°	70°
0.077	0.102 g. hydroxylamine phosphate,
80°	90°
0.133	0.168 g hydroxylamine phosphate,

(Adams, Am. Ch. J. 1902, 28. 204.)

$(\text{NH}_2\text{OH})\text{H}_2\text{PO}_4$ . Hygroscopic. Aq. solution is decomp on heating. (Sabanejeff, B. 1897, 30. 287.)

**Hydroxylamine phosphite,  $(\text{NH}_2\text{OH})_2\text{HPO}_3$ .**

Sol in  $\text{H}_2\text{O}$  and absolute alcohol. (Hofmann and Kohlschütter, Z. anorg. 1898, 16. 467.)

$(\text{NH}_2\text{OH})\text{H}_2\text{PO}_3$ . Sol. in  $\text{H}_2\text{O}$ . Insol in alcohol (Sabanejeff, Chem. Soc. 1900, 78, (2), 14.)

**Hydroxylamine phosphite ammonia,  $(\text{NH}_2\text{OH})_2\text{H}_2\text{PO}_3, \text{NH}_3$ .**

Sol in  $\text{H}_2\text{O}$ . (Sabanejeff, Chem. Soc. 1900, 78, (2) 14.)

**Hydroxylamine sodium,  $\text{NaONH}_2$** 

Very hygroscopic. (de Bruyn, R. t. c. 1892, 11. 18.)

**Hydroxylamine sulphate,  $(\text{NH}_2\text{OH})_2\text{SO}_4$ .**

Easily sol in  $\text{H}_2\text{O}$ . Precipitated from concentrated aqueous solution by alcohol. (Lossen.)

Sol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in alcohol and ether. (Preibisch, J. pr. 1873, (2) 7. 480.)

Not deliquescent. Sol in  $\frac{1}{4}$  of its wt of  $\text{H}_2\text{O}$  at 20° (Divers and Haga, Chem. Soc. 1896, 69. 1665.)

1 g. of aqueous solution contains at	
-8°	0° +10°
0.307	0.329 0.366 g hydroxylamine sulphate,
20°	30° 40°
0.413	0.441 0.482 g. hydroxylamine sulphate,
50°	60° 90°
0.522	0.560 0.685 g. hydroxylamine sulphate.

(Adams, Am. Ch. J. 1902, 28. 203.)

Dry hydroxylamine sulphate is insol. in abs. and almost insol in 95% alcohol. (Adams.)

For double salts, see under sulphuric acid.  $\text{NH}_2\text{OH}, \text{H}_2\text{SO}_4$ . Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Divers, Chem. Soc. 1895, 67. 226.)

**Hydroxylamine tungstate,  $4\text{NH}_2\text{OH}, 3\text{WO}_3 + 3\text{H}_2\text{O}$ .**

Moderately sol. in  $\text{H}_2\text{O}$ . (Allen and Gottschalk, Am. Ch. J. 1902, 27. 338.)

# Hydroxylamine uranate, $\text{UO}_4(\text{NH}_2\text{O})_2 + \text{H}_2\text{O}$ .

Decomp. by heat. (Hofmann, Z. anorg. 1897, 15. 78.)

# Hydroxylamine uranate ammonia,

Decomp. by  $\text{H}_2\text{O}$  (Hofmann, Z. anorg. 1897, 15. 79.)

# Hydroxylamine metavanadate, $\text{VO}_3\text{N}_5\text{H}_{16}$

Decomp. by moisture. (Hofmann, Z. anorg. 1898, 16. 472.)

# Hydroxylamine metavanadate ammonia,

Easily decomp. by  $\text{H}_2\text{O}$  and  $\text{HCl}$  (Hofmann, Z. anorg. 1898, 16. 471.)

# Hydroxylamine monosulphonic acid,

"Sulphazidic acid" of Fremy

"Sulphidroxylamide acid" of Claus.

Sol in  $\text{H}_2\text{O}$ . Slowly decomp. on boiling. (Raschig, A. 241. 161.)

# Ammonium hydroxylamine monosulphonate,

(Sabanéjoff, Z. anorg. 1898, 17. 491.)

# Monobarium ———, $(\text{HONHSO}_3)_2\text{Ba} + \text{H}_2\text{O}$ .

Easily sol in  $\text{H}_2\text{O}$  (Divers and Haga, Chem. Soc. 55. 760.)

# Dibarium ———, $\text{Ba}(\text{HONSO}_3)_2\text{Ba} + \text{H}_2\text{O}$ .

Nearly insol in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . (Divers and Haga, Chem. Soc. 55. 760.)

# Potassium ———, $\text{HONH}(\text{SO}_3\text{K})$ .

"Potassium sulphidroxylamide" of Claus

"Potassium sulphazidate" of Fremy.

Sol. in cold  $\text{H}_2\text{O}$ . Easily sol. in hot  $\text{H}_2\text{O}$  without decomp. Insol. in alcohol. (Raschig, +  $\text{H}_2\text{O}$ . (Divers and Haga, Chem. Soc. 55. 760.)

# Hydroxylamine disulphonic acid,

"Disulphidroxazotic acid" of Claus

"Sulphazotic acid" of Fremy.

Not known in free state. (Raschig, A. 241. 161.)

# Barium hydroxylamine disulphonate,

Practically insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Divers, Chem. Soc. 1894, 65. 559.)

# Barium potassium ———.

Above salts are all ppts. (Divers, Chem. Soc. 1894, 65. 561.)

# Barium sodium hydroxylamine disulphonate,

Above salts are ppts. (Divers.)

# Potassium ———, $\text{HON}(\text{SO}_3\text{K})_2 + 2\text{H}_2\text{O}$ .

"Potassium disulphidroxylazotate" of Claus (A. 168. 75) Insol. in cold  $\text{H}_2\text{O}$ .

Very unstable. Very difficultly sol. in  $\text{H}_2\text{O}$ , more easily in dil  $\text{KOH} + \text{Aq}$ . (Raschig, A. 241. 161.)

$\text{HON}(\text{SO}_3\text{K})_2, \text{KON}(\text{SO}_3\text{K})_2 + \text{H}_2\text{O}$ . True composition of potassium sulphazotate of Fremy. (Divers and Haga, Chem. Soc. 1900, 77. 432.)

# Potassium sodium ———.

$3\text{K}_2\text{NS}_2\text{O}_7, 2\text{Na}_2\text{NS}_2\text{O}_7 + 2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

$6\text{K}_2\text{NS}_2\text{O}_7, \text{Na}_2\text{NS}_2\text{O}_7, \text{H}_2\text{NS}_2\text{O}_7 + 20\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$

$\text{K}_2\text{Na}_2\text{H}_4(\text{NS}_2\text{O}_7)_2 + 5\text{H}_2\text{O}$ . Less sol. in  $\text{H}_2\text{O}$  than the others.

$\text{K}_2\text{Na}_2\text{H}_4(\text{NS}_2\text{O}_7)_2 + 9\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ .

$\text{KNa}_2\text{H}(\text{NS}_2\text{O}_7)_2 + \text{H}_2\text{O}$ . Readily sol. in  $\text{H}_2\text{O}$ .

$\text{K}_2\text{NaH}_2(\text{NS}_2\text{O}_7)_2 + 2\text{H}_2\text{O}$ . Moderately sol. in  $\text{H}_2\text{O}$ .

$\text{KNaHNS}_2\text{O}_7 + 3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

(Divers, Chem. Soc. 1894, 65. 552.)

# Potassium strontium ———.

Ppt. (Divers.)

# Potassium hydroxylamine disulphonate nitrite, $\text{HON}(\text{SO}_3\text{K})_2, \text{KNO}_2$ .

Very sl. in  $\text{H}_2\text{O}$  (Divers and Haga, Chem. Soc. 1900, 77. 433.)

$\text{K}_2\text{H}(\text{NS}_2\text{O}_7)_2, 3\text{KNO}_2 + \text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . (Divers and Haga.)

$2\text{KON}(\text{SO}_3\text{K})_2, \text{KNO}_2 + 1.4\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  which decomp. it into its constituent salts (Divers and Haga.)

$+ 6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  which decomp. it into its constituent salts (Divers and Haga.)

$2\text{K}_2\text{H}(\text{NS}_2\text{O}_7)_2, 7\text{KNO}_2 + 3\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Divers and Haga.)

$3\text{K}_2\text{H}(\text{NS}_2\text{O}_7)_2, 7\text{KNO}_2$ . Decomp. by  $\text{H}_2\text{O}$ . (Divers and Haga.)

# Potassium hydroxylamine disulphonate sodium chloride, $5\text{K}_2\text{HNS}_2\text{O}_7, 8\text{NaCl} + 3\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Divers, Chem. Soc. 1894, 65. 551.)

**Sodium hydroxylamine disulphonate,**  
 $\text{HON}(\text{SO}_2\text{Na})_2$ .

Sol. in somewhat more than its own wt. of  $\text{H}_2\text{O}$  at  $14^\circ$ . (Divers, Chem. Soc. 1891, 65. 546.)

$\text{Na}_2\text{HNS}_2\text{O}_7$ ,  $2\text{Na}_2\text{NS}_2\text{O}_7 + 3\text{H}_2\text{O}$ . Sol. in less than 1.5 pts  $\text{H}_2\text{O}$  at  $14^\circ$ . (Divers)

**Hydroxylamine isomonosulphonic acid,**  
 $\text{NH}_2$ , O,  $\text{SO}_2$ , OH.

Very hygroscopic. Sol. in water; sol. in alcohol. (Sommer, B. 1914, 47. 1226.)  
[Compare Raschig, A. 1887, 241. 161.]

**Hydroxylamine isodisulphonic acid.****Ammonium hydroxylamine isodisulphonate,**  
 $(\text{SO}_2\text{NH}_2)_2\text{ONH}(\text{SO}_2\text{NH}_2)$ .

3 pts. are sol. in 2 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . Apt to form supersat solutions. (Haga, Chem. Soc. 1906, 89. 246.)

**Dipotassium ———,  $\text{K}_2\text{HS}_2\text{O}_7\text{N}$ .**

Only sl. sol. in cold  $\text{H}_2\text{O}$ . Easily sol. in boiling  $\text{H}_2\text{O}$ . Decomp. by hot dil HCl. (Raschig, B. 1906, 39. 246.)

6.44 pts. are sol in 100 pts  $\text{H}_2\text{O}$  at  $16.4^\circ$ .  
7.18 " " " " 100 "  $\text{H}_2\text{O}$  "  $17.8^\circ$ .  
8.05 " " " " 100 "  $\text{H}_2\text{O}$  "  $20^\circ$ .

(Haga, Chem. Soc. 1906, 39. 243.)

**Tripotassium ———,  $(\text{SO}_2\text{K})\text{ONK}(\text{SO}_2\text{K}) + 2\text{H}_2\text{O}$ .**

Very sol in  $\text{H}_2\text{O}$ ; ppt. by alcohol. (Haga.)

**Disodium ———,  $(\text{SO}_2\text{Na})\text{ONa}(\text{SO}_2\text{Na})$ .**

Very sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol by which it is ppt from aqueous solution. (Haga.)

**Trisodium ———,  $(\text{SO}_2\text{Na})\text{ONNa}(\text{SO}_2\text{Na}) + 2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ , ppt. by alcohol. (Haga.)  
 $+ 3\text{H}_2\text{O}$ . Sol. in 1.3 pts  $\text{H}_2\text{O}$  at  $20^\circ$ . Less sol in  $\text{NaOH} + \text{Aq}$ . (Divers, Chem. Soc. 1894, 65. 546.)

**Hydroxylamine trisulphonic acid.****Ammonium hydroxylamine trisulphonate,**  
 $2(\text{SO}_2\text{NH}_2)\text{ON}(\text{SO}_2\text{NH}_2)_2 + 3\text{H}_2\text{O}$ .

Sol. in 0.61 pts  $\text{H}_2\text{O}$  at  $16^\circ$ . (Haga, Chem. Soc. 1904, 85. 84.)

**Potassium ———,  $2(\text{SO}_2\text{K})\text{ON}(\text{SO}_2\text{K})_2 + 3\text{H}_2\text{O}$ .**

1 pt. is sol. in 25.37 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Haga.)

**Sodium ———,  $(\text{SO}_2\text{Na})\text{ON}(\text{SO}_2\text{Na})_2 + 2\text{H}_2\text{O}$ .**

Sol. in 2.84 pts.  $\text{H}_2\text{O}$  at  $21.5^\circ$ .

**Dihydroxylamine sulphonic acid,**  
 $(\text{HO})_2\text{N}(\text{SO}_3\text{H})$ .

"Sulphazinous acid" of Fremy.  
Known only in its salts. (Raschig, A. 241. 161.)

**Potassium *d*-hydroxylamine sulphonate,**  
 $(\text{HO})_2\text{NSO}_3\text{K}$ .

Not obtained in pure state; forms basic salt  $\text{KO} \cdot \text{NSO}_3\text{K}$ , which is quite sol. in  $\text{H}_2\text{O}$ , and corresponds to "sulfazite de potasse" of Fremy (A. ch (3) 15. 421).  
Sol in  $\text{H}_2\text{O}$ ; msol. in alcohol and ether. (Fremy.)

**Hydroxylidoplatinamine sulphate,**  
 $(\text{OH})\text{IPt}(\text{NH}_4)_2\text{SO}_4 + \text{H}_2\text{O}$ .

Very sl sol, even in boiling  $\text{H}_2\text{O}$ . (Carl-gren, Sv. V. A. F. 47. 312.)

**Hydroxylonitratoplatinamine nitrate,**

Sl. sol in cold, more easily in hot  $\text{H}_2\text{O}$ .  
Very sl sol in  $\text{H}_2\text{O}$  containing  $\text{HNO}_3$ . (Cleve.)

**——— pyrophosphate,**

Very sl sol in  $\text{H}_2\text{O}$ . (Cleve.)

**Hydroxyloptinamine hydroxide,**  
 $(\text{OH})_2\text{Pt}(\text{NH}_2\text{OH})_2$ .

Insol in  $\text{H}_2\text{O}$ . Easily sol. in dil acids, even  $\text{HCl} + \text{H}_2\text{O}_2 + \text{Aq}$ . Not decomp. by boiling  $\text{KOH} + \text{Aq}$ . (Gerhardt, Compt. Chem. 1849. 490.)

**Hydroxyloptinamine nitrate,**  
 $(\text{OH})_2\text{Pt}(\text{NH}_2\text{NO}_2)_2 + 2\text{H}_2\text{O}$ .

Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ ; not attacked by cold  $\text{HCl} + \text{Aq}$ . (Cleve.)

**——— oxalate,  $(\text{OH})_2\text{Pt}(\text{NH}_2)_2\text{C}_2\text{O}_4 + \text{H}_2\text{O}$ .**

Sol. in hot  $\text{H}_2\text{O}$ .

**——— sulphate,  $(\text{OH})_2\text{Pt}(\text{NH}_4)_2\text{SO}_4 + \text{H}_2\text{O}$ .**  
Difficultly sol. in  $\text{H}_2\text{O}$ . (Cleve.)**Hydroxyloptinamine bromide,**  
 $(\text{OH})_2\text{Pt}(\text{NH}_2)_2\text{Br}_2$ .

Sl. sol., even in boiling  $\text{H}_2\text{O}$ . (Carl-gren, Sv. V. A. F. 47. 320.)

**——— chloride,  $(\text{OH})_2\text{Pt}(\text{NH}_4)_2\text{Cl}_2$ .**

Sol. in 206 pts. cold, and 49 pts. boiling  $\text{H}_2\text{O}$ . (Carl-gren, Sv. V. A. F. 47. 316.)

**——— chromate,  $(\text{OH})_2\text{Pt}(\text{NH}_4)_2\text{Cr}_2\text{O}_7$ .**

Very sl. sol. in cold or hot  $\text{H}_2\text{O}$ . (Carl-gren, Sv. V. A. F. 47. 319.)

**Hydroxyloplatindiamine iodide,**  
 $(\text{OH})_2\text{Pt}(\text{NH}_3)_4\text{I}_2$ .

Sl. sol. in hot or cold  $\text{H}_2\text{O}$ . (Carligen)

— **nitrate,**  $(\text{OH})_2\text{Pt}(\text{NH}_3)_4(\text{NO}_3)_2$ .

Sl. sol. in cold, moderately sol. in hot  $\text{H}_2\text{O}$ .  
 (Gerhardt, A 76. 315)

Sol. in 343 pts. cold, and 38 pts. boiling  
 $\text{H}_2\text{O}$  (Carligen, Sv. V. A. F. 47. 318.)

— **nitrite,**  $(\text{OH})_2\text{Pt}(\text{NH}_3)_4(\text{NO}_2)_2$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Carligen.)

— **sulphate,**  $(\text{OH})_2\text{Pt}(\text{NH}_3)_4\text{SO}_4$ .

Very sl. sol. in boiling  $\text{H}_2\text{O}$ . (Cleve.)  
 $+4\text{H}_2\text{O}$ . Efflorescent. (Carligen, Sv. V.  
 A. F. 47. 313)

**Hydroxyloplatindiamine nitrate,**

Very easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Hydroxyloplatindiamine nitrate,**

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve)

— **sulphate,**

Sol. in hot  $\text{H}_2\text{O}$ .

**Hydroxyloplatindiamine chloride,**

Extremely sl. sol. in  $\text{H}_2\text{O}$ .

— **dichromate,**  $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_5)_4(\text{Cr}_2\text{O}_7)_2$ .

Ppt (Cleve)

— **nitrate,**  $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_5)_4(\text{NO}_3)_4$ .

Very sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .  
 (Cleve.)

— **phosphate,**  $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_5)_4(\text{PO}_4\text{H})_2$ .

Ppt

— **sulphate,**  $(\text{OH})_2\text{Pt}_2(\text{N}_2\text{H}_5)_4(\text{SO}_4)_2 + 2\text{H}_2\text{O}$

Ppt. Nearly insol. in  $\text{H}_2\text{O}$ .

**Hydroxylosulphatoplatindiamine**

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve)

— **chloride,**

Moderately sol. in cold, very sol. in hot  
 $\text{H}_2\text{O}$ .

**Hydroxylosulphatoplatindiamine chloroplati-**  
**nate,**

Ppt.

— **chromate,**

Sl. sol. in  $\text{H}_2\text{O}$ .

— **dichromate,**  $\left[ (\text{OH})\text{Pt}(\text{N}_2\text{H}_5)_2 \begin{array}{c} \text{SO}_4 \\ \text{SO}_4 \end{array} \right]_2 \text{Cr}_2\text{O}_7$ .

Sl. sol. in  $\text{H}_2\text{O}$ .

— **nitrate,**  $(\text{OH})\text{Pt}(\text{N}_2\text{H}_5)_2\text{NO}_3$ .

Sol. in hot  $\text{H}_2\text{O}$ .

— **sulphate,**

Sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Hypoantimonic acid.**

**Calcium hypoantimonate (?)**,  $\text{Ca}_2\text{Sb}_2\text{O}_4$ .

Min. Romeite. Insol. in acids.

**Potassium hypoantimonate**,  $\text{K}_2\text{Sb}_2\text{O}_4$ .

Sol. in hot  $\text{H}_2\text{O}$ . Sol. in 425 pts boiling  
 $\text{H}_2\text{O}$  (Brandes) Sol. in boiling  $\text{KOH} + \text{Aq}$   
 (Berzelius).

$\text{K}_2\text{Sb}_2\text{O}_4$ . Ppt.

**Hypoboric acid.**

**Sodium hypoborate**,  $\text{NaOBH}_4$ .

Deliquescent, decomp. in aq. solution at  
 room temp. Decomp. by acids. Sl. sol. in  
 alcohol with decomp. (Stock, B. 1914, 47.  
 821.)

**Hypobromous acid**,  $\text{HBrO}$ .

Known only in aqueous solution.

Solution containing 6.21 pts Br as  $\text{HBrO}$   
 in 100 cem  $\text{H}_2\text{O}$  decomposes at  $30^\circ$ . If dilute  
 solution is distilled in vacuo, an acid contain-  
 ing 0.736 pt. Br as  $\text{HBrO}$  in 100 cem is ob-  
 tained at first, but the distillate slowly grows  
 weaker. Dil. solution, stable at ordinary  
 temp., decomp by heating over  $60^\circ$ . (Dancer  
 A. 126. 237.)

**Barium hypobromite.**

Known only in solution

**Calcium hypobromite bromide.**

Deliquescent, and sol in  $H_2O$  with partial decomp. (Beilchus.)

**Potassium hypobromite,  $KBrO$ .**

Known only in solution.

**Sodium hypobromite.**

Known only in solution.

**Strontium hypobromite.**

Known only in solution.

**Hypochlorous acid,  $HClO$ .**

Miscible with  $H_2O$ . Decomposes at  $0^\circ$  in the dark, more rapidly at higher temp. or in light. The stronger the solution the more rapid the decomposition. Moderately strong acid may be distilled without any considerable decomp., a stronger acid distilling over at first, and afterwards an acid weaker than the original acid. Very conc. or very dil. acids decomp. by distillation.

**Ammonium hypochlorite.**

Known only in aqueous solution, which decomposes at once

**Barium hypochlorite.**

Known only in solution

**Calcium hypochlorite,  $Ca(OCl)_2 + 4H_2O$ .**

Deliquescent, and sol in  $H_2O$ . (Kinzett, Chem. Soc. (2) 13. 404.)

**Calcium hypochlorite chloride, etc. (bleaching powder),  $Ca(OCl)_2$ ,  $CaCl_2$ ,  $Ca(OH)_2 + H_2O$ .**

Not deliquescent. Sol. in  $H_2O$ . Alcohol does not dissolve out  $CaCl_2$ . Sol. in 20 pts.  $H_2O$  with a slight residue.

Correct formula is  $CaOCl_2$  (Lunge and Schappi; Kraut, A. 214. 354),  $Ca \overset{O}{\underset{OH}{|}} Cl$  (Stahlschmidt, B. 8. 899),  $CaOCl$ ,  $Cl$  (Oding).

$CaCl_2$  is dissolved out by alcohol. Formula =  $2Ca \overset{OH}{\underset{OCl}{|}} Cl + 2H_2O$ . (Dreyfuss, Bull. Soc. (2) 41. 600.)

**Didymium hypochlorite,  $D_2(OCl)_2$ .**

Difficultly sol. in  $H_2O$ . Easily sol. in acids. (Frerichs and Smith, A. 191. 348.)

**Lanthanum hypochlorite,  $La(OCl)_2$ .**

Easily sol. in  $H_2O$ . (Frerichs and Smith.)

**Lithium hypochlorite,  $LiClO$ .**

Known only in solution. (Kraut, A. 1882, 214. 356.)

**Magnesium hypochlorite.**

Known only in solution.

**Potassium hypochlorite,  $KClO$ .**

Known only in solution.

**Silver hypochlorite,  $AgClO$ .**

Very sol. in  $H_2O$ , and decomp. very quickly. (Sta., Acad. R. de Belg. 35. 103.)

**Sodium hypochlorite,  $NaClO$ .**

Known only in solution

**Hypoiodic acid,  $I_2O_4$ .**

See Iodine tetroxide.

**Hypoiodous acid,  $HOI$ .**

Known only in solution which decomp. on standing. (Taylor, C. N. 1897, 76. 97.)

**Calcium hypiodite iodide,  $Ca(OI)_2$ ,  $CaI_2$ .**

Not very unstable (Lunge and Shoch, B. 15. 1883.)

**Hyponitric acid,  $N_2O_4$ .**

See Nitrogen tetroxide.

**Hyponitrous acid,  $HNO$ , or better  $H_2N_2O_2$ .**

Known only in aqueous solution. Solution is quite stable (van der Plaats, B. 10. 1507.)

Very deliquescent, sol. in  $H_2O$  and alcohol; sol. in ether, chloroform, benzene, sl. sol. in petroleum ether. (Hantzsch and Kaufmann, A. 1896, 292. 323.)

**Ammonium hyponitrite,  $(NH_4)_2N_2O_2$ .**

Sol. in  $H_2O$  and in alcohol. (Jackson, C. N. 1893, 68. 266.)

**Ammonium hydrogen hyponitrite,  $NH_4HN_2O_2$ .**

Easily sol. in  $H_2O$ . The solid salt slowly decomp. at ord temp. into ammonia,  $H_2O$  and  $N_2O$ . (Hantzsch and Kaufmann, A. 1896, 292. 328.)

**Barium hyponitrite,  $BaN_2O_2$ .**

Nearly insol. in, but gradually decomp. by  $H_2O$ . Sol. in conc. acids with evolution of  $N_2O$ , but sol. in dil.  $HC_2H_3O_2 + Aq$  without decomp. (Zorn, B. 15. 1007.)

+  $4H_2O$ . Sl. sol. in  $H_2O$ ; insol. in alcohol and ether. (Kirschner, Z. anorg. 1898, 16. 424.)

+  $xH_2O$ . Efflorescent. (Maquenne, C. R. 108. 1303.)

**Barium hydrogen hyponitrite,  $BaH_2(N_2O_2)_2$ .**

Easily sol. in  $H_2O$ . (Zorn, B. 1882, 15. 1011.)

**Calcium hyponitrite,  $CaN_2O_2 + 4H_2O$ .**

Nearly insol. in  $H_2O$ ; easily sol. in dil. acids. (Maquenne, C. R. 108. 1303.)

Sl. sol. in  $H_2O$ , insol. in alcohol. (Kirschner, Z. anorg. 1898, 16. 426.)

**Cupric hyponitrite**, basic,  $\text{Cu}_2\text{N}_2\text{O}_3$ ,  $\text{Cu}(\text{OH})_2$

Insol in  $\text{H}_2\text{O}$ ; not decomp. by hot  $\text{H}_2\text{O}$ . Sol in dil acids and in ammonia. Decomp by  $\text{NaOH}$ . (Divers, Chem. Soc. 1899, 75. 121.)

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil acids and in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Kirschner, Z. anorg. 1898, 16. 430.)

**Cuprous hyponitrite**,  $\text{Cu}_2\text{N}_2\text{O}_3 + 2\text{H}_2\text{O}$

Ppt. (Kolotow, C. C. 1891, I. 1859.)

Cannot be formed. (Divers, Chem. Soc. 1899, 75. 121.)

**Lead hyponitrite**, basic,  $\text{PbN}_2\text{O}_3$ ,  $\text{PbO}$ .

Insol in  $\text{H}_2\text{O}$ . Sol. in dil acids from which it may be pptd. by  $\text{NaOH} + \text{Aq}$  or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Kirschner, Z. anorg. 1898, 16. 430.)

**Lead hyponitrite**,  $\text{PbN}_2\text{O}_3$ .

Insol in  $\text{H}_2\text{O}$ ; sol in dil acids from which it may be pptd. by  $\text{NaOH} + \text{Aq}$  or  $\text{NH}_4\text{OH} + \text{Aq}$  (Kirschner)

**Mercuric hyponitrite**, basic,  $3\text{HgO}$ ,  $\text{HgN}_2\text{O}_3 + 3\text{H}_2\text{O}$ .

Ppt. Sl sol even in boiling dil.  $\text{HNO}_3$ . Scarcely sol in conc. very sol. in warm dil  $\text{HCl}$ . (Ray, Chem. Soc. 1897, 71. 349)

**Mercurous hyponitrite**,  $\text{Hg}_2\text{N}_2\text{O}_3$ .

Sol. in dil.  $\text{HNO}_3$  with slow decomp. (Ray, Chem. Soc. 1907, 91. 1404.)

**Mercuric hyponitrite**,  $\text{HgN}_2\text{O}_3$

Sol. in  $\text{HCl}$ , and in  $\text{NaCl} + \text{Aq}$ .

Sl. sol. in very dil alkali. (Divers, Chem. Soc. 1899, 75. 119.)

**Potassium hyponitrite**,  $\text{K}_2\text{N}_2\text{O}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (van der Plaats.)

Stable when dry

Sol. in 90% alcohol, and sl. sol. in abs alcohol. (Divers, Chem. Soc. 1899, 75. 103.)

**Silver hyponitrite** (nitrosyl silver),

$\text{Ag}_2\text{N}_2\text{O}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil.  $\text{HNO}_3 + \text{Aq}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

Decomp. by  $\text{H}_3\text{PO}_4$ ,  $\text{H}_2\text{S}$ , and boiling  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (van der Plaats.)

Insol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Divers, C. N. 23. 206)

Sol in dil  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$  and in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ ; decomp. by  $\text{HCl}$ . (Kirschner, Z. anorg. 1898, 16. 431.)

**Sodium hyponitrite**,  $\text{Na}_2\text{N}_2\text{O}_3 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (van der Plaats.)

**Strontium hyponitrite**,  $\text{SrN}_2\text{O}_3$

Easily sol. in  $\text{H}_2\text{O}$ . (Roederer, Bull. Soc. 1906, (3) 35. 715.)

+  $5\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ ; easily sol.

in dil. acids. (Maquenne, C. R. 108. 1303.)

Sl. sol in  $\text{H}_2\text{O}$ , insol in alcohol (Kirschner, Z. anorg. 1898, 16. 426.)

**Hypophosphomolybdic acid**,  $\text{Mo}_2\text{O}_5$ ,

$7\text{H}_2\text{PO}_4 + 31\text{H}_2\text{O}$ .

Very sl sol. in cold  $\text{H}_2\text{O}$ . Scarcely sol. in cold dil  $\text{H}_2\text{SO}_4$ . Sol in cold conc.  $\text{H}_2\text{SO}_4$ .

Sol. in warm conc.  $\text{HCl}$ . Warm  $\text{HNO}_3$  oxidizes forming clear solution. (Mawrow, Z. anorg. 1901, 28. 164.)

**Ammonium hypophosphomolybdate**,

$2(\text{NH}_4)_2\text{O}$ ,  $2\text{H}_2\text{PO}_4$ ,  $8\text{MoO}_3 + 2\text{H}_2\text{O}$ .

Not very sol in cold  $\text{H}_2\text{O}$ , readily in hot  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 3. 402.)

**Hypophosphoric acid**,  $\text{H}_4\text{P}_2\text{O}_6$ .

Very deliquescent, and sol. in the least amount of  $\text{H}_2\text{O}$ . (Joly, C. R. 101. 1058.)

100 cc.  $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq}$ , containing 4.1%  $\text{P}_2\text{O}_5$  has sp. gr. = 1.036.

100 cc.  $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq}$ , containing 12.3%  $\text{P}_2\text{O}_5$  has sp. gr. = 1.122.

(Salzer, A. 1878, 194. 28.)

+  $\text{H}_2\text{O}$  (Sanger, A. 232. 14.)

Does not exist. (Joly.)

+  $2\text{H}_2\text{O}$  Appears to be the only stable hydrate between  $0^\circ$  and  $60^\circ$ .

Singer's hydrate,  $\text{H}_4\text{P}_2\text{O}_6 + \text{H}_2\text{O}$ , and Joly's anhydride could not be obtained. (Rosenheim, B. 1908, 41. 2711)

**Aluminum hypophosphate**,  $\text{Al}_3(\text{P}_2\text{O}_6)_4 +$

$23\text{H}_2\text{O}$ .

Easily sol in mineral acids. Sol in  $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ . (Palm, Dissertation, Rostock, 1890.)

**Ammonium hypophosphate**,  $(\text{NH}_4)_2\text{P}_2\text{O}_6 +$

$\text{H}_2\text{O}$

Sol. in 30 pts.  $\text{H}_2\text{O}$ . (Salzer, A. 194. 32.)

**Ammonium hydrogen hypophosphate**,

$(\text{NH}_4)_2\text{H}_2\text{P}_2\text{O}_6$ .

Sol. in 14 pts cold, and 4 pts. boiling  $\text{H}_2\text{O}$ . (Salzer, A. 194. 32.)

**Ammonium trihydrogen hypophosphate**,

$\text{NH}_4\text{H}_3\text{P}_2\text{O}_6$ .

Sol. in  $\text{H}_2\text{O}$  (Salzer, A. 211. 1.)

**Ammonium magnesium hypophosphate**,

$(\text{NH}_4)_2\text{MgP}_2\text{O}_6 + 6\text{H}_2\text{O}$ .

Precipitate. (Salzer, A. 232. 114.)

**Barium hypophosphate**,  $\text{Ba}_2\text{P}_2\text{O}_6$ .

Very slightly sol, but not wholly insol. in  $\text{H}_2\text{O}$ . Very slightly sol in acetic acid, but

more soluble in hydrochloric, and hypophosphoric acids. (Salzer, A. 194. 34.)

**Barium hydrogen hypophosphate**,  $\text{BaH}_2\text{P}_2\text{O}_6 +$

$2\text{H}_2\text{O}$

Soluble in about 1000 pts  $\text{H}_2\text{O}$ . Solution decomposes by heating. (Salzer, A. 194. 34.)

**Bismuth hypophosphate**,  $\text{Bi}_4(\text{P}_2\text{O}_6)_3 + 8\frac{1}{2}\text{H}_2\text{O}$ .

Completely sol. in  $\text{HCl} + \text{Aq}$ , also in warm  $\text{HNO}_3 + \text{Aq}$ . Insol. in boiling dil  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Sl. sol. by long boiling with conc.  $\text{H}_2\text{SO}_4$ . (Palm, Rostock, 1890.)

**Cadmium hypophosphate**,  $\text{Cd}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil acids (Draue, B. 21. 3403.)

**Cadmium potassium hydrogen hypophosphate**,  $\text{CdK}_2(\text{H}_2\text{P}_2\text{O}_6)_2 + 2\frac{1}{2}\text{H}_2\text{O}$   
(Bausa, Z. anorg. 1894, 6. 147.)

**Cadmium sodium hypophosphate**,  $\text{CdNa}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. thereby. Sol. in dil. acids (Draue.)

**Calcium hypophosphate**,  $\text{Ca}_3\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in  $\text{HCl} + \text{H}_2\text{O}_2$ ; easily sol. in  $\text{H}_2\text{P}_2\text{O}_6$ , or  $\text{HCl} + \text{Aq}$ . (Salzer, A. 194. 36.)

**Calcium hydrogen hypophosphate**,  
 $\text{CaH}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$ .

Sol. in 60 pts.  $\text{H}_2\text{O}$  (Salzer, A. 232. 114)

**Chromic hypophosphate**,  $\text{Cr}_4(\text{P}_2\text{O}_6)_3 + 34\text{H}_2\text{O}$ .

Sol. in  $\text{HCl} + \text{Aq}$  on sl. warming, also in  $\text{HNO}_3 + \text{Aq}$ . Not completely sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , but completely sol. in conc.  $\text{H}_2\text{SO}_4$ . (Palm, Dissertation, Rostock, 1890.)

**Cobaltous hypophosphate**,  $\text{Co}_2\text{P}_2\text{O}_6 + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids (Draue, B. 21. 3403.)

**Cobaltous potassium hypophosphate**,  
 $\text{CoK}_3\text{P}_2\text{O}_6 + 5\text{H}_2\text{O}$ .

Ppt. (Bausa, Z. anorg. 1894, 6. 156)

**Cobaltous potassium hydrogen hypophosphate**,  $\text{CoH}_2\text{P}_2\text{O}_6 \cdot 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$

**Cobaltous sodium hypophosphate**,  $\text{CoNa}_2\text{P}_2\text{O}_6 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. thereby. Sol. in dil. acids. (Draue, B. 21. 3403)

**Cupric hypophosphate**,  $\text{Cu}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil. acids. (Draue, B. 21. 3403.)

Ppt. (Bausa, Z. anorg. 1894, 6. 145.)

**Cupric potassium hydrogen hypophosphate**,  
 $\text{CuH}_2\text{P}_2\text{O}_6 \cdot 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$ .

Ppt. (Bausa, Z. anorg. 1894, 6. 152.)

**Glucinum hypophosphate**,  $\text{Gl}_2\text{P}_2\text{O}_6 + 7\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Moderately sol. in all mineral acids. (Palm, Rostock, 1890.)  
 $+ 3\text{H}_2\text{O}$ . (Rammelsberg.)

**Iron (ferrous) hypophosphate**,  $\text{Fe}_2\text{P}_2\text{O}_6 + 4\frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in cold  $\text{HCl} + \text{Aq}$ . Decomp. by hot  $\text{HNO}_3 + \text{Aq}$  into  $\text{Fe}_2(\text{P}_2\text{O}_7)_3$ . Insol. in  $\text{HNO}_3 + \text{Aq}$ . Insol. in boiling dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Somewhat sol. in cold  $\text{H}_2\text{SO}_4$ , but a ppt. separates out on heating. (Palm, Rostock, 1890.)

**Iron (ferric) hypophosphate**,  $\text{Fe}_4(\text{P}_2\text{O}_6)_3 + 20\text{H}_2\text{O}$ .

Easily sol. in  $\text{HCl} + \text{Aq}$ . Wholly insol. in  $\text{HNO}_3$ , and dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Completely sol. in conc.  $\text{H}_2\text{SO}_4$  by warming a short time, but a ppt. separates out on boiling. (Palm.)

**Lead hypophosphate**,  $\text{Pb}_2\text{P}_2\text{O}_6$ .

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl} + \text{H}_2\text{O}_2$ , or  $\text{H}_2\text{P}_2\text{O}_6 + \text{Aq}$ ; sol. in dil.  $\text{HNO}_3 + \text{Aq}$  (Salzer)

**Lithium hypophosphate**,  $\text{Li}_4\text{P}_2\text{O}_6 + 7\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . (Salzer, A. 194. 28.) Sol. in 120 pts.  $\text{H}_2\text{O}$  at ord. temp. (Rammelsberg, J. pt. (2) 45. 153)

$\text{Li}_2\text{H}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$  Deliquescent. (Rammelsberg.)

**Magnesium hypophosphate**,  $\text{Mg}_2\text{P}_2\text{O}_6 + 12\text{H}_2\text{O}$ .

Sol. in 15,000 pts.  $\text{H}_2\text{O}$ ; sl. sol. in acetic, easily in hypophosphoric, or mineral acids. (Salzer, A. 232. 114.)  
 $+ 24\text{H}_2\text{O}$  (Rammelsberg.)

**Magnesium hydrogen hypophosphate**,  
 $\text{MgH}_2\text{P}_2\text{O}_6 + 4\text{H}_2\text{O}$

Sol. in 200 pts.  $\text{H}_2\text{O}$ . (Salzer, A. 232. 114.)

**Manganese hypophosphate**,  $\text{Mn}_2\text{P}_2\text{O}_6 + 2\frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in mineral acids, insol. in acetic acid. (Palm, Dissertation, Rostock, 1890.)

**Manganous potassium hydrogen hypophosphate**,  $\text{MnH}_2\text{P}_2\text{O}_6 \cdot \text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 3\text{H}_2\text{O}$

Ppt. (Bausa, Z. anorg. 1894, 6. 150.)

**Manganous sodium hypophosphate**,  $\text{Mn}_2\text{P}_2\text{O}_6 \cdot \text{Na}_4\text{P}_2\text{O}_6 + 11\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , sol. in mineral acids. (Palm.)

**Nickel hypophosphate**,  $\text{Ni}_2\text{P}_2\text{O}_6 + 12\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; Sol. in dil. acids (Draue, B. 21. 3401)

**Nickel potassium hypophosphate**,  
 $\text{NiK}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$ .

Ppt. (Bausa, Z. anorg. 1894, 6. 155.)

**Nickel potassium hydrogen hypophosphate**,  
 $\text{NiH}_2\text{P}_2\text{O}_6 \cdot 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$ .

Ppt (Bausa, Z. anorg. 1894, 6. 144.)

**Nickel sodium hypophosphate**,  $\text{NiNa}_2\text{P}_2\text{O}_6 + 12\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , but decomp. thereby. Easily sol. in dil. acids. (Draue)

**Potassium hypophosphate**,  $\text{K}_4\text{P}_2\text{O}_6 + 8\text{H}_2\text{O}$

Sol in  $\frac{1}{4}$  pt.  $\text{H}_2\text{O}$ , insol in alcohol. (Salzer, A. 211. 1.)

**Potassium hydrogen hypophosphate**,  $\text{K}_3\text{HP}_2\text{O}_6 + 3\text{H}_2\text{O}$ .

Sol. in  $\frac{1}{2}$  pt.  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)

**Potassium dihydrogen hypophosphate**,  $\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 3\text{H}_2\text{O}$ , and  $+2\text{H}_2\text{O}$ .

Sol. in 3 pts. cold, and 1 pt. boiling  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)

**Potassium trihydrogen hypophosphate**,  $\text{KH}_3\text{P}_2\text{O}_6$ .

Sol. in  $1\frac{1}{2}$  pts. cold, and  $\frac{1}{2}$  pt. hot  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)

**Potassium pentahydrogen dihypophosphate**,  $\text{K}_3\text{H}_5(\text{P}_2\text{O}_6)_2 + 2\text{H}_2\text{O}$ .

Sol. in  $2\frac{1}{2}$  pts. cold, and  $\frac{1}{2}$  pt. boiling  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)

**Potassium sodium hypophosphate**,  $\text{Na}_2\text{K}_2\text{P}_2\text{O}_6 + 9\text{H}_2\text{O}$

Sol. in about 25 pts. cold, and 3 pts. hot  $\text{H}_2\text{O}$ . (Bausa, Z. anorg. 1894, 6. 158.)

**Potassium zinc hydrogen hypophosphate**,  $\text{ZnH}_2\text{P}_2\text{O}_6 \cdot 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$ .

Ppt. (Bausa, Z. anorg. 1894, 6. 148.)

**Silver hypophosphate**,  $\text{Ag}_3\text{P}_2\text{O}_6$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HNO}_3$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . Very sl. sol. in  $\text{H}_3\text{P}_2\text{O}_6 + \text{Aq}$  (Salzer, A. 232. 114.)

**Sodium hypophosphate**,  $\text{Na}_4\text{P}_2\text{O}_6 + 10\text{H}_2\text{O}$ .

Sol. in about 30 pts. cold, much more easily in hot  $\text{H}_2\text{O}$ . (Salzer)

**Sodium hydrogen hypophosphate**,  $\text{Na}_3\text{HP}_2\text{O}_6 + 9\text{H}_2\text{O}$ .

Sol. in 22 pts.  $\text{H}_2\text{O}$ . (Salzer)

**Sodium dihydrogen hypophosphate**,  $\text{Na}_2\text{H}_2\text{P}_2\text{O}_6 + 6\text{H}_2\text{O}$ .

Sol. in 45 pts. cold, and 5 pts. boiling  $\text{H}_2\text{O}$ . More sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Insol. in alcohol. (Salzer, A. 187. 331.)

**Sodium trihydrogen hypophosphate**,  $\text{NaH}_3\text{P}_2\text{O}_6$ .

Sol. in  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)

**Sodium trihydrogen dihypophosphate**,

Very efflorescent. Sol. in 15 pts. cold  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)

**Thallium hypophosphate**,  $\text{Tl}_4\text{P}_2\text{O}_6$

Sl. sol. in  $\text{H}_2\text{O}$ . Decomp. in sunlight. (Joly, C. R. 1894, 118. 650.)

**Thallium hydrogen hypophosphate**,  $\text{Tl}_3\text{H}_2\text{P}_2\text{O}_6$ .

Sol. in  $\text{H}_2\text{O}$ . (Joly.)

**Zinc hypophosphate**,  $\text{Zn}_3\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Draue, B. 21. 3403.)

**Hypophosphorosemolybdic acid**.

**Barium hypophosphorosemolybdate**,

$\text{BaO}$ ,  $\text{Mo}_2\text{O}_7$ ,  $3\text{H}_3\text{PO}_4 + 12\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  and  $\text{BaCl}_2 + \text{Aq}$ . (Mawrow, Z. anorg. 1902, 29. 156.)

**Hypophosphorous acid**,  $\text{H}_3\text{PO}_2$ .

Very sol. in  $\text{H}_2\text{O}$  and alcohol. (Rose.)

**Aluminum hypophosphite**.

Not deliquescent, but very sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 86.)

**Ammonium hypophosphite**,  $\text{NH}_4\text{H}_2\text{PO}_2$ .

Sol. in  $\text{H}_2\text{O}$ , less deliquescent than the potassium salt. (Wurtz, A. ch. (3) 7. 193.)

Very sol. in absolute alcohol. (Dulong.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 826.)

Insol. in acetone (Edmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

**Barium hypophosphate**,  $\text{Ba}(\text{H}_2\text{PO}_4)_2 + \text{H}_2\text{O}$ .

Sol. in 35 pts. cold, and 3 pts. boiling  $\text{H}_2\text{O}$ . Insol. in alcohol. (Wurtz, A. 43. 323.)

**Bismuth hypophosphite**,  $\text{Bi}(\text{H}_2\text{PO}_2)_3$ .

Ppt (Vannino, J. pr. 1906, (2) 74. 150.)

$+ \text{H}_2\text{O}$  Sol. in acid  $\text{Bi}(\text{NO}_3)_3 + \text{Aq}$ . (Haga, Chem. Soc. 1895, 67. 229.)

**Cadmium hypophosphite**.

Sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 91.)

**Calcium hypophosphite**,  $\text{Ca}(\text{PH}_2\text{O}_2)_2$ .

Sol. in 6 pts. cold, and not much more sol. in hot  $\text{H}_2\text{O}$ . Insol. in strong, very sol. in weak alcohol (Rose, Pogg. 9. 361.)

**Calcium cobaltous hypophosphite**.

$2\text{Ca}(\text{PH}_2\text{O}_2)_2$ ,  $\text{Co}(\text{PH}_2\text{O}_2)_2 + 2\text{H}_2\text{O}$ .

Efflorescent. (Rose, Pogg. 12. 295.)

**Calcium ferrous hypophosphite**.

Sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 294.)

**Cerous hypophosphite**,  $\text{Ce}(\text{PH}_2\text{O}_2)_3 + \text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$  (Rammelsberg, B. A. B. 1872. 437.)

**Chromium hypophosphite**,  $\text{Cr}_2(\text{OH})_2(\text{H}_2\text{PO}_2)_4$ .

*Anhydrous* Insol in  $\text{H}_2\text{O}$  or dil. acids.  
+  $3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Wurtz, A. ch. (3) 16. 196.)

**Cobaltous hypophosphite**,  $\text{Co}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$ .

Efflorescent. Easily sol. in  $\text{H}_2\text{O}$  (Rose, Pogg. 12. 87.)

**Cupric hypophosphite**,  $\text{Cu}(\text{PH}_2\text{O}_2)_2$ .

Very sol in  $\text{H}_2\text{O}$ , but very easily decomp on heating. (Wurtz, A. ch. (3) 16. 199)

**Glucinum hypophosphite**

Sol in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 86.)

**Iron (ferrous) hypophosphite**,  $\text{Fe}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 294)

**Iron (ferrie) hypophosphite**.

Difficultly sol in  $\text{H}_2\text{O}$  or acids. Decomp. on boiling. Sl sol. in  $\text{H}_3\text{PO}_2 + \text{Aq}$ . (Rose.)

**Lead hypophosphite**,  $\text{Pb}(\text{PH}_2\text{O}_2)_2$ .

Difficultly sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Insol. in alcohol. (Rose, Pogg. 12. 288)

**Lithium hypophosphite**,  $\text{LiH}_2\text{PO}_2 + \text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  (Rammelsberg, B. A. B. 1872. 416)

**Magnesium hypophosphite**,  $\text{Mg}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$ .

Efflorescent in dry air. Sol. in  $\text{H}_2\text{O}$  (Rose)

**Manganous hypophosphite**,  $\text{Mn}(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$ .

Permanent. Very sol. in  $\text{H}_2\text{O}$ . (Wurtz, A. ch. (3) 16. 195.)

**Mercurous hypophosphite nitrate**,

$\text{HgH}_2\text{PO}_2, \text{HgNO}_3 + \text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$  with rapid decomp.

Sol. in hot conc  $\text{HNO}_3$ . (Haga, Chem. Soc 1895, 67. 227)

**Nickel hypophosphite**,  $\text{Ni}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$

Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, B. 5. 494.)

**Nickel hypophosphite ammonia**,

$\text{Ni}(\text{H}_2\text{PO}_2)_2, 6\text{NH}_3$ .

(Ephraim, B. 1913, 46. 3111.)

**Platinous hypophosphite**  $\text{Pt}(\text{PH}_2\text{O}_2)_2$ .

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4 + \text{Aq}$ , etc. Sol. in  $\text{HNO}_3 + \text{Aq}$ . Insol. in alcohol. (Engel, C. R. 91. 1068)

**Potassium hypophosphite**,  $\text{KH}_2\text{PO}_2$ .

Very deliquescent. Very sol. in  $\text{H}_2\text{O}$ . sol. in weak, less in absolute alcohol. Insol in ether. (Wurtz, A. ch. (3) 7. 192)  
Sl sol in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

**Sodium hypophosphite**,  $\text{NaH}_2\text{PO}_2 + \text{H}_2\text{O}$ .

Very deliquescent. Somewhat less sol. than the K salt. Very sol. in absolute alcohol. (Dulong)

Very sol in  $\text{H}_2\text{O}$ , and somewhat less sol in alcohol (Rammelsberg, B. A. B. 1872. 412.)  
Sl sol in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

**Strontium hypophosphite**,  $\text{Sr}(\text{PH}_2\text{O}_2)_2$

Very easily sol. in  $\text{H}_2\text{O}$ . (Dulong.)  
Insol in alcohol (Wurtz.)

**Thallous hypophosphite**,  $\text{TlH}_2\text{PO}_2$ .

Sol in  $\text{H}_2\text{O}$  (Rammelsberg, B. A. B. 1872. 492)

**Uranyl hypophosphite**,  $\text{UO}_2(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . (Rammelsberg, Chem. Soc. (2) 11. 1.)

**Vanadyl hypophosphite**,  $\text{V}_2\text{O}_5(\text{H}_2\text{PO}_2)_4 + 2\text{H}_2\text{O}$ .

Insol. in cold, sl sol. in hot  $\text{H}_2\text{O}$ .  
Sol in hot dil  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$  and in warm conc.  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$ .  
Insol in oxalic acid. (Mawrow, Z. anorg. 1907, 55. 147)

**Zinc hypophosphite**,  $\text{Zn}(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ .  
+  $6\text{H}_2\text{O}$ . Efflorescent. (Wurtz, A. ch. (3) 16. 195.)

**Zirconium hypophosphite**,  $\text{Zr}(\text{OPH}_2\text{O})_4 + \text{H}_2\text{O}$ .

Sensitive to light. Insol in alcohol, by which it is pptd. from aqueous solution. (Hauser, Z. anorg. 1913, 84. 93.)

**Hypophosphotungstic acid**.

**Potassium hypophosphotungstate**,  $4\text{K}_2\text{O}, 6\text{H}_2\text{PO}_2, 18\text{WO}_3 + 7\text{H}_2\text{O}$ .

Precipitate. Sol in hot, very sl. sol. in cold  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 5. 361.)

**Hyposulpharsenious acid**.

**Hyposulpharsenites**,  $\text{As}_2\text{S}_2, \text{M}_2\text{S}$ .

Difficultly sol. in  $\text{H}_2\text{O}$ . (Berzelius.)  
Do not exist. (Nilson, B. 4. 989)

**Hyposulphuric acid**,  $\text{H}_2\text{S}_2\text{O}_6$ .

See Dithionic acid.

**Hyposulphurous acid,  $\text{H}_2\text{S}_2\text{O}_3$ .***See* Thiosulphuric acid.**Hyposulphurous (Hydrosulphurous) acid,  $\text{H}_2\text{SO}_2$** 

Known only in dil. aqueous solution, which decomposes rapidly.

Correct formula is  $\text{H}_2\text{S}_2\text{O}_3$ , according to Bernthsen (A. 211. 285.)More sol. in alcohol than in  $\text{H}_2\text{O}$  (Rossler, Arch. Pharm. (3) 25. 845.)**Ammonium hyposulphite,  $(\text{NH}_4)_2\text{S}_2\text{O}_4$ .**

Known only in solution. (Prudhomme, Bull. Soc. 1899, (3) 21. 326.)

**Ammonium hydrogen hyposulphite,  $\text{NH}_4\text{HS}_2\text{O}_4$** 

Known only in solution. (Prudhomme, Bull. Soc. 1899, (3) 21. 326.)

**Calcium hyposulphite,  $\text{CaS}_2\text{O}_4 + 1.5\text{H}_2\text{O}$** Difficultly sol. in  $\text{H}_2\text{O}$ . (Bazlen, B. 1905, 38. 1059.)**Magnesium hyposulphite,  $\text{MgS}_2\text{O}_4$** 

(Billy, C. R. 1905, 140. 936.)

**Potassium hyposulphite,  $\text{K}_2\text{S}_2\text{O}_4 + 3\text{H}_2\text{O}$ .**

Easily decomp.

Insol. in alcohol. (Bazlen, B. 1905, 38. 1058.)

**Sodium hyposulphite,  $\text{Na}_2\text{S}_2\text{O}_4$ .***Anhydrous.* Stable in dry air (Bazlen, B. 1905, 38. 1061.)100 g.  $\text{H}_2\text{O}$  dissolve 24.1 g. of the anhydrous salt at  $20^\circ$ . (Jellinek, Z. anorg. 1911, 70. 130.) $+2\text{H}_2\text{O}$  Solubility in  $\text{H}_2\text{O}$ 

11.6 g. of the solution contain at:

 $20^\circ$  1.91 g.  $\text{Na}_2\text{S}_2\text{O}_4$  $10^\circ$  1.67 g. " $1^\circ$  1.49 g. "

(Jellinek, Z. anorg. 1911, 70. 128.)

Insol. in alcohol. (Bazlen, B. 1905, 38. 1058.)

**Sodium zinc hyposulphite,  $\text{Na}_2\text{S}_2\text{O}_4, \text{ZnS}_2\text{O}_4$ .**Less sol. in  $\text{H}_2\text{O}$  than  $\text{ZnS}_2\text{O}_4$ . (Bazlen, B. 1905, 38. 1060.)**Strontium hyposulphite,  $\text{SrS}_2\text{O}_4$ .**Sol. in  $\text{H}_2\text{O}$ . (Moissan, C. R. 1902, 135. 653.)**Zinc hyposulphite,  $\text{ZnS}_2\text{O}_4$ .**Easily sol. in  $\text{H}_2\text{O}$ ; about 1 pt. in 7 pts.  $\text{H}_2\text{O}$ . Forms supersat. solutions readily. (Bazlen, B. 1905, 38. 1060.)**Hypovanadic acid,  $\text{V}_2\text{O}_5(\text{OH})_4$ .***See* Vanadium tetrhydroxide.**Hypovanadic acid,  $\text{H}_2\text{V}_4\text{O}_6$ .***See* Vanadous acid.**Hypovanadic acid with vanadic acid.***See* Vanadicovanadic acid.**Imidodimetaarsenic acid.****Ammonium imidodimetaarsenate,** $(\text{NH}_4\text{O}_2\text{As}_2\text{O}_7\text{NH})$ .

(Rosenheim and Jacobsohn, Z. anorg. 1907, 50. 307.)

**Imidochromic acid.****Ammonium imidochromate,** $\text{NHCrO}(\text{ONH}_4)_2$ .Very sol. in  $\text{H}_2\text{O}$  with decomp. (Rosenheim and Jacobsohn, Z. anorg. 1906, 50. 299.)**Ammonium potassium imidochromate,** $\text{NH}_4\text{KCrO}_5\text{NH}$ Decomp. on solution in  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1906, 50. 302.)**Imidodimidochromic acid.****Ammonium imidodimido chromate,** $\text{NH}[\text{CrO}(\text{NH})\text{ONH}_4]_2$ .

(Rosenheim and Jacobsohn, Z. anorg. 1906, 50. 303.)

**Imidomolybdic acid.****Potassium imidomolybdate,  $\text{NKM}_2\text{O}(\text{OK})_2$ .**

Unstable in air.

Very hygroscopic. Very sol. in  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1906, 50. 305.)**Diimidodiphosphormonamic acid,** $\text{HO}-\text{PO} < \begin{smallmatrix} \text{NH} \\ \text{NH} \end{smallmatrix} > \text{PO}-\text{NH}_2$ 

Correct formula for pyrophosphotriamic acid of Gladstone. (Mente, A. 248. 241.)

**Imidodiphosphoric acid,** $\text{HO}-\text{PO} < \begin{smallmatrix} \text{O} \\ \text{NH} \end{smallmatrix} > \text{PO}-\text{OH}$ .

Correct name for pyrophosphamic acid. (Mente, A. 248. 251.)

**Barium imidodiphosphate,  $\text{Ba} \begin{smallmatrix} \text{O} \\ \text{O} \end{smallmatrix} \text{PO} > \text{PO} > \text{NH}$ .**Sl. sol. in  $\text{H}_2\text{O}$ . (Mente, A. 248. 243.)**Barium imidodiphosphate, basic,** $\text{Ba} \begin{smallmatrix} \text{O} \\ \text{O} \end{smallmatrix} \text{PO} > \text{PO} > \text{N}-\text{Ba}-\text{N} \begin{smallmatrix} \text{PO}-\text{O} \\ \text{PO}-\text{O} \end{smallmatrix} \text{Ba} +$  $2\text{H}_2\text{O}$ 

Ppt. (Mente.)

**Ferric imidodiphosphate.**

Sl. sol. in conc. acids. (Mente, A. 248. 241.)

**Silver imidodiphosphate,  $\text{Ag}_3\text{H}_2\text{P}_2\text{NO}_6$ .**Insol. in  $\text{H}_2\text{O}$ . (Stokes, Am. Ch. J. 1896, 18. 660.) $\text{Ag}_3\text{H}_2\text{P}_2\text{NO}_6$ . Ppt. (Stokes.)**Diimidodiphosphoric acid,**Correct name for *pyrophosphodiamic acid* (Mente, A. 248. 241.)**Barium diimidodiphosphate,**

Sl. sol. in dil. acids. (Mente, A. 248. 244.)

**Sodium diimidodiphosphate, basic,**Sl. sol. in  $\text{H}_2\text{O}$ . (Mente, A. 248. 245.)**Diimidotriphosphoric acid,****Silver diimidotriphosphate,  $\text{Ag}_5\text{H}_4\text{P}_3\text{N}_2\text{O}_{10}$ .**Insol. in  $\text{H}_2\text{O}$ . Very sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
Rather sl. sol. in dil.  $\text{HNO}_3$ . (Stokes, Am. Ch. J. 1896, 18. 657.) $\text{Ag}_5\text{H}_4\text{P}_3\text{N}_2\text{O}_{10}$ . Insol. in  $\text{H}_2\text{O}$ . Very sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
Decomp. by  $\text{HNO}_3$ . (Stokes.)**Trisodium diimidotriphosphate,**Sol. in  $\text{H}_2\text{O}$ .

Insol. in alcohol. (Stokes.)

**Triimidotetraphosphoric acid.****Silver triimidotetraphosphate.**

Ppt. (Stokes, Am. Ch. J. 1898, 20. 755.)

**Sodium triimidotetraphosphate,**Easily sol. in  $\text{H}_2\text{O}$ ; insol. in sodium acetate solution and dil. alcohol. (Stokes, Am. Ch. J. 1898, 20. 754.)**Imidosulphamide,  $\text{NH}_2\text{SO}_2\text{NH}\cdot\text{SO}_2\text{NH}_2$** 

"Sulphamide" of Traube.

Very sol. in  $\text{H}_2\text{O}$  with decomp. appreciably sol. in cold, easily sol. in hot methyl and ethyl alcohol. Insol. in  $\text{C}_2\text{H}_5$  and  $\text{CHCl}_3$ . Sl. sol. in ether, cold and hot acetic ether and glacial acetic acid. Moderately stable toward alkalis. (Hantzsch and Stuer, B. 1905, 38. 1022.)**Ammonium imidosulphamide,**

(Hantzsch and Stuer.)

**Imidosulphonic acid,**

Ammoniosulphonic acid of Claus. Known only in aqueous solution (Divers and Haga, Chem. Soc. 61. 943.)

Very unstable (Berglund, B. 9. 252.)

**Ammonium imidosulphonate, basic,**Sol. in 9 pts. of  $\text{H}_2\text{O}$ . Solution is stable.

Insol. in alcohol.

Sl. sol. in warm conc.  $\text{H}_2\text{SO}_4$  without decomp. (Rose, Pogg. 1834, 32. 81.)

Much less sol. than the neutral salt (Berglund, B. 9. 255.)

= "P-rasulphatammon"

+  $\text{H}_2\text{O}$ . Gradually efflorescent. Sol. in  $\text{H}_2\text{O}$  with subsequent decomp. (Divers and Haga.)**Ammonium imidosulphonate,  $\text{HN}(\text{SO}_2\text{NH}_4)_2$ .**Sol. in  $\text{H}_2\text{O}$ . (Raschig, A. 241. 161.)**Ammonium barium imidosulphonate,**Very sl. sol. in  $\text{H}_2\text{O}$ . (Divers and Haga.) $(\text{NH}_4)_2\text{BaN}_4(\text{SO}_4)_4 + 8\text{H}_2\text{O}$ . (D. and H.)**Ammonium calcium imidosulphonate.**

(Divers, Chem. Soc. 1892, 61. 968.)

**Ammonium sodium imidosulphonate,**Very sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Divers and Haga.)**Ammonium sodium imidosulphonate nitrate,  $\text{HN}(\text{SO}_2\text{NH}_4)_2\text{NaNO}_3$ .**Very sol. in  $\text{H}_2\text{O}$ . (Divers and Haga.)**Barium imidosulphonate,  $\text{Ba}[\text{N}(\text{SO}_2)_2\text{Ba}]_2 + 5\text{H}_2\text{O}$ .**Sl. sol. in  $\text{H}_2\text{O}$ . (Berglund, B. 9. 255.)Sol. in dil.  $\text{HNO}_3 + \text{Aq}$  without decomp. (Divers and Haga.) $\text{HN}(\text{SO}_2)_2\text{Ba} + \text{H}_2\text{O}$ . Moderately sol. in  $\text{H}_2\text{O}$ . (D. and H.)**Barium mercury imidosulphonate,**Almost insol. in cold  $\text{H}_2\text{O}$ . (Divers and Haga, Chem. Soc. 1892, 61. 977.)**Barium sodium imidosulphonate,**Sparingly sol. in  $\text{H}_2\text{O}$ . Readily sol. in  $\text{HNO}_3$  or  $\text{HCl}$ . (Divers, Chem. Soc. 1892, 61. 967.)

Calcium imidosulphonate,  $\text{Ca}[\text{N}(\text{SO}_3)_2\text{Ca}]_2 + 6\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$  (Berglund.)

Calcium mercury imidosulphonate,  $\text{N}_2\text{Hg}[(\text{SO}_3)_2\text{Ca}]_2$ .

Very sol. in  $\text{H}_2\text{O}$ . (Divers and Haga, Chem. Soc. 1896, 69. 1629.)

Calcium mercury imidosulphonate chloride,  $(\text{NS}_2\text{O}_6\text{Ca})_2\text{Hg}_2\text{Cl} + 12\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Divers and Haga, Chem. Soc. 1896, 69. 1629.)

Calcium sodium imidosulphonate,  $\text{NaN}(\text{SO}_3)_2\text{Ca} + 3\text{H}_2\text{O}$

Sl. sol. in cold  $\text{H}_2\text{O}$ . (Divers and Haga, Chem. Soc. 61. 968.)

Lead imidosulphonate,  $(\text{PbOH}(\text{SO}_3)_2)_2\text{NPbOH}$ .

Ppt. (Berglund)

Insol. in  $\text{H}_2\text{O}$  (Divers and Haga)

$(\text{PbOH})_2\text{N}(\text{SO}_3)_2$ , PbO. Insol. in  $\text{H}_2\text{O}$ ; easily sol. in dil  $\text{HNO}_3$  + Aq. (D. and H.)

Mercurous imidosulphonate, basic,  $[\text{Hg}_2\text{N}(\text{SO}_3)_2\text{Hg}_2]\text{O} + 6\text{H}_2\text{O}$ .

Much more sol. in dil  $\text{HNO}_3$  than mercuric salt. Sol. in cold conc.  $\text{KI} + \text{Aq}$ , leaving half Hg as metal. (Divers and Haga, Chem. Soc. 1896, 69. 1631)

Mercuric imidosulphonate, basic,  $\text{NH}(\text{SO}_3)_2\text{Hg}(\text{O})_2\text{Hg}$ .

Easily decomp. (Divers and Haga)

Mercurimercuric imidosulphonate,  $[\text{Hg}_2\text{N}(\text{SO}_3)_2\text{Hg}]_2\text{O} + 3\text{H}_2\text{O}$ .

(Divers and Haga.)

$[\text{Hg}_2\text{N}(\text{SO}_3)_2\text{Hg}]_2\text{O}$ ,  $[\text{Hg}_2\text{N}(\text{SO}_3)_2\text{Hg}_2]$ ,  $\text{Hg}_2\text{N}(\text{SO}_3)_2\text{Hg}]_2\text{O} + 6\text{H}_2\text{O}$ . (Divers and Haga.)

Mercury sodium imidosulphonate, basic,  $\text{Hg}_2\text{ON}(\text{SO}_3)_2\text{Na} + 2\text{H}_2\text{O}$

Slightly efflorescent. Decomp. by long washing with  $\text{H}_2\text{O}$ . Much more readily sol. in  $\text{HCl}$  than in  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$  and is wholly decomp. thereby. (Divers and Haga, Chem. Soc. 1892, 61. 983.)

Mercury sodium imidosulphonate,  $\text{Hg}_2\text{N}_4(\text{SO}_3\text{Na})_4 + 6\text{H}_2\text{O}$ .

Sparingly sol. in cold  $\text{H}_2\text{O}$ .

Readily sol. in  $\text{HNO}_3$  and in  $\text{HCl}$ .

Decomp. by  $\text{HCl}$  immediately, but not by  $\text{HNO}_3$ . (Divers and Haga, Chem. Soc. 1892, 61. 981.)

Potassium imidosulphonate, basic,  $\text{KN}(\text{SO}_3)_2\text{K} + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Raschig, A. 241. 161.)

Less sol. than neutral salt. (Berglund.)

Potassium imidosulphonate,  $\text{HN}(\text{SO}_3)_2\text{K}$ .

Sol. in  $\text{H}_2\text{O}$ . (Raschig, A. 241. 161.)

= Potassium ammoniumsulphonate of Claus.

Difficultly sol. in cold  $\text{H}_2\text{O}$ , sol. in 64 pts.  $\text{H}_2\text{O}$  at  $23^\circ$ . (Piemy.) Gradually decomp. by boiling (Claus)

Sl. sol. in  $\text{H}_2\text{O}$ . (Berglund, B. 9. 255)

Potassium mercury imidosulphonate,

$\text{N}_2\text{Hg}(\text{SO}_3)_2\text{K} + 4\text{H}_2\text{O}$ .

See Mercurimidosulphonic acid.

Silver imidosulphonate,  $\text{AgN}(\text{SO}_3)_2\text{Ag}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Berglund.)

Silver sodium imidosulphonate,

$\text{NaN}(\text{SO}_3)_2\text{Ag}$

Sl. sol. in  $\text{H}_2\text{O}$ . (Divers and Haga.)

$\text{AgN}_2\text{N}(\text{SO}_3)_2$ . Sl. sol. in  $\text{H}_2\text{O}$ , but more sol. than the two preceding salts. (D. and H.)

Sodium imidosulphonate,  $\text{HIN}(\text{SO}_3)_2\text{Na} + 2\text{H}_2\text{O}$

Not efflorescent. Very sol. in  $\text{H}_2\text{O}$  (Diver and Haga)

$\text{NaN}(\text{SO}_3)_2\text{Na} + 12\text{H}_2\text{O}$ . Efflorescent. Sl. sol. in cold  $\text{H}_2\text{O}$ , but very sol. in hot  $\text{H}_2\text{O}$ . Sol. in 54 pts  $\text{H}_2\text{O}$  at  $27.5^\circ$ . (Divers and Haga)

Sodium strontium imidosulphonate,

$\text{SrNaNS}_2\text{O}_6 + 3\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$  (Divers, Chem. Soc. 1896, 69. 1625)

Strontium imidosulphonate,

$\text{Sr}[\text{N}(\text{SO}_3)_2\text{Sr}]_2 + 6\text{H}_2\text{O}$

Sl. sol. in  $\text{H}_2\text{O}$  (Berglund)

$+ 12\text{H}_2\text{O}$  Somewhat sol. in hot  $\text{H}_2\text{O}$ . (Divers, Chem. Soc. 1896, 69. 1623)

Imidotrisulphoorthophosphoric acid,  $\text{NH}_4\text{P}(\text{SH})_3$ .

Insol. in  $\text{CS}_2$  and readily decomp. by  $\text{H}_2\text{O}$ . (Stock, B. 1906, 39. 1991)

Ammonium imidotrisulphoorthophosphate,  $\text{NHP}(\text{SNH})_3$ .

Very hygroscopic.

Loses  $\text{NH}_3$  in the air.

Somewhat sol. in liquid  $\text{NH}_3$ .

Decomp. by any other solvent in which it is sol. (Stock, B. 1906, 39. 1983.)

Diammonium hydrogen imidotrisulphoorthophosphate,  $\text{SHP}(\text{SNH})_3\text{NH}$ .

(Stock, B. 1906, 39. 1983.)

Ammonium dihydrogen ———,  $\text{SNH}_4\text{P}(\text{SH})_2\text{NH}$ .

(Stock.)

**Disodium hydrogen imidotrisulphocarthophosphate**,  $\text{SHP}(\text{SNa})_2\text{NH}$ .

Very easily sol in  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . Somewhat sol. in methyl and ethyl alcohol (Stock.)

**Diimidopentasilphopyrophosphoric acid**,  $\text{P}_2\text{S}_5\text{N}_2\text{H}_6$ .

Not known in pure state (Stock, B. 1906, 39. 1967.)

**Ammonium diimidopentasilphopyrophosphate**,  $\text{S}[\text{P}(\text{SNH})_2\text{NH}]_2$ .

Very hygroscopic. Sol in cold  $\text{H}_2\text{O}$  with decomp. (Stock, B. 1906, 39. 1978.)

**Inidosulphurous acid**.

**Ammonium imidosulphite**,  $\text{HN}(\text{SO}_2\text{NH}_2)_2$ .

Somewhat deliquescent. Very unstable. Easily sol in  $\text{H}_2\text{O}$  with decomp. into thiosulphate and amidosulphate. Insol. in alcohol. (Divers and Ogawa, Chem. Soc. 1901, 79. 1100.)

**Ammonium barium imidosulphite**,  $\text{Ba}(\text{SO}_2\text{NHSO}_2\text{NH}_2)_2$ .

Sol in  $\text{H}_2\text{O}$  (Divers, Chem. Soc. 1901, 79. 1102.)

**Potassium imidosulphite**,  $\text{NH}(\text{SO}_2\text{K})_2$ .

(Divers and Owaga, Proc. Chem. Soc. 1900, 16. 113.)

Very sol. in  $\text{H}_2\text{O}$ . (Divers, Chem. Soc. 1901, 79. 1101.)

**Imidosulphuryl amide**,  $\text{S}_2\text{O}_4\text{N}_2\text{H}_4 =$

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by conc.  $\text{HCl}$ . Insol. in alcohol sat. with  $\text{NH}_3$ . (Mente, A. 248. 265.)

**Indic acid**.

**Magnesium indate**,  $\text{MgIn}_2\text{O}_4 + 3\text{H}_2\text{O}$ .

Ppt. Insol. in  $\text{H}_2\text{O}$ . Sol in  $\text{HCl} + \text{Aq}$ . (Renz, B. 1901, 34. 2764.)

**Indium, In**

Does not decomp. hot  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl}$  and  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Decomp. by conc.  $\text{H}_2\text{SO}_4$ . Easily sol in  $\text{HNO}_3 + \text{Aq}$ . Insol. in acetic acid. Insol. in  $\text{KOH} + \text{Aq}$  (Winkler, J. pr. 102. 273.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 830.)

$\frac{1}{2}$  cc. oleic acid dissolves 0.0039 g. In m 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

**Indium monobromide**,  $\text{InBr}$

Decomp. by hot  $\text{H}_2\text{O}$ . Easily sol. in acids. Easily sol. in cold conc.  $\text{HCl}$ . (Thiel, Z. anorg. 1901, 40. 328.)

**Indium dibromide**,  $\text{InBr}_2$ .

Decomp. by hot  $\text{H}_2\text{O}$ . Easily sol. in acids. (Thiel, Z. anorg. 1904, 40. 329.)

**Indium tribromide**,  $\text{InBr}_3$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$

**Indium monochloride**,  $\text{InCl}$

Deliquescent. Decomp. by  $\text{H}_2\text{O}$  into  $\text{InCl}_3$  and  $\text{In}$ . (Nilson and Pettersson, Chem. Soc. 43. 820.)

**Indium dichloride**,  $\text{InCl}_2$ .

Deliquescent in moist air; decomp. by  $\text{H}_2\text{O}$  into  $\text{InCl}_3$  and  $\text{In}$ . (Nilson and Pettersson, Chem. Soc. 43. 818.)

**Indium trichloride**,  $\text{InCl}_3$ .

Very deliquescent; sol in  $\text{H}_2\text{O}$  with hissing and great evolution of heat

**Indium lithium chloride**.

Extremely deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Meyer, A. 150. 144.)

**Indium potassium chloride**,  $3\text{KCl}, \text{InCl}_3 + 1\frac{1}{2}\text{H}_2\text{O}$

Easily sol in  $\text{H}_2\text{O}$  (Meyer.)

**Indium trifluoride**,  $\text{InF}_3 + 3\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ ; readily decomp. (Thiel, B. 1904, 37. 175.)

1 l.  $\text{H}_2\text{O}$  dissolves 86 g. at  $25^\circ$ . Decomp. on boiling. (Thiel, Z. anorg. 1904, 40. 331.)

+  $9\text{H}_2\text{O}$ . Sl. sol in cold  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$  and in  $\text{HNO}_3$ . Insol. in alcohol and ether. (Chabré, C. R. 1905, 140. 90.)

**Indium hydrosulphide**.

Decomp. by acids. (Meyer.)

**Indium hydroxide**,  $\text{In}_2\text{O}_3\text{H}_6$ .

Sol. in acids, also in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  but the solution clouds up on standing or boiling, with separation of  $\text{In}_2\text{O}_3\text{H}_6$ . Insol. in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4\text{Cl} + \text{Aq}$ .

Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Renz, B. 1904, 37. 2110.)

Sl. sol in alkylamines but completely ppt. by addition of the hydrochloride of the base. (Renz, B. 1903, 36. 2754.)

**Indium monoiodide**,  $\text{InI}$ .

Slowly decomp. in moist air. Not attacked by boiling  $\text{H}_2\text{O}$

Sol. in dil.  $\text{HNO}_3$  in presence of  $\text{AgNO}_3$ . Very slowly sol. in cold, more rapidly sol. in

hot acids with evolution of  $H_2$ . Very sol in sulphurous acid.

Insol. in alcohol, ether and chloroform. (Thiel, Z. anorg. 1910, 66. 302.)

**Indium diiodide,  $IndI_2$**

(Thiel, Z. anorg. 1910, 66. 302.)

**Indium triiodide,  $IndI_3$**

Deliquescent. (Meyer.)

Sol in  $CHCl_3$ . Decomp. by xylene. (Thiel, Z. anorg. 1904, 40. 330.)

**Indium nitride,  $IndN$**

Decomp. by heat (Franz Fischer, B. 1910, 43. 1469.)

**Indium monoxide,  $IndO$**

Gradually sol. in  $HCl + Aq$ . (Winkler, J. pr. 94. 1.)

**Indium sesquioxide,  $Ind_2O_3$**

Slowly sol. in cold, easily in hot acids.

Four modifications:

(1) Yellow Amorphous. Sol. in acids. Its hydroxide is insol. in ammonia and  $NH_4Cl$ .

(2) White Amorphous. Insol. in acids.

(3) White Amorphous. Sol. in acids. Its hydroxide is sol. in ammonia, but pptd. by  $NH_4Cl$ .

(4) Crystallized. Crystalline modification is insol. in acids. (Renz, B. 1904, 37. 2112.) Insol. in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20. 830.)

**Indium oxide,  $Ind_2O_3 = 3IndO, 2Ind_2O_3 (?)$**

(Winkler)

$Ind_2O_3 = 2IndO, Ind_2O_3 (?)$ . (Winkler.)

**Indium oxybromide (?)**

Not decomp. by hot acids or alkalis.

(Meyer, A. 150. 137.)

**Indium oxychloride,  $IndOCl$**

Very sl. sol. in  $H_2O$ . (Thiel, B. 1904, 37. 176.)

Very sl. sol. in cold or hot dil. acids. Quickly sol. in hot conc. acids. (Thiel, Z. anorg. 1904, 40. 327.)

**Indium triselenide,  $Ind_2Se_3$**

Sol. in strong acids with evolution of  $H_2Se$ . (Thiel, Z. anorg. 1910, 66. 315.)

**Diindium sulphide,  $Ind_2S$**

Sol. in acids. (Thiel, Z. anorg. 1904, 40. 326.)

**Indium monosulphide,  $IndS$**

Easily sol. in  $HCl$  with evolution of  $H_2S$ . Sol. in  $HNO_3$  with evolution of oxides of nitrogen. (Thiel, Z. anorg. 1910, 66. 314.)

**Indium sesquisulphide,  $Ind_2S_3$**

Partially sol. in  $(NH_4)_2S + Aq$

**Indium potassium sulphide,  $Ind_2S_3, K_2S$**

Insol. in  $H_2O$ ; decomp. by weak acids with separation of  $Ind_2S_3$ , sol. in conc. acids. (Schneider, J. pr. (2) 9. 200.)

**Indium silver sulphide,  $Ind_2S_3, Ag_2S$**

Insol. in  $H_2O$ . (Schneider, l. c.)

**Indium sodium sulphide,  $Ind_2S_3, Na_2S + 2H_2O$**

Insol. in  $H_2O$ . (Schneider, l. c.)

**Indium monotelluride,  $IndTe$**

Sol. in  $HNO_3$ ; insol. in  $HCl + Aq$ . (Thiel, Z. anorg. 1910, 66. 318.)

**Infusible white precipitate.**

**Diiodamine,  $NHI_2$**

Decomp. by  $H_2O$ .

**Iodammonium iodide,  $NIH_3I$**

Decomp. by  $H_2O$ , caustic alkalis, and acids. Sol. in  $KI + Aq$ , alcohol, ether,  $CS_2$ ,  $CHCl_3$ . (Guthrie, Chem. Soc. (2) 1. 239.)

**Iodauric acid,  $HAuI_4 (?)$**

Not known with certainty

**Ammonium iodaureate.**

Deliquescent. Decomp. by  $H_2O$ . (Johnston, Phil. Mag. (3) 9. 266.)

**Barium iodaureate.**

Sol. in  $BaI_2 + Aq$

**Cæsium iodaureate,  $CsAuI_4$**

(Gupta, J. Am. Chem. Soc. 1914, 36. 748.)

**Ferrous iodaureate.**

Sol. in  $H_2O$ . (Johnston.)

**Potassium iodaureate,  $KAuI_4$**

Decomp. by  $H_2O$ . Sol. in  $KI$ , and  $HI + A$ . (Johnston.)

**Sodium iodaureate.**

Very deliquescent (Johnston.)

**Iodauricyanhydric acid,  $HAu(CN)_2I_2$**

Known only in its salts.

**Barium iodauryanide,  $Ba[Au(CN)_2I_2]_2 + 10H_2O$**

Sl. sol. in cold, easily in hot  $H_2O$ . Easily sol. in alcohol. (Lundbom, Lund. Univ. Arsk. 12. No. 6.)

Calcium iodaurycyanide,  $\text{Ca}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$ .

Not stable. (L.)

Cobalt iodaurycyanide,  $\text{Co}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$ .

Most insol. of all iodaurycyanides, and only sl. sol in warm  $\text{H}_2\text{O}$ . Easily sol. in alcohol.

Potassium iodaurycyanide,  $\text{KAu}(\text{CN})_2\text{I}_2 + \text{H}_2\text{O}$ .

Sl. sol. in cold, easily sol. in warm  $\text{H}_2\text{O}$  and alcohol. (L.)

Strontium iodaurycyanide,  $\text{Sr}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$ .

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .

### Iodhydric Acid, III.

Very easily and quickly absorbed by  $\text{H}_2\text{O}$ , with evolution of much heat.

Solution is decomp. on exposure to the air. 1 vol.  $\text{H}_2\text{O}$  absorbs 450 vols. HI at  $10^\circ$ . (Thomson.)

1 vol.  $\text{H}_2\text{O}$  absorbs 425 vols. HI at  $10^\circ$ . (Berthelot, C. R. 76, 679.)

Weak or strong solutions when boiled in an atmosphere of H leave a residue of constant composition, which distils unchanged at  $126^\circ$  (de Luynes), at  $127^\circ$  (Roscoe, Chem. Soc. 13, 146; Naumann; Topsoe), at  $128^\circ$  (Bineau, A. ch. (3) 7, 266); and has a sp. gr. of 1.67 (Naumann), of 1.70 (Bineau, de Luynes), of 1.708 (Topsoe); and contains 56.26 % HI (Bineau), 57.0 % HI (Roscoe), 57.75 % HI (Topsoe.)

By conducting dry H gas through the aqueous solution of HI, a constant residue is obtained, containing 60.3-60.7 % HI if temp. is  $15-19^\circ$ , and 58.2-58.5 % HI if temp. is  $100^\circ$ . (Roscoe.)

Solubility of HI in  $\text{H}_2\text{O}$  at  $t^\circ$

25	1.2773	60	1.9954
30	1.3484	65	2.1260

(Kammerer.)

According to Thomsen (B. 7. 71) solutions of HIO<sub>3</sub> have sp. gr.—

HIO<sub>3</sub> + 10H<sub>2</sub>O = 1.6609.

HIO<sub>3</sub> + 20H<sub>2</sub>O = 1.3860.

HIO<sub>3</sub> + 40H<sub>2</sub>O = 1.1945.

HIO<sub>3</sub> + 80H<sub>2</sub>O = 1.1004.

HIO<sub>3</sub> + 160H<sub>2</sub>O = 1.0512.

HIO<sub>3</sub> + 320H<sub>2</sub>O = 1.0258.

H<sub>2</sub>SO<sub>4</sub> at nearly boiling temp. dissolves 1/4 its weight of iodic acid. (Millon.)

Solubility in HNO<sub>3</sub> containing 27.73% HNO<sub>3</sub>.

100 g. of the sat. solution contain at:

0°	20°	40°	60°
18	21	27	38 g. HIO <sub>3</sub> .

Solubility in HNO<sub>3</sub> containing 40.88% HNO<sub>3</sub>.

100 g. of the sat. solution contain at:

0°	20°	40°	60°
9	10	14	18 g. HIO <sub>3</sub> .

(Groschuff, Z. anorg. 1905, 47. 344.)

Less sol. in HNO<sub>3</sub> than H<sub>2</sub>O; nearly insol. in anhydrous HNO<sub>3</sub>. (Groschuff, Z. anorg. 1905, 47. 347.)

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 830.)

Unattacked and undissolved by liquid NO<sub>2</sub>. (Frankland, Chem. Soc. 1901, 79. 1362.)

Insol. in absolute alcohol. Alcohol of 35° B. dissolves half its weight in HIO<sub>3</sub>. (Kammerer.)

+4 1/2 H<sub>2</sub>O.  
HIO<sub>3</sub>, I<sub>2</sub>O<sub>5</sub>. (Groschuff, Z. anorg. 1905, 47. 343.)

### Iodates.

The alkali iodates are sol. in H<sub>2</sub>O, the others are sl. sol. or insol. therein.

Aluminum iodate, Al(IO<sub>3</sub>)<sub>3</sub> (?).

Deliquescent. (Berzelius.)

Ammonium iodate, NH<sub>4</sub>IO<sub>3</sub>.

Sl. sol. in H<sub>2</sub>O. Sol. in 38.5 pts. H<sub>2</sub>O at 15°, 6.9 pts. at 100°. (Rammelsberg, Pogg. 44. 555.)

Solubility of  $\text{NH}_4\text{IO}_3$  in  $\text{HIO}_3$  + Aq at 30°.

% $\text{HIO}_3$ in the solution	% $\text{NH}_4\text{IO}_3$ in the solution	Solid phase

(Harkins and Winninghof, J. Am. Chem. Soc. 1911, 33, 1829.)

## Insol. in alcohol

100 cc. 95% alcohol dissolve 0.0011 g.  $\text{Ba}(\text{IO}_3)_2$  at room temp. (Hill and Zink.)

Insol. in acetone. (Eidmann, C. C. 1899, II 1014.)

+  $\text{H}_2\text{O}$ . Sol. in 3333 pts.  $\text{H}_2\text{O}$  at 18°, and 625 pts.  $\text{H}_2\text{O}$  at 100° (Gay-Lussac, A. ch. 91, 5.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329.)

**Barium manganic iodate**,  
 $Mn(IO_3)_4, Ba(IO_3)_2$ .  
 Insol in  $H_2O$ .  
 Insol in  $HIO_3$ . (Berg, C. R. 1899, 128.  
 675.)

**Bismuth iodate, basic**.  
 Insol in  $H_2O$ . Very difficultly sol. in  
 $HNO_3 + Aq$  (Rammelsberg, Pogg. 44. 568.)  
 $Bi(IO_3)_3 + 1\frac{1}{2}H_2O$ . Insol in  $H_2O$ .

**Cadmium iodate,  $Cd(IO_3)_2$** .  
 Very sl. sol. in  $H_2O$ . Easily sol. in  $HNO_3$ ,  
 or  $NH_4OH + Aq$ . Sol. in  $Cd(C_2H_3O_2)_2 + Aq$   
 (Rammelsberg, Pogg. 44. 566.)  
 $+H_2O$ . Sl. sol. in  $H_2O$ . Very sol. in dil.  
 $HNO_3 + Aq$ . (Ditte, A. ch. (8) 21. 145.)

**Cadmium iodate ammonia,  $Cd(IO_3)_2, 2NH_3$** .  
 Insol. in  $H_2O$ ; sol. in  $NH_4OH + Aq$ . (Ditte.)  
 A. ch. (8) 21. 145.)  
 $Cd(IO_3)_2, 2NH_3 + H_2O$  As above. (Ditte.)

**Cassium iodate,  $CsIO_3$** .  
 100 pts  $H_2O$  dissolve 2.6 pts.  $CsIO_3$  at  $24^\circ$ .  
 Insol in alcohol. (Wheeler, Sil. Am. J. 144.  
 123.)  
 $2CsIO_3, I_2O_5$ . 100 pts  $H_2O$  dissolve 2.5 pts.  
 at  $21^\circ$ . Not decomp. by hot  $H_2O$  (Wheeler.)  
 $2CsIO_3, I_2O_5, 2HIO_3$ . Sl. sol. in cold  $H_2O$   
 and decomp thereby into  $2CsIO_3, I_2O_5$   
 (Wheeler.)

**Cassium iodate chloride,  $CsCl, HIO_3$** .  
 Decomp. by  $H_2O$  into  $2CsIO_3, I_2O_5$ .  
 (Wheeler)

**Cassium hydrogen iodate periodate**,  
 $HCsIO_5, IO_4 + 2H_2O$ .  
 Ppt. Sol. in dil.  $HNO_3$ . (Wells, Am. Ch.  
 J. 1901, 26. 280.)

**Calcium iodate,  $Ca(IO_3)_2$** .  
 100 pts dissolve 0.22 pt. at  $18^\circ$  and  
 0.986 pt. at  $100^\circ$ . (Gay-Lussac.) Sol. in  
 conc.  $HCl + Aq$ . (Filhol.) Much more sol.  
 in  $HNO_3 + Aq$  than in  $H_2O$ . (Rammelsberg)  
 Insol. in  $H_2SO_4$ . (Ditte.) Scarcely sol. in  
 sat.  $KIO_3 + Aq$ . (Sonstadt, C. N. 29. 209.)

$+H_2O$ . Sat. solution contains at:  

$21^\circ$	$35^\circ$	$40^\circ$	$45^\circ$
0.37	0.48	0.52	0.54% $Ca(IO_3)_2$
$50^\circ$	$60^\circ$	$80^\circ$	$100^\circ$
0.59	0.65	0.79	0.94% $Ca(IO_3)_2$

 (Mylius and Funk, B. 1897, 30. 1724.)

$+6H_2O$ . Efflorescent.  
 Sol. in 253 pts  $H_2O$  at  $15^\circ$ , and 75 pts. at  
 $100^\circ$ . (Rammelsberg.)

Sat. solution contains at:  

$0^\circ$	$10^\circ$	$18^\circ$	$30^\circ$
0.1	0.17	0.25	0.42% $Ca(IO_3)_2$
$40^\circ$	$50^\circ$	$54^\circ$	$60^\circ$
0.61	0.89	0.14	1.36% $Ca(IO_3)_2$

 (Mylius and Funk, B. 1897, 30. 1724.)

Much more sol. in  $HNO_3 + Aq$ . Pptd. by  
 alcohol from  $Ca(IO_3)_2 + Aq$ .  
 Insol. in  $H_2SO_4$ . (Ditte.)  
 Pptd. by alcohol from aqueous solution.  
 (Henry.)

**Cerous iodate,  $Ce(IO_3)_2 + 2H_2O$** .  
 Sl. sol. in cold, easily sol. in hot  $H_2O$  and in  
 acids. (Holzmann, J. pr. 75. 321.)  
 Solubility in  $H_2O$  100 cc. of the sat.  
 solution contain 0.1456 g. at  $25^\circ$  (Rimbach,  
 Z. phys. Ch. 1909, 67. 199.)  
 Calc. from electrical conductivity of  
 $Ce(IO_3)_2 + Aq$ , 100 cc of the sat. solution  
 contain 0.1636 g.  $Ce(IO_3)_2$  at  $25^\circ$ . (Rim-  
 bach, Z. phys. Ch. 1909, 67. 199.)

**Ceric iodate,  $Ce(IO_3)_4$** .  
 Slightly hydrolyzed by  $H_2O$ .  
 0.34 g is sol. in 100 cc hot conc.  $HNO_3$ .  
 (Barbier, Chem. Soc 1907, 92. (2) 487.)

**Cobaltous iodate,  $Co(IO_3)_2$** .  
*Anhydrous*. Sol. in warm dil  $H_3PO_4$ , or  
 $H_2SO_4 + Aq$ . (Ditte, A. ch. (8) 21. 14.)

Solubility in  $H_2O$

Form	Temp.	$\frac{g}{100}$ $Co(IO_3)_2$	Mols of water free salt to 100 mols $H_2O$
$Co(IO_3)_2 + 4H_2O$	$0^\circ$	0.54	0.028
	$18^\circ$	0.83	0.038
	$30^\circ$	1.03	0.046
	$50^\circ$	1.46	0.065
	$60^\circ$	1.88	0.084
$Co(IO_3)_2 + 2H_2O$	$65^\circ$	2.17	0.098
	$0^\circ$	0.32	0.014
	$18^\circ$	0.45	0.020
	$30^\circ$	0.52	0.023
	$50^\circ$	0.67	0.030
$Co(IO_3)_2$	$75^\circ$	0.84	0.038
	$100^\circ$	1.02	0.045
	$18^\circ$	1.03	0.046
	$30^\circ$	0.89	0.040
	$50^\circ$	0.85	0.036
	$75^\circ$	0.75	0.033
	$100^\circ$	0.69	0.031

(Meusser, B. 1901, 34. 2435.)

$+H_2O$ . Sol. in 148 pts.  $H_2O$  at  $15^\circ$  and  
 90 pts. at  $100^\circ$ . Sol. in  $NH_4OH + Aq$ . (Ram-  
 melsberg, Pogg. 44. 561.)  
 Does not exist. (Meusser, B. 1901, 34.  
 2434.)  
 $+2H_2O$ . (Meusser.)  
 $+4H_2O$ . (Meusser.)

**Cupric iodate, basic,  $6\text{CuO}, 3\text{I}_2\text{O}_5 + 2\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . (Millon, A. ch. (3) 9. 400.)

Mixture of  $\text{CuO}$  and  $\text{Cu}(\text{IO}_3)_2$ . (Ditte, A. ch. (6) 21. 175.)

$2\text{CuO}, \text{I}_2\text{O}_5 + 1\frac{1}{2}\text{H}_2\text{O}$ . Slowly sol. in dil.  $\text{H}_2\text{SO}_4$ . (Granger and de Schulten, Bull. Soc. 1904, (3) 31. 1027.)

**Cupric iodate,  $\text{Cu}(\text{IO}_3)_2$ .**

1 l.  $\text{H}_2\text{O}$  dissolves  $3.32 \times 10^{-3}$  mol.  $\text{Cu}(\text{IO}_3)_2$  at  $25^\circ$ . (Spencer, Z. phys. Ch. 1913, 83. 295.)

Solubility in  $\text{CuSO}_4 + \text{Aq} = 3.28 \times 10^{-4}$  mol per l. at  $25^\circ$

Solubility in  $\text{KIO}_3 + \text{Aq} = 3.29 \times 10^{-3}$  mol per l. at  $25^\circ$ . (Spencer)

+  $\text{H}_2\text{O}$  (Ditte.)

+  $2\text{H}_2\text{O}$  Sol in 302 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 154 pts. at  $100^\circ$ . Sol. in  $\text{HCl} + \text{Aq}$  or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Millon)

**Cupric iodate ammonia,  $\text{Cu}(\text{IO}_3)_2, 2\text{NH}_3 + \text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . (Ditte, A. ch. (6) 21. 145.)  $\text{Cu}(\text{IO}_3)_2, 4\text{NH}_3 + 2\text{H}_2\text{O}$ . Ppt. (Ephraim, B. 1915, 48. 52.)

+  $3\text{H}_2\text{O}$ . Partially sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in alcohol. (Rammelsberg.)

$\text{Cu}(\text{IO}_3)_2, 5\text{NH}_3$ . (Ephraim.)

$\text{Cu}(\text{IO}_3)_2, 8\text{NH}_3 + 4\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in alcohol. (Ditte, A. ch. (6) 21. 145.)

**Decipium iodate,  $\text{Dp}(\text{IO}_3)_3 + 3\text{H}_2\text{O} (?)$ .**

Precipitate; scarcely sol. in  $\text{H}_2\text{O}$ . (Dela-fontaine.)

**Didymium iodate,  $\text{Di}(\text{IO}_3)_3 + 2\text{H}_2\text{O}$**

Ppt (Cleve)

**Erbium iodate,  $\text{Er}(\text{IO}_3)_3 + 3\text{H}_2\text{O}$ .**

Very sl. sol. in  $\text{H}_2\text{O}$ . (Hoglund.)

**Glucinum iodate.**

Deliquescent.

**Indium iodate,  $\text{In}(\text{IO}_3)_3$ .**

1 pt. is sol. in 1500 pts.  $\text{H}_2\text{O}$  at  $20^\circ$

1 pt. is sol. in 150 pts.  $\text{HNO}_3$  (1.5) at  $80^\circ$ .

Sol. in  $\text{HCl}$  with decomp. Sol. in dil.  $\text{H}_2\text{SO}_4$ . (Mathers, J. Am. Chem. Soc. 1908, 30. 213.)

**Iodine iodate,  $\text{I}(\text{IO}_3)_2$ .**

Decomp. by  $\text{H}_2\text{O}$  or by alcohol. (Fichter, Z. anorg. 1915, 91. 142.)

**Iron (ferrous) iodate.**

Ppt. Sl. sol. in  $\text{H}_2\text{O}$ ; more sol. in  $\text{FeSO}_4 + \text{Aq}$ . (Geiger, Mag Pharm. 29. 252.)

**Iron (ferric) iodate,  $\text{Fe}_2\text{O}_3, \text{I}_2\text{O}_5$ .**

Insol in acids. (Ditte, A. ch. (6) 21. 145.)

$\text{Fe}_2\text{O}_3, 2\text{I}_2\text{O}_5 + 8\text{H}_2\text{O}$  Sol in 500 pts  $\text{H}_2\text{O}$ . Difficulty sol. in  $\text{HNO}_3 + \text{Aq}$ . Sol. in  $\text{FeCl}_3 + \text{Aq}$ . (Geiger)

$3\text{Fe}_2\text{O}_3, 5\text{I}_2\text{O}_5 + 15\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$  (Rammelsberg.)

**Lanthanum iodate,  $\text{La}(\text{IO}_3)_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .**

Sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$ . Very sol. in warm  $\text{HCl} + \text{Aq}$ . (Holzmann, J. pr. 75. 349.)

100 cc of the sat. solution in  $\text{H}_2\text{O}$  contain 0.1681 g at  $25^\circ$  (Rimbach, Z. phys. Ch. 1909, 87. 199.)

Calc from electrical conductivity of  $\text{La}(\text{IO}_3)_3 + \text{Aq}$ , 100 cc of the sat. solution contain 0.1871 g.  $\text{La}(\text{IO}_3)_3$  at  $25^\circ$ . (Rimbach)

**Lead iodate, basic,  $3\text{PbO}, \text{Pb}(\text{IO}_3)_2 + 2\text{H}_2\text{O}$ .**

Ppt. (Stromholm, Z. anorg. 1904, 38. 442.)

**Lead iodate,  $\text{Pb}(\text{IO}_3)_2$ .**

Very sl. sol. in  $\text{H}_2\text{O}$  (Pleschl), and difficultly sol. in  $\text{HNO}_3 + \text{Aq}$ . (Rammelsberg.)

Insol. in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Very sl. sol. in  $\text{HNO}_3 + \text{Aq}$ , and wholly insol therein after being heated to  $100^\circ$ . (Ditte, A. ch. (6) 21. 169.)

Sl. sol. in  $\text{H}_2\text{O}$   $1.83 \times 10^{-2}$  are dissolved in 1 liter of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46. 603.)

1 l.  $\text{H}_2\text{O}$  dissolves 19 mg.  $\text{Pb}(\text{IO}_3)_2$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

17.8 mg. are dissolved in 1 l. sat. solution at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1903, 64. 168.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.0307 g.  $\text{Pb}(\text{IO}_3)_2$  at  $25^\circ$ . (Harkins, J. Am. Chem. Soc. 1911, 33. 1830.)

Solubility of  $\text{Pb}(\text{IO}_3)_2$  in salts +  $\text{Aq}$  at  $25^\circ$ .

C = concentration of salt in salt solution expressed in equivalents per l.

S = solubility of  $\text{Pb}(\text{IO}_3)_2$  in salt solution expressed in equivalents per l.

8.9	12.6	19.3% $\text{Mg}(\text{IO}_3)_2$

(Mylius and Funk, B. 1897, 30. 1722.)

Sat. aq. solution at  $18^\circ$  contains 6.44%  $\text{Mg}(\text{IO}_3)_2$  or 6.88 g. are sol. in 100 g.  $\text{H}_2\text{O}$ . Sp. gr. of sat. solution = 1.078. (Mylius and Funk, B. 1897, 30. 1718.)

+ $10\text{H}_2\text{O}$ . Sat. aq. solution contains at:

$0^\circ$	$20^\circ$	$30^\circ$	$35^\circ$	$50^\circ$ (m pt.).
3.1	10.2	17.4	21.9	67.5% $\text{Mg}(\text{IO}_3)_2$ .

(Mylius and Funk, B. 1897, 30. 1723.)

**Manganous iodate,  $\text{Mn}(\text{IO}_3)_2 + \text{H}_2\text{O}$ .**

Sol. in about 200 pts.  $\text{H}_2\text{O}$ . (Rammelsberg.)

Insol. in  $\text{H}_2\text{O}$  and  $\text{HNO}_3 + \text{Aq}$ , even on boiling. Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Ditte)

**Manganous manganic iodate,**

$\text{Mn}(\text{IO}_3)_4, \text{Mn}(\text{IO}_3)_3$ .

Insol. in  $\text{H}_2\text{O}$ . (Berg, C. R. 1899, 128. 675.)

**Manganic potassium iodate,**

$\text{Mn}(\text{IO}_3)_4, 2\text{KIO}_3$ .

Insol. in and only sl. attacked by  $\text{H}_2\text{O}$ .

Insol. in  $\text{HIO}_3$ . (Berg, C. R. 1899, 128. 674.)

**Mercurous iodate,  $\text{Hg}_2(\text{IO}_3)_2$ .**

Insol. in boiling  $\text{H}_2\text{O}$ , or cold  $\text{HNO}_3 + \text{Aq}$ . Easily sol. in dil.  $\text{HCl} + \text{Aq}$ . Sol. in very

conc  $\text{HIO}_3 + \text{Aq}$ . (Lefort, J. Pharm. 1846. 5.)

**Mercuric iodate,  $\text{Hg}(\text{IO}_3)_2$ .**

Insol. in  $\text{H}_2\text{O}$  or alcohol (Millon, A. ch. (3) 18. 367.) Sol. in  $\text{H}_2\text{O}$  (Berzelius.) Sol. in dil.  $\text{HCl} + \text{Aq}$  (Rammelsberg.)

Nearly insol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl}$ ,  $\text{HBr}$ , or  $\text{HI} + \text{Aq}$ ; very sl. sol. in  $\text{HNO}_3 + \text{Aq}$ ; insol. in  $\text{HF}$ ,  $\text{H}_2\text{SiF}_6$ , or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . Sol. in alkali chlorides, bromides, iodides, cyanides, and cyanates +  $\text{Aq}$ ; also in  $\text{Na}_2\text{S}_2\text{O}_3$ , dil.  $\text{MnCl}_2$ , and  $\text{ZnCl}_2 + \text{Aq}$ . Insol. in  $\text{KOH}$ ,  $\text{NaOH}$ ,  $\text{NH}_4\text{OH}$ ,  $\text{Na}_2\text{S}$ ,  $\text{Na}_2\text{B}_4\text{O}_7$ ,  $\text{Na}_2\text{HPO}_4$ , and the alkali chlorates, bromates, and iodates +  $\text{Aq}$ . (Cameron, C. N. 33. 253.)

**Nickel iodate,  $\text{Ni}(\text{IO}_3)_2$ .**

Solubility in  $\text{H}_2\text{O}$ .

Form	Temp	Percent of $\text{Ni}(\text{IO}_3)_2$ in solution	Mols. water free salt to 100 mols. $\text{H}_2\text{O}$
$\text{Ni}(\text{IO}_3)_2 + 4\text{H}_2\text{O}$	$0^\circ$	0.73	0.033
	$18^\circ$	1.01	0.045

"	$100^\circ$	0.983	0.044

(Meusser, B. 1901, 34. 2440.)

+ $\text{H}_2\text{O}$  Sol. in 120.3 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 77.35 pts. at  $100^\circ$  (Rammelsberg, Pogg. 44. 562.)

Sol. in  $\text{HNO}_3$ , and dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Ditte.)

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

Does not exist (Meusser.)

+ $2\text{H}_2\text{O}$ . See Meusser above.

+ $3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$ .

(Ditte, A. ch. 1890, (6) 21. 160.)

+ $4\text{H}_2\text{O}$ . See Meusser above.

**Nickel iodate ammonia,  $\text{Ni}(\text{IO}_3)_2, 4\text{NH}_3$ .**

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  Insol. in alcohol. (Rammelsberg, Pogg. 44. 562.)

$\text{Ni}(\text{IO}_3)_2, 5\text{NH}_3$ . Ppt. (Ephraim, B. 1915, 48. 53.)

+ $3\text{H}_2\text{O}$ . (Ephraim.)

**Potassium iodate,  $\text{KIO}_3$ .**

1 pt.  $\text{KIO}_3$  dissolves in 13 pts.  $\text{H}_2\text{O}$  at  $14^\circ$ . (Gay-Lussac.)

# IODATE, POTASSIUM HYDROGEN

1 pt.  $\text{KIO}_3$  dissolves at:

0° in 21	11 pts. $\text{H}_2\text{O}$
20° "	12 " "
40° "	7 " "
60° "	5.40 "
80° "	4.02 "
100° "	3.10 "

Sat. solution boils at 102°. (Kremers, Pogg. 97. 5.)

Sp. gr. of  $\text{KIO}_3 + \text{Aq}$  containing:

1	2	3	4	5	% $\text{KIO}_3$
1.010	1.019	1.027	1.035	1.044	
6	7	8	9	10	% $\text{KIO}_3$
1.052	1.061	1.071	1.080	1.090	

(Kremers, Pogg. 96. 62.)

Stable at 10° in  $\text{H}_2\text{O}$  or potassium acetate + Aq. (Eakle, C. C. 1896, 11. 649.)

Solubility of  $\text{KIO}_3$  in  $\text{HIO}_3 + \text{Aq}$  at 30°.

% $\text{HIO}_3$ in the solution	% $\text{KIO}_3$ in the solution	Solid phase

76.70	0	$\text{HIO}_3$

(Meerburg, Z. anorg. 1905, 45. 330.)

More sol. in  $\text{KI} + \text{Aq}$  than in  $\text{H}_2\text{O}$ . Sol. in warm  $\text{H}_2\text{SO}_4 + \text{Aq}$ .  
 Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)  
 Insol. in alcohol.  
 Insol. in methyl acetate (Naumann, B. 1900, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)  
 +  $\frac{1}{2}\text{H}_2\text{O}$ . (Ditte, C. R. 70. 621.)

Potassium hydrogen iodate,  $\text{KH}(\text{IO}_3)_2$ .

Sol. in 18.65 pts.  $\text{H}_2\text{O}$  at 17°. (Meineke, A. 261. 360.)

Sol. in 75 pts.  $\text{H}_2\text{O}$  at 15°. Insol. in alcohol. (Serullas, A. ch. 22. 181.)  
 See also Meerburg under  $\text{KIO}_3$ .

Potassium dihydrogen iodate,  $\text{KH}_2(\text{IO}_3)_3$ .

Sol. in 25 pts.  $\text{H}_2\text{O}$  at 15°. (Serullas, A. ch. 43. 117.)  
 See also Meerburg under  $\text{KIO}_3$ .

Potassium tellurium iodate.

See Iodotellurate, potassium.

Potassium uranyl iodate,

$\text{KUO}_2(\text{IO}_3)_3 + 3\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ , dil. salt solutions and  $\text{UO}_2(\text{NO}_3)_2 + \text{Aq}$ . (Artmann, Z. anorg. 1913, 79. 340.)

Potassium iodate chloride,  $\text{KH}(\text{IO}_3)_2, 2\text{KCl}$ .

Sol. in 19 pts.  $\text{H}_2\text{O}$  at 15° with decomp. Cold alcohol dissolves out  $\text{KCl}$ .

Potassium iodate molybdate,  $\text{KIO}_3, \text{MoO}_3 + 2\text{H}_2\text{O}$

See Molybdatiodate, potassium.

Potassium iodate selenate.

See Iodoselenate, potassium.

Potassium iodate sulphate,  $\text{KIO}_3, \text{KHSO}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . (Marnagac, J. B. 1856. 209.)  
 $\text{K}'\text{HIO}_3, \text{KHSO}_4$ . More sol. in  $\text{H}_2\text{O}$  than  $\text{KHIO}_3$ . (Serullas.)

Potassium iodate tungstate.

See Tungstoidate, potassium.

Rubidium iodate,  $\text{RbIO}_3$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 2.1 pts.  $\text{RbIO}_3$  at 23°. Easily sol. in cold  $\text{HCl} + \text{Aq}$  (Wheeler Sill. Am. J. 144. 123.)

Rubidium hydrogen iodate,  $\text{RbH}(\text{IO}_3)_2$ .

Sl. sol. in cold, more readily in hot  $\text{H}_2\text{O}$ ,  $\text{RbIO}_3$  separating on cooling. Insol. in alcohol. (Wheeler.)

$\text{RbH}_2(\text{IO}_3)_3$ . As above. (Wheeler.)

Rubidium iodate chloride,  $\text{RbIO}_3, \text{HCl}$ , or  $\text{HIO}_3, \text{RbCl}$ .

Decomp. by cold  $\text{H}_2\text{O}$ . (Wheeler.)  
 $3\text{RbCl}, 2\text{HIO}_3$ . Sol. in  $\text{H}_2\text{O}$ , from which  $\text{RbIO}_3$  separates. (Wheeler.)

Rubidium iodate selenate.

See Iodoselenate, rubidium.

Samarium iodate,  $\text{Sm}(\text{IO}_3)_3 + 6\text{H}_2\text{O}$ .

Precipitate. (Cleve.)

Scandium iodate,  $\text{Sc}(\text{IO}_3)_3 + 10, 13, 15$ , and  $18\text{H}_2\text{O}$ .

Nearly insol. in  $\text{H}_2\text{O}$ . (Crookes, Phil. Trans. 1910, 210, A, 361.)

Silver iodate,  $\text{AgIO}_3$ .

$1.89 \times 10^{-4}$  moles or  $5.38 \times 10^{-2}$  g.  $\text{AgIO}_3$  are sol in 1 liter  $\text{H}_2\text{O}$  at  $25^\circ$ . (Noyes and Kohl, Z. phys. Ch. 1903, 42, 338.)

Sl. sol in  $\text{H}_2\text{O}$ .  $4.35 \times 10^{-2}$  g. are dissolved in 1 liter of sat. solution at  $20^\circ$  (Böttger, Z. phys. Ch. 1903, 46, 603.)

1 l.  $\text{H}_2\text{O}$  dissolves 40 mg.  $\text{AgIO}_3$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50, 356.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.0275 g.  $\text{AgIO}_3$  at  $9.43^\circ$ ; 0.039 g. at  $18.4^\circ$ ; 0.0539 g. at  $26.6^\circ$ . Solubility increases rapidly with temp. (Kohlrausch, Z. phys. Ch. 1908, 64, 168.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.039 g.  $\text{AgIO}_3$  at  $20^\circ$ . (Whitby, Z. anorg. 1910, 67, 108.)

Not completely insol. in  $\text{H}_2\text{O}$ . (Rose.) Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$ . (Naquet, J. B. 1860, 201.) Sol. in conc.  $\text{KI} + \text{Aq}$ . (Ladenburg, A. 136, 1.)

Sol. in 27,700 pts.  $\text{H}_2\text{O}$  at  $25^\circ$ ; in 42.4 pts.  $5\%$   $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ ; in 2.1 pts.  $10\%$   $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ ; in 104.3 pts.  $35\%$   $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.21) at  $25^\circ$ . (Long, Gazz. ch. it. 13, 87.)

Solubility in  $\text{HNO}_3 + \text{Aq}$  at  $25^\circ$ .

Normality $\text{HNO}_3$	G. $\text{AgIO}_3$ dissolved per l
0.000	0.0503
0.125	0.0864
0.250	0.1075
0.500	0.1414
1.00	0.2067
2.00	0.3319
4.00	0.6985
8.00	1.5875

(Hill and Summons, Z. phys. Ch. 1909, 67, 602.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 829.)

Insol. in methyl acetate. (Bezold, Dissert. 1906; Naumann, B. 1909, 42, 3790); ethyl acetate. (Hamers, Dissert. 1906; Naumann, B. 1910, 43, 314.)

Silver iodate ammonia,  $2\text{AgIO}_3, 3\text{NH}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Very sol. in cold  $\text{H}_2\text{O}$ . (Ditte, A. ch. (6) 21, 145.)

$\text{AgIO}_3, 2\text{NH}_3$ .  
Sl. sol. in conc  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rosenheim, A. 1899, 308, 52.)

Sodium iodate,  $\text{NaIO}_3$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 7.25 pts.  $\text{NaIO}_3$  at  $14.5^\circ$ . (Gay-Lussac.) 100 pts.  $\text{H}_2\text{O}$  dissolve 2.52 pts. at  $0^\circ$ ; 9.07 pts. at  $20^\circ$ ; 14.39 pts. at  $60^\circ$ ; 27.7 pts. at  $80^\circ$ ; 33.9 pts. at  $100^\circ$ . (Krem-

ers, Pogg. 97, 5.) Sat. solution boils at  $102^\circ$  (Kremers),  $105^\circ$  (Ditte).

Sol. in warm  $\text{H}_2\text{SO}_4 + \text{Aq}$  diluted with  $\frac{1}{2}$  vol.  $\text{H}_2\text{O}$ . Crystallizes out on standing over  $\text{H}_2\text{SO}_4$ . (Ditte.)

Solubility of  $\text{NaIO}_3$  in  $\text{HIO}_3 + \text{Aq}$  at  $30^\circ$ .

% $\text{HIO}_3$ in the solution	% $\text{NaIO}_3$ in the solution	Sol. phase

(Meerburg, Z. anorg. 1905, 45, 334.)

Insol. in alcohol. Sol. in dil.  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ .

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)  
 $+ 1\frac{1}{2}\text{H}_2\text{O}$ . See Meerburg above.

Sodium diiodate,  $\text{Na}_2\text{O}, 2\text{I}_2\text{O}_5$ .

See Meerburg under  $\text{NaIO}_3$ .

Sodium triiodate,  $\text{NaIO}_3, 2\text{HIO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Blomstrand, J. pr. (2) 42, 337.)

See also Meerburg under  $\text{NaIO}_3$ .

Sodium iodate bromide,  $\text{NaIO}_3, 2\text{NaBr} + 9\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)

Sodium iodate chloride,  $\text{NaIO}_3, \text{NaCl} + 4\text{H}_2\text{O}$ , and  $2\text{NaIO}_3, 3\text{NaCl} + 18\text{H}_2\text{O}$ .

Cold  $\text{H}_2\text{O}$  dissolves out  $\text{NaCl}$ .

Sodium iodate iodide,  $\text{NaIO}_3, \text{NaI}$ .

Hot  $\text{H}_2\text{O}$  or alcohol dissolves out  $\text{NaI} + 8\text{H}_2\text{O}$ .

$+ 10\text{H}_2\text{O}$ .  
 $2\text{NaIO}_3, 3\text{NaI} + 20\text{H}_2\text{O}$ . (Peanny, A. 37, 202.)

Stable in a solution of  $\text{NaI} + \text{NaOH} + \text{Aq.}$  (Eakle, C. C. 1896, II. 650.)

### Strontium iodate, $\text{Sr}(\text{IO}_3)_2$ .

*Anhydrous.* Insol. in  $\text{H}_2\text{SO}_4$  (Ditte), easily sol. in cold  $\text{HCl} + \text{Aq.}$  (Rammelsberg, Pogg. 44. 575.)

+  $\text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$   
+  $6\text{H}_2\text{O}$ . Sol. in 416 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 138 pts. at  $100^\circ$  (Gay-Lussac); 342 pts. at  $15^\circ$ , and 110 pts. at  $100^\circ$ . Difficultly sol. in warm  $\text{HNO}_3 + \text{Aq.}$  (Rammelsberg, Pogg. 44. 575.)

### Thalious iodate, $\text{ThIO}_3$ .

Difficultly sol. in warm  $\text{H}_2\text{O}$  (Oettinger.) Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in  $\text{HNO}_3 + \text{Aq.}$  (Rammelsberg.)

Sl. sol. in  $\text{H}_2\text{O}$ .

$0.58 \times 10^{-1}$  g. are dissolved in 1 liter of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46. 603.)

$2.12 \times 10^{-2}$  mols = 0.667 g. are sol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ . (Spencer, Z. phys. Ch. 1912, 80. 707.)

Sol. in a little  $\text{NH}_4\text{OH} + \text{Aq.}$  also in boiling  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HCl} + \text{Aq.}$  Insol. in alcohol. (Oettinger.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$  or dil. boiling acids. (Ditte, A. ch. (6) 21. 145.)

### Thallic iodate, basic, $\text{Ti}(\text{OH})(\text{IO}_3)_2 + \text{H}_2\text{O} = \text{Ti}_2\text{O}_3 \cdot 2\text{I}_2\text{O}_5 + 3\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in cold  $\text{HCl} + \text{Aq.}$  and warm dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Ditte, A. ch. (6) 21. 145.)

### Thallic iodate, $\text{Ti}(\text{IO}_3)_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sl. sol. in  $\text{HNO}_3 + \text{Aq.}$  Decomp. by alkalis. (Rammelsberg.)

+  $12\text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$

Easily sol. in dil. acids (Gewecke, Z. anorg. 1912, 75, 275.)

### Thorium iodate, $\text{Th}(\text{IO}_3)_4$ .

Precipitate. (Cleve.)

### Tin (stannous) iodate.

Ppt. Sol. in  $\text{SnCl}_2 + \text{Aq.}$ ; insol. in  $\text{NaIO}_3 + \text{Aq.}$

### Tin (stannic) iodate.

Ppt.

### Uranous iodate.

Precipitate. Very unstable. (Rammelsberg.)

### Uranyl iodate, $\text{UO}_2(\text{IO}_3)_2$ .

Sol. or insol. in  $\text{HNO}_3$  and  $\text{H}_3\text{PO}_4 + \text{Aq.}$  according to method of preparation. (Ditte.) +  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{HNO}_3 + \text{Aq.}$  (Rammelsberg.)

### Ytterbium iodate, $\text{Yb}(\text{IO}_3)_3 + 6\text{H}_2\text{O}$ .

Ppt. (Cleve, Z. anorg. 1902, 32. 136.)

### Yttrium iodate, $\text{Y}(\text{IO}_3)_3 + 3\text{H}_2\text{O}$ .

Sol. in 190 pts.  $\text{H}_2\text{O}$ . (Berlin.)

### Zinc iodate, $\text{Zn}(\text{IO}_3)_2$

*Anhydrous.* (Ditte, A. ch. (6) 21. 145.) +  $2\text{H}_2\text{O}$ . Sol. in 114 pts. cold, and 76 pts. hot  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 43. 665.)

Sol. in  $\text{HNO}_3$  and  $\text{NH}_4\text{OH} + \text{Aq.}$

Exists also in a very sol. modification (Mylius and Funk, B. 1897, 30. 1723.)

### Zinc iodate ammonia, $3\text{Zn}(\text{IO}_3)_2 \cdot 8\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  from which it is pptd. by alcohol (Rammelsberg, Pogg. 44. 563.)

$\text{Zn}(\text{IO}_3)_2 \cdot 2\text{NH}_3$ . Insol. in  $\text{H}_2\text{O}$ . (Ditte, A. ch. (6) 21. 145.)

$\text{Zn}(\text{IO}_3)_2 \cdot 3\text{NH}_3 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Ditte.)

$\text{Zn}(\text{IO}_3)_2 \cdot 4\text{NH}_3$ . (Ditte, A. ch. 1890, (6) 21. 164.) (Ephraim, B. 1915, 48. 53.)

### Periodic acid.

See Periodic acid.

### Iodides.

The iodides are in general easily sol. in  $\text{H}_2\text{O}$ ; exceptions are  $\text{HgI}_2$ ,  $\text{PbI}_2$ ,  $\text{AgI}$ ,  $\text{Cu}_2\text{I}_2$ , and  $\text{BiI}_3$ , also the iodides of the Pt metals, all of which are insol.  $\text{SnI}_4$ ,  $\text{SbI}_3$ , and  $\text{TiI}_3$  are decomp. by  $\text{H}_2\text{O}$ . Many iodides are more sol. in solutions of salts than in  $\text{H}_2\text{O}$ , and several are sol. in alcohol or ether.

See under each element.

### Iodine, $\text{I}_2$ .

Sol. in 5524 pts.  $\text{H}_2\text{O}$  at  $0-12^\circ$  (Wittstein, J. B. 1857, 123.)

Sol. in 7000 pts.  $\text{H}_2\text{O}$  (Gay-Lussac.)

Sol. in 3800 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  (Basse.)

Sol. in 500 pts.  $\text{H}_2\text{O}$  (Jacquelin.)

Sol. in 71964 pts.  $\text{BrO}$  at  $18.75^\circ$  (Abl.)

Pure  $\text{H}_2\text{O}$  dissolves 0.01519173 g. I per litre, or I is sol. in 6582 pts.  $\text{H}_2\text{O}$  at  $6.3^\circ$ . (Dossius and Weith, Zest. Ch. 12. 378.)

Sol. in about 4500 pts.  $\text{H}_2\text{O}$ . (Hager, Comm. 1883.)

Sol. in 7000 pts.  $\text{H}_2\text{O}$ . (Cap and Garot, J. Pharm. (3) 26. 80.)

1 l.  $\text{H}_2\text{O}$  at  $25^\circ$  dissolves 0.3387 g.  $\text{I}_2$ . (Jakowkin, Z. phys. Ch. 1895, 18. 590.)

1 l.  $\text{H}_2\text{O}$  dissolves 1.342 millimols of iodine at  $25^\circ$ . (Noyes, Z. phys. Ch. 1898, 27. 359.)

When iodine is shaken with  $\text{H}_2\text{O}$  at  $15^\circ$ , 1 pt. dissolves in 3750 pts.  $\text{H}_2\text{O}$ ; when iodine and  $\text{H}_2\text{O}$  are heated together and then cooled to  $15^\circ$ , 1 pt. iodine dissolves in 3500 pts.  $\text{H}_2\text{O}$ .

At  $30^\circ$  1 pt. is sol. in 2200 pts.  $\text{H}_2\text{O}$ . (Dietz, Chem. Soc. 1899, 76, (2) 150.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.279 grams  $\text{I}_2$  at  $25^\circ$ . (McLauchlan, Z. phys. Ch. 1903, 44. 617.)

Solubility of  $I_2$  in  $H_2O$  at  $t^\circ$ 

$t^\circ$	g $I_2$ per l $H_2O$
18	0.2765
25	0.3395
35	0.4661
45	0.6174
55	0.9222

(Hartley, *Chem. Soc.* 1906, 93, 744.)Solubility of  $I_2$  in  $II_2O$  at  $t^\circ$ .

$t^\circ$	g per l.	millimol per l
0	0.1649	1.30
20	0.2941	2.30
40	0.5684	4.56

(Fedotief, *Z. anorg.* 1910, 69, 30.)

1.32 millimol  $I_2$  are sol. in 1 l.  $H_2O$ . (Bray, *J. Am. Chem. Soc.*, 1910, 32, 933.)

Calculated from electrical conductivity of sat.  $I_2$  + Aq. 1 l.  $H_2O$  dissolves 0.0006383 mols.  $I_2$  at  $0^\circ$ . (Jones, *J. Am. Chem. Soc.* 1915, 37, 256.)

Conc.  $H_2SO_4$ ,  $HCl$ ,  $HNO_3$ ,  $H_3PO_4$ ,  $HC_2H_3O_2$ , tartaric, or citric acids + Aq dissolve I, but give it up to  $CS_2$  on shaking therewith. (Tessier, *Z. anal.* 11, 313.)

Sol. in 150 pts  $H_2SO_4$  on warming, but crystallizes out in part on cooling. (Kraus.)

Much more sol. in  $HBr$  + Aq than in pure  $H_2O$ ;  $HBr$  + Aq of sp. gr. 1.486 dissolves 3-4% (Bineau.)

Sl. sol. in  $HCl$  + Aq. Easily sol. in even dil  $HI$  + Aq.

1 l. 0.001 N- $HCl$  + Aq sat. with  $I_2$  contains 0.338 g.  $I_2$  (Bray and Mackay, *J. Am. Chem. Soc.* 1910, 32, 1619.)

1 l. 0.1 N- $HNO_3$  + Aq sat. with  $I_2$  contains 0.340 g.  $I_2$  (Sammet, *Z. phys. Ch.* 1905, 63, 644.)

1 l. 0.1 N- $H_2SO_4$  + Aq sat. with  $I_2$  contains 0.341 g.  $I_2$ . (Sammet.)

Sol. in  $H_2SO_4$  + Aq with decomp.

1 l. 0.9 N.  $H_2BO_3$  dissolves 0.300 g.  $I_2$  at  $25^\circ$ . (McLauchlan, *Z. phys. Ch.* 1903, 44, 617.)

100 cc. of a 10% solution of  $BaBr_2$  dissolve 0.231 g.  $I_2$  at  $13.5^\circ$ . (Meyer, *Z. anorg.* 1902, 30, 114.)

100 cc. of a 10% solution of  $BaCl_2$  dissolve 0.067 g.  $I_2$  at  $18.5^\circ$ . (Meyer.)

100 cc. of a 10% solution of  $BaI_2$  dissolve 0.541 g.  $I_2$  at  $13.5^\circ$ . (Meyer.)

100 cc. of a 10% solution of  $CaBr_2$  dissolve 0.274 g.  $I_2$  at  $13.5^\circ$ . (Meyer.)

100 cc. of a 10% solution of  $CaCl_2$  dissolve 0.078 g.  $I_2$  at  $18.5^\circ$ . (Meyer.)

100 cc. of a 10% solution of  $CaI_2$  dissolve 0.062 g.  $I_2$  at  $13.5^\circ$ . (Meyer.)

Easily sol. in boiling dil.  $HgCl_2$  + Aq. (Selmi.)

Solubility in  $HgCl_2$  + Aq at  $25^\circ$ .

10 cc. of the solution contain	
millimol $I_2$	millimol $Hg$
0.0134	0
0.1294	0.9444
0.1460	1.2442
0.1806	1.9542
0.2543	3.3460

(Heiz and Paul, *Z. anorg.* 1914, 85, 214.)

Sol. in solutions of soluble iodides.

100 pts.  $KI$  + 200 pts.  $H_2O$  dissolve 153 pts.  $I_2$ ; from this solution  $H_2O$  precipitates  $\frac{1}{2}$  the dissolved  $I$ . 100 pts.  $KI$  + 400 pts.  $H_2O$  dissolve quickly 76.5 pts  $I$ . If more water is present, the solution takes place more slowly. (Baup.)

$CS_2$  extracts the  $I$  from the above solutions

Solubility of  $I$  in  $KI$  + Aq at  $7-7.3^\circ$ 

% $KI$ in $KI$ + Aq	Pts $I$ dissolved	Sp gr of solution
1.802	1.173	1.0234
3.159	2.303	1.0433

(Bell and Buckley, J. Am. Chem. Soc. 1912, 34. 13.)

100 cc. of a 10% solution of  $\text{SrBr}_2$  dissolve 0.270 g.  $\text{I}_2$  at 13.50. (Meyer, Z. anorg. 1903, 30, 114.)

100 cc. of a 10% solution of  $\text{SrCl}_2$  dissolve 0.066 g.  $\text{I}_2$  at 18.5°. (Meyer.)

100 cc. of a 10% solution of  $\text{SrI}_2$  dissolve 6.616 g.  $\text{I}_2$  at 13.5°. (Meyer.)

#### Solubility in salts + Aq at 25°

Salt + Aq	Grams $\text{I}_2$ sol in 1 liter	Salt + Aq	Grams $\text{I}_2$ sol in 1 liter
$\frac{1}{4}$ -N $\text{Na}_2\text{SO}_4$	0.160	N. $\text{NaCl}$	0.575
$\frac{1}{2}$ -N $\text{K}_2\text{SO}_4$	0.238	N. $\text{KCl}$	0.668
$\frac{1}{4}$ -N. $(\text{NH}_4)_2\text{SO}_4$	0.246	N. $\text{NH}_4\text{Cl}$	0.735
N. $\text{NaNO}_3$	0.257	N. $\text{NaBr}$	3.29
N. $\text{KNO}_3$	0.206	N. $\text{KBr}$	3.801
N. $\text{NH}_4\text{NO}_3$	0.375	N. $\text{NH}_4\text{Br}$	4.003

(McLauchlan, Z. phys. Ch. 1903, 44, 617.)

1.14 g. are sol in 100 ccm. liquid  $\text{H}_2\text{S}$ . (Antony, Gazz. ch. it 1905, 35, (1) 206.)

Sol. in liquid  $\text{NH}_3$ . (Franklin, Am. ch. J. 1898, 20, 832.)

Sl. sol. in liquid  $\text{CO}_2$ . (Buchner, Z. phys. Ch. 1906, 54, 674.)

Sol. in liquid  $\text{SO}_2$  (Sestini), and  $\text{SO}_2$  (Weber).

100 pts.  $\text{AsCl}_3$  dissolve 8.42 pts.  $\text{I}$  at 0°; 11.88 pts.  $\text{I}$  at 15°, 36.89 pts.  $\text{I}$  at 96°. (Sloan, C. N. 46, 194.)

Sol. in liquid  $\text{SO}_2$ ,  $\text{AsCl}_3$ ,  $\text{SO}_2\text{Cl}_2$ , and acetaldehyde. (Walden, Z. phys. Ch. 1903, 43, 407.)

Very sol. in liquid  $\text{NO}_2$ . (Frankland, Chem. Soc. 1901, 79, 1301.)

Sol. in 10-12 pts. alcohol. (Wittstein.)

Sol. in wood-spirit. (Playfair.)

Abundantly sol. in amyl (Pelletan), and hexyl alcohol (Bous).  
Iodine is sol in 20 pts. alcohol, 110 pts. oil, 7000 pts.  $\text{H}_2\text{O}$ , 100 pts. glycerine. (Cap and Garot, J. Pharm. (3) 26, 80.)

#### Solubility of $\text{I}_2$ in $\text{C}_2\text{H}_5\text{OH} + \text{Aq}$ at room temperature (14.5°—15.1°).

Volumes of $\text{C}_2\text{H}_5\text{OH}$ in 100 volumes of $\text{C}_2\text{H}_5\text{OH} + \text{H}_2\text{O}$	Cen. of 1/10-normal iodine in 5 cc. of the solution

(Arcetowski, Z. anorg. 1894, 6, 404.)

1 l.  $CS_2$  dissolves 230 g.  $I_2$  at 25°.

1 l.  $CHBr_3$  dissolves 189.55 g.  $I_2$  at 25°.

1 l.  $CCl_4$  dissolves 30.33 g.  $I_2$  at 25°.

(Jakowkin, Z. phys. Ch. 1895, 18, 590.)

Solubility in  $CS_2$ .

100 g. of the sat. solution contain at:

-80°	-87°	-92.5°	-94°
0.509	0.440	0.391	0.378 g. $I_2$ .

(Arcetowski, Z. anorg. 1896, 11, 274.)

When an aqueous solution of  $I$  is shaken with  $CS_2$ , 400 pts. go into solution in  $CS_2$  for 1 pt. remaining in  $H_2O$ . (Berthelot and Jungfleisch, C. R. 69, 338.)

Abundantly sol. in methane. (Villard, A. ch. 1897, (7) 10, 387.)

Easily sol. in hot, less in cold naphtha. (Pelletier and Walker.)

Sol. in about 8 pts. hot petroleum from Amiano (de Saussure.)

Sol. sol. in cold, more readily in hot benzene (Mansfield.) Easily sol. in benzene. (Morde, A. ch. (3) 39, 452.)

Solubility in benzene.

100 g. of the sat. solution contain at:

4 7°	6 6°	10 5°	13.7°	16.3°
8.08	8.63	9.60	10.44	11.23 g. $I_2$ .

(Arcetowski, Z. anorg. 1896, 11, 276.)

1 l. benzene sat. with iodine at 25° contains 139 g. iodine. Abegg, Z. anorg. 1906, 50, 409.)

1 l. nitrobenzene dissolves 50.62 g.  $I_2$  at 16-17°. (Dawson and Gawler, Chem. Soc. 1902, 81, 524.)

Solubility of  $I_2$  in nitrobenzene + iodides at room temp.

"	51.4	280

(Dawson and Goodson, Chem. Soc. 1904, 85, 706.)

Sol. in quinoline (Beckmann and Gabel, Z. anorg. 1906, 51, 236.)

Easily sol. in oil of turpentine, but an explosion soon occurs (Walker.)

Sol. in oil of mandarin. (Luca.)

Sol. in oil of arnica root. (Zeller)

Very sol. in  $\text{CS}_2$ , lignone, furfural, glycerine, aldehyde, chloral, warm retinole, toluene, salicylic acid, methyl nitrate, methyl salicylate, mercaptan, amyl carbamate, ethyl sulphhydrate, allyl iodide, ethyl disulphocarbonate, carbon chloride,  $\text{SCl}_2$ ,  $\text{ICl}_3$ ,  $\text{H}_2\text{S}_2$ , chlorochromic acid, amyl valerianate, valerianic acid, warm butyric acid, croosote, aniline, quinine, methylsulphyleic acid. Quickly sol. in oil of dill, peppermint, sassafras, and tansy. Slowly sol. in oil of cloves, cinnamon, cajuput, and rue. Other essential oils decompose it. (Various authorities.)

Sol. in potassium croconate + Aq. (Gmelin.)

Sol. in potassium antimony tartrate + Aq. 176 pts.  $\text{H}_2\text{O}$  + 6 pts. potassium antimony tartrate dissolve 275 pts. I; 373 pts.  $\text{H}_2\text{O}$  + 6 pts. potassium antimony tartrate dissolve 412 pts. I.

More sol. in tannic acid than in  $\text{H}_2\text{O}$ . 1 pt. I is sol in 450 pts.  $\text{H}_2\text{O}$  with 3.3 pts. tannic acid at  $12^\circ$ ; 1 pt. I is sol in 240 pts.  $\text{H}_2\text{O}$  with 0.015 pt. tannic acid at about  $30^\circ$ . (Koller, Zeit. Ch. 1886. 380.)

200 g.  $\text{H}_2\text{O}$  containing 0.3 g. tannic acid dissolve 1.0 g. I. (Hager, Comm. 1883.)

Sol. in considerable quantity, especially on warming, in resorcin, orcin, or phloroglucin + Aq. without coloration or formation of HI + Aq. These solutions withdraw I from  $\text{CS}_2$  solution, and do not give it up on boiling, but on evaporation in vacuo the I is sublimed in a pure state. (Hlasiwetz, Z. anal. 6. 447.)

Partition coefficient for iodine between  $\text{CS}_2$  and Aq at  $25^\circ\text{C}$ .

A = concentration of the water layer.

C = concentration of the carbon bisulphide layer.

(Landau, Z. phys. Ch. 1910, 73, 205.)

Iodine monobromide,  $IBr$ .

Slowly sol. in  $H_2O$  with slight decomp. Sol. in  $CHCl_3$ ,  $CS_2$ , ether, and alcohol.

+5 $H_2O$ . (Lewig, Pogg. 14, 485.) Does not exist. (Bornemann, A. 189, 183.)

**Iodine pentabromide,  $\text{IBr}_5$ (?).**

Sol in  $\text{H}_2\text{O}$  with separation of iodine (Lowig, Pogg. 14. 485.)

**Iodine monochloride,  $\text{ICl}$ .**

Decomp. by  $\text{H}_2\text{O}$ ; sol. without decomp. in alcohol, ether, and  $\text{HCl} + \text{Aq.}$

Sol. in  $\text{CS}_2$ .

**Iodine hydrogen chloride,  $\text{ICl}$ ,  $\text{HCl}$ .**

Unstable. Sol. in ether. (Schutzenberger, C. R. 84. 389.)

**Iodine trichloride,  $\text{ICl}_3$ .**

Deliquescent. With  $\text{H}_2\text{O}$ , a part is dissolved without decomp., and the rest is decomp. The aqueous solution contains more unchanged  $\text{ICl}_3$ , the more conc. it is. (Serullas.) Precipitated from aqueous solution by  $\text{H}_2\text{SO}_4$ . Sol. in  $\text{HCl} + \text{Aq.}$  Sol. in warm conc.  $\text{H}_2\text{SO}_4$  without decomp. Sol. in alcohol, and benzene. Decomp. by small amount of  $\text{CS}_2$ . (Christomanos, B. 10. 484.) Ether does not remove it from aqueous solution. (Serullas.)

**Iodine lithium chloride,  $\text{ICl}_3$ ,  $\text{LiCl} + 4\text{H}_2\text{O}$ .**

See Lithium chloriodide.

**Iodine trichloride magnesium chloride,  $2\text{ICl}_3$ ,  $\text{MgCl}_2 + 5\text{H}_2\text{O}$ .**

Very deliquescent and easily decomposed. (Filhol, J. Pharm. 25. 442.)  
 $+ 8\text{H}_2\text{O}$  Hygroscopic (Weinland, Z anorg 1902, 30. 141.)

**Iodine trichloride manganous chloride,  $2\text{ICl}_3$ ,  $\text{MnCl}_2 + 8\text{H}_2\text{O}$ .**

Hygroscopic (Weinland, Z anorg 1902, 30. 139.)

**Iodine trichloride nickel chloride,  $2\text{ICl}_3$ ,  $\text{NiCl}_2 + 8\text{H}_2\text{O}$ .**

Hygroscopic.  $\text{CCl}_4$  dissolves out  $\text{ICl}_3$ . (Weinland, Z. anorg 1902, 30. 138.)

**Iodine monochloride phosphorus pentachloride,  $\text{ICl}$ ,  $\text{PCl}_5$ .**

Very deliquescent; decomp. by  $\text{H}_2\text{O}$ .

**Iodine potassium chloride,  $\text{ICl}_3$ ,  $\text{KCl}$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp.

Ether dissolves out  $\text{ICl}_3$ . (Filhol, J. Pharm. 25. 433, 506.)

See Potassium chloriodide.

**Iodine sodium chloride,  $\text{ICl}_3$ ,  $\text{NaCl} + 2\text{H}_2\text{O}$ .**

See Sodium chloriodide.

**Iodine trichloride strontium chloride,  $2\text{ICl}_3$ ,  $\text{SrCl}_2 + 8\text{H}_2\text{O}$ .**

Hygroscopic (Weinland, Z anorg. 1902, 30. 142.)

**Iodine trichloride sulphur tetrachloride,  $\text{ICl}_3$ ,  $\text{SCl}_4$ .**

Very deliquescent in air; decomp. by  $\text{H}_2\text{O}$ . Decomp. with formation of clear solution by dil  $\text{HNO}_3 + \text{Aq.}$  (Weber, Pogg. 128. 459.)

$\text{SCl}_2$ ,  $2\text{ICl}_3$ . (Jaindard, J. B. 1860. 95.)  
 Correct formula is as above. (Weber, l. c.)  
 $2\text{ICl}_3$ ,  $\text{SCl}_4$  Sol. in  $\text{SO}_2$ ,  $\text{CS}_2$ ,  $\text{SOCl}_2$ ,  $\text{POCl}_3$ , warm  $\text{SCl}_2$ , petroleum ether, ligroin,  $\text{CHCl}_3$ ,  $\text{CCl}_4$ ,  $\text{CS}_2$  and abs. ether. (Ruff, B. 1904, 37. 4519.)

**Iodine trichloride zinc chloride,  $2\text{ICl}_3$ ,  $\text{ZnCl}_2 + 8\text{H}_2\text{O}$ .**

Unstable. Hygroscopic (Weinland, Z. anorg 1902, 30. 140.)

**Iodine pentafluoride,  $\text{IF}_5$ .**

Fumes in air; decomp. with  $\text{H}_2\text{O}$ . (Gore, C. N. 24. 291.)

Decomp. by  $\text{H}_2\text{O}$  into iodic acid and  $\text{HF}$ . Decomp. by solutions of the alkalis. (Moissan, C. R. 1902, 135. 504.)

**Iodine trioxide,  $\text{I}_2\text{O}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Ogier, C. R. 85. 957; 86. 722.)

Probably a mixture

**Iodine tetroxide,  $\text{I}_2\text{O}_4$ (?).**

Insol in cold, decomp. by hot  $\text{H}_2\text{O}$ ; insol. in alcohol. Decomp. by  $\text{HNO}_3 + \text{Aq.}$  Sol in  $\text{H}_2\text{SO}_4$ . (Millon, J. pr. 34. 319, 337.)

**Iodine pentoxide,  $\text{I}_2\text{O}_5$ .**

Very sol. in  $\text{H}_2\text{O}$ , and in dil. alcohol. Insol in absolute alcohol, ether,  $\text{CS}_2$ , chloroform, and hydrocarbons.

Forms hydrates, iodic acid  $\text{HIO}_3$ , and  $3\text{I}_2\text{O}_5$ ,  $\text{H}_2\text{O}$ ; insol. in ordinary alcohol.  
 For sp. gr. of aqueous solution, see *iodic acid*.

**Iodine oxides,  $\text{I}_{10}\text{O}_{13}$ ,  $\text{I}_2\text{O}_{12}$ .**

The compounds,  $\text{I}_{10}\text{O}_{13}$  (Millon, J. pr. 34. 336), and  $\text{I}_2\text{O}_{12}$  (Kammerer, J. pr. 83. 81), are probably mixtures.

Millon's oxides are impure  $\text{I}_2\text{O}_5$ . (Kappeler, B. 1911, 44. 3496.)

**Iodine sulphur oxide,  $5\text{I}_2\text{O}_5$ ,  $\text{SO}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Kammerer.)

$\text{I}_2\text{O}_5$ ,  $3\text{SO}_2$ . Decomp. by  $\text{H}_2\text{O}$ ; sl. sol. in hot  $\text{SO}_2$ . (Weber, B. 20. 86.)  
 $= (\text{IO})_2(\text{SO}_4)_3$ . Iodyl sulphate (?).

**Iodine oxyfluoride,  $\text{IOF}_3 + 5\text{H}_2\text{O}$ .**

Fumes in the air. (Weinland, Z. anorg. 1908, 60. 163.)

**Iodine sulphide,  $\text{S}_2\text{I}_2$ .**

Sol. in  $\text{CS}_2$ . (Linebarger, Am. Ch. J. 1895, 17. 57.)

Iodine sulphoxide,  $\text{I}_2\text{SO}_4(?)$

Decomp. by  $\text{H}_2\text{O}$ . (Schultz-Sellack.)

$\text{I}_2(\text{SO}_3)_2(?)$ . Decomp. by  $\text{H}_2\text{O}$ . (Weber, J. pr. (2) 25, 224.)

$\text{I}_2(\text{SO}_3)_2(?)$ . As above. (Weber.)

See also Iodosulphuric anhydride.

Iodiridic acid.

Ammonium iodiridate,  $(\text{NH}_4)_2\text{IrI}_6$ .

Very easily sol. in cold  $\text{H}_2\text{O}$ , decomp. on warming. Insol. in alcohol. (Oppler, J. B. 1857. 263.)

Potassium iodiridate,  $\text{K}_2\text{IrI}_6$ .

Very easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol.

Sodium iodiridate,  $\text{Na}_2\text{IrI}_6$ .

Insol. in cold, sl. sol. in hot  $\text{H}_2\text{O}$ . Easily sol. in acids. (Oppler.)

Iodiridous acid.

Ammonium iodiridite,  $(\text{NH}_4)_4\text{Ir}_2\text{I}_{12} + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ , but decomp. on warming (Oppler.)

Potassium iodiridite,  $\text{K}_4\text{Ir}_2\text{I}_{12}$ .

Insol. in  $\text{H}_2\text{O}$ , or alcohol. Slowly sol. in acids, easily in warm alkalis +  $\text{Ag}$ .

Silver iodiridite,  $\text{Ag}_2\text{Ir}_2\text{I}_{12}$ .

Ppt.

Iodochloroplatin diamine chloride,

Sl. sol. in  $\text{H}_2\text{O}$ .

Iodochromic acid.

Potassium iodochromate,  $\text{KCrO}_2\text{I}$ .

Decomp. by boiling  $\text{H}_2\text{O}$ . (Guyot, C. R. 73. 46.)

See also Chromoiodic acid.

Iodomolybdic acid.

See Molybdoiodic acid.

Iodonitratoplatin monodiamine bromide,

Very sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

Iodonitratoplatin diamine nitrate,

Quite easily sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)

Iodopalladous acid.

Potassium iodopalladite.

Deliquescent. (Lassaigne.)

Iodophosphoric acid.

See Phosphoiodic acid.

Iodoplatinamine iodide,  $\text{I}_2\text{Pt}(\text{NH}_3\text{I})_2$ .

Sol. in  $\text{H}_2\text{O}$ , especially easily if boiling. (Cleve.)

Iodoplatin diamine iodide,  $\text{I}_2\text{Pt}(\text{N}_2\text{H}_4\text{I})_2$ .

Sol. in  $\text{H}_2\text{O}$ , especially when hot (Cleve.)

— mercuric iodide,  $\text{I}_2\text{Pt}(\text{N}_2\text{H}_4\text{I})_2, 2\text{HgI}_2$ .

Extremely difficultly sol. in cold  $\text{H}_2\text{O}$ , partly decomp. by boiling. (Jürgensen, Gin. K. 3. 1214.)

— nitrate,  $\text{I}_2\text{Pt}(\text{N}_2\text{H}_4\text{NO}_2)_2$ .

More sol. in hot than cold  $\text{H}_2\text{O}$ .

— sulphate,  $\text{I}_2\text{Pt}(\text{N}_2\text{H}_4)_2\text{SO}_4$ .

Very sl. sol. in  $\text{H}_2\text{O}$  (Jürgensen, J. pr. (2) 15. 429.)

Iodoplatin semidiamine iodide,

Sl. sol. in  $\text{H}_2\text{O}$  (Jürgensen, J. pr. (2) 16. 345.)

— periodide,  $\text{I}_2\text{Pt}(\text{NH}_3)_2\text{I}, \text{I}_2$ .

Moderately sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

Iododiplatinamine iodide,  $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_4)_2\text{I}_4$ .

Insol. in  $\text{H}_2\text{O}$ .

Iododiplatin diamine anhydriodide,

Insol. in  $\text{NH}_4\text{OH} + \text{Ag}$ .

— anhydronitrate,  $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_4)_2\text{O}(\text{NO}_2)_2$ .

Easily sol. in warm  $\text{H}_2\text{SO}_3 + \text{Ag}$ . (Cleve.)

— iodide,  $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_4)_2\text{I}_4$ .

Ppt.

— nitrate,  $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_4)_2(\text{NO}_2)_4 + 4\text{H}_2\text{O}$ .

Sl. sol. in cold, moderately sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)

— phosphate,  $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_4)_2[\text{O}_2\text{P}(\text{OH})]_2$ .

Nearly insol. in  $\text{H}_2\text{O}$ .

— sulphate,  $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_4)_2(\text{SO}_4)_2$ .

Nearly insol. in  $\text{H}_2\text{O}$ .

— platodiamine sulphate,  $\text{I}_2\text{Pt}_2(\text{N}_2\text{H}_4)_2\text{SO}_4$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . (Carlgren Sv. V. A. F. 47. 308.)

Iodoplatinic acid,  $\text{H}_2\text{PtI}_6 + 9\text{H}_2\text{O}$ .

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ , with decomp. into  $\text{PtI}_4$  and  $\text{HI}$  on standing or warming. (Topsoe.)

**Ammonium iodoplatinate,  $(\text{NH}_4)_2\text{PtI}_6$ .**  
Easily sol. in  $\text{H}_2\text{O}$ . (Topsøe.)  
 $\text{NH}_4\text{I}$ ,  $\text{PtI}_4$ . Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol (Lassaigne, A. ch. (2) 51. 128.)

**Barium iodoplatinate,  $\text{BaPtI}_6$ .**  
Deliquescent, but less so than  $\text{Na}_2\text{PtI}_6$  which it otherwise resembles. (Lassaigne.)

**Calcium iodoplatinate,  $\text{CaPtI}_6 + 12\text{H}_2\text{O}$ .**  
Not so deliquescent as Na salt.

**Cobalt iodoplatinate,  $\text{CoPtI}_6 + 9\text{H}_2\text{O}$ .**  
Very deliquescent.

**Lead tetraiodoplatinate,  $[\text{PtI}_4(\text{OH})_2]\text{Pb}$ ,  $\text{Pb}(\text{OH})_2$ .**  
Ppt. (Bellucci, C. C. 1902, I 625)

**Magnesium iodoplatinate,  $\text{MgPtI}_6 + 9\text{H}_2\text{O}$ .**  
Sol. in  $\text{H}_2\text{O}$ .

**Manganese iodoplatinate,  $\text{MnPtI}_6 + 9\text{H}_2\text{O}$ .**  
Very deliquescent.

**Mercuric tetraiodoplatinate,  $[\text{PtI}_4(\text{OH})_2]\text{Hg}$ .**  
Ppt. (Bellucci, C. C. 1902, I 625)

**Nickel iodoplatinate,  $\text{NiPtI}_6 + 9\text{H}_2\text{O}$ .**  
Very deliquescent.

**Potassium iodoplatinate,  $\text{K}_2\text{PtI}_6$ .**  
Easily sol. in  $\text{H}_2\text{O}$  Insol. in alcohol. Not attacked by cold conc.  $\text{H}_2\text{SO}_4$ .

**Silver tetraiodoplatinate,  $[\text{PtI}_4(\text{OH})_2]\text{Ag}$ .**  
Ppt. (Bellucci, C. C. 1902, I. 625.)

**Sodium iodoplatinate,  $\text{Na}_2\text{PtI}_6 + 6\text{H}_2\text{O}$ .**  
Not deliquescent, but easily sol. in  $\text{H}_2\text{O}$  and alcohol. (Vauquelin.) Deliquescent. (Lassaigne.)

**Thallium tetraiodoplatinate,  $[\text{PtI}_4(\text{OH})_2]\text{Tl}$ .**  
Ppt. (Bellucci, C. C. 1902, I 625.)

**Zinc iodoplatinate,  $\text{ZnPtI}_6 + 9\text{H}_2\text{O}$ .**  
Easily sol. in  $\text{H}_2\text{O}$ .

**Iodoplatinocyanhydric acid,  $\text{H}_2\text{Pt}(\text{CN})_4\text{I}_2$ .**  
See Periodoplatinocyanhydric acid.

**Silver iodoplatinocyanide,  $\text{Ag}_2(\text{PtI}_2(\text{CN})_2)_2$ .**  
Ppt. (Miolati, Gazz. ch. it. 1900, 30. 588.)

**Strontium iodoplatinocyanide platinumcyanide,  $\text{SrPt}(\text{CN})_4\text{I}_2$ ,  $10\text{SrPt}(\text{CN})_4 + x\text{H}_2\text{O}$ .**  
(Holst.)

**Iodopurpleochromium chloride,  $\text{ICr}(\text{NH}_3)_3\text{Cl}_2$ .**  
Quite sol. in  $\text{H}_2\text{O}$ . (Jorgensen, J. pr. (2) 25. 83.)

— chloroplatinate,  $\text{ICr}(\text{NH}_3)_3\text{PtCl}_6$ .  
Precipitate. (Jorgensen, l. c.)

— iodide,  $\text{ICr}(\text{NH}_3)_3\text{I}_2$ .  
Difficultly sol. in  $\text{H}_2\text{O}$ . Insol. in III, or  $\text{KI} + \text{Aq}$ ; insol. in alcohol. (Jorgensen, l. c.)

— nitrate,  $\text{ICr}(\text{NH}_3)_3(\text{NO}_3)_2$ .  
Much less sol. in  $\text{H}_2\text{O}$  than the chloride. (Jorgensen, l. c.)

**Iodopurpleocobaltic iodide,  $\text{CoI}(\text{NH}_3)_5\text{I}_2$ .**  
(Claudet.)  
Does not exst. (Jorgensen, J. pr. (2) 25. 94.)

**Iodopurpleorhodium chloride,  $\text{IRh}(\text{NH}_3)_3\text{Cl}_2$ .**  
Relatively easily sol. in  $\text{H}_2\text{O}$ ; insol. in  $\text{HCl} + \text{Aq}$  and alcohol. Insol in  $\text{KI} + \text{Aq}$ . (Jorgensen, J. pr. (2) 27. 433)

— fluosilicate,  $\text{IRh}(\text{NH}_3)_3\text{SiF}_6$   
Nearly insol. in cold  $\text{H}_2\text{O}$

— iodoplatinate,  $\text{IRh}(\text{NH}_3)_3\text{PtI}_6$ .  
Ppt.

— iodide,  $\text{IRh}(\text{NH}_3)_3\text{I}_2$ .  
Very sl sol. in cold  $\text{H}_2\text{O}$ ; more sol. in hot  $\text{H}_2\text{O}$ ; insol. in dil.  $\text{HI} + \text{Aq}$ , and alcohol. (Jorgensen, J. pr. (2) 27. 433.)

— nitrate,  $\text{IRh}(\text{NH}_3)_3(\text{NO}_3)_2$ .  
Sl. sol. in  $\text{H}_2\text{O}$ , more easily sol. in hot  $\text{H}_2\text{O}$ ; insol. in dil.  $\text{HNO}_3 + \text{Aq}$ , and alcohol.

— sulphate,  $\text{IRh}(\text{NH}_3)_3\text{SO}_4$ , and  $+3\text{H}_2\text{O}$ .  
Sl. sol. in even hot  $\text{H}_2\text{O}$ . (Jorgensen.)

**Iodoselenic acid.**

**Ammonium iodoselenate,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{SeO}_3 + \text{H}_2\text{O}$ .**  
Decomp. by  $\text{H}_2\text{O}$ . (Weinland, B. 1903, 38. 1400.)  
 $2(\text{NH}_4)_2\text{O}$ ,  $3\text{I}_2\text{O}_5$ ,  $2\text{SeO}_3 + 5\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp.(?). (Weinland.)

**Potassium iodoselenate,  $2\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{SeO}_3 + \text{H}_2\text{O}$ .**  
Decomp. by  $\text{H}_2\text{O}$ . (Weinland.)  
 $2\text{K}_2\text{O}$ ,  $3\text{I}_2\text{O}_5$ ,  $2\text{SeO}_3 + 5\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$  with decomp.(?) (Weinland.)

Rubidium iodoselenate,  $2\text{Rb}_2\text{O}$ ,  $3\text{I}_2\text{O}_5$ ,  $28\text{SeO}_2$   
 $+5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Weinland.)

### Iodostannous acid.

Data concerning solubility of  $\text{SnI}_2$  in  $\text{HI} + \text{Ag}$  indicate formation of this compound. (Young, J. Am. Chem. Soc. 1897, 19, 853.)

### Iodosulphobismuthous acid.

Cuprous iodosulphobismuthite,  $2\text{Cu}_2\text{S}$ ,  $\text{Bi}_2\text{S}_3$ ,  $2\text{BiSI}$

Decomp. by  $\text{H}_2\text{O}$  at ord temp. Decomp. by mineral acids with evolution of  $\text{H}_2\text{S}$  (Ducatte, C. R. 1902, 134, 1213.)

Lead iodosulphobismuthite,  $\text{PbS}$ ,  $\text{Bi}_2\text{S}_3$ ,  $2\text{BiSI}$ .

Insol. in  $\text{H}_2\text{O}$ . Partially decomp. by boiling  $\text{H}_2\text{O}$ . Decomp. by dil. mineral acids with evolution of  $\text{H}_2\text{S}$ . (Ducatte.)

### Iodosulphuric acid.

Ammonium iodosulphate,  $(\text{NH}_4)_2\text{SO}_4\text{I}_2(?)$ .

Very sol. in  $\text{H}_2\text{O}$ . (Zinno, N. Rep. Pharm. 20, 449.)

Mercuric iodosulphate,  $\text{Hg}_2(\text{SO}_4)\text{I}_2$ .

See Mercuric sulphate iodide.

Potassium iodosulphate,  $\text{K}_2\text{SO}_4\text{I}_2(?)$ .

Sol. in 7.14 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Zinno, N. Rep. Pharm. 20, 449.)

Sodium iodosulphate,  $\text{Na}_2\text{SO}_4\text{I}_2 + 10\text{H}_2\text{O}$ .

Sol. in 3.04 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  and in dil. alcohol. (Zinno, N. Rep. Pharm. 20, 449.)

Does not exist. (Michaelis and Koeth, B. 6, 999.)

Iodosulphuric anhydride,  $\text{ISO}_2$ .

Decomp. very violently by  $\text{H}_2\text{O}$ . (Weber, J. pr. (2) 25, 224.)

Diiodosulphuric anhydride,  $\text{I}_2\text{SO}_2$ .

Decomp. with  $\text{H}_2\text{O}$ , but not so violently as  $\text{ISO}_2$ . (Weber, J. pr. (2) 25, 224.)

Iodotrisulphuric anhydride,  $\text{I}(\text{SO}_2)_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Weber, J. pr. (2) 25, 224.)

### Iodotelluric acid.

Ammonium iodotellurate,  $(\text{NH}_4)_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_3 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1901, 28, 52.)

$(\text{NH}_4)_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_3 + 8\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Weinland, B. 1900, 33, 1017.)

Cæsium iodotellurate,  $\text{Cs}_2\text{TeI}_4$ .

Insol. in  $\text{CsI}$  or  $\text{HI} + \text{An}$ . Decomp. slowly by cold, rapidly by hot  $\text{H}_2\text{O}$ . (Wheeler, Sill. Am. J. 145, 267.)

Potassium iodotellurate,  $\text{K}_2\text{TeI}_4 + 2\text{H}_2\text{O}$ .

Sl. efflorescent. Somewhat sol. in  $\text{KI} + \text{Aq}$ , and dil.  $\text{HI} + \text{Aq}$ . (Wheeler.)

$\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $\text{TeO}_3 + 3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Partially decomp. on recryst. from  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1901, 28, 53.)

$\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_3 + 6\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  without decomp. (Weinland.)

Rubidium iodotellurate,  $\text{Rb}_2\text{TeI}_4$ .

Sl. sol. in  $\text{HI}$ , or  $\text{RbI} + \text{Aq}$ . Decomp. by  $\text{H}_2\text{O}$ . Somewhat sol. in alcohol. (Wheeler.)  $\text{Rb}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_3 + 6\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Weinland.)

Iodotetramine chromium iodide,

$\text{ICl}(\text{NH}_4)_4\text{I}_2 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Pptd. by alcohol (Cleve.)

Iodotetramine cobaltic sulphate,

$\text{ICo}(\text{NH}_4)_4\text{SO}_4$ .

(Vortmann and Blasberg, B. 22, 2652.)

Iodotungstic acid.

See Tungstic acid.

Iodous acid,  $\text{I}_2\text{O}_3$ .

See Iodine trioxide.

Iodovanadic acid,  $\text{I}_2\text{O}_5$ ,  $\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$ .

Very easily sol. in  $\text{H}_2\text{O}$ .

$2\text{V}_2\text{O}_5$ ,  $3\text{I}_2\text{O}_5 + 18\text{H}_2\text{O}$ . (Ditte, C. R. 102, 757.)

Ammonium iodovanadate,  $3(\text{NH}_4)_2\text{O}$ ,  $2\text{V}_2\text{O}_5$ ,  $5\text{I}_2\text{O}_5 + 20\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 102, 1019.)

Irididiamine compounds,  $\text{Cl}_2\text{Ir}(\text{NH}_3)_4\text{X}_2$ .

See Chloriridiamine compounds.

Iridic acid.

Potassium iridate (?).

Sol. in  $\text{H}_2\text{O}$  and  $\text{HCl} + \text{Aq}$ .

Iridicyanhydric acid,  $\text{H}_3\text{Ir}(\text{CN})_6$ .

Easily sol. in  $\text{H}_2\text{O}$ , still more easily in alcohol, less in ether. (Martius, A. 117, 369.)

Barium iridicyanide,  $\text{Ba}_3[\text{Ir}(\text{CN})_6]_2 + 18\text{H}_2\text{O}$ .

Efflorescent. Easily sol. in hot or cold  $\text{H}_2\text{O}$ . Nearly insol. in alcohol. Not decomp. by acids.

**Cupric iridicyanide ammonia**,  $\text{Cu}_2\text{Ir}_2(\text{CN})_{12}$ ,  $6\text{NH}_3 + 4\text{H}_2\text{O}$   
 Ppt. Decomp. in air. (Rimbach, Z. anorg. 1907, 52. 413.)

**Potassium iridicyanide**,  $\text{K}_3\text{Ir}(\text{CN})_6$ .  
 Easily sol. in  $\text{H}_2\text{O}$ .

**Silver iridicyanide ammonia**,  $\text{Ag}_3\text{Ir}(\text{CN})_6$ ,  $2\text{NH}_3 + 3\text{H}_2\text{O}$ .  
 Ppt. Decomp. in the light. (Rimbach, Z. anorg. 1907, 52. 414.)

**Iridium, Ir**  
 Insol. in all acids, including aqua regia, except when in finely divided state, as "iridium black," when it is sol. in aqua regia. (Claus, J. pr. 42. 251.)

**Iridium ammonia compounds.**

See—

**Chlorirididiamine comps.**,  $\text{ClIr}(\text{NH}_3)_2\text{X}$ .  
**Iridotriamine** "  $\text{Ir}(\text{NH}_3)_3\text{X}_3$   
**Iridopentamine** "  $\text{Ir}(\text{NH}_3)_5\text{X}_3$   
**Iridotetramine** "  $\text{Ir}(\text{NH}_3)_4\text{X}_3$   
**Iridoquopentamine** "  $\text{Ir}(\text{NH}_3)_5(\text{OH}_2)\text{X}_3$   
**Iridosamine** "  $\text{Ir}(\text{NH}_3)_6\text{X}_3$   
**Iridosodiamine** "  $\text{Ir}(\text{NH}_3)_4\text{X}_2$

**Iridium tribromide**,  $\text{IrBr}_3 + 4\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol or ether. (Birnbbaum.)

**Iridium tetrabromide**,  $\text{IrBr}_4$ , or  $\text{H}_2\text{IrBr}_6$ .  
 Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (Birnbbaum.)  
 See Bromiridic acid.

**Iridium hydrogen sesquibromide**,  $3\text{HBr}$ ,  $\text{IrBr}_3 + \text{H}_2\text{O} = \text{H}_3\text{IrBr}_6 + 3\text{H}_2\text{O}$ .  
 See Bromiridous acid.

**Iridium sesquibromide with MBr.**  
 See Bromiridate, M.

**Iridium tetrabromide with MBr.**  
 See Bromiridate, M.

**Iridium phosphorous bromide**,  $\text{IrBr}_3 \cdot 3\text{PBr}_3$ .  
 Partially decomp. by  $\text{H}_2\text{O}$  into a sol., and insol. modification. Sol. in  $\text{PBr}_3$ . (Geisenheimer.)  
 $\text{IrBr}_3 \cdot 2\text{PBr}_3$ . Not easily attacked by  $\text{H}_2\text{O}$ .  
 $\text{IrBr}_4 \cdot 2\text{PCl}_5$ .  
 See Iridium phosphorus chlorobromide.

**Iridium carbide**,  $\text{IrC}_4(?)$ .  
 (Berzelius.)  
 Stable toward  $\text{H}_2\text{O}$ , acids, and alcohol. (Strecker, B. 1909, 42. 1773.)

**Iridium monochloride**,  $\text{IrCl}$ .  
 Insol. in acids and bases (Wohler, B. 1913, 46. 1584.)

**Iridium dichloride**,  $\text{IrCl}_2$ .  
 Insol. in acids and bases (Wohler, B. 1913, 46. 1585.)

**Iridium trichloride**,  $\text{IrCl}_3$ .  
 Insol. in acids or alkalis. (Claus, C. C. 1861. 690.)  
 Insol. in  $\text{H}_2\text{O}$ , acids and alkalis, (Leidie, C. R. 1899, 129. 1251.)  
 $+4\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Claus.)

**Iridium tetrachloride**,  $\text{IrCl}_4$ , or  $\text{H}_2\text{IrCl}_6(?)$   
 Deliquescent, and easily sol. in  $\text{H}_2\text{O}$ .

**Iridium trichloride with MCl.**  
 See Chloriridite, M.

**Iridium tetrachloride with MCl.**  
 See Chloriridate, M.

**Iridium chloride with potassium chloride and sulphite.**  
 See Chloriridosulphite, potassium.

**Iridium phosphorus chloride**,  $\text{IrP}_2\text{Cl}_6$ .  
 Insol. in cold  $\text{H}_2\text{O}$ . Sl. decomp. by hot  $\text{H}_2\text{O}$ . (Geisenheimer, A. ch. (6) 23. 254.)  
 $\text{IrP}_2\text{Cl}_6$ . Very sol. in chloroform. (G.)  
 $\text{IrP}_2\text{Cl}_6$ . Easily sol. in  $\text{PCl}_5$  or  $\text{CHCl}_3$ , also in  $\text{CS}_2$  with gradual decomp. Sl. sol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling into  $\text{IrCl}_3$ ,  $3\text{H}_3\text{PO}_4$ . Sl. sol. in benzene, ligroin and  $\text{CCl}_4$ . (Strecker, B. 1909, 42. 1772.)  
 $+ \text{H}_2\text{O}$  Insol. in  $\text{PCl}_5$  at  $100^\circ$ . Very slowly sol. in boiling  $\text{H}_2\text{O}$ . (Geisenheimer, A. ch. (6) 23. 266.)  
 $\text{IrP}_2\text{Cl}_6$ . Decomp. by  $\text{H}_2\text{O}$  into  $2\text{IrCl}_3$ ,  $3\text{H}_3\text{PO}_3$ ,  $3\text{H}_3\text{PO}_4$ . Violently decomp. by alcohol. Sl. sol. in cold, more in hot  $\text{POCl}_3$ , without decomp. Very sol. in  $\text{PCl}_5$  with decomp. into  $\text{IrP}_2\text{Cl}_6$ ; similarly in  $\text{PBr}_5$ . Sol. in  $\text{AsCl}_3$  with combination. Sol. in  $\text{CS}_2$  with decomp. Sol. in  $\text{SCl}_2$  with combination. Easily sol. in cold  $\text{C}_6\text{H}_6$  with decomp. Insol. in  $\text{CCl}_4$ . Sol. in  $\text{CHCl}_3$  with decomp. (Geisenheimer, A. ch. (6) 23. 254.)

**Iridium phosphorus arsenic chloride**,  $2\text{IrP}_2\text{Cl}_6 \cdot 5\text{AsCl}_3$ .  
 Sol. in  $\text{H}_2\text{O}$  with decomp. into corresponding acid. (Geisenheimer, C. R. 110. 1336.)  
 $\text{IrCl}_3 \cdot 2\text{PCl}_5$ ,  $2\text{AsCl}_3$ . Very sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in  $\text{AsCl}_3$ ; insol. in  $\text{CCl}_4$ . (Geisenheimer.)

**Iridium phosphorus sulphur chloride**,  $\text{IrCl}_3 \cdot 2\text{PCl}_5 \cdot 2\text{SCl}_2$ .  
 Very sol. in sl. aq.  $\text{H}_2\text{O}$ , with decomp. into an acid analogous to chlorophosphuric acid. Sol. in  $\text{SCl}_2$ . (Geisenheimer.)

**Iridium phosphorus chlorobromide, IrBr<sub>4</sub>2PCl<sub>3</sub>**

(Geisenheimer, C. R. 111. 10.)

**Iridium dihydroxide, IrO<sub>2</sub>, 2H<sub>2</sub>O = IrO<sub>2</sub>H<sub>2</sub>**

Insol in dil HNO<sub>3</sub> or H<sub>2</sub>SO<sub>4</sub>+Aq. Slowly but completely sol. in HCl+Aq. Sol in KOH, and NaOH+Aq (Claus, J. pr. 39. 101.)

**Iridium sesquihydroxide, Ir<sub>2</sub>(OH)<sub>6</sub>**

Not attacked by acids, except slightly by conc HCl+Aq (Claus, C. C. 1861. 690.)

**Iridium triiodide, IrI<sub>3</sub>.**

Very sl sol. in cold, somewhat more in hot H<sub>2</sub>O. Insol. in alcohol. (Oppler, J. B. 1857. 263.)

**Iridium tetraiodide, IrI<sub>4</sub>.**

Insol. in H<sub>2</sub>O or acids. (Lassagne.)  
Sol. in solutions of iodides (Oppler.)

**Iridium triiodide with MI.**

See Iodiridite, M.

**Iridium tetraiodide with MI.**

See Iodiridate, M.

**Iridium dioxide, IrO<sub>2</sub>**

Very sl sol in acids.

Freshly pptd. Sol in conc H<sub>2</sub>SO<sub>4</sub>, hot 2-N H<sub>2</sub>SO<sub>4</sub>, HNO<sub>3</sub>, HCl. Insol in 2-N KOH and sl sol in hot 1-N KOH.

Dried in a desiccator. Sol in HCl. Insol in H<sub>2</sub>SO<sub>4</sub>, HNO<sub>3</sub> and KOH.

Dried at 100°. Sol. in hot conc HCl. Insol. in H<sub>2</sub>SO<sub>4</sub>, HNO<sub>3</sub> and KOH. (Wöhler, Z. anorg. 1908, 57. 334.)

See also Iridium dihydroxide.

**Iridium trioxide, IrO<sub>3</sub>.**

Unstable. (Wöhler, Z. anorg. 1908, 57. 340.)

**Iridium sesquioxide, Ir<sub>2</sub>O<sub>3</sub>.**

Insol. in acids.

Sol. in conc. H<sub>2</sub>SO<sub>4</sub> and hot conc HCl. Forms colloidal solution with dil. HCl. Conc. HNO<sub>3</sub> converts it into the dioxide.

Insol in KOH+Aq. (Wöhler, Z. anorg. 1908, 57. 339.)

**Iridium oxybromide, Ir<sub>2</sub>Br<sub>2</sub>O<sub>2</sub> = 2IrBr<sub>4</sub>, IrO<sub>2</sub>.**

Not decomp by H<sub>2</sub>O. (Geisenheimer, A. ch. (6) 23. 286.)

**Iridium phosphide, Ir<sub>3</sub>P.**

(Clarke and Joslin, Am. Ch. J. 5. 231.)

**Iridium sesquiselenide, Ir<sub>2</sub>Se<sub>3</sub>**

Insol. in HNO<sub>3</sub>; slowly sol. in hot aqua regia. (Chabrie and Bouchonnet, C. R. 1903, 127. 1280.)

**Iridium monosulphide, IrS**

Insol in HNO<sub>3</sub>+Aq. and very sl sol if at all in aqua regia (Berzelius.)

Sol in K<sub>2</sub>S<sub>2</sub> and KSH+Aq.  
+ 1 H<sub>2</sub>O. Sl sol. in H<sub>2</sub>O; sol. in cold HNO<sub>3</sub>+Aq. Insol in NH<sub>4</sub>Cl+Aq or dil. acids. More sol. in K<sub>2</sub>S+Aq than PtS<sub>2</sub>. (Berzelius.)

**Iridium disulphide, IrS<sub>2</sub>.**

Not attacked by H<sub>2</sub>O, but decomp when exposed moist in air. Not attacked by sat. HCl+Aq or by conc HNO<sub>3</sub>+Aq, but is oxidised by fuming HNO<sub>3</sub>+Aq, and aqua regia. Insol in NH<sub>4</sub> sulphides, or polysulphides+Aq. Slowly sol. in alkali polysulphides+Aq (Antony, Gazz. ch. it. 23, 1. 190.)

**Iridium sesquisulphide, Ir<sub>2</sub>S<sub>3</sub>.**

Sl. sol in H<sub>2</sub>O. Sol. in HNO<sub>3</sub>, or K<sub>2</sub>S+Aq.

**Iridotriamine chloride, Ir(NH<sub>3</sub>)<sub>3</sub>Cl<sub>3</sub>.**

Sl. sol. in H<sub>2</sub>O. Not attacked by boiling H<sub>2</sub>SO<sub>4</sub>. (Palmaer, B. 22. 15.)

**Iridotetraamine chloride, Ir(NH<sub>3</sub>)<sub>4</sub>Cl<sub>2</sub>.**

Very sol. in H<sub>2</sub>O. (Palmaer, B. 22. 15.)

— chlorosulphate, [Ir(NH<sub>3</sub>)<sub>3</sub>Cl<sub>2</sub>]SO<sub>4</sub>+4H<sub>2</sub>O.

(Palmaer.)

**Iridopentamine bromide, Ir(NH<sub>3</sub>)<sub>5</sub>Br.**

Sol. in 352 pts. H<sub>2</sub>O at 12.5°. (Palmaer, B. 23. 3817.)

— bromochloride, Ir(NH<sub>3</sub>)<sub>5</sub>ClBr<sub>2</sub>.

Sol in H<sub>2</sub>O. (Palmaer, B. 24. 2090.)

— bromonitrite, Ir(NH<sub>3</sub>)<sub>5</sub>Br(NO<sub>2</sub>)<sub>2</sub>.

Sol in 179 pts. H<sub>2</sub>O at 18°. (Palmaer.)

— bromosulphate, Ir(NH<sub>3</sub>)<sub>5</sub>BrSO<sub>4</sub>+H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Palmaer.)

— carbonate, [Ir(NH<sub>3</sub>)<sub>5</sub>]<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>+3H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Claus, J. pr. 63. 99.)

— trichloride, Ir(NH<sub>3</sub>)<sub>3</sub>Cl<sub>3</sub>.

Sol. in 153.1 pts. H<sub>2</sub>O at 15.1°. (Palmaer, B. 23. 3810.)

Sol in hot H<sub>2</sub>O containing HCl. (Claus, J. pr. 69. 30.)

— chlorobromide, Ir(NH<sub>3</sub>)<sub>5</sub>ClBr<sub>2</sub>.

Sol. in 213.6 pts. H<sub>2</sub>O at 15°. (Palmaer.)

— chloriodide, Ir(NH<sub>3</sub>)<sub>5</sub>ClI<sub>2</sub>.

Sol. in 104.5 pts. H<sub>2</sub>O at 15°. (Palmaer.)

— chlorooxalate, Ir(NH<sub>3</sub>)<sub>5</sub>ClC<sub>2</sub>O<sub>4</sub>.

Sl. sol. in H<sub>2</sub>O. (Palmaer.)

**Iridopentamine chloronitrate**,  
 $\text{Ir}(\text{NH}_3)_5\text{Cl}_2(\text{NO}_3)_2$ .  
 Sol. in 51.54 pts.  $\text{H}_2\text{O}$  at  $15.4^\circ$ . (Palmaer.)

— **chloronitrite**,  
 $\text{Ir}(\text{NH}_3)_5\text{Cl}(\text{NO}_2)_2$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Palmaer.)

— **chloroplatinate**,  $\text{Ir}(\text{NH}_3)_5\text{Cl}_3$ ,  $\text{PtCl}_4$ .  
 Very sl. sol. in  $\text{H}_2\text{O}$ . (Palmaer.)

— **chlorosulphate**,  $\text{Ir}(\text{NH}_3)_5\text{ClSO}_4 + 2\text{H}_2\text{O}$ .  
 Sol. in 134.5 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Palmaer.)

— **hydroxide**,  $\text{Ir}(\text{NH}_3)_5(\text{OH})_2$ .  
 Known only in solution, which decomp. on evaporation. (Claus.)

— **nitrate**,  $\text{Ir}(\text{NH}_3)_5(\text{NO}_3)_2$ .  
 Moderately sol. in  $\text{H}_2\text{O}$ . (Claus.)  
 Sol. in 349 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ . (Palmaer.)

— **sulphate**,  $[\text{Ir}(\text{NH}_3)_5]_2(\text{SO}_4)_3$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Claus.)

**Irido-aquopentamine bromide**,  
 $\text{Ir}(\text{NH}_3)_5(\text{OH})_2\text{Br}_2$ .  
 Sol. in 4 pts.  $\text{H}_2\text{O}$ . Pptd. from aqueous solution by  $\text{HBr} + \text{Aq}$ . (Palmaer, B. 24. 2090.)

— **chloride**,  $\text{Ir}(\text{NH}_3)_5(\text{OH})_2\text{Cl}_3$ .  
 Sol. in 1.2 to 1.5 pts.  $\text{H}_2\text{O}$  at ord. temp.  
 Pptd. by  $\text{HCl} + \text{Aq}$  from aqueous solution. (Palmaer, B. 24. 2090.)

— **nitrate**,  $\text{Ir}(\text{NH}_3)_5(\text{OH})_2(\text{NO}_3)_3$ .  
 Sol. in about 10 pts.  $\text{H}_2\text{O}$  at  $17^\circ$ . Pptd. from aqueous solution by  $\text{HNO}_3 + \text{Aq}$ . (Palmaer.)

**Iridonitrous acid**,  $\text{H}_2\text{Ir}_2(\text{NO}_2)_2$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Gibbs, B. 4. 281.)

**Ammonium iridonitrite**,  $(\text{NH}_4)_2\text{Ir}_2(\text{NO}_2)_2$ .  
 Almost insol. in cold  $\text{H}_2\text{O}$ ; decomp. by hot  $\text{H}_2\text{O}$  with evolution of  $\text{N}_2$ . Decomp. by hot conc.  $\text{H}_2\text{SO}_4$  or  $\text{HCl}$ . Insol. in sat.  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Leidié, C. R. 1902, 134. 1583.)

**Barium iridonitrite iridochloride**,  
 $\text{Ba}_3\text{Ir}_2(\text{NO}_2)_2$ ,  $\text{Ba}_3\text{Ir}_2\text{Cl}_{12}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Lang.)

**Mercuric iridonitrite**,  $\text{Hg}_2\text{Ir}_2(\text{NO}_2)_2$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Gibbs, B. 4. 280.)

**Potassium iridonitrite**,  $\text{K}_3\text{Ir}_2(\text{NO}_2)_2$ .  
 Sl. sol. in cold, more sol. in boiling  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . Insol. in  $\text{KCl} + \text{Aq}$ . (Leidié, Bull. Soc. 1902, (3) 27. 937.)  
 $+ 2\text{H}_2\text{O}$ . Moderately sol. in  $\text{H}_2\text{O}$ .

**Potassium iridonitrite iridochloride**,  
 $\text{K}_3\text{Ir}_2(\text{NO}_2)_2$ ,  $\text{K}_3\text{Ir}_2\text{Cl}_{12}$ .  
 Sol. in  $\text{H}_2\text{O}$ .

**Silver iridonitrite**,  $\text{Ag}_2\text{Ir}_2(\text{NO}_2)_2$ .  
 Difficultly sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .

**Sodium iridonitrite**,  $\text{Na}_3\text{Ir}_2(\text{NO}_2)_2 + 2\text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in cold  $\text{H}_2\text{O}$ . Decomp. by hot conc.  $\text{H}_2\text{SO}_4$  or  $\text{HCl}$ . (Leidié, C. R. 1902, 134. 1583.)

**Sodium iridonitrite iridochloride**,  
 $\text{Na}_4\text{Ir}_2\text{Cl}_2(\text{NO}_2)_2 + 2\text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)  
 $\text{Na}_2\text{Ir}_2(\text{NO}_2)_2$ ,  $\text{Na}_2\text{Ir}_2\text{Cl}_2$ . Insol. in cold, sl. sol. in hot  $\text{H}_2\text{O}$ . (Lang.)

**Iridosamine chloride**,  $\text{Ir}(\text{NH}_3)_5\text{Cl}_2$ .  
 Nearly insol. in  $\text{H}_2\text{O}$ . (Skoblikoff, A. 84. 275.)

— **sulphate**,  $\text{Ir}(\text{NH}_3)_5\text{SO}_4$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Skoblikoff.)

**Iridosodiamine chloride**,  $\text{Ir}(\text{N}_2\text{H}_5)_2\text{Cl}_2$ .  
 Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . (Skoblikoff.)

— **nitrate**,  $\text{Ir}(\text{N}_2\text{H}_5)_2(\text{NO}_3)_2$ .  
 Easily sol. in  $\text{H}_2\text{O}$ .

— **sulphate**,  $\text{Ir}(\text{N}_2\text{H}_5)_2\text{SO}_4$ .  
 Sl. sol. in cold, easily in boiling  $\text{H}_2\text{O}$ . Sl. sol. in alcohol.

**Iridosulphuric acid**.

**Potassium iridosulphate**,  $\text{K}_4\text{Ir}_2(\text{SO}_4)_4$ .  
 Sol. in  $\text{H}_2\text{O}$  (de Boisbaudran, C. R. 96. 1406.)

**Iridosulphurous acid**.

**Ammonium iridosulphite**,  $(\text{NH}_4)_2\text{Ir}_2(\text{SO}_3)_2 + 6\text{H}_2\text{O}$ .  
 Slightly sol. in  $\text{H}_2\text{O}$ . (Birbaum, A. 136. 179.)

**Potassium iridosulphite**,  $\text{K}_4\text{Ir}_2(\text{SO}_3)_2 + 6\text{H}_2\text{O}$ .  
 Slightly sol. in  $\text{H}_2\text{O}$

**Sodium iridosulphite**,  $\text{Na}_4\text{Ir}_2(\text{SO}_3)_2 + 8\text{H}_2\text{O}$ .  
 Scarcely sol. in  $\text{H}_2\text{O}$ .

**Iron, Fe.**

Permanent in dry air; oxidises only slowly in moist air, but rapidly when in contact with air and  $\text{H}_2\text{O}$  simultaneously.  
 Fe does not rust in contact with air and

H<sub>2</sub>O containing alkalis even in very small amounts. (Payen, A. ch. 50. 305.)

Not attacked at ord. temp. by H<sub>2</sub>O free from air. More easily oxidised by NH<sub>4</sub> salts + Aq than by H<sub>2</sub>O when exposed to an simultaneously. (Peterson, A. ch. (3) 24. 506.)

Iron is slowly attacked by distilled H<sub>2</sub>O in presence of air. 100 ccm. distilled water removed 29 mg. from 118 sq. cm. iron in one week, while air free from CO<sub>2</sub> was passed through the solution. In presence of CO<sub>2</sub> 51 mg. were removed (Wagner, Dingl. 221. 200.)

CO<sub>2</sub> acts as a catalyst for the solution of Fe by H<sub>2</sub>O. (Whitney, J. Am. Chem. Soc. 1903, 25. 394.)

Iron is most easily oxidised when it is exposed to air, and H<sub>2</sub>O is deposited on it at the same time in liquid form.

100 l. sea water dissolve 27.37 g. from 1 sq. metre Fe, 29.16 g. from 1 sq. metre steel, 1.12 g. from 1 sq. metre galvanised Fe (Calvert and Johnson, C. N. 11). 171.)

Readily sol. in HCl, dil. H<sub>2</sub>SO<sub>4</sub> + Aq, and most other acids.

Action of H<sub>2</sub>SO<sub>4</sub> + Aq (1.12) is very much accelerated by a few drops of PtCl<sub>4</sub> + Aq; the addition of As<sub>2</sub>O<sub>3</sub> arrests the action completely. Tartar emetic and HgCl<sub>2</sub> diminish the action, but do not arrest it. CuSO<sub>4</sub> + Aq strongly accelerates the action, and Ag<sub>2</sub>SO<sub>4</sub> + Aq also to a less extent.

In the case of HCl + Aq, the addition of small amts. of metallic salts also influences the action. Weak HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq has but little action, and the addition of PtCl<sub>4</sub> increases it; As<sub>2</sub>O<sub>3</sub> stops it; other solutions have no effect. With racemic and tartaric acids the phenomena are the same.

With oxalic acid, PtCl<sub>4</sub> prevents the action. Saline solutions and even distilled H<sub>2</sub>O, when mixed with PtCl<sub>4</sub>, have slight solvent action. (Millon, C. R. 21. 45.)

Above phenomena are due to galvanic action from metal deposited on the iron. (Barreswill, C. R. 21. 292.)

H<sub>2</sub>SO<sub>4</sub> has only sl. action on cast-iron at ord. temp. with exclusion of air.

Weak acids have a strong action at higher temperatures.

Charcoal pig-iron, and case-hardened cast-iron are much less attacked by weak acids at b.-pt. than other sorts of Fe. Scotch pig-iron is most strongly attacked.

99.8% H<sub>2</sub>SO<sub>4</sub> has very sl. action on iron at ord. temp. when air is excluded. (Lunge, Dingl. 261. 131.)

Resistance against dil. H<sub>2</sub>SO<sub>4</sub> + Aq is greatly increased by increase in amt. of C if chemically combined, less so by P or Si. (Ledebur, Dingl. 223. 326.)

*Passive Iron.*—When Fe is treated with pure conc. HNO<sub>3</sub> + Aq of 1.512–1.419 sp. gr., it soon becomes coated with a bluish or black coating, apparently FeO, and when thus

covered Fe is not attacked by HNO<sub>3</sub> + Aq of any strength at ord. temp. or at the temp. of a freezing mixture; but action occurs on heating. No is Fe attacked at ord. temp. by acid of 1.401 sp. gr. or even somewhat weaker acid, though action begins at once on heating. Very dil. HNO<sub>3</sub> + Aq attacks Fe at ord. temp. with formation of NH<sub>4</sub>NO<sub>3</sub> and Fe(NO<sub>3</sub>)<sub>2</sub>. The action of HNO<sub>3</sub> + Aq is influenced by PtCl<sub>4</sub>. If acid containing 4.5 equivalents of H<sub>2</sub>O is diluted with 2–3 vols. H<sub>2</sub>O, and then poured on Fe turnings, they dissolve at once with evolution of nitrous fumes and formation of ferric salt, but if to the acid one drop of PtCl<sub>4</sub> be added, only H<sub>2</sub> is evolved, and NH<sub>4</sub>NO<sub>3</sub> and Fe(NO<sub>3</sub>)<sub>2</sub> are formed. (Millon, C. R. 21. 47.)

The more H<sub>2</sub>O the acid contains the lower will be the temp. at which the Fe remains passive. Shaking the wire hastens the passivity. Contact with Pt, Au, or C does not prevent it. Fe wire becomes passive by remaining 10 min. in HNO<sub>3</sub> vapour. (Renard, C. R. 79. 159.)

Iron may be made passive by HClO<sub>4</sub>, HBrO<sub>3</sub>, HIO<sub>3</sub>, H<sub>2</sub>CiO<sub>4</sub>, in the same way as by HNO<sub>3</sub>.

Iron may also be made passive by moderate ignition.

Passivity occurs with HNO<sub>3</sub> + Aq of 1.38 sp. gr. after a short time at 31°, but if temp. is 32°, passivity does not occur.

Colourless HNO<sub>3</sub> + Aq of 1.42 sp. gr. produces passivity at 55° but not at 56°. Red fuming HNO<sub>3</sub> + Aq of 1.42 sp. gr. produces passivity at 82° but not at 83°. (Ordway, Sill. Am. J. (2) 40. 316.)

The passivity of Fe is destroyed when it is placed in a magnetic field at a much lower temperature than when in normal condition. (Nichols and Franklin, Sill. Am. J. (3) 34. 419.)

Passivity depends on a coating of NO which hinders the action of the acid. All operations which remove this layer terminate the passivity, as shaking, rubbing, placing in a vacuum, etc. (Varenne, C. R. 89. 783.)

When Fe is plunged in HNO<sub>3</sub> + Aq of 1.42 sp. gr. there is a sudden evolution of gas which ceases after 3 to 20 seconds, and the surface becomes bright. The same phenomena take place with a more dilute acid, if of not less than 1.32 sp. gr. In the latter case, there is an immediate evolution of gas, which suddenly ceases and the metal becomes bright, but soon the acid begins to act again at a single point, and the action gradually spreads over the whole surface, this, however, soon ceases again, and we have an "intermittent passivity."

If a part of a piece of iron is immersed in strong acid, the whole of it is made passive. This is explained by the NO spreading over the whole surface by capillarity.

The passivity ceases when the Fe is placed in dil. acid, after a longer or shorter time,

according to the dilution of the acid,—when the acid has sp. gr. = 1.30, after 11 days  
 " " " 1.28 " 5 "  
 " " " 1.26 " 32 hours  
 " " " 1.16 " 12 "

Iron may also be made passive by long standing in NO gas under pressure. (Vareane, C. R. 90. 998.)

Fe is made passive by a coating of  $\text{Fe}_2\text{O}_3$ , not by NO (Schonbein, Pogg. 39. 342.) (Beetz, Pogg. 87. 286.) (Ramann, B. 14. 1430.)

Passivity may also be caused by  $\text{NH}_4\text{NO}_3$  + Aq. ammoniacal  $\text{AgNO}_3$  + Aq.  $\text{Fe}(\text{NO}_3)_3$ ,  $\text{Fe}(\text{NO}_3)_2$ ,  $\text{Al}(\text{NO}_3)_3$ ,  $\text{Co}(\text{NO}_3)_2$ ,  $\text{Ni}(\text{NO}_3)_2$ , etc + Aq instead of  $\text{HNO}_3$  + Aq. (Ramann, B. 14. 1933.)

Hardly attacked by either dil. or conc. acids when they are under high pressure. (Cailliet, C. R. 68. 395.)

Iron is dissolved by  $\text{HNO}_3$  + Aq. even when very conc., but no gas is evolved and the process is very slow

$\text{HNO}_3$  + Aq. of the following sp. gr. dissolves the given amts. from strips of pure Fe

Sp. gr. of acid	Diminution of weight in 24 hours
1.28	0.82%
1.34	0.75
1.38	0.29
1.48	0.34
1.53	5.80

(Gautier and Charpy, C. R. 113. 1451.)

Insol. in liquid chlorine below  $90^\circ$ . (Lange, Zeit. angew. Ch. 1900. 13. 688.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. ch. J. 1898. 20. 828.)

Not attacked by alkalis

Sol. in  $\text{NaOH}$  + Aq (84%) when air is blown through the liquid (Zirmité, Ch. Ztg. 12. 355.)

$\text{NaOH}$  + Aq attacks iron and steel. (Venator, Dingl. 261. 133.)

$\text{NaOH}$  + Aq has slight action on Fe between  $15^\circ$  and  $100^\circ$ . (Lunge, Dingl. 261. 131.)

Presence of alkalis prevent rusting entirely, and fats and oils greatly hinder it. (Wagner.)

Sol. in alkali hydrogen carbonates + Aq. (Berzelius.)

Sat.  $\text{NaCl}$  + Aq has al. but perceptible action on Fe.  $\text{NH}_4\text{Cl}$  + Aq has stronger action than  $\text{NaCl}$  + Aq. (Lunge.)

100 cem.  $\text{H}_2\text{O}$  containing 0.5 g.  $\text{NaCl}$  or  $\text{KCl}$  removed 42 mg. from 11.8 sq. cm. iron in one week, while air free from  $\text{CO}_2$  was passed through the solution, and 72 mg. in presence of  $\text{CO}_2$ .

100 cem.  $\text{H}_2\text{O}$  containing 1 g.  $\text{NH}_4\text{Cl}$  removed 45 mg., and 78 mg. respectively under the above conditions.

100 cem.  $\text{H}_2\text{O}$  containing 0.8 g.  $\text{MgCl}_2$  re-

moved 49 mg., and 65 mg. respectively under the above conditions.

Not attacked by 100 cem  $\text{H}_2\text{O}$  containing 1 g.  $\text{Na}_2\text{CO}_3$ , or by  $\text{CaO}_2\text{H}_2$  + Aq (Wagner, Dingl. 221. 260.)

Action of  $\text{KClO}_3$  + Aq.  $\text{KClO}_3$  + Aq (6.3%  $\text{KClO}_3$ ) oxidised 11.21 g. cast iron and 20.1 g. pure iron from a surface of 1 sq. metre in 7 hours;  $\text{KClO}_3$  + Aq (25%  $\text{KClO}_3$ ) oxidised 24.59 g. cast, and 44.90 g. pure Fe under above conditions;  $\text{Ca}(\text{ClO}_3)_2$ ,  $\text{CaCl}_2$  + Aq (20° Baume) obtained by passing Cl through  $\text{CaO}_2\text{H}_2$  + Aq oxidised 85 g. cast, and 95 g. pure Fe under the above conditions. (Lange and Deggele, J. Soc. Chem Ind. 4. 32.)

Easily sol. in organic acids

#### Comparative action of oils on Fe.

	Amount Fe dissolved
Nentsfoot oil	0.0875 grains
Colza "	0.0800 "
Spam "	0.0460 "
Lard "	0.0250 "
Olive "	0.0032 "
Linseed "	0.0050 "
Seal "	0.0050 "
Castor "	0.0048 "
Paraffine "	0.0045 "
Almond "	0.0040 "
"Lubricating" oil	0.0018 "

(Watson, C. N. 42. 190.)

$\frac{1}{2}$  cem. oleic acid dissolves 0.0007 g. Fe in 6 days (Gates, J. phys. Chem. 1911. 15. 143.)

Fe dissolves in albumen solution to the extent of 1 to 2 per cent. (Buchner, Arch. Pharm. (3) 20. 417.)

Attacked by sugar + Aq at  $115$ – $120^\circ$ , also by inverted sugar or malt extract, not by glycerine or mannite + Aq. (Klein and Berg, C. R. 102. 1170.)

#### Iron arsenide, $\text{FeAs}_2$ .

Min. *Löllingite*. Sol. in  $\text{HNO}_3$  + Aq with separation of  $\text{As}_2\text{O}_3$ .

$\text{Fe}_2\text{As}_4$ . Min. *Leucopyrite*

#### Iron arsenide sulphide, $\text{FeAs}_2\text{S}_2$ .

Min. *Arsenopyrite*. Sol. in  $\text{HNO}_3$  + Aq with separation of S and  $\text{As}_2\text{O}_3$ ; wholly sol. in aqua regia; not attacked by  $\text{HCl}$  + Aq

#### Iron boride, $\text{Fe}_2\text{B}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in hot dil  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$  and in hot conc  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . Sol. in hot dil. or cold conc.  $\text{HNO}_3$ . (Jassonneix, C. R. 1907. 145. 122.)

$\text{FeB}$ . Sol. in molten alkali carbonates; not sol. in dil. or conc.  $\text{H}_2\text{SO}_4$  in the cold; sol. in boiling  $\text{H}_2\text{SO}_4$  and in  $\text{HNO}_3$ . (Moissan, Bull. Soc. 1895. (3) 13. 958.)

Stable in dry air. Decomp. by aqua regia,

but not readily sol in conc.  $\text{H}_2\text{SO}_4$  and  $\text{HCl}$  (Moissan, C. R. 1895, 120, 176.)

$\text{FeBr}_2$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  and in hot conc.  $\text{HCl}$  (Jassomere, C. R. 1907, 145, 122.)

#### Iron (ferrous) bromide, $\text{FeBr}_2$ .

Sol in  $\text{H}_2\text{O}$ . Decomp. by heating on air. Sat.  $\text{FeBr}_2 + \text{Aq}$  contains at

-21°	-7°	+10°	21°
17 0	48 3	52 3	53 7 <sup>c</sup> $\text{FeBr}_2$ .
37°	50°	65°	95°
50 0	58 0	59 4	63 3 <sup>c</sup> $\text{FeBr}_2$ .

(Étard, A. ch. 1894, (7) 2, 541.)

+4 $\text{H}_2\text{O}$ . Very sol in  $\text{H}_2\text{O}$ , pptd. from cooled aq. solution. (Volkman, C. C. 1894, II 611.)

+6 $\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$  (Lowig.)

+9 $\text{H}_2\text{O}$  (Volkman.)

#### Ferric bromide, $\text{FeBr}_3$ .

Deliquescent. Sol in  $\text{H}_2\text{O}$ , alcohol, and ether (Lowig.)

Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 828.)

+6 $\text{H}_2\text{O}$ . Sol. in alcohol and ether. (Bolschakoff, C. C. 1898, II 660.)

#### Ferrous mercuric bromide.

Deliquescent (v. Bonsdorff.)

#### Ferric rubidium bromide, $\text{Rb}_2\text{FeBr}_4 \cdot \text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Walden, Z. anorg. 1894, 7, 332.)

#### Ferrous stannic bromide.

See Bromostannate, ferrous.

#### Ferrous bromide nitric oxide, $3\text{FeBr}_2 \cdot 2\text{NO}$

Sol. in  $\text{H}_2\text{O}$ . Not isolated (Thomas, C. R. 1896, 123, 944.)

#### Ferric bromochloride, $\text{FeCl}_2\text{Br}$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ , alcohol, and ether. Notably sol. in chloroform, benzene, and toluene. Insol. in  $\text{CS}_2$ . (Lenormand, C. R. 116, 820.)

#### Iron carbide, $\text{Fe}_3\text{C}$

(Gurlt, J. B. 1856, 781.)

Mixture of  $\text{Fe}$  and  $\text{Fe}_3\text{C}_4$ . (Tunner, Polyt. Centralbl. 1861, 1227.)

$\text{Fe}_3\text{C}$  (Karsten, J. pr. 40, 229.)

$\text{Fe}_3\text{C}$ . Sol. in hot conc.  $\text{HCl}$ ; oxidized slowly by moist air. (Campbell, Am. Ch. J. 1896, 18, 840-841.)

$\text{Fe}_2\text{C}_2$ . (Rammelsberg, C. C. 1847, 60.)

#### Iron molybdenum carbide, $\text{Fe}_3\text{C} \cdot \text{Mo}_3\text{C}$ .

Sol. in hydrazoids; insol. in  $\text{HNO}_3$ . (Williams, C. R. 1898, 127, 484.)

#### Iron tungsten carbide, $2\text{Fe}_3\text{C} \cdot 3\text{W}_2\text{C}$ .

Insol. in  $\text{H}_2\text{O}$  and hydrazoids; sol. in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . (Williams, C. R. 1898, 127, 411.)

#### Iron carbonyl, $\text{Fe}(\text{CO})_5$ .

Slowly decomp. on air. Not attacked by dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ . Conc.  $\text{HNO}_3$ ,  $\text{Cl}_2 + \text{Aq}$ , or  $\text{Br}_2 + \text{Aq}$  decomp. easily. Sol. in alcoholic solution of  $\text{KOH}$  or  $\text{NaOH}$  with subsequent decomp. Sol. in alcohol, ether, benzene, mineral oils, etc. (Mond and Langer, Chem. Soc. 59, 1000.)

$\text{Fe}_2(\text{CO})_9$ . Decomp. on air. Not attacked by  $\text{H}_2\text{SO}_4$  or  $\text{HCl} + \text{Aq}$ . Sol. in alcoholic potash. Very much less sol. in organic solvents than  $\text{Fe}(\text{CO})_5$  (Mond and Langer.)

#### Ferrous chloride, $\text{FeCl}_2$ .

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$  with evolution of heat, or in alcohol. Insol. in ether. (Jahn.)

Sol. in 2 pts.  $\text{H}_2\text{O}$  at 18.75°. (Abl.)

Sol. in 1 pt. strong alcohol. (Wenzel.)

Sp. gr. of  $\text{FeCl}_2 + \text{Aq}$  at 15.5°.

Sp. gr.	% $\text{FeCl}_2$	% $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$

45 0 45.9 49 2 51 3 51 0 51 7% FeCl<sub>3</sub>.

(Étard, A. ch. 1894, (7) 2, 637.)

100 g. FeCl<sub>3</sub>, 4H<sub>2</sub>O + Aq contain 17.54 g. Fe at 22.8°; 18.59 g. at 43.2° (Boecke, N. Jahrb. Min 1911, I, 61)

More sol. in water containing NO than in pure H<sub>2</sub>O. (Gay, Bull. Soc. (2) 44, 175.)

Sol in hot HCl + Aq. (Sabatier, Bull. Soc. 1895, (3) 13, 599)

[Sabatier could not obtain FeCl<sub>2</sub> + 6H<sub>2</sub>O of Lescaur]

**Ferroferric chloride, Fe<sub>3</sub>Cl<sub>8</sub> + 18H<sub>2</sub>O.**

Deliquescent. (Lefort, J. Pharm. (4) 10, 85.)

**Ferric chloride, Fe<sub>2</sub>Cl<sub>6</sub> or FeCl<sub>3</sub>**

Very deliquescent, and sol. in H<sub>2</sub>O with evolution of great heat

100 mols. H<sub>2</sub>O dissolve mols. anhydrous Fe<sub>2</sub>Cl<sub>6</sub> at t°.

t°	Mols. Fe <sub>2</sub> Cl <sub>6</sub>	t°	Mols. Fe <sub>2</sub> Cl <sub>6</sub>
66	29.20	80	29.20
70	29.42	100	29.75
75	28.92	.	...

(Roozeboom, Z. phys. Ch. 10, 477.)

See also hydrated salts below

Solution in H<sub>2</sub>O is decomp. into colloidal Fe<sub>2</sub>O<sub>3</sub>, xH<sub>2</sub>O and HCl, upon heating if conc., and on simple standing if dil.

Kreeke (J. pr. (2) 3, 286) gives the following table.

% FeCl <sub>3</sub> in solution	Temp. at which Graham's colloidal hydrate is formed	Temp. at which Saint Gilles' colloidal hydrate is formed	Temp. at which oxychlorides are formed	Temp. at which Fe <sub>2</sub> O <sub>3</sub> is formed

30	45	20	24.0
17.6	30	20	24.47
17.6	50	20	24.5

(Hinrichsen and Sachscl, Z. phys. Ch. 1904, 50. 95.)

Difficultly sol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1903, 29, 374.)

Attacked by liquid  $\text{NO}_2$  in the presence of traces of moisture. (Frankland, Chem. Soc. 1901, 79, 1361.)

Sol in liquid  $\text{SO}_2$ . (Walden, B. 1899, 32, 2861.)

Sol in alcohol ether, acetic ether (Cann, C. R. 102, 303), and acetone (Krug and M'Elroy, J. anal. Ch. 6, 184.)

Sl. sol. in ethylamine (Shinn, J. phys. Chem. 1907, 11, 538.)

Sol in benzonitrile. (Naumann, B. 1914, 47, 1369.)

Sol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

1 g.  $\text{FeCl}_3$  is sol. in 1.59 g. acetone at  $18^\circ$ . Sp. gr. of sat. solution  $18^\circ/4^\circ = 1.160$ . (Naumann, B. 1904, 37, 4333.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II, 1014.)

Sol in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 51, 286.)

Sl. sol. in  $\text{CS}_2$ . (Arcowski, Z. anorg. 1894, 6, 257.)

Mol weight determined in pyridine (Werner, Z. anorg. 1897, 16, 22.)

Sublimed.

Sol. in  $\text{AsCl}_3$ ,  $\text{POCl}_3$ ,  $\text{SO}_2\text{Cl}_2$  and  $\text{PBr}_3$ ; sl. sol. in  $\text{PCl}_5$ . (Walden, Z. anorg. 1900, 25, 214.)

The salts with different amts. of crystal  $\text{H}_2\text{O}$  have different solubilities. (Roozeboom.

+4 $\text{H}_2\text{O}$ . Melts in crystal  $\text{H}_2\text{O}$  at  $73.5^\circ$ .

100 mols.  $\text{H}_2\text{O}$  dissolve mols.  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 4\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$
50	19 96	69	21 53	72 5	26 15
55	20 32	72 5	23 35	70	27 90
60	20 70	73 5	25 00	66	29.20

(Roozeboom, Z. phys. Ch. 10, 477.)

+5 $\text{H}_2\text{O}$ . Correct formula for +6 $\text{H}_2\text{O}$  salt.

100 mols.  $\text{H}_2\text{O}$  dissolve mols.  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 5\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$
12	12 87	30	15.12	55	19.15
20	13.95	35	15.64	56	20.00
27	14 85	50	17 50	55	20.32

(Roozeboom.)

Melts in crystal  $\text{H}_2\text{O}$  at  $31^\circ$  (Engel, C. R. 104, 1708); at  $56^\circ$  (Roozeboom).

+6 $\text{H}_2\text{O}$ . Very deliquescent. Sol. in alcohol. Ether dissolves out  $\text{Fe}_2\text{Cl}_6$ .

M.-pt. is  $31^\circ$ . (Ordway.) Contains only 5 $\text{H}_2\text{O}$ . (Roozeboom.)

+7 $\text{H}_2\text{O}$ . Melts in crystal  $\text{H}_2\text{O}$  at  $32.5^\circ$ .

100 mols.  $\text{H}_2\text{O}$  dissolve mols.  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 7\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$
20	11.85	32	13 55	30	15.12
27 4	12 15	32 5	14 99	25	15 54

(Roozeboom.)

+12 $\text{H}_2\text{O}$ . Less deliquescent than  $\text{Fe}_2\text{Cl}_6$  or  $\text{Fe}_2\text{Cl}_6 + 5\text{H}_2\text{O}$ .

100 mols.  $\text{H}_2\text{O}$  dissolve mols.  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 12\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols $\text{Fe}_2\text{Cl}_6$
-55	2 75	30	5.93	27.4	11 20
-41	2 81	35	6.78	20	12 15
-27	2 98	36.5	7.93	10	12 83
0	4.13	37	8 33	8	13 70
10	4 54	36	9 29	.	.
20	5.10	30	10 45	.	.

(Roozeboom.)

Sol. in alcohol. Ether dissolves out  $\text{Fe}_2\text{Cl}_6$ . Melts in crystal  $\text{H}_2\text{O}$  at  $37^\circ$  (Roozeboom); at  $35.5^\circ$  (Ordway).

Ferric hydrogen chloride,  $\text{FeCl}_3$ ,  $\text{HCl} + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Sabatier, Bull. Soc. (2) 197.)

More sol. in  $\text{H}_2\text{O}$  than  $\text{FeCl}_3$ . (Engel, C. R. 104, 1708.)

For solubility, see  $\text{FeCl}_3 + \text{HCl}$ , under ferric chloride.

+6 $\text{H}_2\text{O}$ . (Roozeboom and Schreinemakers.)

For solubility, see  $\text{FeCl}_3 + \text{HCl}$ , under ferric chloride.

Ferrous lithium chloride,  $\text{FeCl}_2$ ,  $\text{LiCl} + 3\text{H}_2\text{O}$ . (Chassevant, A. ch. (6) 30, 17.)

Ferric magnesium chloride,  $\text{FeCl}_3$ ,  $\text{MgCl}_2 + \text{H}_2\text{O}$ .

Deliquescent. (Neumann, B. 18, 2890.)

Ferrous mercuric chloride,  $\text{FeCl}_2$ ,  $\text{HgCl}_2 + 4\text{H}_2\text{O}$ .

Deliquescent. (v. Bonsdorff.)

Ferric nitrosyl chloride,  $\text{FeCl}_3$ ,  $\text{NOCl}$ .

Very deliquescent. (Weber, Pogg. 118, 477.)

Ferric phosphoric chloride,  $\text{FeCl}_3$ ,  $\text{PCl}_5$ .

Decomp. by  $\text{H}_2\text{O}$ . (Baudrimont, A. ch. (4) 2, 15.)

**Iron (ferrous) potassium chloride,  $\text{FeCl}_2 \cdot 2\text{KCl} + 2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  (Berzelius)

**Ferrie potassium chloride,  $\text{FeCl}_2 \cdot 2\text{KCl} + \text{H}_2\text{O}$**

A little  $\text{H}_2\text{O}$  dissolves out  $\text{FeCl}_2$ . (Fritzsche J. pr. 18. 483.)

Sol. in  $\text{H}_2\text{O}$  (Walden, Z. anorg. 1891, 71. 332.)

**Ferric rubidium chloride,  $\text{FeCl}_2 \cdot 3\text{RbCl}$**

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{HCl} + \text{Aq}$ . (Godeffroy, Arch. Pharm. (3) 9. 343.)

$\text{FeCl}_2 \cdot 2\text{RbCl} + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Neumann, A. 244. 329.)

Sol. in  $\text{H}_2\text{O}$  (Walden, Z. anorg. 1894, 7. 332.)

**Ferric sulphur chloride,  $\text{FeCl}_2 \cdot \text{SCl}_2$**

Very sensitive toward heat and moisture (Ruff, B. 1901, 37. 4518.)

**Ferric thallium chloride,  $\text{FeCl}_2 \cdot 3\text{TlCl}$**

Decomp. by  $\text{H}_2\text{O}$ . Can be crystallised from  $\text{HCl} + \text{Aq}$ . (Wohler, A. 144. 250.)

**Ferrous chloride ammonia,  $3\text{FeCl}_2 \cdot 2\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Rogstadus, J. pr. 86. 310.)

$\text{FeCl}_2 \cdot 6\text{NH}_3$ . Loses  $4\text{NH}_3$  at  $100^\circ$  (Miller, Am. Ch. J. 1895, 17. 377.)

$\text{FeCl}_2 \cdot 2\text{NH}_3$ . Decomp. in the air (Miller)

**Ferric chloride ammonia,  $\text{FeCl}_3 \cdot \text{NH}_3$ .**

Slowly deliquescent. Sol. in  $\text{H}_2\text{O}$  with evolution of heat. (Rose, Pogg. 24. 302.)

$\text{FeCl}_3 \cdot 6\text{NH}_3$ . Not deliquescent, not sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl}$  with decomp. (Miller, Am. Ch. J. 1895, 17. 577.)

Loses  $\text{NH}_3$  to give  $\text{FeCl}_3 \cdot 5\text{NH}_3$ , and  $\text{FeCl}_3 \cdot 4\text{NH}_3$ .

**Ferric chloride cyanhydric acid,  $\text{FeCl}_3 \cdot 2\text{HCN}$ .**

Deliquescent. (Klein, A. 74. 85.)

**Ferrous chloride nitric oxide,  $\text{FeCl}_2 \cdot \text{NO}$ .**

Sol. in  $\text{H}_2\text{O}$  without evolution of gas (Thomas, C. R. 1895, 121. 204.)

$+2\text{H}_2\text{O}$ . Sol. in cold  $\text{H}_2\text{O}$  without decomp. (Thomas, C. R. 1895, 120. 448.)

$2\text{FeCl}_2 \cdot \text{NO}$ . Very hygroscopic. (Thomas, C. R. 1895, 121. 129.)

$10\text{FeCl}_2 \cdot \text{NO}$ . Very hygroscopic. (Thomas, C. R. 1895, 121. 128.)

**Ferric chloride nitric oxide,  $\text{Fe}_2\text{Cl}_6 \cdot \text{NO}$ .**

Very hygroscopic. Loses  $\text{NO}$  when exposed to the air.

$2\text{Fe}_2\text{Cl}_6 \cdot \text{NO}$ . Very hygroscopic. In contact with  $\text{H}_2\text{O}$  gives off  $\text{NO}$ . (Thomas, C. R. 1895, 120. 447.)

**Iron (ferrous) fluoride,  $\text{FeF}_2$ .**

Sl. sol. in  $\text{H}_2\text{O}$ , insol. in alcohol and ether. Partly sol. in hot  $\text{HCl} + \text{Aq}$ ; slowly sol. in cold, easily in hot  $\text{HNO}_3$ ; decomp. by  $\text{H}_2\text{SO}_4$ .

(Poulenc, C. R. 115. 941.)  
 $+3\text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$ ; more easily if it contains  $\text{HF}$ . (Berzelius.)

**Ferroferic fluoride,  $\text{FeF}_3 \cdot \text{FeF}_2 + 7\text{H}_2\text{O}$ .**

Sol. in dil.  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg. 1899, 22. 218.)

**Ferric fluoride,  $\text{FeF}_3$ .**

Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol or ether. Sl. attacked by  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

(Poulenc, C. R. 115. 941.)  
 $+4\frac{1}{2}\text{H}_2\text{O}$ . More sol. in hot than cold  $\text{H}_2\text{O}$ .

Insol. in alcohol. (Seheuer-Kestner, A. ch. (3) 68. 472.)

**Ferric nickel fluoride,  $\text{FeF}_3 \cdot \text{NiF}_2 + 7\text{H}_2\text{O}$ .**

Sl. sol. in dil.  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg. 1899, 22. 268.)

**Ferrous potassium fluoride,  $\text{FeF}_2 \cdot \text{KF} + 2\text{H}_2\text{O}$ .**

(Wagner, B. 19. 896.)

$\text{FeF}_2 \cdot 2\text{KF}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Ferric potassium fluoride,  $\text{FeF}_3 \cdot 2\text{KF}$ .**

Somewhat sol. in  $\text{H}_2\text{O}$ , especially if hot. (Berzelius.)

$+ \text{H}_2\text{O}$ . (Christensen, J. pr. (2) 35. 164.)

$\text{FeF}_3 \cdot 3\text{KF}$ . Properties as above. (Berzelius.)

**Ferric sodium fluoride,  $\text{FeF}_3 \cdot 2\text{NaF} + \frac{1}{2}\text{H}_2\text{O}$ .**

Rather easily sol. in  $\text{H}_2\text{O}$ . Solution decomp. on heating. Very sol. in  $\text{FeCl}_3 + \text{Aq}$ .

(Nicksels, J. Pharm. (4) 10. 14.)

$\text{FeF}_3 \cdot 3\text{NaF}$ . (Wagner, B. 19. 896.)

**Ferric thalious fluoride,  $2\text{FeF}_3 \cdot 3\text{TlF}$ .**

Sol. in hot  $\text{H}_2\text{O}$ , less sol. in cold. Sl. sol. in  $\text{HF}$ . (Ephraim, Z. anorg. 1909, 61. 239.)

**Ferrous titanium fluoride.**

See Fluotitanate, ferrous.

**Ferric zinc fluoride,  $\text{FeF}_3 \cdot \text{ZnF}_2 + 7\text{H}_2\text{O}$**

Sl. sol. in dil.  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg. 1899, 22. 269.)

**Ferrous hydroxide,  $\text{FeO} \cdot \text{H}_2\text{O}$ .**

Sol. in 150,000 pts.  $\text{H}_2\text{O}$ . (Bineau, C. R. 41. 509.)

Insol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ . Sol. in  $\text{NH}_4$  salts  $+ \text{Aq}$ . Sl. sol. in  $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Mercer.)

Not pptd. in presence of  $\text{Na}$  citrate. Insol. in boiling cane sugar  $+ \text{Aq}$ , but sl. sol. when  $\text{KOH}$  has been added. Not pptd. in presence of much  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ . (Rose.)

Solubility in glycerine + Aq containing about 60% by vol. of glycerine  
100 ccm. of the solution contain 1.0 g.  $\text{FeO}$ .  
(Muller, Z. anorg. 1905, 43. 322)

Iron (ferric) hydroxides,  $\text{Fe}_2\text{O}_3 \cdot x\text{H}_2\text{O}$ .

Many indefinite compounds of  $\text{Fe}_2\text{O}_3$  and  $\text{H}_2\text{O}$  are known, and uncertainty exists as to their composition.

According to van Bemmelen (R. t. c. 7. 106) there are probably no true definite compounds of  $\text{Fe}_2\text{O}_3$  and  $\text{H}_2\text{O}$ .

According to Tommasi (B. 12. 1924, 2334), there are two series of Fe hydroxides,  $\alpha$ , red hydroxides, and  $\beta$ , yellow hydroxides.

$\alpha$  *Hydroxides*.  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (unstable),  $\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $50^\circ$ ), and  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $92^\circ$ ).

Sol. in dil. acids and in  $\text{Fe}_2\text{Cl}_6 + \text{Aq}$ , and pptd. from the latter solution by  $\text{Na}_2\text{SO}_4$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

$\beta$  *Hydroxides*.  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (stable below  $70^\circ$ ),  $\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $105^\circ$ ),  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $150^\circ$ ).

Sl. sol. in acids, and insol. in  $\text{Fe}_2\text{Cl}_6 + \text{Aq}$  (Tommasi.)

The following more or less uncertain data are given.

$2\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . Very sl. sol. in  $\text{HNO}_3 + \text{Aq}$  (Davies, Chem. Soc (2) 4. 99.)

Min. *Turgite*.

$\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Insol. in cold acids, difficultly sol. in warm  $\text{HCl}$  and  $\text{H}_2\text{SO}_4 + \text{Aq}$ , and especially in warm  $\text{HNO}_3 + \text{Aq}$  (Schiff, A. 114. 199)

Min. *Gothite*.

$2\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$ . Sl. sol. in tartaric, citric, or acetic acids, but easily sol. in  $\text{HCl} + \text{Aq}$ . (Wittstein.)

Sparingly attacked by conc.  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ . Sol. in acetic acid or dil.  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ , from which solution it is pptd. by trace of alkali salts (St. Gilles.)

Min. *Lamonte*

$3\text{Fe}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ . (Muck.)

$\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ .

Min. *Xanthoderite*.

$\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$ . Sl. sol. in acetic acid of 1.03 sp. gr., but easily sol. if of 1.076 sp. gr. Sol. in mineral acids (Limberger, J. B. 1853. 70.)

Pptd.  $\text{Fe}_2\text{O}_3 \cdot x\text{H}_2\text{O} = \text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (?). Insol. in  $\text{H}_2\text{O}$ , or in solutions of the alkalis or  $\text{NH}_4$  salts. When recently pptd. is easily sol. in acids. (Fresenius.)

Sl. sol. in  $\text{NH}_4\text{OH}$ , and  $\text{NH}_4$  salts + Aq (Odling.)

Apparently insol. in  $\text{NH}_4\text{Cl}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Brett, 1837.)

Sl. sol. in conc., but insol. in dil.  $\text{KOH} + \text{Aq}$ . (Chodnow, J. pr. 28. 221.)

Sl. sol. in very conc.  $\text{KOH} + \text{Aq}$  free from  $\text{CO}_2$ . (Völeker, A. 59. 34.)

Not at all sol. in pure conc.  $\text{KOH} + \text{Aq}$ , solubility noticed by previous observers being caused by the presence of silicic acid. (Sandrock.)

Sl. sol. in conc. alkali carbonates + Aq.

When freshly pptd., it is not acted upon by conc.  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Grotthaus.)

Readily sol. in conc.  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , but pptd. by addition of  $\text{H}_2\text{O}$ .

Sol. in excess of  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  when pptd. by that reagent. (Wöhler.)

Sol. in solutions of the alkali bicarbonates. (Berzelius.)

Sol. in aqueous solutions of water-glass. (Orlway.)

Immediately dissolved by  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

Sol. in  $\text{NH}_4\text{F} + \text{Aq}$ . (Helmholtz, Z. anorg. 3. 121.)

Sol. in conc.  $\text{Al}_2(\text{SO}_4)_3 + \text{Aq}$ . (Schneider, B. 23. 1352.)

Sl. sol. in a solution of  $\text{MgCO}_3$  (?). (Bischhof.)

Insol. in ethylamine, or amylamine + Aq. (Wurtz, A. ch. (3) 30. 472.)

Sol. in boiling solution of  $\text{Bi}(\text{NO}_3)_3$ , with pptn of  $\text{Bi}_2\text{O}_3$ . (Perron.)

Sol. in  $\text{Cr}_2\text{Cl}_6 + \text{Aq}$ ; after 3 months 15 mols.  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  were dissolved by 1 mol.  $\text{Cr}_2\text{Cl}_6$ . (Béchamp, A. ch. (3) 57. 290.)

Insol. in formic acid, even when freshly pptd.

When recently pptd., it is easily sol. in  $\text{KHCO}_3 + \text{Aq}$ , but after drying it is difficultly sol. therein.

When moist easily sol. in  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$ , but after drying is scarcely sol. therein when cold, and only sl. sol. when hot. (Werther.)

Easily sol. in acetic, citric, and other acids. (Wittstein.)

Solubility in glycerine + Aq containing about 60% by vol. of glycerine.

100 ccm. of the solution contain 0.8 g.  $\text{Fe}_2\text{O}_3$ . (Müller, Z. anorg. 1905, 43. 322.)

Easily sol. in aqueous solution of sucrates of Ca, Ba, Sr, K, Na. (Ilunton, 1837.)

Unacted upon by cane sugar + Aq. (Gladstone.)

Sl. sol. in cane sugar + Aq, from which it is pptd. by  $(\text{NH}_4)_2\text{S} + \text{Aq}$ , but not by  $\text{NH}_4\text{OH}$ , or  $\text{K}_4\text{FeC}_6\text{N}_6 + \text{Aq}$  (Peschier.)

Solubility of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  in sugar solutions. 1 l. of sugar solution of given strength dissolves mg. of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ .

% Sugar	Mg. $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$		
	at $17.4^\circ$	at $45^\circ$	at $75^\circ$
10	3.4	3.4	6.1
30	2.3	2.7	3.8
50	2.3	1.9	3.4

(Stolle, Z. Ver. Zuckerind. 1900, 50. 340.)

Not pptd. from solutions by alkalis or alkali carbonates in presence of many organic substances, as tartaric acid, sugar, etc.

Not pptd. by  $\text{NH}_4\text{OH}$  from solutions containing  $\text{Na}_2\text{P}_2\text{O}_7$ . (Rose, Pogg. 76. 19.)

Not pptd. by  $\text{NH}_4\text{OH}$  in presence of Na citrate. (Spiller.)

**Iron (ferrous) potassium chloride,  $\text{FeCl}_2$ ,  $2\text{KCl} + 2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  (Berzelius.)

**Ferric potassium chloride,  $\text{FeCl}_3$ ,  $2\text{KCl} + \text{H}_2\text{O}$ .**

A little  $\text{H}_2\text{O}$  dissolves out  $\text{FeCl}_3$ . (Fritzsche J. pr 18. 483.)

Sol. in  $\text{H}_2\text{O}$  (Walden, Z. anorg. 1894, 71. 332.)

**Ferric rubidium chloride,  $\text{FeCl}_3$ ,  $3\text{RbCl}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{HCl} + \text{Aq}$  (Godeffroy, Arch. Pharm. (3) 9. 343.)

$\text{FeCl}_3$ ,  $2\text{RbCl} + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Neumann, A. 244. 329.)

Sol. in  $\text{H}_2\text{O}$ . (Walden, Z. anorg. 1894, 7. 332.)

**Ferric sulphur chloride,  $\text{FeCl}_3$ ,  $\text{SCl}_2$ .**

Very sensitive toward heat and moisture. (Ruff, B. 1904, 37. 4518.)

**Ferric thallium chloride,  $\text{FeCl}_3$ ,  $3\text{TlCl}$ .**

Decomp. by  $\text{H}_2\text{O}$ . Can be crystallised from  $\text{HCl} + \text{Aq}$  (Wohler, A. 144. 250.)

**Ferrous chloride ammonia,  $3\text{FeCl}_2$ ,  $2\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Rogstadus, J. pr 86. 310.)

$\text{FeCl}_2$ ,  $6\text{NH}_3$ . Loses  $4\text{NH}_3$  at  $100^\circ$ . (Miller, Am. Ch. J. 1895, 17. 577.)

$\text{FeCl}_2$ ,  $2\text{NH}_3$ . Decomp. in the air (Miller).

**Ferric chloride ammonia,  $\text{FeCl}_3$ ,  $\text{NH}_3$ .**

Slowly deliquescent. Sol. in  $\text{H}_2\text{O}$  with evolution of heat. (Rose, Pogg. 24. 302.)

$\text{FeCl}_3$ ,  $6\text{NH}_3$ . Not deliquescent; not sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl}$  with decomp. (Miller, Am. Ch. J. 1895, 17. 577.)

Loses  $\text{NH}_3$  to give  $\text{FeCl}_3$ ,  $5\text{NH}_3$ , and  $\text{FeCl}_2$ ,  $4\text{NH}_3$ .

**Ferric chloride cyanhydric acid,  $\text{FeCl}_3$ ,  $2\text{HCN}$ .**

Deliquescent. (Klein, A. 74. 85.)

**Ferrous chloride nitric oxide,  $\text{FeCl}_2$ ,  $\text{NO}$ .**

Sol. in  $\text{H}_2\text{O}$  without evolution of gas (Thomas, C. R. 1895, 121. 204.)

$+2\text{H}_2\text{O}$ . Sol. in cold  $\text{H}_2\text{O}$  without decomp. (Thomas, C. R. 1895, 120. 448.)

$2\text{FeCl}_2$ ,  $\text{NO}$ . Very hygroscopic. (Thomas, C. R. 1895, 121. 129.)

$10\text{FeCl}_2$ ,  $\text{NO}$ . Very hygroscopic. (Thomas, C. R. 1895, 121. 128.)

**Ferric chloride nitric oxide,  $\text{Fe}_2\text{Cl}_6$ ,  $\text{NO}$ .**

Very hygroscopic. Loses  $\text{NO}$  when exposed to the air.

$2\text{Fe}_2\text{Cl}_6$ ,  $\text{NO}$ . Very hygroscopic. In contact with  $\text{H}_2\text{O}$  gives off  $\text{NO}$ . (Thomas, C. R. 1895, 120. 447.)

**Iron (ferrous) fluoride,  $\text{FeF}_2$ .**

Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol and ether. Partly sol. in hot  $\text{HCl} + \text{Aq}$ ; slowly sol. in cold, easily in hot  $\text{HNO}_3$ ; decomp. by  $\text{H}_2\text{SO}_4$ . (Poulenc, C. R. 115. 941.)

$+ \text{SiF}_6$ . Difficultly sol. in  $\text{H}_2\text{O}$ ; more easily if it contains  $\text{HF}$ . (Berzelius.)

**Ferroferric fluoride,  $\text{FeF}_3$ ,  $\text{FeF}_2 + 7\text{H}_2\text{O}$ .**

Sol. in dil.  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg. 1899, 22. 268.)

**Ferric fluoride,  $\text{FeF}_3$ .**

Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol or ether. Sl. attacked by  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Poulenc, C. R. 115. 941.)

$+ 4\frac{1}{2}\text{H}_2\text{O}$ . More sol. in hot than cold  $\text{H}_2\text{O}$ . Insol. in alcohol. (Scheurer-Kestner, A. ch. (3) 68. 472.)

**Ferric nickel fluoride,  $\text{FeF}_3$ ,  $\text{NiF}_2 + 7\text{H}_2\text{O}$ .**

Sl. sol. in dil.  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg. 1899, 22. 268.)

**Ferrous potassium fluoride,  $\text{FeF}_2$ ,  $\text{KF} + 2\text{H}_2\text{O}$ .**

(Wagner, B. 19. 896.)

$\text{FeF}_2$ ,  $2\text{KF}$ . Sl. sol. in  $\text{H}_2\text{O}$  (Berzelius.)

**Ferric potassium fluoride,  $\text{FeF}_3$ ,  $2\text{KF}$ .**

Somewhat sol. in  $\text{H}_2\text{O}$ , especially if hot. (Berzelius.)

$+ \text{H}_2\text{O}$ . (Christensen, J. pr (2) 35. 164.)

$\text{FeF}_3$ ,  $3\text{KF}$ . Properties as above. (Berzelius.)

**Ferric sodium fluoride,  $\text{FeF}_3$ ,  $2\text{NaF} + \frac{1}{2}\text{H}_2\text{O}$ .**

Rather easily sol. in  $\text{H}_2\text{O}$ . Solution decomp. on heating. Very sol. in  $\text{FeCl}_3 + \text{Aq}$ . (Nickles, J. Pharm. (4) 10. 14.)

$\text{FeF}_3$ ,  $3\text{NaF}$ . (Wagner, B. 19. 896.)

**Ferric thalious fluoride,  $2\text{FeF}_3$ ,  $3\text{TlF}$ .**

Sol. in hot  $\text{H}_2\text{O}$ , less sol. in cold. Sl. sol. in  $\text{HF}$ . (Ephraim, Z. anorg. 1909, 61. 239.)

**Ferrous titanium fluoride.**

See Fluotitanate, ferrous.

**Ferric zinc fluoride,  $\text{FeF}_3$ ,  $\text{ZnF}_2 + 7\text{H}_2\text{O}$ .**

Sl. sol. in dil.  $\text{HF} + \text{Aq}$ . (Weinland, Z. anorg. 1899, 22. 269.)

**Ferrous hydroxide,  $\text{FeO}_2\text{H}_2$ .**

Sol. in 150,000 pts.  $\text{H}_2\text{O}$ . (Bineau, C. R. 41. 509.)

Insol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ . Sol. in  $\text{NH}_4$  salts  $+ \text{Aq}$ . Sl. sol. in  $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Mercer.)

Not pptd. in presence of  $\text{Na}$  citrate. Insol. in boiling cane sugar  $+ \text{Aq}$ , but sl. sol. when  $\text{KOH}$  has been added. Not pptd. in presence of much  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ . (Rose.)

Solubility in glycerine+Aq containing about 60% by vol. of glycerine.

100 cm. of the solution contain 1.0 g. FeO. (Muller, Z. anorg. 1905, 43, 322.)

Iron (ferric) hydroxides,  $\text{Fe}_2\text{O}_3 \cdot x\text{H}_2\text{O}$

Many indefinite compounds of  $\text{Fe}_2\text{O}_3$  and  $\text{H}_2\text{O}$  are known, and uncertainty exists as to their composition.

According to van Bemmelen (R. t. c. 7, 106) there are probably no true definite compounds of  $\text{Fe}_2\text{O}_3$  and  $\text{H}_2\text{O}$ .

According to Tommasi (B. 12, 1924, 2334), there are two series of Fe hydroxides,  $\alpha$ , red hydroxides, and  $\beta$ , yellow hydroxides

$\alpha$  *Hydroxides*  $\text{Fe}_2\text{O}_3\text{H}_4$  (unstable),  $\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $50^\circ$ ), and  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $92^\circ$ )

Sol in dil. acids and in  $\text{Fe}_2\text{Cl}_6$ +Aq, and pptd from the latter solution by  $\text{Na}_2\text{SO}_4$  or  $\text{H}_2\text{SO}_4$ +Aq.

$\beta$  *Hydroxides*.  $\text{Fe}_2\text{O}_3\text{H}_2$  (stable below  $70^\circ$ ),  $\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $105^\circ$ ),  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $150^\circ$ ).

Sl. sol. in acids, and insol. in  $\text{Fe}_2\text{Cl}_6$ +Aq. (Tommasi.)

The following more or less uncertain data are given.

$2\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ +Aq. Very sl. sol. in  $\text{HNO}_3$ +Aq (Davies, Chem. Soc. (2) 4, 69.)

Min. *Turgite*.

$\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Insol. in cold acids, difficultly sol. in warm  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$ +Aq, and especially in warm  $\text{HNO}_3$ +Aq (Schiff, A. 114, 199.)

Min. *Gothite*.

$2\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$ . Sl. sol in tartaric, citric, or acetic acids, but easily sol. in  $\text{HCl}$ +Aq. (Wittstein.)

Scarcely attacked by conc.  $\text{HNO}_3$ , or  $\text{HCl}$ +Aq. Sol. in acetic acid or dil.  $\text{HNO}_3$ , or  $\text{HCl}$ +Aq, from which solution it is pptd. by trace of alkali salts (St Gilles.)

Min. *Lamontite*.

$3\text{Fe}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ . (Muck.)

$\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl}$ +Aq.

Min. *Xanthosiderite*

$\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$ . Sl. sol in acetic acid of 1.03 sp. gr., but easily sol. if of 1.076 sp. gr. Sol in mineral acids. (Lamberger, J. B. 1853, 70.)

Pptd.  $\text{Fe}_2\text{O}_3 \cdot x\text{H}_2\text{O} = \text{Fe}_2\text{O}_3\text{H}_2$ (?). Insol. in  $\text{H}_2\text{O}$ , or in solutions of the alkalis or  $\text{NH}_4$  salts. When recently pptd. is easily sol. in acids (Fresenius.)

Sl. sol. in  $\text{NH}_4\text{OH}$ , and  $\text{NH}_4$  salts+Aq. (Odling.)

Apparently insol. in  $\text{NH}_4\text{Cl}$ , or  $(\text{NH}_4)_2\text{CO}_3$ +Aq. (Brett, 1837.)

Sl. sol. in conc., but insol. in dil.  $\text{KOH}$ +Aq (Chodnew, J. pr. 28, 221.)

Sl. sol. in very conc.  $\text{KOH}$ +Aq free from  $\text{CO}_2$  (Völkner, A. 69, 34.)

Not at all sol. in pure conc.  $\text{KOH}$ +Aq, solubility noticed by previous observers being caused by the presence of silicic acid. (Sandrock.)

Sl. sol. in conc. alkali carbonates+Aq.

When freshly pptd., it is not acted upon by conc.  $\text{K}_2\text{CO}_3$ +Aq. (Grotthaus.)

Readily sol. in conc.  $(\text{NH}_4)_2\text{CO}_3$ +Aq, but pptd by addition of  $\text{H}_2\text{O}$ .

Sol. in excess of  $(\text{NH}_4)_2\text{CO}_3$ +Aq when pptd by that reagent (Wöhler.)

Sol. in solutions of the alkali bicarbonates. (Berzelius.)

Sol. in aqueous solutions of water-glass. (Ordway.)

Immediately dissolved by  $\text{H}_2\text{SO}_4$ +Aq.

Sol. in  $\text{NH}_4\text{F}$ +Aq. (Helmholtz, Z. anorg. 3, 124.)

Sol in conc.  $\text{Al}_2(\text{SO}_4)_3$ +Aq (Schneider, B. 23, 1352.)

Sl. sol in a solution of  $\text{MgCO}_3$ (?). (Bischhof.)

Insol. in ethylamine, or amylamine+Aq. (Wurtz, A. ch. (3) 30, 472.)

Sol in boiling solution of  $\text{Bi}(\text{NO}_3)_3$ , with pptn. of  $\text{Bi}_2\text{O}_3$  (Persoz.)

Sol. in  $\text{Cr}_2\text{Cl}_6$ +Aq; after 3 months 15 mols.  $\text{Fe}_2\text{O}_3\text{H}_4$  were dissolved by 1 mol.  $\text{Cr}_2\text{Cl}_6$ . (Béchamp, A. ch. (3) 67, 206.)

Insol. in fumaric acid, even when freshly pptd.

When recently pptd., it is easily sol. in  $\text{KHC}_2\text{H}_3\text{O}_6$ +Aq, but after drying it is difficultly sol. therein.

When moist easily sol. in  $\text{H}_2\text{C}_2\text{H}_3\text{O}_6$ +Aq, but after drying is scarcely sol. therein when cold, and only sl. sol. when hot. (Werther.)

Easily sol. in acetic, citric, and other acids. (Wittstein.)

Solubility in glycerine+Aq containing about 60% by vol. of glycerine.

100 cm. of the solution contain 0.8 g.  $\text{Fe}_2\text{O}_3$ . (Muller, Z. anorg. 1905, 43, 322.)

Easily sol. in aqueous solution of succates of Ca, Ba, Sr, K, Na. (Huntton, 1837.)

Unacted upon by cane sugar+Aq. (Gladstone.)

Sl. sol. in cane sugar+Aq, from which it is pptd. by  $(\text{NH}_4)_2\text{S}$ +Aq, but not by  $\text{NH}_4\text{OH}$ , or  $\text{K}_4\text{FeC}_6\text{N}_4$ +Aq (Pesohier.)

Solubility of  $\text{Fe}_2\text{O}_3\text{H}_4$  in sugar solutions 1 l of sugar solution of given strength dissolves mg. of  $\text{Fe}_2\text{O}_3\text{H}_4$

° Sugar	Mg FeO.H <sub>2</sub> O		
	at 17°	at 45°	at 75°
10	3.4	3.4	6.1
30	2.3	2.7	3.8
50	2.3	1.9	3.4

(Stollé, Z. Ver. Zuckerind 1900, 50, 340.)

Not pptd. from solutions by alkalis or alkali carbonates in presence of many organic substances, as tartaric acid, sugar, etc.

Not pptd. by  $\text{NH}_4\text{OH}$  from solutions containing  $\text{Na}_2\text{P}_2\text{O}_7$ . (Rose, Pogg. 78, 19.)

Not pptd. by  $\text{NH}_4\text{OH}$  in presence of Na citrate. (Spiller.)

*Soluble* (a) *By dialyses*. Solutions containing 1% can be concentrated somewhat, whereupon they gelatinise. They also gelatinise by cold, or addition of traces of  $H_2SO_4$ , alkalis, alkali carbonates or sulphates, or neutral salts, not, however, by  $HCl$ ,  $HNO_3$ , alcohol, or sugar. (Graham, A. 121. 16.)

When a dil. solution of a solid organic acid, or an alkali, or salt is added to a dialysed solution of  $Fe_2O_3 \cdot 3H_2O$ , a coagulum sol. in  $H_2O$  is formed, but if the solutions are conc. the separating coagulum is no longer sol. in  $H_2O$  (Athenstadt, C. C. 1871. 823.)

(b) *Pean St Gilles' hydride, or meta-iron hydroxide*. Sol. in  $H_2O$ . Pptd. from solution by traces of  $H_2SO_4$ ,  $HCl$ ,  $HNO_3$ ,  $Ag$ , and alkalis; the ppt. is insol. in cold acids, but sol. in pure  $H_2O$  (Pean St Gilles, A. ch. (3) 46. 47.)

See also table by Kiecke in the article on ferric chloride.

**Iron (Ferroferric) hydroxide,  $Fe_2O_3 \cdot H_2O$  (?)**

Sol. in acids

$Fe_2O_3 \cdot 4H_2O$  (Lefort.)

**Ferrous iodide,  $FeI_2$**

Very deliquescent. Sol. in  $H_2O$ . Solution decomp. on evaporating.

+ $4H_2O$ . Very deliquescent, sl. sol. in  $H_2O$ ; sol. in ether. (Jackson, Am. Ch. J. 1900, 24. 19.)

+ $5H_2O$ . Deliquescent. Sol. in alcohol. Sol. in sugar+ $Aq$ , and solution is much more stable than aqueous solution. Easily sol. in glycerine

Insol. in methylene iodide. (Retgers, Z. anorg. 3. 343.)

+ $6H_2O$ , and + $9H_2O$ . Very sol.; pptd. from cooled aq. solution. (Volkmann, C. C. 1894, II. 611.)

**Ferric iodide,  $FeI_3$**

Has not been isolated. Solution of I in  $FeI_3$ + $Aq$  in the molecular ratio of I :  $FeI_3$  probably contains  $FeI_3$ .

Very sol. in liquid  $NH_3$  (Franklin, Am. Ch. J. 1898, 20. 828.)

**Ferrous mercuric iodide,  $FeI_2 \cdot 2HgI_2 \cdot 6H_2O$**

As the corresponding Mg salt. (Duboin, C. R. 1907, 145. 714.)

**Ferrous iodide ammonia,  $FeI_2 \cdot 6NH_3$**

Decomp. by  $H_2O$ . (Jackson, Am. Ch. J. 1900, 24. 27.)

**Ferrous mercuric iodide.**

Very deliquescent. Decomp. by  $H_2O$ ; sol. in  $HCl$ ,  $H_2O$ , or alcohol.

**Iron molybdenide,  $FeMo_2$**

Attacked by  $HCl$ + $Aq$  with difficulty. Sol. in hot conc.  $H_2SO_4$ . (Steinacker.)

**Iron nitride.**

Easily decomp. by  $H_2O$  when finely powdered. (Rössel, C. R. 1895, 121. 942.)

$Fe_3N$ . Easily sol. in  $HNO_3$ ,  $HCl$ , or  $H_2SO_4$ + $Aq$ . Very slowly decomp. by  $H_2O$ . (Stahlschmidt, Pogg. 126. 37.)

Sol. in  $HCl$  with decomp.; decomp. by steam and by  $H_2S$  at  $200^\circ$ . (Fowler, C. N. 1894, 68. 152.)

$Fe_2N_2$ . Probably the same as the above compound (Rogstadus, J. pr. 86. 307.)

**Iron nitrososulphantimonate,  $Fe_2S(NO)_4Sb_2S_5$**

(Low, C. C. 1885. 948.)

Does not exist, but was impure sodium ferroheptanitrososulphide. (Pawel, B. 15. 2600.)

**Iron nitrososulphides.**

See Ferroterranitrososulphidic acid and Ferroheptanitrososulphide, ammonium.

$Fe_2S_3(NO)_4$ . (Roussin, C. R. 46. 224.)

$Fe_2S_2(NO)_4 \cdot 2H_2O$ . (Porcansky, A. 125. 302.)

$Fe_2S_2(NO)_4 \cdot 4H_2O$ . (Rosenberg, B. 3. 312.)

The compound to which the above formula were given was impure, according to Pawel (B. 12. 1407 and 1919; 15. 2600), and contained more or less Na or  $NH_4$ . Pawel considers the substance as  $NH_4$  salt of ferroheptanitrososulphidic acid, which see.

$Fe_2S_2N_2O_4 \cdot 1\frac{1}{2}H_2O$ . Sol. in  $H_2O$ , alcohol, ether,  $CHCl_3$ , acetone and ethyl acetate. Insol. in benzene and light petroleum. (Marie, C. R. 1896, 122. 138.)

**Iron sodium nitrososulphide,  $3Na_2S, Fe_2S_2, 2NO$**

(Roussin.)

$Na_2FeS_2(NO)_{12}$ . (Rosenberg.)

Correct formula is  $Na_2S_2(NO)_4Fe_2$ , sodium ferroterranitrososulphide.

**Iron nitrososulphocarbonate,  $Fe_2S(NO)_4CS_2 \cdot 3H_2O$**

(Low, C. C. 1885. 948.)

Correct formula is  $Na_2S_2(NO)_4Fe_2 \cdot 2H_2O$ , sodium ferroheptanitrososulphide (Pawel, B. 15. 2600.)

**Ferrous oxide,  $FeO$**

Insol. in  $H_2O$ . Sol. in acids.

Easily sol. in  $HCl$ , and  $HNO_3$ + $Aq$ ; nearly insol. in  $H_2SO_4$ , even when heated. (Tissandier, C. R. 74. 531.)

**Ferric oxide,  $Fe_2O_3$**

Attacked by acids with difficulty, the more so the higher it has been heated.  $HCl$ + $Aq$  is the best solvent, in which it is more quickly sol. by long digestion at a gentle heat than by boiling. (Fresenius.)

Most easily sol. in 16 pts. of a mixture of 3 pts.  $H_2SO_4$  and 3 pts.  $H_2O$ . (Mitscherlich, J. pr. 81. 110.)

Solubility of  $\text{Fe}_2\text{O}_3$  in  $\text{HF} + \text{Aq}$  at  $25^\circ$ .

(Deussen.)

Absolutely insol in  $\text{Br}_2 + \text{Aq.}$  (Balard)  
 Insol. in hot  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Rose.)  
 Insol. in  $\text{KOH} + \text{Aq.}$  (Chodnew, J. pr. 28. 222.)

Slowly sol. in an aq. solution of calcium hydrogen carbonate. The velocity of the reaction may be much increased by the addition of small amounts of alkali sulphate or  $\text{CaSO}_4$ . (Rohland, Z. anal. 1900, 48. 629.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in acetone. (Edmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Solubility in (calcium succinate + sugar) +  $\text{Aq.}$   
 1 l. solution containing 418.6 g. sugar and 34.3 g.  $\text{CaO}$  dissolves 6.26 g.  $\text{Fe}_2\text{O}_3$ , 296.5 g. sugar and 24.3 g.  $\text{CaO}$  dissolves 1.71 g.  $\text{Fe}_2\text{O}_3$ ; 17½ g. sugar and 14.1 g.  $\text{CaO}$  dissolves 3.08 g.  $\text{Fe}_2\text{O}_3$ . (Bodenbender, J. B. 1865. 600.)

Solubility of  $\text{Fe}_2\text{O}_3$  in sugar solutions 1 l. of sugar solution of given strength dissolves mg.  $\text{Fe}_2\text{O}_3$

% Sugar	mg. $\text{Fe}_2\text{O}_3$	
	at $17.5^\circ$	at $45^\circ$
10	1.4	2.0
30	1.4	1.1
50	0.8	1.1

(Stolle, Z. Ver. Zuckerind, 1900, 50. 340)

## Calcined.

Solubility of calcined  $\text{Fe}_2\text{O}_3$  in acids at  $25^\circ$ .

Acid	Time	g. $\text{Fe}_2\text{O}_3$ in 10 ccm. of the solution
N-HF	4½ hrs.	0.0889
	43½ "	0.2035
	129½ "	0.2194
N-HCl	4½ "	0.0224
	43½ "	0.1000
	139½ "	0.1910

(Deussen, Z. anorg. 1905, 44. 413.)

## See also Ferric hydroxide.

Min. Hematite. Rather easily sol. in  $\text{HCl} + \text{Aq.}$  but not readily sol. in other acids.

## Metallic oxide.

See Ferric hydroxides.

Ferroferric oxide,  $6\text{FeO}, \text{Fe}_2\text{O}_3$ .

$\text{FeO}, \text{Fe}_2\text{O}_3 = \text{Fe}_3\text{O}_4$ . With insufficient  $\text{HCl} + \text{Aq.}$  for complete solution,  $\text{FeO}$  is dissolved and  $\text{Fe}_2\text{O}_3$  left. (Berzelius.)

Insol. in  $\text{HNO}_3 + \text{Aq.}$  at the ordinary temperature. (Millon.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

tion. (Granger, Bull. Soc. 1896, (3) 15. 1086.)

$\text{Fe}_4\text{P}_3$ . Very slowly sol. in boiling  $\text{HCl} + \text{Aq}$ . Easily sol. in  $\text{HNO}_3$  or aqua regia. (Struve, J. B. 1860, 77.)

Mixture. (Freese, Pogg. 132, 225.)

Almost insol. in aqua regia. Sol. in fused alkali. (Granger)

$\text{Fe}_3\text{P}$ . Nearly insol. in dil. acids; rapidly sol. in  $\text{HNO}_3$  or aqua regia; decomp. by conc.  $\text{HCl}$ , or  $\text{KOH} + \text{Aq}$ . (Schneider, J. B. 1886, 2026)

Of the nine iron phosphides described the constitution has been established for only two,  $\text{Fe}_3\text{P}$  and  $\text{Fe}_2\text{P}$ .

$\text{Fe}_3\text{P}$  Sol. in conc.  $\text{HCl}$ .

$\text{Fe}_2\text{P}$ . Sol. in hot aqua regia. Insol. in other acids. (Le Chatelier, C. R. 1909, 149, 709)

### Iron selenide, $\text{Fe}_2\text{Se}$ .

Not attacked by  $\text{HNO}_3$  or acetic acid. Sol. attacked by conc.  $\text{HCl}$ . Readily attacked by aqua regia. Sol. in  $\text{HF}$ . (Vigouroux, C. R. 1905, 141, 829.)

$\text{FeSe} + x\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{HCl} + \text{H}_2\text{O}_2 + \text{Aq}$ . Insol. in alkalis, or  $(\text{NH}_4)_2\text{S} + \text{Aq}$ . (Reeb, J. Pharm. (4) 9, 173.)

$\text{Fe}_3\text{Se}_2$ . Sol. in dil.  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$  with evolution of  $\text{H}_2\text{Se}$  Sol. in conc.  $\text{HNO}_3 + \text{Aq}$ . (Little, A. 112, 211.)

$\text{Fe}_2\text{Se}_3$ . Decomp. by fuming  $\text{HNO}_3$ . (Fonze-Diacon, C. R. 1900, 130, 1711.)

$\text{Fe}_3\text{Se}_2$ . Decomp. by fuming  $\text{HNO}_3$ . (Fonze-Diacon, C. R. 1900, 130, 1711.)

$\text{FeSe}_2$ . Insol. in conc.  $\text{HCl}$ ; decomp. by fuming  $\text{HNO}_3$ . (Fonze-Diacon, C. R. 1900, 130, 1711.)

### Iron silicide, $\text{Fe}_3\text{Si}$ .

Difficultly sol. in  $\text{HCl} + \text{Aq}$ ; easily sol. even in dil.  $\text{HF} + \text{Aq}$ . (Hahn, A. 129, 57.)

$\text{Fe}_2\text{Si}$ . Not easily sol. in conc.  $\text{HCl}$  and  $\text{HNO}_3$  but readily sol. in  $\text{HF}$ . (Moissan, C. R. 1895, 121, 623.)

$\text{Fe}_3\text{Si}_2$ . Sol. in hot  $\text{HCl} + \text{Aq}$  only when most finely powdered (Hahn.)

$\text{FeSi}_2$ . Not attacked by conc.  $\text{HF}$  or  $\text{H}_2\text{SO}_4$ . (Hahn.)

Sol. in cold  $\text{HF}$ . (de Chalmot, Am. Ch. J. 1897, 19, 123)

Existence questioned by Jouve, (Bull. Soc. 1901, 25, 290-293)

$\text{Fe}_3\text{Si}_4$ . Sol. in  $\text{HF}$  and in fused  $\text{KNO}_3$  and  $\text{KNaCO}_3$ . (de Chalmot, J. Am. Chem. Soc. 1895, 17, 924.)

### Iron semisulphide, $\text{Fe}_2\text{S}$ .

Sol. in dil. acids with decomposition. (Arfvedson, Pogg. 1, 72.)

### Ferrous sulphide, $\text{FeS}$ .

Decomp. by dil. acids, with evolution of  $\text{H}_2\text{S}$  and without separation of S, except with  $\text{HNO}_3 + \text{Aq}$ .

$+ x\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ , especially if hot. (Berzelius)

1 l  $\text{H}_2\text{O}$  dissolves  $70.1 \times 10^{-6}$  moles  $\text{FeS}$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58, 204.)

Very violently decomp. even by dil. acids. Sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Insol. in  $\text{H}_2\text{S}$ , or  $(\text{NH}_4)_2\text{S} + \text{Aq}$ . Sol. in  $\text{Na}_2\text{S}$ , or  $\text{K}_2\text{S} + \text{Aq}$ . Sol. in  $\text{Na}_2\text{S}$  or  $\text{K}_2\text{S} + \text{Aq}$ . (de Koninck, Z. angew. Ch. 1891, 204)

Insol. in  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4\text{Cl} + \text{Aq}$  (Brett.)

Not completely pptd. in presence of Na citrate (Spiller.)

Contrary to assertion of  $\text{FeSO}_4$ , it can be nearly completely pptd. in presence of  $\text{Na}_2\text{P}_2\text{O}_7$  by  $(\text{NH}_4)_2\text{S} + \text{Aq}$  (Rose, Pogg. 76, 18.)

Sol. in alkali sulpho-molybdates, -tungstates, -vanadates, -arsenates, -antimonates, and -stannates (Storeh, B. 16, 2015.)

Sol. in  $\text{KCN} + \text{Aq}$

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1808, 20, 828)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

Solubility of  $\text{FeS}$  in sugar solutions 1 l sugar of given strength dissolves mg.  $\text{FeS}$

% Sugar	mg FeS		
	at $1^\circ 5^\circ$	at $45^\circ$	at $75^\circ$
10	3 8	3 8	5 3
30	7 1	9 1	7 2
50	9 9	19 8	9 1

(Stolle, Z. Ver. Zuckermil. 1900, 50, 300.)

*Colloidal.*—A very dilute solution has been obtained which coagulated very readily. (Winssinger, Bull. Soc. (2) 49, 452.)

### Ferric sulphide, $\text{Fe}_2\text{S}_3$ .

Decomp. by dil.  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  with evolution of  $\text{H}_2\text{S}$ , leaving a residue of  $\text{FeS}_2$ .

$+ 1\frac{1}{2}\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , also in alcoholic ammonia. Sol. in  $(\text{NH}_4)_2\text{S} + \text{very dil. Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ . (Phurson, C. N. 30, 139.)

### Iron disulphide, $\text{FeS}_2$ .

Insol. in dil.  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Decomp. by  $\text{HNO}_3$  or aqua regia with separation of S. Insol. in a 10% solution of alkali sulphide.

Min. *Pyrite*, *Marcasite*. Sol. in a mixture of  $\text{Na}_2\text{S}$  and  $\text{NaOH} + \text{Aq}$ ,  $\text{Na}_2\text{S} + \text{Aq}$ , or mixture of  $\text{Na}_2\text{S}$  and  $\text{NaSH} + \text{Aq}$ ; insol. in cold  $\text{NaSH} + \text{Aq}$ . *Marcasite* is more easily sol. in above than *pyrite*. (Becker, Sill. Am. J. (3) 33, 199.)

### Ferroferric sulphide, $\text{Fe}_3\text{S}_4$ or $\text{Fe}_2\text{S}_3$ .

Min. *Pyrrhotite*. Sol. in dil. acids with a residue of S. Extremely slowly sol. in a 10% solution of alkali sulphides. (Terrel, C. R. 69, 1360.)

Iron (terrous) nickel sulphide,  $2\text{FeS}$ ,  $\text{NiS}$ .

Min. *Pentlandite*.

Ferrous phosphorus sulphide,  $\text{FeS}$ ,  $\text{P}_2\text{S}_3$ .

(Berzelius.)

$2\text{FeS}$ ,  $\text{P}_2\text{S}_3$ . Slowly decomp. by  $\text{H}_2\text{O}$ . Insol. in boiling  $\text{HCl} + \text{Aq}$ ; decomp. by aqua regia. (Berzelius, A. 46. 256.)

Iron potassium sulphide (potassium sulphoferrite),  $\text{K}_2\text{Fe}_2\text{S}_4 = \text{K}_2\text{S}$ ,  $\text{Fe}_2\text{S}_3$ .

Insol. in cold or hot  $\text{H}_2\text{O}$ . Violently attacked by dil. acids. Not decomp. by boiling with alkalis, alkali carbonates, or sulphides +  $\text{Aq}$ . Decomp. by  $\text{KCN}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ . (Proust, J. pr. 107. 16.)  
 $\text{K}_2\text{S}$ ,  $2\text{FeS}$ . (Schneider, Pogg. 136. 460.)

Iron silver sulphide (silver sulphoferrite),  $\text{Ag}_2\text{S}$ ,  $\text{Fe}_2\text{S}_3$ .

Not attacked by dil.  $\text{HCl} + \text{Aq}$ , decomp. by conc.  $\text{HCl} + \text{Aq}$ . (Schneider.)  
 $2\text{Ag}_2\text{S}$ ,  $\text{FeS}_2$ . (Schneider, Pogg. 138. 305.)  
 $\text{Ag}_2\text{S}$ ,  $3\text{FeS}$ ,  $\text{FeS}_2$ . Min. *Steinbergite*. Decomp. by aqua regia.

Iron sodium sulphide (sodium sulphoferrite),  $\text{Na}_2\text{Fe}_2\text{S}_4 + 4\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by very dil. acids (Schneider, Pogg. 138. 302.)

Iron sulphophosphide,  $\text{Fe}_2\text{P}_2\text{S}_3$ .

Attacked by acids at  $100^\circ$ . Decomp. by boiling  $\text{NaOH} + \text{Aq}$ . (Ferrand, A. ch. 1896, (7) 17. 410.)

Ferrous telluride,  $\text{FeTe}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in acids (Fabre, C. R. 105. 277.)

Kermes.

See Antimony trisulphide.

"Knallplatin" compounds.

See Fulminoplatinum compounds.

Krypton, Kr

Absorption by  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Coefficient of absorption (mole) by two series of experiments	
0	0.1240	0.1166
10	0.0965	0.0877
20	0.0788	0.0670
30	0.0762	0.0597
40	0.0740	0.0561
50	0.0823	0.0610

(Antropoff, Roy. Soc. Proc. 1910, 83. A. 480.)

Lanthanic acid.

Barium *metalanthanate*,  $\text{Ba}(\text{H}_2\text{La}_2\text{O}_7)_2$ .

(Baskerville, J. Am. Chem. Soc. 1904, 26. 79.)

Lithium *metalanthanate*,  $\text{LiH}_2\text{La}_2\text{O}_7 + 2\text{H}_2\text{O}$ . (Baskerville.)

Potassium *metalanthanate*,  $\text{KH}_2\text{La}_2\text{O}_7 + 15\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Baskerville.)

Sodium *metalanthanate*,  $\text{NaH}_2\text{La}_2\text{O}_7 + 4\text{H}_2\text{O}$ .

Almost insol. in  $\text{H}_2\text{O}$ , but decomp. by it (Baskerville.)

Disodium *tetralanthanate*,  $\text{Na}_2\text{La}_4\text{O}_7$ .

Insol. in  $\text{H}_2\text{O}$ . (Baskerville.)

Lanthanicoctungstic acid.

Ammonium lanthanicoctungstate,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{La}_2\text{O}_3$ ,  $16\text{WO}_3 + 16\text{H}_2\text{O}$ .

Ppt. Insol. in  $\text{H}_2\text{O}$ . (E. F. Smith, J. Am. Chem. Soc. 1904, 26. 1481.)

Barium lanthanicoctungstate,  $5\text{BaO}$ ,  $\text{La}_2\text{O}_3$ ,  $16\text{WO}_3 + 16\text{H}_2\text{O}$ .

Ppt. (E. F. Smith.)

Silver lanthanicoctungstate,  $5\text{Ag}_2\text{O}$ ,  $\text{La}_2\text{O}_3$ ,  $16\text{WO}_3 + 4\text{H}_2\text{O}$ .

Very insol. in  $\text{H}_2\text{O}$ . (E. F. Smith.)

Lanthanum, La

Slowly decomp. cold, rapidly hot  $\text{H}_2\text{O}$ . Not attacked by cold conc.  $\text{H}_2\text{SO}_4$ , but energetically by cold conc.  $\text{HNO}_3 + \text{Aq}$ . Sol. in dil. acids. (Hillebrand and Norton, Pogg. 156. 633.)

Lanthanum bromide,  $\text{LaBr}_3 + 7\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Not very sol. in absolute alcohol. Insol. in ether. (Cleve, Sv. V. A. H. Bih. 2. No. 7.)

Lanthanum nickel bromide,  $2\text{LaBr}_3$ ,  $3\text{NiBr}_2 + 18\text{H}_2\text{O}$ .

Deliquescent. (Frerichs and Smith, A. 191. 355.)

Lanthanum zinc bromide,  $2\text{LaBr}_3$ ,  $3\text{ZnBr}_2 + 36\text{H}_2\text{O}$ .

Very deliquescent. (F. and S.)

Lanthanum carbide,  $\text{LaC}_2$ .

Decomp. by  $\text{H}_2\text{O}$  and dil. acids. (Pettersson, B. 1895, 28. 2422.)

Sol. in conc.  $\text{H}_2\text{SO}_4$  and dil. acids; insol. in conc.  $\text{HNO}_3$ .

Sol in fused oxidizing agents; decomp. by  $H_2O$  at ordinary tempa. (Moissan, C. R. 1896, 123. 149.)

**Lanthanum chloride,  $LaCl_3$ .**

*Deliquescent.* (Hermann.)  
Insol. in acetone. (Naumann, B. 1904, 37. 329.)

+ $7\frac{1}{2}H_2O$ . Not deliquescent. (Zschiesche.)  
Easily sol. in alcohol. (Hermann.)

**Lanthanum mercuric chloride,  $2LaCl_3, HgCl_2$**   
+ $\frac{1}{3}H_2O$ .

Not deliquescent. Very sol. in  $H_2O$ . (Marignac, Ann. Min. (5) 15. 272.)

**Lanthanum stannic chloride.**

See Chlorostannate, lanthanum.

**Lanthanum fluoride,  $LaF_3$  +  $H_2O$ .**

Precipitate. Sl. sol. in  $HCl$  + Aq. (Cleve.)

**Lanthanum hydrogen fluoride,  $2LaF_3, 3HF$ .**

Precipitate. (Frerichs and Smith, A. 191. 355.)

Does not exist. (Cleve, B. 11. 910.)

**Lanthanum hydride,  $La_2H_3$ .**

Decomp. by dil. acids. (Winkler, B. 24. 1906.)

$LaH_3$ . Decomp. by  $H_2O$ . Sol. in acids with evolution of  $H_2$ . Decomp. by alkalis (Muthmann, A. 1902, 325. 266.)

**Lanthanum hydroxide,  $La_2O_3.H_2O$ .**

Insol. in  $H_2O$ ; easily sol. in acids, insol. in  $KOH$ , or  $NaOH$  + Aq.

Sol. in citric acid. (Baskerville, J. Am. Chem. Soc. 1904, 26. 49.)

**Lanthanum zinc iodide,  $2LaI_3, 3ZnI_2 + 27H_2O$ .**

Very sol. in  $H_2O$ . (Frerichs and Smith, A. 191. 353.)

**Lanthanum nitride,  $LaN$ .**

Decomp. by  $H_2O$  with evolution of  $NH_3$ . Sol. in mineral acids. Decomp. by alkali. (Muthmann, A. 1902, 325. 275.)

**Lanthanum oxide,  $La_2O_3$ .**

Easily sol., even when ignited, in mineral, and acetic acids (Hermann.)

Sol. in boiling conc.  $NH_4Cl$  + Aq. (Mosander.)

Sol. in cold conc.  $NH_4NO_3$  + Aq. (Dumour and Deville.)

Insol. in  $(NH_4)_2CO_3$  + Aq. (Mosander.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

**Lanthanum peroxide,  $La_2O_5$ .**

Sol in  $HCl, H_2SO_4, HNO_3$ , and  $HC_2H_3O_2$  + Aq with decomp. (Cleve, Bull. Soc. (2) 43. 359.)

$La_2O_5 + xH_2O$ . Unstable. Sol. in dil.  $H_2SO_4$  + Aq with decomp. (Melikoff, Z. anorg. 1899, 21. 71.)

**Lanthanum oxybromide,  $LaOBr$ .**

Ppt. (Frerichs and Smith.)

**Lanthanum oxychloride,  $3La_2O_3, 2LaCl_3$ .**

Insol. in  $H_2O$ . Difficultly and slowly sol. in  $HCl$ , or  $HNO_3$  + Aq. (Hermann.)

$LaOCl$ . Boiling  $H_2O$  dissolves only traces. (Frerichs and Smith.)

**Lanthanum sulphide,  $La_2S_3$ .**

Decomp. by  $H_2O$  and acids. (Didier.)

**Lanthanum disulphide,  $LaS_2$ .**

Decomp. by heat. (Biltz, Z. anorg. 1911, 71. 435.)

**Lead, Pb.**

Lead, in contact with  $H_2O$  and air free from  $CO_2$ , gives a solution of PbO which turns litmus blue and turns red, and is turned brown with  $H_2S$ .

$H_2O$  which has been boiled does not dissolve Pb if there is no access of air. When shaken up with air it dissolves 0.91 to 0.008% Pb in 2 hours. Pure spring water, containing  $1\frac{1}{2}$  grains aise in 2 pounds  $H_2O$  and no  $CO_2$ , when conducted through a lead pipe 150 feet long, dissolves so much lead that it turns brown with  $H_2S$  (Yorker, Phil Mag. J. 5. 82.)

$CO_2$  or small amts of salts prevent the solution of Pb. 1 vol.  $H_2O$  with  $\frac{1}{2}$  vol.  $CO_2$  dissolves only a trace of Pb. Spring  $H_2O$ , containing in 10 pounds 1.21 grains  $NaCl$  and  $CaCl_2$ , and 6.4 grains  $CaCO_3$  dissolved in  $CO_2$ , does not dissolve Pb. (Yorker.)

If the amt of salts in solution equals the amt of  $H_2O$ , and especially if they are carbonates, very slight amts. of Pb are dissolved. (Christison, Phil Mag. J. 21. 156.)

$CaCO_3$  dissolved in  $CO_2$  water decreases the solubility of Pb more than any other salt.

Distilled  $H_2O$ , quietly standing in a closed flask with lead and air free from  $CO_2$ , deposits white flakes of  $Pb_2O_3.H_2O$ , and dissolves  $\frac{1}{2}$  pt. PbO. The solution has an alkaline reaction. (A. Bondorff, Pogg. 41. 305.)

Water of 3° hardness does not take up enough Pb to become injurious. (Clarke, J. R. 1886. 008.)

Soluble carbonates increase the solubility of Pb in  $H_2O$  (Nevins, C. C. 1881. 008), especially  $(NH_4)_2CO_3$ . (Böttger.)

Presence of  $H_2SO_4$  decreases the solubility of Pb (Horsford, Chem. Gaz. 1849. 217.)

$H_2O$  containing  $K_2SO_4$  takes up only a trace of Pb. (Wetzel, Schwe. J. 54. 324.)

Presence of sulphates diminishes (Christison), does not diminish (Graham, Miller, and Hoffmann), the action of  $H_2O$  on Pb.

$CaSO_4$  protects Pb, but it is attacked by much  $MgSO_4$ . (Nevins.)

$NaCl$  + Aq dissolves only a trace of Pb.

200 pt. of a chloride in  $H_2O$  is not sufficient to prevent the solubility of Pb in  $H_2O$ . (Christison.)

Presence of chlorides increases the solubility. (Graham, Miller, and Hoffmann, Nevins.)

$H_2O$  containing  $KN_3$  does not corrode Pb.

Nitrates hinder the action of  $H_2O$ . (A. Bondorff.)

Nitrates increase the action of  $H_2O$ . (Graham, Miller, and Hoffmann.) Nitrates have no influence. (Kersting.)

10 lbs. of  $H_2O$  dissolved the following amts. from Pb pipes in 24 hours: if distilled  $H_2O$  + 1%  $Na_2CO_3$ , 0.38 grain Pb; if Duna water, 0.19 grain Pb; if canal water, 0.15 grain Pb; if distilled  $H_2O$  + 1%  $NH_4NO_3$ , 0.15 grain Pb; if hard well water, 0.04 grain Pb; if distilled  $H_2O$  + 1%  $KNO_3$ , 0.01 grain Pb. (Kersting, Dingl. 169. 183.)

200 l. Manchester drinking water dissolved 2.094 g. from 1 sq. metre Pb in 8 weeks; 9 l. well water dissolved 1.477 g. from 1 sq. metre Pb in 8 weeks; 11 l. distilled  $H_2O$  containing

are dissolved 110.003 g. from 1 sq. metre Pb in 8 weeks; distilled H<sub>2</sub>O free from air dissolved 1829 g. from 1 sq. metre Pb in 8 weeks, sea water dissolved 0.038 g. from 1 sq. metre Pb in 8 weeks. (Calvert and Johnson, C. N. 16. 171.)

A lead pipe taken up in Paris, which had been exposed to action of ordinary H<sub>2</sub>O for 200 years, was found perfectly smooth and uncorroded. (Belgrand, C. R. 77. 1655.)

Pb is attacked by all waters, hard or soft, even highly calcareous water dissolves some lead. (Mayençon and Bergeret, C. R. 78. 484.)

Pure distilled H<sub>2</sub>O does not act on Pb, but extremely small quantities of NH<sub>3</sub>, HNO<sub>3</sub>, etc. cause an action; but for this action on Pb the presence of air and CO<sub>2</sub> is also required. (Stallman, Dingl. 180. 366.)

100 ccm. distilled H<sub>2</sub>O dissolved 3 mg. from 11.8 sq. cm. lead in one week when air without CO<sub>2</sub> was passed through the solution. 8 mg. were dissolved when the air contained CO<sub>2</sub>. (Wagner, Dingl. 221. 260.)

Action of dil. salt solutions on lead. In 500 ccm. of the solutions containing salt, bright sheets of lead of 5000 sq. metres' surface were so suspended that the liquid reached all parts of the metal without hindrance, and the amts. dissolved determined after 24, 48, and 72 hours of action.

NaOH	0.923	430	.
CaO.H <sub>2</sub>	Saturated	137	.

(Wagner, Dingl. 221. 260.)

Solubility of Pb in salt solutions.

25 sq. cm. were acted upon by a solution containing 0.2 g. salt in a litre for 21 days.

Three series of experiments were carried on I. In corked flasks. II. In beakers covered with porous paper; diameter of mouth of beaker = 11.5 cm. III. In basins covered with porous paper; diameter of mouth of basin = 14.5 cm. IV. In corked flasks with constant current of air. V. In beakers half filled and covered with porous paper, the lead being suspended so that equal amts. of surface were above and beneath the liquid.

The amts. in mgs. of Pb dissolved were as follows:—

Salt used	I	II	III	IV	V.
NH <sub>4</sub> NO <sub>3</sub>	1.8	4.0	16.0	.	.
KNO <sub>3</sub>	1.6	0.5	6.0	1.5	.
CaCl <sub>2</sub>	3.0	2.8	5.5	3.5	3.5
(NH <sub>4</sub> ) <sub>2</sub> SO <sub>4</sub>	0.7	1.3	16.0	5.0	2.5
K <sub>2</sub> CO <sub>3</sub>	0.3	0.3	0.7	0.6	0.3
Dist. H <sub>2</sub> O	1.5	0.8	4.2	2.0	.

(Muir, Chem. Soc. 36. 660.)

H<sub>2</sub>O sat. with CO<sub>2</sub> dissolves 0.012 g. Pb to a litre in 3 days (Marais, C. R. 77. 1529.)

Action of H<sub>2</sub>O charged with CO<sub>2</sub> under 760 mm. pressure on Pb. 3 mg. of Pb were dissolved per litre in 24 hours, and the amt. was not increased by further action. The addition of 100 mg. K<sub>2</sub>CO<sub>3</sub> + 20 mg. NH<sub>4</sub>NO<sub>3</sub> to a litre prevented all action.

Action of H<sub>2</sub>O charged with CO<sub>2</sub> under 6 atmos. pressure on Pb.

14.8 mg. were dissolved per l. in 24 hours, and 24 mg. per l. in 48 hours.

Action of various salt solutions added to above solution of CO<sub>2</sub> were as follows:—

	mg salt per l	mg Pb dissolved	
		after 24 hrs	after 48 hrs
K <sub>2</sub> CO <sub>3</sub> . . .	80	13.2	32.0
K <sub>2</sub> CO <sub>3</sub> . . .	160	..	6 0
CaCl <sub>2</sub> . . .	160	32.0	44.0
NH <sub>4</sub> NO <sub>3</sub> . .	16	5.0	..
NH <sub>4</sub> NO <sub>3</sub> . .	40	10.0	35.0
Distilled H <sub>2</sub> O .	...	14.8	24 0

(Muir, C. N. 33. 125.)

The corrosion of Pb by ordinary distilled H<sub>2</sub>O depends upon the presence of CO<sub>2</sub> and O. If the dissolved CO<sub>2</sub> is double the amt. of the dissolved O, the action is most energetic. When CO<sub>2</sub> is wholly absent and O present, the action is very slight, and when the H<sub>2</sub>O contains 1½ or more vol % CO<sub>2</sub> with normal amt. of oxygen, there is no visible corrosion. Pure distilled H<sub>2</sub>O containing neither O nor CO<sub>2</sub> has no action on Pb. In the above cases the greater part of the Pb remains in the form of a white ppt. or crust on the Pb, but in the case where O and CO<sub>2</sub> are both present in the ratio of 1 : 2, very small amts. of Pb go into solution in a few days, the amt., however, diminishes on standing. As the amt. of CO<sub>2</sub> increases, the amt. of Pb dissolved in the H<sub>2</sub>O also increases.

NH<sub>4</sub>OH alone does not protect Pb from corrosion, but when in combination with CO<sub>2</sub> the action is much diminished.

CaO<sub>2</sub>H<sub>2</sub> and NaOH+Ag attack Pb much more actively in absence of CO<sub>2</sub> and presence of air. In absence of dissolved O neither CaO<sub>2</sub>H<sub>2</sub> nor NaOH attacks Pb.

Na<sub>2</sub>CO<sub>3</sub>+Ag in absence of CO<sub>2</sub> attacks Pb slightly, but NaHCO<sub>3</sub>+Ag has not the slightest action.

CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>+Ag also has not the slightest action on Pb, and the presence of CaCO<sub>3</sub> and CO<sub>2</sub> wholly prevents H<sub>2</sub>O attacking Pb.

CaSO<sub>4</sub>+Ag in presence of air forms a crust on Pb, but no Pb is found in solution, but if air is excluded there is no visible action. Presence of CO<sub>2</sub> causes a strong corrosive action.

H<sub>2</sub>O containing CaSO<sub>4</sub> and CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub> does not attack Pb.

The above reactions are not in the least altered by the presence of moderate amts. of nitrates, chlorides, or ammonium, or organic compounds; but ammonium salts in excess have a strong solvent action on Pb. (Muller, J. pr. (2) 38. 317.)

See also an extended report of the action of H<sub>2</sub>O on Pb made to the Water Committee of Huddersfield, England, in 1888, by Messrs. Crookes, Odling, and Tidy.

Very extended researches are published by Cornelly and Frew (Jour. Soc. Chem. Ind. 7. 15), of which only the general conclusions can be given here.

The action of slaked lime, limestone, sand and calcium silicate, mortar, etc., was tested. The results were as follows —

1. In nearly all cases the corrosion is greater with free exposure to the air than when air is excluded. The difference is especially great in those cases where the greatest action on the lead takes place. Aluminum hydroxide and blue clay form exceptions, and exert a greater corrosive action when air is excluded. In the case of CaCO<sub>3</sub>, old mortar, CaSiO<sub>3</sub>, or a mixture of CaCO<sub>3</sub> and CaO<sub>2</sub>H<sub>2</sub>, the exclusion or presence of air makes no appreciable difference.

KNO<sub>3</sub>+Ag shows a peculiar behaviour. In the presence of air it acts nearly as much on the Pb as pure H<sub>2</sub>O, but when air is excluded it exerts nearly as much retarding action as CaSiO<sub>3</sub>.

2. In the presence of air the action of H<sub>2</sub>O on Pb is considerably increased by the presence of NH<sub>4</sub>NO<sub>3</sub> or CaO<sub>2</sub>H<sub>2</sub>, with exclusion of air, by CaSO<sub>4</sub>, also by a mixture of CaO<sub>2</sub>H<sub>2</sub> and sand. All the other investigated substances, even KNO<sub>3</sub>, under the action of H<sub>2</sub>O on Pb either with or without exclusion of air.

3. CaO<sub>2</sub>H<sub>2</sub>+Ag exerts in all cases a much greater corrosive action than pure H<sub>2</sub>O, and although this action is diminished by sand yet fresh mortar very quickly destroys lead pipes when in contact therewith. Old mortar, on the other hand, and also CaSiO<sub>3</sub> and CaCO<sub>3</sub>, have a protective action.

4. The fact is very important that sand, CaCO<sub>3</sub>, old mortar, CaSiO<sub>3</sub>, and a mixture of sand and CaCO<sub>3</sub> afford considerable protection to lead against H<sub>2</sub>O. A mixture of limestone and sandstone has more effect than the two substances separately.

5. CaSiO<sub>3</sub> totally prevents the corrosive action of KNO<sub>3</sub> and NH<sub>4</sub>NO<sub>3</sub>, so that the lead is not attacked by solutions of those salts any more than by H<sub>2</sub>O containing CaSiO<sub>3</sub> alone. Sand, and a mixture of sand and CaCO<sub>3</sub> have a similar effect, but not to such a degree.

6. The protective influence of CaCO<sub>3</sub> does not appear to depend on the presence of CO<sub>2</sub> and the formation of CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>.

7. MgCO<sub>3</sub> prevents the corrosion of Pb as much as CaSiO<sub>3</sub>. (Carmelley and Frew, Jour. Soc. Chem. Ind. 7. 15.)

Pb in contact with Zn or Fe is protected thereby from the solvent action of H<sub>2</sub>O, and in fact the action is nearly null. Sn, on the other hand, increases the action. This is of importance in regard to use of tin-coated lead pipes.

The presence of Ca salts does not influence the action of the H<sub>2</sub>O on Pb, hard or soft H<sub>2</sub>O provided it contains CO<sub>2</sub> having a strong corrosive action. Removal of air from H<sub>2</sub>O diminishes the solvent action. Simple filtration will remove all Pb from H<sub>2</sub>O if suitable filters are used. (Flogel, J. B. 1888. 2645.)

tions; and  $\text{Ca}(\text{ClO}_3)_2$ ,  $\text{CaCl}_2 + \text{Aq}$  (20° Baume), obtained by passing  $\text{Cl}_2$  through  $\text{CaO} \cdot \text{H}_2\text{O} + \text{Aq}$ , oxidised 437.70 g. (Lunge and Daggeker, Jour. Soc. Chem. Ind. 4. 31.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 828.)

Sol. in a solution of K in liquid  $\text{NH}_3$ . (Kraus, J. Am. Chem. Soc. 1907, 29. 1562.)

1.2 ccm. oleic acid dissolves 0.0592 g. Pb in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Solubility of Pb in petroleum.

If b.-pt. is under 230°, only slightest trace is dissolved in 4 months; if 230–300°, 0.0026% in 4 months; if over 300°, 0.0244% in 4 months in 4 months; if over 300°, 0.0244% in 4 months.

Solubility of Pb in commercial oil of turpentine and resin oil.

	Temp	% Pb dissolved	
		in 5 days	in 14 days

Old "	130–150	2.208	4.740

(Engler and Kneis, Dingl. 263. 193.)

Pb is strongly attacked by oil of turpentine (Am. Chem. 4. 280.)

The fatty oils dissolve Pb in considerable amt. (Macadam, J. B. 1878. 1169.)

Not attacked by sugar + Aq. (Klein and Berg, C. R. 102. 1176.)

Lead potassium amide.

See Potassium ammonoplumbite.

Lead azoumide, basic,  $\text{PbO}$ ,  $\text{PbN}_3$ .

Insol. in  $\text{H}_2\text{O}$ . (Wöhler, B. 1913, 46. 2054.)

Lead azoumide,  $\text{PbN}_3$ .

Insol. in cold  $\text{H}_2\text{O}$ ; much less sol. in boiling  $\text{H}_2\text{O}$  than  $\text{PbCl}_2$ . 1 l.  $\text{H}_2\text{O}$  dissolves about 1/2 g.  $\text{PbN}_3$ . Easily sol. in warm  $\text{HCl} \cdot \text{H}_2\text{O} + \text{Aq}$ . Insol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Curtius, B. 24. 2214.)

Lead bromide,  $\text{PbBr}_2$ .

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ , or in  $\text{H}_2\text{O}$  containing  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{HCl} \cdot \text{H}_2\text{O}$ , (Lowig.)

1 l.  $\text{H}_2\text{O}$  dissolves 6 g.  $\text{PbBr}_2$  at 10°, addition of  $\text{HBr}$  causes a ppt. which redissolves on further addition of  $\text{HBr}$ . 1000 pts. of a liquid containing 720 pts.  $\text{HBr}$  dissolve 550 g.  $\text{PbBr}_2$ . This solubility increases by heating. (Ditte, C. R. 92. 718.)

1 l.  $\text{H}_2\text{O}$  dissolves 26.28 millimols.  $\text{PbBr}_2$  at 25.2°. (von Ende, Z. anorg. 1901, 26. 159.)

Solubility in 100 g.  $\text{H}_2\text{O}$  at t°.

0.051	42.56
0.04 $\text{KNO}_3 +$	
0.01 $\text{HNO}_3$	42.77

(von Ende, Z. anorg. 1901, 26. 162.)

Slowly sol. in cold, easily in warm  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Wittstein.)

Not pptd. in presence of Na citrate. (Spiller.)

Insol. in  $\text{H}_2\text{O}$  containing  $\text{Pb}(\text{NO}_3)_2$ . (von Ende, Z. anorg. 1901, 26. 159.)

Insol. in benzene. (Franchimont, B. 16. 387.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate (Naumann, B. 1900, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

1.2  $\text{H}_2\text{O}$  (Ditte, C. R. 92. 718.)

Lead hydrogen bromide,  $5\text{PbBr}_2 \cdot 2\text{HBr} + 10\text{H}_2\text{O}$ .

Sol. in  $\text{HBr} + \text{Aq.}$  (Ditte, C. R. 92, 718.)

Lead magnesium bromide,  $\text{PbBr}_2 \cdot 2\text{MgBr}_2 + 16\text{H}_2\text{O}$ .

Very deliquescent. Decomp. immediately by  $\text{H}_2\text{O}$  or alcohol. (Otto and Drewes, Arch. Pharm. 229, 585.)

Lead potassium bromide (potassium bromoplumbite,  $\text{PbBr}_2 \cdot \text{KBr} + \text{H}_2\text{O}$ .

(Remsen and Hefty, Am. Ch. J. 14, 124.)

$+ \text{H}_2\text{O}$ . (Wells, Sill. Am. J. 145, 129.)

$\text{PbBr}_2 \cdot 2\text{KBr}$  Sol. in a little  $\text{H}_2\text{O}$  without decomp., but decomp. by an excess with separation of  $\text{PbBr}_2$  (Lowig.)

$+ \text{H}_2\text{O}$ . (Wells, Sill. Am. J. 145, 129.)

$2\text{PbBr}_2 \cdot \text{KBr}$ . (Wells.)

Lead potassium perbromide,  $\text{K}_2\text{Pb}_2\text{Br}_7 + 4\text{H}_2\text{O}$

Decomp. by  $\text{H}_2\text{O}$  and alcohol (Wells, Z. anorg. 4, 340.)

Lead rubidium bromide,  $\text{PbBr}_2 \cdot 2\text{RbBr} + \frac{1}{2}\text{H}_2\text{O}$ .

(Wells, Sill. Am. J. 146, 34.)

$2\text{PbBr}_2 \cdot \text{RbBr}$  (Wells)

Lead sodium bromide.

Decomp. by  $\text{H}_2\text{O}$ . (Lowig.)

Lead bromochloride,  $\text{PbBrCl} = \text{PbBr}_2 \cdot \text{PbCl}_2$ .

Can be recrystallised from  $\text{H}_2\text{O}$  without decomp. (Hes. C. N. 43, 216.)

$3\text{PbCl}_2 \cdot \text{PbBr}_2$  Sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in  $\text{HCl}$  and in  $\text{HBr}$ . Insol. in cold alcohol, sl. sol. in boiling alcohol. (Thomas, C. R. 1899, 128, 1235.)

Lead bromiodide,  $\text{PbBrI} = \text{PbBr}_2 \cdot \text{PbI}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . Cryst. from a solution of  $\text{PbI}_2$  in  $\text{HBr}$ . (Grissom and Thorp, Am. Ch. J. 10, 220.)

$3\text{PbBr}_2 \cdot \text{PbI}_2$  Decomp. by  $\text{H}_2\text{O}$ . (Thomas, C. R. 1899, 128, 1236.)

$6\text{PbBr}_2 \cdot \text{PbI}_2$ . (G. and T.)

Lead bromosulphide,  $\text{PbBr}_2 \cdot \text{PbS}$ .

Properties as chlorosulphide. (Parmentier.)

Lead chloride,  $\text{PbCl}_2$ .

Slowly sol. in 146 pts  $\text{H}_2\text{O}$  at  $12.5^\circ$ , and in a much smaller quantity of hot  $\text{H}_2\text{O}$  (Buehler.)

Sol. in 30 pts cold and 22 pts hot  $\text{H}_2\text{O}$  (Wittstein.)

Sol. in 20 pts  $\text{H}_2\text{O}$  at  $18.75^\circ$  (ABL.)

100 pts  $\text{H}_2\text{O}$  dissolve 1.50 pts.  $\text{PbCl}_2$  at  $15.5^\circ$  (Ure's Dict.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.9712 pt.  $\text{PbCl}_2$  at  $20^\circ$ . (Formánek, C. C. 1887, 270.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.946 pt.  $\text{PbCl}_2$  at  $17.7^\circ$ . (Bell, Chem. Soc. (2) 6, 355.)

Sol. in 105.2 pts.  $\text{H}_2\text{O}$  at  $18.5^\circ$ . (Bell, C. N. 16, 69.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.8 pt.  $\text{PbCl}_2$  at  $0^\circ$ , 1.18 pts. at  $20^\circ$ ; 1.7 pts. at  $40^\circ$ ; 2.1 pts. at  $55^\circ$ ; 3.1 pts. at  $80^\circ$ . (Ditte, C. R. 92, 718.)

1 l.  $\text{H}_2\text{O}$  dissolves 38.80 millimols.  $\text{PbCl}_2$  at  $25.2^\circ$  (von Ende, Z. anorg. 1901, 26, 148.)

$9.61 \times 10^{-4}$  gram are dissolved in 1 liter of sat. solution at  $20^\circ$  (Rottger, Z. phys. ch. 1903, 46, 603.)

Solubility in  $\text{H}_2\text{O}$ .

100 g.  $\text{H}_2\text{O}$  dissolve g.  $\text{PbCl}_2$  at  $t^\circ$

\* By extrapolation.

(Lachty, J. Am. Chem. Soc. 1903, 25, 474.)

33.6 millimols.  $\text{Pb}$  are dissolved in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$  (Plessner, C. C. 1907, II 1056.)

1 l.  $\text{H}_2\text{O}$  dissolves 77.76 milliequivalents  $\text{PbCl}_2$  at  $25^\circ$ . Sp. gr. of the solution  $25^\circ/4^\circ = 1.0069$ . (Harkins and Winnighoff, J. Am. Chem. Soc. 1911, 33, 1816.)

0.0388 mol. mg.  $\text{PbCl}_2$  are sol. in 1 l.  $\text{H}_2\text{O}$ . (Kernot and Pomilio, Soc. R. Napoli, 1912, (3), XVII, 353.)

A colloidal modification is sol. in hot water to give cryst. modification. (Van de Velde, Ch. Z. 1893, 17, 1908.)

Solubility in  $\text{H}_2\text{O}$  is not much increased by the addition of acids. (Fresenius.)

Sol. in conc.  $\text{HCl} + \text{Aq.}$  from which it is pptd. by  $\text{H}_2\text{O}$ , but less sol. in dil.  $\text{HCl} + \text{Aq.}$  than in  $\text{H}_2\text{O}$ . (Berzelius.)

Sol. in 1636 pts.  $\text{H}_2\text{O}$  containing  $\text{HCl}$ . (Bischof.)

Sat. solution of  $\text{PbCl}_2$  in  $\text{HCl} + \text{Aq.}$  of 1.116 sp. gr. contains 2.566%  $\text{PbCl}_2$  at  $16.5^\circ$ .

Solubility in  $\text{HCl} + \text{Aq.}$  100 pts. liquid containing pts.  $\text{HCl}$  of 1.162 sp. gr. in 100 pts  $\text{H}_2\text{O}$  dissolve pts  $\text{PbCl}_2$  at  $17.7^\circ$ .

Pts $\text{HCl}$	Pts. $\text{PbCl}_2$	Pts $\text{HCl}$	Pts. $\text{PbCl}_2$	Pts $\text{HCl}$	Pts. $\text{PbCl}_2$

0 099	2 3	1 5	89 0
0 090	3 4	1 9	96 0
0 08	4 5	3 01	111 5

It is seen that very little  $HCl + Aq$  is sufficient to diminish solubility very considerably, and, that on further addition of  $HCl + Aq$ , the solubility is nearly constant, and increases finally very much when large amts. of  $HCl + Aq$  are present (Engel, A. ch. (6) 17, 359.)

Solubility of  $PbCl_2$  in  $HCl + Aq$  at 25°
